Claim.—A field-fence, when its panels have oblong pieces cut out of their extremities, the corners of the same being beveled, so as to bear against the faces of corresponding panels of other sections of fencing, and interlocked in such a manner that the extremities of said panels will bear against the vertical bars B, substantially as described and set forth.

91,345.—J. R. KELSO, Freedom, Mo., assignor to himself and ERNEST QUAST, same place.—*Gun-Carriage.*—June 15, 1869.

Claim.—The carriage, swiveled or otherwise mounted upon supports at each end, arranged to traverse in grooves or upon ways at right angles to each other, substantially as specified.

91,346.—SOLOMON KEPNER, Pottstown, Pa., assignor to JOHN E. MEISTER and JOHN F. EVANS, same place.—*Apparatus for Detaching Horses from Carriages.*—June 15, 1869.

Claim.—1. The box C, and collars *d d*, in combination with the single-tree D, substantially as and for the purpose shown and described.

2. The bolt and double loop E, secured to the single-tree, and connected with the rubber band F, and the strap for operating said single-tree, substantially as shown, and for the purpose specified.

3. The guards H H, secured to and forming a part of the ferrules upon the ends of the single-tree, in combination with the hooks G G, and single-tree D, substantially as and for the purpose shown.

4. The rubber band F, secured to the cross-bar B and loop E, and operating through said loop upon the single-tree D, substantially as shown, and for the purpose set forth.

91,347.—JOHN KERSHAW, Kent, Ohio.—*Harvester.*—June 15, 1869.

Claim.—1. The arrangement and combination of the wheel B, case C, and door or top M′, for the purpose set forth.

2. The staple *b*, bar *d*, and block *f*, in combination with the hooks *c*, pitman and cutter-bar, constructed and arranged in the manner and for the purpose set forth.

3. The ball and socket joint *a*, pivoted lug or wrist *b′*, in combination with the shoe O and coupling-brace P, constructed and arranged in the manner and for the purpose set forth.

4. The rack R, wheel S, ratchet and pawl D′ G′, and levers B′ E′, all arranged and combined to operate in the manner as and for the purpose set forth.

91,348.—JOHN KILLEFER, West Richfield, Ohio.—*Machine for Threading Bolts and Nuts.*—June 15, 1869.

Claim.—1. The arrangement of the cutters B, set-screws *b e*, and jam-nuts *d*, in the holder A, all fitted together in the manner described, for the purpose specified.

2. The combination of the mechanism, (for automatically opening and closing the jaws,) with the bolt-holding mechanism and the thread-cutting dies, all arranged and operating together as described.

3. The arrangement of the several parts of the shipping-mechanism with the cone Q and the lever die-holders, as herein shown and described.

4. The combination of the spring-clutch D′, having the set-screw H′, and recess I′, the hollow shaft A′, and the guard G′, with the mechanism for holding and advancing the nut, substantially as described, for the purpose specified.

91,349.—F. KUTSCHER, New Haven, Conn.—*Bottle-Stopper.*—June 15, 1869.

Claim.—The combination of the plate B, having the cone *a* formed upon its under side, and combined with the plug A, so that the said cone serves to expand the plug, as and for the purpose specified.

91,350.—James Lee, New York, N. Y.—*Child's Chair and Carriage.*—June 15, 1869.

Claim.—An improved combined child's chair and carriage, formed by the combination of the bars A and B, rounds C D E F, four or more, wheels H, flexible seat and back G, arms I, and stops J, with each other, said parts being arranged and operating substantially as herein shown and described, and for the purpose set forth.

91,351.—John M. Lemon, Polk City, Iowa.—*Conveyer-"Flight."*—June 15, 1869.

Claim.—The "flight" A, constructed as described, to be applied to a conveyer-shaft, for the purposes set forth.

91,352.—Samuel Lewis, Williamsburgh, N. Y.—*Rock-Drill.*—June 15, 1869.

Claim.—1. The combination of the eccentrics H H, drill G, sliding rotating-tube F, collar E, cam C, and disk J, as and for the purpose specified.

2. The revolving disk J, in combination with the eccentrics H, attached to the sliding and rotating tube F, substantially as herein shown and described, and for the purpose set forth.

91,353.—Charles Lockwood, Haverstraw, N. Y.—*Sand-Screen.*—June 15, 1869.

Claim.—1. An improved screen, formed by the combination of the side-bars A, cross-bars B, longitudinal wires C, and plates D, with each other, and with the detachable wooden frame E, substantially as herein shown and described, and for the purpose set forth.

2. The combination of the stake G, cross-bar H, springs I, and detachable rod J, with each other and with the screen A B C D E, substantially as herein shown and described, and for the purpose set forth.

91,354.—Josiah Long, Leavenworth, Ind.—*Plow.*—June 15, 1869.

Claim.—The plow-standards D, constructed, arranged, and secured to the plow-beam A, substantially in the manner herein shown and described, and for the purpose set forth.

91,355.—Jesse Mallett, Catherine, N. Y.—*Wool-Table.*—June 15, 1869.

Claim.—A wool-tying table, consisting of the bed A, with the slotted end-pieces B and the hinged sides C, having the notches *h* formed therein, to receive the windlass E, attached to the straps D, all constructed and arranged to operate as herein described.

91,356.—Charles Marcher, New York, N. Y.—*Spittoon-Footstool.*—June 15, 1869.

Claim.—The bent spring F, arranged and operating as described, for the purpose specified.

91,357.—George Mayer, Cincinnati, Ohio.—*Cooking-Stove.*—June 15, 1869.

Claim.—The combination with the ash-pit A, having an aperture, B, lugs E, and flanges H H, arranged substantially as herein described, of the gratings C D, removable handle F, and the removable ash-pan G, constructed, arranged, and employed substantially as and for the purposes set forth.

91,358.—John Mayer, Rondout, N. Y.—*Brick-Truck.*—June 15, 1869.

Claim.—The combination of the spring E and its adjusting-nut F with the caster A B, screw-threaded stem C, frame D, and the front end of the platform of a brick-truck, whose rear end is supported upon the wheels G H, arranged as herein shown and described.

91,359.—John H. Morse, Peoria, Ill., assignor to himself and Henry W. Wells, same place.—*Permutation-Lock.*—June 15, 1869; antedated May 28, 1869.

Claim.—1. The changeable wheel A, with its rim L, core B, and screw *m*, in combination with the rubber-tired friction-wheel *h*, lug *n*, all arranged substantially as and for the purposes described.

2. The friction-wheel *h*, in combination with the crooked lever J and bolt R, arranged substantially as and for the purpose described.

91,360.—J. L. Nettleton, West Cheshire, Conn., assignor to himself and F. Caffrey, same place.—*Churn.*—June 15, 1869.

Claim.—1. A churn-dash, consisting of the bar A and the two legs B B, bent from a single piece of material, and constructed so as to be attached to the spindle E, substantially in the manner set forth.

2. The arrangement of the beaters, formed as described, and combined with the spindle E, column F, wheels H and I, and cover G, all in the manner as herein set forth.

91,361.—T. Campbell Oakman, Paterson, N. J.—*Cotton-Bale Tie.*—June 15, 1869.

Claim.—The bale-tie or fastening, consisting of the cam-lever A, provided with the journals B, flattened on one side, and having their bearings H in the angles of the bent side-bars of the frame C, all constructed and operating as set forth.

91,362.—Samuel P. Parmly, New Orleans, La.—*Bag-Fastener.*—June 15, 1869.

Claim.—A bag-fastener, consisting of the knotted string D, star-shaped, perforated, or notched plate B, and wire-hook C, all arranged, combined, and operating substantially as herein shown and described.

91,363.—Henry Pattison, Duck Creek, Ill.—*Animal-Trap.*—June 15, 1869.

Claim.—The combination of the weighted wheel C, lever F, trigger G, stop H, wing or flange I, and partition B, with each other, and with the trap A and entrance D, substantially as herein shown and described, and for the purpose set forth.

91,364.—Shadrach H. Pearce, Boston, Mass.—*Mosaic Covering for Floors.*—June 15, 1869.

Claim.—A covering for floors, &c., composed of a series of elastic blocks, sections, or tiles, substantially as described.

91,365.—M. Perl, Houston, Texas.—*Apparatus for Destroying Worms on Cotton-Plants.*—June 15, 1869; antedated June 9, 1869.

Claim.—The combination of wagon A, with gas-generator B, blower E, cog-wheels *e e'*, crank *f*, and hose G', constructed, arranged, and operated substantially as described.

91,366.—Lawrence M. Platt, Chicago, Ill.—*Railway-Car Duster.*—June 15, 1869.

Claim.—1. The construction and arrangement of a railway-car "safety platform or bridge," in the manner and for the purpose herein described.

2. The combination of the piece B, adjustable slide C, and platform A, in the manner and for the purpose herein described.

91,367.—J. C. Richardson, Ilion, N. Y.—*Fork-Blank.*—June 15, 1869.

Claim.—1. In the manufacture of a fork-blank, substantially such as described, crowding the metal which occupied the space *a* into that part of the blank constituting the head, in the manner specified, so as to condense the metal of said head, and thereby strengthen the shoulder at its junction with the tang B, all substantially as described.

2. The improved new article of manufacture herein described, to wit, the fork-blank, with the metal which occupied the space *a* forced into the head of the blank, at the junction of the head with the tang B, all as set forth.

91,368.—F. Rochow, New York, N. Y.—*Valve and Opening for Steam-Engines.*—June 15, 1869.

Claim.—1. The arrangement of the valve L, cylinders K^1 and K^2, and channels 1, 2, 3, 4, 5, and 6, substantially in the manner set forth.

2. The induction and eduction slide-valve L, constructed and arranged as described, in connection with the passages 3 and 4, whereby to admit live steam directly from the steam-chest into either one of the auxiliary cylinders, and exhaust it from the opposite end of the auxiliary cylinder, as described.

3. The combination of a slide-valve with a row of openings in the cylinder of an engine, when this slide-valve is made adjustable, so as to uncover only one or any other desired number of these openings, substantially as set forth.

4. The combination and construction of valve U, valve V, and stem W, and openings 8, 9, 10, 11, and 12, substantially as herein set forth.

5. The valve-chest, J ,with its chambers *i i*, in combination with the rows of holes 8, 9, 10, 11, and 12, valves U and V, and the channels 5 and 6, substantially as described.

91,369.—J. B. SARGENT, New Haven, Conn.—*Cabinet-Hook.*—June 15, 1869.

Claim.—The herein-described hook, struck up from sheet-metal, so as to form a double convex surface, as and for the purpose specified, as an improved article of manufacture.

91,370.—JAMES A. SEVEY, Boston, Mass.—*Machine for Rounding Whalebone for Corsets.*—June 15, 1869.

Claim.—1. The arrangement of the blades *a a*, of the two gauge-cutters A A, viz, so as to stand with their convexities in opposite directions, and with their backs at an acute angle with each other, as specified.

2. The arrangement of the blade of each cutter, with respect to its furcated shank, the blade, under such arrangement, having its back at an acute angle with the axis of the shank, and one side of the shank disposed on or about on a line with the axis of the blade, as set forth.

3. The combination of the two knives A A, arranged and provided with operative mechanism, substantially as described, with the bed-wheel G, the gauge K, and the rack H, disposed with and applied to the bench C, as set forth.

91,371.—R. M. SELDIS, New York, N. Y., assignor to MYER STERN, same place.—*Fur Collar.*—June 15, 1869.

Claim.—A fur collar, provided with ear-flaps B B, pockets C C, sustaining-cord *b*, and lapels D D, arranged substantially as described.

91,372.—J. C. SHERWOOD, West Cornwall, Conn.—*Milk-Cooler.*—June 15, 1869.

Claim.—The milk-cooler, consisting of the box A, perforated cover B, vessel E, pipe *d*, strainer *e*, perforated trough D, and cooling-pan C, the latter having the inclined bottom *b*, and the perforated transverse plates *e e*, all combined and operating substantially as herein shown and described.

91,373.—WILLIAM CAMERON SILLAR, MATHERAN SYDENHAM HILL, ROBERT GEORGE SILLAR, 7 Cintra Park, Upper Norwood, and GEORGE WILLIAM WIGNER, Grove Lane, Camberwell, Great Britain.—*Mode of Purifying and Deodorizing Sewage, &c.*—June 15, 1869.

Claim.—1. The mixture of chemical substances above described, for the purpose of purifying sewage or water impregnated with sewage.

2. The right of using the mud precipitated from sewage, as above described, for the purpose of purifying a further quantity of sewage.

3. The addition of an acid to the mud, in order to retain the ammonia, and fit it for sale as a manure.

91,374.—J. PLUMER SMITH, Cleveland, Ohio.—*Liquid-Meter.*—June 15, 1869.

Claim.—The combination of the valve I and chamber H, as arranged in relation to and with the needle-valve L, and operating conjointly therewith, substantially as and for the purpose set forth.

91,375.—SAMUEL P. SNEAD, Louisville, Ky.—*Fire-Proof Ceiling.*—June 15, 1869.

Claim.—The ornamented plates B, supported upon the flanges of the beams A, when provided with the arched ribs *b*, constructed as described, for the purpose specified.

91,376.—JOSEPH H. SNOW, Providence, R. I.—*Automatic Gas-Regulator for Blow-Pipes.*—June 15, 1869.

Claim.—The combination of the blow-pipe A, flexible tube B, and automatic valve D, operating substantially as described.

91,377.—DANIEL SPILL, Paradise Terrace, Hackney, England.—*Compound Containing Xyloidine.*—June 15, 1869.

Claim.—The manufacture and production of compounds containing xyloidine, in conjunction with oils, camphor, paraffine, and gutta-percha, or other similar substances, by the employment of non-volatile solvents, such solvents becoming and remaining a part of the resulting compound.

91,378.—DANIEL SPILL, Paradise Terrace, Hackney, England.—*Mode of Protecting Insulated Telegraph-Wire.*—June 15, 1869.

Claim.—The coating and protecting of telegraphic wires, which have been previously coated or covered with an insulating-material, with any of the compounds or combinations hereinbefore referred to, or with other similar compounds, they having, as parts of their constituents, xyloidine or gun-cotton, in conjunction with a non-volatile solvent, and they being applied in a manner as hereinbefore described.

91,379.—FISHER A. SPOFFORD and MATTHEW G. RAFFINGTON, Columbus, Ohio.—*Velocipede.*—June 15, 1869.

Claim.—The combination of the lever H with the rods *h h*, toothed segments G G, pinions *e e*, spring-pawls *f f*, ratchet-wheels *d d*, and axle B, all arranged and operating substantially as and for the purpose herein shown and described.

91,380.—ABRAHAM STAFFER and PETER STAFFER, Salt Creek, Ind.—*Saw-Gummer.*—June 15, 1869.

Claim.—The arrangement of the lever E, the screw H, nut I, and cutter D, in combination with the block A, all the parts being constructed as described, and for the purposes set forth.

91,381.—ABRAHAM STAFFER and PETER STAFFER, Salt Creek, Ind.—*Flour-Cooler.*—June 15, 1869.

Claim.—The arrangement of the floors D E F, having openings alternately at the center and periphery, and the arms *h i j k*, having the wings *o*, inclined in opposite directions alternately, the arms *i k*, having end-wings *u*, all operating as described, to discharge the flour from one floor to another through the openings *q r s t*, for the purpose specified.

91,382.—MYER STERN and R. M. SELDIS, New York, N. Y.—*Muff.*—June 15, 1869.

Claim.—1. A muff which is adapted to be spread out, and closed in cylindrical form, substantially as and for the purpose specified.

2. A supporting-frame, B, provided with a locking-device, whereby a divided muff is adapted to be spread flat and secured together in cylindrical form, substantially as described, for the purpose specified.

91,383.—LINUS STEWART, San Francisco, Cal.—*Steam-Plow.*—June 15, 1869.

Claim.—1. The arrangement of the revolving cutters within a supplementary frame, all in the same line, at right angles to the line of travel, and so placed that the curves described by the arms or blades a^1 a^1 may intersect each other, substantially as described.

2. The horizontal connecting-shaft G, united to the shafts *a* and a^2, by universal joints *b b*, substantially as and for the purpose described.

3. The segmental racks e' e', attached to the supplementary frame, and engaging with the pinions *e e*, on the shaft H, said shaft being operated by an endless screw, *i*, engaging with a pinion, *f*, on the shaft H, substantially as and for the purpose described.

91,384.—SAMUEL SYKES, Chippewa Falls, Wis., assignor to himself and MICHAEL GORLAND, same place.—*Sawdust-Feeder for Furnaces.*—June 15, 1869.

Claim.—1. The hoppers D, constructed as described, and arranged within the furnace above the grate B, with its discharge-orifices between the

boilers A, as herein described, for the purpose specified.

2. The hoppers D, arranged within the furnace above the grates, having their discharge-orifices between the boilers, in combination with the flies F, upon the vertical shaft G, resting upon the shelves E above the grate, as herein described, for the purpose specified.

91,385.—M. J. TROWBRIDGE, Cazenovia, N. Y.—*Center-Square.*—June 15, 1869.

Claim.—A center-square, consisting of the jointed arms A A C C, of the reversible swivel sockets B D, which hold and slide on the tongue F, and of the squaring-pins E, arranged in the sockets *c d* of the arms, all arranged and operating substantially as herein shown and described.

91,386.—ROBERT B. TUNSTALL, Norfolk, Va.—*Seeder.*—June 15, 1869.

Claim.—1. The combination of the seed-wheel A with the wheel B and supporting-frame, all substantially as specified.

2. The seed-wheel A, constructed as described, and provided with the detachable plates E, substantially as specified.

3. The combination, with the wheel A, arranged and operated as described, of the chain and roller, arranged substantially as specified.

91,387.—A. VAUGHAN, Chicago, Ill.—*Post-Auger.*—June 15, 1869.

Claim.—In the construction of post-augers, the point F, which is provided with recesses on its opposite sides; conical holes I I, communicating with the tubular shank, and ribs J J, protecting the holes from earth, and also with arms D D, for the support of the lips B B, as set forth and shown.

91,388.—ARTHUR WADSWORTH, Newark, N. J.—*Attachment of Main-Springs to Watch-Barrels, &c.*—June 15, 1869; antedated December 15, 1868.

Claim.—The pivoted segment *d*, fitted in the periphery or side, *b*, of the barrel A, with the pivots, which are at one end of the segment, working in the fixed bearings in the barrel, and the opposite or free end of the segment, attached to the outer end of the spring C, all arranged substantially as and for the purpose herein set forth.

91,389.—JOHN H. WEEDEN, Waterbury, Conn., assignor to himself and L. G. ARNOLD, same place. *Head-Rest for Church-Pews.*—June 15, 1869.

Claim.—An improved head-rest or cushion, for attachment to church-pews, formed by the combination of the stuffing A, covering B, plate C, band D, base-plate E, and springs F, with each other, substantially as herein shown and described, and for the purpose set forth.

91,390.—JACOB WELKER, Attica, N. Y.—*Trace-Buckle.*—June 15, 1869.

Claim.—A trace-buckle, consisting essentially of the bent frame A, with cross-plate *c* and disconnected side-bars *a a*, and of a tongue-frame, D, hinged to the ends of said side-bars, and provided with an extension, *g*, the whole constructed, arranged, and operating as set forth.

91,391.—JOHN WETTSTEIN, Lynchburgh, Va.—*Rolling Tobacco.*—June 15, 1869.

Claim.—1. The feed-rollers E and E^1, and feeding-belt, in combination with the feeding-table C, when constructed and operated substantially as and for the purpose described.

2. The combination, with the feed-rollers and belt, of the means arranged, substantially as described, for stopping the feed, as and for the purpose set forth.

3. The combination, with the feed-rollers and belt, of the cutters, substantially as and for the purpose described.

4. The combination, with the feed-rolls and belt, of the means for automatically setting them into gear with the driving-mechanism, substantially as and for the purpose described.

5. The combination, with the said means for setting the feed-rolls into gear with the driving-mechanism, of the sliding-cutter frame, substantially as and for the purpose described.

6. The forming-rolls *c* and e^2, and forming-belt c^2, arranged for joint operation, substantially as and for the purpose described.

7. The combination of the same with the driving-roll e^2, substantially as and for the purpose described.

8. The combination, with the same, of the adjustable roller c^6, substantially as and for the purpose described.

9. The forming-roller e^1, arranged in oscillating bearings, substantially as and for the purpose described.

10. The combination, with the forming-rolls and belt, of the means, substantially as described, for connecting and disconnecting the said rolls and belt with the driving-mechanism, as and for the purpose specified.

11. The combination, with the forming rolls and belt, of the wrapping-plate *h*, substantially as and for the purpose described.

12. The combination, with the forming-mechanism, of the feeding-mechanism, substantially as and for the purpose described.

91,392.—ELONZO S. WHEELER, Westport, Conn.—*Carpet Stretcher and Nailer.*—June 15, 1869.

Claim.—The lever A, combined with the spindle D, the lever arranged for stretching the carpet, and the spindle, provided with a clasping-device to hold the tack, the whole constructed and arranged to operate in the manner herein set forth.

91,393.—EDWARD ORANGE WILDMAN WHITEHOUSE, Stoke Newington, England.—*Mode of Protecting Insulated Telegraph-Wires.*—June 15, 1869.

Claim.—The coating and protecting of telegraphic wires, which have been previously coated or covered with an insulating material, with any of the compounds or combination hereinbefore referred to, or with other similar compounds, they having, as part of their constituents, xyloidine or gun-cotton, in conjunction with a violatile solvent, and they being applied in a manner as hereinbefore described.

91,394.—ANDREW F. WHITING, Greenville, Conn.—*Knob-Latch.*—June 15, 1869.

Claim.—1. The combination of the dog or catch C, lever or dog E, tumblers G G′, and sliding-bolt B, substantially as shown and described.

2. The combination of the tumbler G′, the lever F, disks D, and bolt B, substantially as and for the purpose described.

3. The arrangement of the incline on bolt B, with reference to lever F, disks D, and tumbler G′, substantially as and for the purpose set forth.

91,395.—H. WHITTINGHAM, New York, N. Y.—*Steam-Generator.*—June 15, 1869.

Claim.—1. A sectional steam-generator, in which each section consists of a series of horizontal tubes, A, connected in front and rear by vertical tubes B C, and in the middle by a tube or tubes, D, and provided with smoke-flues E, that pass through the tubes A, substantially as herein shown and described.

2. The ribs *e e*, formed on the sides of the vertical pipes of each section, to form transverse partitions, substantially as herein shown and described.

3. The ears *d d*, formed on the tubes A, B, and C, when arranged as described, to admit bolts *c*, for securely connecting the tubes of one section, substantially as herein shown and described.

91,396.—FLAVIUS L. WICKHAM, Pavilion, Ill.—*Washing-Machine.*—June 15, 1869.

Claim.—1. The rubber, formed by the combination of the rubber-strip I, curved rubber-board H, bars or levers J, shaft L, pivoted bars M, and cross-bar or handle N, constructed and operating substantially as herein shown and described, and for the purposes set forth.

2. The adjustable board G, in combination with the detachable washing-board D, rubber H I J K L M N, and box A, substantially as herein shown and described, and for the purpose set forth.

91,397.—CHARLES P. WING, Lyonsville, Ill.—*Table-Leaf Support.*—June 15, 1869.

Claim.—The combination of the jointed brace-bar D, with the catch E and cord F, substantially as and for the purpose set forth.

91,398.—JOHN C. WIRTZ, New York, N. Y.—*Velocipede.*—June 15, 1869.

Claim.—1. The combination of the protecting-case or box F with the frame, consisting of the cross-bar *a*, converging-bars *b b*, and front-reach *c*, with the seat E, and with the driving-mechanism, that consists of the foot-board D, rods *i*, wheels *f*, and pinions *e*, all arranged and operating substantially as herein shown and described.

2. The combination of the hood I with the enlarged front-reach and with the steering-cords *m*, beam *l*, wheel *k j*, and post H, all arranged and operating substantially as and for the purpose herein shown and described.

91,399.—GEORGE H. WOOD, Cambridge City, Ind.—*Corn-Planter.*—June 15, 1869.

Claim.—1. The endless toothed belt or chain, arranged as described, for operating the dropping-device of a corn-planter, substantially as herein set forth.

2. The combination of the toothed belt or chain J, polygonal wheels D E, axles F G, pins or projections K, and springs M, with the platform or frame C, and dropping-slides L, of the seed-hoppers N, substantially as herein shown and described, and for the purpose set forth.

3. The combination and arrangement of the pivoted curved arms S, arms or levers T, pivoted connecting-bars U and V, arms W, and shaft X, provided with a lever or handle, Y, with each other and with the runners A, and platform or frame C, substantially as herein shown and described, and for the purpose set forth.

91,400.—JOHN WRIGHT, Middleport, Ohio, assignor to himself and J. W. WELLS, same place.—*Punch.*—June 15, 1869.

Claim.—1. The combination of the right and left threaded operating-screw, sleeve supporting the punch, screwed lug C, lug D, and ratchet and pawl, when arranged substantially as specified.

2. The double pawl K, provided with the lip M, sliding-spring N, ratchet-lever, and wheel, combined and arranged substantially as specified.

3. The arrangement of the sleeve G, double hollow nut H, and punch, all substantially as specified.

4. The arrangement of the right and left threaded screw F, sleeve G, punch-lugs C and D, and hand-crank, all substantially as specified.

91,401.—ABRAM ADAMS, Boston Station, Ky.—*Harvester-Rake.*—June 15, 1869.

Claim.—1. The arrangement and combination of the crank-shaft D, crank *a*, beam F, slotted arm G, standard H, slotted bar I, angular bar or box *d*, rake-handle J, and rake K, all substantially as and for the purposes herein set forth.

2. The arrangement of the rake K, rods *e e*, bars *f f*, and inclined railing *h*, all constructed and operating substantially as and for the purposes herein set forth.

3. The arrangement of the rods *e e*, bars *f f*, spring *i*, and pin *m*, on the rake K, all constructed and operating substantially as and for the purposes herein set forth.

91,402.—HENRY W. ADAMS, Philadelphia, Pa. *Apparatus for Tanning Hides.*—June 15, 1869.

Claim.—1. In combination with a close vat, containing tanning-liquor, a reciprocating plunger, in which the hides are confined in horizontal parallel planes, and caused to move in the direction of their edges through the liquor by the application of a suitable force, substantially as set forth.

2. The combination of the vat, the reciprocating plunger, the cover, and a clamping-device, substantially as set forth.

3. The combination, in the plunger, of the hides and cords, or equivalents, for holding the hides in parallel horizontal planes, substantially as set forth.

91,403.—JOHN H. ADAMS, Martinsville, Ind.—*Device for Carrying Lumber from the Saw in Circular-Saw Mills.*—June 15, 1869.

Claim.—Attaching the off-bearing truck or car D to the forward end of the log-carriage, and operating the same in the manner substantially as herein described.

91,404.—ARTHUR M. ALLEN, New York, N. Y.—*Railway-Car Brake.*—June 15, 1869.

Claim.—1. The toggle-levers G, arms *b*, and cross-head H, and lever I, in combination with the windlass J, and rising and falling brake-shoes F, constructed and operating substantially as shown and described.

2. The elastic cushions *g*, in combination with the blocks *f*, of rising and falling brake-shoes F, substantially as set forth.

91,405.—JOHN BACHELDER, Norwich, Conn.—*Neck-Tie.*—June 15, 1869.

Claim.—The combination of the clamp *a* and supporting-plate *b*, whereby the parts of the bow are secured together, the supporting-plate being provided with means for attachment to the shank or head of a shirt-stud, substantially as described.

91,406.—JOHN BACHELDER, Norwich, Conn.—*Fastening for Neck-Tie.*—June 15, 1869.

Claim.—The fastening for neck-ties, consisting of the plates *a* and *b* and stud *h*, the plate *a* being provided with an enlarged entering-eye, *i*, and a securing-eye, the two connected by a slot or neck, and the latter countersunk, to conform to the convex head of the stud, and retain it in a fixed position, all arranged substantially as shown and described.

91,407.—HAYDN M. BAKER, Washington, D. C.—*Process of Cleaning Cotton and Woolen Waste from Oils, Grease, &c.*—June 15, 1869.

Claim.—1. The use of soluble alkaline oleates, margarates, and stearates, (known in the market as soaps,) either in the anhydrous or hydrated state, for the removal of oils, gums, resins, &c., from fibrous substances.

2. The process, herein described, for the separation and recovery of the soaps and oils.

91,408.—HAYDN M. BAKER, Washington, D. C.—*Process for Cleaning Plate-Printers' Cloths, &c.*—June 15, 1869.

Claim.—The use of soluble alkaline oleates, margarates, and stearates, for the purpose of removing printers' ink from plate-printers' cloths, in the manner substantially as herein described, for the purpose set forth.

91,409.—WILLIAM E. BEAMES, New York, N. Y.—*Cabinet for Dressing-Bureau.*—June 15, 1869.

Claim.—1. The combination of the side-acting hinges *e* and *e'* with the tilting-arrangement, in connection with the cabinet-case, when constructed substantially as described.

2. The bolt *f*, having the combined action of a bolt, when the front is closed, and pivot, on which it may be tilted when used for that purpose, the same being described and set forth.

91,410.—MYRON T. BOULT, Battle Creek, Mich.—*Machine for Carving and Ornamenting Wood-Work.*—June 15, 1869.

Claim.—The arrangement of the cutter-head C with one or more angular or curved cutters, D, adjustable gauge-plate F, and adjustable table G, with its arms H H H, roller I, and spring J, or the equivalents, all constructed substantially as shown and described.

91,411.—JOHN F. BOYNTON, Syracuse, N. Y.—*Fire-Extinguisher.*—June 15, 1869.

Claim.—1. The use of a cylinder of compressed air or gases, placed within another cylinder filled with fluids, and so arranged that, by opening the cylinder of compressed gases, they will eject the liquids from the superior cylinder by their expanding force.

2. The application of a cylinder of condensed gases or air to the outside of a larger cylinder, for expel-

ling liquids from the same, by the expansive force of the compressed gases.

91,412.—ABRAM BURKHOLDER, CORNELIUS BURKHOLDER, and HENRY K. BURKHOLDER, Clear Spring, Pa.—*Grain-Separator.*—June 15, 1869.

Claim.—1. The combination of the scoops or scrapers upon the board E, with the four rakes L, F, P, and O, when they are used in the manner and for the purpose set forth.

2. The grooved roller K, when provided with cranks for operating the shoe I, and regulating the feed to the blast, in the manner and for the purpose set forth.

3. The shaker-board G, when provided with three rakes, above, below, and upon one end, in combination with the rake F, pitman *x*, and shoe I, when arranged and operated in the manner and for the purpose set forth.

4. The fan M, in combination with the adjustable covers and weight N, when used in the manner and for the purpose set forth.

91,413.—CHARLES BURLEY, Cincinnati, Ohio. *Safety-Valve.*—June 15, 1869.

Claim.—1. The arrangement, in combination with the vessel D and pipe C, of the connecting-pipe C′, inclined while in a state of rest, as shown.

2. The tube R, inclosed within the vessel D, so as to leave the pipes C C′ free for the circulation of steam and water, substantially as set forth.

3. The combination of the loose valve F, gasket G, and collar *c*, with the pipes C C′ and vessel D, substantially as shown and explained.

4. The arrangement of the counterbalance O P, to act in connection with the pipe C′ and vessel D, substantially as described.

91,414.—JAMES W. CAMPBELL and WILLIAM J. MILLER, New York, N. Y.—*Gluing-Hopper.*—June 15, 1869.

Claim.—The gluing-hopper A, having attached to its bottom the combined guide-strip and regulator *a*, substantially as and for the purpose herein set forth.

91,415.—HORACE CARRIER, Kirtland, Ohio.—*Potato-Digger.*—June 15, 1869.

Claim.—The shovel K, endless belt Y Y, separator G, levers I and J, and drag-fork R, combined, arranged, and operating as and for the purpose set forth.

91,416.—ALANSON CARY, New York, N. Y., assignor to the AMERICAN COMPOUND TELEGRAPH-WIRE COMPANY, same place.—*Telegraph-Wire.*—June 15, 1869.

Claim.—A telegraph-wire, constructed as herein described, that is to say, having the steel core, and the strip or strips of copper, or other good electric conductor, applied thereto, and soldered in place by means of a bath of tin, substantially as set forth.

91,417.—ALANSON CARY, New York, N. Y., assignor to the AMERICAN COMPOUND TELEGRAPH-WIRE COMPANY, same place.—*Machine for Making Compound Telegraph-Wire.*—June 15, 1869.

Claim.—1. The combination of the device for folding the sheathing upon the wire with the device for drawing the compound wire, substantially as described.

2. In a machine for simultaneously grooving and twisting sheathing upon wire, the employment, in combination with the rotating device F, of die-wheels N N′, or other equivalent device, substantially in the manner and for the purpose set forth.

3. The method of making telegraph-wire by twisting about the common wire a sheathing of metallic ribbon, and drawing them both through a suitable die, in the manner specified a d own.

91,418.—JOHN F. CHASE, Augusta, Me.—*Hoop-Skirt.*—June 15, 1869.

Claim.—As a new article of manufacture, the herein-described hoop-skirt, consisting of the lower or main skirt A, having no hoops at its upper part, and the upper or flounce skirt B, the skirts A B being connected together only at the waist-band, and the skirt A being made adjustable by hooks and eyelets, substantially as described.

91,419.—FELIX CHILLINGWORTH, Springfield, Mass.—*Cartridge-Box.*—June 15, 1869.

Claim.—1. A cartridge-box, having two compartments, C and H, one above another, the lower one of which is hinged at A, and operated by means of the strap D, all constructed and operating substantially as herein described and set forth.

2. A cartridge-box, containing the compartments C H, the lower being hinged at A, the strap D, buttons E G, flap-lining L, and openings F Q, all constructed and arranged substantially as herein set forth.

91,420.—MILTON CLARK, Oakley, Ill.—*Corn-Stalk Cutter.*—June 15, 1869.

Claim.—In combination with a revolving slotted cylinder, a reciprocating knife or cutter, arranged and operated in the interior of said cylinder, and so as to strike through the slots or openings therein, substantially in the manner and for the purpose described and represented.

91,421.—LOUGHLIN CONROY, New York, N. Y.—*Breech-Loading Fire-Arm.*—June 15, 1869.

Claim.—1. The cartridge-shell extractor, constructed as described, and applied to work on a pivot in a recess in one side of the breech-receiver, and operated with a motion accelerated, with respect to that of the breech-block, by an attached pawl, H, and spring *f*, and a projection, *h*, on the breech-operating lever or breech-block, substantially as herein specified.

2. The combination of the tenons *m n* and shoulders 16, on the breech-operating lever, the swinging breech-block, the recoil-block, and the spring *q*, substantially as herein described.

3. The spring-case L, containing the main-spring, and applied to the fire-arm, substantially as herein described.

4. The sere, applied within the spring-case, substantially as herein specified.

91,422.—HENRY T. COOPER, New York, N. Y., assignor to himself and WILLIAM PITMAN, same place.—*Curtain-Fixture.*—June 15, 1869.

Claim.—The bracket A, carrying-roller *a*, slotted at *e*, and having hook *b*, in connection with pin *d* and spring *e*, said pin guiding the bracket, and supporting one end of the spring, when the parts are constructed to operate together, substantially as described.

91,423.—E. HALL COVELL, New York, N. Y.—*Apparatus for Making Light from Hydrocarbon-Liquids.*—June 15, 1869.

Claim.—1. In an apparatus for generating gas or vapor from hydrocarbon-liquids for a head-light, a tank or vessel for holding the liquid, which is inclosed in a jacket containing non-condensing material, substantially as and for the purpose set forth.

2. The employment of the shut-off cock C, with gauging stop-screw *a*, in the manner and for the purpose set forth.

3. The conical valve D, arranged in combination with and in relation to the supply-pipe C, generator *d*, and steam-chamber E, substantially as set forth.

4. The combination of the conical valve D with the gauged set-cock C′, for regulating accurately the influx of the liquid into the vaporizer, substantially as set forth.

5. The combination, with the valve D and chamber *d*, of the piston *e*, for varying the capacity of the generating-chamber by the movements of the valve, substantially as set forth.

6. In combination with the generator *d*, and the burner or burners, of the intermediate reserve-chamber H, for the gas or vapor, substantially as set forth.

7. The arrangement, in combination with the reserve-chamber H, of the steam-pipe G, for maintaining the requisite temperature of the gas or vapor, substantially as set forth.

8. The equalizing-device, consisting of the diaphragm *i i*, in the pipe I, provided with graduated openings, diminishing in size as they approach the burner, substantially as set forth.

91,424.—Daniel M. Cummings, Enfield, N. H., assignor to himself, Francis H. Wells, and Salmon R. Godfrey.—*Railway-Car Axle.*—June 15, 1869.

Claim.—1. Securing the wheel-carrying sleeve *d* to the tapering axle-end *b*, by means of the inwardly screw cut and flanged tubular coupler *c*, which acts conjointly with the screw-threads on the periphery of said sleeve, and with the radial flange *e*, on the car-axle, when the said wheel-carrying sleeve *d* extends outside the car-wheel, and forms the journal-bearing surface at that end of the axle, all substantially as herein set forth.

2. The journal-sleeve *g*, when the inner end of said sleeve extends only partially through the hub of the wheel, on that end of my improved car-axle, and is retained in its position by the severe pressure of the inner periphery of said hub upon portions of the axle and the sleeve, substantially as herein represented and described.

91,425.—J. S. H. Dickinson, Jackson, Pa.—*Harness-Tug.*—June 15, 1869.

Claim.—The perforated metallic plates *c c*, provided with oblique slots *o o*, bent arm *d*, having a projection, *m*, at its forward end, and secured to the trace C, in combination with the loop D, all arranged, constructed, and operated in the manner and for the purpose set forth.

91,426.—John Fanning, Brooklyn, N. Y., assignor to Thomas Otis Le Roy & Co., New York City.—*Mold for Casting Solder.*—June 15, 1869.

Claim.—Forming the bottom of the mold with the recess for receiving the movable bottom, that is slipped into place as set forth, and contains the letters or characters to be formed in casting upon the ingot or bar, substantially as set forth.

91,427.—A. C. Flanders, Owatonna, Minn.—*Animal-Trap.*—June 15, 1869.

Claim.—The arrangement of the incline C, arm F, spring S, staple *n*, cord R, and catch-apparatus *e* E D, when said parts are constructed to operate substantially in the manner and for the purposes specified.

91,428.—Joseph Flint, Rochester, N. Y.—*Saw-Handle.*—June 15, 1869.

Claim.—The saw-handle, formed by combining the handle A, ferrule D, slotted bolt B, with its nut *f*, when all the parts are constructed and arranged as shown and described.

91,429.—Nelson B. Forrest, Auburn, N. Y.—*Match-Boxing Machine.*—June 15, 1869.

Claim.—1. The combination of the sliding-gate M, scraper H, and plunger W, when constructed and arranged to operate substantially as and for the purposes herein set forth.

2. The arrangement of the bent arm *v*, cross-bar *z*, arms a^1 a^1, and evener e^1, all substantially as and for the purposes herein set forth.

3. The slotted carriage A′, provided with spring-boxes B′ B′ and dividers *k′ k′*, or their equivalents, in combination with the arm n^1 and the inclined l^1, substantially as described.

4. The combination of the plungers z^1 z^1, handles a^2 a^2, cross-bar b^2, sliding-bars c^2 e^2, inclined bar l^2, and slotted hinged cover E′, all constructed and arranged to operate substantially as and for the purposes herein set forth.

5. The hinged rack F^1, or its equivalent, constructed so as to receive the boxes of matches, when packed, and carry them to the place where the covers are to be placed on the same, substantially as herein set forth.

6. The combination of the frame J′, rack F^1, and plungers a^3, with the spring-boxes I′ I′ on said frame, all constructed and arranged to operate substantially as and for the purposes herein set forth.

7. The sliding-carriage G′ and sliding-plungers d^3 d^3, constructed and arranged to operate substantially as and for the purposes herein set forth.

8. The arrangement of the shaft B, pulley C′, weight D′, chains x^1 y^1, and carriage A′, all constructed and operating substantially as and for the purposes herein set forth.

91,430.—Theodore M. Fuller, Hainesville, N. J.—*Turbine Water-Wheel.*—June 15, 1869.

Claim.—1. The bucket *a*, with the rounded back and nearly tangential and vertical face, but the lower part thereof curved outward and downward, as herein set forth.

2. The arrangement of the wheel *o*, plates *l* and *h*, in their relation to the outer end of the gates *i*, and for operating said gates, as herein recited.

91,431.—John F. Gebhart, New Albany, Ind.—*Harness-Operating Mechanism for Looms.*—June 15, 1869.

Claim.—1. The combination of the eccentric cams C C and levers J J, constructed and arranged as described, and mounted upon one end of the main frame A, and above the heddle-frames K, so as to free the same from the falling dirt and dust, substantially as set forth.

2. The combination of the cross-shaft F with miter-wheel F″, vertical shaft H, with wheels G′ I, stand B, cross-shaft D, with wheels E, cams C, levers J, and frames K, all constructed and arranged upon the frame A, with its pulleys, and operating substantially as set forth.

91,432.—A. G. Good, Reading, Pa.—*Device for Raising and Kneading Bread.*—June 15, 1869.

Claim.—A bread kneading and raising apparatus, having lining A, shaft C, with its beaters, wedge E, stoppers G, and pan H, constructed, arranged, and operating substantially as specified.

91,433.—Charles H. Goss, Troy, N. Y.—*Laundry-Heater.*—June 15, 1869.

Claim.—1. A laundry-heater, with a sloping top, constructed in the form of a polygon, with concave faces or sides *e e*, substantially as hereinbefore described and specified.

2. The said sloping top, constructed in the form of a polygon, with a partition, *f*, placed in the center of each of the concave sides or faces *e e* thereof, substantially as hereinbefore described and specified.

3. The said sloping top, constructed in the form of a polygon, with concave sides or faces *e e*, in combination with the reflecting-collar G, substantially as hereinbefore described and specified.

91,434.—John D. Coxwell, Gibson, Ga.—*Guano-Distributer.*—June 15, 1869.

Claim.—The machine, constructed and operating substantially as herein described; that is to say, having the wheel C, belt J, shaft L, agitator G, with arms *e e*, hopper A, and handles E E, all arranged and combined as and for the purpose set forth.

91,435.—J. Ashton Greene, Brooklyn, N. Y.—*Mode of Attaching Rubber Tires to Wheels.*—June 15, 1869.

Claim.—The employment, in combination with the grooved felloe and rubber tire, of a metallic auxiliary tire or tires, covering the periphery of the felloe, on each side of the groove, and pinching or compressing laterally the rubber, substantially as and for the purpose shown and set forth.

91,436.—Daniel Gusweiler, Cincinnati, Ohio, assignor to himself and Jacob Hoffner, same place.—*Hot-Air Furnace.*—June 15, 1869.

Claim.—1. The combination of the fire-pot A, the air-distributer D, and diaphragm E, all constructed and arranged to operate as described.

2. The arrangement of the combustion or heat chambers G, H, and H′, and the air-chambers I, I′, and M′, with the perforated base C, all as herein shown and described.

91,437.—Cordelia C. Hall, Saratoga Springs, N. Y.—*Miniature Rink.*—June 15, 1869.

Claim.—The stellated box or chamber A, the mirrors B B, the revolving disk or table C, and the open crown *a*, all constructed and arranged as and for the purpose set forth.

91,438.—C. A. Harper, New York, N. Y.—*Velocipede.*—June 15, 1869.

Claim.—1. The combination of the jointed levers

I, arms or levers H, slides I[1], springs *a*, connecting-rod K, levers L, and ratchet-wheels G, for converting the reciprocating motion into a continuous rotary motion, substantially as and for the purpose set forth.

2. The arrangement of the swinging portion *b* of the levers L, substantially as and for the purpose set forth.

91,439.—LEVI M. HARVEY, Albany, N. Y.—*Skirt-Board and Ironing-Table.*—June 15, 1869; antedated June 4, 1869.

Claim.—The standards *b b*, curved as and for the purpose described, in combination with the hinged cross-bars *c c*, board *a a*, and stalls *d d*, the whole arranged and operating substantially as and for the purposes set forth.

91,440.—THOMAS D. HAWLEY, Detroit, Mich.—*Apparatus for Shoveling Grain.*—June 15, 1869.

Claim.—In apparatus for shoveling and conveying malt or grain, the combination of the scoop G, rope F, and clutched drum C, with the clutch *e'*, rotated by a shaft, A, and the guiding-posts H, when constructed, arranged, and operating substantially as and for the purposes herein set forth.

91,441.—CHARLES WASHINGTON HILL, New York, N. Y.—*Cornice for Curtains.*—June 15, 1869.

Claim.—A cornice composed of a backing, A, of wood or metal, and of a facing, B, of leather, muslin, or paper, as shown and described.

91,442.—A. C. HOBBS, Bridgeport, Conn.—*Cartridge-Case Charger.*—June 15, 1869.

Claim.—1. A cartridge-loader, consisting of the body or piston A, for shoving in the wads or charge, and a sliding-rod, with its pin or point *e*, for removing the cap from the shell, substantially as described.

2. The projection *l*, constructed substantially as described, for inserting the caps in the recess in the head of the shell, as set forth.

91,443.—JOHN HORTON, New York, N. Y.—*Extension-Slide for Gas-Fixtures.*—June 15, 1869.

Claim.—A gas-slide or extension-joint, composed of the outer cylinder A, inner cylinder B, slot *e*, washers *a a*, screw-plugs D D, and stem or pipe C, when used in combination with oil, or other oleaginous substance, as and for the purposes hereinbefore described.

91,444.—WILLIAM B. HUBARD, Arrington Depot, Va.—*Corn-Harvester.*—June 15, 1869.

Claim.—The combination and arrangement of the vertical beveled reciprocating knives *m*, with like stationary knives *n*, bevel gear-wheel *h*, bevel-pinion *g*, shaft F, disk G, pin *i*, slotted standard *k*, reciprocating knife-bar H, reels I, provided with arms *o*, grooves *p*, bands or ropes *q*, vertical grooved pulleys *r*, and grooved wheel J, on axle A, all arranged to operate as herein described.

91,445.—LEAVITT HUNT, Weathersfield, Vt.—*Plow.*—June 15, 1869.

Claim.—1. The employment of a vertically adjustable plow-wheel, located between the mold-board and landside, when the same is mounted in bearings suspended from or attached to the plow-beam, substantially as and for the purposes described.

2. The combination, with the mold-board and landside of an adjustable plow-wheel, located between said parts, and one or more upright friction-rolls, mounted on the landside, in the manner and for the purposes described.

4. The detachable and adjustable skeleton landside, carrying one or more friction-rolls, and applied to the share, substantially in the manner shown and specified.

4. The adjustable wheel on forward part of plow-beam, in combination with its two upright supporting-bars, vertical plate-sockets, and socket-frame, extending beneath plow-beam and bolt, or equivalent means for fixing said bars in the desired position in their sockets, as shown and described.

5. The combination of the adjustable wheel between the mold-board and landside, and the adjustable wheel forward on the plow-beam, for the purpose of raising the plow when going to or returning from the field, and of supporting plow and regulating depth of furrow while the work is in progress.

6. The combination and relative arrangement of the adjustable plow-wheel, the landside friction-rollers, and the adjustable wheel forward on the plow-beam, substantially as herein shown and set forth.

91,446.—JOSIAH B. KENDALL, Boston, assignor to himself and JAMES O. SAFFORD, Salem, Mass.—*Oil for Curriers' Use.*—June 15, 1869.

Claim.—An oil or "stuffing" for curriers' use, consisting of oleaginous and resinous substances, in combination with an alkaline solution, prepared in the manner substantially as set forth.

91,447.—JAMES J. JOHNSTON, Allegheny City, assignor to JOHN T. TYLER, A. R. HURST, HENRY M. MYERS, and DAVID M. ARMOR, Pittsburgh, Pa.—*Apparatus for Distilling Hydrocarbon.*—June 15, 1869; antedated June 12, 1869.

Claim.—1. Evolving hydrocarbon-oil into a vapor, by causing it to flow through a series of layers of charcoal, placed on inclined ways, arranged in a chamber, substantially as herein described, and for the purpose set forth.

2. Separating the lighter part of hydrocarbon-oil from the heavy part, by causing it to flow through a series of layers of charcoal, placed on a series of inclined ways, arranged in a chamber, provided with suitable means for drawing off the heavy part of the hydrocarbon-oil, substantially as herein described, and for the purpose set forth.

3. The evaporator D, provided with inclined ways 2, and pipes *f*, *e*, and 1, constructed, arranged, and operating substantially as herein described, and for the purpose set forth.

91,448.—JAMES J. JOHNSTON, Allegheny City, assignor to JOHN T. TYLER, A. R. HURST, HENRY M. MYERS, and DAVID M. ARMOR, Pittsburgh, Pa.—*Apparatus for Distilling Hydrocarbon-Oils.*—June 15, 1869; antedated June 10, 1869.

Claim.—1. Distilling hydrocarbon-oil by distributing it, through the medium of a pipe, in small jets or streams, against the inner surface of a revolving still, in which is placed a revolving shaft, armed with a spiral flange, so arranged that it will force the vapor evolved from the hydrocarbon from the still, into the condenser, as hereinbefore described.

2. The combination and arrangements of the still *g*, provided with the hollow trunnions D and D', the shaft *h*, provided with flange or wings *i*, and the pipe *k*, constructed, arranged, and operating substantially as herein described, and for the purpose set forth

91,449.—HORACE K. JONES, Kensington, Conn.—*Method of Making Carpenters' Squares.*—June 15, 1869.

Claim.—1. The method herein described of graduating squares by means of a die, sunk into a recess in a block, to preserve the shape of the square.

2. As an improved method of making squares, cutting the blank out whole from the plate, grinding it upon a revolving grindstone, and stamping the graduations upon it, by means of a recessed die, for preserving the shape of the edges, substantially as herein described.

3. The particular form, herein described and shown, of the plate from which the blanks are cut.

91,450.—ANDREW J. KENNEDY, St. Louis, Mo.—*Sad-Iron Heater.*—June 15, 1869.

Claim.—The sad-iron heater, when constructed with the shell A, having apertures *e*, partition C, having apertures *a*, and chamber D, with the gas-tube H, coil, and two or more burners, *h* and *h'*, all arranged in the manner and for the purpose set forth.

91,451.—D. A. KENNEDY, Beloit, Wis., assignor to himself, WILLIAM WADSWORTH, and E. D. MURRAY.—*Oven.*—June 15, 1869.

Claim.—1. The combination, with the rotating-table A, of the hand-wheel A', shaft B, wheels C and

D, braces H, and supports F, when all arranged substantially as specified.

2. The combination, with the rotating-table and the oven, of the water-tube K, when arranged to form a track for the table, as herein described, for the purpose specified.

3. Impregnating bread or other articles, while baking, with aromatic or other flavor, by means of aqueous vapor or steam generated in the presence of flavoring substances, substantially as specified.

91,452.—WILLIAM KNAUS, Otterville, Mo.—*Nail-Extractor.*—June 15, 1869.

Claim.—The implement herein described, consisting of the fulcrum-plate B, the hook C, and lever A, all constructed and arranged as set forth.

91,453.—GEORGE KNELL, Moorestown, N. J.—*Combination of Rocker, Sled, and Swing.*—June 15, 1869; antedated June 8, 1869.

Claim.—1. A frame, consisting of side-pieces A and A′, and of cross-pieces B and B′, so constructed and arranged as to form, when properly adjusted, a rocker, a sled, or the base of a swing, substantially as herein described.

2. In combination with the above, the seat F, having hinged arms *i i*, arranged to be fastened together, and a projection, *a*, on its under side, for attachment to the cross-piece B, or to a swing, substantially as and for the purpose described.

91,454.—GOTTLEIB LANGE, East Saginaw, Mich.—*Churn-Dasher.*—June 15, 1869.

Claim.—In churn-dashers, the tubes B, in connection with the disks A and handle C, when constructed and operating substantially as described.

91,455.—C. W. LANGWORTHY, Bergen, N. J.—*Roofing-Paint.*—June 15, 1869.

Claim.—The composition herein described, when compounded of the ingredients substantially in the manner herein specified.

91,456.—WILLIAM LAUVER, Peru Mills, Pa.—*Horse-Power.*—June 15, 1869.

Claim.—1. The counterbalance K or K′, applied in connection with a sun and planet wheel, substantially as shown and described.

2. The combination and arrangement of the horizontal wheel A, vertical miter-wheels E H, sun and planet wheels F J L, and E *e* N *n*, shafts G *m* Q, and arms I M, all constructed, combined, and adapted to operate in connection with each other, in the manner and for the purposes set forth.

91,457.—THOMAS S. LINES, Newcastle, Ind.—*Wind-Wheel.*—June 15, 1869.

Claim.—1. The frame A B C D, with cross-beams E F, cross-heads G, rod O, axle H, balance-wheel Z, supported by rods M M′ M″ M‴, when combined and used with wind-wheel W W′ W″ W‴, substantially as and for the purposes set forth,

2. The guides Q Q′ Q″ Q‴, in combination with the frame A B C D, and the other parts of said machine, when used in combination with wind-wheel W W′ W″ W‴, substantially as and for the purposes set forth.

91,458.—R. O. LOWREY, Salem, N. Y.—*Fabric from Fibrous Sheets and Hard Rubber.*—June 15, 1869.

Claim.—Covering and uniting paper, woven fabrics, wood, and similar materials, with a hard-rubber compound, and submitting them to the vulcanizing process, substantially as herein described, and for the purpose set forth.

91,459.—S. C. MAINE, Boston, Mass.—*Fire-Extinguisher.*—June 15, 1869.

Claim.—1. The self opening and closing valve *v*, constructed and operating substantially as described.

2. The combination of chambers A, B, C, D, and E, and valves *v v′ v″ v‴*, as and for the purpose described.

3. The combination of the chambers A B C D E, valves *v v′ v″ v‴*, cocks H I J G, and pipes F and F′, substantially as set forth.

4. The combination of chambers A, B, C, D, and E, with covers *a a′ b c d e*, or their equivalent, valves *v v′ v″ v‴*, cocks H I J G and K M N L, induction-pipe F, with branch-pipe F′, pipe S′, cock P, outlet R, with cock R′, and air-chamber Z, all constructed and operating relatively to each other, substantially as and for the purpose set forth.

91,460.—M. W. MARSHALL, Hudson, Mich.—*Skate.*—June 15, 1869.

Claim.—1. The shaft D, which has one or more slots in its end, a screw-thread and ratchet upon its surface, and one end so formed as to be used as a thumb-screw, substantially in the manner and for the purpose specified.

2. The screw-shaft D and strap C, constructed and arranged as described, for the purpose of fastening the skate to the foot, substantially as herein set forth.

3. In combination with the screw-shaft D and strap C, the clamp B, working on the same shaft, substantially as and for the purposes herein set forth.

91,461.—WILLIAM MARTIN, Bay City, Mich., assignor to himself and HIRAM B. EVERETT, Washington, D. C.—*Sawing-Machine.*—June 15, 1869.

Claim.—The arrangement of the curved feed-spring L, provided with a loop or slide, K, at its forward end, to which the saw-frame I is attached, arm J, levers F F″, and crank C, all constructed and operated in the manner and for the purpose set forth.

91,462.—ARNOLD P. MASON, Gowanda, N. Y., assignor to himself and ZALMON HANFORD, same place.—*Horse-Fetter.*—June 15, 1869.

Claim.—The combination of the nose-band *a*, martingale *b*, shear *d*, cord *e*, and boots *l*, as and for the purpose set forth.

91,463.—A. P. MASON, Gowanda, N. Y., assignor to himself and ZALMON HANFORD, same place.—*Bridle-Bit.*—June 15, 1869.

Claim.—The combination of the bit A, provided with one round and one angular side, with the double rings B, as and for the purpose described.

91,464.—A. B. MATTOON, Auburn, N. Y.—*Coulter-Cleaner.*—June 15, 1869.

Claim.—The combination of the clearing-arm D and wheel B, when constructed and arranged to operate substantially as herein described, for the purpose specified.

91,465.—W. W. MAUGHLIN, Baltimore, Md.—*Sash-Fastener.*—June 15, 1869.

Claim.—1. A sash-fastener, adapted to move horizontally, and furnished with clamping-lugs, to hold the sash independently of the beads.

2. The latch or fastener B, provided with the holding-lugs or ears b^2 b^2, and slotted boss or head B′, constructed and operating substantially as described.

91,466.—FERDINAND F. MAYER, New York, N. Y.—*Manufacture of White Lead.*—June 15, 1869.

Claim.—Producing pyroligneous acid for the manufacture of white lead, by treating pyroligneous acetates with phosphoric acid, or phosphates having an acid reaction, substantially as described.

91,467.—DAVID MCCURDY, Ottawa, Ohio.—*Churn-Power.*—June 15, 1869.

Claim.—In churn-powers, the combination of the semi-circular recessed clip L, provided with a thumb-screw, *l*, with the connecting-rod K, wrist J, slotted balance-wheel H, pinion G, internally geared wheel E, crank *e′*, standard D, tripod A, A′, and B, cross-tie C, notched latch *c*, button *c′*, and dash-rod M, when constructed, arranged, and operating as herein described, and for the purpose specified.

91,468.—THOMAS MCEWEN, Chicago, Ill.—*Rotary Steam-Engine.*—June 15, 1869.

Claim.—A rotary steam-engine, consisting of the case, with the chamber D, the disk *c*, with the piston or wing *b*, and the sliding-head E, operated by the elbow-lever J, yoke I, and cam H, all arranged substantially as described.

91,469.—Albert K. McMurray, Utica, N. Y.—*Rocking-Chair.*—June 15, 1869.

Claim.—The combination and arrangement of the reverse rockers A and B, the springs D D, and the part E, when the latter is arranged to turn down for use as a footstool, or to turn up, and form a rest for the front edge of the chair-seat, and prevent the same from rocking, substantially as and for the purposes herein specified.

91,470.—O. H. Melendy, Delhi, Iowa.—*Revolving Show-Case.*—June 15, 1869.

Claim.—The outer case A, which has its top formed with separated glass sections, G G, and a hinged door, C, in combination with the inner revolving-box B, which is divided into separate chambers, and with the spindle E, which extends up through the top of case A, and serves as a means by which to turn box B, all in the manner and for the purpose described.

91,471.—A. D. Michener and J. W. Steigmeyer, Attica, Ohio.—*Corn-Plow.*—June 15, 1869.

Claim.—1. Adjusting the movable side-beams of a plow, by means of the handles, substantially as herein set forth.

2. The combination of the adjustable side-beam D, plate G, ears *b b*, and handle H, all substantially as and for the purposes herein set forth.

3. The arrangement on the under side of the handle H of the pawl *c*, spring *d*, rod *e*, and thumb-piece *f*, all substantially as and for the purposes set forth.

4. The combination of the center-beam A, side-beams D D, plates F and G, and handles H H, all constructed and arranged to operate substantially as and for the purposes herein set forth.

91,472.—William D. Miller, Enon, Ohio.—*Plow.*—June 15, 1869.

Claim.—1. A plow mold-board, constructed upon the principle and in the manner substantially as set forth.

2. The lug M and groove N, in combination with the cutter L′ and post E, as set forth.

91,473.—Fisk Mills, Washington D. C., assignor to himself, Marcus P. Norton, Troy, N. Y., and George H. Penfield, Hartford, Conn.—*Postal-Currency Envelope.*—June 15, 1869.

Claim.—1. A postage-stamp envelope currency, constructed, arranged, and combined in the manner and for the purposes substantially as herein described and set forth.

2. A postage-stamp, folded into an envelope of the requisite size to receive letters for mailing, and having the postage-stamp so printed, and impressed, and arranged thereon, that it shall be canceled in the manner and by the means substantially as herein described and set forth.

91,474.—Henry Moule, Fordington, and Henry John Girdlestone, London, England.—*Deodorizing-Apparatus for Water-Closets.*—June 15, 1869.

Claim.—1. The oscillating hopper A, the chucker C, upon the oscillating shaft D, the shelf C′, pivoted lever F, and handle G, combined to operate within the case, substantially as described, for the purpose specified.

2. The oscillating hopper A, the chucker C, upon the oscillating shaft E, and the weighted levers, in combination with each other, and the hinged seat, substantially as described, for the purpose specified.

91,475.—Anton Müller, Brooklyn, N. Y.—*Construction of Hot-Water Boilers.*—June 15, 1869.

Claim.—The arrangement of an inwardly projecting flange, *a*, and bead *b*, at the ends of the body A, in combination with the head B, substantially as shown and described.

91,476.—John Murphy and Albert H. Hook, New York, N. Y.—*Machine for Making Rubber Hose, &c.*—June 15, 1869.

Claim.—1. A machine for making hose and similar articles, constructed and combined substantially as described.

2. Rolling the mandrel and cloth between two surfaces, one or both of which are covered with elastic material.

91,477.—Henry M. Myers, Allegheny City, Pa.—*Method of Coating Hinges with Tin.*—June 15, 1869.

Claim.—Coating hinges with tin, as herein described, and for the purpose set forth.

91,478.—Isaiah Nutt, New York, N. Y.—*Machine for Refitting Conical Valves.*—June 15, 1869.

Claim.—The combination, with the adjustable center C, and stationary concave B, constructed smooth on its interior, to form a rest and guide for the valve of the sliding-cutter E, arranged to project through a slot, *a*, in the concave, substantially as specified.

91,479.—Anton Ochsner, New Haven, Conn.—*Combined Latch and Lock.*—June 15, 1869.

Claim.—1. The spring-plate Q, pivoted on the bolt A, in combination with the two-armed nut E, substantially as described.

2. The combination of the sliding-bolt A H H with lips G G′, the nut E, with arms F F, on the spindle D, the pivoted spring-tumblers L, with notch T and stops O O′, the stop N, and pivoted spring-plate Q, all constructed and arranged substantially as described, to operate either as a night-lock, a knob-door-latch, or as a positive, or dead-lock, as set forth.

91,480.—John Pickles, Wigan, England.—*Manufacture of Paper.*—June 15, 1869.

Claim.—The manufacture of paper-pulp from the materials and by the process substantially as herein described.

91,481.—Merritt F. Potter, Kaneville, Ill.—*Milk-Cooler.*—June 15, 1869.

Claim.—1. The air-tight spreading-chamber and feeding and discharging pipes F G, the whole operating as a siphon, for conducting the cooling-liquid through and discharging it from the can or other vessel containing the liquid, to be cooled automatically.

2. The spreading-chamber, in combination with the tube B and milk can or vessel, as set forth.

91,482.—George Pye, Boston, Mass.—*Harvester.*—June 15, 1869.

Claim.—1. A mowing-machine, having a cam-wheel, E, attached to one of the driving-wheels, in combination with the rocking-lever I, elbow-lever G, rod H, and lever *l*, all constructed and arranged as herein described.

2, The drag-bar J, hinged to the main frame, and having the lever *l*, that operates the sickle, pivoted thereon, and the finger-bar L hinged thereto, as herein set forth

3. The slotted plate R, set at an angle on the frame A, and held in place by the lug *g* and bolt *h*, for holding and adjusting the rocking-lever I, as herein described.

91,483.—Peter Regitz, Chicago, Ill.—*Hopper-Cock.*—June 15, 1869.

Claim.—The combination of the shell A, ground valve F, stem E, washers G and H, nut J, lever M, weight N, and standard and projection L, when arranged and operating substantially as and for the purposes herein set forth and shown.

91,484.—George Rehfuss, Philadelphia, Pa., assignor to the American Button-Hole Over-Seaming and Sewing-Machine Company, same place.—*Sewing-Machine Work-Plate.*—June 15, 1869.

Claim.—1. The detachable work-plate B, having two ips one catching beneath a projection on the base-plate of the machine, and the other adapted to a projection on a pin, *f*, turning in the base-plate, and provided at the lower end with a handle or its equivalent, substantially as and for the purpose described.

2. The plate B, with its lip *e′*, bent and adapted to a projection on the base-plate, for the purpose specified.

91,485.—Dexter Reynolds, Albany, N. Y.—*Evaporating-Apparatus.*—June 15, 1869.

Claim.—1. The straps *a* and sockets *c*, with their removable pins *i*, for the purpose of joining two boxes together, and of separating them, when desired, substantially in the manner described.

2. The evaporating box or boxes, with their pipes, cases, tubes, or receptacles for steam, when constructed and adjusted as herein described, so as to utilize the heat of the steam from a liquid in a primary vessel or vessels subjected to heat, for the purpose of heating in such box or boxes, or concentrating by evaporation further liquid of the same or similar character, in combination with any suitable mechanical device for raising it or them vertically, or removing it or them horizontally from such primary vessel or vessels, in order to have access to such primary vessel or vessels, or their surroundings, for any purpose whatever.

3. The evaporating box or boxes, with their pipes, cases, tubes, or receptacles for steam, when constructed and adjusted substantially as described, so as to utilize the heat of the steam from liquid in a primary vessel or vessels subjected to heat, for the purpose of heating in such box or boxes, or concentrating by evaporation further liquid of the same or similar character, when such box or boxes are placed vertically over, or under, or diagonally from a primary vessel or vessels subjected to heat, in combination with a cover or covers to such primary vessel or vessels, or such parts thereof not covered by such box or boxes, opening or removable, or both, so as to have access to such primary vessel or vessels, and its or their surroundings, for any purpose whatever, with a communication, by pipes or otherwise, for the passage of steam from under such cover or covers, either through, back, under, or aside from it or them, to one end or any part of the pipes, cases, tubes, or receptacles for steam in such box or boxes, through which heat is to be transmitted to the liquid surrounding it or them, substantially in the manner and for the purposes set forth.

91,486.—Percival Roberts, Philadelphia, Pa.—*Method of Constructing Piles for Forming Axles, &c.*—June 15, 1869.

Claim.—A pile or fagot, (for axles and shafting,) composed of flat bars and layers of square bars, arranged alternately, substantially in the manner and for the purpose herein set forth.

91,487.—James Roberts, White Pigeon, Mich.—*Potato-Digger.*—June 15, 1869.

Claim.—1. The intermittent rotating rim-wheels P, provided with the grated scoops Q, main shaft R, ratchets O, rocker-arms N, and pin M, when arranged and operating substantially as described, for the purpose specified.

2. The oscillating grated drum S, provided with the internal grated drum U, door T, and pallet X, when arranged and operating substantially as described, and for the purposes herein set forth.

3. The standards G, main journals F, adjusting-screws H, and pawls I and J, as and for the purpose set forth.

4. The vibrating grated apron W and cam-lever Y, when arranged and operating substantially as described, and for the purpose specified.

5. The slotted connecting-rods L, cranks K, ratchets E, and pawls D, substantially as and for the purpose set forth.

6. The combination and arrangement of the above-named parts with the frame A, wheels C and B, excavator Z, shaft 2, lever 3, and quadrant 4, when operating and used substantially as herein described and for the purpose described.

91,488.—William S. Ryerson, New York, N. Y., assignor to himself, Amos L. Tripp, and Charles Chambers, same place.—*Boat-Detaching Apparatus.*—June 15, 1869.

Claim.—The slings *a a*, connected together, so as to be hung from the blocks or fall, in combination with the shaft *e*, hooked ends *e'*, and lever *k*, substantially as and for the purposes set forth.

91,489.—Henry C. Shafer, Petersburgh, Ind.—*Corn-Planter.*—June 15, 1869.

Claim.—The arrangement of the frame A, wheels B and C C, seed-boxes D, lever E, spring F, slides G G, and slotted scrapers H, all substantially as specified.

91,490.—Christian Sholl, Mount Joy, Pa.—*Sash-Holder.*—June 15, 1869.

Claim.—A metallic box, D, with or without its side flange, E, having a V-shaped guide, G, at top, and pin H below, that holds the spring J and angular plate K, which has its V-shaped notch at top, working on the guide G and pin-lock C at one end, and button M on the other end, all arranged and operated substantially as described and set forth.

91,491.—De Witt Stevens, Newark, N. J.—*Ash-Sifter.*—June 15, 1869.

Claim.—A reversible inclined sieve, with inclosed spaces above and below the screen, with guide and central dust-proof vent, substantially as constructed, for the purposes set forth.

91,492.—Solomon Stevens, Terre Coupee, Ind.—*Bee-Hive.*—June 15, 1869.

Claim.—1. The base, constructed as described, with an opening for the admission of robbers, in the front, and a passage through; the bottom being closed with a slide, substantially as set forth.

2. The combination and arrangement of the base, constructed as described, with a bee-hive, having openings *u* and chambers *h*, when constructed substantially as specified.

91,493.—Charles H. Swain, Brooklyn, N. Y.—*Smelting-Furnace.*—June 15, 1869.

Claim.—The arrangement of the retorts in the sides of the furnace, with pipes leading from them, and conveying the vaporized fluid to the inside of the furnace, or under the bottom of the same, and mixing it with the oxygen of the air through the openings at G' G', and driving the combined gas and oxygen into and up through the ores to be smelted.

91,494.—Andrew J. Taylor, Manchester, Ind.—*Potato and Corn Planter.*—June 15, 1869.

Claim.—1. The machine described, consisting of the frame A, standards B B', platform C, rock-shaft D, and slides F and H, when combined and arranged as and for the purpose described.

2. The slide F, constructed and arranged as described, in combination with perpendicular knife C^1 and springs C^2, as described.

3. The above-described arrangement, in combination with slides H, and knife H^2, and hopper I, substantially as and for the purpose set forth.

91,495.—Henry H. Tift, Mystic, Conn.—*Baling-Press.*—June 15, 1869.

Claim.—In an upright toggle-lever baling-press, the trunnions or bearings *c*, projecting from the nuts F F of the right and left hand screw G, in combination with the guides I, on which the trunnions or bearings *c* rest, all being arranged to operate in the manner substantially as and for the purpose set forth.

91,496.—L. Trowbridge and W. H. Trowbridge, New York, N. Y.—*Gas-Stove.*—June 15, 1869.

Claim.—1. The combination of the tube or section C and rod *e*, between the point B, or the point A and the point D, at the outside of the frame-work, for the purpose of removing the packing-cap D and thumb-piece E beyond the reach of the heat, substantially as and for the purpose described.

2. The combination and arrangement of burner A, pipe C, packing-cap D, and thumb-piece E, substantially in the manner and for the purpose set forth.

3. The ducts L L, the convexity for ignition *z z*, and escape-opening *o*, in combination with the rim M, substantially in the manner and for the purpose described.

91,497.—Seth G. Tufts, Maineville, Ohio.—*Reversible Cultivator.*—June 15, 1869.

Claim.—1. The provision, in a hand or other cultivator, of the double-ended sheth or standard C, substantially as and for the purposes designated.

2. In combination with a double-ended sheth, the reversible-handle E, substantially as set forth.

3. The cross-bar G, cheeks *g*, and bolt I, or their equivalents, in the described combination with the reversible handle E.

91,498.—JOHN TURNER, Norwich, Conn.—*Machine for Making Covered Cord.*—June 15, 1869

Claim.—1. The combination, in a machine for making covered cord, of two or more strand-carrying devices, which do not twist the strands, covering-devices for each strand, and laying-devices, whereby the strands are covered, and all subsequently laid into cord, substantially as herein described.

2. The strand-carrying bobbins, in combination with the laying-spindle, and with the spindles E E, occupying a fixed relation to the laying-spindle, and arranged in line with the axis of the covering-spindles, substantially as herein specified.

91,499.—JOHN T. TYLER, Pittsburgh, and JAMES J. JOHNSTON, Allegheny City, assignors to JOHN T. TYLER, A. R. HURST, HENRY M. MYERS, and DAVID M. ARMOR, Pittsburgh, Pa.—*Apparatus for Making Gas from Hydrocarbons.*—June 15, 1869; antedated June 12, 1869.

Claim.—1. Making a fixed gas from the lighter products of hydrocarbon-oil, by causing it to flow through a series of layers of charcoal, placed on inclined ways, arranged in a gas-generating chamber, provided with a supply and exit pipe, said chamber being subjected to heat, substantially as herein described, and for the purpose set forth.

2. A series of layers of wood-charcoal, or its equivalent, when used in combination with the inclined ways 2, or their equivalent, arranged within the gas-generating chamber D, as herein described, and for the purpose set forth.

91,500.—ALEXANDER VAIL, Henry, Ill.—*Whiffletree.*—June 15, 1869.

Claim.—The double-tree E′, single-trees F F, pulley E, and chain D, in combination with the pivoted lever B, provided with adjustable hooks *b b*, and single-tree C, all constructed, arranged, and operated in the manner and for the purpose set forth.

91,501.—WILLIAM J. WALLIS and WILLIAM E. HUTTMANN, Chicago, Ill.—*Harvester.*—June 15, 1869.

Claim.—1. The combination of the pivoted rake F, operated by the shaft A and cam G, with the circular incline E and endless belt D, all constructed and arranged to operate substantially as and for the purpose set forth.

2. The hinged platform H, attached to the main platform, and supporting the binding-table K, and binders' seats *s*, as arranged and described.

91,502.—JOSEPH WEIZENECKER, St. Louis, Mo.—*Wine and Cider Press.*—June 15, 1869.

Claim.—The pressure-head E, formed of the parts *e*, e^1, e^2, e^3, e^4, and e^5, when combined with the box D, formed with sides *d*, perforated as shown at d^1, and beveled slats d^2, substantially as set forth.

91,503.—CORNELIUS WHITEHOUSE, Bridgetown, near Cannock, England.—*Process for Making Augers and Boring-Bits.*—June 15, 1869.

Claim.—The manufacture of augers, boring-bits, and other similar tools by the process or combination of processes hereinbefore described, and illustrated in the accompanying drawing; that is to say, making the said augers, boring-bits, and other similar tools, by first casting them of steel or iron, and subsequently softening or annealing the same, bending and shaping into the required form such parts as could not be conveniently cast of the required form, and finally hardening and finishing the said tools, substantially as described and illustrated.

91,504.—HIRAM L. WILCOX, Percival, Iowa.—*Process of Tanning Hides.*—June 15, 1869.

Claim.—The above-described process for tanning hides, substantially as herein set forth.

91,505.—JAMES R. WOOD, Providence, R. I., assignor to CHARLES G. TAFT, Jr., same place.—*Butchers' Steel.*—June 15, 1869.

Claim.—The improved butchers' steel, herein described, with its cross-cut teeth, manufactured in the manner and for the purposes specified.

91,506.—BENJAMIN C. ATKINSON, Newburyport, Mass.—*Steam-Condenser.*—June 22, 1869; antedated June 8, 1869.

Claim.—The arrangement of the hot well B, pipes *b* and *d*, exhaust-pipe E, and pump H, with reference to the condenser A, and pipes C and D, substantially as described and specified.

91,507.—LLOYD E. BALDWIN, Windham, Conn., assignor to the CONNECTICUT RIVER QUARRY COMPANY.—*Stone-Sawing Machine.*—June 22, 1869.

Claim.—1. The adjustable bed or carriage, running upon the tracks *i i*, being a combination of the truck-wheels a^1 a^1, beams b' b', cross-beams e' c', with the duplicate racks *z z′* attached thereto, and gearing into the gear-wheels *y y′*, tracks o^1 o^1, truck-wheels e' e', beams x^1 x^1, fixed top-beams m^1 m^1, and sliding top-beams m^2 m^2, containing one or more leveling-screws, i^3, the whole constructed and operating substantially as described, and applied to a machine for sawing stone or other material.

2. The combination of machinery herein described, for producing an adjustable feed-motion of the adjustable bed, consisting of the cone-pulleys *g* and *j*, with the connecting-belt *f*, shaft *v*, worm *p* upon shaft *n*, the worm-wheel *l*, reversing-clutch *s′*, loose wheel E, shaft *m*, worm *p*, worm-wheel *r*, shaft *n*, pinion *w*, and its duplicate gear-wheels *y* and *y′*, and the racks *z* and *z′*, all constructed and operating substantially as described, for the purposes described.

3. The combination of the parts mentioned in the first and second claims, with the shaft *n*, belt-wheel *o*, belt *e*, belt-pulley *d*, shaft *a*, and a saw, B, composed of an iron or steel plate, with or without teeth, or of copper or other suitable material, with diamonds or other hard precious stones imbedded in the edge, and acting as teeth, the whole constructed and operating substantially as described, and applied to sawing stone or other materials.

4. The leveling-screws i^3, more or less in number, in combination with the adjustable bed, constructed and operating as described, for the purposes described.

5. The combination of the adjustable bed and the several devices for producing feed-motion in a stone-sawing machine, as specified in claim second, substituting, if desirable, a screw and bevel-gear wheel in lieu of the rack and pinion on shaft *n*, substantially as described.

91,508.—J. H. BEAN, Marietta, Ohio, assignor to himself, ABRAM PRATT, and JAMES A. TENNEY.—*Heel-Cutter.*—June 22, 1869.

Claim.—1. The bent lever E, with its slot *b*, in combination with set-screw *b′* and shaft C, as and for the purpose described.

2. The lever E, when provided with the hinged tongue e^2, substantially as described.

91,509.—CHAUNCEY N. BENNETT, Cincinnati, Ohio, assignor to himself and A. T. BENNETT.—*Coal-Stove.*—June 22, 1869.

Claim.—1. The register D′, substantially as and for the purpose described.

2. The register D, substantially as and for the purpose described.

3. The combination of registers B and D′, substantially as and for the purpose described.

4. The combination of register D′ and foot-rest A, substantially as and for the purpose described.

5. The combination of registers B and D′, and foot-rest A, substantially as and for the purpose described.

91,510.—GEORGE BERGNER, Washington, Mo.—*Velocipede.*—June 22, 1869.

Claim.—A velocipede, combining the wheels E, E′, and F, pinions *o o′*, cogs 1, 2, 3, &c., adjustable stirrups *k k′*, concentric wheels A and B, provided with friction-rollers *a* a^1 a^2 a^3, and seat H, all constructed, arranged, and operated substantially as and for the purpose shown and specified.

91,511.—Henry Blundell and John McWilliams, Providence, R. I.—*Screw-Press.*—June 22, 1869.

Claim.—1. Forming an anti-friction female screw or nut of a screw-press, by pouring the melted alloy or anti-friction metal around the screw, and into a chamber inclosing it, formed in the manner described.

2. The combination of the plunger E, slides D D, and frame J, substantially as described.

91,512.—Robert Briggs, Philadelphia, Pa.—*Machine for Shearing Metals.*—June 22, 1869.

Claim.—1. Combining, with the plain and spleened shaft and the cutters, the screw-threaded sleeves, for the purpose of adjusting said cutters, substantially as described.

2. The guard-rollers, or their equivalent, back of the cutters of shears, such as are used for slitting or trimming plates, in combination with elevating-guards, to carry the contiguous strips or shearings above the rollers, for the purpose of causing the plate to pass straight through the shears, substantially as described.

91,513.—Albert Brisbane, New York, N. Y.—*Pneumatic Tube for Transporting Goods.*—June 22, 1869; antedated June 11, 1869.

Claim.—The combination of hollow spheres and cylinders with pneumatic tubes, arranged and operating substantially as and for the purpose herein described.

91,514.—Thomas W. Brown, Reading, Pa.—*Grindstone-Journal Box.*—June 22, 1869.

Claim.—The improved manufacture of grindstone-journal box, as made with the friction-wheel bearings and journals and journal-abutments arranged wholly within the oil-receptacle, and with the bearings projecting inward from its opposite sides, in combination with the cover, arranged and constructed so as, when shut down upon the oil-receptacle, it shall close it, and extend over the wheels, their bearings, journals, and journal-abutments, in manner substantially as above described, and as represented in the accompanying drawings.

91,515.—Henry I. Brunner, Nazareth, Pa.—*Boiler-Feeder.*—June 22, 1869.

Claim.—The arrangement of the transversely perforated valve E, in relation to the supply-pipe F and pipes C and D, respectively communicating with the steam and water spaces of the boiler A, substantially as herein specified.

91,516.—Abner H. Bryant, Philadelphia, Pa.—*Pocket for Egg-Carriers.*—June 22, 1869; antedated June 8, 1869.

Claim.—A pocket, constructed in the manner herein described and shown, to accompany and be used with devices for transporting eggs.

91,517.—William M. Bush and Thomas B. Richards, Cincinnati, Ohio.—*Base-Burning Stove.*—June 22, 1869.

Claim.—1. The register K, passage X, formed by the magazine A and drum D, in combination with the series of holes L, substantially as shown and described.

2. The combination of a perforated door, G, with an outer door, F, containing a mica panel, substantially as shown and described.

3. The passage X, formed by the magazine A and drum D, in combination with the series of holes L and plate V, substantially as shown and described.

4. The combination of the magazine A and the series of holes L, all as shown and described.

5. The exit-flue H, placed in pipe E′, in any position between the chambers S and T, as and for the purpose described.

6. The damper I, arranged in pipe E′ relative to exit-flue H, as and for the purpose described.

91,518.—Joseph Busser, Troy, Ohio.—*Wooden Wall for Buildings.*—June 22, 1869.

Claim.—1. The construction of the inner surface of a plank wall, which has its planks laid flatwise of tenons *b*, and crossing-strips *c*, substantially as and for the purpose described.

2. The beveled and grooved planks A, in combination with the interposed strips B B′ and horizontal chambers C, substantially as and for the purposes described.

91,519.—W. E. Canedy, Wauconda, Ill.—*Stove-Pipe Shelf and Drier.*—June 22, 1869.

Claim.—The combination of a rotating shelf, R, provided with a hinged leaf, B, with the drying-oven D, provided with a grated bottom, J, and the pivoted support K, provided with slots *f*, for supporting arms P, and so cut away on the side *g* as to allow the leaf B to fall down, when the support is turned on its pivot *l*, as set forth.

91,520.—Addis E. Chamberlain and J. B. Crowley, Cincinnati, Ohio, assignors to Addis E. Chamberlain, O. N. Bush, and Franklin V. Chamberlain.—*Cooking-Stove.*—June 22, 1869.

Claim.—1. The combination of the standards V V and pendants C C, as and for the purpose described.

2. The forked pieces G G, with the pins H H, as and for the purpose described.

3. The adjusting of the grates A and B, so that both will be operated, as described, by the same motion.

4. The pan E, containing the grate A, reversible in the stove, as and for the purpose described.

5. The chamber O′ and the series of holes O O, as and for the purpose described.

6. The combination of the plate O and box N, as and for the purpose described.

7. The vertical partition R′, as and for the purpose described.

8. The pan S, as and for the purpose described.

9. The shoulders *f f*, at right angles to each other on the handle D′, as and for the purpose described.

91,521.—Joseph Chisholm, Boston, Mass.—*Ash-Sifter.*—June 22, 1869.

Claim.—1. Controlling the action of the yielding supplementary side I, of the hopper H, by the use of the spring J, arranged and operating substantially as described.

2. The general arrangement and combination of the movable inclined sieve D, receptacles B and C, inclosed in the case A, and the hopper H, provided with the yielding supplementary side I, substantially as described.

91,522.—John F. Collins, New York, N. Y.—*Liquor-Thief.*—June 22, 1869.

Claim.—An instrument for sampling fluids, consisting of the tube A, ring E, rod F, perforated plug G, valve H, combined, constructed, and operated substantially as described and set forth.

91,523.—Patrick H. Coyle, Newark, N. J.—*Steam-Generator Flue-Brushes.*—June 22, 1869.

Claim.—The combination, with the boiler-flue brushes, of a guard to guide the brush back into the flue after having been pushed through, substantially as set forth.

91,524.—Achibald C. Crary, Utica, N. Y.—*Steam Device for Warming Railroad-Cars, and other Purposes.*—June 22, 1869.

Claim.—1. The combination and arrangement of the steam-car, and the enginery pertaining thereto, when constructed substantially as herein set forth.

2. The steam-generator and its mechanical devices, when disconnected from the locomotive, and constructed substantially as herein set forth.

3. The arrangement of the eccentric and its immediate devices, whereby to operate the pump of the steam-generator, substantially as herein described.

91,525.—Isaac Crum, West Chester, Ohio.—*Harrow.*—June 22, 1869; antedated June 8, 1869.

Claim.—The arrangement of the sections A B C, for transportation from place to place, by reversing the position of the harrow upon the ground, and folding the sections, in the manner described.

91,526.—James G. Divoll, Sonora, Cal.—*Meat-Cutting Machine.*—June 22, 1869.

Claim.—1. The eeeentrie ehopping-knives B B, revolving in opposite direetions upon the parallel shafts *a a'*, and operated by gearing eonneeted with the driving-wheel E, substantially as and for the purpose described.

2. The ehopping-ease L, moving from end to end of the frame, and having the eeeeutrie ehopping-knives B B revolving and eutting from side to side, substantially as and for the purpose herein deseribed.

3. The eombination of the endless serew *h*, toothed wheels H and K, and eonneeting-rod *m*, or an equivalent deviee, reeeiving their motion from the driving-wheel E, substantially as and for the purpose above deseribed.

91,527.—Thomas A. Edison, Boston, assignor to Joel H. Hills and William E. Plummer, Newton, Mass.—*Printing-Telegraph.*—June 22, 1869.

Claim.—The two eleetro-magnets B E, plaeed within the same eireuit, one for operating the type-wheel, the other for operating the printing-hammer, in eombination with a "polarized relay," whieh forms an automatie switeh, whereby either one of the eleetro-magnets may be brought into aetion, and the other cut out of the eireuit by the reversal of the current, substantially as and for the purpose deseribed.

91,528.—Stephen Elliott, Richmond, Ind.—*Door-Spring.*—June 22, 1869.

Claim.—The stationary eireular rod E, attaehed at both ends, with its supporter D, when used to eontraet the spring, in eombination with spring D and plates F F, as eonstrueted and shown, for the purpose set forth.

91,529.—William H. Emerson, Dixon, Ill.—*Dish-Washer.*—June 22, 1869.

Claim.—1. The rotating eylinder B F C^2, provided with doors D, in eombination with removable dish-holders L M G H I, and S *b* T, as set forth.

2. The eombination of the eylinder B F C^2, earrying the dish-holders, with the ease A, as and for the purpose deseribed.

3. In eombination with the eylinder B F C, the buekets E, for eonduetiug eurrents of water on to the dishes in the holders, as deseribed.

91,530.—Henry W. Farley, Oswego, Ill.—*Lightning-Rod.*—June 22, 1869.

Claim.—The applieation of one or more wires or strips of eopper or other metal possessing superior qualities as eonduetors of eleetrieity, within the angles or grooves of a eorrugated iron rod, substantially as and for the purpose shown.

91,531.—Michael Feigel, New Utreeht, N. Y.—*Mortising-Chisel.*—June 22, 1869.

Claim.—The mortising-ehisel A, provided with the eutting-blade E, projeeting obliquely from near the middle of the baek thereof, and operating as and for the purpose herein speeified.

91,532.—Henry J. Ferguson, Manehester, N. J.—*Compound Railroad-Rail.*—June 22, 1869; antedated June 7, 1869.

Claim.—1. The eompound rail, eonsisting of the longitudinally divided web A, flanged base-plate B, and flanged and dovetailed head C, the whole eonstructed, arranged, and eombined substantially as herein shown and deseribed.

2. The dovetailed tongue *g*, and flanges *c c*, on the under side of the head C, in eombination with the channel *e* in the web A, serving to unite the head with the web, by filling the eavity around the tongue *g* with molten metal, substantially as shown and deseribed.

3. Combining the head and web of a railroad-rail, by means of molten metal poured in and around a dovetailed tongue and groove, substantially as deseribed.

91,533.—Louis Fiseher, Brooklyn, N. Y.—*Vapor-Burner.*—June 22, 1869.

Claim.—The sereen or perforated guard K, in eombination with the air-passages F F, when employed on vapor-burners, substantially as and for the purpose herein set forth.

91,534.—L. B. Flanders, Philadelphia, Pa.—*Velocipede.*—June 22, 1869.

Claim.—1. In eombination with the said seat or saddle, a spring, *f*, earrying a roller, *h*, adapted to the edge of the opening in the annular wheel, substantially as deseribed.

2. In combination with the said saddle, the elastic straps *i i*, each having a stirrup earrying a roller, as set forth.

91,535.—Allen Greene and Elisha Dyer, Providenee, R. I.—*Velocipede.*—June 22, 1869.

Claim.—1. The spheroidal wheel D, having but one rim, with double set of spokes, with separate hubs for eaeh set, between whieh, within the wheel, is the pendent seat E, in eombination with the erank and treadle movement, arranged aud operating in the manner substantially as shown and deseribed.

2. In eombination with a single wheel of the eharaeter deseribed, the forked lateral support J, arranged and operating substantially as and for the purpose speeified.

91,536.—Joseph C. Henderson, Troy, N. Y.—*Base-Burning Stove.*—June 22, 1869.

Claim.—1. The eontinuous supply eylinder or magazine C, in eombination with the front aperture or opening D, eonstrueted as deseribed, substantially as hereinbefore set forth and speeified.

2. The eontinuous supply-eylinder C, and front opening, D, in eombination with the gas-eombustion chamber A and exit-passage E, substantially as hereinbefore speeified.

3. The eombination of the ehamber A, exit-passage E, flue I, and upper ehamber B, substantially as and for the purposes hereinbefore speeified.

4. The eombination of the ehamber A, exit-passage E, flue I, oven F, and ehamber B, substantially as and for the purposes hereinbefore speeified.

5. The eombination of the ehamber A, exit-passage E, flue I, boiler-seat G, and ehamber B, substantially as and for the purposes hereinbefore speeified.

6. Construeting an oven, F, or boiler-seat, G, in sueh a manner that the oven or boiler may be heated by the passage of the produets of eombustion from the lower to the upper portion of the stove, through an exterior flue or flues, I, substantially as hereinbefore speeified.

7. The damper L, in combination with the lower ehamber A and the upper ehamber B of the stove, substantially as hereinbefore speeified.

8. The annular air-ehamber H, and apertures *a a*, in eombination with the eontinuous supply-eylinder C, substantially as and for the purposes hereinbefore speeified.

91,537.—Edward Heylyn, Roehester, N. Y.—*Cement for Calking Ships, and other Purposes.*—June 22, 1869.

Claim.—The eement or eomposition above deseribed, for the purpose of ealking the seams and bolt-heads and other openings in the deeks of vessels, and for eoating and lining wooden vessels, and other similar purposes.

91,538.—Ephraim C. Hodge, Oneonta, and Delos H. Mann, Delhi, N. Y.—*Carriage-Spring.*—June 22, 1869.

Claim.—In eombination with a wheeled vehiele, the reaehes A, arehed pieees B, springs C, eross-pieees F, and springs D, the whole being eombined, arranged, and operating in the manner and for the purposes set forth in the above speeifieation.

91,539.—Alpheus S. Hunter, Newburgh, N. Y.—*Skate.*—June 22, 1869; antedated June 19, 1869.

Claim.—1. The mode of fastening or unfastening skates to the boot or shoe by the combined aetion of lever H, lever G S *c*, rod T T R, double-aeting wedge K K, with plates P^1 Q^1 and P^2 Q^2, and angle-plate F, as speeified.

2. The manner of adjusting the skate to the boot by means of the rod T T R, nuts L and M, double-aeting wedge K K, and the corresponding grooves

in the angle-plates P^1 Q^1 and P^2Q^2, for the foot-plate, and by means of movable angle-plate F for the heel, as specified.

91,540.—THOMAS C. JENKS, Philadelphia, Pa.—*Raised-Lettered Signs, Show-Cards, and the Like Articles, from Papier-Maché.*—June 22, 1869.

Claim.—1. The manufacture of either block or flat letters or figures from *papier-maché*, substantially as described.

2. The manufacture of a complete sign or show-card, with raised letters or figures, with or without frame, said letters or figures, frame, and ground, being of one and the same piece, made of *papier-maché*, substantially as described.

3. Stamping a frame around the edge of the *papier-maché* show-card, of one and the same piece with the letters or figures and ground, substantially as described.

91,541.—JONATHAN JOHNSON, Lowell, Mass.—*Pad for Horses' Hoofs.*—June 22, 1869.

Claim.—1. The spring A, constructed, applied, and arranged in the manner and for the purpose shown and described.

2. The sandal-pad B, constructed, applied, and arranged in the manner and for the purpose described.

3. The combination of the strap C, spring A, pad B, and absorbent D, all constructed, combined, and arranged as and for the purpose described.

91,542.—D. P. KAYNER, Erie, Pa.—*Cooking-Stove.*—June 22, 1869.

Claim.—1. The construction of a cook-attachment for stoves, when the same is constructed substantially in the manner and form set forth.

2. The construction of a cook-attachment for stoves, with a direct flue.

3. A cook-attachment for parlor or sitting-room stoves, with an oven in combination therewith, when constructed substantially as set forth.

4. The oven-attachment, herein described.

91,543.—JAMES M. KEEP, New York, N. Y.—*Office Indicator and Register.*—June 22, 1869; antedated June 8, 1869.

Claim.—The combination and arrangement of the numbered knob, pointer, dial, and super-indicator, constructed and operating as described.

91,544.—ISAAC KELLER, Randolph, Ohio.—*Wood-Sawing Machine.*—June 22, 1869.

Claim.—1. The combination of the shaft B, loose bevel-gear wheels O O, sliding clutch-collar N, bevel-gear wheel M, shaft R, gear S T, universal joints U and W, rod V, and feed-roller X, the several parts being arranged as and for the purpose herein specified.

2. The arrangement of the connecting-rod L, slides Y Y, (united, by a neck, at their centers, as shown,) saw-bar Z, oscillating guides *q q*, and post *v*, when the several parts are constructed, arranged, and operated in the manner and for the purpose specified.

3. The arrangement of the lever *f* of the third order, provided with brad *g* and ratchet *i*, the connecting and adjusting iron *l*, the working-lever *k*, with catch *z* and the carriage-way A^2, when the several parts are constructed and operated in the manner and for the purpose set forth.

91,545.—IRA C. KELLEY, Monticello, Ind.—*Rosette-Holder.*—June 22, 1869.

Claim.—An improved rosette-holder, consisting of the base A, over which the fabric is stretched, and the clamp *d*, which secures it thereon, and the screw-stud *b*, by which the device is attached, the whole arranged substantially as described.

91,546.—PETER KLINE, Johnsville, Ohio.—*Horse-Power.*—June 22, 1869.

Claim.—The combination of the draught-levers D with the slotted guide-beams C E and brackets B, all the parts being constructed, arranged, and operating substantially as described, for the purpose specified.

91,547.—WILLIAM LEATHE, Woburn, Mass., assignor to himself, STOUGHTON B. HOLDEN, and LUTHER L. HOLDEN.—*Boot and Shoe.*—June 22, 1869.

Claim.—The device A B D *m m*, as shown in Fig. 1, for the leg of a boot, as herein described.

91,548.—WILLIAM A. LEWIS, Joliet, Ill.—*Horse-Rake.*—June 22, 1869.

Claim.—1. The arrangement of the tubular rake-head *a* with the teeth *e*, as shown and described.

2. The arrangement and combination of the tubular rake-head *a*, wheels *b*, and lever *o*, the whole operating substantially as shown and described.

91,549.—WILLIAM A. LEWIS, Joliet Ill.—*Grain-Cleaner.*—June 22, 1869.

Claim.—1. The shield *i*, over the sieves, for the purposes described.

2. The regulator *p* and radial arms *o o*, on the shaft *z*, in combination with the hopper *n*, arranged, operating, and constructed as and for the purposes set forth.

3. A machine, constructed, operating, and arranged substantially as described, for the purpose set forth.

91,550.—JOHN LUND, Milwaukee, Wis.—*Velocipede.*—June 22, 1869.

Claim.—1. Seat I, cranks N N N, foot-rests K K, bands G G, in combination with pulleys F and H, and shafts D D, and wheel A, substantially as described.

2. Wheel A, spokes B, hubs C, and shafts D, in combination with hanger O, and cranks E, constructed and arranged substantially as described.

3. Foot-rests K K and seat I, resting on cranks N, with long feet, substantially as described.

91,551.—BENJAMIN G. LUTHER, Providence, R. I.—*Folding Wagon-Cover Frame.*—June 22, 1869.

Claim.—The combination of the two outer bows with the toggle-levers B′ B′ and B B, secured to the middle bow D by appropriate clasps, substantially as described.

91,552.—AZEL STORRS LYMAN, New York, N. Y., assignor to himself and DAVID LYMAN, Middlefield, Conn.—*Curing and Preserving Meat, &c.*—June 22, 1869.

Claim.—1. The method of preparing meat for preservation, by placing it in a vacuum-chamber while yet warm, and exhausting the air from said chamber, substantially as described, and keeping the meat in such vacuum until properly cooled, all substantially as set forth.

2. The combination, with the meat-chamber and pump, of a condenser or absorbent, located between said pump and chamber, operating substantially as and for the purposes set forth.

3. As a new manufacture, fresh meat, prepared substantially as herein specified—that is to say, fresh meat that has been placed in a vacuum so perfect that water will boil in it below blood-heat, and has there been deprived of its ammonia and some other products of the normal waste, substantially as and for the purposes specified.

4. As a new article of merchandise, fresh meat, treated as herein described, and packed in cans or other suitable receptacles, and then introduced into a vacuum-chamber, the air exhausted, and its place supplied with nitrogen and carbonic oxide, or other innoxious gas, and the receptacle closed while in the vacuum-chamber, in the manner and for the purposes substantially as specified.

5. Removing the products of the normal waste, roasting and drying the meat, as herein specified, grinding or otherwise reducing it, or a part of it, and finally sealing it up in air-tight cans, substantially as and for the purposes described.

6. As a new manufacture, concentrated roast beef, mutton, fish, or other meat, prepared and preserved substantially as specified.

7. Preserving meat by roasting and drying it at one and the same time, such roasting and drying being effected by passing a current of warm air through the meat, substantially as set forth.

91,553.—Charles Mackh, Elgin, Ill.—*Coffee-Roaster.*—June 22, 1869.

Claim.—1. The revolving cylinder E, or its equivalent, mounted upon a balanced frame, composed of the levers C and D, or their equivalents, in combination with a suitable weighing-device, in the manner substantially as described, for the purposes specified.

2. The heat-directors B, when constructed and arranged substantially as described, for the purposes specified.

3. The combination of the rag-wheels, endless chain, and crank-shaft, or its equivalent, with a coffee-roasting apparatus, when arranged and operating substantially as described, for the purposes specified.

91,554.—C. K. Marshall, New Orleans, La.—*Sweet-Potato Flour.*—June 22, 1869; antedated June 8, 1869.

Claim.—As a new article of commerce and manufacture, the reducing of desiccated sweet potatoes or yams to a fine flour or powder, substantially as described.

91,555.—Thomas A. Mitchell, Washington, D. C.—*Device for Converting Motion.*—June 22, 1869.

Claim.—1. The guide-rods, forming a slot, resting on the shaft, for supporting and directing the racks.

2. Introducing a block in the slot, or between the guide-bars, hung on the shaft, to reduce friction and cause a more smooth and even motion of the racks.

3. In combination with the above, the elastic buffers at each end of the rack-frame, for preventing undue strain on the teeth of either racks or pinions, at the end of stroke.

91,556.—Cyrus G. Moore and Levi S. Gambold, Coatesville, Ind.—*Brush-Head.*—June 22, 1869.

Claim.—Construeting the brush-head in two cone-shaped halves, secured together by the clamps C C, and, in combination therewith, the cone-shaped point E, on the end of the screw F, all arranged to operate in the manner substantially as set forth.

91,557.—E. R. Norny, McDonough, Del.—*Process for Preserving Fruit.*—June 22, 1869; antedated June 10, 1869.

Claim.—1. The preparatory process, by which the fruits are preserved in jars, substantially in the manner hereinbefore described.

2. The glazing and finishing process, substantially as and for the purpose above set forth.

91,558.—James H. Northcott, Mechanicsburgh, Ill.—*Steam-Plow.*—June 22, 1869.

Claim.—1. As new in steam-plowing, the working-shaft, and the combination and arrangement by which said shaft is placed in position to receive the power direct from the engine, with the friction of a single axle between the engine and the main work of moving earth.

2. The frame C, and the mode of raising and lowering the working machinery as desired, by said frame and the screw H.

91,559.—Joseph E. Osborn, Chicago, Ill.—*Hat and Coat Rack.*—June 22, 1869.

Claim.—The combination of the bed-piece *a*, the arm *b*, the brace *c*, the shafts *d i j*, the hat and coat hooks described, and the looking-glass *g*, substantially as set forth.

91,560.—John S. Perry, Albany, N. Y.—*Hot-Air Furnace.*—June 22, 1869.

Claim.—So constructing a furnace casing or wall, and the furnace to be fitted thereto, and mounting the latter upon wheels or rollers, that an air-tight hot-air chamber will be secured, and the furnace made capable of being readily removed, without requiring to be taken apart itself, or its casing or wall to be disturbed, substantially as described.

91,561.—C. T. Phillips, Jordan, N. Y.—*Grain-Separator.*—June 22, 1869.

Claim.—1. The blast-fan A, chamber C K, hanging partition *m*, valve-openings *n d*, spouts D D, and chutes *e e*, and vibrating screen F *f*, all constructed and arranged substantially as and for the purpose herein set forth.

2. The series of vertical spouts D D^1 D^2 D^3 D^4, connected together by means of the chutes *e* e^1 e^2 e^3, when said spouts are made to communicate with a common fan-chamber, C, in the manner substantially as herein described, whereby a single fan is rendered sufficient for the entire series of spouts.

3. The combination and arrangement of the vertical spouts D D^1 D^2 D^3, connected together by chutes, the common chamber C, fan A *a*, and the swinging-frame with screens F *f*, all constructed and arranged to operate substantially as described.

91,562.—A. M. Powell, Collinsville, Ill., assignor to himself, William J. Matthews, and Hezekiah R. Johnson, same place.—*Churn.*—June 22, 1869.

Claim.—The combination of the dashers *d d'*, valves *h h'*, and connecting-rods *e e'*, arranged as shown and specified, and constructed substantially as hereinbefore described.

91,563.—S. H. Ransom, Albany, N. Y.—*Cooking-Stove.*—June 22, 1869.

Claim.—1. Such an arrangement in an extension-top cook-stove as will allow all that portion of the chamber formed by the rear extension of the upper part of the stove to receive the heated products before they enter the flues below the top plate of the oven, whether the direct-draught damper be closed or open, substantially as described.

2. In combination with the free space *a*, extending horizontally from the fire-chamber into the chamber formed by a rear extension, E, a damper, *h*, or its equivalent, arranged below said space *a*, but above the escape-passage *b'*, substantially as described.

3. Flue-plates C C, terminating at their upper ends on a level, or nearly so, with the top plate of oven B, in combination with flues *a' a'* and *b*, and a damper, arranged substantially as described.

4. The portable elbow-extension F, arranged below the extension-chamber E, and secured by a hook, *f*, and a screw-fastening, *g*, substantially as described.

5. The relative arrangement of *a*, E, F, *h*, and C, substantially as described.

91,564.—Edmund Rice, United States Army.—*Spade-Bayonet.*—June 22, 1869.

Claim.—1. The spade B, when provided with a socket, A, and shank A', as described, adapted to and combined with the muzzle of a musket, as set forth.

2. The finger-guard F, connected at one end with the shank A' by means of the swivel E, as described.

3. The finger-guard F, connected at one end with the shank A', and at the other end with the spade B, as described.

4. The tompion G, connected with shank A' by swivel E or finger-guard F, substantially as set forth and described.

91,565.—Horace T. Robbins, Boston, Mass.—*Umbrella-Runner.*—June 22, 1869.

Claim.—1. An umbrella-runner, provided with an inner sliding or revolving unlocking-tube, substantially as described.

2. The combination of the runner *a* and sliding-tube *c*, substantially as described and for the purpose specified.

3. The chamber *b*, in combination with the runner *a* and sliding-tube *c*, substantially as described, and for the purpose specified.

91,566.—John Robinson, Plainfield, assignor to Aaron Snell and Arthur T. D. Austin, Will County, Ill.—*Sulky-Cultivator.*—June 22, 1869.

Claim.—1. The combination of the slotted metal seat *s*, post *v*, and swivel-brace *t*, with the shovel-beam *d*, arranged, operating, and constructed as and for the purposes set forth.

2. The general combination of all the parts described and shown, as and for the purposes set forth.

91,567.—GEORGE W. ROTHROCK, Mifflin, Pa.—*Foot-Comforter.*—June 22, 1869; antedated May 25, 1869.

Claim.—A foot-comforter or shoe, having folding soles *b b'*, and insulators *d d'*, one or more on each half sole, substantially as and for the uses above set forth.

91,568.—NEWTON N. RUGG, Geneva, Ill.—*Bag-Holder.*—June 22, 1869.

Claim.—In combination with the spout M, the elbow-levers D E, having jaws K, said levers being hinged to lugs G on the side of the spout, and operated by the pivoted bail A, all arranged as herein shown and described.

91,569.—WATSON SANFORD, Brooklyn, N. Y.—*Hot-Air Furnace.*—June 22, 1869.

Claim.—1. A center feed, arranged relatively to and in connection with a series of side flues, and the horizontal top flues connected to the latter, when such side flues are exterior to and open horizontally into the fire-pot, substantially as described.

2. A horizontal flue or flues, constructed with a division-plate, in combination with side flues, substantially as described.

3. A horizontal flue or flues, constructed with a division-plate, in combination with a valve or valves, substantially as described.

4. The arrangement, in combination with a horizontal flue or flues, constructed with a division-plate, of a valve or valves, substantially as described.

5. The center-feed *b*, attached to the dome by means of the projections *h e f*, and button *g*, in manner shown and described.

6. The arrangement of lugs or projections upon the grate-bar support *o*, in connection with spurs or projections upon either the inner ring of the horizontal grate or upon the collar of the center-pin, or both, when constructed and operating substantially as described.

91,570.—ALFRED L. SEWELL, Chicago, Ill.—*Book-Cover Protector.*—June 22, 1869.

Claim.—A metallic protector for book-corners, constructed substantially as herein described, for the purpose of clasping the opposite corners of the book-covers, and covering the corners of the leaves intervening, and also for the purpose of being attached and removed when desired, as set forth.

91,571.—HARRISON SMITH, Sandyville, and JOHN H. EVANS, Bolivar, Ohio.—*Horseshoe.*—June 22, 1869.

Claim.—A horseshoe, composed of the shoe A, toe-calks B and C, and heel-calks D E, with stems *b c*, and *d e*, having right or left handed threads cut on each, respectively, as herein shown, the several parts being arranged and combined substantially in the manner and for the purpose herein specified.

91,572.—J. P. SMITH, Hummelstown, Pa.—*Corn-Sheller.*—June 22, 1869.

Claim.—1. The combination of the drum C, tube *c*, and concave D, arranged and operating in connection with the long teeth, *h h*, of the shelling-wheel, substantially and for the purpose herein specified.

2. The notches *i*, in the end of the tube *c*, for the purpose set forth.

3. The combination of the projecting bar *d*, on the concave D, and the adjustable guide-standard *f*, substantially as and for the purpose herein set forth.

91,573.—J. V. C. SMITH, New York, N. Y.—*Carpet-Fastener.*—June 22, 1869.

Claim.—The carpet-fastening device, composed of the elastic metallic strip, bent and shaped in the manner described, and furnished with the points or studs *a*, the holding-studs *b*, openings *c*, and nail-holes *f*, all arranged and operating in the manner herein set forth.

91,574.—W. SMITH, San Francisco, Cal.—*Water-Closet Valve.*—June 22, 1869.

Claim.—The sliding-tube D, having ports K K and recess M, in combination with the stem K', having a head, *a*, fitted to slide in the recess M, to form a slip-joint, substantially as described.

91,575.—D. M. SMYTH, Orange, N. J., assignor to D. APPLETON & COMPANY, New York City.—*Envelope-Machine.*—June 22, 1869.

Claim.—1. A swinging-shear, placed diagonally to the feeding-mechanism, and formed with a bend, so as to separate the paper diagonally of the strip, and simultaneously form one of the gores of the envelope-blank, substantially as set forth.

2. The arrangement herein set forth, of a series of swinging-shears, for cutting out the gores of the envelope-blank, in combination with mechanism for feeding in the strip of paper, and for folding the envelope, substantially as set forth.

3 The pusher W, arranged and operating substantially as set forth, in combination with the followers S and T, and folders U, for folding and delivering the envelope, as set forth.

4. The rollers 25 and 30, placed so as to raise the rear portions of the envelopes, as they are delivered from the folder, in combination with the pusher W, that passes the envelope beneath those previously delivered, and the belt Z, that conveys the envelopes away, substantially as set forth.

91,576.—HIRAM G. SOULES, Syracuse, N. Y.—*Roofing-Compound.*—June 22, 1869.

Claim.—A roofing-compound, composed of the within ingredients, in about the proportions mentioned.

91,577.—HIRAM G. SOULES, Syracuse, N. Y.—*Machine for Manufacturing Roofing.*—June 22, 1869.

Claim.—The roofing-machine herein described, consisting of the open frame, with its jointed side *b' g*⁴, and fastening *h*, the detachable roller B, and sand-hopper C, having the shield *i* and the pivoted gate *c*, operated by means of lever *f*, the frame being provided with a suitable handle, and all the parts constructed and arranged to operate substantially as herein described, for the purpose of preparing roofing, as set forth.

91,578.—WILLIAM E. TASCOTT, Cleveland, Ohio.—*Paint-Oil Compound.*—June 22, 1869.

Claim.—The compound for paint-oil, when composed of ingredients substantially as set forth.

91,579.—JAMES W. TEFT, Buffalo, N. Y.—*Slide for Extention-Tables.*—June 22, 1869.

Claim.—The stops *c* and *c'*, in combination with the cross and stop *x*, and the double cross *d*, and the pin *v*, arranged and used substantially as described.

91,580.—THEODORE R. TIMBY, Saratoga, N. Y.—*Turbine Water-Wheel.*—June 22, 1869:

Claim.—1. The buckets, constructed with radial or nearly radial impact faces G, concentric or tangential lips H, to prevent slip, and curved inner walls I, to permit the free passage of the spent water inward to its discharge, substantially as set forth.

2. The segmental checks H J, in combination with the eccentric flume or casing, as explained.

3. The central plate, in connection with the buckets G H I and discharge-apertures K L, arranged as shown.

91,581.—PHINEAS H. TOMPKINS and ELZA DOUGAL, Van Buren, Iowa.—*Ground-Roller and Stock-Cutter.*—June 22, 1869.

Claim.—The combination and arrangement of the roller *a*, wheel B, shaft *x*, with its collars, the dog D, springs Z, wheels C, knives H, guides J, sashes P P, all when constructed and used substantially as and for the purposes above set forth.

91,582.—WILLIAM H. WARD, Auburn, N. Y.—*Harvester-Rake.*—June 22, 1869.

Claim.—1. The combination, as set forth, of the revolving radially-slotted dome with the independently pivoted arms.

2. The combination, as set forth, of the radially-slotted dome, the independently pivoted arms, and the guide-rails E, F, and G.

3. The combination, as set forth, of the revolving dome, the pivoted arms, and the guide-rails, with the switch-latches, operating as described.

91,583.—Frederick Wittram, San Francisco, Cal.—*Letter-Box.*—June 22, 1869.

Claim.—The combination of the lid or cover B, rods C, disk or ledge D, with the box A, in the manner and for the purpose herein described.

91,584.—W. M. Wood, Owing's Mills, Md.—*Boat-Detaching Apparatus.*—June 22, 1869.

Claim.—The projections *c*, the block F, and the hooks *s*, in combination with the bar A and lever I, arranged and operated for the purpose substantially as described.

91,585.—Cyrus Abbott, Iowa City, Iowa.—*Farm-Fence.*—June 22, 1869.

Claim.—An improved fence, formed by the combination of the posts or vertical bars A, boards or longitudinal bars B, ties or cross-bars C, and inclined brace or supporting-bars D, with each other, substantially in the manner herein shown and described, and for the purpose set forth.

91,586.—John S. Alexander, Philadelphia, Pa.—*Spade-Bayonet.*—June 22, 1869.

Claim.—The blade A, constructed as described, and adapted to be attached to a bayonet, in the manner herein set forth, for the purpose specified.

91,587.—Joseph Allonas, Mansfield, Ohio, assignor to Cornelius Aultman and Henry H. Taylor.—*Thrashing-Machine.*—June 22, 1869.

Claim.—1. The through-shaft *p*, provided with cams, or their equivalent, for simultaneously adjusting the two ends or sides of the concave.

2. The adjustable bearing plate or frame, in which the bevel-wheel shaft is mounted, in combination with means for adjusting the same, to compensate for wear.

91,588.—Robert Alsop, Philadelphia, Pa.—*Apparatus for Manufacturing Illuminating-Gas.*—June 22, 1869.

Claim.—1. The closed gas-generator *d*, provided with the circular diaphragms *g*, radiating perforated diaphragms *f*, and pipes *h e i*, all arranged as and for the purpose specified.

2. The within-described arrangement of the gas-generator *d* and *k*, with relation to each other and to the gasometer *a b*, as and for the purpose specified.

91,589.—Samuel Anderson, New Orleans, La.—*Velocipede.*—June 22, 1869.

Claim.—1.—The application to a two-wheel velocipede of the supplemental power-wheel H, when the same is combined with a ratchet-wheel, *c*, pawl *d*, spring *e*, a pulley for the cord *g*, a vibrating saddle-frame, *i*, and a spring, *h*, substantially in the manner herein described.

2. The above combination and arrangement, in combination with pedals M and N, when the latter are constructed and operate substantially as herein described.

3. The combination of a power-wheel, H, and its operating-appliances, with the double straddling connecting-bar C, when all the parts are constructed and operate substantially as herein described.

4. The above combination, in combination with a hand-lever, *y*, pitman *u*, and a crank, *t*, when these latter parts are constructed and arranged substantially as described.

5. The combination of a power-wheel, H, and its operative appliances, with a pulley, P, on the axis of the driving-wheel, and a belt, *p*, substantially as herein described.

91,590.—Lewis J. Atwood, Waterbury, Conn., assignor to himself and Holmes, Booth & Haydens, same place.—*Lamp.*—June 22, 1869.

Claim.—1. A perforated air-distributer, sustained around the wick-tube by the closed cap, containing the wick-raiser, but removable therefrom, in combination with a draught-plate, connected with said air-distributer, and passing up into the glass chimney, substantially as and for the purposes set forth.

2. A draught-plate, supported within the chimney and above the wick-tube, and a chimney-holder, made removable from the burner, in combination with the wick-tube and a closed ratchet-cap, upon which the movable parts are supported, substantially as set forth.

3. The chimney-holder, made removable, with the draught-plate, that is supported within the chimney, in combination with an internal spring or springs, to clamp the chimney, substantially as specified.

4. The closed cap around the wick-tube and over the wick-raiser, in combination with the removable air-distributer, supported by said cap, and with a spring chimney-holder, substantially as specified.

91,591.—J. D. Ayers, East Greensborough, Vt.—*Curtain-Fixture.*—June 22, 1869.

Claim.—The curtain-fixture, consisting of the right-angular brackets C, having the spring *i*, when supported upon the sash by means of the supports D, arranged as described, for the purpose specified.

91,592.—J. N. Ayres, Stamford, Conn., assignor to the Stillwater Company, same place.—*Machine for Bending Wire for Rake-Teeth.*—June 22, 1869.

Claim.—The construction and arrangement of the grooved former A, perforated holding-plate C, and supports B B, in the manner described, and for the purpose set forth.

91,593.—Nathan W. Baker, Lynn, Mass.—*Tying-Up Awl.*—June 22, 1869.

Claim.—The awl A, having recess *c*, searfed at *i*, substantially as set forth.

91,594.—Phineas Ball, Worcester, Mass.—*Clamps for Joining Cement-Lined Water-Pipes.*—June 22, 1869.

Claim.—1. The clamping-pieces C G, made with flanged recesses, to receive and retain the packing, while at the same time properly supporting the cement-filling, substantially as shown and described.

2. The combination, with the ends of the pipes, of the packing-rings *a a* and clamping-pieces C G, substantially as shown and described.

3. The combination, with the ends of the pipe and clamping-pieces, C G, of the rubber packing-rings *a a*, and packing-pieces *c c*, substantially as and for the purposes set forth.

4. The combination, with the clamping-pieces C G, of the auxiliary pieces M N, substantially as and for the purposes set forth.

91,595.—George Banister, Hartford, Vt.—*Seed-Planter.*—June 22, 1869.

Claim.—1. The combination of the shaft *g* and adjustable friction-wheel *h*, with the driving-wheel A, box D, and the adjustable slide within the box, substantially as described, for the purpose specified.

2. The disk-wheel *j*, with its pin *k*, sliding-ring L, with its loose dogs *m m*, in combination with a seed-planter, arranged substantially as and for the purposes described.

3. The plow *p*, with its wings *q q*, and the gauge R, arranged substantially as described, in combination with a seed-planter, and for the purposes set forth.

91,596.—Andrew Bennett, Brooklyn, N. Y.—*Range-Boiler.*—June 22, 1869.

Claim.—Securing the top A and body B of the boiler to each other, by means of the beading *a'*, formed around the lower edge of said top, and the tongues *b'* cut out and struck up from the solid metal of the said body B, to give the solder a firm hold upon both of said parts, substantially as herein shown and described.

91,597.—Leopold Bertsche, Jr., Allegheny City, Pa.—*Fire-Place Grate.*—June 22, 1869.

Claim.—The grate-bars D, constructed with cross-heads *d'*, in combination with the upper bar A, lower bar C, and detachable side-bar B, said parts being constructed, arranged, and operating substantially as herein shown and described, and for the purpose set forth.

91,598.—Elijah W. Bigelow, Worcester, Mass.—*Stove Top and Cover.*—June 22, 1869.

Claim.—1. The combination and relative arrange-

ment, with the top plate A and rim *b*, of the hinged cover C, with outer flange *c*, substantially as shown and described.

2. The combination, with the hinged or swinging cover C, of the hinged ornamental top F, substantially as and for the purposes set forth.

3. The combinatiou, with the hiuged cover C and hinged ornamental top F, of a projeetion, *a*, substantially as and for the purposes set forth.

91,599.—James Brahn, Jersey City, N. J., assignor to himself and G. E. Cutter.—*Low-Water Indicator.*—June 22, 1869.

Claim.—1. The box A, when provided with the small valve on top, to counteraet the pressure on the larger valve in the bottom, substantially as herein shown and described.

2. The water-indieator, consisting of the box A, having the lever F and the valves D E, whieh are kept elosed, by pressure on D, as long as the water is high in the boiler, while they will be opened when there is not enough water in the boiler, substantially as herein shown and deseribed.

3. The lever F, provided with an adjustable pivot, *f*, substantially as herein shown and described.

4. The lever F, when arranged in a box, A, between two valves of different size, substantially as herein shown and described.

91,600.—Henry Bruggeman, Petersburgh, Ind.—*Fanning-Mill.*—June 22, 1869.

Claim.—1. The smut-roller L, constructed as described, and perforated adjustable coucave O, in combination with the shoe E and frame A of a fan-mill, substantially as herein shown and deseribed, and for the purpose set forth.

2. Adjusting the lower sereen of the shoe E, by means of the set-serews J, substantially as herein shown and described.

3. The combination of the flanged plate K with the adjusting-serews J, and lower sereen of the shoe E, of the fan-mill, substantially as herein shown and deseribed, aud for the purpose set forth.

91,601.—Leander Burdick, H. J. Chase, F. P. Isherwood, and W. S. Isherwood, Toledo, Ohio.—*Tobacco-Drier.*—June 22, 1869.

Claim.—1. The method or process of sweating and curing tobaeeo, substantially as described.

2. In the process of sweating and curing tobaeeo, the employment of an apparatus consisting of a chest, B, inclosed by a case, A, so as to leave a steam-spaee, *a*, pipes F G, and eseape-pipe E, substantially as deseribed.

91,602.—Abner L. Butterfield, Brattleborough, Vt.—*Velocipede.*—June 22. 1869.

Claim.—1. The springs A, constituting the outer ends of the spokes, and supportiug the tires, substantially as herein shown and deseribed.

2. The eombination of the axles I I, which carry the loose pulleys *e* and the sliding-elutches *f*, with the pulleys *g* formed on the wheels E, substantially as herein shown and deseribed, to provide a combined driving and steering mechanism, as specified.

3. The brake-levers J J, when arranged in eombination with the springs *j*, chaius K, and vertical pins *l*, substantially as herein shown and described, to operate as set forth.

91,603.—G. E. Clarke and Edwin P. Dickey, Raeine, Wis.—*Lubricating-Journal.*—June 22, 1869.

Claim.—Standard B, bolt C, hollow axle D, nut E, paeking F, holes H and I, and flauge L, construeted and arranged substantially as described.

91,604.—Abiel Codding, Jr., North Attleborough, Mass.—*Manufacture of Enameled Bracelets.*—June 22, 1869.

Claim.—The enameled braeelet, formed by the sheet-metal base-plate *a*, haviug longitudinal flanges *c c*, and the enameled eoneavo-eonvex plate *d*, adapted to fit between, and to be seeured in place by the flanges *c*, substantially as deseribed, for the purpose specified.

91,605.—Loring Coes, Worcester, Mass.—*Wrench-Bar Heading-Machine.*—June 22, 1869.

Claim.—1. The combination, with the stationary bed B and base A, of the auxiliary removable bed D, substantially as and for the purposes set forth.

2. The combination, with the parts D′ D′, constituting the auxiliary bed D, of adjusting-wedges F and G, substantially as and for the purposes set forth.

3. The combination, with the parts D′ D′, constituting the auxiliary bed D, and wedges F, of thin strips *d*, substantially as and for the purposes set forth.

4. The combination, with the bed whieh supports the anvil-bloek, of a clearing hole or holes, *g*, substantially as deseribed.

91,606.—Cornelious Collins, Warren, Ind.—*Machine for Turning Boot-Legs.*—June 22, 1869.

Claim.—1. The wire *g*, arranged in the upper ends of the semi-cylindrieal plates C D, substantially as herein shown and deseribed, for the purpose speeified.

2. The slide *c*, operated by the serew *e*, and carrying the adjustable semi-cylinder C, substantially as herein shown and deseribed, to operate as speeified.

91,607.—William J. Connell,. West Unity, Ohio.—*Flood-Roller.*—Jnne 22, 1869.

Claim.—The above-deseribed oetagon or polygon roller, in combination with the slotted posts, substantially in the manner and for the purposes set forth.

91,608.—Abel D. Cook, New Madrid, Mo.—*Stove-Pipe.*—June 22, 1869.

Claim.—1. The eombination of the angular or elbow part D and plate C with the horizontal part B and vertical part A of the pipe or elbow, substantially as herein shown and deseribed, and for the purpose set forth.

2. The seetion E and bag or receptaele F, when used in conneetion with the plate C and pipes A and B, substantially as herein shown and described, and for the purpose set forth.

91,609.—John J. Crooke, Southfield, and Lewis Crooke and Henry S. Crooke, New York, N. Y.—*Hinge.*—June 22, 1869.

Claim.—1.—A hinge, construeted with a boss, head, or shoulder, F, upon the end of the joint-pin or outside thereof, sunk in a reeess formed in the end of the hinge, and the metal of the joiut swaged down upon or closed over said head, boss, or shoulder, snbstantially as hereinbefore set forth.

2. The combination, with the wings of the hinge and the joint-pin or pintle, of the bosses, shoulders, or heads, F, made separate from the axis of the hinge, or upon parts of a divided pintle, and sceured in plaee by swaging down the metal of the hinge upon the said bosses, shoulders, or heads, substantially as hereinbefore set forth.

91,610.—Addison Crosby, Westfield, N. Y.—*Padlock.*—Jnne 22, 1869.

Claim.—1. The rising and falling bow or shackle B, in connection with the dogs C C, the tumblers E, provided with the slots *e*, and the arms F, having the bars *dx* attached, all arranged to operate in the manuer snbstantially as and for the purpose set forth.

2. The key G, provided with two prongs, *f f*, having lateral bits *g g*, when used in conneetion with the tumblers E and dogs C, all arranged to operate substantially as and for the purpose set forth.

91,611.—Addison Crosby, Westfield, N. Y.—*Burial-Case.*—June 22, 1869.

Claim.—1. A burial-ease, eomposed of a frame construeted of sheet-irou strips, rolled, folded, or swaged in angle-form, and covered with sheet-lead or sheet-lead and tin, or other metal, rolled out, iu contaet with each other, substantially as shown and described.

2. Securing the pieees B C of the frame to the rims A D by slitting the pieces B C longitndinally at their ends, and inserting one part of said pieees formed by the slits in perforations in A D, or in the fold of the same, and the other part lapping over one side of the same, substantially as hercin shown and deseribed.

3. The diagonal, inclined, or oblique stays or brace-rods I I, when applied to or combined with a frame, constructed of sheet-metal strips, folded, rolled, or swaged in angle-form, substantially as shown and described, and for the purpose specified.

4. Joining the edges of the parts of the burial-case, comprising the covering, by stitching the edges with fine wire, and then soldering the same, and either with or without the tubular cap L.

5. The securing of the lining P in the case by means of the rods *h*, fitted in the hems in the lining, and secured in the eyes *j*, substantially as shown and described.

91,612.—HENRY CUTLER, Ashland, Mass., assignor to S. N. CUTLER & COMPANY, same place. —*Flour-Mill.*—June 22, 1869.

Claim.—1. The pipe P, leading to the shoe S, and discharging directly under the opening of the hopper B, all arranged as described, for the purpose of regulating a uniform supply of grain and mailings to the mill, substantially as set forth.

2. The drying-chamber E, in combination with mill A, elevator D, sieve E, box H, pipe P, and draught *c e'*, all arranged and operated substantially as herein described.

91,613.—MEXWORTH D. DRAKE, Scituate, assignor to W. E. BARRETT, Providence, R. I.—*Pitmen.*—June 22, 1869.

Claim.—1. The combination, with the parts C and H, and means for holding said parts together, of the rawhide bearing-pieces E G, substantially as and for the purposes set forth.

2. The combination, with the parts named in the preceding clause, of the metal pieces *a* and *e*, set-screw M, and set-nut O, substantially as and for the purposes set forth.

91,614.—PROSPER ERHARD and AMELIE ERHARD, New York, N. Y.—*Fabric for the Manufacture of Hats, Bonnets, and Various Articles for Use and Ornament.*—June 22, 1869.

Claim.—The use of the bast of the bass-wood, or linden, or other vegetable "basts," in the production of a fabric applied to the manufacture of hats, bonnets, dress-trimmings, and other useful and ornamental articles, substantially in the manner described.

91,615.—JOEL A. H. ELLIS, Springfield, Vt., assignor to ELLIS, BRITTON & EATON, same place. —*Children's Carriage.*—June 22, 1869.

Claim.—The arrangement of the child's carriage upon the four independent springs E, supported upon the two parallel springs C, which form the reach and sole connection between the front and rear axles, as herein described, for the purpose specified.

91,616.—LEWIS T. FAIRBANKS, Worcester, Mass.—*Breech-Loading Fire-Arm.*—June 22, 1869.

Claim.—1. The arrangement, in a break-down breech-loading fire-arm, such as described, of the toothed shell-extractor, held and sliding in the rear end of the hinged barrel, with the stationary cog-projection *g*, to which the barrel is hinged, and by which the extractor is operated, when the barrel is tilted, substantially as shown and set forth.

2. The arrangement, in the rear end of the hinged barrel, and with respect to the recoil or locking-piece, of the catch-piece E, springs S S, and stop *m*, substantially as and for the purposes described.

3. The combination, in the rear end of the hinged barrel, of the shell-extractor, and the sliding catch-piece, arranged underneath, so as to support the rear end of said extractor, substantially as shown and set forth.

4. The construction and arrangement of the hinged piece B, supporting-arm G, shell-extractor D, and piece *h*, provided with cog-projections, substantially as and for the purposes shown and set forth.

91,617.—R. R. FENNER, Urbana, Ill.—*Stubble and Subsoil Plow.*—June 22, 1869.

Claim.—1. The combination of the shaft D', bed-plate E, standard D, eye *e*, with the landside of a plow, for the purpose of raising or lowering the beam, substantially in the manner herein shown and described.

2. The combination of the guide-plate G, threaded rod *g*, and plate H, for the purpose of giving the beam a lateral motion, substantially as and for the purpose herein shown and described.

91,618.—DAVID F. FETTER, New York, N. Y.—*Bush for Barrels, &c.*—June 22, 1869.

Claim.—The bush or lining A *a*, provided at its lower edge with the downward-projecting lugs *b*, which are adapted to be bent outward against the inner surface of the stave, to retain the bushing in place, as herein shown and described.

91,619.—GEORGE WEEDEN FRANCIS, Hartford, Coun., assignor to himself, EDWIN GARFIELD, and JEREMY W. BLISS, assignors to themselves and GEORGE W. WILLIAMS, same place.—*Process and Apparatus for Making Sheet Iron.*—June 22, 1869.

Claim.—1. The process for producing a polished or enameled surface upon sheet-iron, substantially as herein described.

2. A series of automatically operated hammers, acting directly upon the pack of inclosed sheets, substantially as described.

3. A series of automatically operated hammers, having, in addition, a traveling motion over the face of the material to be treated, substantially as set forth.

4. A traveling frame, for supporting the hammers, arranged to be automatically traversed forward or backward, at will, substantially as set forth.

5. As a container for the sheets to be treated, a metal box, with removable bottom, or bottom and top, arranged to be fastened or clamped thereto, substantially as set forth.

6. In combination with the hammers and the sheet-containing box, the slotted cover, arranged to permit the traversing movements during the hammering, substantially as set forth.

91,620.—DAVID GORE, Carlinville, Ill.—*Machine for Plashing Hedges.*—June 22, 1869.

Claim.—1. The arrangement and use of two or more rollers, placed at different heights, and connected to a proper frame, which is moved over the hedge, for depressing and interweaving the plants, substantially as herein set forth.

2. The arrangement and use of two or more inclined lateral rollers, to laterally compress the hedge, operating in the plasher-frame, substantially as set forth.

3. The guide-prong K, roller H, rollers M, and roller I, combined and operating in the frame F, substantially as and for the purpose set forth.

4. The frame F, connected to the timbers E, and hinged to the timbers D, to allow the plasher-frame to be turned back, and rest upon the wagon-frame, substantially as set forth.

91,621.—WILLIAM H. GOSS, Boston, Mass.—*Beverage.*—June 22, 1869.

Claim.—The within-described effervescent beverage, made of the ingredients set forth, mixed and prepared, substantially as described.

91,622.—DE WITT C. HALL, Barnes's Corners, N. Y.—*Curd-Agitator.*—June 22, 1869.

Claim.—1. The combination of the vat A, screen B, and rotary and sliding beating-arms G, substantially as specified.

2. The combination of the sliding and rotating beating-arms G, and scrapers H, substantially as specified.

91,623.—F. W. HARLOW, Hannibal, Mo.—*Hay Raker and Loader.*—June 22, 1869.

Claim.—The arrangement of the truck A and elevator-frame D, supported upon the axle C, bearing the wheels B, the hinged rake F G, the rake-elevator and carrier, the trough M, guards M', and the endless carrier N, as herein described, for the purpose specified.

91,624.—JOHN ADAM HECKENBACH, Mayville, Wis.—*Breech-Loading Fire-Arm.*—June 22, 1869.

Claim.—The spring-catch H, constructed as de-

scribed, and operated by the trigger I, in combination with the breech-projection *a*, for locking the swinging and sliding barrel E, as herein shown and described.

91,625. — ROBERT HENDERSON, Thomaston, Conn.—*Planer-Chuck for Holding Bodies of Different Shape.*—June 22, 1869.

Claim.—The operating-screw D, combined with the parallel B and the adjustable jaw C, substantially as and for the purpose herein set forth.

91,626.—HENRY HENLEY, Shoals Station, Ind.—*Fruit-Drier.*—June 22, 1869.

Claim.—The frame A, provided with plates B C, the upper surface of the latter being made concave, as described, in combination with the pipe D and boiler E, all constructed, arranged, and operated substantially as set forth.

91,627.—WILLIAM G. HESLEP and THOMAS A. COCHRANE, Jamestown, Cal.—*Ore Washer and Concentrator.*—June 22, 1869.

Claim.—1. The inclined troughs D D, having amalgamated bottoms, and having the section *d* moving in ways so as to form an opening, through which the sulphurets may pass to the troughs below, the whole arranged substantially as described.

2. The perpendicular spouts G G, for carrying off the surplus water and refuse matter, substantially as and for the purpose herein described.

3. The tank C, hollow posts E E, and pipes *e e*, for introducing water to the heads of the troughs, substantially as and for the purpose described.

91,628. — MARTIN HEUSY, Burlington, Ohio.—*Device for Cleaning Sausage Cases.*—June 22, 1869.

Claim.—As a new article of manufacture, a device for cleaning sausage-cases, made and operating substantially as herein shown and described.

91,629.—HENRY HICKMAN, Omaha, Nebr.—*Picture-Nail.*—June 22, 1869.

Claim.—Forming the head of picture-nails in two parts, hinged to each other, and so formed that the cord may pass around a groove in the upper part, and be clamped between the two parts in such a way as to project at the outer ends of the two parts, substantially as herein shown and described, and for the purpose set forth.

91,630.—HENRY HICKMAN, Omaha, Nebr.—*Trunk.*—June 22, 1869.

Claim.—The rubber packing-strips, B D, in combination with the inner part A and the outer part C of the trunk, all arranged as described, for the purpose specified.

91,631.—DANIEL H. HILL, Union Springs, Ala.—*Plow.*—June 22, 1869.

Claim.—The curved slotted bar D, constructed and arranged in combination with the beam A, upright B, and standard E, substantially as herein shown and described, and for the purpose set forth.

91,632.—JOHN Q. HILL, Worcester, Mass.—*Confection.*—June 22, 1869.

Claim.—The use of elm-bark in a composition for a confection, substantially as above set forth and described, under whatever name it may be used or sold.

91,633.—J. W. HILL, Jefferson, Iowa.—*Projectile.*—June 22, 1869.

Claim.—The projectile herein described, consisting of the loaded shells A and D, placed one within the other, the inner shell being closed by the cap G, as herein set forth and shown.

91,634.—WILLIAM HOFER, New Haven, Conn.—*Screw-Driver.*—June 22, 1869.

Claim.—The combination, with the handle A, of the ring *a'*, spirally slotted tube B, springs D and E, cap F, and bit C *c*, provided with the pin *c'*, by which said bit is adapted to be rotated, and also to be locked at the respective ends of the tube in the notches b^2, all constructed, arranged, and operating as set forth.

91,635.—THOMAS HOLT, Brooklyn, N. Y., assignor to himself and ABRAM T. MERWIN, same place.—*Grooving-Machine.*—June 22, 1869.

Claim.—1. The oscillating standard L, arms K N, carrying the pulleys I^1 I^2, and the slides F, for carrying the cutter, in combination with the swinging-frame, all arranged and operating as described, for the purpose specified.

2. The adjustable standard and guide-pulleys R R' in combination with the oscillating standard L, pulley I^2, main driving-belt, and the driving-pulley Q, all arranged and operating as described, for the purpose specified.

91,636.—JOHN HORTON, Rochester, N. Y.—*Tuyere-Arch for Blast-Furnaces.*—June 22, 1869.

Claim.—The water-tuyere arch, or its equivalent, surrounding the tuyere of a blast-furnace, when constructed substantially as described, and for the purposes specified.

91,637.—JOHN EDWARD INSLEY, Philadelphia, Pa., assignor to JAMES FALLOWS and JOHN PFEIFER, same place.—*Curry-Comb.*—June 22, 1869; antedated June 11, 1869.

Claim.—The loop C and plate D, in combination with the back A B of a curry-comb, the said parts being constructed and arranged to operate together, substantially as and for the purpose described.

91,638.—ORLANDO JENNINGS, North San Juan, Cal.—*Mining-Sluice for Saving Sulphurets.*—June 22, 1869.

Claim.—1. A sluice, having the channels *b b' b''*, and parallel riffles *e e e*, either diagonal in one direction, or diverging from or converging to the center, and leading into the longitudinal channel or channels *g*, on one or both sides, or in the center of the sluice, substantially as and for the purpose described.

2. Connecting the section of a sluice, B, so that the side *d* will be between the two sides of the sluice A, substantially as and for the purpose described.

91,639.—WILLIAM KELLY, Saranac, Mich.—*Animal-Poke.*—June 22, 1869.

Claim.—1. The bar, constructed with prongs *a a*, and provided with the movable bar *d*, substantially as and for the purpose set forth.

2. The movable staple *f*, arranged to operate substantially for the purpose specified.

3. The staple *f*, attached to the spring *g*, in combination with yoke B, movable bar *d*, and bar A, substantially as set forth.

91,640. — WATSON KING, Springfield, Ill. — *Horse-Rake.*—June 22, 1869.

Claim.—1. The combined axle and rake-head A, provided with a series of transverse mortises, for the reception of the rake-teeth, and with a longitudinal groove intersecting said mortises, for the reception of the ends of said teeth, substantially as and for the purpose specified.

2. The combination of the teeth D, provided with the angular end *d'*, mortise *a*, groove *a'*, and wedge *d*, substantially as and for the purpose shown.

3. The devices for revolving the rake-head, consisting of the ratchet-wheel E, ratchet-bar F, lever G, shaft H, and handle I, and, in combination therewith, the tooth *e* upon the flange of the ratchet-wheel, stops *f* and *f'*, upon the ratchet-bar, and rod *x*, substantially as shown, and for the purpose described.

4. Combining the draught of the machine with the devices F G H, and I, for revolving the rake-head, so that the power applied to move said machine shall operate said rake-head, substantially as and for the purpose shown.

91,641.—S. R. KRONN, New York, N. Y.—*Ore-Crusher.*—June 22, 1869.

Claim.—1. The arrangement of the driving-shaft E, in journals on the vibrating end of one of the jaws A, and operating the other jaw by means of eccentrics H, connecting-rods J, and diagonal links C so as to dispense with the usual fixed pillar-blocks, substantially as shown and described.

2. The braces M, arranged in relation to the hollow or skeleton jaws A A', whereby a reduction of

weight, with increased strength in said jaws, is obtained, substantially as specified.

91,642.—J. M. LENT, Schuyler's Lake, N. Y.—*Pattern for Measuring and Cutting Out Dress-Waists.*—June 22, 1869.

Claim.—The patterns and rule-scales, Figs. 1, 2, 3, 4, 5, shaped and graduated as and for the purposes herein set forth.

91,643.—J. W. LEWIS, Oregon City, Oreg.—*Gang-Plow.*—June 22, 1869.

Claim.—1. The hoisting-lever G of a gang-plow, arranged for operation, in connection with the hand-lever H, for raising the plows, substantially as herein described.

2. The curved extremities or arms *f f'*, in combination with the hand-lever H, and hoisting-lever G, substantially as and for the purpose herein set forth.

3. The swinging-frame, and roller *c'*, in combination with the beams E and lever G, substantially as and for the purpose herein set forth.

91,644.—J. W. LEWIS, Oregon City, Oreg.—*Roller-Cutter for Plows.*—June 22, 1869.

Claim.—A roller-cutter for plows, consisting of a roller, A, arms B B, swivel-joint *b*, and braces C C', substantially as herein described.

91,645.—LANDON LIMERICK and A. H. E. STEIN, Louisville, Ky., assignors to JAMES T. HAIR and O. W. RICHARDSON.—*Advertising-Attachment to Tables, &c.*—June 22, 1869.

Claim.—The combination of a table, A B B', fixed shaft C, and revolving-frame E D D', the latter being provided with grooves or clips F, for the reception of the transparent slides G, and also of the business cards, in the manner described and represented.

91,646.—THOMAS A. LYLE, Pittsburgh, Pa.—*Fan-Attachment for Sewing-Machine.*—June 22, 1869.

Claim.—The combination with the needle-arm of a sewing-machine, of a fan support, detachably connected to the said arm, substantially as specified.

91,647.—NICHOLAS LUMSDEN and FRANK LESSMAN, Oakland, Cal.—*Compound for Salve.*—June 22, 1869.

Claim.—The within-described medicine, made of the ingredients enumerated, mixed, or compounded, in about the proportions herein specified.

91,648.—FRANCIS A. MACK, Niles, Mich.—*Double-Acting Pump.*—June 22, 1869.

Claim.—1. The body B, consisting of a series of wooden layers, *f*, and provided with an internal space, *g*, the metallic chambers D E, wooden platform C, and metallic cylinders A A', combined together in the manner and for the purpose described.

2. The sub-platform K, between which and the platform C is a free space, as arranged in relation to the other parts of the described pump, substantially as and for the purpose described.

91,649.—THOMAS C. MARSHALL and H. W. HAWKINS, Akron, Ohio.—*Wheel-Making Machine.*—June 22, 1869.

Claim.—1. The arrangement of the rim *b*, which supports and guides the chuck-dogs *d*, the hooks *c'*, and top-rim *e*, provided with curved *e'* ribs, and handle *f*, when said parts are constructed and operated substantially as and for the purposes set forth.

2. The combination, with the self-centering chuck, of the spindles C E, with their cutter-heads D *g*, substantially as and for the purpose set forth.

3. The combination, with the spindles C E, of the levers F *a*, treadle G, rod *b'*, spring *k*, and fork *i*, substantially as and for the purpose set forth.

4. The combination, with lever *a* and spindle C, of the step *a'* and bolt 23, substantially as and for the purposes set forth.

5. The combination, with spindle C E, of lever *a* F, treadle G, rod *b'*, and shaft H, provided with pulleys I', said parts being arranged, in relation to each other, substantially as and for the purposes set forth.

6. The combination, with the platform P, of the slotted table M, provided with hub-supporting device or devices, as stated, of the swinging-frame R, with the saw S, substantially as and for the purposes set forth.

7. The combination, with the platform P, of the hub-supporting device, sliding hollow augur T, and swiveled hand-lever P', substantially as and for the purposes set forth.

8. The combination, with the sliding-arbor T', of the swinging-frame R^1 and lever V, provided with a flanged plate, *w*, substantially as and for the purposes set forth.

9. The combination, with the arbor T', hollow augur T, and lever V, of the collars *t v'* and spring 7, arranged and operating as and for the purposes stated.

10. The employment, in connection with the self-centering chuck, of the flanged and concave block D', provided with a base, E^2, as and for the purposes set forth.

11. The combination, with the flange 17, on block D', of the gauges 19, 20, 21, as and for the purposes set forth.

12. The combination, with the arbor K', cutter-head W, and doweling-bit 10, of the gauges 11, 12, and 13, or either, substantially as and for the purposes set forth.

13. The combination, with the swinging-frame R^2 and swing-table L', of the arbor K', cutter-head W, doweling-bit 10, and gauges 11, 12, and 13, arranged and operating substantially as and for the purposes set forth.

14. A machine for facilitating the manufacture of wheels for carriages, and other purposes, the parts of which are constructed and arranged in relation to each other, and operating substantially as shown and described.

91,650.—WILLIAM N. MARTIN, Providence, R. I.—*Self-Clearing Watch-Key.*—June 22, 1869; antedated June 10, 1869.

Claim.—The dirt-excluding key-core *b c e d*, when operated in conjunction with the spring *f*, the core-pin *e*, and the notched or T-headed slit *i k*, substantially in the manner herein set forth.

91,651.—PETER MCCOLLUM, Fayette, Mo.—*Portable Fence.*—June 22, 1869.

Claim.—1. The panels A C, joined by brackets B, and the sliding-key D, substantially as set forth.

2. The bars *a*, battens *b* and b^1, when combined with the bars *c*, and battens *d* and d^1, and the brackets B, substantially as set forth.

91,652.—JAMES MCFARLAND, Louisville, Ky.—*Device for Preventing Radiation of Heat from Steam-Pipes.*—June 22, 1869.

Claim.—The arrangement of the surrounding exhaust-pipe B, elbow C, and tube G, with the steam-pipe A, connecting the boiler and steam-chest, as herein shown and described.

91,653.—JAMES MCINTIRE, Hopewell Cotton Works, assignor to W. C. DICKEY, Oxford, Pa.—*Machine for Making Twine, &c.*—June 22, 1869.

Claim.—1. The arrangement of the series of posts *o o o* around the path of the wheels M M M, when said posts are employed to support the flexible adjustable belt O, and hold it in relation to the said wheels, as herein shown and described.

2. The guides N N, when constructed with the two loops and the bent arm, and arranged in relation to the bobbins, in the manner described and shown, and for the purpose specified.

3. The arrangement of the belt O, wheels M M M and K, bobbins C C C, shafts D D D and I, guides N N, and arms P P P, substantially as described.

91,654.—THOMAS E. MERRICK, Cleveland, Ohio.—*Lubricating-Oil from Petroleum.*—June 22, 1869.

Claim.—1. The process of first removing by distillation the lighter products of crude petroleum oil, until the gravity is reduced to any gravity between thirty-five (35) and twenty-five (25) Baumé, and then treating it with sulphuric acid, hot water, alkali of caustic-soda or soda-ash, and water, in the proportions and manner substantially as described.

2. The oil produced by said process, as a new article of manufacture.

91,655.—JOHN B. MINER, Groton, Conn.—*Seed-Planter.*—June 22, 1869.

Claim.—1. In combination with a seed-planter, the wings J, constructed and arranged substantially as and for the purposes described.

2. The combination of the pivoted lever *m*, connecting-rod O, and pivoted roller-arms N with the tongue K, platform C, belt F, and seed-droppers G, all arranged as described, whereby the seed-droppers are thrown in or out of operation, and the plows raised or lowered simultaneously, substantially as described, for the purpose specified.

91,656.—JAMES MONTGOMERY, New York, N. Y.—*Machine-Belting.*—June 22, 1869; antedated June 18, 1869.

Claim.—1. Constructing leather-belting for machinery with folded edges, substantially as and for the purposes set forth.

2. Thickening the ends of the belting, to compensate for material punched out to receive the lacings, or other fastenings.

91,657.—JAMES W. MURFEE, Havanna, Ala.—*Subsoil-Plow.*—June 22, 1869.

Claim.—1. The wedge-shaped share herein described, the upper surface being composed of two or three inclined planes, the under surface being hollowed out (arched) and beveled, so as to form wedge-edges below, upon the sides and front, substantially as specified.

2. The reversed truncated wedge-shaped heel, elevated toward the rear, substantially as specified.

3. The arrangement of the coulter-shank, in rear of the greatest transverse diameter of the wedge, and acutely thereto, so that the power is applied, as near as practicable, in the direction of the axis of the point, substantially as specified.

4. The arrangement of the standard of the frame in a line with the coulter-shank and the handles, parallel to a line, which, in direction, is a mean between the line of the shank and point, or nearly so, substantially as specified.

91,658.—JOHN NICHOLS, Battle Creek, Mich.—*Thrashing-Machine Concave.*—June 22, 1869.

Claim.—1. A concave, composed of removable sections, for the purpose set forth.

2. The removable blank section of the concave, adapted to be transposed relative to the toothed sections, supported at their ends in grooved or flanged side pieces, substantially as and for the purpose set forth.

3. A concave, composed of the removable sections adapted to be transposed, as set forth, in combination with a removable apron.

91,659.—PATRICK O'HALLORAN, New York, N. Y.—*Liniment for Horses, &c.*—June 22, 1869.

Claim.—The improved compound, substantially as herein described.

91,660.—JAMES S. OSTRANDER, Albany, N. Y.—*Apparatus for Winding Maps, Songs, Curtains, &c.*—June 22, 1869.

Claim.—1. The revolving wrench or key D, in combination with the pulley C, substantially as described, for the purpose set forth.

2. The pulleys B and C, and cord F, in combination with the staff A, substantially as described.

91,661.—R. B. PARKS and J. R. PARKS, Neponset, Ill.—*Cultivator.*—June 22, 1869.

Claim.—1. The suspended beams I I, with plow or share standards J attached, in combination with the levers K, connected by the rack N and lever O, all arranged and combined to operate in the manner substantially as and for the purpose set forth.

2. Securing the frame A to the axle-bar B, by means of the clamps C, constructed and arranged as shown, so as to admit of the ready adjustment of the frame A, in a more forward or backward direction, as may be required.

3. The sector-rack N and lever O, in combination with a cultivator, substantially as and for the purposes described.

91,662.—GEORGE M. PHELPS, Brooklyn, N. Y.—*Printing-Telegraph.*—June 22, 1869.

Claim.—1. The combination of a magnet, double wedge-acting pallets, pallet-wheel, type-wheel, and printing-mechanism, substantially as and for the purposes described.

2. The combination of two electro-magnets, *f*, *g*, with the armatures 10, 11, lever *h*, pallets, wheel *l*, and type-wheel *k*, substantially as set forth.

3. The pneumatic circuit-changer, constructed substantially as specified, and combined with a magnet or magnets, for giving or allowing a gradual movement when the vibration of the magnet ceases, substantially as set forth.

4. The combination of the spring 18 with the impression-roller *m*, swinging-arm *n'*, and electro-magnet operating the same, in the manner and for the purposes substantially as set forth.

5. A double-acting relay magnet, in combination with the magnets *f* and *g*, and type-wheel *k*, the parts being connected and operating substantially in the manner and for the purposes set forth.

91,663.—DANIEL PIKE, New Orleans, La., assignor to himself, JOSHUA E. VOSE, and W. J. MCCULLOH, same place.—*Railway-Switching Apparatus.*—June 22, 1869.

Claim.—The bracket A, when supported by the cross-braces B B', in combination with the rod C, when constructed as herein described, and provided with the flanched wheel D, and sustained at its highest point of elevation by the spring E, substantially as and for the purpose herein set forth.

91,664.—C. L. PROUTY, Worcester, Mass.—*Wire Broiler and Toaster.*—June 22, 1869.

Claim.—1. The main or skeleton frame, made of V-shaped wire, as and for the purposes set forth.

2. The combination, with the main frame, made of grooved V-shaped wire, as shown, of the filling-bars B, substantially as and for the purposes set forth.

91,665.—JOHN H. RAUCH, New York, N. Y.—*Pencil-Case.*—June 22. 1869.

Claim.—The tube B, having the right and left spiral slots C D, in combination with the tube E, having the straight groove G and fixed stud H, the rotating stock F, and the pencil A, having the stud I, all arranged to operate in the manner described, for the purpose specified.

91,666.—JAMES L. REBER, Philadelphia, Pa.—*Paper Box.*—June 22, 1869.

Claim.—Paper boxes, formed of blanks, consisting of one piece, shaped and folded substantially as herein specified.

91,667.—F. C. RENNER, Ladiesburgh, Md.—*Fertilizer.*—June 22, 1869.

Claim.—The compound, substantially as and for the purpose above described.

91,668.—WESTLEY RICHARDS, Birmingham, England.—*Breech-Loading Fire-Arm.*—June 22, 1869; patented in England June 12, 1868.

Claim.—1. As respects this part of my invention in fire-arms, in which the breech is closed by a block turning on a horizontal axis at its breech-end, the combination of the vibrating tumbler and reciprocating striker, the combination being and operating substantially as set forth.

2. The combination of the vibrating breech-block, vibrating tumbler, and reciprocating striker, the combination being and operating substantially as set forth.

3. In such fire-arms, the mounting the tumbler within the body or frame on the same axis with the breech-block, and the arranging the hand-lever which actuates the breech-block so as also, in opening the breech, to draw down the tumbler, and cause the striker to recede.

4. The connection of the stock with the barrel of the fire arm, by means of the frame, trigger-guard, screws, and lug, as described.

91,669. — FRANCIS B. RICHARDSON, Boston, Mass.—*Casting Jug-Tops.*—June 22, 1869.

Claim.—In jug-tops, in which one portion of the hinge which holds the cover is located upon a shelf, projecting from the rim of the tubular neck, and forming the prolongation of the hinged cover, casting said shelf and hinge in one and the same piece with the tubular neck, substantially as and for the purposes herein shown and specified.

91,670.—L. ROBINSON, L. CONINE, N. F. HYATT, and D. W. HYATT, Matteawan, N. Y.—*Felting-Machine.*—June 22, 1869.

Claim.—The arrangement in a felting-machine, of the formers A C, of the shape shown and described, with the jiggers E, for the purpose of felting the tips and bodies of hats at separate successive operations, substantially as herein shown and described.

91,671.—SAMUEL D. ROGERS and FRANCIS C. SELBY, Allegan, Mich.—*Fruit-Drier.*—June 22, 1869.

Claim.—The combination of an apparatus for drying fruit, consisting of a number of shelves, which are combined to a system, in such a way that they always remain in a horizontal position, although they may change their relative position to each other.

91,672.—CHARLES C. SCAIFE, Pittsburgh, Pa.—*Metallic Roofing.*—June 22, 1869; antedated June 10, 1869.

Claim.—Sheet-metal, lined with felting, or its equivalent, substantially as herein described, and for the purpose set forth.

91,673.—GEORGES SCHNEIDER, Buffalo, N. Y.—*Picture-Frame.*—June 22, 1869.

Claim.—A gilt beading or molding, B, or C, or F, either around the inner edge of the wooden frame A, or of the paper mat *h*, or around the outside, as shown in Figs. IV and V, when spun thereon from a flat metal band, for the purpose substantially as herein described.

91,674.—F. LE ROY SENOUR and H. L. TRAPHAGAN, Eaton, Ohio; said TRAPHAGAN assigns his right to said SENOUR.—*Fastening Together the Soles and Uppers of Boots and Shoes.*—June 22, 1869.

Claim.—The combination of a leather sole with metal plate, when the uppers are secured by means of screws, substantially as and for the purpose described.

91,675.—HENRY C. SERGEANT, New York, N. Y.—*Water-Meter.*—June 22, 1869.

Claim.—1. A reciprocating piston and independent reciprocating valve, having passages connecting their respective cylinders or cases and water-ways in the piston, in connection with suitable inlet and outlet passages, so arranged that the valve and piston are made to control each other by the direct action of the fluid passing through the meter, without the aid of valve-gear or other intervening mechanical devices, substantially as set forth.

2. The combination of the piston C, cylinder A, and hollow heads or caps B B′, with the valve J, having heads *e d d′*, and cylinder F, provided with passages H H′, connecting the valve cylinder with the main cylinder, and main inlet and outlet passages I and E, essentially as shown and described.

3. The valve J, so constructed and arranged relatively to the exhaust-port *b′*, which it controls, and inlet-passages *c c′*, as that while said valve overlaps the exhaust-port in passing it, ingress is established for the impelling-fluid through the passages *c c′* to the valve and opposite ends of the main cylinder, substantially as described.

4. The combination, with the piston C, of one or more eyes or loops, *h*, and guide-rods *i*, arranged within the main cylinder or its heads, substantially as shown and described, for the purpose set forth.

91,676.—HENRY C. SERGEANT, New York, N. Y.—*Steam-Pump.*—June 22, 1869; antedated June 17, 1869.

Claim.—1. The cylinders A A′, in combination with the condensers G G′ and outlets J J′, substantially as described.

2. The arrangement of the pipe D, valves F F′, steam-passages *e e′* and *f f′*, with reference to the pistons B B′, substantially as specified.

91,677.—L. W. SIBLEY, Ames, Iowa.—*Gate.*—June 22, 1869.

Claim.—1. The curved tilting-track F G, constructed and operating substantially as herein shown and described, and for the purpose set forth.

2. The combination of the grooved wheel H, tilting-track F G, ropes or chains I, pulleys or wheels J, eccentric wheels K, and cranks M, with each other and with the gate A, substantially as herein shown and described, and for the purposes set forth.

91,678.—WILLIAM H. SILBERHORN, New York, N. Y.—*Curing Meat.*—June 22, 1869.

Claim.—The herein-described process for curing or preserving meat, by depositing within the same solid saltpeter, salt, or other preservative substances, substantially in the manner specified.

91,679.—LUCIUS A. SINCLAIR, Bellevue, Ohio.—*Velocipede.*—June 22, 1869.

Claim.—1. The rear axle D of a three-wheeled velocipede, when provided with a projecting tongue, *a*, which is in front pivoted by a pin, *b*, and when supported in the slotted frame A, substantially as herein shown and described.

2. The steering-post F, when connected by the jointed levers *e g*, with the pivoted rear axle D, to operate the same on the frame A, substantially as herein shown and described.

91,680.—C. B. SKIFF, Jersey City, N. J.—*Compound for Extracting Oils, Paint, Grease, and the Like, from Clothes.*—June 22, 1869.

Claim.—The chemical composition, formed of the ingredients, in the proportions and manner substantially as herein set forth and described.

91,681. — ANDREW SMITH, Dayton, Oreg.—*Ellipsograph.*—June 22, 1869.

Claim.—In connection with the standards A A and arm B, the combination and arrangement of the staff C, block E, arm F, pattern D, guide H, springs *t s*, slide I, screw J, and pencil-holder, all constructed to operate substantially as and for the purposes specified.

91,682.—CHARLES H. SMITH and GEORGE D. WALKER, Brooklyn, N. Y.—*Velocipede.*—June 22, 1869.

Claim.—1. The spring *m*, around the rod *k*, in combination with said rod *k*, formed at its upper end so as to receive the handle *c*, and the steering-post, fitted to receive said rod *k*, as set forth.

2. A spring, placed between the steering-arm of a velocipede and the steering-post, for the purposes and substantially as set forth.

3. The perch *h*, formed with the flange *o*, forks *e*, formed with the flange *o′*, spring *q*, and steering-post *g*, combined and arranged substantially as set forth.

4. The perch *h*, sockets *s*, and springs 7, all combined and arranged substantially as set forth.

91,683.—GEORGE W. SPAULDING and GEORGE R. SMITH, Syracuse, N. Y.—*Bracket-Clamp.*—June 22, 1869.

Claim.—The jaws A A, hinged at B, the lower jaw being serrated and wedge-shaped at one extremity, and projecting beyond the upper jaw, in combination with the cam-lever D, all constructed, arranged, and operated in the manner and for the purpose set forth.

91,684.—GREENLEAF STACKPOLE, New York, N. Y., assignor to STACKPOLE SEWING-MACHINE COMPANY, Boston, Mass.—*Method of Attaching Needles in Sewing-Machines.*—June 22, 1869; antedated June 19, 1869.

Claim.—The within-described mode of securing the needle N to the needle-bar A, by means of pin B, nuts E H, and spring F, all as described, and so that the needle can be thrown out of work without detaching it from the needle-bar, for the purposes above set forth.

91,685.—Stephen G. Sturges and William E. Sturges, Newark, N. J.—*Combined Buckle and Snap.*—June 22, 1869.

Claim.—The spring-hook A, constructed as described, in combination with a buckle, when hinged to the cross-bar of the same, as shown, and for the purpose set forth.

91,686.—Simeon Taylor, Worcester, Mass.—*Organ and Melodeon.*—June 22, 1869.

Claim.—1. The arrangement of the arms, by which the volume of tone-regulating mechanism is operated, between the rear parts of the keys, substantially as and for the purposes set forth.

2. The combination, with one or more valves, E, of a bell-crank lever, J, stands *h*, and connections *f m* and *e*, substantially as and for the purposes set forth.

3. The combination and relative arrangement, with the valves E E, bell-cranks J J, stands H *h*, and arms I, of the pieces *f f*, and connections *m m* and *c c*, substantially as and for the purposes set forth.

4. The arrangement of the mechanism for opening and closing the valves or stops, by which the volume and power of the organ or melodeon is regulated, under the keys and above the reed-frame, substantially as shown and described.

91,687.—Simeon Taylor, Worcester, Mass.—*Combination Organ and Book-Case.*—June 22, 1869.

Claim.—1. A combined organ and library or book-case, made substantially as herein described.

2. The arrangement, with respect to the organ-case A and book-case E, of the sliding-cover B C D and stand *c*, substantially as shown and described.

91,688.—David Trefry, Boston, Mass.—*Bureau-Bedstead.*—June 22, 1869.

Claim.—The wing D and doors F F′, in combination with retaining-pieces *b c c′* and bureau-bedstead, in the manner and for the purpose substantially as specified.

91,689.—Charles Truesdale, Cincinnati, Ohio, assignor to William Resor & Co., same place.—*Lining for Fire-Places.*—June 22, 1869.

Claim.—1. Providing the fire-chambers of grates, stoves, &c.. with a lining, consisting of a metallic frame, which is adapted to receive removable blocks of soapstone, fire-clay, or other refractory substances.

2. Providing the fire-chambers of grates, stoves, &c., with a lining consisting of a metallic frame, which is adapted to receive removable blocks of soapstone, fire-clay, or other refractory substances, said frame or blocks, or both, being either perforated, slotted, or otherwise arranged, so as to admit air into the fire-chamber proper, substantially as herein described and set forth.

3. The metallic frame A B C, having openings D and protuberances *b*, when used in connection with the removable blocks E, for the purpose of admitting air, as above explained.

4. The combination, substantially as described, of the metallic frame A B C, rearwardly flaring openings D, protuberances *b*, tapering blocks E, and one or more binders, F, or its equivalents, for the object stated.

5. Projecting the blocks E in front of the exposed face of the metallic frame A B C, as herein set forth.

91,690.—Silvester J. Tucker, Philadelphia, Pa., assignor to J. Adam Rush, same place, for one-half his right.—*Writing-Desk Calendar.*—June 22, 1869.

Claim.—In combination with the fastening-device of a writing-desk, the calendar-mechanism herein described, consisting of the pivoted lever *e* and pawls *f g*, operated by means of an arm on the "square" *c*, whereby the unlocking of the desk will move the pointers of the calendar, in the manner and for the purpose set forth.

91,691.—J. W. Upham, Worcester, Mass.—*Turbine Water-Wheel.*—June 22, 1869.

Claim.—The adjustable inner water-guide pieces G, in combination with the stationary water-guide pieces F, substantially as and for the purposes set forth.

91,692.—William Vogel, Norwich, Conn.—*Ash-Sifter.*—June 22, 1869.

Claim.—1. The rod D, when arranged and operated in the manner and for the purpose set forth.

2. In addition to the above, the eccentric G, springs F and I, in combination with the sifter B and rod D, arranged and operated substantially in the manner and for the purpose set forth.

91,693.—Addison G. Waterhouse, San Francisco, Cal.—*Pocket-Knife.*—June 22, 1869.

Claim.—The forming of two blades on one piece of steel or metal, with their edges upon opposite sides, so that the back of one will form a leverage for the other, and the mode of sliding the said blades out of the ends of the handle, in the manner and for the purpose substantially as above set forth.

91,694.—Arthur McNutt Wier and Marshall Arthur Wier, Elm Lodge, Newton Road, Bayswater, Great Britain.—*Pneumatic Telegraph.*—June 22, 1869; patented in England August 29, 1867.

Claim.—The application and arrangement of the air-chambers, in combination with the racks, pinions, and other mechanical parts, as described and illustrated, whereby the expansive and contractive action of the said air-chambers is made to impart motion to an index or dial, either to the right or left, as described.

91,695.—William E. Wilcox. Peoria, assignor to himself and T. H. Willis, Beardstown, Ill.—*Anti-Friction Roller for Shafting.*—June 22, 1869.

Claim.—The four sectional endless plates E, at each end, with their respective rollers C and journals G, operating in the oblong slots H of each section, when arranged as herein described, and for the purposes set forth.

91,696.—Ira Yeamans, Brooklyn, N. Y.—*Coffee-Pot.*—June 22, 1869.

Claim.—Coffee-pots and other similar vessels, suspended on horizontal turn-tables and vertically oscillating trunnions, substantially as specified.

91,697.—Henri Zachgo, South Brooklyn, N. Y.—*Culinary Vessel.*—June 22, 1869.

Claim.—The culinary vessel, constructed as described, of the double walls A B, of different lengths, separate at their lower edges and connected together at their upper edges, the lower part of the annular space between said walls opening directly into the fire, and the upper part communicating with the upper part of the interior vessel, by means of the openings a^1, formed in the inner wall A, between the covers C D, all arranged as herein shown and described, for the purpose specified.

91,698.—John H. Adams, Martinsville, Ind.—*Fruit-Picker.*—June 22, 1869.

Claim.—The curved shears D, arranged to be operated by means of the toggle-bars E, wire or cord F, and spiral spring H, in combination with the circular ring forming the mouth of the flexible basket or hose, abutment-piece J, and hand-hold K, all attached to the pole A, and arranged substantially as and for the purpose set forth.

91,699.—Reuben Adams and J. David Sheetz, Heidelberg Township, Pa.—*Hay-Spreader.*—June 22, 1869; antedated December 22, 1868.

Claim.—1. The arrangement of the beam K with metal bars *e e*, arms *f* and *h*, shank *i*, and spring *m*, all as shown and described.

2. The arrangement of the levers J and pins *x*, collars *c*, and pinions *b*, with the two crank-shafts G H, and their forks or spreaders L, all constructed and operated substantially as set forth.

91,700.—James Armstrong, Bucyrus, Ohio.—*Feed-Water Heaters for Steam-Engine.*—June 22, 1869.

Claim.—1. The chamber A and receiver F, when

constructed and arranged substantially as shown and described.

2. The pans B B′, when constructed and arranged substantially as shown and described.

91,701.—James D. Bacon, New York, N. Y.—*Shell-Fuse.*—June 22, 1869.

Claim.—In combination with the central tube of a paper-case fuse-stock, that is covered or surrounded by plaster or other non-conductor, an exterior paper covering for said tube, substantially as described.

91,702.—John C. Beaumont, Wilkesbarre, Pa.—*Velocipede.*—June 22, 1869.

Claim.—The swivel-axle, furnished with friction-plates, for the purpose of uniting or disconnecting the motions of the two parts of said axle, and so as to both guide and propel said improved velocipede at the same time by means of the two cranks, as hereinbefore set forth.

91,703.—L. W. Beecher, Westville, Conn.—*Match-Box.*—June 22, 1869.

Claim.—The herein-described box, as an article of manufacture, consisting of the bottom B, two sides A and C, in one and the same piece, with the two ends E, in which the grooves *a* are formed so as to receive and secure the two sides, as set forth.

91,704.—Amelia S. Bird, Buffalo, N. Y., assignor to herself and Peter Peugeot, same place.—*Steam and other Whistles.*—June 22, 1869.

Claim.—1. The whistle, consisting of stem A, sounding-box B, reed *f*, and side-pieces *g h*, combined and operating substantially as specified.

2. The whistle, consisting of stem A, reed *f*, and open-ended sounding-box B, combined and operating substantially as specified.

91,705.—William Boate, Philadelphia, Pa.—*Hose-Carriage.*—June 22, 1869.

Claim.—The arrangement of hose-carriage as constructed, in combination with the horizontal reel, with perpendicular shaft, substantially as and for the purpose set forth.

91,706.—Charles Edvard Boman, San Francisco, Cal.—*Step-Ladder.*—June 22, 1869.

Claim.—The bar *e*, having the joint *e′*, when used in connection with the catch *e* and spring *g*, and the hook *h*, in manner described, for the purpose set forth.

91,707.—C. F. Bowman and Stephen Slyker, Wilkesbarre, Pa.—*Pneumatic Device for Forcing Liquids.*—June 22, 1869.

Claim.—The acrometer A, in combination with the chamber B, air-valve *e*, escape *e*, tubes C, *h*, and *s*, constructed and operating substantially as described.

91,708.—Amos H. Boyd, Rockville, Mass.—*Braiding-Attachment for Sewing-Machines.*—June 22, 1869.

Claim.—The combination of the slide B, actuated by the needle-mechanism, the spring-latches J J, the spring-guides L L, the rocking-lever I, the connecting-rods F^2 G^2, with the arms F and G, constructed and operating substantially as described.

91,709.—Z. Breed, Weare, N. H.—*Fire-Extinguisher.*—June 22, 1869.

Claim.—1. Igniting the charge in a fire-extinguisher after the can or vessel has been closed, substantially as set forth.

2. The dart D, or its equivalent, operated from the outside, yet acting upon the inside of the fire-extinguisher, for igniting the charge or fulminate, substantially as described.

3. Supporting or holding the charge by means of the charge-holder A, or its equivalent, and dropping the same after the can or vessel is closed, substantially as set forth.

91,710.—John Brightbill, Lebanon, Pa.—*Grain-Separator.*—June 22, 1869.

Claim.—The combination, in one machine, of the toothed cylinder C, rakes G G, board or screen E, fan T, board N, and screen O, all constructed, connected, and operating in the manner and for the purposes herein set forth.

91,711.—James R. Burville, Springfield, Ohio.—*Hydrostatic Scale for Weighing Cargoes.*—June 22, 1869.

Claim.—The apparatus for weighing or indicating the loads of vessels, consisting of a case or tube, A, open at its bottom or side, for the entry of the water, the float F, and spiral rod B, with the index and dial, arranged to operate as described.

91,712.—George Calvert, Upperville, Va.—*Bee-Hive.*—June 22, 1869.

Claim.—1. The entrances or cut-offs O, constructed substantially as described, in combination with two or more alternating hives, substantially as and for the purpose set forth.

2. The hives D, E, alternating and connecting with each other, as described, constructed and arranged substantially as and for the purposes set forth.

3. The combination of the front and rear hives D H, each with the other, and both with the other parts of the bee-house, all constructed and arranged substantially as and for the purposes set forth.

4. The store or supply boxes H, constructed and arranged substantially as and for the purposes set forth.

5. The combined arrangement, in a bee-house, of the hives D E H I, and honey-boxes I′ I″, provided with connecting-passages G K H′ H″ I‴ I⁗ I⁗′, and adapted to be isolated, when desired, by means of slides S S′, substantially as herein represented and described, for the purposes set forth.

6. In combination with the hives D E H I, constructed and arranged substantially as herein described, the ventilator W, arranged relatively to said hives, as represented and described, for the purpose set forth.

7. The slides Q, constructed with inwardly flaring passages *q q*, and employed and operating substantially in the manner described, for the purposes set forth.

91,713.—Lewis G. Carr, Philadelphia, Pa., assignor to himself and A. M. Walker, same place.—*Pipe and Tobacco-Box.*—June 22, 1869.

Claim.—1. The box A, with its lid B, covering *a*, compartment *b*, open at the top, and compartment *b′*, provided with a lid, *f*, all as set forth.

2. The arrangement of the hinged serrated plate *h*, in the lid of the box, as described.

91,714.—Isaac H. Chappell, Decatur, Ill.—*Wagon-Seat.*—June 22, 1869.

Claim.—The combination of the springs C C D D, with tapering ends, cross-pieces B B, and hooks E, when constructed and arranged to operate as herein described and shown.

91,715.—James W. Cheney and Brown Ingalls, Shelbyville, Ill.—*Churn-Dasher.*—June 22, 1869.

Claim.—The combination of the vertical shaft A, circular perforated plates B B′ B″, and movable perpendicular dashers C C, all constructed and arranged substantially as and for the purposes herein set forth.

91,716.—William Clemson, Middletown, N. Y.—*Handle for Cross-cut Saws.*—June 22, 1869.

Claim.—The combination of the slotted screw-shank E, inclined slotted block D, ferrule C, handle B, when constructed and arranged to operate together, in the manner and for the purpose described.

91,717.—Adrian Cornell, Newtown, Pa.—*Combined Thrasher, Separator, and Clover-Huller.*—June 22, 1869.

Claim.—1. The combination of the thrashing-cylinder D, screens E, hulling-cylinder F, fan H, and shaking-shoe G, the combination being and operating substantially as set forth.

2. The combination, with the hulling-cylinder D and screens E, of the reversible cant-board f^1, substantially as set forth.

3. The combination with the screens E, of the ra-

dius-bars e^1 and adjustable eye-bolts e^2, as and for the purpose described.

4. The combination, with the elevator K, of the vertically slotted post, and adjustable bag-holder L, constructed and operating substantially as set forth.

91,718.—ROBERT D. CRAFT, La Porte, Ind.—*Cultivator.*—June 22, 1869.

Claim.—The side-rails A A, cross-pieces B B, C C, tongue D, shovels E E E E, rods *b*, braces *c c*, brace G, and adjuster *e*, respectively constructed and arranged, substantially as set forth.

91,719.—JAMES F. CRANSTON, Springfield, Mass., assignor to himself, T. A. CURTIS, and J. W. LABUREE, same place.—*Rail for Railway.*—June 22, 1869.

Claim.—1. A compound continuous rail for railways, consisting of longitudinal portions or halves of a rail or rails, secured together, and having a longitudinal groove or channel in the upper part, in which are placed blocks of wood, substantially as herein described.

2. The connecting-rail A′, having the wood B therein, and with the sockets or chairs D thereon, the whole operating in connection with the main rail, and constructed substantially as herein described.

91,720.—C. O. CROSBY, New Haven, Conn.—*Last.*—June 22, 1869.

Claim.—In a last for the making of boots and shoes, forming the edge or bottom of the sole of equal width, or broader than that portion directly above, substantially as shown and described.

91,721.—WILLIAM H. CUMMINGS and HORACE L. CHILDS, Barnsborough, Iowa.—*Plow.*—June 22, 1869.

Claim.—1. The arrangement of the bar F, braces E E, rods C C, beams D D, and rods L L, all substantially as set forth.

2. The shields or guards G, when used to protect the plow-beams, substantially as set forth and described.

3. The combination of the plow-beams D, rods C and L, shields G, braces E, and plate I, when all are used in the manner and for the purpose set forth.

91,722.—ANTHONY G. DAVIS, Watertown, Conn., *Mouse-Trap.*—June 22, 1869.

Claim.—In a mouse-trap, of essentially the described construction, the partitions C, secured by the grooved center-post A and flanges *c*, substantially as described.

91,723.—LEVI S. DEMING, Newington, Conn.—*Gate.*—June 22, 1869.

Claim.—1. In a self-acting gate, the vibratory shaft *a*, swinging-weight *j*, arranged and operating substantially as and for the purpose described.

2. The arm or notch-wheel *l*, eccentric lever *o*, connection *o′*, gate-fastening *p*, arranged and operating substantially as and for the purpose described.

91,724.—LEVI L. DEWEESE, Canton, Ohio.—*Nut-Lock.*—June 22, 1869.

Claim.—The arrangement of the longitudinally grooved bolt A, washer B, tongue *b*, and nut *c*, all substantially as shown and described.

91,725.—S. B. DOUGHERTY, South Bergen, N. J.—*Safety-Valve.*—June 22, 1869.

Claim.—The hollow tapering valve C, having its outer bearing-surfaces in line, as described, in combination with the cylinders A and B, arranged as specified, and having the valve-seats *a* and *b* disposed to lie in the same conical line or figure, substantially as herein set forth.

91,726.—HENRY S. DRAPER, Rochester, N. Y., assignor to himself and JOHN A. JORDON, same place.—*Fruit-Jar.*—June 22, 1869.

Claim.—A fruit-jar, having its neck and cover so constructed as to be held together by a rubber band, and having its cover provided with a vent, *c*, and depression, *g*, all as herein shown and described.

91,727.—WILLIAM A. DRYDEN, Monmouth, Ill., assignor to himself and J. M. TURNBULL.—*Cultivator-Joint.*—June 22, 1869.

Claim.—The combination and arrangement of the plates E and K, with their respective projections H and *s*, and tongue *e*, with the eye-bolt C, nut D, grooved journal-spindle A, and beam-plate J, substantially as described, and for the purpose set forth.

91,728.—WILLIAM E. EASTMAN, Derby Line, Vt.—*Photographic Card-Holder.*—June 22, 1869.

Claim.—1. A holder for cards, photographic and other pictures, &c., provided with two or more openings, for the reception of two or more cards or pictures, and made in one and the same sheet, folded in its middle, substantially as and for the purpose set forth.

2. In combination with the above, the slit *b*, as and for the purpose set forth.

91,729.—RUDOLPH EICKEMEYER, Yonkers, N.Y. —*Felting-Machine.*—June 22, 1869.

Claim.—1. In jiggering-machines, wherein the fabric is carried, by a carrying cloth or conductor, between a platen and a flat-surfaced jigger, which operates upon the fabric during uniform periods of time, regulated by the machine, and is then released from it, giving the carrying-cloth an intermittent progressive motion for a short distance at a time, as compared with the width of the jiggering-surface, by mechanism combined with the mechanism for regulating the periods of action of the jigger, substantially as described, so that the jigger progressively repeats its action upon portions of the fabric previously acted upon, in order to insure regular and uniform felting of the fabric, substantially as described.

2. In combination with the platen, carrying-cloth, and flat-surfaced jigger, a system of rotating cams and weighted levers, connected with the jigger, substantially as hereinbefore described, whereby the jiggering-surface is pressed upon the fabric with a determinate pressure during regular periods of time, and released from the fabric at regular intervals, in order to permit of the intermittent progressive movement of the carrying-cloth.

91,730.—RUDOLPH EICKEMEYER, Yonkers, N. Y., assignor to EICKEMEYER HAT-BLOCKING MACHINE COMPANY, same place.—*Hat-Stretching Machine.*—June 22, 1869.

Claim.—1. Making the two series of supporting-ribs, which respectively support the tip and brim of the hat-body, adjustable relatively to each other, so as to conform to different heights of crowns of hat-bodies to be stretched, substantially as described.

2. Making the ribs of the lower series of supporting-ribs which support the brim conically adjustable at different angles of inclination, to conform to the variations of conical forms of hat-bodies, by hinging them to a central support, and providing them with a means of expansion and support beneath, substantially as described.

3. Making the supporting-ribs which support the tip and brim of the hat-body adjustable, so as to conform both to variations of heights of crowns and variations of conical forms of hat-bodies, substantially as described.

4. In combination with the series of stretching-devices which act upon the exterior of the brim of the hat-body, the adjustable hinged supporting-ribs, which support the brim of the hat-body, in contradistinction to fixed supporting-ribs, for supporting the brim of the hat-body, substantially as described.

5. In combination with a series of supporting-ribs and a series of stretching-devices, operating to stretch a hat-body between them, substantially as described, a steam-pipe or conduit within the limits of the supporting-ribs, whereby steam is applied directly to the hat-body placed thereon, substantially as described.

6. In combination with the supporting-ribs and stretching-devices, the steam-chest, the reciprocating-pipe, and hollow lifting-rod, with its discharge-apertures, whereby steam is applied to the hat-bodies during the operation of stretching, and cut

off when the hat-bodies are put on or taken off the supporting-ribs.

91,731.—Calvin H. Farnham, Canterbury, Conn.—*Feather-Renovator.*—June 22, 1869.

Claim.—1. The arrangement of the arms *a a a*, with flanges *c c c*, in a spiral around the main cylinder H, substantially as shown and described.

2. In combination with the drying-cylinder, constructed as described, the jacket A, with sitter O at the bottom, when used in connection with the pipes E and E′, with branch-pipes F F, &c.

3. The construction of the traps J and K, with hooks *p p*, &c., around their openings, substantially as and for the purpose shown.

91,732.—Daniel Fitzgerald, New York, N.Y.—*Signal and Switch for Railways.*—June 22, 1869.

Claim.—1. In combination with telegraph wires and conductors, arranged as above described, an electro-magnet, to close a switch by an electric current, communicated to said magnet from an approaching train, substantially as herein set forth.

2. The arrangement of the switch-rails B B, bar C, arm D, weight E, and levers F F and G, all substantially as and for the purposes herein set forth.

3. The arrangement of the hollow posts K and L, plunger *d*, connecting-cord *e*, and weight N, constructed and combined with a switch, as described, so as to signal to an approaching train whether the switch is open or not, all substantially as herein set forth.

4. In combination with the switch-rails B B, bar C, arm D, weight E, and levers F F and G, the alarm M, so constructed and connected with the bar C, that it will be sounded or set in motion when the switch is misplaced, substantially as herein set forth.

5. The arrangement of the telegraph-wires *a a* and adjustable conductors *b b*, provided with friction-rollers, all substantially as and for the purposes herein set forth.

91,733.—Edwin P. Fowler, Brooklyn, and Charles J. Clements, Mott Haven, N. Y.—*Door-Lock.*—June 22, 1869.

Claim.—The box *f*, fitted to swing upon the hubs *k*, in combination with the tumblers *g*, fitted to be acted upon directly by the key, at opposite sides of the fulcrum, when the key is introduced from either side of the lock through either key-hole *l*, in the respective hubs, substantially as set forth.

91,734.—J. Fraser and Jonathan Austin, New York, N. Y.—*Velocipede.*—June 22, 1869.

Claim.—1. A unicycle, formed by the combination of a single narrow tread and a broad rim, the latter being supported on the former, through the medium of diverging spokes, constituting a triangular frame, to bear the double track, substantially as set forth.

2. The unicycle, constructed with double tracks, supported on a closed winged apartment, forming an annular trunk, which terminates in a keel, substantially as and for the purpose described.

3. The guiding-device, consisting of the adjustable weight or ball, operating substantially as set forth.

4. A unicycle, consisting of an annular wheel, having a double bearing-rim, B, propelling-car, with hand and foot levers, and a guiding-device, when constructed and operating as described.

91,735.—David Frazeur and William D. Cocklin, Sidonsburgh, Pa.—*Farm-Gate.*—June 22, 1869.

Claim.—The arrangement, herein shown and described, of the rails D, the upper rail only being pivoted in the central gate-bar, and the lower rail having pin-holes *s* adapted to the pin-hole *y* and pin, as described, when constructed and operating substantially as and for the purposes specified.

91,736.—John Fritz and Robert H. Sayre, Bethlehem, Pa.—*Railway-Rail Joint.*—June 22, 1869.

Claim.—1. The splicing-bar B′, having a flat surface, *y*, and projecting rib *m*, for the purpose described.

2. The within-described waves, made in one or both of the splicing-bars of a rail-joint, where the bolts occur, as and for the purpose set forth.

91,737.—Edward F. Gilbert, Lyons, N. Y.—*Alphabetical Instruction-Puzzle.*—June 22, 1869.

Claim.—The case A, divided into parallel grooves, by the partitions *a a*, the latter being provided with caps *b b* on their upper edges, and in connection with the caps *b b* on the sides of the case, and the strips *c c′ c″*, secured to its bottom, and fitting into corresponding grooves in the bases of the lettered blocks, prevent said blocks from falling out of the case, or becoming inverted therein, substantially as set forth.

91,738.—Robert A. Goodyear, Binghamton, N. Y.—*Spring Bed-Bottom.*—June 22, 1869.

Claim.—The parallel links *c c*, hinged at their ends to the top slat *b* and bottom slat *a*, in combination with the spring or springs, intervening between said slats, as and for the purpose set forth.

91,739.—David Henry Gould, Troy, N. Y.—*Water-Wheel.*—June 22, 1869.

Claim.—1. The guide or chute A A, constructed, arranged, and combined in a water-wheel, in the manner and for the purposes substantially as herein described and set forth.

2. The bucket B B, constructed, arranged, and combined in a water-wheel, and with water-guides or chutes A A, in the manner and for the purposes substantially as herein described and set forth.

3. The guide or chute A and the bucket B for water-wheels, each being constructed hollow, or with a suitable chamber in the same, at or near the upper end thereof, whereby additional strength is given thereto, as well as economy in the use of the water when applied to the wheel, and thus and thereby rendering the application of the water more effective, and giving greater power to the water-wheel, in the manner substantially as herein described and set forth.

91,740.—George Halstead, Buffalo, N. Y.—*Iron-Roof Purlin.*—June 22, 1869.

Claim.—1. An iron purlin for roofs, having its flange oblique to the web, and arranged, in relation to the rafter, as and for the purpose set forth.

2. The iron purlin B, constructed as described, with an overlapping flange, C, tenon *f*, and fitted to the rafter, substantially as described.

91,741.—Frederic I. Hart, New Haven, Conn.—*Hand-Stamp.*—June 22, 1869.

Claim.—The combination of one or more wheels, A, upon a fixed axis, and one or more wheels, D, upon an axis movable, so that the two may be brought into proper relative position, the one wheel having upon its periphery a projection or relief-figure, the other a corresponding impression in *intaglio*, to constitute an embossing-stamp, substantially in the manner herein set forth.

91,742.—Jonathan Hatch, South Windham, Conn.—*Paper-Cutting Machinery.*—June 22, 1869.

Claim.—1. The combination of the bed-knife J, arranged to reciprocate in direction of the feed or run of the paper, with the revolving-knife S, having, in addition to rotation around its axis, a like reciprocating movement, and so that, in effecting the cut, both knives travel with the paper at the speed of the latter, substantially as specified.

2. The revolving knife-cylinder or stock C, hung in swinging bearings or arms D D, and driven by pinions H and I, the one of which has a fixed axis of rotation concentric with that of the swinging-bearings, while the other is free to move around the first, that operates as a driver, in combination with a counter-knife or bed, essentially as shown and described.

3. The combination of the bed-knife J and revolving-knife S, with the swinging-arms D D and pinions H and I, arranged relatively to the shaft E, substantially as specified.

4. The combination with the feeding-in rolls A and B and knives S and J, hung to operate as described, of the cams N N and levers O O, connected

in an adjustable manner, with the swinging-arms D D, to regulate the fall of the knives to the speed of the paper, essentially as herein set forth.

91,743.—Lewis Hayner, Clifton Park, N. Y.—*Coal-Bucket.*—June 22, 1869.

Claim.—A coal pail or bucket for filling self-feeding coal-burners, having its bottom D hinged, and arranged to be supported by a spring-catch, F, and to be operated by a chain, or other suitable device, G, all constructed substantially as herein described.

91,744.—Charles Henert, Washington, D. C.—*Animal-Trap.*—June 22, 1869.

Claim.—The perforated cage A, the shell B, and bait-hook C, in combination with the weapon D E, or its equivalent, substantially as described.

91,745.—Joseph G. Henszey, Philadelphia, Pa.—*Bridge.*—June 22, 1869.

Claim.—1. The upper chord, consisting of the flanged bars *a* and *a'*, with or without the bar *d*, and transverse rods *e*, arranged and secured together, substantially in the manner and for the purpose described.

2. In combination with the above, the suspension-rods D, and longitudinal bars E E of the lower chord.

91,746.—Charles Washington Hill, New York, N. Y.—*Cornice for Window-Curtains.*—June 22, 1869.

Claim.—A cornice, composed of a backing, *a*, and a facing of flexible material, *b'*, with the interposed ribs *b*, as herein set forth.

91,747.—John Hughes, Newark, N. J.—*Harness-Pad.*—June 22, 1869.

Claim.—1. The plate B, formed with an aperture for the passage of the shank of hook *a*, and having an extension, D, which enters a recess in the plate E, whereby, in connection with screw F and nut *e*, the hook *a* is secured to the plate B, and the latter is secured to plate E, substantially as and for the purpose herein set forth.

2. The construction of plate E, with depressions in its upper and under sides, for the reception of the plate B and nut G, and the provision of apertures L L in said plate E, substantially as and for the purpose herein set forth.

3. The removable plate K, constructed and arranged substantially as and for the purpose herein set forth and shown.

91,748.—Abiezer Jameson, Trenton, N. J.—*Paper Bag and Material Therefor.*—June 22, 1869.

Claim.—A bag consisting of the material made by imbedding fibrous strands in paper while the latter is in a pulpy condition, as described.

91,749.—D. H. Jennings and James Bounds, Bridgeport, Conn.—*Bedstead.*—June 22, 1869.

Claim.—The combination of shafts *m g*, wheel N, pinion *h*, arm F, cords *e e*, and lever D, when all are arranged to operate as described.

91,750.—Walter F. Jones, Syracuse, N. Y.—*Pump.*—June 22, 1869.

Claim.—The piston or plunger B, provided with a wedge or cone-shaped point, and used in combination with a force-pump, substantially as shown and described.

91,751.—William Nayson Jordan, Cambridge, assignor to John A. Baldwin and George R. Waterman, Boston, Mass.—*Medical Compound.*—June 22, 1869.

Claim.—The compound or medicine composed of the above ingredients, in the proportions above indicated.

91,752.—J. C. Jordon, Watertown, and Ellis Doty, Janesville, assignors to Doty Manufacturing Company, Janesville, Wis.—*Machine for Upsetting, Punching, and Cutting Tires.*—June 22, 1869.

Claim.—1. The machine, consisting of the frame or body A, cast hollow or slotted, to receive the cam-lever E and pinion F, with the stationary heads B C, and the sliding-head D, with the shear-blades and punch applied thereto, and all constructed and arranged to operate substantially as described.

2. The detachable wedge-shaped blocks S, recessed to receive the detachable jaws I, and provided with lugs, to hold them in place upon the heads B and D, substantially as and for the purpose set forth.

3. The adjustable rest *v*, secured to the head B, substantially as and for the purpose herein set forth.

91,753.—John H. La Bau, Brooklyn, N. Y.—*Striking-Movement for Clocks.*—June 22, 1869.

Claim.—1. The combination of the lever *m* and latch *l*, with each other, and with the pins *o* of the wheel A, substantially as and for the purpose herein set forth.

2. The combination of the latch *l*, lever W, and toothed disk 3, substantially as and for the purpose herein specified.

3. The ribbon-spring *i* and gearing *j j'*, in combination with the wheels A A', for the transmission of motion from the one to the other, substantially as specified.

91,754.—Nathan Lawrence, Taunton, Mass., assignor to Reed & Barton, same place.—*Coffee-Pot.*—June 22, 1869.

Claim.—1. In a coffee or tea pot made of the ordinary soft metal, fusible at low temperatures, the application of the ring *r*, of refractory material, when constructed in the form and attached in the manner described, and for the purpose set forth.

2. In a coffee or tea pot, making the bottom concave on the under side, and providing it with a series of circular concentric corrugations, *a a*, as described, and for the purpose specified.

91,755.—Eric Lindholm, Brooklyn, N. Y.—*Guide-Rolling Hoop.*—June 22, 1869.

Claim.—The construction of the guide B, with curved spring-clasp D, having free openings *d d* at the ends, while the elastic middle portion thereof retains the hoop in the guide, substantially as herein specified.

91,756.—Cyrus Lomax, Paoli, Ind.—*Boot-Crimp.*—June 22, 1869.

Claim.—The cap B, provided with ribs *a a*, in combination with the adjustable springs C C C, arranged to operate in connection with the crimping-board A, substantially in the manner and for the purpose set forth.

91,757.—George G. Lyman, Independence, Iowa, assignor to himself and John F. Lyman, same place.—*Harvester.*—June 22, 1869.

Claim.—1. The arrangement of the vibrating levers G G' and pivoted connecting link or bar M, having a circular projection, *n*, with a recess on each side, in which the levers operate, substantially as shown and described.

2. The arrangement and combination of the vibrating levers G G', lever *f*, carriage I, forked lever *g*, and arm *h*, all substantially as and for the purposes herein set forth.

3. The arrangement of two wheels on the axle of the machine, with rollers on the inside of said wheels, to operate the vibrating levers, substantially as and for the purposes set forth.

4. The arrangement of the eccentric lever *d*, lever *c*, and chain *a*, working on the main frame A, for the purpose of raising the sickle-bars, substantially as herein set forth.

91,758.—Philander Macy, Rochester, N. Y.—*Toy Steam-Engine.*—June 22, 1869.

Claim.—1. The construction and arrangement of the boiler A and steam-cylinder B, with reference to the induction and eduction passages, valve, and valve-box, as herein set forth.

2. The arrangement of the boiler A, passages *x y z*, valve *a*, channel *a'*, cylinder B, support *d*, beam D, and connecting valve-rod *b'*, all constructed substantially as herein set forth.

91,759.—John McCollum and Joseph Parr, New York, N. Y.—*Machine for Making Ginger-Snaps and Crackers.*—June 22, 1869.

Claim.—1. The intermittent progressive motion

of the follower, in combination with the intermittent reciprocating motion of the knives, and the intermittent progressive motion of the apron, when said motions are derived from and are timed by a rotating shaft or first mover, connected with the follower, the frame of knives, and the carrying-apron by mechanical devices, substantially in the manner described.

2. The intermittent progressive motion of the follower, in combination with the intermitteut progressive motion of the carrying-apron, when said motions are derived from and are timed by a rotating shaft or first mover, connected with the follower and carrying-apron by mechanical devices, substantially as described.

3. In combination with the main driving-shaft or first mover, and the frame of knives, the eccentric, with its strap and rod, the four-toothed ratchet-wheel and its pawl, and the short crank-shaft and crank-connections, whereby the knives are made to move forward and back during one-half a revolution of the machine, and to remain at rest during the other half revolution, substantially as and for the purposes described.

4. The regulating mechanism, substantially as hereinbefore described, in combination with the mechanism for moving the follower downward in the dough-box, whereby the pressure of the follower upon the dough is regulated, substantially as hereinbefore described.

5. The mechanism for preventing breakage, substantially as herein described, in combination with the follower and its actuating mechanism, whereby the follower is relieved from the action of its actuating mechanism when it has descended to near the bottom of the dough-box, substantially as described.

91,760.—Loring Moody, Malden, Mass.—*Propelling-Apparatus.*—June 22, 1869.

Claim.—The described arrangement of paddles, and their levers or shanks, with cranks operating downward through openings in the deck, which serve as fulcra, in the manner set forth.

91,761.—George R. Moore, Philadelphia, Pa.—*Lever for Operating Water-Closet Pans and Valves.*—June 22, 1869.

Claim.—1. The valve-barrel A, cast in one with its head and projection E, the cap I, fitting over said projection E, the packing P inclosed by the projection E and cap I, when used in combination with the valve-stem B, to both guide and pack the same, in the manner and for the purposes set forth.

2. The pivoted nut E, combined with the lever A A and the pull-rod C, substantially in the manner and for the purposes herein set forth.

91,762.—Hiram W. Moore, Jersey City, N. J.—*Car-Wheel.*—June 22, 1869.

Claim.—In combination with a car-wheel, with wood interposed between its web and rim, the dovetailed groove in the perimeter of the web, filled with solid dovetailed sections of wood, through an opening in the side of the groove, and keyed and bound therein, substantially as herein described and represented.

91,763.—Andrew J. Morse, Boston, Mass.—*Draught-Cock.*—June 22, 1869.

Claim.—A soda-water draught-cock, having a main valve, *d*, and an auxiliary valve, *o*, controlling fine-stream and main-stream orifices, both operated by one screw-spindle, when the parts are so constructed and arranged that, rotation of the screw-spindle having opened communication with the fine-stream orifice, continued rotation thereof shuts off such communication, and opens communication with the large-stream orifices *y y*, substantially as described.

91,764.—Asa Newell, Jordan, N. Y.—*Shingle-Machine.*—June 22, 1869.

Claim.—1. The froes B *b'*, acting in concert with each other, and upon opposite ends of the bolt, when operated by the means and in the manner described.

2. The arrangement herein described of the froe B, shaving-knives *c c*, and feed-rollers D D', when all the parts are constructed to operate as herein set forth.

3. In a shingle-machine, the arrangement of the table A, with the fixed wedges *a*, and the connected sliding wedges I *i* I *i*, when operated automatically by means of the reciprocating carrier J, all operating substantially as herein set forth.

4. The arrangment of the fixed stop H, constructed as described, with relation to the froes B *b'*, and automatically adjustable table A, all as herein set forth.

5. The arrangement of the arms *g g* G G, gear-wheels N F R S *t*, connections *f r*, and shaft E, with relation to the froes B *b*, feed-rollers, and shaving-knives, substantially as herein described.

91,765.—John North, New York, N. Y., assignor to himself and William T. Holt, same place.—*Rock-Drilling Apparatus.*—June 22, 1869.

Claim.—1. The drill-frame D, adjustable at any point upon the upright frame A A, by means of the nut *g*, when said frame is used in combination with the swivel-head E, substantially as and for the purposes set forth.

2. The swivel drill-head E, supporting a sleeve-gear and drill-rod, when used in combination with a drill-frame, whether adjustable or otherwise, and secured thereto by the hollow shaft I and the nut K, substantially as and for the purposes set forth.

3. The hollow screw-shaft R, when used in combination with the swivel drill-head, sleeve gear, and feed-nut, or their equivalents, substantially as and for the purposes described.

4. The release-gear X, when used in combination with the driving and sleeve gear, substantially as and for the purposes described.

5. The adjustable steady-guide, when used in combination with the drill-head, screw-shaft, and boring-bar, substantially as and for the purposes specified.

6 The straight and continuous driving-shaft L, passing through the crank-arm W, clamp H, hollow shaft J, nuts *g* and K, and drill-head E, substantially as and for the purposes specified.

91,766.—James S. Ostrander, Albany, N. Y.—*Roller-Case for Maps and Charts.*—June 22, 1869.

Claim.—In combination with the rollers B, the feathered spindles *c*, stops *e*, and slotted bearings S, substantially as and for the purposes set forth.

91,767.—Darius Parkhurst, St. Louis, Mo.—*Head-Block for Saw-Mills.*—June 22, 1869.

Claim.—1. The pawl I, arranged on the pivot *i*, having the bearing-surfaces i^1 i^2 i^3, (or either thereof,) and combined with the spring K, substantially as and for the purposes set forth.

2. The method of controlling the movement of the shaft E and its dial N, by the spring-lever *n*, stop *p*, and guard P, said guard being arranged with division-marks, substantially as and for the purposes set forth.

3. The gear-wheel G, cam L, and weighted lever L^1, when operating substantially as set forth.

4. The coupling C', formed of ridged disk *c* c^1, connected by a set-screw c^3, to allow for adjustment of the parts of the shaft thereby connected, substantially as set forth.

91,768.—Hugh Pool, Montgomery County, Tenn.—*Medical Compound.*—June 22, 1869.

Claim.—The combination of the ingredients aforesaid, in the quantities aforesaid, and to be used in the treatment of said disease known as "hog cholera."

91,769.—Edward D. Pritchard, New York, N. Y.—*Low-Water Indicator.*—June 22, 1869.

Claim.—1. The plunger *a* and valve *m*, connected together by rods *p*, in combination with the spherical float *v*, and gauge-tube A, substantially as shown and described.

2. The stop-cock *c*, provided with channels *e f*, as described, in combination with the plunger *a*, float *v*, valve *m*, and gauge-tube A, substantially as set forth.

3. The combination of the steam-gauge C, to the upper part of the gauge-tube or the upper bracket B', as described.

4. The valve *s*, in combination with the tubular spindle of the steam-whistle D, and with a rod, *u*, substantially as set forth.

91,770.—Franklin Ransom, Buffalo, N. Y.—*Steam-Engine Condenser.*—June 22, 1869.

Claim.—The combination of a siphon and pump with a condensing-chamber, substantially as herein described.

91,771.—Wycoff Robbins, Hancock County, Ill.—*Ditcher.*—June 22, 1869.

Claim.—1. The frame A A, when constructed with flanges B and C, and secured by a hinge, *f f*, all operating substantially as and for the purpose set forth.

2. The combination of the frame A A, flanges B C, connecting-bars D D, hinge *f f*, clevis-holes *l l*, hitching-holes *i i*, when the same are constructed and arranged substantially as and for the purpose described.

91,772.—Herman Royer, San Francisco, Cal.—*Device for Treating Hides.*—June 22, 1869.

Claim.—1. Converting raw hides into leather, by twisting them spirally in either direction alternately, substantially as described.

2. The device, consisting of a reversing-apparatus, the reversible shaft I, and the weighted sliding-bar L, with the stationary shaft I′, the whole constructed substantially as herein described.

91,773.—Robert Ruston, Rockville, Ind.—*Gauge for Dressing Millstones.*—June 22, 1869.

Claim.—1. A gauge for use in dressing millstones, combining in its construction a bed or principal portion, A, a movable or adjustable portion, B, and adjusting-screws E E and F F, substantially as and for the purpose set forth.

2. The adjustable square, consisting of the parts G, H, and I, constructed and arranged for use, substantially as and for the purpose set forth.

91,774.—Isaac N. C. Saville, Worcester, Mass.—*Last.*—June 22, 1869; antedated March 3, 1869.

Claim.—The guard A, firmly embedded in and secured to the last by the prongs, or their equivalents, embracing a portion of the wood, to prevent splitting, when constructed and operating as set forth and described.

91,775.—George Scott, Louisville, Ky.—*Elevator.*—June 22, 1869.

Claim.—1. The clamping-levers F, and their combination with the uprights C^1, and the upright portions of the frame A, constructed substantially as shown and described.

2. The combination of the lever E and the clamping-lever F, substantially as shown and described.

3. The combination of the lever E, cord or chain E^1, and balance-weight E^2, substantially as shown and described.

4. The arrangement of the band D and strap D^2, with reference to the clamping-levers F, substantially as shown and described.

91,776.—Frederick S. Sears, Charlestown, Mass.—*Butter-Chest.*—June 22, 1869.

Claim.—The combination of the chest *a*, constructed substantially as described, with the ice-containing chamber *e*, series of dripping-shelves *i*, and trough *j*.

91,777.—George Seeger, James W. Loveless, and Joseph W. Throp, Clark's Hill, Ind.—*Clod-Fender.*—June 22, 1869.

Claim.—1. The frame A, with cross-bars *a a*, and lugs a^1 a^2, forming the fender, substantially as shown and described.

2. The combination of the frame A, bar B, with arms b^1 and b^2, and clip C, substantially as and for the purpose set forth.

91,778.—Frederick Shaller, Hudson, N. Y., assignor to himself and John B. Longley, same place.—*Lamp-Burner.*—June 22, 1869.

Claim.—1. The curved elastic bearing-straps *f f*, in combination with the double feed-rollers *m m*, substantially as and for the purpose herein set forth.

2. The elastic chimney-holder D, constructed as described, for the purpose herein set forth.

91,779.—Samuel S. Simmons, Watsonville, Cal.—*Seat for Vehicle.*—June 22, 1869.

Claim.—1. In combination with a seat for vehicles, the oscillating-frame E, upright standards D D′, springs *c c* and *i i*, together with the rods *e e*, the whole arranged substantially as described, for the purpose set forth.

2. In combination with the frame E, arranged as described, the device, consisting of the dog K and link *k*, for holding the same when required, substantially as described.

91,780.—Richard Smith, Sherbrook, Canada.—*Machine for Finishing Paper Boxes.*—June 22, 1869.

Claim.—1. A machine for imparting a finishing-pressure to boxes and hollow articles made from paper-pulp, by receiving them on a form, and subjecting them to lateral and vertical compression, applied by means of jaws and a plunger, substantially in the manner described.

2. The jaws A B C D, with their respective toggles and levers, arranged and operating as specified.

3. The slide L, with its spring-plunger *w*, constructed, arranged, and operating as described.

4. The form E, arranged for conjoint operation with the jaws A B C D and the plunger *w*, in the manner set forth.

5. The clearer *v*, constructed, arranged, and operating in the manner and for the purpose set forth.

91,781.—A. J. Smith, Canal Dover, Ohio.—*Lasting-Iron.*—June 22, 1869.

Claim.—1. The main jaws A A, pivoted together, and held apart by the spring C, in combination with the smaller jaws B B, pivoted in slots on the main jaws, substantially as shown and described.

2. In combination with the jaws A A, B B, and spring C, the screw-rod D, ferrule E, connecting-rods *a a*, and handle G, all constructed and arranged substantially as and for the purposes herein set forth.

91,782.—Henry E. Smyser, Philadelphia, Pa., assignor to Weikel & Smith Spice Company.—*Spice-Box.*—June 22, 1869.

Claim.—The flange *b*, arranged on the perforated disk C, when the latter is adapted to an internal rib, *a′*, in the box A, as specified.

91,783.—Jeremiah Snell, Evans's Mills, N. Y.—*Gate.*—June 22, 1869.

Claim.—The grooved rail *i* of the gate, in combination with the rollers G G′, the latter being arranged on a swinging-frame, D E F, substantially as and for the purposes set forth.

91,784.—Greenleaf Stackpole, New York, N. Y., assignor to himself and H. C. Covert, same place.—*Machine for Sewing Brooms.*—June 22, 1869.

Claim.—1. The pressing-jaws C C, in combination with the shuttle B and needle *a*, for sewing brooms, substantially as set forth.

2. The arrangement of the pressing-jaws C C, in such manner that each revolution of the cam N, or its equivalent, will cause them to rise and fall alternately with the motion of the needle and the shuttle, substantially as and for the purpose set forth.

91,785.—M. A. Stevens, Hartford, Conn.—*Bath-Tub.*—June 22, 1869.

Claim.—The rim *b*, sacking-bottom *d*, with the tub *a*, substantially as described, as an improved article of manufacture.

91,786.—Jacob M. Stoner, Greenville Lodge, Pa.—*Corn Fertilizer and Planter.*—June 22, 1869.

Claim.—1. The box F, divided, by means of partitions *a a*, into three chambers, a corn-receptacle, *b*, fertilizer-receptacle *c*, and depositing-chamber *d*, having a tube or spout, *e*, leading downward into the ground, substantially as shown and described.

2. The arrangement within the box F, constructed as described, of the rollers H and J on the respective shafts G and I, so as to deposit the corn and fertilizer at the same time, substantially as herein set forth.

3. The arrangement of the shafts G and I, cog-wheels K and L, and cog-wheel M, on the hub of the driving-wheel, substantially as shown and described.

4. The arrangement of the frame E, boxes F F, with their appurtenances, and the lever N, substantially as and for the purposes herein set forth.

91,787.—Thomas B. Stout and Joseph Stout, Keyport, N. J.—*Coffee and Tea Pot.*—June 22, 1869.

Claim.—The oblique receptacle B, arranged in the pot A, in relation to its spout, and secured therein, substantially as and for the purposes herein specified.

91,788.—Henry D. Stover, New York, N. Y.—*Lathe for Finishing the Driving-Wheels of Locomotives.*—June 22, 1869.

Claim.—1. The combination of the boring-mandrel H with the double-face plate-lathe, as described, in the manner substantially as shown.

2. The combination of the tool-rests K and O with the double face-plate lathe, substantially in the manner described.

3. In combination with such lathes, the tool-rest N, mandrel X, and screw *n*, substantially as described, and for the purposes set forth.

4. The arrangement of the tool-rest O, between the face-plate G and the wheel to be operated on, in the manner and for the purpose substantially as described.

5. In combination with the double-face plate-lathe, the brackets *l l'* and stud or stops *t t'*, substantially as described.

6. In combination with the double-face plate-lathe, the rests K and N and the slotting and boring device thereon, substantially as described.

7. The adjustable stud or bolt *i* and the adjustable bracket R, when combined with the double-face plate-lathe, substantially as described, and for the purposes set forth.

8. The adjustable sleeve *g* and the boring-tool H, in combination with the tail face-plate of the lathe, substantially as described, and for the purposes set forth.

91,789.—Otto Tackmann, Yonkers, N. Y.—*Thill-Coupling.*—June 22, 1869.

Claim.—A shaft-coupling, composed of a hook, A, and looped goose-neck D, in combination with the envelope C, stuffing E, and straps F F', all constructed and operating substantially as shown and described.

91,790.—Joseph A. Talpey, Somerville, Mass.—*Hay-Spreader.*—June 22, 1869.

Claim.—1. The combination, with the revolving fork-head and the series of pivoted or swinging forks which it carries, of a corresponding series of tilting-pins, or their equivalent, under the arrangement described, so that the tines of each fork shall, as they take up the hay, be elevated by said tilting-device, and after having tossed the hay, shall, by the disengagement of the fork from the tilting-device, be free to drop, substantially as and for the purposes set forth.

2. The construction of the forks in the form herein shown and specified.

3. The combination, with the revolving axle and fork-head, and pinions which it carries, of wheels mounted on said axle, and eccentric gears pivoted to said wheels, under the arrangement, and for operation, as set forth.

4. The combination, with the driving-gear, mounted eccentrically on the face of the wheel, and ratchet connected with the same, of the pivoted pawl, and its supporting-rod, fitting upon the axis of the gear, and supported in the frame of the machine, as and for the purposes specified.

5. The combination of the combined axle and fork-head, the frame with which it is connected, the pivoted forks and their tilting-pins, and the mechanism for rotating said axle, under the arrangement and for operation as set forth.

91,791.—Stephen P. M. Tasker, Philadelphia, Pa.—*Method of Manufacturing Welded Wrought-Metal Tubing.*—June 22, 1869.

Claim.—The method of manufacturing wrought-metal welded tubing from skelps, previously prepared by bending, as hereinbefore described.

91,792.—Samuel Teachout, Troy, N. Y.—*Water-Wheel.*—June 22, 1869.

Claim.—1. The intermediate stationary guide A, between the guides B B, its terminations being in line therewith, as arranged in relation to the water-wheel, in the manner substantially as and for the purposes herein described and set forth.

2. The combination of the intermediate guides A, as specified in the foregoing claim, with the water-gate C, when the same are arranged between the guides B B, in the manner and for the purposes substantially as herein described and set forth.

91,793.—Robert Themar, Sheboygan, Wis.—*Mosquito-Guard.*—June 22, 1869.

Claim.—As an article of manufacture, the above-described device, consisting substantially of the parts *a c e i m n*, covered as described, and constructed and arranged in the manner and for the purposes set forth.

91,794.—Bjarne O. Thompson, Chicago, Ill.—*Clothes Wringer and Mangle.*—June 22, 1869.

Claim.—The construction of the rollers, a portion of each being constructed of India rubber, for a wringer, and a portion of wood or other hard material, for a mangle, in combination with the frame and other devices, as arranged and shown.

91,795.—Frederick M. Untiedt, East Orange, assignor to himself and William Martin, Newark, N. J.—*Hand-Chopping Knife.*—June 22, 1869.

Claim.—As a new article of manufacture, the chopping-knife, Fig. 1, when its parts are formed and combined, substantially in the manner and for the purpose shown and described.

91,796.—William W. Vanderbilt, New York N. Y.—*Ventilator for Ships.*—June 22, 1869.

Claim.—The partitioned passages H H, open at their ends, and situated between the ceilings of the upper state-rooms and the hurricane-deck, in combination with the registers C and conduits E, all constructed, arranged, and operated in the manner and for the purpose set forth.

91,797.—W. T. Vann, Macomb, Ill.—*Horseshoe-Nail Pointer.*—June 22, 1869.

Claim.—The machine described, consisting essentially of the swage A, with projection *a*, swage E, with face *e* and head *e'*, and the adjustable lever B, the whole being constructed in the manner described, for the purpose set forth.

91,798.—Lansing Van Wie, Bethlehem, N. Y.—*Potato-Planter.*—June 22, 1869.

Claim.—The machine above described, for dropping, cutting, covering, and rolling potatoes, at one continuous operation, constructed substantially as described.

91,799.—Teunis Vreeland, Wataga, Ill.—*Seed-Sower.*—June 22, 1869.

Claim.—The combination and arrangement of the platform A, hopper W, distributer P, hooks B, pinion O, shaft E, bearings D D, and pulleys F and J, substantially as described, and for the purpose set forth.

91,800.—A. J. Warren and D. W. Wilson, West Eau Claire, Wis.—*Steam-Generator for Combustion.*—June 22, 1869.

Claim.—The apparatus for consuming sawdust herein described, having gas-tube C, boiler A, dome *d*, fire-places B, spouts E, and valves Y, constructed and arranged substantially as specified.

91,801.—JOHN WEBSTER, Chelsea, England.—*Device for Preventing Inerustation in Steam-Generators.*—June 22, 1869.

Claim.—The perforated pipe I, filled with fibrous material, in combination with the tube E, connected with a steam-boiler, A, substantially in the manner herein set forth.

91,802.—W. J. WELLS, Sidney, assignor to himself and H. W. NEAL, Toledo, Ohio.—*Cultivator.*—June 22, 1869.

Claim.—1. The construction of the shovels or blades R R′, substantially as and for the purposes set forth.

2. The arrangement of the shovels E and E′ and R and R′, substantially in the manner and for the purpose set forth.

3. The combination of the plows R R′ and E E′, levers I I and L, and ratchet-bar *g′*, all arranged substantially in the manner set forth.

91,803.—HIRAM WHITNEY, Chicago, Ill.—*Detachable Stove-Pipe Clothes-Drier.*—June 22, 1869.

Claim.—In the construction of detachable stove-pipe clothes-drier, the two-part clamp A B, provided with an interlocking joint or hinge, F G, a rim, C, slots J I, in combination with rod K and arms P, as and for the purpose specified.

91,804.—WILLIAM E. WILCOX, Peoria, assignor to himself and T. H. WILLS, Beardstown, Ill.—*Railway-Car Axle-Box.*—June 22, 1869.

Claim.—The construction of the anti-friction rollers D, operating in links E, that revolve in the grooves G of the concave box F, with the wedge-plate H at top, when arranged and operating as herein described, and for the purposes set forth.

91,805.—S. M. WIRTS and L. SWIFT, Hudson, Mich.—*Grain-Separator.*—June 22, 1869.

Claim.—1. The combination of the slotted arm or lever H, having its fulcrum in the center of the stationary bar I, and obtaining its motion from the crank *b* in the center of the fan-shaft C, with the arms *e e′*, and connecting-rods *d*, *d′*, and *e*, whereby motion is contributed to the shoe E, screen F, and rocking spout and screen J, directly in the center of the machine, substantially as and for the purposes herein set forth.

2. The semicircular rocking screen and spout J, constructed as described, and operating substantially as and for the purposes herein set forth.

3. The arrangement of the adjustable bar I and wind-board K, substantially as and for the purposes herein set forth.

91,806.—NATHAN WOODBURY, Woodstock, Vt.—*Centering-Awl.*—June 22, 1869; antedated May 28, 1869.

Claim.—1. The reversible centering and beveled nut I, when constructed as described, and used upon the extremity of a centering-awl, substantially as set forth.

2. In combination with the nut I, the sliding-tube C, with flange *b*, fixed tube B, with shoulder *a*, awl E, spring *d*, flanged screw F D, and handle A, all the parts being constructed, arranged, and operating substantially as specified.

91,807.—ALVAH WORSTER, Hannibal, N. Y.—*Trace-Buckle.*—June 22, 1869.

Claim.—The combination of the frame C, swinging-link E, and plate or bar F *f*, constructed and operating substantially as and for the purpose described.

91,808.—ALVAH WORSTER, Syracuse, N. Y.—*Trace-Buckle.*—June 22, 1869.

Claim.—A buckle having a central bar or body, C *c*, in connection with the swinging-loop D, as and for the purpose herein set forth.

91,809.—ALVAH WORSTER, Hannibal, N. Y.—*Harness-Loop.*—June 22, 1869.

Claim.—As a new article of manufacture, the harness-loop *g c e f*, when arranged and constructed as described, and adapted to be fastened to the strap at one point only, by a single rivet, passing through the opening *o*, said rivet also securing the buckle, as herein shown and described.

91,810.—JEREMIAH QUINLAN, New York, N. Y.—*Combined Drawer-Pull and Label.*—June 22, 1869.

Claim.—The drawer-pull and label-holder A, having an opening, C, to receive the label D, ears E, to form its rear and end supports, a bead, to sustain it vertically, and an arched flange or boss, B, the whole constructed, arranged, and cast in one piece, substantially as before described.

91,811.—JOHN P. ALLENSWORTH, Mackinaw, Ill.—*Extension Wagon-Coupling.*—June 29, 1869.

Claim.—1. The inclosing-staple F, with its bolt *a* and nut or equivalent fastening, whether attached to either the forward or rear reach, but embracing both within it.

2. In combination with the above, and working together, the revolving or swivel staple or eye E, attached to the rear reach, within the recess *g*, the rear reach B, with the claw-plate *e*, for adjustment in either of the recesses *f*, in the surface of the contiguous reach, the forward reach A, with its grooves or recesses *f*, for the reception of the claw-plate *e*, and the socket *i*, cut in the rear axle, substantially as described, and for the purposes set forth; and the above devices for coupling wagons, whether the staples (fixed and rotary) and clamp or hook *e* are fastened to the forward or to the rear reach, or the staples respectively on a separate reach.

91,812.—J. M. AUBREY, Portage City, Wis.—*Lamp-Light Extinguisher.*—June 29, 1869.

Claim.—The application of an apparatus or extension, made of metal, or anything substantially the same, as before described, which, by blowing against, or forcing air against, will turn it (the air) down the chimney, producing the desired effect.

91,813.—HERMAN BAEUERLE, New York, N. Y.—*Mode of Construeting Architectural Ornaments of Sheet Metal.*—June 29, 1869.

Claim.—The manner of making metallic ornaments in one pair of molds, by first striking three or four metal plates into a shape approximating that which is desired, by dint of repeated heavy blows of the drop upon the combined mass of plates, and then, by separating the plates and striking each again separately, substantially in the manner and for the purpose described.

91,814.—HARRY J. BAILEY, Pittsburgh, Pa.—*Machine for Preparing Bar Lead.*—June 29, 1869.

Claim.—1 The cutter *i* and guide *e*, in combination with a pair of cylindrical metallic rolls, one of which is mortised for the insertion of removable type, die or dies, and at least one of which is grooved, substantially as above described.

2. The subject-matter of the above claim, in combination with the removable die or type *g*, for the purpose specified.

3. The subject-matter of the first foregoing claim, in combination with the straightening-guide *m*, as set forth.

4. The subject-matter of the last foregoing claim, in combination with the feed-rolls *f f′*, all arranged in the manner substantially as shown and described.

91,815.—HARRY J. BAILEY, Pittsburgh, Pa.—*Machine for Making Tin-Lined Lead Pipe.*—June 29, 1869.

Claim.—1. An adjustable double core, *a a′*, with or without a stem, *a″*, arranged in and along the axial line of the machine, substantially as and for the uses set forth.

2. The cylinder A, piston C, ingot-mold D, and double core *a a′*, with or without a stem *a″*, in combination with keys *g g′*, or the mechanical equivalents thereof, all arranged and operated substantially in the manner and for the purposes set forth.

91,816.—JAMES BAUGHMAN, Suffield Township, Ohio.—*Farm-Gate.*—June 29, 1869.

Claim.—The special arrangement of the vibratory standards B and C, attached to each side of the gate, at the top, whereas the lower ends are pivoted near the ground independently of the fence or posts, in

combination with the counterbalance D, substantially as and for the purpose set forth.

91,817.—William E. Beman, Portland, Me.—*Oar-Lock.*—June 29, 1869.

Claim.—The combination, with the oar-lock, of the pivoted collar *e*, slide *m n l*, slotted piece *j*, and recess or mortise *b*, as herein set forth.

91,818.—Edward Mounier Boxer, Royal Arsenal, Woolwich, England.—*Metallic Cartridge.*—June 29, 1869; patented in England October 13, 1866.

Claim.—1. Constructing the anvil to cartridges for breech-loading fire-arms with shoulders or projections, so formed as to abut against the edge of the percussion-cap, and thus to prevent its entering the cap to such an extent as to cause the ignition of the fulminate, except when the cap is acted upon by the striker of the gun, substantially as hereinbefore described with reference to Fig. 1 on the accompanying drawing.

2. The separate flanged cap-chamber E, so made as to inclose the cap and anvil, or other means of ignition, and, at the same time, by compression of a wad, G, around the same, to secure the body of the cartridge-case to a solid metallic disk, C, with or without the intervention of the base cup D, substantially as hereinbefore set forth.

3. Interposing one or more pieces of coiled metal or cups between the base cup and the cartridge-case, which coiled metal or cups extend beyond the edge of the base cup, substantially as and for the purposes hereinbefore described with reference to Figs. 10 to 13 on the accompanying drawing.

91,819.—William Bradbury, Newton, Mass.—*Machinery for Raising and Lowering Goods.*—June 29, 1869.

Claim.—1. The machine for lowering goods, constructed and operating substantially as described.

2. An apparatus for lowering goods, operated by the descending load, raising the empty carriage again, after its load has been discharged, by accumulated power generated by the descent of the load, by means of a fly-wheel, or an equivalent device connected therewith, substantially as described.

3. The combination of the carriage with the inclined ways H′, which supply the load to the same, substantially as described.

4. In combination with the carriage and inclined ways H′, which supply the goods to the carriage, the stop-bars or detents K and K′, for releasing the load to the carriage, and arresting the supply, substantially as described.

5. The method of releasing the brake from the fly-wheel, which permits the load to descend, by operating the releasing mechanism by the weight of the load, substantially as described.

6. The method of applying the brake to the fly-wheel by the ascent of the empty carriage, so as to bring the carriage to a stand-still at the proper place to receive another load, substantially as described.

7. The within-described device for applying the brake to the fly-wheel during a portion of the descent of the load, to retard its motion, and to release it again at the proper time, substantially as described.

8. The combination of the hoisting-carriage, the loading-ways A^3, and the devices shown, or their equivalents, for releasing and retaining the goods to be loaded, all constituting a self-loading apparatus to be used in hoisting goods, substantially as described.

9. The combination of the hoisting-carriage, and the yielding-stop, and inclined ways, for discharging the load from the carriage in hoisting, substantially as described.

91,820.—William G. Brady, Lowell, Mass.—*Door-Plate and Bell-Alarm.*—June 29, 1869.

Claim.—The alarm-device, constructed as herein described, the pivoted door-plate, arranged to cover or uncover a letter-chute made through the door, each part arranged to operate in connection with the other, as described and shown.

91,821.—Moses Breen, Troy, N. Y.—*Coal-Stove.*—June 29, 1869.

Claim.—1. The outer cylinder or heating-chamber B, in combination with the inner cylinder *c* and *c′*, chamber of combustion F, and the fire-pot K, all arranged, combined, and operating substantially in the manner and for the purposes herein described and set forth.

2. The pipes or tubes E E′, or their equivalents, in combination with the fire-pot K and chamber of combustion F, substantially in the manner and for the purposes herein described and specified.

3. The fire-pot K, constructed substantially as herein described, in combination with the inner cylinder C C′, in the manner and for the purposes substantially as herein described and set forth.

4. The outer chamber B, inner combustion-chamber F, pipes or tubes E E′, and fire-pot K, all arranged, combined, and operating substantially in the manner and for the purposes herein fully described and set forth.

91,822.—William H. Brown, Lowell, Mass.—*Machine-Indicator for Cloth-Manufacturing, &c.*—June 29, 1869.

Claim.—The replacable dial-gear *f*, in combination with the elongated pinion *k*, when arranged for the purposes herein described and specified.

91,823.—Francis M. Buckles, Altona, Ill., assignor to himself and John A. Stuckey, same place.—*Eaves-Trough Attachment.*—June 29, 1869.

Claim.—The combination and arrangement of the band B with the tongues S and V, pin E, and gutter A, in the manner and for the purposes herein set forth and described.

91,824.—De Witt C. Chipman, Noblesville, Ind.—*Railroad-Car Heater.*—June 29, 1869.

Claim.—The construction of the funnel-mouths D, with wide flanges at their extremities, in combination with the detachable connecting-pipe F, all arranged to operate substantially as and for the purposes set forth.

91,825.—Henry Churchman, Horsham, England.—*Boot-Blacking Apparatus.*—June 29, 1869; patented in England August 6, 1868.

Claim.—Constructing and using rotary concave brushes, wherein the bottom surface is formed rounded and widens out up to a certain point, from which point the concave brush-surface is contracted toward the rim of the brush, so as to overhang the lower part, substantially as and for the purposes set forth.

2. Combining with such concave rotary brush, constructed as aforesaid, a brush for applying the blacking, arranged and operating substantially as hereinbefore described, with reference to Figs. 1 to 3, on the accompanying drawings.

91,826.—Walter R. Close, Bangor, Me., assignor to himself and Thomas N. Egery, same place.—*Shingle-Machine.*—June 29, 1869.

Claim.—1. The combination of the adjustable gear-wheels *d g i h*, slotted crank *k*, pitman J, lever G, and weighted lever I, substantially as shown and described.

2. The above, in combination with the jointing-saw *b*, placed upon the same shaft with the shingle-saw, and driven by the same pulley, all substantially as and for the purpose set forth.

91,827.—James R. Creighton, Boston, Mass.—*Speaking-Tube Signal.*—June 29, 1869.

Claim.—The construction and arrangement of the tilting-arm *g*, with its knob *i*, the rocker-shaft *b*, with its tipper *d* and finger *k*, and the oscillating lever *e*, the latter being actuated by the spring, and disposed in connection with the rocker-shaft and an alarm mechanism, and the whole being arranged and operating substantially as hereinbefore explained.

91,828.—Thomas Dark, Buffalo, N. Y.—*Sewer.*—June 29, 1869.

Claim.—1. The reservoir A, pivoted to the uprights H, and provided with the space *m* at its closed end, as and for the purposes set forth.

2. The reservoir A, flushing-pipe C, provided with an enlarged mouth, B, vault D, and drain E, all con-

structed, arranged, and operated in the manner and for the purpose set forth.

91,829.—J. G. Dillaha, Waco, Texas.—*Velocipede.*—June 29, 1869.

Claim.—The combination of rim A, crank-wheel E, rims B B′, and C, and sheave-wheels *d d d*, the whole arranged to operate together, substantially in the manner and for the purposes set forth.

91,830.—Henry W. Eastman, Baltimore, Md.—*Dressing-Case.*—June 29, 1869.

Claim.—The "dressing-case," combining the cabinet, wash-stand, and blacking-case, substantially as herein described, the whole operating together in the manner and for the purposes specified.

91,831.—J. B. Eaton, Fryeburgh, Me.—*Holdback for Thill.*—June 29, 1869.

Claim.—The arrangement of the whole contrivance, the plate A, spring B, and catch D, as constructed and combined, as and for the purpose herein specified.

91,832.—Jacob Edson, Boston, Mass.—*Rocking and Reclining Chair.*—June 29, 1869.

Claim.—1. Connecting the rockers *d d* to the frame *a a*, by means of bolts *e e*, springs *h h*, and nuts *g g*, as and for the purpose herein described.

2. In combination with the above, the adjustable screws *k k* and the corners *c c*, for the purpose set forth.

91,833.—John Erpelding and William E. Huttmann, Chicago, Ill.—*Pocket-Lamp.*—June 29, 1869; antedated June 15, 1869.

Claim.—A pocket-lamp, consisting of a lamp-case, *l*, and an outer case, *a*, united, as shown, so as to leave an annular chamber, *i*, between them, for the reception of matches, substantially as herein described.

2. The reflector *c*, located in the top of the cover *b*, and arranged to operate as described.

91,834.—Hampton W. Evans, Philadelphia, Pa.—*Steam-Radiator.*—June 29, 1869.

Claim.—1. The construction of the radiator in one or more sections, whose steam-passages are formed of inclined zigzag surfaces across the sections, substantially as set forth.

2. The combination and arrangement of the spring D, plate F, and cap G, with the bolt B and nut E, substantially in the manner above specified.

91,835.—Andrew J. Forbes and William G. Fletcher, Boston, Mass.—*Wall or Bracket Caster.*—June 29, 1869.

Claim.—As a new article of manufacture, a caster-frame for restaurants, &c., constructed substantially as and for the purposes set forth.

91,836.—James M. Ford, Brooklyn, N. Y.—*Window-Pulley.*—June 29, 1869.

Claim.—The combination of the tubular case A, and the pulley-wheels *c c*, inserted therein, the same being constructed substantially as and for the purpose described.

91,837.—Alfred Freeman, Peoria, Ill.—*Pushing-Jack.*—June 29, 1869.

Claim.—1. The V shaped jaw *h*, having the arms thereof file-faced, substantially as described.

2. In a pushing and hoisting jack for cars, consisting of two levers, A and B, the combination of the jaw *k*, adjustable joint *a b*, depression *g*, with hooked ledge or serrated claw *n*, and chain *i*, the whole constructed substantially as described and shown.

91,838.—Thomas Garrick, Providence, R. I.—*Wrench.*—June 29, 1869.

Claim.—A swivel, or self-adjusting jaw, operating laterally in a curved socket, substantially as described.

91,839.—Thomas Garrick, Providence, R. I.—*Household-Implement.*—June 29, 1869.

Claim.—A combination adjustable wrench, nut-cracker, scraper, hammer, screw-driver, stove-cover, lifter, tack-puller, and gas-burner tongs; and also the combination of a rack or teeth upon one leg, with a slot in the other, for the purpose of holding the wrench-jaws at any point where they may be set, substantially as described.

91,840.—George Goewey, Philadelphia, Pa.—*Apparatus for Treating and Ageing Spirituous Liquors.*—June 29, 1869.

Claim.—1. The process of bringing alcoholic liquors into thorough and intimate contact with atmospheric air, by causing the liquors, at a temperature of from 115° to 165° Fahrenheit, to come into confluence with a forced current of air, at a temperature not exceeding 100° Fahrenheit; or *vice versa*, by causing the liquors, at a temperature not exceeding 100° Fahrenheit, to come into confluence with a forced current of air, at a temperature of from 115° to 165° Fahrenheit, the air carrying the liquors into a finely perforated pipe or other vessel, and forcing the liquors to pass, together with the air, through the perforations of the pipe or vessel, in the form of fine spray or vapor, into a receiver, substantially as set forth.

2. The combination of the pans $a\ a^1\ a^2\ a^3\ a^4$, pipes j, $j^1\ j^2\ j^3$, perforated air-pipes $i\ i^1\ i^2\ i^3$, air-chest h, and fan-blower g, substantially as shown and described, for the purpose specified.

91,841.—George A. Gray, Jr., Cincinnati, Ohio, assignor by mesne assignment to himself and Alexander Gordon.—*Nut-Mandrel.*—June 29, 1869.

Claim.—The construction and arrangement, with reference to each other, in the tool herein described, of the threaded portion *a*, spherical shoulder *a″*, and washer B, as and for the purpose specified.

91,842.—Richard C. Harris, Harrisville, N. J.—*Machine for Making Paper.*—June 29, 1869.

Claim.—1. The arrangement of the roller E with the coucher *a*, Fig. 1, when the periphery of the roller E is made of wire cloth, or its equivalent, substantially as and for the purpose specified.

2. The combination of the roller E, roller F, gutter G, and spouts G′ G′, with the apron *f*, and coucher *a*, substantially as and for the purpose specified.

3. The combination of the vertical agitators *p p*, with a "double-cylinder machine," Fig. 1, substantially as and for the purpose set forth in this specification.

91,843.—Henry M. Hartshorn, Malden, Mass.—*Instrument for Testing the Inflammability of Illuminating-Oils.*—June 29, 1869.

Claim.—1. The tight vessel, filled with water or other fluid.

2. The cavity or depression, Fig. 1, B, holding the oil, forming the top of the vessel.

3. The mass of metal, forming the top of the vessel, and the bottom of the cavity holding the oil.

4. The combination of the stem of the thermometer with the tube, for the purpose of forming the handle.

91,844.—Gilbert Hawkes, Lynn, Mass.—*Manufacture of Boots and Shoes.*—June 29, 1869.

Claim.—As an article of manufacture, a shoe, the sole and heel of which is of a textile fabric, when stiffened and applied in the manner and for the purpose herein described.

91,845.—James O. Heyworth, Chicago, Ill.—*Propeller.*—June 29, 1869.

Claim.—The propeller-wheel A B C, with similar blades C, of the general shape of the outline of a frustum of a right cone, with their inner sides secured, in a line with the shaft A, to the conical hub B its entire length, the apex of which hub is toward the vessel, as and for the purpose above set forth.

91,846.—Levi S. Hicks, Peoria County, Ill.—*Tenoning-Machine.*—June 29, 1869.

Claim.—In a tenoning-machine, the movable bed-plate A′, carrying the presser-box H, the chain-feed G, provided with adjustable lugs *a*, in combination with the stationary bed-plate C, having like devices,

when all the parts are constructed, arranged, and operated substantially in the manner described and for the purpose set forth.

91,847.—E. S. HUFF, Zanesville, Ohio.—*Plow-Cultivator.*—June 29, 1869.

Claim.—The employment of the metal plate A, constructed with the bars or projections *c c*, supplied with the pivoted arms *b b*, in combination with the handles of a cultivator, and arranged substantially as and for the purpose set forth.

91,848.—DAVID W. HUNT, San Francisco, Cal.—*Machine for Kyanizing Wood.*—June 29, 1869; antedated June 22, 1869.

Claim.—1. The base or bed-plate A, with the dish or depression B, flange *a a*, and the whole or opening C in the bottom of the bed-plate, for forcing the substance into the wood, substantially as described.

2. The upper plate E, screw F, corrugated and grooved cup C, for pressing the timber down upon the flange, and allowing the air and sap to escape as it is forced upward, substantially as described.

91,849.—EDWARD A. HYDE, Ann Arbor, Mich.—*Pneumatic Dental Plugger.*—June 29, 1869.

Claim.—1. The tool handle or cylinder carrying the piston or hammer, connected by means of a flexible pipe with the condensing and rarefying cylinder and its piston, the said last cylinder and piston operating a column of air, without the use of a valve or spring, to produce reciprocation of the hammer, substantially as described.

2. The plugging-tool, provided with a lug for securing it in the socket, and to prevent its rotation, substantially as described.

3. The elastic cushion G, by which an elastic blow is secured, and the tool carried back to its normal position, substantially as described, and for the purpose set forth.

4. In combination with the cylinder A and the flexible pipe U, the swivel-joint K, substantially as described, and for the purpose set forth.

5. The recessed socket C and the slotted cap D, the latter provided with the groove X, the said parts being adapted to secure the tool B within the handle, and lock the same in fixed position, substantially as described.

6. In combination with the subject-matter of the first claim, the pedal-apparatus, arranged as shown, whereby a rapid and regular reciprocation is given to the piston or hammer, all substantially as herein-before set forth.

91,850.—GUSTAVUS A. JASPER, Charlestown, Mass.—*Sugar-Sifter.*—June 29, 1869.

Claim.—A succession of sieves, combined with channels, set up at such angles, with respect to each other, that sugar or similar articles will slide freely from one end to the other of each sieve and channel, and be sifted and discharged, substantially as herein described.

91,851.—WILLIAM H. JOHNSON, Troy, N. Y.—*Reservoir Cooking-Stove.*—June 29, 1869.

Claim.—1. A cooking-stove, having a water-reservoir, G, in rear of descending and ascending fire-flues D E, back of the oven, when the rear side *k* of the reservoir is naked, and heating-chambers L L extend along the ends *j j* of the reservoir, and have communication with the fire-flues of the stove by apertures *m m*, substantially as shown and described.

2. In a cooking-stove, a water-reservoir, arranged with its front side *h* directly against the rear casing *i*, of descending and ascending fire-flues, along the upright rear side *f* of the oven, when heating-pockets or chambers L L, having communication by passages *m m*, with the fire-flues of the stove, extend along the ends of the reservoir, as herein shown and described.

3. In a cooking-stove, a water-reservoir, arranged with its front side against the rear casing *i* of descending and ascending fire-flues, along the rear side of the oven, when the back side *k* of the reservoir is naked, and heating-pockets or chambers L L, having communication with the fire-flue or fire-flues of the stove, extend along the ends *j j* of the reservoir, as herein set forth.

4. In a cooking-stove having a water-reservoir arranged back of descending and ascending fire-flues, along the rear side of the oven, the heating-pockets or chamber L L, extending along the ends of the reservoir, and bagging out or projecting laterally beyond the sides of the oven, and having communication with the fire-flues of the stove, by passages through or in laterally projecting parts *n n* of the side-plates *o o* of the stove, substantially as herein described and shown by Figs. 1, 2, 4, 6, and 7.

91,852.—SAMUEL H. JONES, Boston, Mass., assignor to S. D. & H. W. SMITH, same place.—*Bellows for Reed-Organs.*—June 29, 1869.

Claim.—1. In combination with an organ-bellows, as represented, a mechanism for latching or estopping the movement of the bottom board, at one end thereof, while the upper or exhausting board of the bellows may be in operation the same being to produce an effect or effects, as set forth.

2. The combination of the springs *f f*, and the cammed lever F, with the bellows A, and its latching apparatus, consisting of the stud B, the lever-latch C, the connecting-bar D, and the lever E, the whole being substantially as described.

91,853.—WILLIAM P. KILGORE, Hampden, Me.—*Cant-Hook.*—June 29, 1869.

Claim.—A cant-hook, with a bill, concave on its inner side, and straight on its outer side, substantially as described.

91,854.—JOHN L. KREIDER, Drumore Township, Pa.—*Mode of Hitching Horses.*—June 29, 1869.

Claim.—1. The stiff pad *d*, attached to the hames, with its central pin in combination with the vibrating-bar *j*, or their equivalents, and the projections *h*, in combination with the vibrating-arms *b* and connections and hooks *f*, or their equivalents, as set forth and described.

2. A lock-hook, *f*, with its lever *m*, catch *n*, spring *o*, and cords *g*, attached to the vibrating-arms *b* or elbowed levers *l*, substantially as described.

91,855.—PETER S. LUTHER, Hartford, Conn., assignor to the EARTH-CLOSET COMPANY, same place.—*Deodorizing-Apparatus for Water-Closets.*—June 29, 1869.

Claim.—1. The sliding and tilting platform F, as arranged in relation to the pipe or other receptacle for receiving the excrement, the whole constructed, arranged, and operating as and for the purposes described.

2. The combination of the sliding and tilting platform F, with the platform E and hopper D, for the purpose of an earth-closet, substantially as herein described.

91,856.—HENRY MAURER, New York, N. Y.—*Machine for Re-Pressing Bricks.*—June 29, 1869.

Claim.—1. The perforations *x*, through the stationary side or sides of the mold-box B, provided with pistons *n*, acted upon by suitable springs *v*, and operating in conjunction with the solid plungers C D, in the manner and for the purpose herein set forth.

2. The combination of the mold-box B, platens C and E, block or table K, provided with cavity *w*, and slide N, when arranged and operated in the manner and for the purpose substantially as described.

91,857.—OSCAR F. MAYHEW, Indianapolis, Ind.—*Coal-Stove.*—June 29, 1869; antedated June 17, 1869.

Claim.—1. Supplying fresh air in a manner to be commingled and concentrated with the carbon and gases while in the condition of hot flame, as they escape from the fuel and pass through the throat *d*, when said throat is situated, in relation to the incandescent fuel, substantially as and for the purpose set forth.

2. The damper I, for shutting off or regulating the supply of air to the flame and gases between the fuel and throat *d*, substantially as and for the purpose set forth.

3. The deflecting-plate E, with its opening *g*, either with or without the damper F, in combination with the throat *d*, substantially as and for the purposes set forth.

91,858.—Robert W. McClelland, Springfield, Ill.—*Horse-Rake.*—June 29, 1869.

Claim.—1. The combination and arrangement of the rake-head *f* and wooden pieces *g g* with the spring-bars *h h* and adjusting-screw *i i*, in the manner and for the purposes described.

2. The combination of the rake-head *f*, with the foot-lock Q, substantially as and for the purposes set forth.

3. The construction and arrangement of the four pieces 1, 2, 3, 4, either of wood or metal, forming the hub and spokes of the wheel *b*, substantially as herein described and for the purposes set forth.

4. These four pieces, 1, 2, 3, 4, constructed and joined together, as described, with the flanges S S, as and for the purposes set forth.

91,859.—Robert W. McClelland, Springfield, Ill.—*Carriage-Wheel.*—June 29, 1869.

Claim.—1. The butt-disk B, provided with the inside flange E, pressing against the wooden center A, substantially as shown and for the purpose described.

2. The within-described hub, consisting of the wooden center A, butt-disk B, with its inside flange E, face-disk B′, and point-band D, all constructed and arranged substantially as and for the purpose shown.

91,860.—J. M. McMaster, Rochester, N. Y.—*Grain-Binder.*—June 29, 1869.

Claim.—1. The two twisting automatic hands, operating conjointly, for the purpose of making the band out of two lengths of straw.

2. The collecting-arms 17 and 22, in combination with the twisting automatic hands, as and for the purpose set forth.

3. The springs 34, in combination with the jaws of the hands 33, for the purpose set forth.

4. The rods 37 and levers 35, in combination with hands 33, for the purpose herein shown and described.

5. The inclined planes 38, 84, 40, and 85, in combination with rods 37 and levers 35, for the purpose set forth.

6. Spring 91, notch 36, rod 37, in combination with catch 90, for the purpose of holding the hands 33 closed.

7. The cam 6, arms 56 and 53, shaft 55, rod 54, segment and pinion 49 and 48, wings 43, and hand-rods 27, substantially as shown.

8. The movable catches 46 and springs *a*, in combination with the disks 41, as and for the purpose set forth.

9. The movable catches 46, springs *a*, and disks 41, in combination with plates 50 and rods 47.

10. Providing levers 25 with an independent axis, on hub 31, as and for the purpose set forth.

11. The spur-wheel 66, pinion 65, cam 3, arm 64, shaft 32, hub 31, in combination with levers 25 and attachments, for the purpose set forth.

12. The arm 60 and connecting-rod 62, in combination with arm 82, hub 31, and levers 25, for the purpose of giving the oscillating motion to the twisting-devices on the front of the machine.

13. The cam 4, crank 12, shaft 11, arm 24, and connecting-rod 26, in combination with the levers 25, as and for the purpose set forth.

14. The arm 19, connecting-rod 29, in combination with arm 20, shaft 21, and its arm 24, connecting-rod 26, to give motion to levers 25, on the front side of the binder.

15. The cam 5, crank 68, shaft 67, arm 70, and connecting-rod *c*, in combination with arm 71 and twisting-pinions 69, constructed as herein shown, and for the purpose set forth.

16. The cam 4, crank 12, shaft 11, and arm 14, in combination with lever 15 and collecting-arm 17, as and for the purpose set forth.

17. The cam 6, crank 56, rear shaft 55, arm 57, and connecting-rod 79, in combination with frame 92 and receiving-arms 59, as herein shown, and for the purpose set forth.

18. The arm 80, front shaft 55, and arms 53, in combination with cam 6, crank 56, rear shaft 55, arm 57, connecting-rod 79, frame 92, and receiving-arms 59, acting conjointly, for twisting the band.

19. The spiral rod 105 and pin 110, in combination with the tying twisting-pinions 69, for the purpose set forth.

20. The spring 117, in combination with the jaws of the tying-pincers 69, as and for the purposes set forth.

21. The movable pin 108, in combination with the pivoted jaw of the tying-pinions 69, as and for the purpose set forth.

22. The slide 74, bar 112, spring 104, and pins 115 and 116, in combination with the movable pin 108 and pivoted jaw of the tying-pinions 69, as and for the purposes set forth.

23. The arm 113, in combination with the pivoted jaw of the tying-pincers, for the purpose set forth.

24. The pivoted receiving-arms 59, guides 101 and 102, and springs 106, constructed and operating as herein shown, and for the purpose set forth.

25. The pivoted discharging-arm 104, rod 103, in combination with the bearing 97, of the receiving-arms 59, as and for the purposes set forth.

26. The chain-wheels 138 and 136, and chain-band 137, in combination with the rake 7, cam 1, segment 124, and pinion 123, arranged and operating as and for the purposes set forth.

27. The cam 2, in combination with the segment 131 and pinion 134, for the purpose described.

28. The cam 1, segment 124, and pinion 123, in combination with the arm 119, arranged and operating conjointly, as and for the purposes set forth.

29. In combination with the binder, the receiving-box 142, when provided with a self-adjusting trip-bottom, arranged and operated as and for the purposes shown and described.

91,861.—Alexander Miller, Chicago, Ill.—*Wood-Pavement.*—June 29, 1869.

Claim.—The combination of all these, in manner and form as hereinbefore specified, and for the purpose indicated.

91,862.—Charles W. Moore, San Francisco, Cal.—*Flux for Smelting Ores of Gold, Silver, and other Metals.*—June 29, 1869.

Claim.—The application and use of fluor-spar, black oxide of manganese, chloride of sodium, and limestone, or dolomite, in combination, as a flux, using for that purpose the combination of said ingredients above set forth, and any other substantially the same, and substantially in the manner and for the purposes above set forth.

91,863.—William Owen, Hubbard, assignor to himself, Daniel B. Stambaugh, same place, and Daniel Smith, Girard, Ohio.—*Self-Oiling Car-Wheel.*—June 29, 1869.

Claim.—A car or other wheel, running loosely on its axle, provided with one or more chambers, A, with concave ends B, diaphragms C, with passages to spaces D, and passages E, all arranged substantially as specified.

91,864.—William Palliser, Pall Mall, England.—*Ordnance.*—June 29, 1869; patented in England September 10, 1867.

Claim.—1. Constructing the barrels introduced at the muzzles of converted cast-iron guns, of two tubes at the breech-end, of which the inner or A tube is made comparatively thin, substantially as and for the purposes hereinbefore set forth.

2. Combining, with the inner tube of a double-tubular lining, of a converted cast-iron gun, a chamber-lining, A′, substantially as described.

3. Constructing the barrels of converted cast-iron guns with an outer or B tube at the breech-end, of larger external diameter than the muzzle-end of the inner or A tube, and placing upon such muzzle-end of the A tube, cylinders of equal diameter with the B tube, substantially as and for the purposes hereinbefore set forth with reference to Figs. 2 and 3 on the accompanying drawings.

4. Forming a helical chamber between the inner and outer tubes, at the breech-end of the barrel of converted guns, in communication with an indicator passing through the breech of the gun, substantially as and for the purposes described.

5. In combination with a bush extending along the entire length of the vent, and held in place by a

screw-thread, a platinum lining on the inside of its inner or lower end, substantially as described.

6. The improved system of rifling guns, hereinbefore set forth, in which the groove commences at a distance from the breech-end of the bore, proceeds with a very slow, uniform, or unaccelerated twist, to within about two feet, more or less, of the muzzle of the gun, from which point it becomes accelerated, substantially as above described.

91,865.—HERMAN G. PEIN, Peoria, Ill.—*Combined Latch and Lock.*—June 29, 1869.

Claim.—The combination and arrangement of the hook C, latch D, bolt E, and revolving button F, substantially in the manner and for the purpose as herein shown and set forth.

91,866.—WILLIAM F. PRATT, East Bridgewater, Mass., assignor to E. CARVER COMPANY, same place.—*Machine for Removing Lint from Cotton-Seed.*—June 29, 1869.

Claim.—The combination of the roller H, constructed as described, with the saws and hopper working substantially as described, and for the purpose set forth.

91,867.—GEORGE H. REISTER, Washington, Iowa.—*Seed-Sower.*—June 29, 1869; antedated June 15, 1869.

Claim.—1. The arrangement of the seed-box, toothed cylinder, clearing-fingers, and divided rollers, as herein set forth.

2. The arrangement of the levers q, bars d, and arms c, in their relation to each other, and to the toothed cylinder, as herein recited.

3. The forming of the joint of the ends of the arm e and bar d, and supporting the fulcrum-plate p by the shaft of the toothed cylinder, as described.

91,868.—GEORGE H. REISTER, Washington, Iowa.—*Wind-Wheel.*—June 29, 1869.

Claim.—The system of movable guides, as described, when arranged to cover only a segment of a circle.

91,869.—WILLIAM K. RHODES, Portland, Me.—*Steam-Generator.*—June 29, 1869.

Claim.—The arrangement of the diaphragms $e\ e\ e$, in relation to the tubes and the steam and water spaces of the boiler, constructed substantially as described.

91,870.—EDWARD E. RINEHART, Pittsburgh, Pa.—*Manufacture of Roasted Coffee.*—June 29, 1869.

Claim.—The mode of coating or glazing roasted coffee, hereinbefore described, by intermixing therewith, before cooling, a mucilaginous or other suitable substance, substantially as described.

91,871.—DANIEL C. RIPLEY, Pittsburgh, Pa.—*Means for Attaching Covers to Glass Jars.*—June 29, 1869.

Claim.—1. Fitting a metallic jar-cover tightly to the neck of a glass jar, and securing a close and firm union between the two by pressing the metal of the cover into close contact with the uneven glass surface of the jar-neck, substantially as described.

2. In the manufacture of ewer-mouthed metallic-capped glass jars, making the glass neck of the jar with a groove or grooves, a', and with or without a projection, c, into which or against which to press the metal of the jar-cover, so as to make a tight joint, substantially as described.

3. An oval-mouthed glass jar, with grooved neck, made substantially as described, and for the purposes set forth.

91,872.—ADAM G. RITZ, Elizabethtown, and JOHN B. CARTER, Heartsville, Ind.—*Shingle-Machine.*—June 29, 1869.

Claim.—1. The adjustable stirrups W X Y, and adjustable spring-stirrup Z, herein described, when constructed and operated substantially as and for the purpose set forth.

2. The inclined planes I I′, &c., when constructed as described, and operated in combination with the spring-stirrup Z, substantially as set forth.

91,873.—T. L. RIVERS, St. Louis, Mo.—*Caster.*—June 29, 1869; antedated June 22, 1869.

Claim.—The combination of the plates B E A, with the center D and shoulders E E, with the caster, as constructed and described.

91,874.—REZIN ROBINS and ALBERT S. ROBINS, Dundas, Ill.—*Sulky Corn Planter and Plow Combined.*—June 29, 1869.

Claim.—1. The combination of the axle B, constructed in two overlapping or scarfed parts, of the grooves $b\ b$, bolt a, supporting-plate U, and tongue C, arranged substantially as represented and described, for the purpose set forth.

2. The combination of the rods or levers T T, the connecting-bar T′, the bent lever T″, provided with the pedals t'''^{*} and the catch $T^4\ t^4$, all constructed, arranged, and operating as described, to dodge the inner plows, or hold the same in their proper normal position, as set forth.

3. In combination with the shovels or plows O O′, and devices R R′, for operating said plows separately, the levers S‴, rock-shaft S″ S, and catch s^4, for raising said plows simultaneously, and holding them in an elevated position, substantially as described.

4. The combination, with the dropping-slide I, of the spring K, the rock-lever M, chain or rod M′, lever or treadle M″, and catch n, all arranged to operate substantially in the manner described, for the purpose specified.

5. In combination with the dropping-slide I, operating substantially as herein described, the thimble i^5, as and for the purpose set forth.

6. The combination and arrangement of the plows O O′, adapted to be separately and simultaneously elevated, and the former to be dodged; the seed-boxes G G, the dropping-slide I, adapted to drop the seed in variable quantity, and to be operated from the ground-wheels of the machine, or by the foot of the driver, or locked from movement; the valves P P, arranged in the knees of the furrowing-plows and operated by the dropping-slide, and the covering rollers Q Q, adapted to be elevated when desired, all substantially as and for the purposes herein shown and described.

91,875.—J. J. SAVAGE, Troy, N. Y.—*Cooking-Stove.*—June 29, 1869.

Claim.—1. The air-draught passage-way a, in combination with the movable door or cover G F of the fuel-aperture or door-way P, of extended fire-box B, located substantially as described, for the purpose set forth.

2. The arrangement of the air-draught passage-way a, directly over the extended fire-box B, substantially as described.

3. In combination with the extended fire-box B, located as described, the front plate N and fire-box A, the combined sliding and lifting doors G F and G′ F′ thereof, substantially as and operating for the purpose set forth.

4. In combination with the extended fire-box B, the air-draught passage-way a, thereover, and cover-plate G, the perforated air-draught plate F, arranged to operate at or over the top of said fire-box, substantially as described.

5. The arrangement of the hot-air draught passage-way K $b\ b'$, under the extended fire-box B, in combination therewith, and with the fire-grate D, and ash-space E, substantially as and for the purpose described.

6. The combination with each other of the extended fire-box B, the hot-air draught passage-way a thereover, and the hot-air draught passage-way K $b\ b'$ thereunder, when respectively and relatively arranged with the fire-grate D, ash-space E, fire-box A, and flame-chamber C, substantially as and for the purpose described.

7. The combination of the series of herein-described break-joint-arranged ribs or flanges $h\ h\ h$, with the series of apertures or slots $g\ g$, arranged in alternate succession, and combined with the fire-box lining-plates of stoves, substantially as described.

8. The arrangement of the shelf-plates L L, above and forward of the fire-grate D, in combination with the fuel-doorway P, its door or cover F, and thereunder-extended fire-box B, substantially as described.

9. The combination of the close ungrated bottom fire-box B, and air-draught chamber *a* thereover, or its equivalent, with the grated-bottom fire-box A, substantially as and operating for the purpose described.

91,876.—ALEXANDER SHAW, Monmouth, Ill.—*Cultivator.*—June 29, 1869.

Claim.—1. The construction, arrangement, and combination of the frame-piece B, spindle H, pivot V, pivot-joint M, and brace W, as shown and for the purpose described.

2. In combination with the above devices, the braces C D, tongue A, plates L L, and plows K K, arranged as shown and for the purpose described.

91,877.—W. S. SHOEMAKER, Towsontown, Md., and E. H. SHOEMAKER, Lancaster, Ohio.—*Railway-Rail Splice.*—June 29, 1869.

Claim.—1. The construction of the cheek-piece C, in the manner substantially as described.

2. The manner of securing the splice-bar B and cheek-piece C to the rail-sections, by means of transverse bolts, and one or more oblique bolts, substantially as described.

91,878.—GEORGE STEVENS, San Francisco, Cal.—*Amalgamator.*—June 29, 1869.

Claim.—1. The use of rubber, leather, or other pliable material, as shoes, or rubbers, or strips, running on copper, for the purposes of amalgamating with mercury, and for precipitating and gathering the same and metals.

2. The use of a tub or other vessel, arranged so as to make a galvanic battery, by the introduction of copper and zinc plates, with frictional mullers acting upon the copper plates, and by the pulp, containing the mercury and ores, acting as the exciting liquid, for purposes specified.

91,879.—W. H. STEWART and J. H. TILLEY, Orion, Wis.—*Coffee-Boiler.*—June 29, 1869.

Claim.—The construction of a coffee-boiler, with the parts A, B, C, D, E, F, G, H, and I, arranged substantially as described, and operating for the purposes set forth.

91,880.—JOHN D. STILLMAN, Memphis, Tenn.—*Cotton-Seed Huller.*—June 29, 1869.

Claim.—The cotton-seed huller, as shown, composed of the cylinder A, with its bars D and grooves C, drum B, with bars E and grooves G, and the bolt J, and propeller-shaped fan K, all constructed, arranged, and operating substantially as and for the purpose herein set forth.

91,881.—NATHAN STOCKWELL, Windsor, N. Y.—*Device for Feeding Swine.*—June 29, 1869.

Claim.—The combination and arrangement of the shaft E, lever F, and cams G G, swinging-gate C, wedge H, trough A, projections D D, all being constructed and operating as herein described and represented, for the purpose set forth.

91,882.—PETER SWEENY, New York, N. Y.—*Tuyere.*—June 29, 1869.

Claim.—1. The combination and arrangement of the annular receiving-chamber C, the circulating-pipes E H, and foot-box F, the valve-plate K, tube I, and discharging-pipe D, substantially as described.

2. The removable packing-ring or case P, fitted to the top of the tube B, and combined with the hearth, substantially as described.

3. The arrangement of the tubes B D I and removable diaphragm K, substantially as described.

91,883.—ELI THAYER, New York, N. Y., assignor to PAUL P. TODD, Boston, Mass.—*Compound for Extinguishing Fires.*—June 29, 1869; antedated June 11, 1869.

Claim.—1. A solution of muriate of ammonia, in combination with carbonate or bicarbonate of soda, or their equivalent, for the extinguishing of fire, substantially as set forth.

2. A solution of sal ammoniac, in combination with nitrate or phosphate of soda, for extinguishing fire, substantially as set forth.

3. A mixture of water, carbonate of lime, and muriate of soda, for extinguishing fire, substantially as set forth.

91,884.—WILLIAM THOMPSON, Dublin, Ireland.—*Packing-Case for Bottles and Jars.*—June 29, 1869; patented in England November 19, 1869.

Claim.—In a bottle and jar packing-case, a series of springs, C, two or more, in combination with one or more partitions or diaphragms, E E′, and lid F, arranged substantially as described, so as to secure the bottles or jars from both lateral or longitudinal motion in the case.

91,885.—DAVID G. WATT, Lawrence, Kans.—*Bee-Hive.*—June 29, 1869.

Claim.—The hive A, honey-boxes C C, comb-frames D D, openings F, caps or stops G G, and tube I, all constructed and combined in the manner and for the purpose set forth.

91,886.—WILLIAM WEBER, Cincinnati, Ohio.—*Medical Compound.*—June 29, 1869.

Claim.—1. The essence of celery, when compounded of the ingredients and in the proportions substantially as described.

2. The celery-cordial, when compounded of the ingredients and in the proportions substantially as described.

3. The celery-bitters, when compounded of the ingredients and in the proportions substantially as described.

91,887.—CHARLES B. WEEKS, Galesburgh Ill., assignor to himself and F. H. FERRIS, same place.—*Hog-Trap.*—June 29, 1869.

Claim.—A hog-trap, consisting of the panels A A and Y, shade-board B, lever C, and curved neck-block D, when constructed, combined, and arranged as shown, and operating in the manner and for the purpose herein set forth and described.

91,888.—BENJAMIN F. WHITCOMB, Claremont, N. H.—*Reed for Looms.*—June 29, 1869.

Claim.—A weaver's reed, with metallic darts, having oval faces meeting at the opposite edges, and with bosses on one or both sides of the dart, with shoulders as indicated, all constructed and arranged as and for the purposes specified.

91,889.—JAMES B. WILLIAMS, Glastenbury, assignor to the HARTFORD SORGHUM-MACHINE COMPANY, Hartford, Conn.—*Metal-Corrugating Machine.*—June 29, 1869.

Claim.—The crimping-bar *d*, arranged between the guide-ways *b*, in combination with the oscillating compressing-bars *i*, arranged and operating substantially as described.

91,890.—JAMES B. WILLIAMS, Glastenbury, assignor to the HARTFORD SORGHUM-MACHINE COMPANY, Hartford, Conn.—*Evaporation-Pan.*—June 29, 1869.

Claim.—1. Forming grooves *k*, formed in the sides *d*, in combination with a corrugated bottom, constructed and arranged substantially as described.

2. The set-off bolts *h*, in combination with a corrugated bottom *b′*, and sides *d*, substantially as and for the purpose described.

3. The caps *e*, constructed as described, in combination with the corrugated bottom *d′* and sides *d*, substantially as and for the purpose described.

4. Forming a union of the faucet with the corrugated pan through the side *d*, substantially in the manner and for the purpose described.

91,891.—HENRY WILLIS and GEORGE RICE, Worcester, England.—*Machine for Winding Thread, &c.*—June 29, 1869.

Claim.—1. The combination, with the guide and tension plate, and the frame or arm to which the same is attached, of the elliptical and 8-shaped gear-wheels, as described, connected with said slotted frame or arm by a crank-pin, so as to communicate to the frame a reciprocating movement and receiving motion from the shaft of the winder, substantially in the manner and by the means herein specified.

2. The device for arresting automatically the rotation of the spool, in combination with the winder-spindle and its driving-pulley, arranged and connected together, substantially as and for the purposes specified.

91,892.—CHARLES WINTERBOTTOM, Philadelphia, Pa., assignor to W. S. WINTERBOTTOM, same place.—*Combined Try-Square and Bevel.*—June 29, 1869.

Claim.—A square, with the stock A cut at an angle, *x*, at the top, near the left side, down toward the right side *a*, for the purpose specified.

91,893.—E. H. WOODSUM and F. H. WHITMAN, Harrison, Me.; said WOODSUM assigns his right to said WHITMAN.—*Railway-Sleeper.*—June 29, 1869.

Claim.—The improved railway-sleeper, constructed as described, to wit, with the transverse cuts therein, and the blocks of hard wood inserted therein, as herein described.

91,894.—J. A. WOODWARD, S. S. WOODWARD, and THOMAS MASON, Sandwich, Ill.—*Cultivator.*—June 29, 1869.

Claim.—1. The combination of the clamps Z Z, pins V, frame S T U, and beams J, as and for the purpose set forth.

2. The combination of the sockets *f f*, handles *d*, plates *p*, and beams J, said plates being arranged to clamp the handles to the beams, as set forth.

3. The inclined standards D, in combination with segments F, ratchets E, levers and springs G H, beams J, chains *t*, clamps Z, and frame S T U, as shown and specified.

91,895.—WILLIAM ZIERATH and CHARLES J. SMITH, Sheboygan, Wis.—*Scrubbing and Mopping Machine.*—June 29, 1869.

Claim.—1. The brushes G and the mop-jaw I, when constructed, arranged, and operating substantially as set forth.

2. In combination with the above-named parts, the frame A, gear-wheels D and F, the frame H, the water-tank L, mounted upon suitable traction-wheels, when operating substantially as and for the purposes herein set forth and shown.

91,896.—ARTHUR M. ALLEN, New York, N. Y.—*Veloeipede.*—June 29, 1869.

Claim.—1. A veloeipede-wheel, having its bearing-surface or tread of bristles, as a new article of manufacture, substantially as and for the purpose described.

2. The strap *f*, bent at both ends, in combination with pivots *e e* and standards *d d*, substantially as and for the purpose described.

3. The roller-brace F, in combination with the mortise of the reach, and capable of being turned out in either direction, and of being raised and suspended in a central position, or in line with the driving-wheel, substantially as set forth.

91,897.—WILLIAM ANDREWS, Watson, N. Y.—*Potato-Digger.*—June 29, 1869.

Claim.—1. The shafts F, for holding the vine-pulling blocks G, when supported in rear by a pivoted plate, *f*, and in front by laterally adjustable plates *g g*, substantially as herein shown and described.

2. The plates *g g*, for supporting the front ends of the shafts F, when arranged laterally adjustable on a vertically adjustable plate, *i*, and held forced together by springs *k*, substantially as herein shown and described.

3. The plate *i*, for supporting the laterally adjustable rotating cones G, when working in the grooved pendants *h*, and suspended from the shafts H, substantially as herein shown and described.

4. The vine-guides M, when arranged in combination with the rotating adjustable vine-pulling cones G, substantially as herein shown and described.

5. The shaft H, carrying the loose sleeve *w*, when connected with the levers I and L, and with the frame J and shafts F, so that either the frame or shafts, or both, can be elevated to a suitable height, substantially as herein shown and described.

6. The pawls *q* and *z*, when arranged in combination with the shaft H and sleeve *w* respectively, to operate substantially as herein shown and described, so as to automatically lock the vine-pullers or the potato-gatherer at a desired height, as specified.

91,898.—W. B. BARTRAM, Danbury, Conn.—*Embroidering-Attachment for Sewing-Machines.*—June 29, 1869; antedated June 17, 1869.

Claim.—1. In combination with the foot A, the swinging braid-carrier C, constructed substantially as described, and for the purpose set forth.

2. In combination with the braid carrier C, operated by the needle-arm in its reciprocation, and the plate F, provided with the slot G, and notches H H′, the looped-wire I, substantially as and for the purpose set forth.

91,899.—JOSEPH I. BEAUMONT, St. Paul, Minn.—*Funnel.*—June 29, 1869.

Claim.—The funnel, having the outer surface of the neck B, and the lower part of the body A, provided with a series of wires or strips, C, arranged as described, for the purpose specified.

91,900.—JAMES M. BLACKSTOCK, Tarentum, Pa.—*Scroll-Sawing Machine.*—June 29, 1869.

Claim.—The combination of the saw D, saw-frame C, and its driving mechanism, with the frame A and the braces E, when all the parts are constructed substantially as set forth, and for the purpose described.

91,901.—THOMAS S. BLAIR, Pittsburgh, Pa.—*Apparatus for the Manufacture of Pig-Bloom.*—June 29, 1869.

Claim.—1. The moving table, with or without partitions and side-pieces, in combination with a spout for delivering the molten metal, and a spout for delivering the pulverized oxide or oxides simultaneously upon the surface, or into the trough of the moving table, for the manufacture of pig-bloom or pig-scrap, substantially as described.

2. A circular table, having removable outer pieces, or curb and partitions, constructed substantially as described, for the purpose set forth.

3. The combination of the moving table with one or more regulators, *p*, for receiving and delivering the molten iron on the moving table, in a regular and uniform stream, substantially as and for the purpose hereinbefore described.

4. In combination with the moving table and regulator or regulators, the reservoir *r*, for receiving the molten metal from the blast-furnace or cupola, and pouring it into the regulator, so as more easily to control its flow upon the moving table, substantially as hereinbefore described.

91,902.—WILLIAM M. BLEAKLEY, Verplank, N. Y.—*Can-Opener.*—June 29, 1869.

Claim.—The can-opener, consisting of the bar D, swiveled in the end of the slotted lever A, and provided with the handle *d*, and the head E, having the points *a b*, all arranged as described, for the purpose specified.

91,903.—A. C. BROWNELL, Brooklyn, N. Y.—*Construction of Sheet-Metal Boilers.*—June 29, 1869.

Claim.—1. The improved water-boiler, with both heads dome-shaped, double-seamed, brazed or riveted to the ends of its body, either with or without beading, substantially as herein shown and described, for the purpose specified.

2. The body of a hot-water boiler, made in two parts, double-seamed to each other, and double-seamed, brazed or riveted to the dome-heads, substantially as herein shown and described, for the purpose specified.

3. The heavy wheel or band C, whether made with or without spokes or cross-bars, in combination with the body A of the boiler, at the points where the parts of said body are seamed to each other, substantially as herein shown and described, and for the purpose set forth.

4. Beading sheet-metal boilers, and other articles, longitudinally with the double seams, including the same, by which the parts of said articles are secured to each other, substantially in the manner herein shown and described, and for the purpose set forth

91,904.—George W. Bunker, St. Anthony, Minn., assignor to himself and David Thayer, Boston, Mass.—*Corn-Planter.*—June 29, 1869.

Claim.—1. The adjustable pivoted bars P, when provided with the conductor-spouts F, rakes B′, and pivoted rollers C′, all arranged as described, for the purpose specified.

2. The combination of the sliding-plates H, levers I, constructed as described, arms K, rock-shaft L, broad arm M, and radial pins N, with each other, and with the conductor-spouts F, axle A, and frame C, substantially as herein shown and described, and for the purposes set forth.

3. The rakes B′ and rollers C′, when both are arranged upon the pivoted arms P, as herein described, for the purpose specified.

91,905.—Christopher Brunschwiler, New York, N. Y.—*Commercial-Account Indicator.*—June 29, 1869.

Claim.—The indicating frame or tablet A, provided with receiving-grooves B, and with appropriate columns for the names of mercantile firms or correspondents, for the several kinds of property or values involved, and for balances, separated by the partitions D, in combination with replaceable blocks bearing names, words, letters, and figures, to give the indications or accounts desired, the whole being arranged in the manner and for the purpose herein shown and described.

91,906.—Levi L. Burdon, Providence, R. I.—*Button.*—June 29, 1869.

Claim.—The improved shirt stud or button, herein described, consisting of the front, with its post A tapered inwardly from its outer end, with or without the spring-slot described, in combination with the back, having its hollow spring-socket B inversely tapered, substantially as described, for the purposes specified.

91,907.—Marshall Burnett, Boston, Mass.—*Broom.*—June 29, 1869.

Claim.—1. The arrangement and combination of the expansive holder B, as described, with the stock A and its binding-wire *m*, or the equivalent thereof, and with the handle C and its screw D, to operate with such holder, as described.

2. The expansive broom-stock holder, substantially as specified.

3. The combination of the expansive broom-stock holder with the handle and its screw, arranged to operate with such holder, as set forth.

91,908.—Peter H. Carman, Brooklyn, N. Y.—*Air-Heating Furnace.*—June 29, 1869.

Claim.—1. The combination of the sockets or thimbles *n*, with the grate-bars and gear-wheels *g*, arranged and operated substantially as herein shown and described, for the purpose specified.

2. The drum E, provided with the vertical tapered tubes F, and arranged within the oven I, with reference to the hot-air chamber A, flues G and K, and apertures J, as and for the purpose herein shown and described.

91,909.—R. D. Chandler, Fairhaven, N. J.—*Anvil and Vise Combined.*—June 29, 1869.

Claim.—The anvil and vise, constructed, combined, and arranged as herein described and shown.

91,910.—Charles S. Clark, Providence, R. I.—*Lathe.*—June 29, 1869.

Claim.—The combination of the poppet-block A, tool-rest B, wedges C C, and screw D, or their equivalents, as set forth, all constructed, arranged, and fitted together substantially in the manner described.

91,911.—John Cody, New York, N. Y.—*Platform for Submarine Drilling.*—June 29, 1869.

Claim.—The combination of the exterior tube G, interior tube H, ring-packing piston I, piston-rods J, adjustable collars M, cross-bar K, bolts L, and nuts N, with each other, said parts being constructed and arranged substantially as herein shown and described, and for the purposes set forth.

91,912.—John Cody, New York, N. Y.—*Rock-Drilling Apparatus.*—June 29, 1869.

Claim.—1. The combination and arrangement of the pawls G′, sliding cross-bar a^2, spring H, with the vertical shaft or stock E, to which the drill C is attached, and with the racks F′ attached to the frame A, substantially as herein shown and described, and for the purpose set forth.

2. The combination of the pulley J, screw K, combined gear-wheel and screw-nut A′, shaft C′, and cone-pulley D′, with the hoisting-strap I, substantially as herein shown and described, and for the purpose set forth.

3. The combination of the driving-shaft N, crank-shaft L M, fly-wheel O, pawl P, and ratchet-wheel Q, with each other, and with the hoisting-strap I, substantially as herein shown and described, and for the purpose set forth.

91,913.—James Collins, Grand Rapids, Mich.—*Spring Bed-Bottom.*—June 29, 1869.

Claim.—An improved spring bed-bottom, formed by the combination of the cross-bars A, longitudinal bars B, inclined or flaring end boards or bars C, angle-block D, hoop-iron strap E, cross-bars F, and coiled springs G, with each other, substantially as herein shown and described, and for the purpose set forth.

91,914.—Thomas B. Collins, Noank, Conn.—*Harrow.*—June 29, 1869.

Claim.—1. An improved harrow, formed by hinging two or more diamond-shaped parts B to the diamond-shaped central or forward part A, said parts being constructed, connected, and operating substantially as herein shown and described, and for the purpose set forth.

2. The combination of the lever H and wheel or wheels J, with the forward or central part A of the harrow, substantially as herein shown and described, and for the purpose set forth.

3. The combination of the detachable wheels and axles D E with the forward or central part A of the harrow, substantially in the manner herein shown and described, and for the purpose set forth.

91,915.—Charles A. Condé, Indianapolis, Ind.—*Steam-Engine Governor.*—June 29, 1869.

Claim.—1. In combination with a governor, the adjustable sleeve B, constructed and arranged, in relation to the stand A and head C, substantially as shown and described, and for the purposes set forth.

2. The adjustable head C, with the cross G, and bars H, and ball-arms, arranged in connection therewith, substantially as shown and described.

91,916.—A. J. Culver, White Hall, Ill.—*Hanging Sliding-Door.*—June 29, 1869.

Claim.—The door-bracket E, formed with two arms, each having a grooved wheel, F, adapted to run on the double rails D, suspended from the brackets C, which are bolted between said rails, all arranged to operate as herein set forth and shown, for the purpose specified.

91,917.—W. R. Cummings, McCutchanville, Ind.—*Harrow and Cultivator Combined.*—June 29, 1869.

Claim.—1. The combination with the harrow-beams A, united by the elevated beams B, of the cultivators C, all arranged substantially as specified.

2. The arrangement of the beams A and E, as specified.

91,918.—P. Davis, Newport News, Va.—*Fence.*—June 29, 1869.

Claim.—The fence, constructed as described, of the palings B, inserted at their upper ends between the wires *a a*, which are stretched between the posts E E, their lower ends being coated with tar, and driven into the ground, as herein set forth, for the purpose specified.

91,919.—Willis Davis, Elizabethport, and Crowell Macan, Rahway, N. J.—*Railway-Car Axle-Box.*—June 29, 1869.

Claim.—1. In combination with a car-axle box-cap,

the finger C, substantially as and for the purposes herein shown and described.

2. In combination with a car-axle box-cap, the key E, substantially as and for the purposes specified.

91,920.—JONATHAN L. DEVOL, Parkersburgh, W. Va.—*Boot and Shoe Stretcher.*—June 29, 1869.

Claim.—The combination of the wedge B with the screw-bolt D, the hinged portions A and A′, and nut C, substantially as and for the purpose set forth.

91,921.—JONATHAN L. DEVOL, Parkersburgh, W. Va.—*Ironing-Table and Clothes-Drier.*—June 29, 1869.

Claim.—1. In combination with a table having a movable top, the racks C C′, attached to the table, substantially in the manner set forth.

2. In combination with the first section of the side rack D, the second rack D′, constructed with slotted end pieces, and arranged in relation to the first rack, substantially as and for the purpose set forth.

91,922.—A. S. DINSMORE, New York, N. Y.—*Tucking-Attachment for Sewing-Machines.* — June 29, 1869.

Claim.—The tucking-attachment secured to the presser-foot, when constructed as described, of the rectangular plate C, having the narrow rib formed upon its inner side, along its inner edge, through which the needle passes, whereby the rib is adapted to press upon and hold the fold of the cloth, while the remaining portion moves over the folds already formed, without bearing on it, as herein described, for the purpose specified.

91,923.—LE GRAND DODGE, Syracuse, N. Y.—*Curtain-Fixture.*—June 29, 1869.

Claim.—As a new article of manufacture, the spring loop or clasp D, constructed as herein described, to receive and hold the window cord or tape, by a side movement thereof, for the purpose specified.

91,924.—ANDREW T. DUNSHEE, Pittsburgh, Pa.—*Water-Filter.*—June 29, 1869.

Claim.—The arrangement of the air-tight space D, and the single opening *x*, when used in combination with a water-filter, provided with disks *e* and *f*, and filtering media, the whole being constructed, arranged, and operating substantially as hereinbefore described, and for the purpose set forth.

91,925.—DAVID EVANS, Newton, Iowa.—*Combined Grain-Drill, Seed-Sower, and Corn-Planter.*—June 29, 1869.

Claim.—1. The combination of the hopper C and lever C′, with the cams and the rods deriving motion therefrom, when so arranged that the rods may be thrown out of gear by the action of the lever, substantially as set forth.

2. The combination of the feed-bar D, sieve E, and trough F′, and tubes F, substantially as set forth.

3. The combination of the cutters I, tubes F, and revolving harrow L, substantially as set forth.

4. The combination of the double revolving harrow and the bar L^2, substantially as and for the purpose set forth.

5. The combination of the parts L, L^1, L^2, and L^3, arranged to operate substantially as set forth.

91,926.—HENRY B. FERNALD, Dedham, Mass.—*Car-Wheel.*—June 29, 1869; antedated June 19, 1869.

Claim.—1. The hub F, constructed with a transverse mortise for the key-blocks G, in combination with the key-blocks G, the squared journal *a a a a* of the axle A, the screw-bolts S, and nuts *n*, with or without the tires Y Y Y, substantially as herein described.

2. The wheel C, in combination with the hub H, constructed with a transverse mortise for the key-blocks J, the key-blocks J, the squared journal *e e e e*, and the screw-bolts *o*, substantially as herein set forth.

3. The hub N, constructed with a transverse mortise for the key-blocks V, in combination with the key-blocks V, the round journal *g g*, and the screw-bolts P, and nuts *p*, all arranged and applied to the axle-box, substantially as and for the purposes herein specified.

4. The combined guide-carriages K K, constructed as herein specified, and in combination with the anti-friction rollers L, and radial anti-friction wheels I, the whole being held in place, substantially as herein described.

5. The wheel B, in combination with the collars E, the radial anti-friction wheels I, the anti-friction rollers L, the guide-carriages K, and the hub F, the whole constructed and secured upon the axle A, as herein described, substantially as herein set forth.

91,927.—GEORGE A. FORD, Oswego, N. Y.—*Furling Gaff-Topsails.*—June 29, 1869.

Claim.—1. The grooved guide N *n′*, constructed and operating substantially as herein shown and described, and for the purpose set forth.

2. The combination of the metallic socket and strengthening-piece K, detachable catch L, and hoisting-rope M, with the sail E and guide-groove N, substantially as herein shown and described, and for the purpose set forth.

3. The combination of the rope J, spool I, gear-wheels H G, and roller F, with each other, and with the gaff or arm D and sail E, substantially as herein shown and described, and for the purpose set forth.

4. Transferring the sail from one side of the rope O to the other, by means of the detachable catch L, socket P, and rope Q, substantially in the manner herein shown and described.

91,928.—RUFUS D. GARDNER, Watertown, N. Y.—*Milk-Cooler.*—June 29, 1869.

Claim.—1. The combination of the pans B and C, when the latter is hinged to the edge of the former, and adapted to swing up and be supported in a raised position by the pivoted bar G, as herein described, for the purpose specified.

2. In combination with the above, the funnels D E, when arranged with relation to the pans B C and vat A, as described, for the purpose of directing the milk between the pans and the cooling-liquid around the outer pan, as herein set forth and shown.

91,929.—ADIN GAUNTT, Chagrin Falls, Ohio.—*Apparatus for Changing Speed in Machinery.*—June 29, 1869.

Claim.—1. The combination of the shaft A, disk C, sleeve F, and pinion thereon, sliding-arms O, pinions M, intermediate wheels, and fixed wheel S, when arranged for communicating a slow motion to the shaft A from the said sleeve F, or pulleys thereon, substantially as specified.

2. The combination of the arms O, arms P, and oscillating spirally grooved ring T, substantially as specified.

3. The arrangement of the sliding-arms O, pinions M, studs N, and recessed cone-pulleys, all substantially as specified.

91,930.—MYRON GORE, Shelby, Mich.—*Lathe.*—June 29, 1869.

Claim.—1. The combination of the levers L M and wheel E, with the pulleys G′ G′ and mandrels G G, all the parts being constructed and arranged in the manner described and for the purpose specified.

2. The arrangement of the cord B′, shaft V, pulleys W Y, lever Z, and treadle Z′, lever C′, and treadle C″, and wheel F, with the center-bar O, in the manner described, when all the parts are constructed as and for the purpose specified.

91,931.—F. C. HAGEN, Cuba, N. Y.—*Bed-Bottom.*—June 29, 1869.

Claim.—The bed-bottom, constructed, as described, of the frame A, divided into three compartments by the transverse end partitions C C, the central compartment, containing the springs B, being covered by the hinged cushion D, and the two end compartments by the removable head and foot-cushions E F, all arranged as described, for the purpose specified.

91,932. — NATHANIEL HARRIER, Muscatine, Iowa.—*Gate.*—June 29, 1869.

Claim.—The combination of the caster-wheel D,

rail E, bars F, and triple crank-shafts G, with each other and with the gate C, said parts being constructed, arranged, and operating substantially as herein shown and described, and for the purpose set forth.

91,933.—EDGAR K. HAYNES, Boston, Mass., assignor to WILLIAM CARLETON, same place.—*Lamp.*—June 29, 1869.

Claim.—1. The combination, with a lamp-burner of otherwise ordinary or suitable construction, but in which the globe and its draught-nozzle are employed in lieu of the chimney, of an imperforate globe-rest, under such an arrangement that all the air required for the flame shall pass to the same through the burner, and not through said globe-rest, as and for the purposes set forth.

2. The mode of suspending the draught-nozzle wholly or partly within the globe, by means of hooked arms, which catch over the upper end or mouth of the globe, substantially as shown and set forth.

3. The combination of the imperforate globe-rest, arranged so that the air required to feed the flame shall pass through the burner, as before specified, and carrying the globe and draught-nozzle employed in lieu of the chimney, with a removable sleeve, fitting or supported upon the lower part of the burner, under the arrangement and for operation as set forth.

91,934.—M. C. HEPTINSTALL, Enfield, N. C.—*Lamp-Extinguisher.*—June 29, 1869.

Claim.—The combination of the spring concave extinguishers L L and revolving thumb-shaft P, with its wire yoke N, for closing the extinguishers, when constructed and operated as herein described.

91,935.—M. C. HEPTINSTALL, Enfield, N. C.—*Alarm-Gun.*—June 29, 1869.

Claim.—The arrangement of the tube G, spindle F, arms H I, and tripping-pins E, all substantially as specified.

91,936.—M. C. HEPTINSTALL, Enfield, N. C.—*Mustache-Guard.*—June 29, 1869.

Claim.—A detachable mustache-guard, A, for drinking-cups, provided with a mouth-piece, B, and groove, C, substantially as herein described, for the purpose specified.

91,937.—LYMAN F. HODGE, Poughkeepsie, N. Y.—*Velocipede.*—June 29, 1869.

Claim.—1. The thumb levers *g g*, in combination with the steering-bar of a velocipede, substantially as and for the purposes described.

2. An adjustable box or bush in the socket of the steering-post of a velocipede, substantially as and for the purposes described.

3. In combination with the bar D, the loop-lever *h*, for the brake-strap E, substantially as described.

91,938.—H. N. HOUGHTON, Brattleborough, Vt.—*Spoke-Fastener.*—June 29, 1869.

Claim.—In combination with a wheel for highway vehicles, the parts D and E, constructed and arranged substantially as and for the purposes herein shown and described.

91,939.—L. B. HYATT, Flemington, Pa.—*Straw-Cutter.*—June 29, 1869.

Claim.—1. The plate A, provided with the hollow axial pin D, annular collar F, and yielding-guide G, substantially as specified.

2. The cutter-arm C, provided with the projection H, and combined with the plate A, when the latter is arranged substantially as specified.

3. The combination, with the vibrating cutter-arm, of a yielding bearing, G, substantially as specified.

91,940.—THOMAS JEFFERIS, Council Bluffs, Iowa.—*Heating-Drum.*—June 29, 1869.

Claim.—The arrangement, within the heating-drum, of the perforated heat-distributing plates K, with relation to the air-flues, and heat supply and discharge pipes A A′, substantially as described, for the purpose specified.

91,941.—WILLIAM K. JOHNSTON, Cordova, Ill., assignor to himself, EDITH R. WYNKOOP, and DANIEL ZIMMERMAN, same place.—*Wagon-Brake.*—June 29, 1869.

Claim.—1. The locking-device D, applied to the segment E, or its equivalent, and receiving through it the lever C, substantially as described.

2. The lever C, loosely attached at its lower end, and applied to a box-slide, D, which is upon a bar, E, and to which the brake chain or rod is connected, substantially as described.

91,942.—HENRY J. KLINGENBERG and JOHN J. MAU, Davenport, Iowa.—*Apparatus for Operating Churns.*—June 29, 1869.

Claim.—The spring *a*, confined within the metal disks B, shaft *b*, ratchet *b′*, cog-wheel A, pinion *c*, bevel-gear D *e*, shaft E, escapement F, and brake I, when constructed and arranged as described, for the purpose set forth.

91,943.—CHRISTIAN HENRY KOCK, Davenport, Iowa.—*Water-Elevator.*—June 29, 1869.

Claim.—The combination of the cylinder A, spiral springs B, separated by the loose disks C, the piston D, ball-valve E, and its seat F, the metallic ribbon H, the windlass, the supply-pipe L, having the ball-valve *m*, and the discharge-pipe N, all arranged and operating as described, for the purpose specified.

91,944.—PHILIP LEONARD, Sharon, Pa.—*Machine for Turning and Scraping Grindstones.*—June 29, 1869.

Claim.—A machine for turning and scraping grindstones, consisting of the pivoted frame, carrying the longitudinally adjustable frame C, on which the transversely adjustable frame B is arranged, and of the tool A, the frame D being adjustable by means of screws F, and provided with a fender, J, substantially as herein shown and described.

91,945.—B. B. LEWIS, New York, N. Y.—*Sash-Holder.*—June 29, 1869.

Claim.—1. The bracket A, provided with shoulders *c c*, in combination with the projecting-bar D, and the eccentric B, having the rubber band C, all constructed and arranged to operate in the manner described, for the purpose specified.

2. The combination of the eccentric or cam B, with the bracket A, when the offset or shoulder *ax* of the latter is made to form a stop for the former, substantially as set forth.

91,946.—JEAN BAPTISTE LHOTE, Paris, France, assignor to SEWELL HENRY FESSENDEN, Boston, Mass.—*Mold for Glass from Gas-Carbon or Graphite.*—June 29, 1869.

Claim.—1. Manufacturing the molds, as hereinbefore described, from the graphite, or material which is formed in the interior of gas-retorts.

2. Manufacturing the molds by pulverizing the graphite, and then agglomerating it by a binding material, as hereinbefore described.

3. Manufacturing the molds by cutting and working the graphite, in its natural state, into the required form, as hereinbefore described, without pulverizing and agglomerating it.

4. Manufacturing the molds, especially when required to be of large size, by joining or connecting several pieces of the graphite, as hereinbefore described.

5. As a new manufacture, molds made of the graphite, or material which is formed in the interior of gas-retorts, either in its natural state or agglomerated, substantially as specified.

91,947.—J. P. O. LOWNSDALE, Portland, Oreg.—*Dust-Deflector for Railroad-Cars.*—June 29, 1869.

Claim.—The metallic dust-deflector for cars, consisting of the funnel-shaped case A, inclosing the inner triangular-shaped projection, both placed upon the plate E, in reverse positions with relation to each other, substantially as described, for the purpose specified.

91,948.—JOHN MACNAIR, New York, N. Y.—*Paper-Folding Machine.*—June 29, 1869.

Claim.—1. In combination with the rollers B B′ C C′, &c., the boxes or vacuum-chambers K K′, and pistons L L′, when constructed to operate substantially as and for the purposes set forth.

2. The combination of the rollers B B′, chambers K K′, piston L, spring J, shaft M, cams *m m*, and gear *b b s*, all constructed to operate substantially as and for the purposes described.

3. In a machine for folding paper or other fabrics, the employment of a current of air or simply atmospheric pressure, to assist in forcing the material between the rollers, substantially as herein described.

91,949.—James Mahoney, Newport, R. I.—*Steam-Generator Grate-Bar.*—June 29, 1869.

Claim.—The construction of the rectangular corrugated frame, with corrugated cross-bars and surrounding corrugated margin, as herein specified.

91,950.—Henry Markthaler, Elizabeth, N. J.—*Chimney-Top.*—June 29, 1869.

Claim.—A chimney-top, consisting of the body A, cap B, flange *b*, inner annular plate C, and inverted cup D, all combined and arranged substantially as and for the purpose herein shown and described.

91,951.—Samuel Mattix and James McPherson, Clinton County, Ind.—*Tile-Machine.*—June 29, 1869.

Claim.—1. The box A, hoppers B B, shafts E E, cog-wheels *a a*, knives *c c*, and cut-offs *c c*, in combination with shaft H, with its cog-wheel *b*, toothed plunger C, segment of cog-wheel R, and die-plates K K, with their cores *l l*, all constructed and operated substantially as described..

2. The toothed plunger C, and segment of cog-wheel R, in combination with the die-plates K K, with their cores *l l*, substantially as and for the purpose set forth.

91,952.—Benjamin Franklin Mayhew, Carmel, Me.—*Shingle-Machine.*—June 29, 1869.

Claim.—The arrangement of the series of shingle-bolt carriages upon the sides of the radial arms projecting from the horizontal revolving-shaft, all the parts being constructed, arranged, and operating substantially as and for the purposes set forth.

91,953.—Francis McCarty, Smith's Ferry, Pa.—*Distillation of Hydrocarbon-Oils.*—June 29, 1869.

Claim.—1. Causing the oil in the still to move in a continuously returning current or flow, by means of a jet of steam, and a funnel inserted in the steam-pipe back of the discharging aperture, substantially as described.

2. Feeding a jet of oil and a jet of steam continuously into a still through a common pipe, substantially as and for the purposes set forth.

3. A funnel *d*, inserted in a steam-pipe, *a*, inside the still, and back of the discharging aperture, substantially as and for the purposes hereinbefore set forth.

91,954.—W. L. McCord, Abbeville, S. C.—*Medical Compound.*—June 29, 1869.

Claim.—The medical compound, composed of the ingredients herein named, and in about the proportions specified, substantially as and for the purposes described.

91,955.—Jim H. McElroy, Warwick, N. Y.—*Self-Closing Telegraph-Key.*—June 29, 1869.

Claim.—The arrangement of the contact-spring *h*, depressed by the insulated thumb-piece *i*, in connection with the key A, substantially as described, for the purpose specified.

91,956.—John M. McGehu, Milton, Fla.—*Railway-Car Truck.*—June 29, 1869.

Claim.—The railroad-car, consisting of the two two-wheeled trucks A and B, each provided with the swinging bolster D, the forward truck A being supported on the cone-shaped wheels C C, arranged with their bases toward the central line of the car, and the rear truck B provided with the wheels C′ C′, having concave peripheries, all constructed as described, whereby the car is adapted for use on tracks of irregular gauge, for the purpose specified.

91,957.—J. Miles and E. P. Miles, Pleasant Hill, Ohio.—*Plow-Cleaner.*—June 29, 1869.

Claim.—The combination, with a plow, of the curved sliding cleaning-bar A, when arranged to be adjusted vertically, and from side to side of the beam, substantially as specified.

91,958.—Stephen Moore and Homer Rogers, Sudbury, Mass.—*Portable Straining-Press.*—June 29, 1869.

Claim.—1. The arrangement and combination of the bail and toggle applied to the bottom of the expressing-vessel, with the stepped projection applied to the follower.

2. The arrangement and combination of the handle with the expressing-vessel, and the bail, toggle, and stepped projection applied to the said vessel and the follower, in manner and so as to operate therewith, substantially as specified.

3. The arrangement and combination of the projection *e* with the handle *d*, the expressing-vessel, and the bail, toggle, and stepped projection, applied to the expressing-vessel and follower, in manner and so as to operate therewith, as explained.

91,959.—F. L. Morrison, New Albany, Ind.—*Hay-Fork.*—June 29, 1869.

Claim.—1. The adjustable shoulder-rest E, arranged on the handle of a fork, substantially as and for the purpose herein shown and described.

2. The jointed prong B, consisting of the parts *b c*, when arranged on a hand-fork, to operate substantially as herein shown and described.

3. The hand hay-fork, consisting of the handle A, fixed prongs B, detachable prongs C or D, which may be jointed, as described, all made and operating substantially as herein shown and described.

91,960.—Andrew J. Morse, Boston, Mass.—*Sirup-Holder for Soda-Fountain.*—June 29, 1869.

Claim.—For use in soda-water apparatus, a glass sirup-holder, formed rectangular and oblong, in horizontal cross-section, and having an open top and an outlet at its bottom, substantially as shown and described.

91,961.—S. Y. Orr, Morning Sun, Iowa, assignor to himself and J. M. Virgin, same place.—*Corn-Planter.*—June 29, 1869; antedated June 22, 1869.

Claim.—1. The use or employment of a smooth wire or cord, S, wound upon the reels R, in combination with the friction-disks P P, with rubber or elastic washers Q Q′, and nut *y*, with the cams E E′, or their mechanical equivalent, for the purpose of operating the seed-distributing mechanism, as the machine is drawn along, when constructed substantially as and for the purpose set forth.

2. The rod T, provided with the anchor V, and hook *i*, in connection with the eyes *j*, attached to the wires S, for the purpose of connecting the wires to the anchor V and rod T, when so constructed that, in combination with the small eye Bx, on the front end of the machine, the wire will be automatically unhooked from rod T, substantially as and for the purpose set forth.

3. The combination of the wires S, reels R, on axle D, cams E E′, lever F, and seed-dropping mechanism, all arranged to operate substantially as and for the purpose set forth.

4. The toothed rim L, latch Ax, spring *ax*, pinion *h*, in the ring M, attached to the lever N, and the wheel O, between friction-disks P P, on the axle D, all arranged to operate substantially as set forth, and for the purpose specified.

91,962.—D. D. Parmelee, New York, N. Y.—*Mode of Utilizing Tin-Plate Cuttings in the Manufacture of Iron and Steel.*—June 29, 1869.

Claim.—1. The process herein described, of utilizing the waste cuttings or scraps of tin plate, by forming the same into ingots, substantially as described, and subjecting such ingots to the melting or puddling process in any suitable furnace, as herein set forth.

2. The formation of interlaced masses of tin-scraps, preparatory to their being dipped in or mixed with molten cast iron, substantially as set forth.

3. The production of ingots composed of waste

tin-scraps and cast iron, substantially as herein set forth.

4. The method of and means herein described, for producing skeleton ingots of waste tin plate.

91,963.—F. L. PERRY, Canandaigua, N. Y.—*Cultivator.*—June 29, 1869.

Claim.—1. The attaching of the teeth E to the beams A, by having the front prongs *c* of the teeth pass through the front ends of plates *d*, and the rear prongs *f* fitted in the rear parts of the plates, in combination with the arms *g* of the plates, the arms of each pair of plates being fitted together, and all constructed and arranged substantially as shown and described, to admit of the turning or adjusting of the teeth as the beams A A are expanded or contracted, as set forth.

2. The adjusting of the clevis-plates *k k*, by means of the bolt *m*, fitted in any of a series of holes, *l*, in said plates, in connection with the spring-catch G, all constructed and arranged to admit of the adjustment of the gauge-wheel C, substantially as and for the purpose set forth.

91,964.—JOHN POFFENBERGER and IRA M. POFFENBERGER, Urbana, Ohio.—*Corn-Harvester.*—June 29, 1869.

Claim.—1. The inclined board X, when supported parallel to the endless apron R and inclined bars V, by means of the curved springs Y, as herein described, for the purpose specified.

2. The wheel I^2, adjusted upon the lower end of the frame U, by means of the toothed post J′, pawl K′, and rod L′, all arranged as described, for the purpose of steadying the machine, when the filled box N′ is operated, as herein shown and described.

3. The receiving-box N′, constructed, arranged, and operating in combination with the crane M′, jointed catch-lever O′, stationary end board or plate R′, and endless apron R, substantially as herein shown and described, and for the purpose set forth.

4. The combination and arrangement of the wheel E′, sliding post or standard W, and rod G′, with each other and with the platform F′, substantially as herein shown and described, and for the purpose set forth.

91,965.—TREAT T. PROSSER, Chicago, Ill.—*Machine for Forming Threads on Screws.*—June 29, 1869.

Claim.—1. The combination of a pair of circular disks, each with a lateral surface, upon which is formed an annular die, composed of a series of concentric screw-forming projections, lying in the same plane, arranged so that their contiguous and operative faces shall be somewhat inclined to one another, and at different elevations, or axes lying in different vertical and horizontal planes, substantially as set forth.

2. An improved screw-forming machine, constructed substantially as herein described, in which the spiral thread is formed upon a bar or rod, by the compression of two disks or cups, each having on its face concentric projections and grooves, the edges of said projections being, on each disk, on the same plane, and the faces of said disks being set at an angle to each other, and said disks revolving in opposite directions, upon axes in different vertical and horizontal planes, equidistant above and below the axis of the rod or bar subjected to their action, substantially as set forth.

3. In combination with the screw-threading disks F F, constructed and arranged to operate substantially as set forth, the guide G, having an internal thread at G′, substantially as and for the purpose set forth.

4. The combination of the screw-threading disks, the tubular guide, and the adjustable rod placed in the latter, for regulating the length of the thread to be cut, substantially as set forth.

5. The arrangement of the screws K K′, handle or lever H, and the rods, which are secured to the ends of the shafts carrying the thread-forming disks, in virtue of which said disks are equally and simultaneously actuated, both in approaching toward and receding from each other, substantially as and for the purpose set forth.

91,966.—JOSEPH W. V. RAWLINS and SAMUEL STEPHENS, Houghton, Mich.—*Ore-Concentrator.*—June 29, 1869.

Claim.—1. The combination of the receiver B, spout A, guttered table C, revolving table F, and receiving-trough G, all arranged substantially as specified.

2. The combination, with the tables C and F, of the brushes H and scraper M, all arranged substantially as specified.

3. The combination, with the receiver B, guttered table C, table F, and scraper M, of the receiver L, spout K, and pipe N, substantially as specified.

4. The arrangement of the revolving-table F, fixed table C, support X, projection W, bearing and guiding rollers, and operating mechanism, substantially as specified.

91,967.—J. H. RICKETT, West Dover, Vt.—*Clothes-Boiler.*—June 29, 1869.

Claim.—1. My improved arrangement of the annular chamber or space C, the clothes-chamber and basket of the vessel A, the said annular space communicating at top and bottom with such clothes-chamber as described, and the basket, under such arrangement, being separate from the walls or sides of the clothes-chamber, and extended up within and below them, in manner substantially as represented and described.

2. The combination and arrangement of the frame E with the eductes *f f*, the vessel A, the annular space C, and its upper series of educts.

91,968.—FRANCIS RITCHIE, Troy, assignor to S. S. JEWETT, Buffalo, N. Y.—*Cooking-Stove.*—June 29, 1869; antedated June 15, 1869.

Claim.—1. The combination, in a cooking-stove, of an oven, A, having the lower part *c* of the portion furthest from the fire-chamber extended rearward beyond the upper part *d*, with a water-reservoir E, extended below the level of the top of the oven and over the rearwardly extended lower portion thereof, as herein set forth.

2. The arrangement of the flues N, O, P P, Q Q, R, S, exit-passage T, and valve or damper U, in combination with the fire-chamber oven, having the lower portion extended rearward beyond the upper part, and water-reservoir extended below the level of the top of the oven, and over the rearwardly extended lower portion thereof, as herein described.

3. In a cooking-stove, a hot-water reservoir, arranged in the upper rear portion of the stove, and extended below the level of the top of the oven, when the rear upright side *i* of the reservoir is even with or in substantially the same plane as the upright outer rear flue-plate *g* of the stove, as herein set forth.

91,969.—JOSEPH SAXTON, Washington, D. C.—*Folding Opera-Glass.*—June 29, 1869.

Claim.—1. The connecting of the eye-glass *a* to a hinged and adjustable plate, *b*, which, when shut down, forms a part of the case or cover, substantially as described.

2. In addition to the pivoting of the large glass to the frame, to swing it in and out of the case, the hinge for allowing it to be turned at right angles to the plane on which it so swings in and out, substantially as described.

3. A folding opera-glass, which swings into a case or cover, forming a part of the instrument, and which is opened out and arranged for use, substantially as described and represented.

91,970.—SOCRATES SCHOLFIELD, Providence, R. I.—*Braiding-Machine.*—June 29, 1869.

Claim.—1. The combination of a handle, D, stop-rim B, spring L, and spring C, operating substantially as described.

2. The combination of the spool P, revolving upright arms or ribs *h h*, tension-weight I, and spring K, operating substantially as described.

3. The combination of a tension-weight, I, spring K, sliding-thimble Q, and guide-wire S, arranged upon a carrier, substantially as described.

4. The combination of a spring, K, sliding-thimble Q, stationary collar R, guide-wire S, and tension

weight I, arranged upon a carrier, substantially as described.

91,971.—GOTTLIED SCHWARZWALDER, Pittsburgh, Pa.—*Machine for Cutting Vermicelli.*—June 29, 1869.

Claim.—1. The box E, having the inclined bottom G, cover F, and guides *e e*, when constructed substantially as and used for the purpose specified.

2. The knife-frame S, held in position by the swinging-arm T, and crank U, by which the knife is operated, when the parts are arranged and operated substantially as described.

3. The combination of the knife, supported as described, and of the feed-rollers, operating as described, with the box G, constructed as described, forming a machine used for the purpose set forth.

91,972.—JOSIAH SHEPARD, Newport, Me.—*Plow.*—June 29, 1869.

Claim.—An improved plow, provided with a long roller, D, and horizontal roller or wheel F, and having the rear lower part of the landside cut away, substantially as herein shown and described, and for the purpose set forth.

91,973.—JOSIAH SHEPARD, Newport, Me.—*Cultivator.*—June 29, 1869.

Claim.—1. The combination of the two small plows A, bars B, supports D, wheels C, central bar F, and central plow G, having fingers formed upon the rear edges of its rings, with each other, substantially as herein shown and described, and for the purpose set forth.

2. The pivoted tilting-beam H, pivoted lever K, and staples h^1 h^2, arranged upon the frame B E F, bearing the wheels C, as herein described, for the purpose specified.

91,974.—JOHN SIMENSEN, Hermon, N. Y., assignor to himself and OTIS EARL, same place.—*Extension-Table.*—June 29, 1869.

Claim.—A dining or extension table, arranged to assume a curved form around a space at the axis of the curvature, when extended, substantially as herein specified.

91,975.—T. D. SIMONTON, St. Paul, Minn.—*Pocket-Stereoscope.*—June 29, 1869.

Claim.—1. A stereoscope instrument, consisting of the case or box A, adjustable slide C, and flexible partition E, all arranged substantially as herein described, for the purpose specified.

2. The folding partition E, arranged to slide upon the bottom of the case A, and to be supported when in use by the cover B, substantially as described, for the purpose specified.

91,976.—THOMAS D. SIMONTON, St. Paul, Minn.—*Pocket-Stereoscope.*—June 29, 1869.

Claim.—The pocket-stereoscope, consisting of the lens-piece A, having the slots D D, or their equivalents, and the slide and view-holder F, having the slots G H, or their equivalents, all constructed as described, and adapted to be applied to the card E, substantially as herein set forth, for the purpose specified.

91,977.—VALENTIN SIPPEL, Niagara City, N. Y.—*Harrow.*—June 29, 1869.

Claim.—The setting of the rails *o* a little wider apart at and toward the rear, the bars *f f* slanting in opposite directions across the front ends of the rails *o*, beginning the teeth at unequal distances from the ends of the rails, and all these features in combination with the sliding-hinge, draw-bar *b*, and ring *e*, when the whole are constructed, arranged, and operated, in the harrow described, substantially as and for the purposes set forth.

91,978.—OTTO SLIKER, Lincoln, Ill.—*Door-Holder.*—June 29, 1869.

Claim.—1. The expanding springs B B′, when provided with convex or semispherical projections C, in combination with plate E, provided with hole *e*, as shown, and for the purpose described.

2. In combination with the above, the ring or band D and cushion G, as shown, for the purpose described.

91,979.—OTTO SLIKER, Lincoln, Ill.—*Extension-Trestle.*—June 29, 1869.

Claim.—The combination and arrangement, in an extension-trestle, of sliding-legs A A′, B B′, sliding cross-beams C C′, screw-bolts *d d′*, thumb-nuts *e e′*, bands *a a′*, *b b′*, *c c′*, sheaves *f f′*, ropes *g g′*, slots *h*, ears *i i′*, bars *k k′*, pins *l l′*, and holes *m m′*, all arranged and operating as described and shown.

91,980.—BENJAMIN F. SMITH, New Orleans, La.—*Pipe for Water, Gas, &c.*—June 29, 1869.

Claim.—1. The use of American swamp-cane, as a base for water, gas, and other conduit-pipes, substantially as herein described.

2. The process, substantially as herein described, of preparing American swamp-cane for use as water, gas, and other conduit-pipes.

91,981.—WILLIAM SNOOK, Pleasant Plain, Iowa.—*Cultivator.*—June 29, 1869.

Claim.—The combination of the bent yoke K L, bent lever O, curved plates I, and the adjustable connecting-bars M N of the cultivator-beams, arranged, in their relation to the plows, as herein set forth.

91,982.—FREDERIC H. SNYDER, Jersey City, N. J.—*Composition for Covering Steam-Generators.*—June 29, 1869.

Claim.—The above-described composition, consisting of the ingredients named, and in substantially the specified proportions.

91,983.—JOSEPH SPOONER and EBENEZER SPOONER, New York, N. Y.—*Paper-Box Machine.*—June 29, 1869.

Claim.—1. The expanding head E, in combination with the cone *b′*, when used in connection with the operating mechanism of a paper-box machine, substantially as herein shown and described, and for the purpose set forth.

2. The combination of the expanding head E, cone *b′*, shaft B, and hand-nuts G, with each other, substantially as herein shown and described, and for the purpose set forth.

3. The combination of the shaft M, sleeve K, lever spring-catch L, and plates N and O, with each other, substantially as herein shown and described, and for the purpose set forth.

4. The combination of the shaft M, sleeve K, spring lever-catch L, plates N and O, springs R and S, and spring-catch P Q, with each other, substantially as herein shown and described, and for the purpose set forth.

5. The combination of the expanding head E, cone *b′*, shaft B, hand-nut G, plates N and O, shaft M, sleeve K, lever spring-catch L, springs R S, and spring-catch P Q, with each other, substantially as herein shown and described, and for the purpose set forth.

91,984.—GEORGE STACKHOUSE, Mount Washington, Pa.—*Attachment for Comb.*—June 29, 1869.

Claim.—A comb-attachment, consisting of the swinging-trough B, substantially as herein shown and described, to operate as set forth.

91,985.—W. H. TAPPEY, W. C. LUMSDEN, and ALEXANDER STEEL, Petersburgh, Va.—*Tobacco-Press.*—June 29, 1869.

Claim.—The compressing device, consisting of the band C, provided at each of its ends with the heads D E, operated by a right and left hand screw F, with nuts *g*, cog-wheel H, pawl I, and pawl-handle J, all combined and arranged substantially as herein set forth.

91,986.—CLINTON W. TERPENING, Geneseo, Ill.—*Harness-Tug or Trace-Supporter.*—June 29, 1869.

Claim.—As a new article of manufacture, the trace-supporter, consisting of the case A, spring C, and hook D, constructed as described, and arranged to operate in the manner herein shown and set forth.

91,987.—HUBBARD W. TILTON, Walpole, Mass.—*Axle.*—June 29, 1869.

Claim.—The arrangement of the groove-cavity *a*, within one of the ears, C or D, of the sleeve or journal-box.

91,988.—M. Umstadter, Norfolk, Va.—*Type Setting and Distributing Machine.*—June 29, 1869.

Claim.—1. The distributing of type, by shoving the same, through the medium of keys Q, and suitable mechanism connected therewith, transversely upon a bar, O, moving the type on said bar by means of the carriers on the belt L, composed of the spring-plates N, with prongs *c c* attached, and drawing the type into the proper chambers R by the hooked rods or bars A′, all arranged to operate in the manner substantially as and for the purpose set forth

2. The plate G′, connected with the bar F′, operated by the arm B′, arranged substantially as shown, for the purpose of rendering the carriers inoperative, when necessary, as hereinafter set forth.

3. The racks S, with pins *d*xx at their lower ends, in connection with the pinions T, ratchets V, and the pawls W, connected with the keys Q, all arranged to operate substantially in the manner as and for the purpose specified.

4. The setting up of the type, by forcing them from the bottoms of the chambers R transversly upon a bar, L′, on which they are propelled along to a stick, N′, by means of carriers attached to an endless belt, G, and composed of springs M′, provided with prongs *o o*, all arranged substantially as shown and described.

5. The spring-bars K′, operated upon by the arms J′, and arranged, in relation with the springs M′ of the carriers, on belt G, so as to render the carriers inoperative, when necessary, substantially as set forth.

6. The herein-described arrangement of the keys Q H′, for the purpose specified.

7. The combination of the two sets of keys Q H′, with their concomitant parts, the chambers R, with their racks S, and the endless belts and carriers, all arranged substantially as shown, to admit of the distributing and setting up of type being performed on one and the same machine, as set forth.

91,989.—J. B. Van Deusen, New York, N. Y.—*Fluid-Meter.*—June 29, 1869.

Claim.—1. A water-meter, composed of the following elements combined, viz:

(1.) Two D-valve cylinders or pistons, each provided with a D-cavity and two valve-ports leading out of the cylinder, water under pressure having access at all times to the inside of said cylinder, substantially in the manner herein set forth.

(2.) Two water-cylinders, within which the D-valve cylinders are to operate as specified, said water-cylinders being of sufficiently greater length than the D-valve cylinders, to provide a water-chamber at each end of water-cylinders, substantially as described.

(3.) A valve-seat piece, forming part of the two water-cylinders, having two seats, one the seat of one D-valve cylinder, and the other the seat of the other D-valve cylinder, said seats having each, at center of length, a discharge-port, and said seat piece having four passages through it, viz, one from each water-chamber of the one water-cylinder, leading to and opening into the seat of the D-valve of the other water-cylinder, so that the D-valve cylinder of one water-cylinder is at all times supplying water under pressure to the one chamber, and taking water from the other chamber of the opposite water-cylinder, continuous reciprocating movements of the two D-valve cylinders being thus produced, substantially in the manner set forth.

2. The valve-cylinders or pistons, constructed with a central cavity, and a valve opening on each side of said cavity, bearing the relation to the channel-ports and discharge-opening in each water-cylinder, substantially as herein shown and set forth.

3. The combination, with the two water-cylinders and central discharge-openings, of the inlet or bottom sediment-chamber, and the outlet or discharge-chamber, substantially as shown and specified.

4. The combination, with the reciprocating valve cylinders or pistons, of the cranks and shaft, for actuating the register and regulating the length of stroke of said valve-cylinders, substantially as shown and described.

5. The formation of the cylindrical valve-pistons, of brass or other sheet metal, substantially as and for the purposes set forth.

91,990.—Paul Viccellio, New Orleans, La.—*Wood-Plane.*—June 29, 1869.

Claim.—The above-described plane, when composed of the combination of the bit *c*, wedge *b*, cap *a*, and its adjusting devices, with the stock A, all constructed to operate in the manner and for the purpose substantially as described.

91,991.—Franz Wagner, New York, N. Y., assignor to himself and Joseph Metzner, same place.—*Fluid-Meter.*—June 29, 1869.

Claim.—The construction and arrangement of the meter-case A A′, the two cylinders B B′, with four valve-ports and delivery-chambers *l l′*, and four chambers or passages intermediate between the two cylinders, with intervening partitions *i j*, substantially as and for the purposes shown and set forth.

91,992.—Joseph B. Wilkinson, Troy, N. Y.—*Cooking-Stove.*—June 29, 1869.

Claim.—1. The employment of the back oven-plate of a cooking-stove as a support for a reservoir, warming-oven, or any equivalent thereto, as herein described.

2. Constructing the back oven-plate of a cooking-stove with a bend backward, and extension covering the back flues of the stove and the back plate of the stove, and extending to any distance beyond the back plate of the stove, so that it can be used as a shelf or support for a reservoir, warming-closet, or any other article, the said plate having apertures over the back flues of the stove for the passage of hot air, smoke, &c., with or without dampers, as desirable.

3. The boxing or encasing of the middle back flue, by the bent back piece or plate K and the side pieces J, in manner and for the purpose substantially as described and set forth.

91,993.—Joseph B. Wilkinson, Troy, N. Y.—*Cooking-Stove.*—June 29, 1869.

Claim.—1. The extension of the top oven-plate of a cook-stove beyond the back plate of the oven, over the back flues of the stove, to the back plate of the stove, covering the said back flues of the stove, and reaching or extending to any point or distance beyond the said back plate of the stove, in the manner and for the purpose substantially as described.

2. Curving or bending the said top oven-plate of a cooking-stove, at any suitable point in the extension or extended part thereof, beyond the back of the upper back corner of the oven, for the purpose and in the manner substantially as described and set forth.

3. The apertures F, in the said top oven-plate, with or without dampers, and in combination therewith, temporarily covering the same, in the manner and for the purpose substantially as described and set forth.

4. The employment of a water-reservoir or tank, or any equivalent therefor, in combination with the extended top oven-plate of a cooking-stove, resting upon or cast as a part of the said top oven-plate.

5. The division pieces S, or any equivalent therefor, in combination with the said extended top oven-plate, in the manner and for the purpose substantially as described and set forth.

6. The curved plate L, with or without apertures, and with or without dampers, substantially in the manner and for the purpose as described and set forth.

7. The covers T, with the pivots U, for the purpose and in the manner substantially as described and set forth.

91,994.—James Williams, New York, N. Y.—*Reversible Parasol.*—June 29, 1869.

Claim.—1. The arms or stretchers A, braces C, cover and runners B E, arranged for maintaining the parasol, when extended, in the form of a flat disk, with a central conical projection, substantially as specified.

2. The arrangement of the runners, braces, stretchers, and holding-springs, whereby the cover or top is made detachable from the handle, for reversing the position thereof, substantially as and for the purpose specified.

3. A parasol-frame, arranged for folding or spreading the same by a movement of the runner, carrying

either the braces or arms in either direction on the stock, substantially as specified.

91,995.—Louis Gabriel Yon, Paris, France.—*Rope, Cord, &c.*—June 29, 1869.

Claim.—As a new article of manufacture, ropes or cables, constructed as described, of the straight inner threads *a*, bound together by the outer woven layer of thread *b*, as herein described, for the purpose specified.

91,996.—Albert A. York, De Lancey, N. Y.—*Horseshoe.*—June 29, 1869.

Claim.—The lips F, and the removable elastic, angular clasps E, in combination with the shoe A, whereby the shell of the horse's hoof is adapted to rest upon the shoe, between the lip and clasps, to prevent it from being bent inward and broken, as herein shown and described.

91,997.—John Francis Adams, New York, N. Y.—*Stereoscope-Instrument.*—June 29, 1869.

Claim.—1. In combination with a stereoscope, the use of magnets, substantially as and for the purposes herein shown and described.

2. The metallic binding *m*, or its equivalent, on the ends of stereoscopic or photographic pictures, substantially as and for the purposes described.

3. The buttons J, in combination with a stereoscope, for delivering the pictures singly from the pack, when constructed, revolved, and operating substantially as described, for the purposes set forth.

4. The method of discharging the pictures from the magnets, substantially as described.

91,998.—Benjamin F. Alexander, Glen Hope, Pa.—*Horse Hay-Fork.*—June 29, 1869.

Claim.—The slide B′, provided with the pointed head B, handles *b b*, and shoulder *n*, in combination with the fixed part A, having the arms *c c* and shoulder *m*, the arms *c′ c′*, articulated to the head B, the arms *c c*, articulated to the parts A and *c′ c′*, and the eccentric lever *o*, pivoted in a slot in the part A, and operating against the inner face of the part B′, all constructed, arranged, and operating together substantially in the manner and for the purpose set forth.

91,999.—Benjamin T. Babbitt, New York, N. Y.—*Grate for Steam-Generator and other Furnaces.*—June 29, 1859.

Claim.—1. The construction of the grate, consisting of the hollow main bar A, provided with suitable inlet and outlet passages, for establishing flow of water through the grate and hollow side or branch bars B, left free or disconnected from each other at their outer ends, and in communication with the main bar at their inner ones, substantially as specified.

2. The combination, with the hollow main and branch bars A and B, constructed and arranged substantially as specified, of the bent tubes *a*, made of more flexible metal than the bars, substantially as specified.

92,000.—Benjamin T. Babbitt, New York, N. Y.—*Steam-Generator.*—June 29, 1869.

Claim.—1. The arrangement, with the main pipes or body of the structure, of the drum D, and connected with the same by means of bent pipes *a a*, whereby to secure an independent flexibility to such connections, and thereby to provide for the expansion and contraction of the main pipes, as herein set forth.

2. The combination, with the main pipes B B and branch pipes C C, of the tubular connections *b b*, of flexible character, as described, and arranged to connect the branch pipes with each other, and with the drum, substantially as specified.

92,001.—Edwin A. Barton, Boonville, Ind.—*Combined Seed-Sower, Harrow, and Roller.*—June 29, 1869.

Claim.—1. In combination with the roller-frame A A and harrow-frame J J, constructed as shown and described, the peculiarly shaped bearings P Q, the belts R R, and wedges M M, all operating substantially as and for the purpose set forth.

2. A combined seed-sower, harrow, and roller, capable of conversion by means of the peculiarly shaped bearings P Q, belts R R, and wedges M M, as and for the purpose hereinbefore specified.

3. In combination with the harrow-frame J J, when connected with the roller-frame A A, by means of the bearings P Q, belts R R, wedges M M, the screen O, constructed and arranged as and for the purpose set forth.

92,002.—Isidore Bezenah, St. Martin's, Ohio. *Stump-Extractor.*—June 29, 1869.

Claim.—1. In combination with the axle A and wheels B, the grapnel-chain J *j*, block I, chain H, blocks E E′ N, lever M, and chain or chains Q R *r*, the lever or hounds D C, as and for the purpose stated.

2. In combination with the elements A B C D M, the lever-frame S T U, for the double purpose of drawing back the lever M, and of raising the loosened stump clear of the ground, as set forth.

3. The provision, in the lever-frame S T U W, of the removable portion T U W, as and for the purpose stated.

92,003.—Ira Bicknell, Cincinnati, Ohio.—*Fuel.*—June 29, 1869.

Claim.—A fire-kindling, composed of wood saturated with petroleum, or its equivalents, and sized or coated with rosin or pitch, beeswax, and paraffine, to prevent its evaporation, or any other substantially the same, and will produce the same effect.

92,004.—F. C. A. Bock, Copenhagen, Denmark.—*Manufacture of Stearic Acid.*—June 29, 1869.

Claim.—The process of manufacturing stearic acid, employing sulphuric acid as an active agent, and avoiding the dangerous operation of distillation, by proceeding, for the elimination of the black substances, in the manner herein described.

92,005.—N. P. Bradish, Jerseyville, Ill.—*Rock-Drill.*—June 29, 1869; antedated June 18, 1869.

Claim.—1. The cams C C, constructed and arranged as described, in combination with grooved arms D and arm E, constructed and arranged as described, for the purpose set forth.

2. The arms D and E, when connected by means of the ball and socket joint, as and for the purpose set forth.

3. The clasp H, tooth-arm *h*, and bar *h′*, when constructed as described, and operated as and for the purpose set forth.

4. The drilling-machine described, consisting of the cams C, arms D E, clasp H, drills F, and frame I, the whole being constructed, combined, and arranged in the manner and for the purpose set forth.

92,006.—Barnerd Branon and George H. Baldwin, Sharon, Pa.—*Apparatus for Collecting the Waste Gases of Smelting-Furnaces.*—June 29, 1869.

Claim.—The furnace A, in combination with the pipes B and E, when said pipes are furnished with sliding-valves, constructed as and for the purpose described.

92,007.—Joseph Sykes Bromhead, Peckham, England.—*Regulator for Gas-Burner.*—June 29, 1869; patented in England July 23, 1868.

Claim.—The combination of a series of perforated disks of metal, with a screw-threaded rod, to permit of their ready adjustment, at suitable distances apart, according to the pressure of the gas, substantially as herein set forth.

92,008.—William Frank Browne, New York, N. Y.—*Broiler.*—June 29, 1869.

Claim—1. A broiler, having the form, and provided with the conical projections *a a*, with lateral apertures at their base, substantially as and for the purposes herein specified.

2. A broiler-cover, B, so formed as to serve the double purpose of a close cover for the broiler and a separate cooking-utensil, substantially as herein set forth.

92,009.—William Brückner, Central, Col. Ter.—*Process of Roasting Auriferous Sulphurets.*—June 29, 1869.

Claim.—The use and application of these materials in a particular manner, and for special purposes, substantially as set forth in the foregoing specification.

92,010.—David R. Bruton, Thomasville, N. C.—*Animal-Trap.*—June 29, 1869.

Claim.—The combination of the tube *e*, the rack *d*, the stay-beam *f*, and fall-doors, substantially as described above.

92,011.—George H. Buckius, Canton, Ohio, assignor to himself, C. Aultman, A. C. Tonner, and P. S. Sowers, same place.—*Harness-Tug Buckle.*—June 29, 1869.

Claim.—1. The buckle-frame C E B B A, herein described, having the tongue-base A, arranged with respect to the tongue-axle E and the portion C of the frame, substantially as and for the purpose specified.

2. The buckle-tongue D, constructed as described, when used in combination with the buckle-frame C E A, constructed as specified, substantially as and for the purpose herein specified.

3. So constructing and arranging the frame C, tongue-axle E, tongue D, and buckle-strap F, with respect to each other, as that the tongue D shall prevent the trace H from sliding back sufficiently to allow the tongue to free itself from the trace, except when the frame C and trace H are made to assume an angle with each other, substantially as and for the purpose specified.

92,012.—Aaron H. Burgess, Philadelphia, Pa.—*Window-Shade Fixture.*—June 29, 1869.

Claim.—1. The tongues *a a* of the pulley F, and disk F′, adapted to the grooves *b* and *b′* of the roller C, for the purpose of attaching the curtain H and the said pulley and disk to the roller, substantially at herein set forth.

2. The fixtures B and B′, arranged to support the pulley F and disk F′, and adapted for ready attachment to a window-frame, substantially as herein set forth.

92,013.—Bethel Burton, Brooklyn, N. Y.—*Breech-Loader.*—June 29, 1869.

Claim.—1. Constructing the trigger K with an arm, *k*, to operate the carrier, substantially as shown and described.

2. The spring J, in combination with the trigger K, arm *k*, and carrier T, substantially as shown and described.

3. The longitudinal rib N N′, or its equivalent, constructed and operating substantially as shown and described, for the purpose specified.

4. Fluting the breech-pin F, hammer L, and steady-pin I, or the under side of the strap C, substantially as shown and described, for the purpose specified.

5. The lateral hook *h*, on the finger H, and its combination with the rib N N′, in the slot of the breech-pin F, substantially as shown and described.

92,014.—George F. Case, New York, N. Y.—*Rock-Drill.*—June 29, 1869.

Claim.—1. The combination of the drill-rod *b* with the sleeve or collar *x*, nut *d*, and friction-band E, substantially as shown.

2. The friction-band E, lever F, standard G, and nut *h*, with connections, in combination with the friction-wheel *d*, when arranged substantially as shown and for the purpose specified.

3. The shaft *z*, in combination with the sleeve *x* and drill-rod *b*, and friction-wheel or band, as and for the purpose specified.

4. The loose collar C, with or without grooves, when placed upon the drill-head, as and for the purpose specified.

92,015.—James W. Chapman, Madison, Ind.—*Soda-Fountain.*—June 29, 1869.

Claim.—The combination, herein shown, of the treadles a^1 a^2, with the bent pump-rod *c*, tube *y*, and pump C, of a soda-fountain, when the said parts are arranged to operate substantially in the manner and for the purpose set forth.

92,016.—Luke Chapman, Collinsville, Conn., assignor to himself and Collins Company, same place.—*Gang-Plow.*—June 29, 1869.

Claim.—1. The combination of the frame of the gang-plow, with the cranked axle and wheels, by means of a rider, slotted as described, the whole constructed to operate substantially as before set forth.

2. The rider *g*, slotted substantially as described, for the purpose described.

3. The wheel-lever *l*, jointed in the manner described, to the crank-arm *j*, and pivoted at its lower extremity to the axle of the furrow-wheel *a*.

4. The combination of the jointed wheel-lever, the crank-arm *j*, and the rack *m*, the whole constructed to operate substantially as before set forth.

5. The posts *r* and *z*, attached, the former to the frame *d*, in the manner described, and the latter to the axle of the land-wheel, in the manner described, connected at the top by the jointed cross-bar Q.

6. The combination of the frame of the gang-plow, the cranked axle *s′*, the lifting-frame, the differential pulleys, and the chain therefor, the whole constructed to operate substantially as before set forth.

7. The combination of the frame of the gang-plow, the rider, the cranked axle, the lifting-frame, the seat, the jointed wheel-lever, the hand-lever, and racks, the whole constructed to operate substantially as set forth.

92,017.—Gardner Cox, Pierrepont, N. Y.—*Water-Wheel.*—June 29, 1869.

Claim.—The plates A, B, and G, gates C, chutes F, and pinion H, when constructed and arranged to operate substantially as and for the purposes specified.

92,018.—Joseph Croner, Cross Creek Village, Pa.—*Bee-Hive.*—June 29, 1869.

Claim.—A bee-hive, having box A, with bed-plate as described, frames *c*, rods *n*, tubes *s*, and hooks *u*, constructed and arranged to operate substantially as described.

92,019.—F. R. Crothers, Sparta, Ill.—*Gang-Plow.*—June 29, 1869.

Claim.—1. The adjustment-plates I, and brackets K, arranged to permit a lateral and vertical adjustment of the plow-beams L L′, substantially as set forth.

2. The beams L and L′, and the brace N, and link O, when arranged adjustably, substantially as and for the purposes set forth.

3. The foot-lever P, its attachment *q*, and chains Q, acting to raise the beams L and L′, and combined with the detent R, for holding the plows out of ground, substantially as set forth.

4. The axle A, and the adjustable sub-axle C, and frame G, when combined with the beams L and L′, by attachment devices, allowing each of said beams an independent vertical adjustment, substantially as set forth.

92,020.—James F. Dacey, Charlestown, Mass.—*Stench-Trap.*—June 29, 1869.

Claim.—1. A stench-trap, constructed with the partitions *h* and *i*, outlet *g*, outlet *p*, and screw-plug *q*, relatively arranged, substantially as shown and described.

2. The combination, with partitions *h* and *i*, when arranged as above set forth, of the overflow-pipe *f*, arranged as shown and described.

92,021.—George Edward Dering, Lockleys, near Welwyn, England.—*Railway-Rail Splice.*—June 29, 1869; patented in England November 23, 1860.

Claim.—Railway-fastenings of permanently elastic metal, (either steel-tempered, or wrought-iron case, or surface-hardened,) such fastenings constituting a new manufacture.

92,022.—Jerome C. Dietrich and Charles I. Humphrey, Rochester, N. Y.—*Plastering-Trowel.*—June 29, 1869.

Claim.—The standard C, formed with depressions *g*, and curved wings *f*, with or without the recess *e*, as herein shown and described.

92,023. — JOHN DUNLAP, Pittsburgh, Pa.— *Fruit-Can Label.*—June 29, 1869.

Claim.—As a new article of manufacture, providing each one of the constant series of labels, now in use upon the top of a fruit-can, with a corresponding indicator, consisting of an indentation to receive and retain a drop of the sealing-cement or other material, substantially as and for the purpose set forth.

92,024.—ROBERT DUNLAP, 1st, South Lyons, Mich.—*Potato-Digger.*—June 29, 1869.

Claim.—The cutters or shares and points E and G, provided with rods I and slats J, when said cutters are arranged relatively to each other, in connection with suitable frame A, and operating substantially as and for the purposes set forth.

92,025.—DAVID EATON, Rochester, Vt.—*Wagon-Brake.*—June 29, 1869.

Claim.—1. The arrangement of the bolster C, stop H, lever *h*, and upper part of reach E, operating as set forth.

2. The combination of the reach E, brake F, bolster C, stop H, and lever *h*, all arranged and operating substantially as shown and described.

92,026.—WESLEY FARRINGTON, Morrisania, N. Y.—*Mat and Scraper.*—June 29, 1869.

Claim.—The arrangement of the plate B, pivoted to the standards A A, and having scraper C, brush or mat D, and foot-attachment E, constructed as herein described, for the purpose set forth.

92,027.—ALBERT FICKETT, Rochester, N. Y., assignor to himself and CHARLES T. MOORE, same place.—*Process of Preparing Wood for Paper-Stock.*—June 29, 1869.

Claim.—1. As an improvement in the preparation of wood for the manufacture of paper-stock, the process of separating the fiber by pressure applied longitudinally with the grain, for the purposes set forth.

2. The process of producing paper-stock from wood, substantially as herein described.

92,028.—THOMAS E. FIELDS, Louisville, Ky.—*Stenciling-Apparatus.*—June 29, 1869.

Claim.—1. The described stencil-plate A, in combination with the described folding-leaf B, constructed and arranged and operated substantially as and for the purpose described.

2. The described cuneiform rod F, in combination with the described graduated staples *a a' a''*, constructed and operated substantially as described.

3. The described stencil-plate A, in combination with the described folding-leaf B, when both are used in combination with the described cuneiform rod F and staples *a a' a''*, in combination with each other, and constructed and arranged substantially as and for the purposes set forth.

92,029.—R. R. FOOTE, Chicago, Ill.—*Spray-Dampener.*—June 29, 1869.

Claim.—The combination of the pipe C, when provided with the wings *b b*, with the pipe B, substantially as and for the purpose herein described.

92,030.—FREDERIC J. FORSYTH, Au Sable, Mich.—*Windmill.*—June 29, 1869.

Claim.—The arrangement of the wings I, the vanes K, the arms H, the braces J, the levers N and Q, the pins L and M, the links O, and the flanges G, in combination with the shaft C, with its step D, collar E, and rollers *a*, and anti-friction bearing F, in connection with frame A and platform B, when constructed and operating as aforesaid.

92,031.—JAMES A. FOSTER, Detroit, Mich.—*Artificial Leg.*—June 29, 1869.

Claim.—1. The bolt A, in connection with plates or straps B and C, hollow nut *b*, wooden box or bearing D, eye-bolt E, and support F, and thigh and inferior leg, when constructed and operating substantially as and for the purposes set forth.

2. The screw H, provided with head I, nut K, and slot *i*, in connection with springs J, when constructed, arranged, and operating substantially as and for the purposes specified.

92,032.—JOSEPH FOWLER, Saugatuck, Mich.—*Copying-Press.*—June 29, 1869.

Claim.—The construction of a combined printing and letter-copying press, with the parts A, B, C, D, E, F, G, H, I, J, K, *a*, *b*, and *d*, or their equivalents, arranged and operating substantially as herein set forth.

92,033.—WILLIAM H. FOYE, San Francisco, Cal.—*Submarine Foundation.*—June 29, 1869.

Claim.—1. The ground frame, consisting of the rods F and girders *a*, in combination with the guide-rods *c*, connected and arranged substantially as herein set forth.

2. In combination with the rods *c*, the blocks K, provided with holes to receive said rods, substantially as described.

3. In combination with the above-claimed frame and rods, the top frame, consisting of the timbers A and B, and the cross-pieces I, provided with the staples *i i*, substantially as described.

4. In combination with the rods *c*, the binders *f*, substantially as and for the purpose specified.

92,034.—JOSEPH FREY and WENDELL EDERLE, Battle Creek, Mich.—*Scrubbing-Tool.*—June 29, 1869.

Claim.—As a new, cheap, and effective article of manufacture, the "cleaner and scourer" described, with a scouring-edge of India rubber, in which sand or emery has been combined in suitable proportions.

92,035.—G. W. FULTON, Fulton, Tex.—*Apparatus for Slaughtering and Curing Meat.*—June 29, 1869.

Claim.—1. The arrangement of the slaughter-house A, cooling and carrying way B, packing-house C, all substantially as specified.

2. The arrangement of the rails E, cars F, and cutting-table G, substantially as specified.

3. The combination of the cooling-apparatus I, cooling-chamber B, slaughter-house A, and packing-house C', when all arranged substantially as specified.

92,036.—JOHN GALE and MOSES B. AMES, Lawrence, Mass.—*Carriage-Seat.*—June 29, 1869.

Claim.—In combination with the body and jump, or shifting rear seat of a carriage, the bent arms C, partition or covering H, when combined and arranged substantially in the manner as and for the purposes set forth.

92,037.—ALPHEUS C. GALLAHUE, Riverdale, N. Y.—*Shoe-Pegging Machine.*—June 29, 1869.

Claim.—1. The frame A, pivoted centrally, and provided with curved rack E, in combination with pinion I, all constructed and arranged to operate as herein described.

2. The combination of the wheel G, provided with the spring *h*, and pin *n*, with sliding-bolt *o* wheel H, and spring *l*, all arranged to operate as herein set forth.

3. In combination with the pivoted standard C, the slotted arm *m* and spring-catch *r*, arranged to operate in connection with the pin *t*, substantially as herein set forth.

92,038.—JACOB GETZ, Buffalo, N. Y., assignor to himself and SAMUEL WILSON, same place.—*Smut-Machine.*—June 29, 1869.

Claim.—A smut-machine, consisting of the sectional concaves *b b*, with raised edges *c*, and beaters *a*, with edges *d*, combined and provided with the emery filling, substantially as and for the purpose described.

92,039.—CHARLES M. GRANNIS, Morrisville, N. Y.—*Stove-Pipe Shelf.*—June 29, 1869.

Claim.—The combination and arrangement of the rings A and B, sockets *c*, arms *s*, shelf C, and jaws and flanches, as herein shown and described, for the purposes specified.

92,040.—W. N. GRAVES, St. Louis, Mo., assignor to himself and E. C. STERLING, same place.—

Machine for Preparing Clay for Brick-Making.—June 29, 1869.

Claim.—The disk A, when supported by notches F and bolts G, and arranged as described, for the purpose set forth.

92,041.—ORLANDO M. GRIMES, Newark, N. J.—*Lathe.*—June 29, 1869.

Claim.—1. The combination of hollow tapered and slotted mandrel A, sleeve C, and lever E, as and for the purpose set forth.

2. The combination of the tool-holders I and H, lever J, gauges K and N, as and for the purpose set forth.

3. The arrangement of the drill O, cutters P and Q, and stock R, as and for the purpose set forth.

92,042.—JOHN T. HAGERTY, Camp Point, Ill.—*Self-Adjusting Equalizer for Plows, &c.*—June 29, 1869.

Claim.—The construction of the double rack D and C, in front of the double or whiffle tree B, in combination with the hammer-strap J, guard M, and pole A, when constructed, arranged, and operating so as to equalize the strain on the double-tree, as herein described, and for the purpose set forth.

92,043.—WILLIAM HAILES, Albany, N. Y.—*Coal-Stove.*—June 29, 1869.

Claim.—1. A fire-pot, having a depressed basket-grate extending into the ash-pit section of the stove, in combination with an air heating chamber, *a*, surrounding said fire-pot, and having passages *s* leading from it into the ash-pit, substantially as described.

2. A double-acting damper, J, or its equivalent, applied at the base of a chamber, *a*, surrounding a fire-pot, substantially as and for the purposes described.

3. The annular chamber *a*, perforated at four points, *b s e d*, substantially as described.

4. The relative arrangement of the annular deflector D, with the air-jet passages *d*, and a fire-pot having an air-heating chamber around it, substantially as described.

5. In a stove which has a depressed basket-grate, a heat-deflector, D, arranged substantially as described.

6. The annular flue-space *g*, and chamber *f*, arranged below the oven-plate *k*, substantially as described.

7. The heat-concentrating plate *e*, in combination with the oven G, and exit-flue *h*, substantially as described.

92,044.—H. F. T. HALE, East Saginaw, Mich.—*Velocipede.*—June 29, 1869.

Claim.—The steadying support C, consisting of the slotted prongs *p p*, operated by the sliding bifurcated rod *f*, and arm *e*, in combination with a velocipede, substantially as herein set forth.

92,045.—JOSEPH HALL and DANIEL HALL, Chicago, Ill.—*Railway Rail and Splice.*—June 29, 1869.

Claim.—A double-headed rail, A H, provided with flanges B, in combination with couplings E, provided with flanges D, said couplings being arranged to fit in gains in the ties, and the flanges to provide a solid seat for the rails, as set forth.

92,046.—CALVIN HART, Farmington, Ill.—*Farm-Gate.*—June 29, 1869.

Claim.—The gate C, as constructed, in combination with roller F and clasp J, provided with upper and lower rollers M and N, all arranged to operate substantially as and for the purpose set forth.

92,047.—C. F. HERRICK, Independence, Iowa.—*Door-Latch.*—June 29, 1869.

Claim.—1. The slotted lever I, when so arranged as to tilt forward and catch the arm G of the latch F, in the manner and for the purpose described.

2. The arrangement of the latch F, provided with the arm G, lever I, bolt C, slotted plate *d*, and door-plate A, when all are combined in the manner and for the purpose set forth.

92,048.—MATHIAS J. HINDEN, Detroit, Mich.—*Breech-Loading Fire-Arm.*—June 29, 1869.

Claim.—The safety-guard I, provided with slide R, in connection with the cylinder D, and the needle-stock G, when arranged and operating for the purpose aforesaid.

92,049.—G. W. HINMAN, Paducah, Ky.—*Fire-Place Grate.*—June 29, 1869.

Claim.—1. A coal-grate, constructed in sections, as described, and having lugs *i*, notches *v*, and extended side bars, as shown, substantially as and for the purposes specified.

2. In combination with a coal-grate, constructed as described, the lugs *s* and hooks *u*, arranged in the chimney, substantially as and for the purposes set forth.

92,050.—RICHARD M. HOE and STEPHEN D. TUCKER, New York, N. Y.—*Printing-Press.*—June 29, 1869.

Claim.—1. The combination and arrangement, in a printing-machine, of two series of rollers, consisting of two printing-cylinders and one impression-cylinder, with two impression-cylinders and one printing-cylinder, with the requisite inking machinery, arranged and operating substantially as and for the purposes set forth and specified.

2. Arranging the endless blankets for the impression-cylinders, as shown, whereby the same are made to perform the twofold duty of blankets and sheet-conveyers, thus dispensing entirely with the use of tapes for conveying the sheets, substantially as described and specified.

3. The mechanism for sustaining the cylinder for changing the form or blanket, consisting of the rod *o* and bar *k*, substantially as described.

92,051.—WILLIAM H. HOWLAND, San Francisco, Cal.—*Steam-Engine Governor.*—June 29, 1869.

Claim.—1. In combination with the springs *a*, the weights F, when constructed and arranged substantially as herein set forth.

2. In combination with the springs and weights above claimed, the case A, provided with the sliding-collar E, containing the valve-stem H, substantially as described.

3. In combination with the collar E, the adjusting-nuts *i i*, cap I, and cup *m*, substantially as described.

92,052.—WILLIAM H. HOWLAND, San Francisco, Cal.—*Steam-Engine Valve.*—June 29, 1869.

Claim.—1. The valve-chambers C C′, having the passages G, H, and J, together with rotating valves *a*, with their arms *a′*, when constructed substantially as herein described.

2. The reversing mechanism, consisting of the movable shafts E, with the oblique slots *d*, and the pins *e*, substantially as herein described.

3. The construction and arrangement of the valves *a* and passages *c e*, substantially as described.

92,053.—THOMAS A. HUNTER and JOHN BLEWITT, New York, N. Y.—*Lamp-Bracket.*—June 29, 1869.

Claim.—1. The clips *f*, fitted to receive the lower part of the lamp reservoir, in combination with the rib or projection upon said reservoir, as and for the purposes set forth.

2. The bracket or socket *k*, formed with two holes at right angles to each other, for receiving the pivot *h*, and provided with the clamping-screw *l*, as and for the purposes set forth.

92,054.—JACOB JAMESON, Philadelphia, Pa.—*Flux for Manufacturing Steel.*—June 29, 1869.

Claim.—The herein-described composition, as a flux, for the manufacture of steel.

92,055.—BENJAMIN F. JOHNSON, Troy, N. Y.—*Cooking-Stove.*—June 29, 1869.

Claim.—1. The back of a cooking-stove, constructed with rests and recesses, as described and shown, for the purpose set forth.

2. The combination of a water-tank with such recessed back of said stove, in the manner and for the purpose above described.

3. The division of the upper part of the flue by means of the plate *e*, or its equivalent, in combination with damper *b*, for the purpose above described.

4. The division of the said flue by the plate *e*, in Fig. 6, in combination with the flue f^2 in the tank A, Fig. 2, for the purpose herein described.

5. The two parts of the back plate of the stove *d* and *e*, in combination with the flue-opening between them, for the purposes herein described.

6. Said several parts of the back plate of a cooking-stove, and the flue-opening between the same, in combination with the water-tank A, constructed and arranged in the manner and for the purposes herein described.

7. The plate e^1, to complete the stove, without the combination of the water-tank, substantially as described.

8. The damper *b*, in combination with the plates *d* and *e*, substantially as described.

92,056.—JOHN JORDAN, Red Wing, Minn.—*Corn-Sheller.*—June 29, 1869.

Claim.—A corn-sheller of concave form, as shown and described, and having teeth *a* and *c* attached thereto, constructed and arranged to operate substantially as specified.

92,057.—AGUR JUDSON and STEPHEN A. FARRINGTON, Newark, N. J.—*Hydraulic-Press.*—June 29, 1869.

Claim.—1. The self-acting levers, having the swell and hook, or their equivalents, thereon, the swell having a prominence exceeding that of the hook, when the lever is used in combination with a plate, D, substantially as shown and described.

2. A series of disconnected plates, combined with a series of self-acting hook-levers, constructed substantially as described.

92,058.—WILLIAM W. KINGSBURY, Kalamazoo, Mich.—*Harvester-Rake.*—June 29, 1869.

Claim.—1. The pivoted rake-head F′, provided with the screen J, as described, for the purpose set forth.

2. The rake-arm F, with rake-head F′, crank-arm H, carrier rod I, and disk C, when combined and arranged as and for the purpose described.

92,059.—JOSEPH KLINKHARDT, St. Louis, Mo.—*Brick-Machine.*—June 29, 1869.

Claim.—1. The mold D′, arranged with a movable bottom plate, G, supported on the standard H, and pressed up by the cam I, and its operating devices, substantially as set forth.

2. The bar M, and its forks *m′*, operated in combination with the plate G, substantially as set forth.

3. The plunger *q′*, and its operating devices, acting to tilt the brick on the plate G, substantially as set forth.

4. The plunger R, S S′, T T′, when constructed as described, in combination with the cross-head U, intervening elastic connection *u*, or its equivalent, and set-screws V, substantially as and for the purposes herein set forth.

92,060.—S. M. KNAPP and JOSEPH SWITTER, Massillon, Ohio.—*Shovel-Handle Tops.*—June 29, 1869.

Claim.—The improved shovel-handle top herein described, composed of the socket A, arms B E, B E, provided with lips D D, cross-bar C, with end notches *k k*, and retaining-screws F F, or their equivalents, the several parts being constructed, combined, and arranged substantially as and for the purpose herein specified.

92,061.—W. C. KNOX, Jacksonville, Ill.—*Grain-Separator and Scourer.*—June 29, 1869.

Claim.—1. A grain-scourer, constructed of perforated sheet-iron or other metal, in segments of a spiral or inclined-plane shape, and so formed that, by opening or closing the outer or inner edges, the grain may be directed at the wish of the operator, substantially as set forth.

2. The arrangement of the circular receptacle C, tube *a*, shank D, with its cap E, having a circular flange *b*, and washer *c*, all substantially as shown and described.

3. In combination with the perforated lining or jacket *f*, the segmental scourers *h h*, secured to arms *g g* on the vertical shaft F, all substantially as and for the purposes herein set forth.

4. The arrangement of the tube *k*, lever *l*, screw-rod *n*, ears *o o*, and nut *p*, for the purpose of graduating the distance between the cap E and tube *i*, substantially as shown and described.

5. The arrangement of the suction-chambers O P, spout J, fan K, partition *t*, and opening *s*, all substantially as shown and described.

92,062.—WENZEL KOTZUM, Aurora, Ind.—*Draw-Bar.*—June 29, 1869.

Claim.—The combination of the draw-bar B, having shoulders *e e*, the cross-bars C C, springs *a a*, and flat bolt *b*, all constructed and arranged substantially as and for the purposes herein set forth.

92,063.—THOMAS LANGSTON, Brooklyn, N. Y.—*Lantern.*—June 29, 1869.

Claim.—The arrangement of the base A, with a shoulder on its top, catch C, flange B, slide E, and loop D, all constructed to operate substantially as set forth.

92,064.—THOMAS LANGSTON, Brooklyn, N. Y.—*Lantern.*—June 29, 1869.

Claim.—In combination with the base A, rim B, and catch C, the hinge D, and lug E, when all are arranged and combined to form a fastening for lanterns, substantially in the manner and for the purpose described.

92,065.—REUBEN LIGHTHALL, Brooklyn, N. Y.—*Compound to be Used in the Cure of Rheumatism.*—June 29, 1869.

Claim.—The appliances for the cure of rheumatism, and other diseases of similar nature, by the materials set forth.

92,066.—LANDY TUNSTALL LINDSEY, Jackson, Tenn.—*Electro-Magnetic Motor.*—June 29, 1869.

Claim.—1. The arrangement of the levers L L′, suspended over or between the magnets M M′ M″ M‴, and striking alternately upon the adjusting-screws *i i′ i″ i‴*, of the posts P P′ P″ P‴, substantially as hereinbefore described, and for the purpose of obtaining an unintermitting, reciprocating, automatic motion, as set forth.

2. The mechanical combination and arrangement of magnets M M′, lever L, stand S, posts P P′, constituting set No. 1; and of magnets M″ M‴, lever L′, stand S′, posts P‴ P‴, constituting set No. 2, the two sets taken together forming the instrument, the levers of each set actuated and controlled automatically by electro-magnetism, substantially in the manner set forth.

3. Extending the wires 3, magnet M and 5, magnet M′, of set No. 1, to and connecting them with posts P‴ P″, respectively, of set No. 2; uniting the wires 4, magnet M and 6, magnet M′, of set No. 1, and extending them by a connecting-wire leading from their junction to and connecting with stand S′ of set No. 2; extending the wires 7, magnet M″ and 9, magnet M‴ of set No. 2, to and connecting them with posts P P′, respectively, of set No. 1; uniting the wires 8, magnet M″ and 10, magnet M‴, of set No. 2, and extending them by a connecting-wire leading from their junction to and connecting with stand S of set No. 1, attaching or inserting the batteries, as hereinbefore described and set forth.

4. The employment of either of the sets as a governor, to regulate and control the rapidity of motion of the other set, substantially as set forth.

92,067.—ZEPHANIAH LOCKWOOD, Saratoga Springs, N. Y.—*Water-Elevator.*—June 29, 1869.

Claim.—1. The lazy-tongs, or compound lever for elevating water, when the links and the lever are made in the shape shown, and pivoted in such a manner that the chain shall gather faster from the bottom than from the top.

2. In combination with the above, the spring C, when arranged to operate as shown and described.

92,068.—DANIEL MACPHERSON, Edinburgh, North Britain.—*Sewing-Machine.*—June 29, 1869.

Claim.—1. The conical shuttle, having a lip, F, re-

cess D, and central pin E, for supporting a detachable spool, all constructed as described.

2. The combination, with the conical shuttle, of the hinged plates *q q'*, with their curved V-shaped edges adapted to the recess, *h*, of the shuttle, as and for the purpose specified.

3. The combination, with the conical shuttle, constructed as described, of the spring R and set-screw S, when the spring is arranged and bears upon the shuttle, so as to first detain and then release the loose loop of thread, as set forth.

92,069.—WILLIAM MAGUIRE, Baltimore, Md., assignor to himself and FRANCIS B. LONEY, same place.—*Railroad Platform-Scale.*—June 29, 1869.

Claim.—1. Constructing the frame of railway and similar scales in two parts, the lower part being supported by the weighing devices or mechanism, and the upper part supporting the platform or track, and so arranged as to rest on independent supports while the load is being run on or off, and so connected to the lower part, that the weight can be transferred from the independent supports to the lower part of the frame, and thereby to the weighing-mechanism, substantially as described.

2. The frames A and B, united by the bars F and plates I, arranged to operate as described, for the purpose set forth.

3. The combination of the rock-shaft O, bars G and F, and plates or bars I, when arranged to operate in connection with the frames A and B, substantially set forth.

92,070.—JOHN MALLIN, Chicago, Ill.—*Flour-Bolt Feeder.*—June 29, 1869.

Claim.—The agitator I, ribbed or cleated roller D, as arranged to operate, conjointly, in combination with the adjustable supplementary side G, and case, consisting of sections A B, all constructed and arranged to operate in the manner substantially as described and for the purpose set forth.

92,071.—M. R. MARCELL, Dansville, N. Y., assignor to himself and HIRAM CULVER, same place. —*Harrow.*—June 29, 1869.

Claim.—The combination, with the jointed harrow C^1 C^2, elevating-levers E E^1 E^2, and wheel-frame B, of the double set of draught-chains D D', radiating from the pole B', whereby one chain, D, holds the harrow in place, as it straightens back, and the other, D', balances it when elevated, as herein set forth.

92,072.—ISAAC W. MARTIN, Goodville, Pa.—*Thrashing-Machine.*—June 29, 1869.

Claim.—The arrangement of the contiguous perforated sliding-slats D, when connected with a hinged piece, F, or its equivalent, and to which the toothed rod G is also hinged, by a pivot or otherwise, both jointly moving in grooved or other guides, E, affixed so as to be stationary, in combination with the crank C, to operate the combined toothed rod, sliding-hinge, and slat, substantially in the manner and for the purpose specified.

92,073.—FREDERICK W. MASE, Waukau, Wis. —*Cockle-Separating Machine.*—June 29, 1869.

Claim.—1. As new, a revolving cylinder, B, with the inner periphery provided with cavities 3, substantially as described, for the purpose set forth.

2. The cylinder B, provided with cavities 3, in combination with vibratory receiver C and hopper D, substantially as described, for the purposes set forth.

3. The cylinder B, when provided with collars 2 2, bearings *b' b'*, and gear-wheel *g*, as and for the purposes set forth.

4. The shaft M, provided with a driving pulley or crank at N, pinion *g'*, bevel gear-wheel *h*, bevel-pinion and shaft *i*, crank *k*, connection *l*, when used in combination with and for operating cylinder B, and receiver C, substantially as described, for the purposes set forth.

92,074.—ABEL MATSON, Blockville, N. Y.—*Bed-Bottom.*—June 29, 1869.

Claim.—1. Constructing the bottom of a bed in two portions, which can be used to elevate the head, or shift the body from one side to the other, substantially in the manner and for the purpose set forth.

2. The slotted lever L, and tilting-lever M, shaft G, head and side piece B and C, and wheels H and I, when all are combined to form a bed-bottom, substantially as set forth and described.

92,075.—JAMES S. MCCURDY, New York, N. Y., assignor to G. L. and J. B. KELTY & Co., same place.—*Bedstead and Sofa or Chair.*—June 29, 1869.

Claim.—1. The connections or links *g*, extending from the upper parts of the arms *c* to the legs *f*, above the pivots *i*, in combination with the back *d* and bottom *b*, so that said links *g* form guards, as set forth.

2. The top rail *k*, attached to the legs *f*, in combination with the back *d* and connecting-links *g*, substantially as set forth.

92,076.—JOHN MCDONALD, Portville, N. Y.—*Saw-Swage.*—June 29, 1869.

Claim.—The sliding punch C, whose bevel-face *h* is in contact with the gauge-face *a*, in combination with spring *d*, substantially as and for the purposes set forth.

92,077.—EDWARD N. MCKIMM and HOWARD W. BENDER, Benderville, Pa.—*Fertilizing Compound.*—June 29, 1869.

Claim.—The above fertilizing compound, composed of the ingredients mentioned above, in about the proportions named, substantially as and for the purposes set forth.

92,078.—HENRY METCALF, Washington, D. C. —*Speed-Indicator for Vessels.*—June 29, 1869.

Claim.—1. The combination and arrangement of the compensatory tube B, extending down through the vessel, and having its mouth flush with the bottom, with the force-pipe A, parallel with the tube B, and with its mouth at right angles with the axis of the vessel, substantially as set forth.

2. The combination and arrangement of the indicating-scale D E, with the tube B and pipe A, and connected by the flexible tubes C C, all substantially as specified.

92,079.—CHARLES F. W. MEYER, Oconomowoc, Wis.—*Skating-Shoe.*—June 29, 1869.

Claim.—A skate, or "skating-overshoe," A, constructed and arranged, as described, of a metallic runner, K, secured to a runner-plate or sole-piece, *b*, carrying a flexible upper or covering-piece, *c*, and a stiff heel-counter or band, *e*, fastened together and firmly united thereto, when said upper *c* and counter *e* are so formed and combined with the runner-plate *b* and with the spring-catch N as to readily receive, closely embrace, and securely hold the ordinary boot or shoe of a skater, all as herein set forth.

92,080.—EDWARD MIALL, Jr., London, England.—*Saw.*—June 29, 1869.

Claim.—A reciprocating saw, having portions of its cutting-edge occupying different planes, for the purpose set forth.

92,081.—JAMES H. MOFFETT, Reading, Mich.—*Carriage-Axle.*—June 29, 1869.

Claim.—The grooved nut C and flanch D, constructed and arranged to operate substantially as and for the purposes specified.

92,082.—CHARLES MOORE, New York, N. Y.—*Fluid-Meter.*—June 29, 1869.

Claim.—1. The combination of the following devices: first, the swinging-pistons *k l*, actuated by a portion of the fluid; second, the gate *b*, that is opened in proportion to the flow of water; third, the indicator that is connected to the gate, substantially as set forth, so that the movement of the gate causes the indicator to act in proportion to the flow of water, as specified.

2. The swinging-pistons *k l*, in the chambers *h i*, in combination with the rotary valve *p*, inlet and eduction ports 9, 10, 11, 12, and cranks 4, 5, and 8, arranged and acting in the manner and for the purposes set forth.

3. The lever-link *s*, between the crank *r* and clamp

that operates the wheel u' of the indicator, in combination with the arm d and fulcrum-pin u, operated by the movement of the gate b, as and for the purposes set forth.

4. The indicator, formed of the wheel u', pinion 20, rack v, and wheel w, in combination with the actuating-clamp 16 and levers moving the same, as set forth.

92,083.—Thomas Morrison, Cincinnati, Ohio.—*Weighing-Apparatus.*—June 29, 1869.

Claim.—The combination and arrangement of the detachable section F G g, and stop N n, with the elevated rail-track, as and for the purpose described.

92,084.—George W. Moyers, Gordonsville, Va.—*Corn-Planter.*—June 29, 1869.

Claim.—1. In combination with the box M and concavo-convex bottom s, the cylinder T, when the latter is provided with oblique pockets, and all arranged in the manner and for the purpose specified.

2. The arrangement of the pockets t t', so that they arrive at the edge of the feed-openings at different times, when employed in connection with the curved plate r, as and for the purposes specified.

92,085.—N. Q. Munger, Cæco, and G. B. Pomeroy, South Haven, Mich.—*Instrument for Relieving Choke and Bloat in Cattle.*—June 29, 1869.

Claim.—The piston D, in combination with an instrument for the relief of choke and bloat, it consisting of a tube, B, with flaring open end C, and perforated egg-shaped end A, constructed and operating as above described.

92,086.—William B. Myers, Frenchtown, N. J.—*Medical Compound.*—June 29, 1868.

Claim.—The medical compound above described, compounded of the materials, of the proportions and in the manner substantially as specified.

92,087.—James Newman, Portland, Mich.—*Turbine Water-Wheel.*—June 29, 1869.

Claim.—1. The bucket E, above described, in combination with the cylinderical hub F, and flange G, when constructed and operating as above set forth.

2. The band-gate O, standards P, arms Q, sleeve S, lifting-braces R, and lever U, when arranged and operating substantially as set forth, shown, and described.

92,088.—J. S. Park, Montondon, Pa.—*Hoisting-Machine.*—June 29, 1869.

Claim.—1. The spool B, provided with collars c and d, and wheel C, having ribs e e, all substantially as shown and described.

2. The combination of the lever G, arm f, brake h, and arm E, all substantially as and for the purposes set forth.

3. In combination with the spool B, and wheel C, with its ribs e e, the shaft a, wheel D, arm E, lever G, and brake h, all constructed and arranged to operate substantially as and for the purposes herein set forth.

92,089.—Orlando Patee, Ypsilanti, Mich.—*Machine for Upsetting Tires, Axle-Trees, &c.*—June 29, 1869.

Claim.—1. The combination of platforms E F with bar I, wedges m n, eccentric shaft G, lever L, and hooks h h, all constructed to operate substantially as and for the purpose set forth.

2. Connecting the wedge m to the platform F, by means of the slot o and the spur of the platform projecting into it, when the parts referred to are constructed and operated as and for the purpose set forth.

3. Operating simultaneously all the eccentrics D D^1 D^2 D^3 of an upsetting-machine, by means of the parts Q S R T, substantially as and for the purposes described.

4. The hooked link or bar O, when constructed to operate in connection with platform F, bar I, beam a', and cam i, substantially as and for the purposes described.

5. The combination of weighted treadle M, with weighted levers K K, chains k k, wedges m n, and weights W W′, substantially as and for the purposes set forth.

6. In combination with the parts M K K k k m n W W′, the bent levers N N, constructed to operate in connection with platform F, as described.

92,090.—James B. Peake and James A. Lusby, Washington, D. C.—*Coffee-Roaster.*—June 29, 1869; antedated June 19, 1869.

Claim.—1. A coffee-roaster, constructed with a flange, a, and a double-damper, C D, substantially as and for the purpose described.

2. The arrangement in a coffee-roaster, having a revolving cylinder, of three or more rows of wire, set parallel to its pheriphery, substantially as and for the purpose set forth.

3. The combination, with the revolving coffee-roasting cylinder, of an oil-cup, substantially as and for the purposes described.

4. In a coffee-roaster, the trying device, consisting of slotted tube J, rod K, and piston t, substantially as and for the purposes set forth.

92,091.—Elijah S. Pierce, Hartford, Conn., assignor to the National Screw Company, same place.—*Mechanism for Converting Motion.*—June 29, 1869.

Claim.—1. The armed wheel L, with the impinging faces of the arms l l^1 l^2 l^3 l^4, made as described, in combination with the drive-pin k, all constructed and operating as and for the purposes described.

2. The spring s, in combination with the armed wheel h, when arranged and operating in the manner described.

3. The combination of the armed wheel L, with the index-wheel C, by means of the pins m and n, and the spring s, the whole constructed and operating as and for the purposes described.

4. The combination of the shaft b, cam e, drive-wheel D, drive-pin k, sliding-pin d, short arm e, shaft g, pawl h, spring o, armed wheel L, spring s, pins m and n, index-wheel C, and shaft a, all constructed, arranged, and operating as and for the purposes described.

92,092.—Henry G. Porter, Grand Rapids, Mich.—*Elevator.*—June 29, 1869.

Claim.—1. The arrangement, in the carriage B, of the pulley a, bent lever b, slotted slide e, pins e'' e''', and arm d, with its prongs d', all substantially as and for the purposes herein set forth.

2. In combination with the above, the plate o, for the purpose of dumping or tripping the hay-fork, substantially as herein set forth.

3. The "stop arrangement," consisting of the bars i i, roller r, pointed arm s, and roller t, all constructed and operating substantially as and for the purposes herein set forth.

92,093.—Benjamin F. Power, Morgan County, Ohio.—*Carriage-Spring.*—June 29, 1869.

Claim.—1. The spring A, in combination with flexible bars B B and leaves b b, substantially as and for the purpose described.

2. The single flexible bars B B, in combination with the leaves b b, substantially as and for the purpose set forth.

3. The leaves b b, constructed substantially as and for the purpose set forth.

92,094.—R. B. Prindle, Norwich, N. Y.—*Curtain-Fixture.*—June 29, 1869.

Claim.—1. The within-described curtain-fixture, consisting of the spool C, ratchet-wheel D, or its equivalent, pivot E, bracket F, provided with the curved slot f, and detent x', and the lever G, provided with the slot g, all constructed and arranged substantially as and for the purpose herein shown and described.

2. The bracket F, provided with the curved slot f, in combination with the lever G, containing the vertical slot g, and pivoted above said slot, substantially as herein shown and specified.

92,095.—François Raymond, Woodhaven, N Y.—*Enameled Bell.*—June 29, 1869.

Claim.—A gong or bell, constructed of sheet iron, stamped or wrought into the required form, and

enameled with porcelain or vitreous enamel, substantially as herein described.

92,096.—JOHN C. RHODES, Chicago. Ill.—*Device to Operate the Tilting-Floors of Malt-Kilns.*—June 29, 1869.

Claim.—The device, consisting of the endless chain O, catch or catches K, and guide M, all arranged and operating substantially as herein set forth and specified.

92,097.—J. W. RICE, Springfield, Mass.—*Railway-Car Brake.*—June 29, 1869.

Claim.—1. The combination of the drum a^5 and cap a^6, ratchet a^8, and sleeve n^3, shaft a^2, with its pawl o^7, the shaft n^1, pawls L and L′, and levers b^2 b^3, as a means of applying and releasing the brakes of a railway-car automatically, all constructed and operating substantially as herein described.

2. The swinging-block *e*, when used in connection with the winding-shaft a^1, having a socket in its lower end, and the spindle *n*, as a means of changing the vertical position of said shaft a^1, with its pinion a^6, substantially as described.

3. In a self-acting car-brake, the levers b^2 b^3 pivoted at o^1, in combination with the pawls L and L′, all constructed and operating substantially as described.

4. The cords b^4 and b^5, passing down between two pulleys, and through a loop or ring in the rods *b* and b^1, as a means of applying and releasing the brakes of a train or series of railway-cars simultaneously, substantially as described.

5. The combination of the chains *f*, c^4, and f^3, with the equalizing-lever O, whereby the hand-brake staff c^2 and self-acting brake-drum may be used in applying the brakes of a car, either separately or together, substantially as described.

6. The combination of the chains f^6, f^5, and f^3, with the equalizing-levers h^5 and O, as a means of applying the brakes of two or more cars at the same time, by the operation of one hand-brake staff, *r*, substantially as herein described.

7. A brake-lever, O, having a series of holes near each end, for the purpose of changing the leverage-power of the brake when desirable, constructed substantially as herein described.

92,098.—EDWIN T. RICE, New York, N. Y.—*Process of Treating Vegetable Fibers.*—June 29, 1869.

Claim.—The method herein specified of treating flax, hemp, and similar vegetable fibers, by an acid solution, at a temperature of more than 100° Fahrenheit, and less than the boiling-point, for the purposes and as set forth.

92,099.—WILLIAM B. RICE, Oakland, Oreg.—*Gang-Plow.*—June 29, 1869.

Claim.—The temper-holes A, in combination with the uprights B, hinges C, plates D, slot E, plate F, uprights for rollers G, screw H, lever *b*, leverage *c*, hinges *d d*, chain *e*, wheel *f*, all substantially as set forth and described.

92,100.—WILLIAM RICHARD, Clyde, Ohio.—*Pruning-Knife.*—June 29, 1869.

Claim.—The link D, formed at its upper end with a knife or hook, *d*, in combination with the shank A, and arranged to operate as and for the purpose set forth.

92,101.—T. M. RICHARDSON, Stockton, Me.—*Tobacco-Cutter.*—June 29, 1869.

Claim.—A tobacco-cutting apparatus, having cylinder A, cutters *c*, and boxes B and D, constructed, combined, and arranged substantially as specified.

92,102.—CHARLES H. ROBINSON, Greenwich, N. Y.—*Combined Drawer-Pull and Label.*—June 29, 1869.

Claim.—1. The slotted plate C, when used as a protection for the label, substantially as set forth and described.

2. The plates A and C, and label B, when combined so as to form a combined drawer-pull and label, substantially as specified.

92,103.—JAMES M. ROSS, Linden Hall, Pa.—*Corn-Sheller.*—June 29, 1869.

Claim.—A corn-sheller, having cylinder D, knives *d*, fan A, shaft H, and conduit K, constructed and arranged to operate substantially as specified.

92,104.—ELIPHALET S. SCRIPTURE, Brooklyn, N. Y., and JOHN H. DARRAGH, Aurora, Ill.—*Railway-Car Brake.*—June 29, 1869.

Claim.—The within-described brake, consisting of the beams B B, levers C C, and rod D, when so constructed and arranged as that the friction-surfaces of or upon said beams shall press directly against the inner faces of the truck-wheels, substantially as shown, and for the purpose set forth.

92,105.—CHARLES A. SEELY, New York, N. Y.—*Manufacture of Vapor-Gas.*—June 29, 1869; antedated April 10, 1869.

Claim.—1. The mixing of air with my vapor-gas, in the manner and for the purposes described.

2. The automatic adjustment or regulation of the flow of vapor-gas and air, and mixtures of them, in the manner and for the purposes described.

3. The combination of the mixing devices with the generator of the vapor-gas, in the manner described.

4. The combination of the regulating-devices with the generator and the mixing-apparatus, as described.

5. The combination of the regulating-devices with the generator, when the mixer is not employed.

92,106.—D. S. SHANABROOK, Greencastle, Pa.—*Hand-Carriage.*—June 29, 1869.

Claim.—1. The gear-wheels *a* *b′* *c*, H H^1 H^2, arranged to operate in connection with pinions a' a' n^1 n^1, substantially in the manner and for the purpose described.

2. The slide upon which the wheels n^1 n^1 work, in combination with the couplers or projections a' n^1, and lever *n*, arranged to operate as and for the purpose specified.

3. The combination and arrangement of the gear-wheels and pinions with levers *d* and *n*, slide n^4, couplers n^1, a', and lever p', all operating substantially in the manner and for the purpose set forth.

4. The combination of foot-levers *h* h^2, with rods h^1 h^1, pawls f' f', and ratchet-wheels i' *g*, all arranged to operate as and for the purpose specified.

5. The wheel *o*, provided with pawl o^2 and spring o^1, arranged to operate in connection with wheel B, when furnished with ratchet-wheels, substantially as described.

92,107.—JOHN SHAPLEY and A. D. HUTCHINSON, Rosefield, Ill.—*Medicine or Cordial.*—June 29, 1869.

Claim.—The alterative and invigorating cordial, prepared and compounded and to be used substantially as described.

92,108.—FREDERICK SHICKLE, St. Louis, Mo.—*Core-Bar for Molds Used in Casting Metal.*—June 29, 1869.

Claim.—1. A core-barrel, expanded at a single line, by wedge or other devices, against its own elasticity, and arranged to collapse with the aid of its elasticity, and with or without contracting devices, substantially as set forth.

2. The intermediate supports G and levers H, when combined with the levers E and B′, to support the axle F, substantially as set forth.

92,109.—HENRY SHIREY and JESSE M. FURMAN, Fond du Lac, Wis.—*Stove-Pipe Shelf and Sad-Iron Holder.*—June 29, 1869.

Claim.—The combination of the clamp B, provided with lugs D and set-screw C, and made in two sections, hinged together with the shelf A, provided with projections E, legs *d*, and handles F, when constructed and operating as and for the purpose above described.

92,110.—EDWARD G. SHORTT, Carthage, N. Y.—*Apparatus for Measuring Fluids.*—June 29, 1869.

Claim.—The combination of the hollow plug *m* with the hook and coupling *n*, attached to the trunnion-arms *c*, for supporting the measuring-vessel,

and the flexible tube *f*, for connecting it with the barrel, all substantially as herein set forth.

92,111.—W. EDGAR SIMONDS, Hartford, Conn.—*Telegraph-Insulator.*—June 29, 1869.

Claim.—1. As a new article of manufacture, a telegraph-wire insulator, having an insulating substance, *s*, interposed, in the manner described, between the insulator proper, *a*, and the cup *d*, the whole being arranged and constructed as described, for the purpose described.

2. The combination, herein described, of the insulator proper, *a*, constructed as described, the insulating substance *s*, and the cup *d*, the whole constructed, arranged, and operating as described, for the purpose described.

92,112.—NICHOLAS H. SIRRELLE, Baltimore, Md., assignor to MARTIN BURNELL and WILLIAM TASSIL TASSIL.—*Bottle-Washing Machine.*—June 29, 1869.

Claim.—1. The combination of the hollow mandrel C, stationary pipe L, nozzle N, and brush *o*, arranged and operating as set forth.

2. The arrangement of the thimble-valve *p* and spiral spring *t*, substantially as and for the purpose described.

3. The apparatus as a whole, constructed and arranged as described.

92,113.—A. J. SMITH, Decorah, Iowa.—*Fruit-Drier.*—June 29, 1869.

Claim.—The arrangement of the wooden frame A, with screens on top, bottom, and sides, screen-doors, B B, ledges A A, and screen-trays D D, forming a fruit-drier, as specified.

92,114.—CHARLES D. F. SMITH, Geneva, Ill.—*Stove-Pipe Drum.*—June 29, 1869.

Claim.—Constructing the inclined plane, forming the spiral flue, around a central air-drum or cylinder, wholly or in part in sections, susceptible of being adjusted to form a continuous circuitous spiral flue, or to open vertically and permit a direct vertical draught, substantially as and for the purposes set forth and described.

92,115.—C. J. SMITH, Norfolk, Va.—*Safety-Stove for Railroad-Cars.*—June 29, 1869.

Claim.—1. The chamber A, fire-pot B, each cone-shaped in form, and united by flanges *b c*, and cap-plate A^2, ash-chamber A^1, false-bottom G, openings *a a'*, and wire-guard F, when the same are so combined and arranged as to form a safety-stove, substantially as described.

2. Securing the door by casing, bolt, and weighted handle, when the same is so arranged as to operate substantially as described, as and for the purpose specified.

92,116.—DITON SNEDEKER, Lockport, N. Y.—*Combined Cleat and Capstan.*—June 29, 1869.

Claim.—1. Arranging the windlass-mechanism within the frame A, the top plate of which projects beyond the ends, so that the frame, as a whole, has the form and performs the functions of a cleat, as herein shown and described.

2. The construction and arrangement, with a boat-cleat, of the ring-bearing *d*, recess or hole *m*, the shaft C, and windlass B, for rendering the latter readily removable, as and for the purpose set forth.

92,117.—LARS ALBERT LEONARD SÖDERSTROM, Paris, France.—*Hot-Air Engine.*—June 29, 1869.

Claim.—1. The arrangement of devices for distributing the air throughout the apparatus, and for heating the same, consisting of main pistons Z, piston-valves X Y, valves *q r*, and annular chambers *x* x^2, substantially as described.

2. The arrangement of the furnace, with its peculiar closing-piece *g*, its vaulted roof *w*, and ascending platform *c*, substantially as set forth.

3. The arrangement of the valve *q*, for regulating the pressure, and of the double conduit *x u*, for the passage of the compressed air, substantially as set forth.

4. The escapement air-pipe B, arranged in a spiral around the furnace, in combination with chimney *e*, provided with the junction-piece, constructed and operating substantially as described.

5. The combination and arrangement of the various devices constituting the apparatus, substantially as hereinbefore fully set forth and illustrated in the accompanying drawings.

92,118.—FRANK F. SOMMER, Detroit, Mich.—*Fence.*—June 29, 1869.

Claim.—1. The construction of a fence, composed of pickets C and D, their lower ends being secured to the rail B, the upper ends of the pickets C secured to the rail A by the plates G, as described, and the upper ends of the pickets D secured to the pickets C by the plates F, thereby avoiding the employment of an intermediate longitudinal rail.

2. The foundation-post H, provided with serrations *f* and slot *g*, the clamp-plate I, provided with serrations *h*, and secured to the post by the bolt *i*, the whole attached to and forming an adjustable support for the lower rail of the fence

3. The brace J, provided with serrated head *o*, engaging with the serrations *l* in the projection *k* of the clamp plate K, and secured thereto by the bolt *n* passing through the slot *m* in said projection, said clamp-plate being secured to the upper rail of the fence by the bolt *j*, the whole forming an adjustable brace for securing the upper part of the fence in its proper position.

4. The pedestal M, provided with groove *q* and projections *p*, the clamp N and its recess *r*, and the bolt *s*, in connection with a similar groove and projections in the bottom of the sectional post L, for securing said post to its foundation.

5. In sectional posts, securing the cap to the same, by means of a bolt, *t*, provided with an elongated nut, S, entering the post through a transverse slot, T, and engaging with the longitudinal ribs *u*, substantially as described.

92,119.—R. H. SPRINGSTEED, Vandalia, Mich.—*Stove-Pipe Shelf.*—June 29, 1869.

Claim.—The combination of the corrugated stove-pipe collar, the toothed bars B, and the sharpened edges *c c*, with the slotted ears *b b*, and curved braces *c c*, in connection with the sectional shelf A A, as and for the purpose before mentioned.

92,120.—GEORGE STAMM, Pittsburgh, Pa.—*Oxygenating-Furnace.*—June 29, 1869.

Claim.—1. An oxygenating-furnace, constructed substantially as above described—that is to say, having the two chambers *a a* arranged on each side of the fire, the chambers *b d* back of it, the chamber *c* front of it, and the hollow grate-bars *e e* beneath it, and communicating with and connecting the parts *c d*, substantially as and for the purposes set forth.

2. In combination with the parts *a b c d e*, all constructed and arranged as described, the jacket *b'*, water-space *r*, and pipes *i o*, arranged and operating as and for the purposes set forth.

3. The arrangement of the inclined tray *h*, waste-pipe *p*, and jet *k*, in connection with the chambers *a a*, as and for the purposes specified.

4. The described construction of the parts *a a*, a^3 a^3, *b b'*, when said parts are shaped and connected together as shown and specified, and for the purposes set forth.

92,121.—S. T. F. STERICK, Washington, D. C.—*Hub for Carriage-Wheels.*—June 29, 1869.

Claim.—1. A hub for wagons and other vehicles, combining in its construction a pipe or socket, A, for the axle of the carriage to pass through, having upon it a fixed disk or flange, B, a loose sliding-disk, B', provided with inwardly projecting flanges and a tightening nut or nuts, C D, all constructed and arranged as and for the purpose set forth.

2. The projecting rim upon the disks B B', such rims projecting beyond the sockets for the spokes, substantially as and for the purpose set forth.

92,122.—JOSHUA C. STODDARD, Worcester, Mass.—*Hay-Spreader.*—June 29, 1869.

Claim.—1. The combination, with a hay-spreader, of a rake, rotating on an axis transverse to the main axle, the combination being and operating substantially as set forth.

2. The combination, substantially as set forth, in a hay-spreader, of a shaft rotating transversely to the main axle, with teeth radially adjustable relatively to their axis of rotation.

3. The combination, in a hay-spreader, of independently adjustable radial rake-teeth, with independent parallel shafts transverse to the main axle, the combination being and operating substantially as set forth.

4. The combination, substantially as set forth, in a hay-spreader, of a draught-frame, vibrating on the main axle, and a gearing-frame, vibrating on the same axle, and adjustable relatively to the draught-frame, with rakes rotating on shafts transverse to the main axle.

5. The combination, substantially as set forth, in a hay-spreader, of two wheels mounted on crank-axles, and a draught-frame connecting said axles below the axis of the wheels, with an adjustable gear-frame, pivoted in the line of the axles of the wheels above the draught-frame.

6. The combination, substantially as set forth, in a hay-spreader, of rakes rotating transversely to the main axle, in rear thereof, with a countershaft in front of said axle.

92,123.—J. SUMMERS, Winchester, Va.—*Safety-Pocket for Attachment to Suspenders.*—June 29, 1869.

Claim.—As a new article of manufacture, the safety suspender-pocket herein described, consisting essentially of the part A, having the front flap *b*, adapted to button to the back part by means of the button *c*, the button *c* adapted to button the flap, and also to connect the pocket to the lower end of the suspender, the straps D D fixed to the lower corners of the pocket, and adapted to be attached to the pantaloons, and the interlaced chains *e e*, covering and protecting the pocket, said parts being constructed and arranged as and for the purpose herein set forth.

92,124.—JOHN P. SUMMERS, Tiffin, Ohio.—*Sawing-Machine.*—June 29, 1869.

Claim.—The arrangement, upon the frame A, of the shaft M, spring-bearing N, pinions O P, wheels K L, jointed pitman D, guides E E, bar H, slide I, and lever G, all constructed and operating substantially as and for the purposes set forth.

92,125.—GREGOR TRINKS, New York, N. Y.—*Folding Chair.*—June 29, 1869.

Claim.—The leg *k*, hinged to leg *e*, with the sleeve *e*, on their axial rod *a*, and extended into the tongued segment *l m*, in combination with the grooved arm-rest *o n*, the hinged seat *g*, and pins *i*, substantially as and for the purpose described.

92,126.—JAMES TURNBULL, Edinburgh, Scotland.—*Railway-Car Coupling.*—June 29, 1869.

Claim.—1. The weighted levers, with their recesses and hooks, in combination with the draw-bars, having elongated inclined slots for the reception of the fulcrum-pins of the said levers, all substantially as and for the purpose described.

2. The combination of the above, the shaft *g*, its arms *f* and *h*, and the pin *i*, or its equivalent, for the purpose set forth.

92,127.—R. VORIS, Oneida, Ill., assignor to THE WESTERN NECK-YOKE COMPANY.—*Neck-Yoke.*—June 29, 1869.

Claim.—In neck-yokes, having leather holdbacks, the clasp C C, made either in one or two pieces, and secured to the yoke substantially in the manner and for the purposes herein set forth.

92,128.—JOHN F. WALLACE, Birmingham, Pa.—*Steam-Engine Slide-Balance Valve.*—June 29, 1869.

Claim.—1. The construction in detail of the slide-valve balancing-plunger, with the interposed loose rollers, all arranged substantially as described.

2. The construction and arrangement of the cover *g'*, as shown in Fig. 2, with an elastic packing, balanced plunger, slide-valve, and loose rollers, substantially as set forth.

92,129.—WILLIAM G. WARD, New York, N. Y.—*Breech-Loader.*—June 29, 1869.

Claim.—1. Constructing the arm A, which is operated by the trigger B and spring C, of one piece, separate from the trigger, substantially as shown and described.

2. The divided spring C, in combination with the arm A and trigger B, when arranged and operating substantially as shown and described, for the purpose specified.

3. Holding the arm A and the carrier D down by means of the trip E, or its equivalent device, until after the discharged cartridge-shell shall have been ejected by the backward movement of the breech-pin F, and the releasing said parts by the prolongation of the same movement in time for the new cartridge to be presented ready for insertion by the forward movement of the breech-pin, substantially as shown and described.

4. Preventing the remaining cartridge in the feed-tube G from interfering with the free movement of the carrier D, after the release of the first cartridge, by means of the magazine-stop H, when it is operated by the arm A or carrier D, substantially as shown and described.

5. Restricting the movement of the arm A and carrier D, by means of the movable stop J, or its equivalent, substantially as shown and described.

92,130.—ALMON F. WARREN, Brooklyn, N. Y.—*Door-Bolt.*—June 29, 1869.

Claim.—The elastic sleeve C, in combination with the bolt and the tubular socket B, substantially as and for the purposes herein set forth.

92,131.—GARDNER WATERS, Cincinnati, Ohio.—*Lubricator.*—June 29, 1869.

Claim.—An automatic lubricator, in which the bulb and the tube for holding the feed-stem are united, by means of a guard of fusible or soft metal or alloy, cast around the neck of the bulb, provided, upon its exterior, with corrugations or equivalent means, forming a holding surface for the metal, or both around and within the bulb, substantially as and for the purposes set forth.

92,132.—FREDERICK WESTPHAL, Jersey City, N. J., assignor to himself, JOHN V. R. SPENCER, and ALEXANDER BEAKES, same place.—*Velocipede.*—June 29, 1869.

Claim.—The steering-yoke G, constructed to allow of the rotation of the operating cranks within and beneath it, and forming bearings *d d*, to the axle E, outside of said cranks, in combination with the vertical steering-spindle H, having a bearing in the pole C, and upper bearing *f*, connected with the pole by braces *g g*, essentially as shown and described.

92,133.—CHARLES A. WIEDEMANN, New York, N. Y.—*Folding-Chair.*—June 29, 1869.

Claim.—1. The seat A, hinged to the legs C C, so as to be capable of either a folding or extending motion, and provided with hooks or notches *a a*, in combination with the leg and back pieces B B, and studs *a' a'*, substantially as herein shown and described.

2. The combination, with the seat A and hinged piece *b'*, of the combined back and bottom *b b'*, the hook *j*, and recess *j'*, substantially as and for the purpose herein set forth.

92,134.—MOSES G. WILDER, West Meriden, Conn., assignor to NATHAN F. GRISWOLD and GEORGE F. SEARLES, same place.—*Machine for Bending Tubes.*—June 29, 1869.

Claim.—1. The combination of the two grooved dies, constructed to roll upon the tube, and the bridle for holding the tube to one of the dies, substantially as before set forth.

2. The combination of the said grooved dies and bridle with cog-wheels, by which one die is caused to roll upon the other, substantially as before set forth.

3. The combination of the said grooved dies, bridle, and cog-wheels, with shafts, substantially as before set forth.

4. The combination of said grooved dies and bridle with a lever, by which the dies are pressed together, substantially as before set forth.

5. The combination of the said grooved dies and

bridle with a lever, by which the dies can be caused to exert a rolling action upon the tube, substantially as before set forth.

6. The combination of the said grooved dies and bridle with two levers, one for pressing the dies together, and the other for causing them to exert a rolling action, substantially as before set forth.

92,135.—NATHANIEL WILSON, St. Louis, Mich.—*Sulky-Cultivator.*—June 29, 1869.

Claim.—1. The bars B, secured to the frame A, as described, and operated by the treadles J, ropes or chains *m*, and pulley *n'*, substantially as set forth.

2. The rock-shaft G, arms *h*, ropes or chains *i*, pulleys K, lever H, and quadrant I, in combination with the longitudinal bars *a* and B, provided with standards C, and cultivator-teeth *g*, operating as and for the purposes described.

3. The arrangement of the parts A, B, C, D, E, F, G, H, I, J, K, L, *a*, *b*, *c*, *d*, *e*, *f*, *g*, *h*, *i*, *k*, *m*, *n*, and *o*, or their equivalents, when combined and operating substantially as and for the purposes herein set forth.

92,136.—DAVID WILLIAMSON, New York, N. Y.—*Manufacture of Metallic Cartridge-Case.*—June 29, 1869.

Claim.—A sheet metal cartridge-case, formed with a teat, the metal of which is soft, and with cylinderical sides, the metal of which is hardened by the action of the dies, as and for the purposes set forth.

92,137.—RANSOM F. RANKIN, Columbus, Ohio.—*Advertising-Device.*—June 29, 1869.

Claim.—The strip A, roller B, frame C, wheels D and E, and spring G, in combination; but this I claim only when said parts are arranged within a tubular slotted case, I, and used as a device for advertising, substantially as set forth.

92,138.—JOHN Q. ADAMS, North Brookfield, Mass.—*Sewing-Machine.*—July 6, 1869.

Claim.—1. The combination, with the projections E F on the needle-carrier, of the cam C, composed of parts of an eccentric circle *c c' c'' c'''*, and concentric circles *a a' b b'*, when constructed and operating substantially as set forth and described.

2. The combination of the cam N, arms *m n*, thread-carrier P, stem M, and the slide A, or its equivalent, when constructed and operating in the manner and for the purposes set forth.

92,139.—WILLIAM ADDLETON, Mottville, N. Y.—*Harrow and Marker Combined.*—July 6, 1869.

Claim.—1. A flexible harrow-body, composed of chain or link *b c c'*, with teeth attached, substantially as and for the purpose herein described.

2. The removable stretcher-bars B B, made elastic or flexible, when constructed, arranged, and applied substantially as and for the purpose set forth.

3. The bar C C, with markers D, when adapted to be detached, in combination with a harrow-frame composed of chain-links, substantially as herein described.

92,140.—FRANCIS M. ALLERTON, Alliance, Ohio.—*Horse-Rake.*—July 6, 1869.

Claim.—1. In combination with the rake-head, the arms *c*, with their stops *e'*, and the shaft *i*, with its arms *h*, the whole operating as and for the purpose described.

2. In combination with the rake-head, the bars *b*, shaft *i*, lever *k*, hinged bars *c*, and arms *e*, the whole operating substantially as described.

92,141.—WILLIAM A. AMBURG, Chicago, Ill.—*Paper-Clip.*—July 6, 1869.

Claim.—A paper holder, file, and binder, when constructed and operating substantially as described, and in a convenient form for indexing and binding, substantially as set forth.

92,142.—JOHN ANDERSON, Brooklyn, N. Y.—*Shield for Protecting Horses from Sunstroke.*—July 6, 1869.

Claim.—As a new article of manufacture, the shield or horse-bonnet C, provided with apertures E, as shown and described, and for the purpose set forth.

92,143.—WILLIAM J. ARRINGTON, Jefferson County, Ga.—*Plow.*—July 6, 1869.

Claim.—1. The flange A of the landside; substantially as shown and herein specified.

2. The combination of flange A, standard S, and brace C, (with its attachment to handles,) the whole constructed substantially as and for the purposes hereinbefore described.

92,144.—WILLIAM J. ARRINGTON, Jefferson County, Ga.—*Cotton-Seed Planter and Drill.*—July 6, 1869.

Claim.—1. The adjustable portals *g*, and doors *a*, in a revolving cotton-seed drill or seed-planter, substantially as herein shown and described.

2. The triangular buttons C, constructed in the manner and for the purpose above set forth.

3. The drums D D, with the separating-wheel B, made and applied substantially as herein shown and specified.

92,145.—SILAS M. BARRETT, Cincinnati, Ohio.—*Method of Bending Chair-Rims, &c.*—July 6, 1869.

Claim.—As a new article of manufacture, chair backs or rims, constructed as described.

92,146.—DANA BICKFORD, Boston, Mass.—*Knitting-Machine.*—July 6, 1869.

Claim.—1. The combination, with a revolving cam, grooved substantially as described, of a thread-carrier, so held by friction on the cam-plate or ring as to be carried by it, and yet permit the latter to continue its motions after the carrier is at rest, substantially as set forth.

2. In combination with above last-named devices, adjustable pins and a series of holes in the frame of the machine, substantially as and for the purpose set forth.

3. Stops, or their equivalents, and projections on the cylinder, for determining the extent of traverse in either direction of the cam-cylinder of a rotary knitting-machine.

4. A needle ring or plate, the tops of whose walls or ridges, between the needle-grooves, are rounded off, substantially as and for the purposes set forth.

5. The continuously grooved cylinder, having spacious rebates P, two similar needle-elevating cams, and two automatic spring-switches, substantially as and for the purpose set forth.

92,147.—EDWARD BIERSTADT, Jersey City, N. J., assignor to himself and JAMES M. TOWER, same place.—*Hand Dating-Stamps.*—July 6, 1869.

Claim.—1. The employment, in hand-stamps, of parallel frames arranged side by side on a plane, to receive the type, when made adjustable, so that any word or number may be brought into position for printing or retired therefrom, at will, substantially as herein set forth.

2. In combination with said adjustable type-frames, the cam or wedge D, and dog-lever C and wedge D, or their equivalent, arranged and operating substantially as and for the purposes described.

3. The arrangement of the type, forming the words or numbers which compose the inscription of the stamp, in sliding-cases, which are moved in or out of range of the ribbon, by means of the extension *h h*, and the rack or pinion, or other suitable means, substantially as set forth.

4. In combination with the sliding type cases or forms the indicating-device, consisting of the extensions *h h*, having characters marked thereon, which correspond with those of the type, which are concealed by the ribbon, and the register *l*, for gauging the position of the type, substantially as herein set forth.

92,148.—JOSEPH BIRKETT, Tazewell County, Ill.—*Axle-Gauge.*—July 6, 1869.

Claim.—An instrument for finding the proper angles for setting thimble-skeins, iron or wooden axles, and consisting of three movable gauges, A B C, with scales or inches marked thereon, adjusted one upon the other by means of slots and thumb-

screws, or their equivalents, as and for the purposes described.

92,149.—A. F. Bishop and John H. Aiken, Norwalk, Conn., and John M. Pendleton and A. W. Gates, New York, N. Y.—*Card-Clothing.*—July 6, 1869.

Claim.—1. The compound vulcanized fabric, having the central cloth, the enveloping softer fiber, the gum vulcanized in place among the fibers, and the covering fabric or fabrics, combined and arranged as specified, and so as to possess the qualities substantially as herein set forth.

2. The above-defined backing-material, in combination with the card-teeth, as specified.

92,150.—Etienne Boileau and Charles Mesnier, St. Louis, Mo.—*Hinge.*—July 6, 1869.

Claim.—The combination of the notches C C′ with the cams D D′, Fig. 3, so arranged that by reversing the upper part, B, the hinge may be used either right or left, and the shutter fastened both open and closed, all as shown and described.

92,151.—Asa T. Brooks, New Britain, Conn., assignor to Russell & Erwin Manufacturing Company, same place.—*Knob-Latch.*—July 6, 1869.

Claim.—1. The combination with the latch-bolt A, of the latch-plate B *b*, and the locking-plate E, constructed, arranged, and operating substantially as described, and for the purposes set forth.

2. The combination, with the main-latch or latch-bolt A, of the locking-plate E, with its noteh *r*, arranged and operating substantially as and for the purposes set forth.

3. The combination of the locking-plate E, or its equivalent, with the knob-lever G, when so arranged, that, as the latter is moved backward, it will raise the former, substantially as and for the purposes set forth.

4. The arrangement of the slot *t*, or its equivalent, in the latch-plate *a*, in relation to the pin *s*, on the knob-lever, so as to permit the said lever to have a backward movement (to operate the locking-bar E) before acting on the main latch.

5. The combination of the latch-bolt, knob-lever, and locking-plate, so constructed and arranged that the knob-lever, or its equivalent, will adjust the locking-mechanism before actuating the latch.

6. The combination, with the locking-plate E, or its equivalent, of the key-bar *n*, with or without the key-hole guard I, acting upon such locking-bar through the medium of the knob-lever, as described, and for the purposes set forth.

7. In combination with the latch-bolt A, locking-plate E, and knob-lever G, the construction and arrangement of the divided hub J, substantially as and for the purposes set forth.

92,152.—Asa T. Brooks, New Britain, Conn., assignor to Russell & Erwin Manufacturing Company, same place.—*Knob-Latch.*—July 6, 1869.

Claim.—1. The combination, with the latch-bolt A and latch-bar *c c′*, arranged as described, of the locking-plate B, the several parts being constructed and operating substantially as described.

2. The arrangement of the projection *g* on the lock-bolt A, and the projections *f f* on the locking-plate B, substantially as and for the purposes described.

3. The combination, with the latch-bolt A, supplemental latch-bar *c c′* and locking-plate B, constructed and arranged as described, of the knob-lever and key-bar *q*, substantially as and for the purposes set forth.

4. In combination with the latch-bolt A, having within it the supplemental latch-bar *c c′*, the arrangement of a striking-plate, with a right-angled lip, *l*, or its equivalent, substantially as and for the purposes set forth.

5. In combination with the latch-bolt A, and supplemental latch-bar *c c′*, locking-plate B, and knob-lever E, the construction and arrangement of the divided hub H, substantially as and for the purposes set forth.

92,153.—Asa T. Brooks, New Britain, Conn., assignor to Russell & Erwin Manufacturing Company, same place.—*Knob-Latch.*—July 6, 1869.

Claim.—1. The combination of the main latch A, supplemental latch-plate A′, locking bar or plate B, and divided knob-lever, arranged and operating substantially as and for the purposes set forth.

2. The combination of the main latch A, locking bar or plate B, and divided knob-lever, substantially as and for the purposes set forth.

3. The combination of the main latch A, locking bar or plate B, divided knob-lever, and key-bar *i*, or its equivalent, substantially as and for the purposes set forth.

92,154.—George W. Brown, Providence, R. I.—*Scrubbing Brush.*—July 6, 1869.

Claim.—The arrangement of the plate *a a*, provided with teeth *d d d*, handle-socket and handle *e f*, held together by bolts *b* and thumb-screws *c*, as shown, for the purpose of using waste broom-corn, or parts of brooms worn out in ordinary use, as shown and described.

92,155.—Francis M. Buckles, Altona, Ill., assignor to himself and John A. Stuckey, same place.—*Two-Way Rain-Water Conductor.*—July 6, 1869.

Claim.—The movable joint C C″ C‴, with collars H and D, when combined and operating with the joint B, the elbows B B″ B‴ and J J″, for changing the direction of the discharge from eaves, substantially as described, and for the purpose set forth.

92,156.—Daniel Bull, Amboy, Ill.—*Horse Rake.*—July 6, 1869.

Claim.—1. The combination of the rake-head A and small wheels or rollers H, when so constructed and arranged that the wheels support the rake-head, but are raised from the ground, and carried over with the rake-head when the rake is revolved.

2. The combination of the rake-head A, spindles C, draught-rod E, and wheels H, when constructed and operating substantially as and for the purposes described.

3. The combination of the rake-head A, spindle C, and piece D, pawl I, wheel H, draught-arm E, and anti-friction-wheel L, when constructed and arranged substantially as and for the purposes specified.

4. The combination of the handle H′, with the rod Z and stop S, when so constructed and arranged that, by turning the said handle, the stop is relieved, so as to allow the rake to revolve, substantially as described and shown.

92,157.—John O. Burch, Buffalo, N. Y.—*Carriage-Jack.*—July 6, 1869.

Claim.—The standard A, having the ratchet-teeth shown, and the prongs or projections C, with the adjustable lever D, having notches F, hook H, and the adjustable pawl E, all constructed, arranged, and operated as described, for the uses and purposes set forth.

92,158.—John Burnham, Batavia, Ill.—*Truss.*—July 6, 1869.

Claim.—A truss-pad, the adjustment of which to the wearer is governed by a slotted plate attached to the truss-spring by a hinge-joint, and moving upon the pad-lever, and holding the same in the position desired, by pressure against it, produced by a set-screw, substantially as and for the purpose set forth.

92,159.—Walter Caldwell, Bryan, Ohio.—*Corn-Planter.*—July 6, 1869.

Claim.—1. The cams M, when constructed and arranged to operate in combination with the swing-bar I, in the manner substantially as described and for the purpose set forth.

2. The arrangement and combination of the roller U, rake C, shares *c* and D, and shoe H, in the manner substantially as described, and for the purpose specified.

3. The winged wheels A, cams M, swing-bar I, cultivators P, and corn-droppers, when constructed, arranged, and combined to operate and co-operate in relation to each other, substantially as described, and for the purpose set forth.

92,160.—R. W. Campbell, Spurgeon, Ind.—*Wheat-Drill.*—July 6, 1869.

Claim.—1. The adjustable guides E^3, in combination with coulters D^1 and drills c^3, or their equivalents, as and for the purpose set forth.

2. The above-described arrangement for elevating the drills, constructed substantially of the sliding-tongue b^1, lever c^3, pivot c, treadle c^1, connecting-rod b, curved rod B^3, rod B, with arm B^2 B^2, &c., arranged and operated substantially as described.

92,161.—WELLINGTON CAMPBELL, Millburn, N. J.—*Machinery for Manufacturing Composite Paper.*—July 6, 1869.

Claim.—1. The combination of the moving pervious surface for forming the sheet of paper-pulp, the narrow moving pervious surface for forming the strips, and the pressing-rolls, the whole constructed to operate substantially as before set forth.

2. The combination of the said moving pervious surface for forming the sheet of paper-pulp, the narrow moving pervious surface, the pressing-rolls, and the separate vats for the two pervious surfaces, the whole constructed to operate substantially as before set forth.

3. The combination of the press-rolls and folding-guide, substantially as before set forth.

4. The combination of the press-rolls, folding-guide, and moving pervious surface for forming the sheet, the whole constructed to operate substantially as before set forth.

5. The combination of the press-rolls and thread-guide, substantially as before set forth.

6. The combination of the press-rolls, the thread-guide, and the folding-guide, the whole constructed to operate substantially as before set forth.

92,162.—SANFORD CARTMEL, Henry, Ill.—*Band-Cutter for Thrashing-Machines.*—July 6, 1869.

Claim.—The shaft C, with knives D, when arranged transversely with and below the chute A, the knives D operating through the slots H H, substantially as described, and for the purpose set forth.

92,163.—FREDERICK CATLIN, New York, N. Y.—*Safety-Attachment for Breast-Pins.*—July 6, 1869.

Claim.—The combination of the sliding-bolt b with the milled disk g, slotted movable tube J, and fixed tube F, arranged as described, for the purpose of locking the tubes together, as herein described, for the purpose specified.

92,164.—JOHN I. CHEATHAM, Athens, assignor to CICERO A. MITCHELL and RUFUS W. SMITH, Greensborough, Ga.—*Churn.*—July 6, 1869.

Claim.—The combination and arrangement of the crank-wheel D, with its adjustable crank-pin b, the intermediate sliding-gate J, and dasher-rod M, adjustable to different heights on the gate, substantially as and for the purpose herein specified.

92,165.—D. D. CHITTENDEN, Baldwinsville, N. Y.—*Milking-Stool.*—July 6, 1869.

Claim.—1. In combination with the stool A, the pail-rest B b, hinged to the slotted standard E, in such manner as to be adjustable and capable of folding up, when said parts are constructed and arranged substantially as herein shown and described.

2. The clamping-lever D d, in connection with the standard C and milking-stool A, all constructed and operated as and for the purpose herein set forth.

92,166.—DANIEL B. CLEMENT, Brighton, Mass., assignor to himself and DUANE H. NASH, New York City.—*Hay-Spreader.*—July 6, 1869.

Claim.—1. The revolving head e, set upon the side-pieces d', and revolved by the cones of pulleys g h in combination with the shafts n, hinged to the pieces d', and the axle b, of the wheels a, as and for the purposes set forth.

2. The spring clearing-rods m, supported by the bar l, in combination with the revolving-head e and spring-teeth f, as set forth.

3. The lever o, in combination with the shafts n, revolving rake-head e, axle b, and side-pieces d', as and for the purposes set forth.

4. The caster-wheels q, applied below the side-pieces d', in combination with the revolving-head e and teeth f, as and for the purposes specified.

92,167.—CHARLES G. COLE, Bennington, Vt., assignor to DANA BICKFORD, Boston, Mass.—*Circular Knitting-Machine.*—July 6, 1869.

Claim.—1. The cloth-raiser k, applied in substantially the manner and for the purposes set forth.

2. The cylinder m, and slot 3, in combination with the cloth-raiser k, and gearing connecting the same with the cam-ring e, substantially as and for the purposes set forth.

92,168.—LEANDER T. CONANT, New Lisbon, Ohio.—*Wagon-Brake.*—July 6, 1869.

Claim.—The combination and arrangement of the lock-bars A A, rubber-blocks B B, lever-shafts P P, wheels C C, M M, and straps O O and D D, substantially as described.

92,169.—JACOB COOKE, Muncy, Pa.—*Brick-Machine.*—July 6, 1869.

Claim.—The combination and arrangement, in the peculiar manner herein shown, of the pug-mill B, molds m m m, and strike-off knife b, when said knife b is supported upon and operated by the rails c c, that communicate motion to the molds m m m m, for the purpose herein described.

92,170.—ROBERT AVIS COPELAND, Brooklyn, N. Y.—*Oil and Tallow Cup.*—July 6, 1869; antedated June 22, 1869.

Claim.—1. An oil or tallow cup, with a tapering plug or key, similar to those used in corks, being fitted tightly by the ordinary method, and secured on the inside by means of a nut and washer, substantially as shown and described.

2. The thimble or ferrule b, the plug D, the cover J, handle and spring K, air-cock H, provided with the bowl i, openings E E and G G, and the base or stem-piece c, in combination with an oil or tallow cup, substantially as and for the purpose set forth.

92,171.—CHARLES M. CORNELL, Ionia, Mich.—*Combined Seed Planter, Dropper, and Cultivator.*—July 6, 1869.

Claim.—1. The arrangement of the two frames H I, and their independently hinged connection with the main frame, so that the rising and lowering of the frame H may correspondingly raise and lower the frame I, as described and represented, and for the purpose described.

2. In combination with the main frame and the plow-frame, the lever k, cords or chains j l, and pivoted foot-brace m, for the purpose of raising and lowering the plow and harrow frames, or holding them down, as herein described and represented.

3. In combination with the main frame and the plow and harrow frames, the lever, cords, and brace, with a locking-lever, J, arranged to act in connection with the raising-lever k, as and for the purpose herein described and represented.

4. In combination with a main frame and with a plow and harrow frame, arranged and operating as herein described, a seed-hopper or box, and seeding-mechanism connected thereto, and operating as herein stated, so that seed sowing, cultivating, or harrowing may be done by one and the same machine, as set forth.

5. In combination with the outer teeth w, the guards or fenders v, extending from the lower parts of said teeth up, and connected to the frame, substantially as and for the purpose described.

92,172.—DAVID B. COX and ALBERT BROWN, Troy, N. Y.—*Coal-Stove.*—July 6, 1869,

Claim.—1. In a heating-stove, having both a downward and upright draught, the construction of the combustion-chamber B, enlarged laterally outward and upward below the fuel-chamber A, and its outer surface or wall s, having an inclination inward from a horizontal plane only sufficient to properly deliver the ashes and cinders to the grate, in order to radiate the heat downward as much as practicable, outside of the base of the stove, substantially as herein specified.

2. The revolving hollow damper F, with hollow trunnions f f, when arranged in the upper part of the fuel-chamber A, and constructed and operating as and for the purpose herein set forth.

92,173.—Joseph Cox, Philadelphia, Pa.—*Plate for Parlor Stoves.*—July 6, 1869.

Claim.—An illuminating parlor oven-stove, having each of the vertical outside plates or walls of both the oven and the illuminating portion of the said stove cast or constructed in one and the same piece, substantially as and for the purpose described.

92,174.—William G. Creamer, Brooklyn, N. Y.—*Basket-Rack for Railroad-Cars.*—July 6, 1869.

Claim.—Covering the edges of the wire-work racks, for railroad-cars, with a slotted tubular covering, as shown and described.

92,175.—William E. Derrick, Jordan, N. Y., assignor to himself and George B. Garrison, same place.—*Horse Hay-Fork.*—July 6, 1869.

Claim.—In connection with the curved tines A′ A, the swinging-arm B, one end of said arm being pivoted to tine A′, and its opposite end sliding vertically on the opposite tine A, with a cam-lever, E, for securing the arm upon the tine A, the whole arranged and operating substantially as herein described.

92,176.—Fritz Englehorn, August Clemm, Heinrich Caro, and Carl Clemm, Manheim, Germany. *Method of Obtaining Benzole and its Homologues from Coal-Gas.*—July 6, 1869.

Claim. The production of the benzole, and its homologues, from the coal-gas, and other gaseous products capable of supplying light, by first absorbing, and subsequently separating them, as herein described, using for that purpose the above-mentioned liquid compounds, or any other substantially the same, and which will produce the intended effect.

92,177.—George Engle, Patch Grove, Wis.—*Lumber-Sled.*—July 6, 1869.

Claim—1. The construction and arrangement of the cross-bars K K K′ K′, playing in staples L L L′ L′, so as to secure an independent flexibility of each runner, as and for the purpose set forth above.

2. The combination and arrangement of the rockers G G′, rocker-bar I, cross-bars K K K′ K′, reach H, swivel O, with its rod P and linch-pin, and rails D D′, in connection with sleds A and B, when constructed and operating substantially as and for the purpose described.

92,178.—John Farrell, New York, N. Y.—*Construction of Safes.*—July 6, 1869.

Claim.—Interposing between the several layers of steel and wrought-iron plates, composing the shell of burglar-proof safes, and other like structures, any non-conducting material or evaporating substance, as and for the purpose described.

92,179.—Auguste Fau and Eugene Fau, Castres, France.—*Mode of Cleaning Sheep and other Skins for Tanning.*—July 6, 1869.

Claim.—The use of jets of water, under pressure, as we have above described, for washing, freeing from burs, and unhairing woolly skins.

92,180.—Elias T. Ford, Stillwater, N. Y.—*Packing Pump-Pistons.*—July 6, 1869.

Claim.—In the plunger J, having the expanding-disk D, the metal casing C, with tongue *b* and socket *c*, when arranged as described, for the purpose set forth

92,181.—William A. Foskett and Henry B. Tyler, New Haven, Conn.—*Machine for Manufacturing Brushes.*—July 6, 1869.

Claim.—1. The double-incline blocks D and E, in combination with the punch B, for the purpose of varying the stroke of the said punch, substantially as shown and described.

2. Constructing the former F separate from the driving-lever G, substantially as shown and described.

3. The arrangement and construction of the divider-slide H and cam I, to operate independently of the fingers, as shown and described.

4. The construction and arrangement of the slide K, in combination with the table J, for elevating and depressing the same, substantially as shown and described.

5. The combination of the index-plate M and arm N with the table J, to give any required angle, in the manner substantially as shown and described.

6. The arrangement of the bristle-feed table, in connection with the other parts of the machine, in order that the bristles may be fed from the same end of the machine at which the wire is fed, which renders the machine more compact, as shown and described.

7. Locking the fingers S S apart, for the first portion of their backward movement, by the cam-shaped or incline slot T, in combination with the pin *e* and slide R, as shown and described.

8. The cam *h*, in combination with the projection *g*, upon the slide *f*, to allow for the varying thickness between the two ends of the bunch of bristles, substantially as shown and described.

9. The slide A′, in combination with the slide *f* and fingers S S, for the purpose of separating the bristles, fingers, &c., substantially as shown and described.

10. In combination with the table J and its devices, the center-pin L, for holding the plate in position under the punch, substantially as shown and described.

92,182.—Perry G. Gardiner, New York, N. Y.—*Railway-Car Spring.*—July 6, 1869.

Claim.—The combination, with an India-rubber hollow cylinder, surrounded by a spiral spring, of an elastic substance or substances, such as wool, cotton, hair, sponge, cork, or equivalent fibrous material, either single or several of them combined, forced under pressure, into the central hollow space of the India rubber tube, in the manner and for the purpose substantially as specified.

92,183.—Perry G. Gardiner, New York, N. Y.—*Railway-Car Spring.*—July 6, 1869.

Claim.—The combination of an India-rubber ring or belt, B, with or without an internal metal spring G, the bottom-plate A, and cover C, provided with an external bell-mouthed ring E, and an internal cylindrical ring D, arranged and operating in the manner and for the purpose substantially as described.

92,184.—P. P. Gardner, Stoneborough, Pa.—*Combined Corn-Dropper and Cultivator.*—July 6, 1869.

Claim.—1. The slide *p*, lever Q, springs Q^1 Q^2, arm R, shaft K, arranged and operated by suitable gearing and driving-wheels, substantially as and for the purpose set forth.

2. The roller H, harrow G, arms F F′, cam D^1, and driving-wheels D, in combination with the elements of first claim, and V-shaped cultivator, when arranged and operating substantially as and for the purpose set forth.

3. In combination with the frame E and the shaft K, the beveled block *m*, with screw *m′*, as and for the purpose specified.

4. In combination with the rollers H, harrow G, arms F F′, cam D^1, and driving-wheels D, the adjustable teeth or shears A^3, substantially as specified.

92,185.—Thomas Garrick, Providence, R. I.—*Machine for Making Eyelets.*—July 6, 1869.

Claim.—1. The combination and arrangement of a set of eyelet-forming instruments, which move and operate simultaneously upon both sides of a strip of metal, with a stationary slotted block to guide the metal, and prevent its removal by the withdrawal of the instruments, substantially as described.

2. The combination and arrangement, in an organized machine, of a number of sets of eyelet-forming instruments, with their guides, as described, in such a manner that the consecutive operations of raising, shaping, cutting out, and delivering eyelets in a complete form, may be performed in rapid succession, substantially as specified.

3. Combining, in an organized machine for making eyelets from a strip of metal, by a number of mechanical devices, operating consecutively, substantially as described, a heating-apparatus and a cooling-

apparatus or device, for the purpose of annealing the strip of metal at any suitable stage of the operation, so that the successive operations may be performed uninterruptedly, and for the purpose of delivering the eyelets from the machine completely annealed and ready for use.

92,186. — WILLIAM S. GROVER, Oconomowoc, Wis.— *Combined Seeder, Roller, and Cultivator.* — July 6, 1869.

Claim.—1. The within-described agricultural implement, consisting of the frame A A, B and B, cross-bar C, rollers E E, cultivator shares and supports *f* and F, bar G, lever H, chain *g*, catch K, for raising said cultivator-shares, hopper M, with its false bottom, shaft N, provided with the arms *n n*, corrugated ring O, arm P, and rod *p*, for actuating said false bottom, spouts R R, lever S, and catch *x*, all combined and arranged substantially as and for the purpose specified,

2. The vertical shaft N, provided with the arms *n n*, in combination with the corrugated ring O, substantially as and for the purpose shown.

92,187.—JAMES HANN, Frenchtown, N. J.—*Machinery for Bending Wood.*—July 6, 1869.

Claim.—1. The combination of the former upon which the wood is bent, and a set or pair of vibratory toothed sectors, at each end of the former, carrying the forming or bending rolls, and actuated to move around the ends of the former, said parts being constructed and arranged to operate substantially as and for the purposes set forth.

2. The toothed sectors and bearings, in which their tubular journals are held, in combination with the former-box and pins or rods passing through the former-box, and into or through the tubular journals of the sectors, arranged to operate substantially as described, whereby the box can be released, by removing the pins, without disturbing the position of the sectors.

3. The employment, for the purpose of supporting the toothed sectors, of movable bearings or frames, capable of being adjusted longitudinally, so as to conform to the size of the former-box, substantially as shown and described.

4. The sectional former box or frame, constructed and arranged substantially as shown and described, so as to be extended or contracted, to conform to the size of the article to be bent, as set forth.

5. The combination of the vibratory sectors, their adjustable frames or bearings, and the sectional former-box, arranged to be contracted or extended, as herein described, under the arrangement substantially as specified.

6. The arrangement in the adjustable or movable frames or bearings, which support the toothed sectors, of the driving-gear, by which such sectors are actuated, substantially as set forth.

7. Supporting the metal plates *m*, by means of straps or arms, which hang from a bar arranged in or upon the former-box, so as to be raised or lowered, and thereby hold or release the end of the said metal plates, substantially as shown and described.

92,188.—G. M. HARNISCH, Chicago, Ill.—*Harness.*—July 6, 1869.

Claim.—The combination of the strap I I′, sweat-leather A, hames-tug B, tug C, nut E, buckle M N L J G K P, arranged as described, and for the purpose set forth.

92,189.—CYRUS HARRIS, River Point, R. I.—*Skewer for Speeder-Bobbins.*—July 6, 1869.

Claim.—The skewer, constructed as herein described and shown, and provided with a shoulder, B, near its top, to afford a support for the bobbin or spool, for the purpose specified.

92,190.—CHARLES HARRISON, New York, N. Y. —*Self-Closing Cock for Water-Closets.*—July 6, 1869.

Claim.—A water-closet cock, in which the leakage water-way *i*, between the variable chamber *n* and the outlet *k*, is regulated from outside the cock, as and for the purposes set forth.

92,191.—J. R. HOFFMAN, Fort Wayne, Ind.—*Saw-Mill.*—July 6, 1869.

Claim.—1. The combination of the shaft-support *c* with the adjusting-block *a′*, slots *g′*, and screw *g*, constructed and arranged to operate in the manner and for the purpose substantially as described.

2. The combination of the shaft-support *c* with the sliding keeper or box *b*, and adjusting key *b′*, all constructed and arranged to operate in the manner and for the purposes substantially as described.

3. The guide E′, constructed in the manner and for the purpose described.

92,192.—JAMES M. JOHNSON, Northcutt's Store, Ky.—*Mechanical Movement.*—July 6, 1869.

Claim.—The combination and arrangement of the barrels E and Q, diverse trains of gears *h r*, fly-wheel shaft I, crank-shaft M, and screw-threaded arm N, as and for the purpose described.

92,193.—GARRET G. JONES, Rushsylvania, Ohio. —*Locomotive Steam-Engine.*—July 6, 1869.

Claim.—1. The bars C, D, and G, connected by a chain, as described, with shaft H, arranged substantially as specified.

2. In combination with the lifting devices herein described and shown, the slotted bearings, (Fig. 4,) for the front wheels of the tender, substantially as specified.

3. In combination with the shaft H, pinion *i*, bars C, D, and G, the lever *n*, dog *o*, and pawl *s*, when constructed and arranged substantially as described.

92,194.—H. KASIER and A. KASIER, Columbus, Ohio.—*Sprinkling-Can.*—July 6, 1869.

Claim.—The arrangement of the force-pump B, permanently attached to the inside of the can A, with the valves *k* and *h*, all combined and arranged as set forth.

91,195.—ARCHIBALD KELLY, Sharpsburgh, Pa. —*Shredding-Auger for Barrels.*—July 6, 1869; antedated June 19, 1869.

Claim.—The shredding-auger herein described, consisting of shank A, cutting-head B, spring *c*, when all are constructed and arranged to operate as set forth.

92,196.—W. P. LATHROP, West Winsted, Conn. —*Knife-Handle Bolster.*—July 6, 1869.

Claim.—1. The bolster B, having the slot b^2, lips *d d*, mortise *c*, and side-plates *b*, connected by the hub b^1, substantially as and for the purpose specified.

2. In combination with the above, the handle C, with its tenon *c′*, substantially as described.

92,197.—J. D. LEACH, Penobscot, Me., assignor to himself, SABIN HUTCHINGS, and SEWELL LEACH same place.—*Navigator's Bearing Indicator.*—July 6, 1869.

Claim.—1. Combining with the mariner's compass a mechanical device, which, when sighted or brought to bear upon any object, shall indicate upon the compass the direction or bearing of such object.

2. The indicator, substantially as described and shown, and for the purposes specified.

92,198. — ALFRED E. LYMAN, Northampton, Mass.—*Transplanting and Weeding Machine.*—July 6, 1869.

Claim.—The three-sided angular pieces A and B, with edges on the sides, shutting within each other so closely as to retain itself in any desired position, the same being held firmly by suitable bolts (or rivets) of any required length best adapted therefor, the stay E to be only at the option of the operator, (used when desired,) the handle C D being operated at will, adjusting the parts A and B as they turn on the handle or hinge F, so as to produce the intended effect.

92,199.—JOHN MAIR, Philadelphia, Pa., assignor to himself and HAZLETON W. CRAMER, same place. —*Metallic Grommet.*—July 6, 1869; antedated June 22, 1869.

Claim.—The application of the metallic ring R to the flanges F or F′, so that when the tube part of one is inserted into the other, the canvas will pass between the tube and the ring R, and thus hold the grommet firmly in the canvas or cloth when pressed or riveted together.

92,200.—WILLIAM H. MCCORMICK, Muncie, Ind.—*Corn-Planter.*—July 6, 1869.

Claim.—1. The covered seed-cells C′ C′, consisting of the slides *h h*, passages *c′*, *d′*, and *b‴*, and brush B, substantially as described.

2. The perforated stop *h′*, in combination with the brush B and openings in the hollow plunger V, constructed and operated substantially as described.

3. The hollow plunger V, in combination with the gate *o* and spring *s*, substantially as described.

4. The hollow plunger V, in combination with the plunger *u*, working therein, constructed and operated substantially as described.

5. The slotted cam *a*, in combination with the curved arms *b b′*, and friction-rollers *t r m*, on the plungers *u* and V, substantially as described.

6. The cross-piece *z*, working in the slot *y*, arm a^8, and foot-lever a^9, in combination with the rock-shaft a^7, arm a^{10}, and cross-piece m^2, working in the slot *a′*, as and for the purpose set forth.

7. The cross-bar m^5, lever n^2, and spring m^6, in combination with the clutch-lever m^7, and grooved pulley on the main axle, substantially as described.

8. The combination of the foot-lever a^6, rock-shaft K, arm *l*, and friction-roller *m′*, substantially as described.

9. In combination with the cross-bar m^{12}, the driver's seat K, and rods *p p*, substantially as described.

92,201.—SAMUEL B. MCCULLOUGH, Rock Spring, Md., and JOHN R. WEST, Lancaster County, Pa.; said WEST assigns to said MCCULLOUGH.—*Cheese-Press.*—July 6, 1869.

Claim.—The arrangement of the cog gear-wheel K, pinion *k*, drum L, cord or rope *m*, and weight M, when combined with the rotating-frame F, whose center is a right and left hand screw, all constructed to operate in the manner herein set forth and shown.

92,202.—S. A. MCFARLANE, Grand Rapids, Mich.—*Pruning-Shear.*—July 6, 1869.

Claim.—Toggle-levers A B, terminating in shear-blades *b b′* at their outer ends, and in spiked shanks *i i*, at their opposite ends, and otherwise constructed and adapted to operate, substantially as described.

92,203.—HENRY MILLER, Cranston, assignor to himself and GEORGE O. MILLER, Johnston, R. I.—*Metallic Flower Stand and Holder.*—July 6, 1869; antedated January 6, 1869.

Claim.—The combined cast-metal basket and close-fitting dish, constructed substantially as herein described, as a new article of manufacture.

92,204.—JOSHUA MONROE, New York, N. Y.—*Ships' Berth.*—July 6, 1869.

Claim.—1. A folding-frame, composed of a series of shelves arranged one above the other, and connected together by means of common supports, substantially as herein described.

2. The combination of the bottoms A, vertical strips B, and corner-supports C, all arranged substantially as described, and forming a folding-frame.

3. In combination with the bottoms A, strips B, and corner-supports C, the hinged boards D, which serve to give rigidity to the frame, substantially as herein set forth.

4. In combination with the folding-frame or series of berths, constructed and arranged substantially as described, the coupling-pieces E F, and detachable feet G, substantially as described.

92,205.—ALFRED B. MULLETT and BARTHOLOMEW OERTLY, Washington, D. C.—*Metallic Door or Shutter.*—July 6, 1869; antedated June 30, 1869.

Claim.—A metallic door or shutter, made by riveting or bolting two sheets of metal to rigid bars B and braces D, laid between them without welding, all substantially as and for the purposes herein specified.

92,206.—HARRISON OGBORN, Richmond, assignor to SAMUEL WATSON, Lewisville, Ind.—*Clothes-Line Holder.*—July 6, 1869.

Claim.—The construction of the cam L and lever K, connecting-bar F and pulley W, when used for the purposes and in the manner set forth.

92,207.—WILLIAM P. PATTON, Harrisburgh, Pa.—*Ironing-Table.*—July 6, 1869; antedated June 26, 1869.

Claim.—1. Attaching the connecting-piece *b* to the upright supports *a a′*, of the frame A, in such a manner as to allow of the entire or partial revolution of both of said supports, substantially in the manner and for the purpose herein set forth.

2. The combination and arrangement of a hinged or folding bracket, *o*, with the devices of the first claim, substantially as shown, and for the purpose specified.

3. The combination of the ironing-board B with a supporting-frame, A, when said frame is constructed and operated in conjunction with said ironing-board, substantially as herein described.

92,208.—WILLIAM F. PRATT, East Bridgewater, Mass., assignor to the E. CARVER COMPANY, same place.—*Cotton-Gin.*—July 6, 1869.

Claim.—1. The application, to a cotton-gin, of fan chambers, arranged at the ends of the brush-cylinder, and connecting, by flues, directly with the lint-room, so that the air-currents produced by the fans do not pass through the brush-chamber, but flow directly into the lint-room, in the manner and for the purpose described.

2. The wings H, on the ends of the brush-cylinder G, in combination with the casings J, forming, with the ceiling of the gin, fan-chambers at the end of the brush-cylinder, in the manner and for the purpose set forth.

92,209.—MARY H. RAMSAUR, Lincolnton, N. C.—*Medical Compound.*—July 6, 1869.

Claim.—The above-described compound, prepared substantially as and for the purpose set forth.

92,210.—GEORGE RICHARDSON, Lowell, Mass.—*Machine for Drying Yarn, &c.*—July 6, 1869.

Claim.—The trunk C, conducting a blast of heated air, said trunk being provided with ribs or deflectors K K K, placed transversely and arranged alternately, as shown, all combined and operating for the purpose of rapidly and economically drying yarns, twines, or other fabrics of fibrous material, substantially as herein described and set forth.

92,211.—P. H. RYAN, Cincinnati, Ohio.—*Boiler-Flue Brush.*—July 6, 1869.

Claim.—The clamping-plates C C′, and the bolts E, when the same are constructed and arranged substantially in the manner herein shown and specified.

92,212.—J. MILTON SANDERS, New York, N. Y.—*Furnace for Generating Steam-Gas.*—July 6, 1869.

Claim.—An apparatus for generating steam-gas, consisting of a furnace, air and steam inlets, introduced through a close chamber under said furnace, and gas outlets, controlled by stop-cocks or cut-offs, and the whole arranged to operate as herein described, and for the purposes set forth.

92,213.—M. J. SANFORD, Fredonia, N. Y.—*Washing-Machine.*—July 6, 1869.

Claim.—The combination and arrangement of the adjustable rests E E′, rods G G, and catches H H, with the bar A, when the said parts are employed in connection with the depending rollers C D D, in the manner and for the purpose specified.

92,214.—SAMUEL S. SHERMAN and JEREMIAH G. SHERMAN, McHenry, Ill.—*Post-Auger.*—July 6, 1869.

Claim.—A post-auger, with each bit or cutting-edge made in two or more parts, substantially as and for the purposes specified.

92,215.—THOMAS R. SINCLAIRE, New York, N. Y.—*Apparatus for Filtering Liquids under Pressure.*—July 6, 1869.

Claim.—1. The combination of the safety or loaded valve C, or its equivalent, and the vessel A, containing the rectifying or clarifying medium, when the fluid to be operated upon is forced, under pressure, through the rectifying or clarifying medium, for the purpose set forth.

2. The two check-valves H H, in the supply-pipe E, in combination with the pipe G, when said parts are arranged as shown, and used in connection with

or applied to a rectifying or clarifying apparatus, substantially as and for the purpose specified.

92,216.—Cornelius T. Smith, Nyack, N. Y.—*Roofing.*—July 6, 1869.

Claim.—The within-described arrangement of the intermediate fastening-pieces B, the hollow-based covering-pieces E, and the hollow-topped main boards C, substantially as and for the purposes herein set forth.

92,217.—David E. Smith, Bronxville, N. Y.—*Pocket-Cutlery.*—July 6, 1869.

Claim.—The knife-handle, with the back, sides, and projection 2 cast in one piece, in combination with the folded spring, applied in the manner and for the purposes specified.

92,218.—George S. Smith, Bozrahville, Conn.—*Yarn-Evener.*—July 6, 1869.

Claim.—The adjustable needles E E, in combination with the adjustable trimmers F′ F′, in a spooling-mechanism, arranged and operating substantially as and for the purpose set forth.

92,219.—William M. Smith, Augusta, Ga.—*Railway-Car Truck.*—July 6, 1869.

Claim.—1. Arranging the wheels upon one side of a truck-frame in movable bars C C, while those on the other side are arranged in stationary bars B B, and mounting said wheels on their own independent axles, so that the movable ones may be shifted to or from the stationary ones, to adapt the car to roads of wider or narrower gauges, substantially as described.

2. In combination with shifting-wheels on one side of a car or truck, a shifting bolster-beam, that brings the weight of the car-body into a position central between the wheels, whatever gauge said wheels may be set for, substantially as described.

3. The combination of the screw-shaft *q* and nuts *u u*, with the cogged or racked plates *j r*, and cogged rollers *n n*, as and for the purpose described and represented.

4. In combination with a car-body and a bolster-beam, the cup *w*, with the circular racks and cogged rolls *x*, for allowing the trucks to freely turn under the body, or the body on the trucks, substantially as described.

5. Securing the oil or lubricating-boxes to their respective journals, by means of the recesses in said boxes and journals, and a "Babbit-metal" joint, substantially as described and represented.

6. In combination with the truck-frame and car-body, the safety-beams G, suspended to the former, and so as to catch and hold the latter in case of breakage of the axles or wheels, substantially as described.

7. The pulley-cylinders N, arranged above one or more of the wheels of the truck, with a cord connecting one of them with an alarm, so that if the body of the car, by any casualty, should drop, said pulley-cylinder would come in contact with the wheel and be rotated thereby, and, by winding up the cord, sound an alarm, substantially as described.

92,220.—James R. Speer, Pittsburgh, Pa.—*Process of Treating Cast Iron for the Manufacture of Horseshoes and other Articles.*—July 6, 1869; antedated June 26, 1869.

Claim.—The method hereinbefore described for making malleable cast-iron or steel horseshoes, &c.

92,221.—James R. Speer, Pittsburgh, Pa.—*Mode of Treating Pig-Iron for Making Steel and Malleable Cast Iron.*—July 6, 1869; antedated June 26, 1869.

Claim.—Treating melted pig-iron with the ingredients herein named, said ingredients being used in about the proportions and manner herein specified, and for the purpose set forth.

92,222.—Monroe Stannard, Hartford, Conn., assignor to Pratt, Whitney & Co., same place.—*Water-Meter.*—July 6, 1869.

Claim.—1. The combination with the principal measurement cylinder E, of a smaller secondary cylinder, M, and piston N, the latter connected to and operating the main valve K of the principal cylinder, when both cylinders are arranged within a case, to which the water to be measured is admitted, substantially as and for the purpose set forth.

2. The combination of the channel-plate A, for supporting the working parts of the meter, and containing the inlet and outlet passages B and C, and the channels of communication H^1 and H^2, with the measuring cylinder and with the box-like cover D, when this is arranged substantially as described, to facilitate uncovering the working parts.

3. The caps E^1 and E^2, with their openings G^1 and G^2, in combination with the tubular part E of the main measuring cylinder.

4. The combination of the bolts *f* and *f* and the set-screws g^1 and g^2 with the caps E^1 and E^2, and the tubular part E of the main cylinder, as described, for the purpose specified.

5. The combination of the two lever-arms T and T^2 lying within the measuring cylinder or its caps, one at each end of the cylinder, with the two lever-arms R^1 and R^2 lying outside of the cylinder, and connected with the valve O, for the purpose hereinbefore set forth.

6. The combination of the bushings t^1, with the self-packing hubs upon the top of the valve-driving rock-shafts S^1 S^2, substantially as set forth.

7. The combination of the registering-pawl with the secondary valve O, substantially as described, so that the required movement of the pawl shall be produced by that portion of the movement of the valve necessary to overcome the "lap" of the valve, for the purpose hereinbefore set forth.

8. The combination, with the register-pawl arm V and the mechanism by which it is moved, of a frictional coupling, and of positive stops x^1 and x^2, for the purpose hereinbefore explained.

92,223.—George W. Swett, Troy, N. Y.—*Cooking-Stove.*—July 6, 1869.

Claim.—1. The tubular grate I, consisting of two plates, *e e*, substantially as described, so that it will form longitudinal and transverse tubes, with open sides, substantially as and for the purpose herein shown and described,

2. Extending the central pipe *h* of the grate beyond the ends of the same, to form the hollow open-ended trunnions, upon which the grate can be reversed, as herein shown and described.

3. The openings *f* in the fire-box, communicating with the open ends of the long tubes of the grate, in combination with the short tubes *g* in the sides of the stove, to operate as specified.

4. The openings *c* and *t*, in the side of the stove, arranged with relation to the top of the fire-box, and the air-passage *b* between the front plate *a* of the oven, the back of the fire-box, and the perforated plate *r*, for the purpose of permitting a regulated supply of air to be brought to the fire-box from the sides of the stove, as herein shown and described.

5. The damper N, in combination with the fire-box G, arranged above said fire-box across the smoke-passage M, for the purpose of throwing the smoke down through the grate, as specified.

6. The plate *r*, perforated at its curved front end interposed between the bottom of the stove and the oven H, for the purpose of forming the smoke-passage M, and the air-passage *s*, in which air is, through openings in the sides of the stove, carried to the back and bottom of the fire-box, as specified.

7. The draught-chamber *l*, formed under the hearth plate, and in front of the fire-place, by means of the perforated plate *m*, substantially as herein shown and described.

8. The channels *l* and *s*, when carried so far under the grate as to produce a narrow air-entrance under the same, substantially as herein shown and described.

9. The pipes *w w*, extending from the hot-water reservoir to the fire-place of a stove, or near to the said fire-place, substantially as and for the purpose herein shown and described.

10. The perforated shield *v*, arranged in the oven H, to produce circulation, by causing the heated air to traverse behind the shield from the upper to the lower side of the oven, as herein shown and described, for the purpose specified.

11. The horizontal partition *x*, arranged in the case S, with relation to the reservoir and openings

a and *b'*, in the back plate E of the stove, whereby the products of combustion are directed from the flue M, through the opening *a'*, into the lower chamber *z*, and around the back of the boiler to the upper chamber *y*, escaping into the flue M through the opening *b'*, as herein described, for the purpose specified.

12. The suspended draught-plate K, pivoted to the hearth-plate, and arranged in and across the ash pan, substantially as herein shown and described.

13. The hinged perforated plate *p*, arranged within the front oven L, substantially as herein shown and described, so that it can be swung out of the way, as specified.

14. The perforated damper U, arranged in the back smoke-passage, opposite the opening *a'* to the chamber *z*, substantially as herein shown and described, to operate as specified.

15. The combination of the dampers U and V with the openings *a' b'*, chambers *z* and *y*, and horizontal partition *x*, all arranged and operating substantially as herein shown and described.

16. The plate *u*, arranged in rear of the ash-pan, for the purpose of conducting the downward-passing smoke to the channel M, as set forth.

92,224.—JOHN W. SWICKARD, Galva, assignor to himself and WILLIAM H. HOWELL, Altona, Ill.—*Excavator.*—July 6, 1869.

Claim.—1. The longitudinally curved shovel P, when suspended by oscillating arms S from the axle D, and combined with the dirt-box M, substantially as and for the purpose set forth.

2. The combination and arrangement of bars H, guards K, wheels F, and shovel P, for carrying up the dirt, substantially as described.

3. The arrangement of lever T, arm S'', slide *a*, with clutches *b b* and *n'' n*, and notches *c* and *e*, spring W, and axle D, substantially as described and for the purpose set forth.

92,225.—NICHOLAS CHARLES SZERELMEY, Belgrave road, Pimlico, assignor to WILLIAM HENRY VALPY, No. 8 Craig's Court, Charing Cross, England.—*Manufacture of Tarpaulins.*—July 6, 1869; patented in England January 29, 1869.

Claim.—The improvements in making tarpaulins, and in treating sail-cloth and other fabrics, substantially as above described.

92,226.—GILBERT F. TAYLOR, New York, N. Y.—*Carpet-Sweeper.*—July 6, 1866.

Claim.—The combination of the two toothed wheels or gears C D, the upper one C, on the axis of the vibrating brush, being permanently keyed, or otherwise secured on the shaft *a* of the rotating brush B, and the other wheel D being attached to or cast with a friction or traction wheel E, when said gears are placed, one directly over the other, and with the axis of the rotating brush in the same axial plane, having a vertical or nearly vertical position, substantially as and for the purpose herein set forth.

92,227.—ENOCH THOMAS, Craigsville, Va.—*Retainer for Tobacco-Presses.*—July 6, 1869.

Claim.—The combination of the slotted sections C' C' with the follower C, and uprights B B, the said sections being connected with the follower by means of the joints *b b*, and straps E, the several parts being arranged and operating substantially in the manner and for the purpose herein set forth.

92,228.—WILLIAM THOMSON, Glasgow College, Scotland.—*Reflecting Galvanometer.*—July 6, 1869.

Claim.—1. The reflector M, magnet N, coils or helix C, source of light A, and scale or equivalent receiving surface D, combined and arranged as described, and adapted to serve, relatively to each other and to a telegraphic conductor, substantially as and for the purposes set forth.

2. The method, herein described, of rendering visible rapidly succeeding changes in weak currents, through long telegraphic conductors, by causing the same to deflect a ray of light, substantially as and for the purposes herein set forth.

92,229.—BENJAMIN C. TILGHMAN, Philadelphia, Pa.—*Process of Treating Vegetable Substances to Obtain Fiber.*—July 6, 1869.

Claim.—1. The process of treating vegetable substances which contain fibers with a solution of sulphurous acid in water, either with or without the addition of sulphites, heated, under a pressure not exceeding that of the atmosphere, to a temperature sufficient to cause it to dissolve the intercellular or incrusting matter of said vegetable substances, so as to leave the undissolved portion in a fibrous state, applicable to the manufacture of fibers for spinning, or of paper-pulp, or of cellulose, or to other purposes, according to the nature of the material employed.

2. The use and application of sulphites, or other salts of equivalent chemical properties, as above described, in combination with a solution of sulphurous acid in water, as an agent in treating vegetable substances which contain fibers, when heated therewith at a pressure not exceeding that of the atmosphere, to a temperature sufficient to cause said acid solution to dissolve the intercellular or cementing matter of said vegetable substances.

92,230.—FREDERICK TOWNSEND, Albany, N. Y.—*Railway-Car Brake.*—July 6, 1869.

Claim.—1. A laterally movable screw-shaft, provided with couplings on its extremities, and adapted for operating railroad-car brakes, substantially as described.

2. A double-acting lever, D, or its equivalent, interposed between a traveling nut, on a rotary-screw shaft, G, and a system of brakes, substantially as described.

3. Lever D, constructed with forked arms *h h*, and combined with a traveling-nut and a system of brakes, substantially as described.

4. The manner of suspending the lever D from a car-bed, so that it will accommodate itself to the motions of the shaft G, and car-trucks, substantially as described.

92,231.—CHARLES W. TREMAIN, Chicago, Ill.—*Balance Piston-Valve for Steam-Engines.*—July 6, 1869.

Claim.—1. The steam-chest K, provided with recesses, G, in its bottom, and the bolts I, for securing said chest to the cylinder, arranged as herein set forth.

2. The construction of the annular valve-seat D, with reference to the cylindrical steam-chest, substantially as described.

3. The construction of the recessed double-wedge P, and its arrangement with the set-screws S, for expanding the outer packing-rings of piston-valves, substantially as herein set forth.

4. The arrangement of the peep-holes O in the annular steam-passage A, in reference to the valve E, substantially as herein set forth.

92,232.—D. J. TRUE and E. FAIRFIELD, Portland, Me.—*Washing-Machine.*—July 6, 1869.

Claim.—The rubber lip *n*, as herein set forth, attached as described.

92,233.—JONATHAN B. TURNER, Jacksonville, Ill., assignor to himself and BRONSON MURRAY, New York City.—*Clod Breaker and Pulverizer.*—July 6, 1869.

Claim.—1. The use of parallel chains, attached at right angles, or less than right angles, to parallel bars, the whole forming a drag, for the purpose of destroying clods or lumps of earth by attrition, when drawn over the same.

2. The use of angular bars of metal, secured so as to be drawn over the ground, with an edge or angle downward, and in contact therewith, for pulverizing the surface of the ground, as and for the purposes hereinbefore described.

3. Uniting the bars B^1 to B^4 by links, so as to allow independent lateral and vertical motion, substantially as and for the purposes hereinbefore described.

4. The angular bars B^1 to B^4, box E, and bearers A A, chains *e e e*, and loops *d d*, all arranged and combined substantially as and for the purposes hereinbefore described.

92,234.—Morris L. Utter, Rockford, Ill.—*Seeder.*—July 6, 1869.

Claim.—The seed-wheel, with journals A A, constructed as described, the partition B B and square shaft C, the whole being combined and arranged as described, for the purpose set forth.

92,235.—Samuel W. Valentine, Bristol, Conn.—*Fruit-Picker.*—July 6, 1869.

Claim.—The combination of the knife *k* with the beveled jaws *i* and *j*, substantially as and for the purpose specified.

92,236.—George Weaver and H. Nelson Allen, Boston, Mass., assignors to themselves and E. R. Cheney, same place.—*Rubber Spring.*—July 6, 1869.

Claim.—The hollow rubber spring or packing A, constructed with a cylindrical exterior, one or more apertures, B, and an internal cavity, C, increasing in diameter from the ends toward the center, substantially as and for the purpose described.

92,237.—Phineas D. Wesson, Providence, assignor to himself and James Phillips, Central Falls, R. I.—*Low-Water Indicator for Boilers.*—July 6, 1869.

Claim.—The arrangement of the shell B, the expansible tube I, and the diaphragm *m*, follower E, stem Z, lever T, and whistle D, substantially as specified.

92,238.—James W. Weston, New York, N. Y.—*Carriage-Hub.*—July 6, 1869.

Claim.—A wheel-hub made of laminæ of wood, in the manner specified, and for the purposes set forth.

92,239.—James B. Wheeden, Baltimore, Md.—*Window-Awning.*—July 6, 1869.

Claim.—The combination of the awning and frames B C, slides E, and cords D *a*, in the manner substantially as specified.

92,240.—Gottlieb H. Wilde, Aurora, Ill.—*Apple-Parer.*—July 6, 1869.

Claim.—Combination of guide C, pins F, and blade A, when constructed and arranged so as to operate substantially as and for the purposes specified.

92,241.—William H. Williams, Canton, Ohio.—*Nut-Locking Washer.*—July 6, 1869.

Claim.—The nut-locking washer herein described, the same being constructed of malleable metal, with arms or depressions *a a*, arranged around the bolt-hole *b*, and fitting into slots or indentations *f f*, in the nut-plate, and being caused to lock the nut by the turning of its edge over a side face of the nut, substantially in the manner and for the purpose herein specified.

92,242.—Charles E. Wilson, Boston, Mass.—*Truing Grindstones.*—July 6, 1869; antedated June 19, 1869.

Claim.—The arrangement of the grindstones B B, in such a manner upon the frame A, that their peripheries will touch, so that when they are revolved at unequal speed, they will mutually level each other's faces, the same being adjusted substantially as herein set forth.

92,243.—H. C. Alexander, New York, N. Y.—*Toy-Velocipede.*—July 6, 1869.

Claim.—An improved toy-velocipede, constructed and operating substantially as shown and described.

92,244.—E. F. Anderson, Mansfield, Conn.—*Teacher's Toy.*—July 6, 1869.

Claim.—1. The arrangement, upon a revolving plate, B, of several blocks upon spindles, so as to turn each block independent of the other and of the table, substantially as described.

2. The arrangement, upon a revolving table, B, of two or more series of blocks, F and G, each series revolving independent of the other series, and each block independent of the other block of the same series, substantially as described.

92,245.—Henry K. Averill, New Oregon, Iowa.—*Thrashing-Machine.*—July 6, 1869.

Claim.—1. So constructing the thrashing-machine, that the cylinder and endless carrier are adapted to be driven either by the wind-wheels or a tumbling-rod and horse-power, or both combined, substantially as described, for the purpose specified.

2. The arrangement of the carrier D′, closed bottoms F and F¹, and the shaking-device K, all substantially as specified.

3. The combination, with the carrier, of the winnower G, constructed and arranged substantially as specified.

92,246.—Joseph F. Baldwin, Provincetown, Mass.—*Preserving Animal and Vegetable Sustenances on Ship-Board.*—July 6, 1869.

Claim.—1. The herein-described arrangement of the main deck and hull and the ice-receptacle, with the cargo-receptacles and the air-spaces between and about the cargo-receptacles.

2. The arrangement of the water-tight flooring and the ballast-receptacles in the hull, with the cargo and ice receptacles and air-spaces disposed together, and with respect to the main deck and hull, in manner substantially as set forth.

3. The combination and arrangement of the poop P, with the main deck, the ice and cargo receptacles and their air-spaces disposed together and within the hull, substantially as specified.

92,247.—Harvey Ball, Walpole, N. H.—*Billiard-Counter.*—July 6, 1869.

Claim.—1. The latch *n* and stop *f*, arranged in connection with the slide *o′* and toothed wheel B, substantially in the manner and for the purpose specified.

2. The pawl n^3, constructed and operated in connection with pin n^2, and slide *o′*, substantially as and for the purpose described.

3. The pivoted levers p^1 p^1, arranged to operate substantially as and for the purpose set forth.

4. The combination of the levers p^1 p^1, slide o^1, and pawl *m*, substantially as and for the purpose described.

5. The toothed wheel B, provided with stop *f* and pin f^2, in combination with latch *n* and dog e^3, operating as and for the purpose set forth.

6. The pawls *g* and f^2, operating conjointly or independently, for either setting back one or more points, substantially in the manner described.

7. The combination of the lever h^1, pawls *g* and f^2, and toothed wheels B, all operating substantially as and for the purpose set forth.

8. The combination of the pawl f^2 with lever *g* and toothed wheel B, substantially as and for the purpose specified.

92,248.—Simon S. Barger, Golconda, Ill.—*Medical Compound for Treating Hog-Cholera.*—July 6, 1869.

Claim.—The application of a compound for the prevention of hog-cholera, composed of the ingredients as herein designated.

92,249.—R. F. Baughn, Lexington, Miss.—*Car-Coupling.*—July 6, 1869.

Claim.—The parts A B, with the springs G, constructed, arranged, and operating substantially as and for the purposes herein shown and described.

92,250.—John Beattie, Chicago, Ill., assignor to William Baker, same place.—*Hoisting-Apparatus.*—July 6, 1869.

Claim.—1. The improved method of gearing and ungearing the clutch F and drum A, by means of the drums C and D, actuated as described, the tappet-wheel N, and catch M, chain H, and weighted cord I, all substantially as and for the purpose specified.

2. The combination with the drum A, bell-crank, and clutch, of the drum C, weighted cord O, tappet-wheel N, latch M, and weighted cord I.

92,251.—Bernard J. Beck, Brooklyn, N. Y.—*Paper File or Binder.*—July 6, 1869.

Claim.—The string or cord C, when the same is provided with a needle, E, having a double cutting-

edge, *e e*, and eye, *e' e'*, and is fastened by a clamping-buckle, D, each feature being constructed and secured as shown, and the whole being combined and arranged so as to operate substantially as described, as and for the purpose specified.

92,252.—STEPHEN A. BELL, Newtown, Ohio.—*Turbine Water-Wheel.*—July 6, 1869.

Claim.—1. The provision of the pit K, and connecting-conduits L, in the stationary cover, constructed and operating substantially in the manner and for the purpose specified.

2. In the described combination, with the elements of the preceding clause, the bucket-extension H and flange I, for the purpose described.

92,253.—ETIENNE BOILEAU, St. Louis, Mo.—*Fire-Plate for Stoves.*—July 6, 1869.

Claim.—The within-described back or fire plate A, consisting principally of the triangular bars B B, joined together at their upper and lower ends, and containing the annular openings *c c*, near the upper edge thereof, substantially as and for the purpose shown.

92,254.—HORACE C. BRADFORD, Providence, R. I.—*Eyelet-Making Machine.*—July 6, 1869.

Claim.—1. The combination of the dies E and F, or their equivalents, with the revolving cutter G, or its equivalent, arranged relatively to each other, substantially as herein described, for the purposes specified.

2. The revolving cutter G, with its open center constructed to operate substantially as described, for the purposes specified.

92,255.—WILLIAM BRADY and CHRIST. H. BRADY, Mount Joy, Pa., assignors to themselves and H. A. BRADY, same place.—*Lifting-Jack.*—July 6, 1869.

Claim.—1. The bed-piece A, constructed substantially in the bent form herein described, and provided with a perpendicular slotted standard, B, as shown and described.

2. In combination with the bed-piece A and slotted standard B, the toothed and flanged bar D, block C, and clamp or jaw E, all constructed and arranged to operate substantially as and for the purposes herein set forth.

3. The arrangement of the ears *e e* on the bed-piece A, the lever F, loop *h*, and hook *m*, or their equivalents, all substantially as and for the purposes herein set forth.

92,256.—HOMER BROOKE, New York, N. Y.—*Lamp-Chimney.*—July 6, 1869.

Claim.—A chimney for gas or lamp burners, constructed with an external rib or projections, for support of the shade, substantially as herein described.

92,257.—JAMES F. BROOKS, Stafford Springs, Conn.—*Apparatus for Operating Scrapers.*—July 6, 1869.

Claim.—The combination, with the scraper A B, of the vehicle herein described, when arranged and attached to the scraper, as herein set forth and shown, for the purpose specified.

92,258.—SAMUEL D. BROOKS, Baltimore, Md.—*Process for Soldering the Joints and Seams of Metallic Vessels.*—July 6, 1869.

Claim.—The improved method, herein substantially described, of producing a soldered joint or seam in a metallic vessel, viz: by first dipping, into a bath of molten metal or alloy, one or both of the edges or surfaces which are to form the desired joint or seam, so as to coat them with fusible metal before they are brought together; and, secondly, applying heat, in any suitable manner, to the joint or seam obtained, by properly placing and holding these coated edges in contact, with or without flux, all substantially as herein set forth.

92,259.—P. F. BURKE, Worcester, assignor to THOMAS DOOLEY, Boston, Mass.—*Die for Making Horseshoe Toe-Calks.*—July 6, 1869.

Claim.—1. For punching dies for toe-calks, the offset arrangement of the punches and the openings in the die, substantially as shown and described.

2. The non-integral structure, consisting of the carrier *e d*, separate punching-cutters *a b*, *a b*, clamping-plates *e e*, and bolts *f f*, substantially as and for the purposes specified.

3. The bridge *h*, combined with the die *g*, and operating substantially as and for the purpose specified.

92,260.—JOHN G. BUTLER, New York, N. Y.—*Electro-Magnetic Alarm.*—July 6, 1869.

Claim.—1. The connection of one end of the electro-wire directly with the armature-spring, substantially as and for the purposes set forth.

2. The combination of the spring G with the wire *o*, set-screw L, and armature F, carrying the bell-hammer, substantially as described, for the purpose specified.

3. Connecting the electric wire with any portion of the bell-hammer armature, as herein described, for the purpose specified.

92,261.—R. P. BUTTLES, Mansfield, Pa.—*Countersink.*—July 6, 1869.

Claim.—A countersink, having a tubular stem, A, with the burr E formed on its lower end, and arranged to be used in connection with a bit or boring-tool, substantially as described.

92,262.—JOHN E. BUXTON, Owatonna, Minn.—*Combined Drill and Seeder.*—July 6, 1869.

Claim.—1. The tilting-spouts D and rod C, in combination with the perforated bottom of the hopper B, with the frame A, and with the spouts E and G, substantially as herein shown and described, and for the purpose set forth.

2. Providing a seeder with two sets of spouts, E and G, to adapt it for use as a drill or broadcast-seeder, substantially as herein shown and described, and for the purpose set forth.

3. The combination of the lever H and catch-bar I, with the bar C and tilting-spouts D, substantially as herein shown and described, and for the purpose set forth.

92,263.—DANIEL CAMPBELL, Elizabeth, N. J., assignor to CHARLES PARKER, Meriden, Conn.—*Power-Press.*—July 6, 1869.

Claim.—In a power-press, in which the vertical slide is arranged so as to be operated by a revolving shaft extending back from the said slide, combining with such slide and shaft a mechanism substantially such as described.

92,264.—E. D. CHAMBERLAIN, New York, N. Y.—*Hand-Stamp.*—July 6, 1869.

Claim.—The set card F, composed of the rows or figures N N', in combination with the frame of a hand-stamp, employing revolving printing-disks C, substantially as and for the purpose set forth.

92,265.—WILLIAM LATTA CHAMBERS, Pleasant Unity, Pa.—*Atmospheric Car-Brake.*—July 6, 1869.

Claim.—1. The cylinder B, operated as described, the brake-cylinder F, and brake F', arranged relatively to each other, as herein described.

2. The valve-box G, valve g^1, and safety-valves g^4 g^5, in combination with the reservoir C, pipes e' G^1, and brake-cylinders F, the whole constructed substantially as set forth.

3. The brake-cylinder F, piston *f*, arm F', and brake-shoes H, with the chains f^5, pulleys f^6, and spring f^7, the whole arranged substantially as described.

4. The boxes K, and pivoted doors K', in combination with the flexible pipes I' L, and air-pipes G^2 and I, constructed substantially as described.

5. The shaft b^8, and gear-wheel b^6, in combination with the shipper b^{12}, spring b^{13}, and pivoted lever b^{16}, the whole arranged substantially as described.

92,266.—CHARLES P. CASE, Troy, Pa.—*Saw-Filing Machine.*—July 6, 1869.

Claim.—1. The frame D, ratchet-wheel E, pawls *n*, levers *h* and *k*, set-screw *l*, spring *i*, and arm *v*, when constructed and arranged to operate substantially as and for the purposes set forth.

2. In combination with the foregoing devices, the frame P, with its double saws, as described, arranged to operate substantially as specified.

3. The frame R, with its rollers e', slotted plates S, thumb-nuts a', pins d', crank and screw T, and beveled gear, as described, constructed and arranged to operate substantially as and for the purposes specified.

4. The above-described machine for filing saws, both on the upper and lower side of a tooth, at one operation.

92,267.—J. W. COCHRAN, New York, N. Y.—*Railway-Car Spring.*—July 6, 1869.

Claim.—1. The combination, with a metallic spiral spring, and surrounding rubber one, of a telescopic tube or sleeves, arranged to surround the spiral spring, and within the eye of the rubber spring, substantially as specified.

2. The combination, with a metallic spiral spring, and surrounding rubber one, of a telescopic tube or sleeves, arranged to support the spiral spring on its interior, essentially as herein set forth.

3. The combination of inside and outside telescopic tubes or sleeves to a metallic spiral spring, with an outside or surrounding rubber spring, substantially as specified,

4. The combination, with an inner metallic spiral spring, and surrounding rubber one, of a telescopic tube or case, arranged to freely surround, on its outside, or inclose the rubber spring, substantially as described.

92,268.—CORNELIUS A. COGGESHALL, Bridgeport, Conn., assignor to himself, ROBERT T. CLARKE, and SALATHIAL T. NICKERSON.—*Machine for Bending and Hardening Springs.*—July 6, 1869.

Claim.—1, A "former," B, either hollow or solid, made capable of axial adjustment or rotation, and constructed so as to present forming-faces $a\ a$ of different curvatures, substantially as specified.

2. The combination of the adjuster D, gauges e, and supporting-former B, operating together substantially as described.

3. The construction and arrangement of mechanism, by which the adjuster D and pressers C are simultaneously operated, substantially as set forth.

92,269.—DAN. A. CONNOR, Milford, Conn., assignor to himself, CHARLES RODER, and ROBERT E. WIRSCHING, same place.—*Water-Proof Fabric for the Manufacture of Hats and other Articles.*—July 6, 1869.

Claim.—Coating the surface of articles with a compound, prepared and applied substantially as set forth.

92,270.—ALFRED E. COOKE, Philadelphia, Pa.—*Brick-Machine.*—July 6, 1869.

Claim.—1. The grinding-rolls A and B, made adjustable in relation to each other, and automatic as regards the stoppage of the feed on an obstacle passing in between them, by means of the rising and falling hangers C C to the one roll, and falling stops or props D D, substantially as specified.

2. The combination of the toothed pulverizing roll G with the screen-back and ribbed concave H, constructed essentially as shown and described.

3. The reciprocating screen-separator I, in combination with the toothed pulverizing-roll G and its concave H, constructed substantially as specified.

4. The combination of the loose sleeves $t\ t$, with the chargers $n\ n'$ or $o\ o'$ of the feed-table or tables $N\ N^1$, for operation on or over the face of the mold-bed, substantially as described.

5. The hinged leaves S S', attached to the ends of either feed-table $N\ N^1$, and arranged to rise and fall during the reciprocating action of said table or tables, essentially as and for the purpose or purposes herein set forth.

6. The combination of the cam-wheels $K^2\ K^2$ or $K^3\ K^3$, and rocking segment or segments $I^2\ I^3$, with pinions and racks for operation of the feed table or tables, substantially as described.

7. The combination, with the lower followers R or R', of the adjustable levers M^2, for gauging the depth of the molds open for reception of clay, essentially as herein set forth.

8. The combination, with the lower followers R R', or pins or projections z, carried by the blocks or tables thereof, of the beams $w\ w$, and clamps $v\ v$, for adjustment and grip of the off-bearing boards T T, substantially as specified.

9. A brick-machine, made up of intermittently reciprocating feed-tables, provided with sleeves t, mold-beds, with molds therein, and upper and lower followers, all arranged, and the several working parts being operated, substantially as specified.

92,271.—JOHN C. COTTINGHAM. Philadelphia, Pa.—*Gaff-Chock for Vessels.*—July 6, 1869; antedated June 24, 1869.

Claim.—Arranging the yokes Y and Y' in the stock S of the gaff G, the said yokes being constructed as shown, and provided with sockets, for the purpose of holding the friction-rollers, substantially as specified.

92,272.—DAVID B. COX, Troy, N. Y.—*Cooking-Stove.*—July 6, 1869.

Claim.—The raised hearth-plate A, constructed and applied to the hearth of a cooking-stove, substantially as and for the purposes herein specified.

92,273.—BENJAMIN P. CRANDALL, New York, N. Y.—*Velocipede.*—July 6, 1869.

Claim.—1. The combination, with the steering-wheels, of the hand-lever G, arranged at the sides of the seat D, substantially as and for the purpose described.

2. The slot H, to allow vibration of the steering-wheels, without disturbing the hand-levers, substantially as set forth.

3. The combination, with a fixed wheel on the crank-axle, of a similar wheel, mounted loosely thereon, for the purpose described.

4. The reach C, forming an auxiliary bearing for the crank-axle, as set forth.

5. The standard L, rising from the reach, and supporting the rear of the seat, substantially as and for the purpose described.

6. The pedals T, suspended from the reach, and arranged in relation to the parallel rods E, as herein described.

7. The hand-levers G, at the sides of the seat, substantially as set forth.

92,274.—JASON CRANE, Bloomfield, N. J.—*Preserving Furs, Clothes, and the Like Articles from Injury by Moths, &c.*—July 6, 1869.

Claim.—1. The herein-described mode of preserving furs, clothes, and other articles, the same consisting in filling suitably formed spaces within boxes or packing-cases with cedar shavings, cedar sawdust, or other equivalent preservative material, substantially as herein described.

2. The new article of manufacture, boxes for preserving furs, clothes, and the like, having spaces for preservative agents, substantially as described.

92,275.—MOSES G. CRANE, Newton, and EDWIN ROGERS, Boston, Mass.—*Automatic Signal-Box for Fire-Alarm Telegraphs.*—July 6, 1869.

Claim.—1. The combination, with an automatic signal-box, of a circuit-wheel, operated by a weight or spring, through the means of a reciprocating gear-sector, the teeth of which sector engage with a pinion, which rotates loosely upon the circuit-wheel shaft, or a shaft geared thereto, in one direction, and drives said shaft when rotating in the opposite direction, substantially as described.

2. In combination with the weighted lever, and the gear-train operated by the lever, a spring, or series of springs, interposed between the weight and the rotating gears, substantially as described.

3. In combination with the gear-train, and an escapement and pallet connected thereto, a reciprocating fly, placed directly on the pallet-shaft, substantially as described.

4. In combination with the setting-lever a^2, and the slot through which the finger-piece of the lever traverses, the stationary guard-plate g^2, substantially as described.

5. In combination with the lever a^2, the swinging or spring-lifter c^2, substantially as shown and described.

6. In combination with the weighted lever, the slide-pin b^2, so arranged that while it may be actuated by the lifter whenever the signal is not being transmitted, it cannot be operated while the signal is in course of transmission.

92,276.—JOHN CRAWLEY, Brooklyn, N. Y., assignor to VICTOR E. MAUGER, New York City.—*Lithographic Press.*—July 6, 1869.

Claim.—1. The water-reservoir A, when provided with apertures for receiving the screw-valves C, and with the converging sheets of absorbing material, substantially as herein shown and described, to operate as set forth.

2. The screw-valves C, applied to the moistening attachment herein described, when grooved or flattened, substantially as and for the purpose specified.

92,277.—A. G. CUMMINS and J. R. CUMMINS, McKinney, Tex.—*Plow.*—July 6, 1869.

Claim.—The plow-beam A, formed with the front end B enlarged horizontally, and perforated for the purpose specified, the same being likewise provided with the seat E, longitudinally adjustable thereon, by means of the bolt *f* and holes *g*, and the adjustable standards D D and adjusting braces *d*, as herein set forth.

92,278.—SUSAN C. CURRIE, New York, N. Y.—*Medicine-Spoon and Bottle-Stopper Combined.*—July 6, 1869.

Claim.—A medicine-spoon, provided with a projection upon its under side, by which it is adapted to be applied to the cork of a medicine-bottle, substantially as specified.

92,279.—ISRAEL J. CURRIER and JOSEPH HAWSE, Wolcott, Vt.—*Potato-Washer.*—July 6, 1869.

Claim.—A potato-washer, consisting of the bucket A, crank-shaft B, stirrer C, revolving bottom *b*, with diagonal strips, and cross-bars or rods *a' a' a'*, all combined, arranged, and operating substantially in the manner and for the purpose set forth.

92,280.—JOSEPH O. CURRYER and WILLIAM C. YOUNG, Thorntown, Ind.—*Door-Latch.*—July 6, 1869.

Claim.—The combination and arrangement of the plate *a* with its slot *s*, catches *c* and *u*, and guard *v*, when constructed substantially as and for the purposes specified.

92,281.—HENRY CURTNER, Anna, Ohio.—*Sausage-Stuffer.*—July 6, 1869.

Claim.—The arrangement of the sector-shaped chamber D, door *a*, follower F, cylindrical or sectional plates H I, and lever M, substantially as and for the purpose stated.

92,282.—MARK ANTHONY CUSHING, Aurora, Ill.—*Hot-Air Furnace.*—July 6, 1869.

Claim.—1. The furnace A, in combination with a chamber for receiving the heated products of combustion, having within it an escape-pipe, with an adjustable mouth or escape-opening, substantially in the manner and for the purpose above described.

2. A chamber for receiving the products of combustion, separate from the combustion-chamber, having within itself an escape-pipe for the products of combustion, with an adjustable mouth or escape-opening, which may be elevated or depressed, substantially in the manner and for the purpose above described.

3. An adjustable escape-pipe for passing off the products of combustion, by means of which the escape-draught may be made direct or revertible at the pleasure of the operator.

92,283.—HENRY A. DANIELS, Thomaston, Conn.—*Lubricator.*—July 6, 1869.

Claim.—The conical valve D, constructed as described, upon the upper end of the stem *c*, in combination with the adjustable shank B, carrying the oil-cup, whereby, when the shank B is sufficiently elevated above the journal-box, the valve is seated and the supply of oil cut off, substantially as herein shown and described.

92,284.—WILLIAM EDWARD DAVIS, Jersey City, N. J.—*Telegraph-Sounder.*—July 6, 1869.

Claim.—1. The hollow sounding-column A, when made of hard rubber, and covered by a metallic cap, substantially as herein shown and described.

2. The combination of the perforated base C and steel bolt E with the hollow rubber column A, cap D, and armature-lever F, all arranged and operating substantially as herein shown and described.

3 The stud or standard *h*, carrying the pin *g*, when provided with double slots *i* and *j*, substantially as and for the purpose herein shown and described.

92,285.—WILLIAM EDWARD DAVIS, Jersey City, N. J.—*Telegraph-Key.*—July 6, 1869.

Claim.—The bent lever G and spring *i*, in combination with the spring-lever C, slotted standard B, contact points *c k*, and the insulated point of the adjusting screw *e*, all arranged as described, for the purpose specified.

92,286.—JOSÉ F. DE NAVARRO, New York, N. Y., assignor to EMERY ROTARY MACHINE COMPANY, same place.—*Rotary Steam-Engine.*—July 6, 1869.

Claim.—The arrangement of the loose ring I, operating in central slots *d*, in the pistons D, said pistons having a radial motion in grooves on the inner sides of the heads E F of the eccentric revolving drum C, substantially as shown and described.

92,287.—J. F. DE NAVARRO, New York, N. Y., assignor to EMERY ROTARY MACHINE COMPANY, same place.—*Measuring-Faucet.*—July 6, 1869.

Claim.—The arrangement, in relation to a measuring faucet and its revolving operating shaft E, of the screw G, the worm-wheel I, and revolving dial K, with its index M, substantially as shown and described.

92,288.—WILLIAM H. DOBSON, Medina, N. Y., assignor to himself and HOMER BELDING, same place.—*Scroll-Sawing Machine.*—July 6, 1869.

Claim.—1. The adjustable bar F, adjustable rollers H, springs J, and cord K, supporting the upper end of the saw, constructed and arranged as described, for the purpose specified.

2. The sliding cross-head or plate N, constructed substantially as herein shown and described, in combination with the ways O and saw M, as and for the purpose set forth.

92,289.—WILLIAM B. DUNNING, Geneva, N. Y.—*Shaft-Coupling.*—July 6, 1869.

Claim.—The key *a* and shaft A and B, in combination with the annular wedge *b*, shell C, and screw-cap D, constructed to operate substantially as and for the purpose set forth.

92,290.—J. W. DURHAM, Ripley, Tenn.—*Match-Safe.*—July 6, 1869.

Claim.—As an improved article of manufacture, match-boxes, provided with pins B and catches D, substantially as specified.

92,291.—RUFUS M. EASTMAN, Boston, Mass., assignor to himself and FRANCIS L. BOYD, same place.—*Automatic Tongs.*—July 6, 1869.

Claim.—The automatic tongs, composed of devices A, B, H, *f*, and *c*, combined and arranged substantially as specified.

92,292.—HENRY V. EDMOND, Norwich, Conn.—*Composition for Staining Glass.*—July 6, 1869.

Claim.—1. The compound or preparation hereinbefore described, for coloring or staining glass.

2. The use of gelatine as the base, in combination with aniline or coal-oil dye, in the production of a compound for coloring or staining glass, substantially as described.

3. The employment of glycerine, in combination with gelatine and aniline, or any kind of color, in a liquid form, in the production of stained or colored glass, substantially as described.

4. Stained or colored glass, produced as hereinbefore described, as a new article of manufacture.

92,293.—JOHN ELBERTSON, Kirksville, Mo.—*Railway-Car Coupling.*—July 6, 1869.

Claim.—1. The bar C, with its pin *d* and hook *c*, as described, when constructed and arranged to operate substantially as and for the purposes specified.

2. The sliding-bars G, with their lips and pins, as described, in combination with the lever D and its pins, when the same are constructed and arranged to operate substantially as set forth.

3. In combination with the levers B and D, the vertical rods a' and e' *c*, and the dog *d*, when the same are constructed and arranged to operate substantially as and for the purposes described.

92,294.—GEORGE S. ELLARD, Westerly, R. I.—*Harvester.*—July 6, 1869.

Claim.—The wheel A, constructed as described, with the ratchet C and corrugated flange upon opposite sides, in combination with the driving-wheel B, pawl D, and sleeve F, carrying the lever E, all arranged as described, for the purpose specified.

92,295.—ELIHU FIELD, Geneseo, Ill.—*Corn-Husker.*—July 6, 1869.

Claim.—The improved corn-husker, constructed as described, of the straight shank A, having a slightly curved point, and bent at B to form a loop, C, for the reception of the three fingers, exclusive of the index-fingers, as herein shown and described.

92,296.—FREDERICK FISHER, Rockland, Me.—*Marline-Spike.*—July 6, 1869.

Claim.—A marline-spike, A, made hollow for a portion or the whole of its length, and provided or not with a removable head, substantially as and for the purpose described.

92,297.—ROBERT FORMAN, Normal, Ill.—*Corn Planter.*—July 6, 1869.

Claim.—1. The combination of the partition k^1, dropping-device k^2 k^3, and shaft J, with the conductor-spout K, and plate H of the dropping-device G H I, substantially as herein shown and described, and for the purpose set forth.

2. The combination of the connecting-bar L, connecting-rod M, lever N, connecting-rod G, lever P, and hub-enlargement or wheel b', having a zigzag groove formed in it, with each other, with the plates H of the dropping-device G H I, and with the frames E, frame A, and wheel B, substantially as herein shown and described, and for the purpose set forth.

92,298.—SAMUEL WARD FRANCIS, New York, N. Y.—*India Rubber Tooth-Brush.*—July 6, 1869.

Claim.—A tooth-brush, made of vulcanized-rubber sponge, substantially as herein described.

92,299.—JOHN W. FRY, Elizabeth, N. J.—*Telegraph-Insulator.*—July 6, 1869.

Claim.—1. An insulator for telegraph-wires, formed to hold the wire by the compression of a surrounding cushion of India rubber, or other non-conducting and elastic substance, substantially as set forth.

2. An insulator, consisting of the spindle A, jaws *b c*, and India rubber *f*, arranged and operating substantially as and for the purpose set forth.

92,300.—FREDERICK GARDNER, Hamilton, Canada.—*Knitting Machine.*—July 6, 1869.

Claim.—1. The combination, with the cam-cases G or G' and the stationary cams H, of the movable cams H, provided with lugs *a*, and the screw-ring I or I', provided with the groove *c*, all constructed and operating substantially as described.

2. The grooved gates O P, constructed as described, and operating in connection with the zigzag grooves, and the groove *p*, substantially as and for the purpose set forth.

3. The latch-opener J, constructed with a single eye, *t*, and two wings, *u u*, and arranged in relation to the upper and lower carriers D E, substantially as and for the purpose described.

92,301.—ALFRED CHARLES GARRATT, Boston, Mass.—*Physiological Battery.*—July 6, 1869.

Claim.—The arrangement of buttons *a a*, *c c*, of dissimilar metals, upon a flexible non-conducting base, A, insulated from the back B, the buttons connected by wires *d d*, the whole forming a single-element physiological battery, substantially as herein set forth.

92,302.—DOMENICO GIAMBASTIANI, Washington, D. C.—*Armor-Plating for Vessels.*—July 6, 1869.

Claim.—1. A defensive armor for ships or batteries, consisting of many distinct blocks or plates of steel, with beveled, pointed faces, as described, in combination with the elliptic springs, as and for the purpose set forth.

2. The combination and arrangement, as described, of the blocks C', B^4, and elliptic springs D, for the purpose specified.

92,303.—G. F. GOETZE, New York, N. Y.—*Papier-Maché Compound.*—July 6, 1869.

Claim.—A compound for petrified papier-maché, made of the ingredients herein specified, and mixed together substantially in the manner and about in the proportion described.

92,304.—ISAAC C. GROOM, Albany, N. Y.—*Potato-Digger.*—July 6, 1869.

Claim.—1. The endless band of digging-forks, consisting of the tines *z*, bar *x*, flat metal links V, oblong links O, arranged substantially as and for the purpose set forth.

2. The vibrating sieve L, in combination with the receiving-basket M, substantially as and for the purpose set forth.

3. The lever W, rod U, spring T, standard W', catch W'', in combination with the main frame D and the front axle Q, substantially as and for the purpose set forth.

4. The levers P, pivots *f*, connecting-links *h*, and buttons *r*, in combination with the shaft *g*, substantially as and for the purpose set forth.

92,305.—WILLIAM HALL, North Adams, Mass.—*Let-Off Mechanism for Looms.*—July 6, 1869.

Claim.—The pivoted lever *e*, provided with press-plate e', and projection *f*, in combination with sliding-plate b'', guide b''', levers *a a*, and bands *d d*, all arranged as and for the purpose described.

92,306.—THOMAS A. HARES, New York, N. Y.—*Apparatus for Propelling Carriages.*—July 6, 1869.

Claim.—1. The arrangement, in a carriage, of two spring clock-work devices, entirely independent of each other, and wound up by independent cranks, F, or their equivalent, one apparatus and crank being on one side, and the other on the other side of the carriage, and so constructed and operating that, while either is running down and propelling the carriage forward, the other may be winding up, substantially and for the purpose herein set forth.

2. In a carriage having two spring clock-work devices winding independently of each other, as and for the purpose specified, and in combination with said devices, the clutch *i*, pinion H, and teeth *e e*, operating substantially as and for the purposes set forth.

3. The construction and arrangement of the two disks c^2 c^3, one above and one below the projecting end of the prow, said parts being rigidly connected by the standard b', to the axle of the forward wheels, the upper disk having a crown-wheel cog-rim, and being connected with the pinion c^1, horizontal shaft *c*, and its hand-wheel, in the manner described, and for the purposes herein specified.

4. The form and construction of the carriage, herein shown, in order to adapt it to the use of the motive-power above described.

92,307.—ABRAHAM W. HARRIS, Providence, R. I.—*Lubricator.*—July 6, 1869.

Claim.—1. Constructing the stem of the regulating-valve D, of an oil-cup, A, with an expansible disk-rim head, E, substantially as described, for the purposes specified.

2. The combination of the oil-cup A, regulating-valve D, expansible rim E, and tapering plug *h*, or equivalent device, substantially as described.

92,308.—B. N. HARRIS, Talbotton, Ga.—*Churn.*—July 6, 1869.

Claim.—The dashers L, adjustable disks M N, shaft G, pulley H, and hinged arm C, all constructed and arranged to operate as herein described, and for the purpose set forth.

92,309.—JOHN B. HASTINGS, Ironton, Ohio, assignor to himself and LOVEARD T. DEAN, same place.—*Cleaning and Polishing Attachment to Sheet-Metal Rolls.*—July 6, 1869.

Claim.—1. The provision upon the periphery of a roll for making sheet-metal, of one or more pressure-rollers, substantially as set forth.

2. The arrangement of the pressure-rollers D E, journaled in levers F G, having adjustable weights, or springs H or J, for the purpose indicated.

92,310.—WILLIAM E. HENRY, Joliet, Ill.—*Railway-Rail Splice.*—July 6, 1869.

Claim.—The railway-rail splice, consisting of the bar *d*, grooved bar *a*, elastic strip *b*, continuous washer *c*, and connecting-bolts, all constructed and arranged to operate substantially as and for the purposes set forth.

92,311.—JAMES M. HILL and HENRY C. HILL, Fairfield Post Office, Ill.—*Windmill.*—July 6, 1869.

Claim.—The combination and arrangement of the cranks *c*, arms *d*, wheels H and *n*, ratchet *o*, pawl *s*, handle *a*, and springs *u* and *b*, substantially as and for the purposes specified.

92,312.—NOAH WILLIAM HOUSE, Adrian, Mich.—*Rope-Molding Machine.*—July 6, 1869.

Claim.—1. A machine for cutting rope-molding, provided with a face-plate, B, die-plate C, nose-piece D, oblique knives *a b*, and spiral grooves *e*, arranged, connected, and operating substantially as and for the purposes herein described.

2. The face-plate B, die-plate C, and nose-piece D, in combination with the clutches S T, slots *h i*, and projections and depressions 1, 2, 3, 4, substantially as described.

92,313.—CHRISTIAN HUGHES, Niles, Ohio.—*Injector.*—July 6, 1869.

Claim.—1. The construction and arrangement of the enlarged extension E, of the steam-pipe D, as specified.

2. The arrangement of the T-pipe connections, substantially as described.

3. The combination, with the steam-valve K and steam-tube D, of the spirally-fluted extension, substantially as specified.

92,314.—G. H. JONES, Grand Rapids, Mich., assignor to himself and HENRY L. WISE, same place.—*Railway-Car Truck.*—July 6, 1869.

Claim.—The combination, with the tread-wheels C C, of the intermediate set of double wheels D D, projecting lower than the tread-wheels, to embrace the rails, and having tread-surfaces, *d d*, to strike upon the rails and elevate the ordinary wheels above the track in replacing, as herein set forth.

92,315.—HERMANN KAEMPF, Newark, N. J.—*Dog-Muzzle.*—July 6, 1869.

Claim.—The flat spring B, in combination with the wire ring C and the bent wires *a*, *b*, *c*, *d*, *e*, *f*, *g*, and *h*, when said spring extends from the nose to the ring C, conforming to the curvature of the head, all arranged as herein shown and described, for the purpose specified.

92,316.—EDWARD G. KELLEY, New York, N. Y.—*Oil-Can from Paper-Stuff.*—July 6, 1869.

Claim.—A can for containing oil or hydrocarbon liquids, when made of paper or paper-pulp, and when coated on the inside with a substance impervious to oil, and on the outside with water-proof material, substantially as herein shown and described.

92,317.—PATRICK KELLY, Dayton, Ohio.—*Gas-Generator.*—July 6, 1869.

Claim.—An apparatus for carbureting air, combining in its construction the following groups of elements:

1. A gasometer for pumping air with induction-valve and eduction-pipe;

2. A storing-gasometer, with an induction-valve and eduction-pipe;

3. A series of carbureting-chambers, containing the chemicals, connected by pipes arranged to carry the air through such chemicals; and

4. A gas-pipe, through which the gas is carried for use, and having a branch-pipe with gas-jet, arranged to heat the air in the pipe D, said parts being arranged substantially as and for the purpose set forth.

92,318.—REUBEN A. KELLY, Hope, Ind.—*Clod-Fender for Plows.*—July 6, 1869.

Claim.—1. A combination of a runner, plow-beam, clamp, and spring, arranged to hold the runner upon the ground with a yielding force, substantially as specified.

2. A combination of a clod-feeder, runner, clod-discharging wing, and reinforcing springs, when adjustably connected together, substantially as specified.

92,319.—WILLIAM KENNEDY, New London, Pa.—*Shaft-Coupling.*—July 6, 1869.

Claim.—A shaft-coupling, formed of two parts or halves, drawn together upon the shafts by means of tongues and mortises, secured by gibs and keys passing through the parts, substantially as set forth.

92,320.—JAY KNICKERBOCKER, Dunning, Pa.—*Harrow.*—July 6, 1869.

Claim.—An adjustable harrow, consisting of the triangles A B and bars C D, the triangles being pivoted together, and one or both of the bars being hinged to the triangles, substantially as herein shown and described.

92,321.—HENRY F. LAWRENCE, Vallejo, Cal.—*Funnel.*—July 6, 1869.

Claim.—A funnel, in which are combined and arranged the jointed rod *h*, operated as described, the guide-pipe *g*, the ball-valve *f*, the tube *b*, and the jacket *e*, all as and for the purpose described.

92,322.—H. Y. LAZEAR and J. L. SHARP, New York, N. Y.—*Gas-Heater.*—July 6, 1869.

Claim.—1. The expansion or commingling chamber *c* above the end of the tube, and between it and the perforated diaphragm *e*, as herein recited.

2. The perforated diaphragm or plate *e*, in combination with the chamber *c* and plate *d*, as herein set forth.

92,323.—CHARLES M. LELAND, Central City, Colorado Territory.—*Machine for Washing Dishes, Knives and Forks, &c.*—July 6, 1869.

Claim.—The kettle A, crate C, and perforated cylinder D, when combined, arranged, and operated as and for the purpose specified.

92,324.—SAMUEL LEWIS, Williamsburgh, N. Y.—*Portable and Convertible Coffer-Dam.*—July 6, 1869.

Claim.—1. The portable and extensible coffer-dam, constructed of double walls, laid off into the water-tight and air-tight compartments, furnished with the tubes and valves, and braced and timbered as shown, all constructed and arranged as specified, and for the object set forth.

2. The adjustable supports 17, for supporting the upper sections of the portable and extensible coffer-dam, said sections being adapted to slide one within the other, as herein described, for the purpose specified.

3. The removable side, with its special compartments, tubes, and valves, with the objects and for the purposes explained.

4. The cam, constructed and arranged, in its several parts as herein shown and described, for the purpose specified.

92,325.— SAMUEL LEWIS.—Williamsburgh, N. Y.—*Ice-Planer.*—July 6, 1869.

Claim.—1. The pivoted lever D, constructed with toothed segmental ends in combination with the inclined racks *b'*, formed upon the runners B, arranged

and operating as described, for the purpose specified.

2. The combination of the gauge-rack bar E, levers D, and runners B, with each other, substantially as herein shown and described, and for the purpose set forth.

3. The combination of the gauge-bars F, and adjustable stops *f'* with the brakes M, substantially as herein shown and described, and for the purpose set forth.

4. The draught-attachment L, constructed as described, in combination with the frame of an ice-planer, substantially as herein shown and described, and for the purpose set forth.

5. Arranging the vertical cutters K, with their curved edges forward, substantially as herein shown and described, and for the purpose set forth.

92,326.—SAMUEL H. LINTAN, Burrows, Ind.—*Clover and Flax Thrashing Machine.*—July 6, 1869.

Claim.—The combination, with the cylinder and inclined ways *d*, of the perforated shaker and the endless scraper or carrier *e*, all arranged substantially as and for the purpose described.

92,327.—DANIEL LOEFFEL, Mount Vernon, Ind.—*Revolving Screen for Cleaning Grain.*—July 6, 1869.

Claim.—An improved grain-screen, formed by the combination of the feed-hopper J K L M N, spur-wheel O, screen I, shaft C, pipe E, tapering screen B b^1 b^2 b^3, box A, and discharge-spouts D and F, with each other, said parts being constructed, arranged, and operating substantially as herein shown and described, and for the purposes set forth.

92,328.—THOMAS L. LUDERS, Olney, Ill.—*Device for Holding Thread While Doffing in Spinning-Machine.*—July 6, 1869.

Claim.—1. The hooks *d d*, in combination with the case *c*, spring *e*, base *m*, and support *n*, substantially as described.

2. The combination of the wires or rods *g g*, spring *f*, base *m*, and support *n*, substantially as described.

92,329.—CHRISTIAN MACK, Leipsic, Ohio.—*Gate.*—July 6, 1869.

Claim.—1. The arrangement and combiuation of the horizontal pivoted arms F F', the vertically-pivoted bars J J', and their connecting-rods, with a swinging gate, substantially as before described.

2. The arrangement and combiuation of the pivoted latch-lifter P P', the crank-locking arm R R', the horizontal pivoted arms F F', and their connecting-rods, with the slotted connection *a b*, with the gate, substantially as described.

92,330.—L. J. MARCY, Newport, R. I.—*Magic-Lantern.*—July 6, 1869.

Claim.—1. The outer case A, when provided with an opening through the top, to allow the insertion of the chimney B, and with projecting flanges *a*, that are fastened to the chimney, substantially as herein set forth and described.

2. The deflector-plates *c d*, formed on the chimney, substantially as and for the purpose herein set forth and described.

3. The inner case of a magic-lantern, when so attached that it is in no metallic connection with the outer case, above the flame, except at the connections *b*, as specified.

4. The plate F, having the slot *e* and struck-up parts *f*, substantially as and for the purposes herein set forth and described.

5. A magic-lantern, when provided with a lamp which has no cone formed on it, so that the lamp can be moved in or out from the side or end, as specified.

6. The tube J, when provided with the projecting loop *i* and hook *j*, to be fastened to the pins *k l*, substantially as herein set forth and described.

92,331.—A. Z. MASON, Adrian, Mich.—*Vise.*—July 6, 1869.

Claim.—The combination of the parts E, B, and C, when the same are constructed and arranged to operate as described, and for the purpose set forth.

92,332.—JOHN K. MAYO, Williamsburgh, N. Y.—*Process and Apparatus for Manufacturing Composition Pipes, Tubes, Barrels, &c.*—July 6, 1869.

Claim.—The process and apparatus, substantially as above described, for producing barrels, pipes, and other hollow articles of laminated wood.

92,333.—C. MCELROY, New Baltimore, Mich.—*Device for Detaching Horses from Carriages.*—July 6, 1869.

Claim.—1. The arm D, constructed substantially in the manner herein shown and described, that is to say, having its forward end slotted, notched, and rounded, or beveled off, as and for the purpose set forth.

2. The combination of the spring-bolt H F with the arm D and thill A, substantially as herein shown and described, and for the purpose set forth.

3. The trigger or catch-lever E, constructed substantially in the manner herein shown and described, in combination with the arm D and spring-bolt H F, as and for the purpose set forth.

92,334.—JAMES MCKEE, Mount Vernon, Ohio.—*Fence.*—July 6, 1869.

Claim.—The rails B B, secured to iron post A by miter-joints *c*, and bolts *b*, with screw-nuts, in combination with brace-rods C, so arranged with the posts and bottom rails as to give greater strength to the fence, substantially as described.

92,335.—J. M. MCMASTER, Rochester, N. Y.—*Car-Brake and Starter.*—July 6, 1869.

Claim.—The arrangement of the gearing B C E and *f* and G, spring H, ratchet-wheels *b* and *b'*, in combination with the sliding-disks *h* and *h'*, and hand-levers *p* and *p'*, for connecting and disconnecting the pawls *a* and *a'*, in the manner shown, and for the purposes described.

92,336.—ROBERT MCVEEN, Cleveland, Ohio.—*Ruling-Pen.*—July 6, 1869.

Claim.—The tube A, constructed as described, in combination with the handle B, substantially as and for the purpose set forth.

92,337.—SAMUEL C. MOORE, Boston, Mass.—*Nickle-Lined Culinary Vessels.*—July 6, 1869.

Claim.—A vessel for culinary purposes, having a lining of nickle, applied by electro-deposition or otherwise.

92,338.—STEPHEN MOORE, Sudbury, Mass., assignor to himself and HOMER ROGERS, same place.—*Pipe-Leak Stopper.*—July 6, 1869.

Claim.—The leak-stopper, substantially as described, that is, as composed of the tubular segment, the two flanges or pairs of inclined planes, and the clamps, arranged in manner and so as to operate together, as and for the purpose as specified.

92,339.—C. H. MOSEY, Mansfield, Ohio.—*Horse Rake.*—July 6, 1869.

Claim.—1. The sliding rock-shaft M, arranged in boxes *b b*, and provided with the head R, hand-lever Q, and foot-lever N, when used in combination with the revolving-rake T S T, substantially as and for the purpose herein specified.

2. The spring P, when used in combination with the arm O, on the rock-shaft M, substantially as and for the purpose herein specified.

3. The combination of the sliding rock-shaft M, provided with the hand-lever Q, and guard-piece *r*, ratchet-wheel U, and revolving hay-rake T S T, the several parts being constructed, arranged, and operating substantially as and for the purpose herein specified.

92,340.—GEORGE MUNRO, Philadelphia, Pa.—*Hat-Ventilator.*—July 6, 1869.

Claim.—The adjustable wings F F, arranged within a hat, substantially in the manuer and for the purpose specified.

92,341.—WILLIAM MUSBASH and CHARLES R. SMITH, Middletown, N. Y.—*Chimney.*—July 6, 1869.

Claim.—The chimney-top, constructed as described, of the inclined beveled plates F F', secured

to the cap D and E, and base A′ B, by means of the recesses in the former, the curved flanges *g* upon the latter, and the central bolt C, passing through both, all arranged as herein shown and described, for the purpose specified.

92,342.—F. B. NEWTON, Bouckville, N. Y.—*Straw-Cutter.*—July 6, 1869.

Claim.—1. The arrangement of the balance wheel A, relatively to the end of the trough, and the attachment to the arms thereof of the cutters, by means of the brackets, all substantially as specified.

2. The arrangement of the shaft B, detachable pinions F, wheel G, on the feed-roller shaft, all substantially as specified.

3. The presser-block H, shaft I, links L, slotted bearings K, crank-shaft N, and springs O, all arranged substantially as specified.

92,343.—MOSES H. NICHOLS, Hancock, N. Y.—*Device for Securing Covers to Jars for Transportation.*—July 6, 1869.

Claim.—The combination, with the jar A, of the right and left hand screw-rods D D, and the top and bottom pieces B B, as herein described, for the purpose specified.

92,344.—OSCAR NICHOLSON, New York, N. Y.—*Locking Wardrobe-Hook.*—July 6, 1869.

Claim.—The combination of the parts A and B, constructed substantially as described, toothed arm b^2, pawl C, spring D, and guard E, with each other, substantially as herein shown and described, and for the purpose set forth.

92,345.—RICHARD NORRIS, Jr., Baltimore, Md.—*Mode of Hardening and Working "Ransome Concrete Stone."*—July 6, 1869.

Claim.—Forcing chloride of calcium to harden, or water to wash out the chloride of sodium, in the manufacture of the "Ransome concrete stone," so known, into and through the material, by artificial means and force, applied in a close chamber, substantially in the manner herein described and represented.

92,346.—BENJAMIN NOTT, Albany, N. Y.—*Illuminator for Stoves, Ranges, &c.*—July 6, 1869.

Claim.—1. The solid glass cylinders, prisms, or pieces of glass, substantially as set forth.

2. The solid glass cylinders, prisms, or pieces of glass, in combination with the frame, substantially as and for the purposes as set forth.

92,347.—ASA J. OLNEY, Van Buren, Ind.—*Bag-Filler.*—July 6, 1869.

Claim.—The bag-filler, consisting of the removable box D and of the supporting-frame F, which is suspended from springs, and which carries the fastening pins or hooks *f*, all arranged and operating substantially as herein shown and described.

92,348.—JOSEPH A. PADDOCK and JEREMIAH S. ESTEP, Cass County, Ill.—*Bee-Hive.*—July 6, 1869.

Claim.—1. The self-adjusting brace, formed by the combination of the horizontal bar C and elastic bands *g g*, substantially as and for the purpose set forth.

2. The combination of the adjustable brace C with the triangular guides *a a*, as described and represented.

92,349.—WILLIAM PARLIN, Canton, Ill.—*Plate for Plowshare-Blanks.*—July 6, 1869.

Claim.—A rolled plate of metal, for plowshare-blanks, of the shape herein described and shown, that is to say, with the raised or thickened portion extending obliquely across it, of sufficient breadth to yield a thickened portion to two plowshares when divided centrally, as set forth.

92,350.—D. H. PAUL, De Witt, Iowa.—*Cultivator.*—July 6, 1869.

Claim.—The application of reciprocating saws to a cultivator, in the manner substantially as shown and described, for the purpose of cutting or severing weeds or trash, which may adhere to the plow or share standards, and stripping it from the latter, as set forth.

92,351.—BENJAMIN F. PENNY and JAMES JONES, Rochester, N. Y.—*Grate-Bar.*—July 6, 1869.

Claim.—The box-grate A, with openings *b*, in combination with the auxiliary grate B, constructed and arranged substantially as described.

92,352.—JOHN PERHAM, Beloit, Wis.—*Reversible Stove-Pipe Shelf.*—July 6, 1869.

Claim.—1. A reversible collar for stove-pipe shelves, adjustable to different-sized stove-pipes, substantially as and for the purpose herein set forth.

2. A reversible and adjustable collar for stove-pipe shelves, so constructed with sliding-ways, C C′, as to allow the shelf to be moved around and extend in any direction, substantially as described.

3. An extension and revolving shelf, in combination with a reversible and adjustable collar, constructed substantially as and for the purposes described.

4. An extension and revolving shelf, provided with vertical loops, *g*, at or under its periphery, to receive arms extending radially and in a line even with the surface of the shelf, substantially as and for the purposes set forth, in combination with the adjustable and reversible collar.

5. The combination with an adjustable and reversible stove-pipe collar, of a warming-closet or chamber, substantially as described.

6. A reversible and adjustable stove-pipe collar, so formed that its parts $b\ b^1$, not incircling the stove-pipe, will form supports for warming closets or chambers, substantially as described.

6. In combination with a revolving stove-pipe shelf and adjustable and reversible stove-pipe collar, the drier-arms *h*, and warming closet or chamber F, substantially as and for the purposes set forth.

92,353.—EDWARD L. PERRY and CHARLES MANHEIM, New York, N. Y.—*Rubber or Gutta-Percha Hose.*—June 6, 1869.

Claim.—Hermetically inclosing the canvas part of India-rubber or gutta-percha hose at the ends, either by folding over the said ends extensions of the lining or exterior covering, or by the employment of rubber or gutta-percha washers, the said inclosing parts being united in the process of vulcanizing, all substantially as specified.

92,354.—F. P. PFLEGHAR, New Haven, Conn.—*Reversible Knob-Latch.*—July 6, 1869.

Claim.—The arrangement of the latch-bolt G, in the socket F, so as to be reversed in the manner described, and held in position by the spring-catch *a*, in the tail-piece of the bolt, as and for the purpos set forth.

92,355.—ARTON M. POLSEY, Boston, Mass., assignor to F. H. FULLER.—*Method of Making Horse-shoe-Nails.*—July 6, 1869.

Claim.—A nail made by punching or cutting, from hot-rolled ribbed bars of metal a headed blank, substantially as described, and by elongating, hardening, and compressing the shanks of such blanks by cold-rolling, from the head to the point, thereby giving all parts of the nail so produced the peculiar qualities specified.

92,356.—NIELS POULSON, New York, N. Y.—*Stairs.*—July 6, 1869.

Claim.—A hollow casing or receptacle, into which any suitable material or composition of matter may be placed, serving as treads or platforms for stairs, constructed and arranged substantially as and for the purpose set forth.

92,357.—WILLIAM E. PRALL, Washington, D. C., assignor to himself and A. C. RAND, New York City.—*Steam Water-Elevator.*—July 6, 1869.

Claim.—1. The combination of the reservoir A, the generator A^2, and the connecting-pipe A^1, constructed and arranged substantially as set forth.

2. The arrangement of the reservoir A, the pipe D, and the pipe or conduit A^1, substantially as shown and described.

3. The combination of pipe D, generator A^2, and the pipe E, substantially as shown and described.

4. The combination and arrangement of the dis-

charge-pipe C, jet-pipe F, and pipe D, substantially as shown and described.

92,358.—A. QUESNOT, Bloomington, Ill.—*Artificial Stone.*—July 6, 1869.

Claim.—In the manufacture of artificial stone, the composition above described and set forth.

92,359.—CHARLES W. REEDER, Trenton, Mo.—*Farm-Fence.*—July 6, 1869.

Claim.—The parallel bars *a a*, in combination with the supports A A, substantially in the manner and for the purpose described.

92,360.—W. A. RHOADES, Lineolnville, Pa.—*Churning-Machine.*—July 6, 1869.

Claim.—1. The rod C, the semicircular perforated plates or disks D, and circular plate E, in combination with the cylindrical pivoted churn B, substantially as herein shown and described, and for the purpose set forth.

2. The combination of the branched connecting-rod F, two crank-wheels G, shaft H, pulley I, band K, pulley J, shaft L, and heavy crank-wheel M, with each other, and with the churn B, C, D, E, substantially as herein shown and described, and for the purpose set forth.

92,361.—T. C. RICHARDS, New York, N. Y.—*Head for Screws.*—July 6, 1869.

Claim.—A rounded sheet-metal cap, provided with a depression or notch, *a*, formed to receive the screw-driver without cutting or breaking the metal for that purpose, and attached to a flat-headed screw, substantially as and for the purpose set forth.

92,362.—E. D. RICHARDSON, Chardon, Ohio.—*Yard-Mark and Knife.*—July 6, 1869.

Claim.—As an improved article of manufacture, a combined yard-mark and cutter, made and operating substantially as herein shown and described.

92,363.—F. C. RICHER, Gilmer, Tex.—*Oscillating Steam-Engine.*—July 6, 1869.

Claim.—The construction of the oscillating cylinder A, the pipes E F, ports *h*, hollow bed *d*, steam-chest G, valve H, and pumps I and J, all arranged substantially as herein shown and described.

92,364.—JOHN P. RIDER, Brooklyn, N. Y.—*Portable Bath-Tub.*—July 6, 1869.

Claim.—1. A portable bath, composed of a pliable and water-proof body, in combination with supporting-arms, which, while upholding said body, are independent of and have no direct connection with one another, substantially as and for the purposes set forth.

2. The series of pockets upon the sides of the bath-tub or basin, to receive the ends of the supporting-arms, by which the bath is upheld, substantially as shown and described.

3. The combination of the divided and hinged supporting-arms with the pliable and water-proof body of the tub, to which said arms are applied and held, substantially in the manner shown and set forth.

92,365.—JAMES RILEY, Chicago, Ill.—*Railway-Car Coupling.*—July 6, 1869.

Claim.—The draw-bars A B, bumpers P, jaws F, elongated catch L M, lever T, bar V, and lugs U, when constructed, combined, and arranged as described.

92,366.—CHARLES ROBINSON, Cambridge, Mass.—*Toy-Game.*—July 6, 1869.

Claim.—The construction and arrangement of the board A, with support B, pegs D, and ball G, with cord F, the parts being all combined together, and operating substantially in the manner and for the purpose set forth.

92,367.—HORACE A. ROBISON, Cleveland, Ohio.—*Weather-Strip.*—July 6, 1869.

Claim.—The weather-strip herein described, consisting of the molding A, with the two inclined plane sides A′ and A″, and having in its thick edge the wide, shallow groove *a*, deep, narrow groove *c*, parallel with side A′, and containing the rubber-strip *b*, all constructed and arranged in the manner and for the purpose set forth.

92,368.—THOMAS A. ROBINSON, Boston, Mass.—*Apparatus for Cutting and Shearing Metal.*—July 6, 1869.

Claim.—The improved hydraulic metal-cutter, constructed and operating in the manner described.

92,369.—NATHAN ROSE, Belmont, N. Y.—*Mill-Pick Handle.*—July 6, 1869.

Claim.—The handle A, provided with mortise *a*, in combination with the pivoted triangular block *b*, substantially in the manner and for the purpose described.

92,370.—NATHAN ROSE, Belmont, N. Y.—*Picks.*—July 6, 1869.

Claim.—1. The holder A, constructed as described, and provided with the hinged clamp D, substantially in the manner and for the purpose described.

2. A pick-holder, consisting of the holder A, provided with mortises *b b b′* and pick E, all constructed, arranged, and operating substantially in the manner and for the purpose specified.

92,371.—GEORGE W. RUSSELL, Rockford, Ill.—*Plow.*—July 6, 1869.

Claim.—1. A stubble-folding attachment to a plow, composed of the parts *d*, *h*, and *k*, in combination with the bolts *c c′* and plates *a a′*, the whole constructed and operating substantially as and for the purpose set forth.

2. Constructing the parts *a*, *d*, and *h* as herein described, and for the purpose specified.

92,372.—ANTHONY SCHARFF, Philadelphia, Pa.—*Whip.*—July 6, 1869.

Claim.—A whip, consisting of an outer wrapper, inclosing a strip of rattan, within which a wire is secured, as specified.

92,373.—CHRISTIAN SCHMIDT, Rock Island, Ill.—*Pump.*—July 6, 1869.

Claim.—The combination and arrangement of chambers 1, 2, and 3, 4, with partitions U U and S S^2, induction and eduction pipes R R^1 and Sx St, combined and operating substantially as described.

92,374.—CARL SCHORTAU, New York, N. Y., assignor to himself and A. L. BOGART, same place.—*Fluting-Machine.*—July 6, 1869.

Claim.—The within-described devices for raising the roller and adjusting the tension, consisting of the rods E E, bar F, eccentric lever G, nuts H H, and springs I I, in combination with the boxes D D, rollers C C, and frame A, B, and B′, substantially as shown, and for the purpose specified.

92,375.—D. A. SCOTT, Cincinnati, Ohio.—*Spring Bed-Bottom.*—July 6, 1869.

Claim.—The combination of the slats or disks A, and the twisted wire-cord B, when arranged as herein shown and described.

92,376.—SAMUEL B. SHAW, West Randolph, Mass.—*Beverage.*—July 6, 1869.

Claim.—1. The composition, or "citronale," as above specified.

2. The composition or yeast, as hereinbefore described, as engaged in the making of such beverage.

92,377.—S. W. SHELLER, Mount Carroll, Ill.—*Fly-String Cutter and Rounder.*—July 6, 1869.

Claim.—The combination of the blocks A B, hinged together, vertical knives *c c*, wedges *d d*, set-screw C, and rounder D, all constructed and arranged to operate substantially as set forth.

92,378.—ANDREW M. SHOENFELT and JOSEPH M. SHOENFELT, Waterside, Pa.—*Oiling-Device.*—July 6, 1869.

Claim.—1. The inclined plate B, provided with a point, *b*, arranged substantially as and for the purpose set forth.

2. The oiling-device, consisting of the box A, plate B, point *b*, spout C, wick D, and lid E, arranged to

operate substantially as and for the purposes set forth.

92,379.—CHARLES SINGER, South Bend, Ind.—*Rocking-Chair.*—July 6, 1869.

Claim.—1. The stand A, having rails B, the seat *c'*, and rockers C, fitted to the said rails, and the elastic bands M, combined and arranged substantially as specified.

2. The combination of the adjustable back I, seat *c'*, provided with the rockers C, the stand A, having the rails B, the bellows D, and its pipe E, and the bars F and G, all arranged substantially as herein shown and described, and for the purpose set forth.

92,380.—FRANKLIN H. SMITH and WILLIAM F. WOOD, North Hebron, N. Y.—*Invalid-Bedstead.*—July 6, 1869.

Claim.—The sleeve E, having the crank *a*, when adapted to turn loosely upon the shaft C, or to be locked rigidly to it by the pin *b*, in combination with the loose roller *d*, shaft C', bands or cords *c e f g*, jointed frame F, pawls and ratchets *j k*, and the bedstead, all arranged as described, whereby both ends of the frame F are adapted to be raised together, or one end only at a time, for the purpose specified.

92,381.—GEORGE C. SMITH, Matteawan, N. Y.—*Process of Making Suction Rubber-Hose.*—July 6, 1869.

Claim.—1. The above-described process for making suction-hose, substantially in the manner and for the purpose set forth.

2. Vulcanizing rubber or gutta-percha compounds, of different degrees of hardness, in and at the same heat, thereby making of it, as it were, one piece, substantially as and for the purposes herein set forth.

3. Suction-hose, formed as described, of strips of hard rubber or gutta-percha, of different degrees of hardness, wound either spirally or in a ring, combined with the usual material for making hose, and all vulcanized at one time, substantially as and for the purposes herein set forth.

92,382.—JOHN BURNS SMITH, Cohoes, N. Y.—*Mule for Spinning.*—July 6, 1869.

Claim.—1. The combination of the bifureated faller B with the vibrating faller *u*, and the rods *u'*, B^1 B^2, all constructed to operate in connection with each other, substantially as and for the purposes specified.

2. The series of adjusting holes *e e e*, when arranged in the outer fork of the building-faller B, in connection with the wires B^1 *u'* B^2, substantially as and for the purposes set forth.

92,383.—J. C. SMITH, Stoughstown, Pa.—*Railway-Car Coupling.*—July 6, 1869.

Claim.—The arrangement of the cam-lever H, with relation to the coupling-bars A B, which are secured to the cars by the loops C and bolts D, said lever being pivoted to the slotted end of the bar A, by means of the pin F, in such a manner that the projection I is adapted to be pressed down upon the beveled end of the spring-hook G, to disengage the coupling, as herein shown and described, for the purpose specified.

92,384.—VERNON E. SMITH, Lancaster, N. H.—*Water-Gate.*—July 6, 1869.

Claim.—The arrangement of the friction-rollers *e f*, with relation to the gate B, operated by the rack H and pinion I, the guide-face C of the discharge-spout D, and the bottom guide-bar *g*, as herein described, for the purpose specified.

92,385.—WILLIAM B. SMITH, Clayton, Ill., assignor to himself, REID WALLACE, and CYRUS FINLEY, same place.—*Grain-Cleaner.*—July 6, 1869.

Claim.—1. The arrangement of the blowers, screens, and scouring-apparatus, substantially as specified.

2. The arrangement of the chutes H, fan B, and screens, substantially as specified.

3. The spouts F G, apron S, fan A, and scourer V, all substantially as specified.

92,386.—D. G. W. SNYDER, Williamsport, Md.—*Railway-Car Coupling.*—July 6, 1869.

Claim.—1. The bent and slotted bar H, attached to a ear, for maintaining the coupling-link in a horizontal position, substantially as and for the purpose set forth.

2. The springs D F, made of flat bars of metal, bent into the form described, whereby additional strength is obtained, and the pressure is exerted on the slide C and on the coupling-pin, which is secured to the spring F, all constructed, arranged, and operating substantially as herein described.

92,387.—ENOS SNYDER, Providence, Pa.—*Railway-Car Replacer.*—July 6, 1869.

Claim.—1. The movable and adjustable replacers C C, constructed as described, and attached to a railroad-track, substantially in the manner and for the purposes herein set forth.

2. The combination of the replacers C, loops *d d*, pins *i i*, and bars E E, having flanges or hooks *e e*, all constructed and arranged to operate substantially in the manner and for the purposes herein set forth.

92,388.—SAMUEL SNYDER, Delaware, Ohio.—*Device for Turning and Loading Logs.*—July 6, 1869.

Claim.—1. A portable log-turner, consisting of the frame A, drum B, lever C, pawls *b* and *e*, and rope or chain D, all arranged and operating, in combination with the standards E, substantially as herein shown and described.

2. A portable log-loader, consisting of the frame A, drum B, lever C, spring-pawls *d*, *e*, and rope or chain D, all arranged and operating, in combination with the standards E and cross-bar G, substantially as herein shown and described.

92,389.—A. V. M. SPRAGUE and R. F. OSGOOD, Rochester, N. Y.—*Cotton-Seed Planter.*—July 6, 1869.

Claim.—1. The combination of the comb K and inclosing-cylinder E, with the seed-roller D, said parts being so arranged that an annular chamber is left between the periphery of the roller and the cylinder, for the retention of the seed, and the comb-teeth project from the outside of the cylinder, through the discharge-opening at the bottom, and rest against the roller, as herein set forth.

2. The arrangement of the cylinders E, seed-rollers D, combs K, drill-teeth I, and covering-rollers L, when the said parts are capable of lateral adjustment, in the manner and for the purpose specified.

92,390.—HARVEY B. STEELE, Winchester, Conn.—*Concrete Pavement.*—July 6, 1869.

Claim.—1. The pavement, composed of the ingredients set forth, when prepared and laid in the manner substantially as described.

2. The binders, or diagonally placed strips of wood, when used in combination with a concrete pavement, in the manner and for the purpose substantially as described.

92,391.—JOHN H. STEINER, St. Louis, Mo.—*Apparatus for Generating and Carbureting Gas for Lighting Railroad-Cars.*—July 6, 1869.

Claim.—1. A gas-generating apparatus, consisting of a cylindrical vessel, containing a gas holder and generator, substantially as herein described.

2. In combination with the cylinder A and gas-holder D, the air-chamber above the gas-holder, substantially as and for the purposes set forth.

3. In combination with the cylinder A, containing a generator and gas-holder, the carbureting-chamber C, substantially as herein described.

4. In combination with the carbureter, the condenser G, as and for the purpose described.

5. The combination of the cylindrical vessel A, the cylindrical vessel B, and gas-holder D, with the carbureter C, and condenser G, substantially as herein described.

92,392.—GEORGE STEVENSON, Zionsville, Ind.—*Harvester-Dropper.*—July 6, 1869.

Claim.—1. The gates *c c*, hinged to the dropper-fingers *b b*, as and for the purpose set forth.

2. The hinged gates *c c*, in combination with the pins *e e*, as and for the purpose set forth.

3. The grooves *m m*, made in the lower faces of the hinged gates *c c*, substantially as described.

4. The inclined outer fingers *b' b'*, as and for the purpose set forth.

5. The fingers *b b*, having their under surfaces beveled or made V-shaped, as and for the purpose set forth.

6. The combination of the bar *a*, fingers *b b*, *b' b'*, hinged gates *c c*, provided with grooves *m m* and pins *e e*, substantially as described.

92,393.—JOHN T. STOAKES, Champlain, N. Y.—*Breech-Loading Fire-Arm.*—July 6, 1869; antedated June 29, 1869.

Claim.—1. The spring *g*, with the hook *h*, attached to the hammer, with the pin *i*, substantially as and for the purposes set forth.

2. The safety-catch J, substantially as and for the purposes shown and specified.

3. The described arrangement, with relation to each other, of the forked wing *p*, upon the hammer E, the pin *v* in the stock, the pin *v* in the breech-piece C, and the eccentric retractor S, for the purpose of fully cocking the hammer and retracting the cartridge-shell, by the downward movement of the breech-piece, as herein shown and described.

92,394.—JOHN R. STRICKLAND, Sayville, N. Y.—*Compound for Cure of Dropsy.*—July 6, 1869.

Claim.—The aforesaid compound, prepared in the manner set forth, and for the purposes specified.

92,395.—CHARLES CARROL STRONG, Defiance, Ohio.—*Boring-Tool.*—July 6, 1869.

Claim.—The loose collar C, having a smooth periphery, when applied to the boring-tool A, between the cutter B and shoulder *b*, as herein described, for the purpose specified.

92,396.—M. SULZBACHER, New York, N. Y.—*Folding-Mattress.*—July 6, 1869.

Claim.—A series of mattresses, consisting of frames A, composed of corner blocks D, webbing B C E F, and springs G H, and upholstered at top, and flat at the bottom, and alternately hinged to each other above and below, whereby the sections may be folded uniformly on each other, and extended as contiguous mattress, and all parts are constructed and arranged to operate as described.

92,397.—WILLIAM ALLEN SUTTON, New York, N. Y., and EUGENE CROWELL, San Francisco, Cal.—*Railway.*—July 6, 1869.

Claim.—1. The combination of the metallic sleeves *b* and collars or protuberances *c* with the rope C, when applied so as to entirely incase said rope without destroying its flexibility, substantially as specified.

2. The combination, with the sprocket-wheel E, of the griper and depresser I, to the endless rope or chain, constructed and arranged for operation substantially as specified.

3. The automatic take-off or shifter J, to the endless rope or chain, for operation in relation to the sprocket-wheel E, essentially as herein set forth.

4. The combination of the switch or swinging-rail section A' with the crane L, substantially as and for the purposes specified.

92,398.—JOHN TALBOTT, Albany, Ga.—*Gun-Cap.*—July 6, 1869.

Claim.—A gun-cap, having a recess, D, and ring *c*, constructed and arranged to operate substantially as specified.

92,399.—HUGH THOMAS, New York, N. Y.—*Lubricator.*—July 6, 1869.

Claim.—The combination, with the oil can or reservoir, of the fixed handle for holding the reservoir, the cylinder, and plunger, for effecting compression of the air within the reservoir, and the plunger-rod, passing through the fixed handle, and furnished with a movable handle outside of the fixed one, substantially as herein described.

92,400.—HUGH THOMAS and ROBERT WALLACE, New York, N. Y.—*Clothes-Rack.*—July 6, 1869.

Claim.—A clothes-rack, consisting of a strip, A, carrying-hooks *a*, and having outwardly projecting ends D D', one or both of which is made adjustable in direction of the length of said strip, substantially as and for the purpose specified.

92,401.—J. G. THOMPSON, Stockton, N. Y.—*Seed-Sower.*—July 6, 1869.

Claim.—An improved seed-sowing machine, formed by the combination of the box A, adjustable slide B, having two or more sets or series of different-sized holes formed in it, spirally-looped wire D, suspended bar C, and lever I, with each other, said parts being constructed and operating substantially as herein shown and described, and for the purpose set forth.

92,402.—WILLIAM J. THOMPSON, Normal, Ill.—*Potato Digger and Picker.*—July 6, 1869.

Claim.—1. The arrangement, with the frame A, of the slotted standards I I, shaft K, and belt F, all substantially as and for the purposes set forth.

2. The shafts E and K, provided with collars, in combination with the endless belt F, constructed as described, and guides H, when used substantially as described.

3. In combination with the cutter P, scoop R, and belt F, the slotted receptacle G, upon the rear end of the frame A, as set forth.

4. In combination with the frame L, the cutter P and scoop R, when both are provided with the slotted standards, so that they can be regulated at will, substantially as specified.

5. The frame L, cutter P, and scoop R, in combination with the belt F, guides H, shafts E and K, slotted standards I, and wheel D, when all are arranged to form a potato-digger, as described.

92,403.—WILLIAM HENRY TOWERS, Boston, Mass.—*Coating Hoop-Skirt Wire.*—July 6, 1869.

Claim.—1. Coating or covering hoop-skirt wire with compositions, substantially such as herein described, so as to dispense with the necessity of fibrous covering.

2. The improved skirt wire or spring, formed by painting, enameling, japanning, or otherwise coating, substantially as described.

3. The process, herein described, of forming hoop-skirt wire by coating, and the passing between rollers, so as to imitate a woven fabric, such as herein described.

92,404.—MARSHALL TURLY and J. D. BAYLISS, Council Bluffs, Iowa.—*Stove-Drum.*—July 6, 1869.

Claim.—The stove-drum, constructed as described, of the chambers C D, connected by the tubes A, which contain the spiral wires D, and are surrounded by the tubes G, in such a manner as to form annular air-passages, all arranged as described, for the purpose specified.

92,405.—CARL WANDEL, Waldau, near Bernburg, North German Confederation, assignor to F. O. MATTHIESSEN and W. A. WIECHERS, New York City.—*Manufacture of Hydrate of Magnesia.*—July 6, 1869.

Claim.—The manufacture of hydrate of magnesia from sea-water, by the use of lime, substantially as described.

92,406.—CARL WANDEL, Waldau, near Bernburg, North German Confederation, assignor to F. O. MATTHIESSEN and W. A. WIECHERS, New York City.—*Manufacture of Granulated Sugar.*—July 6, 1869.

Claim.—The manufacture of granulated sugar, while in the centrifugal machine, by the injection of a current or currents of superheated steam or hot air against the wall of sugar therein, substantially as specified.

92,407.—R. A. WARNER, Columbus, Ga.—*Window-Sash Balance.*—July 6, 1869.

Claim.—The combination, with the sash and frame of the endless cords A, pulleys C D, and the guide-pulleys E, so arranged that the cord passes between

the sash and the casing, as herein shown and described.

92,408. — GEORGE WATT, Richmond, Va. *Plow.*—July 6, 1869.

Claim.—1. The coulter-edged mold-board B B′, constructed and operating as and for the purpose set forth.

2. The sole C, constructed as and for the purposes specified.

3. The arrangement of the landside-bar F, the point E, and share D, by means of which the sole C is securely protected from wear.

4. The combination of the frame A, supplied with the rounded throat A′, with the coulter mold-board B B′, the sole C, the point E, and share D, all substantially as and for the purposes described.

92,409. — GEORGE WATT, Richmond, Va. — *Clevis-Attachment for Plows.*—July 6, 1869.

Claim.—1. The block M, provided with vertical pivots O O, and a vertical series of perforations, N N, substantially as described, for the purposes set forth.

2. In combination with the clevis L M, constructed substantially as described, the plates G G, bolts H H′, and whiffletree-loop P, constructed and arranged to operate substantially as and for the purpose specified.

3. In combination with the clevis L M, constructed substantially as described, whiffletree-loop P, bolts H H′, and coupling G G′, the bolt I, and washers K, substantially as and for the purpose set forth.

92,410. — THEOPHILUS WEAVER, Harrisburgh, Pa.—*Corn-Sheller.*—July 6, 1869.

Claim.—1. In a hand-sheller jaw, of two blades N N′, the central semi-elliptical spiral cut Z, substantially as and for the purpose specified.

2. A sheller-jaw, provided with blades N N′, transverse blades B B′, strikes *h h′*, guides O O′, bent shaft P, all constructed and arranged substantially as herein set forth.

3. Constructing and arranging the tines L L′, substantially as herein shown and described.

4. Constructing the sections of the sheller-case W Q, and combining them with each other and with the handle-chair A M H, as herein specified.

5. The combination and arrangement of jaw N N′ P, with tines L L′, and case W Q, as and for the purpose herein set forth.

92,411.—DANIEL WIDMAYE, Lansing, Mich.—*Churn.*—July 6, 1869.

Claim.—The combination of the tub A, standard B, chamber *s*, frame D, wheels *o* and *r*, and belt *m*, all constructed and arranged to operate substantially as and for the purposes specified.

92,412. — ALBERT OLIVER WILLCOX, Jr., Port Richmond, N. Y.—*Velocipede.*—July 6, 1869.

Claim.—1. The frame, consisting of the perch and bars D and E, combined and arranged substantially as described and shown.

2. Connecting the part E, of the frame, which incloses the wheel B, to the perch by swivel-joints, so that it can turn on the perch, substantially as set forth.

3. The baggage-receptacle N, combined with the perch of a velocipede, substantially as shown.

4. Combining, with a velocipede, a saddle-seat, whose surface is elastic and yielding, substantially as set forth.

92,413.—R. WILSON, Rees Corners, Md.—*Revolving Dining-Table.*—July 6, 1869.

Claim.—The combination of the detachable stationary leaves G, circular central revolving-top C, drawers F, or equivalent, and pivoted or hinged arms H, with each other and with the frame A B, substantially as herein shown and described, and for the purpose set forth.

92,414.—JAMES A. WISNER and MONSON HOYT, East Saginaw, Mich.—*Lock for Handcuffs.*—July 6, 1869.

Claim.—The combination and arrangement of the conical screw-bolt *b*, bars *c*, catch-springs *d*, and notched arm A, all constructed and operated substantially as and for the purpose set forth.

92,415.—EMERY ANDREWS and WILLIAM TUCKER, Portland, Me.—*Match-Machine.*—July 13, 1869.

Claim.—1. The wedges or bars *v*, attached to the cross-head, and operating as and for the purposes described.

2. The arrangement of the ratchet-wheel *z*, cam-bar D, and clutch H, as herein described.

92,416.—ROBERT ANDREWS, Milwaukee, Wis.—*Finishing and Dressing Sheep-Skins for Leather.*—July 13, 1869.

Claim.—1. The method of dressing, finishing, making, and preparing sheep-skins, of whatever description, with the aid and assistance of the materials herein named, compounded as herein described.

2. The leather that is made out of such skins by such a method, and with such materials so compounded, disclaiming all other things but the leather, and the method of making it with the materials compounded as herein described.

92,417.—ALBERT D. ANGELL, Coldwater, Mich. —*Uterine Supporter.*—July 13, 1869.

Claim.—1. The adjustable funnel-formed pessary O P, supported loosely on the tripod N *m*, over the outlet of the sink K, from which depends the narrow-necked sac or pouch M, substantially as described, and for the purposes aforesaid.

2. In combination with the above-named parts, the devices whereby the pessary is made adjustable in height and direction, consisting of the strap R, shifting-bar *u*, stud *e*, and catch Q, substantially as described.

3. In combination with the strap R, the shiftable and ventilated rubber bag T, substantially as described, and for the purpose before explained.

92,418.—ARTHUR BARBARIN, New Orleans, La. —*Railway-Car Seat.*—July 13, 1869.

Claim.—The combination of the slotted straight bars A with a railroad-car seat, when the two are conjoined, as herein described, and the former is supported by the guide-brackets E *e c′*, and the latter is provided with the strips C, and all the parts are constructed and operate substantially as herein described.

92,419. — HAMILTON BATES and DANIEL L. BATES, Dayton, Ohio.—*Drill.*—July 13, 1869.

Claim.—1. The improved automatic feed-devices, consisting of the ring O, lever P, pawl R, and projection or cam *k*, upon the bevel-gear K, all constructed and arranged to operate substantially as and for the purpose shown.

2. The within-described improved drill-press, consisting of the frame A, B, C, and H, mandrels D and E, balance-wheel F, hand-wheel N, shaft I, gear and pinion K and L, and crank M, in combination with the automatic feed-devices hereinbefore described, substantially as and for the purpose specified.

92,420.—L. A. BRINGIER, Ascension Parish, and N. B. TRIST, New Orleans, La.—*Cane-Scraper.*—July 13, 1869.

Claim.—1. The scraper herein described, when provided with a bracket, *d d′ d″*, in combination with the vertical standard G and the lever H, when these several parts are constructed, and arranged, and operate substantially as herein described, for the purpose set forth.

2. The above combination, in combination with a suitable frame, to which the parts are secured, substantially as herein described.

92,421.—EDWIN J. BROWN, Carroll Parish, La. —*Machine for Making Levees.*—July 13, 1869.

Claim.—The combination of a rotating cutter, provided with radiating knives G, with an excavating and throwing-up wheel, provided with radiating arms F, to which are connected shovels *b*, and covered by a casing, J, when these parts are constructed substantially as herein described, and are operated by the means specified, for the purposes set forth.

92,422.—Myron B. Champion, Sturgis, Mich.—*Rotary Harrow.*—July 13, 1869.

Claim.—In a harrow that is convertible from a truck to a harrow, and *vice versa*, the combination of the hinged journal-heads B, carrying the harrow-wheels, the swivel-pins *e*, and drag-bars D, so that in either of its conditions, of truck or harrow, the drag-bars will maintain a uniform position in the line of draught or resistance, as described and represented.

92,423.—Jonas Clark, Lowell, Mass.—*Cigar-Tip.*—July 13, 1869.

Claim.—The cigar-tip herein described, constructed in the manner and of the materials substantially as specified.

92,424.—James B. Cleveland and Henry C. Guilderslein, Haekensack, N. J.—*Machine for Setting, Fitting, and Tempering Spring-Plates.*—July 13, 1869.

Claim.—The adjustable double former A and A^2, Figs. 1, 3, 4, having an open back or space, B, and flanges, *r*, in combination with an adjustable convex bed, constructed in two parts, A′ and A″, all arranged and operating in the manner and for the purpose substantially as above set forth.

92,425.—William Compton, Newark, N. J.—*Means for Refreshing Horses while in Harness.*—July 13, 1869.

Claim.—1. A hollow perforated bit, combined with a flexible tube, for conveying water to the bit, substantially as set forth.

2. The flexible tube, having perforations in its side, combined with a bridle-bit or other portion of the harness, substantially as and for the purpose set forth.

92,426.—John G. Conlon, New Orleans, La.—*Dumping-Car.*—July 13, 1869.

Claim.—The mechanism herein described, in connection with a dumping car, in which there are two distinct compartments, by reason of the construction, as herein described, and the floors of these compartments vibrate, and are supported on axes, as set forth, that are placed underneath, and at or about the centers of the same, for the purpose set forth.

92,427.—P. M. Consuegra and Ramon Antiguedad, New York, N. Y.—*Manufacture of Tobacco Paper.*—July 13, 1869.

Claim.—The within-described process of treatment of tobacco for the production of paper, the same consisting in the direct introduction of the dry tobacco into a carefully strained and actively boiling solution of lime in water, with the subsequent washing and pulping, the whole being conducted in the manner and for the purposes herein set forth.

92,428.—John Crandell and P. W. Smith, Chicopee, Mass.—*Curtain-Fixture.*—July 13, 1869.

Claim.—As a new article of manufacture, the brace *b*, constructed as herein described, and for the purpose specified.

92,429.—Henry C. Dart, New York, N. Y.—*Beer-Cooler.*—July 13, 1869.

Claim.—1. The series of horizontal corrugated chambers, placed one above the other, in combination with the inlet pipes and cocks, and outlet-pipes, arranged in the manner and for the purposes set forth.

1. The hooks *i* and eyes *e*, united to the interior surfaces of the corrugated metallic sheets, and set together, as and for the purposes set forth.

3. The trough *k*, fitted with horizontal pipe within it, having a longitudinal incision, to equalize the flow of the beer, which runs over the edge of the trough, substantially as specified.

92,430.—Benjamin F. Dickey, Marshall, Mich.—*Automatic Gate.*—July 13, 1869.

Claim.—The arrangement and combination of the rocking-shaft and step-plate E F, lower hinge pivot-strap *d′*, and upper stationary center hinge *d e*, with a gate, B, and hanging-post A, and with the connecting-rods C, and wheel-irons D, the several parts being operated in connection with or without the staple-iron *i*, and studs *j*, and arranged relatively with each other, and with the gate and post, substantially as and for the purpose set forth.

92,431.—Henry Dodge, Washington Mills, N. Y.—*Machine for Grinding the Cutters of Mowing-Machines.*—July 13, 1869.

Claim.—1. The slotted semicircular base C *c*, as and for the purpose herein described.

2. The double-jawed clamp *m m*, worked by a single screw at the center, and having releasing-springs *o*, as and for the purpose herein described.

3. The hinged sickle-holder F *m n*, adjustable standards H H, traversely adjustable base D *d e*, and semicircular base C *e*, all constructed and arranged as and for the purpose described.

92,432.—Michael F. Doran, Philadelphia, Pa.—*Spool.*—July 13, 1869.

Claim.—A winding or unwinding spool, marked substantially in the manner and for the purpose herein set forth.

92,433.—J. J. Doughty, Lake City, Minn.—*Spring for Steadying the Motion of Millstones.*—July 13, 1869.

Claim.—1. The combination with the pinion, or wheel and shaft upon which it is mounted, as described, of the arms *f* and the rubber springs and boxes in which the same are held, constructed, and arranged, upon the exterior of the said wheel, in the manner and for the purposes herein shown and specified.

2. In combination with the parts claimed in the preceding clause, the clutches *k*, for preventing the backward movement of the pinion, under the arrangement and for operation as herein shown and set forth.

92,434.—John A. Eberly and Henry Wechter, Reamstown Station, Pa.—*Horse Hay-Fork.*—July 13, 1869.

Claim.—The arrangement and combination of the arms A A′ with their respective hooks or combined tines F F′ or B B′, operated by the links and collar D D E, hook arrangement G, and pulley O, all connected and operating substantially in the manner and for the purpose specified.

92,435.—Ezra Emmert, Franklin Grove, Ill.—*Harvester.*—July 13, 1869.

Claim.—1. The combination, as set forth, with the flexible endless apron, of the transverse metal strips h^2, bent up into hooks, at their front ends only, to carry forward the butts of the grain, as described.

4. The combination, as set forth, with the elevating conveyer, of the elastic oscillating grating, constructed, arranged, and operating as and for the purposes specified.

3. The combination, substantially as set forth, of a continuously moving carrier, with an oscillating stop-rake, to intermit the delivery of the grain to the binders.

4. The combination of a continuously moving carrier, an elastic grating, and a stop-rake vibrating between the bars of the grating, substantially as specified.

5. The combination of a continuously moving carrier with a stop-rake, automatically and intermittently operated, for the purpose specified.

6. The combination, as set forth, of the elevating carrier, with the binders' stands so arranged both in front and rear thereof, that the binders work with their faces toward the stubble.

7. The combination, as set forth, of the conveyor, with the binders' stands, so arranged both in front and rear of the conveyer and of the driving-wheels, that the binders work with their faces toward the stubble.

8. The combination, substantially as set forth, of an elevated frame, and a conveyer suspended below said frame, with binders' stands also suspended below said frame, on each side of the conveyer.

9. The combination of a supporting roller with a binder's foot-board flexibly suspended from the main frame, substantially in the manner described.

10. The combination, substantially as set forth,

with the binders' stands, of the pockets to carry the bands.

11. The combination, substantially as set forth, with binders' stands, of a reciprocating receptacle.

12. The combination, substantially as set forth, of a conveyer discharging the grain laterally to the path of the machine of a receptacle reciprocating transversely to the conveyer.

13. The combination, substantially as set forth, with the receptaclo which delivers a gavel to each binder in succession, of the binders' stands, located in front and rear of the conveyer, and on the grain-side of the receptacle.

14. The combination, substantially as set forth, of a binder's stand with a reciprocating binding-table.

15. The arrangement of a receptacle to transverse over the pockets for tho bands, substantially in the manner described.

16. The combination, substantially as set forth, of an intermittently reciprocating receptacle and a stop-rake, automatically operated by the receptacle, to intermit the discharge from the conveyer into the receptacle.

17. The combination, with binders' stands, of a dumping-cradle, oscillating on an axis parallel to the path of the machine, with the binders' stands so arranged that the binders face the cradle.

18. The combination, substantially as set forth, of a reciprocating receptacle, with a dumping-cradle oscillating on an axis parallel with the line of movement of the conveyer.

19. The combination, substantially as set forth, of a dumping-cradle and binders' stands, with a receptacle reciprocating between the stands and cradle.

92,436.—Henry Fairbanks, St. Johnsbury, Vt.—*Automatic Grain-Weighing Scale.*—July 13, 1869.

Claim.—1. The arm or extension B′, with the cross-pin *b′*, or an equivalent laterally extended surface near the top, adapted to alternately lift the notched lever D, and to depress the rocking-lever E′, and its connections, at each weighing operation, substantially as and for the purposes herein set forth.

2. The weighted lever E E′ E², and the connected weight or constant force E³, arranged to be set by the depression of the beam B, to be held by the lever D, and ultimately released by the rising of the beam B, and to turn forcibly on such release, substantially as and for the purposes herein set forth.

3. The spring C, arranged as represented, and adapted to carry up the scale-beam to the position for weighing correctly, and also to hold down the notched lever D, with a force graduated in accordance with the amount of depression of the scale-beam, as and for the purpose described.

4. The thrusting-piece G g^1 g^2, with its cross-bar G¹, or its equivalent, constructed and arranged as represented, and adapted to operate relatively to the arms n^1 n^2, which operate the grain-spout N, substantially in the manner and for the purpose herein set forth.

5. The combination and the arrangement of the thrusting part g^1 g^2, deflecting or tilting ridge A³, arms n^1 n^2, with the notched lever D *d′*, rocking-lever E E′ E², and scale-beam B *b′*, all adapted for joint operation, substantially in the manner and with the effect herein set forth.

6. The spring-catches H′ *h*′ H² *h*², arranged relatively to the arms n^1 n^2, and to the forks g^1 g^2, substantially as and for the purposes herein set forth.

92,437.—Elias T. Ford, Stillwater, N. Y.—*Potato-Digger.*—July 13, 1869.

Claim.—1. The digging and separating cylinder of tines K, formed by a continuation or lengthening of the arms or tines K K, as they radiate from the hub C in a cylindrically spiral form or shape, with the branches *v v* and tube or sleeve L, as described.

2. The separating-cylinder of bars, formed by a continuation or lengthening of the same, as they radiate from the hub C, and surrounding their front extremities with the cutting circular plate *i i*, armed with teeth or shears, and its intermediate bars *v v*, extending to the rear in a cylindrically spiral inclination or form.

3. The central draught-bar E, with oval tube Q, shaft D, rear tube *t*, with frame or yoke H C, ratchet-standard R, with springs *d*, lever M, with fulcrum-standard X, and brace-bar *m*.

4. The combination of the four-wheel truck, as the base of adjustment and operation of the several parts, by the use of the lever M, together with tho draught-bar E, shaft D, tube *t*, with yoke A C, yoke or bar N, arms P P, sections F F, knives *z z*, with plane or sickle edges, the auxiliary plows C C, with double edges, and yoke or arms *s s*, as described and for the purpose specified.

92,438.—Elias T. Ford, Stillwater, N. Y.—*Carriage-Wrench.*—July 13, 1869.

Claim.—1. The socket D, cross-bar H, arms F, and screw J, arranged and operated as described, and for the purpose set forth.

2. The frame, composed of the guide-arms F F, and cross-head C, when used in connection with the double socket D, cross-bar A, and screw J, the whole constructed and operated substantially as described, and for the purpose set forth.

92,439.—Andrew Goetzinger, Cincinnati, Ohio.—*Bung-Cutter.*—July 13, 1869.

Claim.—1. The cutters B and C, whose holders, E and F, slide in oblique ways, J, in a fixed stock, as and for the purpose stated.

2. The arrangement of the converging cutters B C, sliding and oblique bars E F, oblique ways J J, links K L, sleeve M, and handle R, substantially as and for the purpose set forth.

3. In combination with the parts B C, E F, J J, M, and R, the spindle G *g g′ p′*, pin *p*, and tail-screw, as set forth.

4. In combination with the cutters B C, holders E F, guide J, sleeve M, and handle R, the bung-holding devices T U, substantially as represented.

92,440.—E. J. Gordon, Greenville, Mich.—*Plaster-Sower.*—July 13, 1869.

Claim.—The within-described combined roller and plaster-sower, consisting of the roller C C, supporting the frame A A and B B, the hopper E, with its adjustable bottom *e*, the vibrating-bar F, levers G and I, and corrugated ring H, all constructed and arranged to operate substantially as and for the purpose specified.

92,441.—John M. Griswold, Auburndale, Mass.—*Mosquito-Screen.*—July 13, 1869.

Claim.—As an improved insect screen or guard, the device above described, consisting of the two frames *g h*, covered with a suitable netting, when the same are provided with the studs *i i*, and combined with the channels *f f*, made within the facings *d d*, or independent strips secured thereto, the arrangement and operation of the whole being as before explained.

92,442.—H. A. Grover, North Cohocton, N. Y.—*Fence.*—July 13, 1869.

Claim.—The arrangement, with the posts A and rails B, of the intermediate blocks *a a*, battens C, loops *c c*, and keys *d d*, the whole operating as herein set forth.

92,443.—Edson Hartwell, Hubbardston, Mass.—*Rocking-Chair.*—July 13, 1869.

Claim.—1. The forked standards B, when made and combined with the chair, as shown and described.

2. The combination of the pieces E, E, and F, substantially as and for the purposes set forth.

3. The combination of the side projections *f* with the rounds *g*, substantially as described.

92,444.—William H. Henderson and William H. Snider, Lena, Ill.—*Feed-Rack for Addressing-Machines.*—July 13, 1869.

Claim.—The combination, with the galley, of the detachable perforated feed-bar, constructed and applied as set forth.

92,445.—Gardner Herrick, Albion, Mich.—*Sad-Iron Heater.*—July 13, 1869.

Claim.—The arrangement and combination of the base A, deflector D, radiator C, and slotted shield-cover E, with each other, and with a suitable central

burner, B, when said burner is fed from a reservoir connected therewith, and its flame directed and applied substantially in the manner and for the uses set forth.

92,446.—Joseph M. Hoadley, Derby, assignor to Weed Sewing-Machine Company, of Hartford, Conn.—*Needle-Setter for Sewing-Machine.*—July 13, 1869.

Claim.—The needle-adjuster herein shown and described, and formed of a single piece of wire, having a point, *a*, notch *c*, and bent portion *b*, the latter serving as a means for adjusting the distance between the point and the notch, and also as a handle.

92,447.—Charles Hœfinghoff, Cincinnati, Ohio, assignor to himself, Charles C. Winchell, and John T. Sargent, same place.—*Coal-Box.*—July 13, 1869.

Claim.—1. A cast-iron coal-box, A B D, with lid F and hinged cover C, for admitting and removing the coal, substantially as shown.

2. The combination of the rack or stand G with the coal-box, either with or without casters, substantially as shown and described.

92,448.—J. L. Hood, Floyd County, Ga., assignor to himself, J. F. Martin, and J. S. Black.—*Double-Footed Plow-Stock.*—July 13, 1869.

Claim.—1. The within-described plow-stock, consisting of the draught-beam A, the side-beams C and C′, the bolts *c c*, and blocks D D, &c., the plow-feet E E, and support-rods G G, all constructed and arranged substantially as and for the purpose shown.

2. The side-beams C and C′, in combination with the bolts *c c* and *c*, and blocks D D, &c., substantially as and for the purpose specified.

92,449.—Benjamin F. Horn, Boston, Mass.—*Ash-Sifter.*—July 13, 1869.

Claim.—1 The drum-shaft, as made, with the transverse groove, (arranged near one end of the drum,) and with the long journal and head to extend beyond the other end of such drum, as set forth, the same being as specified.

2. The combination and arrangement of devices for holding the mouth-piece or door of the sifting-drum in place on the mouth of the drum, such devices consisting of the two hooked lugs, the stud, and the two turn-buttons, the whole being to operate as specified.

92,450.—James M. Hotchkin, Prattsburgh, N. Y.—*Potato-Digger.*—July 13, 1869.

Claim.—The construction and arrangement of the digger B, rods D, chains E, and balls F, when used in combination, as and for the purpose set forth.

92,451.—Elijah Humphreys, Samsville, Ill.—*Fence-Gate Post.*—July 13, 1869.

Claim.—1. The brace D, provided with the gauge-holes *i i*, and auxiliary brace E, in combination with the post A, substantially as and for the purposes described and set forth.

2. The brace D, provided with the pin *g*, in combination with the blocks or posts *h h*, and keys *m m*, as and for the purposes specified.

92,452.—John W. Hyatt, Jr., Albany, N. Y.—*Process for Coating and Beautifying the Surface of Billiard-Balls, Knife-Handles, &c.*—July 13, 1869.

Claim.—1. A ball or other object, which is coated with collodion, substantially as described.

2. The process of applying a coating of collodion to balls and other objects, consisting in first priming the object to be coated with an adhesive substance, and then dipping or molding the object, substantially as described.

3. The application of heat and pressure to an object coated with collodion, for the purpose and substantially as described.

92,453.—W. T. Jaquith and Robert Calhoun, Allegheny, Pa.—*Sash-Cord Sheave.*—July 13, 1869.

Claim.—A cylindrical, perforated, and grooved sheave, having exterior longitudinal corrugations, substantially as described, as a new article of manufacture.

92,454.—Lemuel P. Jenks, Boston, Mass., assignor to H. A. Hall, same place, and Joseph A. Minott, New York City.—*Curry-Comb.*—July 13, 1869.

Claim.—In curry-combs, the metallic teeth shown, when the same are in combination with and held by an elastic front, and are provided with heads, held immovably between the front and the back of the comb, all substantially as described.

92,455.—Thomas W. Johnson, New York, N. Y.—*Apparatus for Concentrating Extracts of Bark and other Liquids.*—July 13, 1869; antedated June 26, 1869.

Claim.—The open drum C, constructed of disks *a*, and traverses *b*, in combination with the tank A, substantially as shown and described.

92,456.—Julius H. Jones, Charlton, Mass.—*Scroll-Gate for Water-Wheels.*—July 13, 1869.

Claim.—1. The gate A, with its flaring end shield or guard, and covered inner end, and ways *a a*, substantially as described.

2. The described gates, spring-connections, and operating-mechanism, substantially as set forth.

92,457.—Isaac Keith, West Sandwich, Mass., assignor to himself, Hiram Keith, and Isaac N. Keith, same place.—*Dumping-Car.*—July 13, 1869.

Claim.—1. The combination and arrangement of a platform, *a*, and its two trucks, *b b*, (composing a long car,) with one or more tip-cart bodies, B, and with supporting-wheels *d* and runners *e*, guide rails *l* and studs *k*, or their equivalents, arranged substantially as described.

2. The combination of the four holding chains *m*, or their equivalent, with each tip cart body, the long car-platform, and their supporting runners, wheels, guides, and studs, as set forth.

92,458.—August Kindermann, Cleveland, Ohio.—*Churn.*—July 13, 1869.

Claim.—1. The rotary dasher *a*, when constructed as described, with arms *e. e*, and *e′*, floats *d*, said arms *e′* and floats being provided with breakers *b*, as and for the purpose set forth.

2. In combination with the dasher, constructed as described, the breakers *b*, arranged as described.

92,459.—C. H. Knox, Mount Pleasant, Iowa.—*Washing-Machine.*—July 13, 1869.

Claim.—The combination of the washer H with the clamp G, journal E, nut K, and pinion D, said clamp and nut being arranged to turn on right and left hand screws, and clamp the washer between them, as specified and shown.

92,460.—Henry Laurence, New Orleans, La.—*Velocipede.*—July 13, 1869.

Claim.—1. The adjustable auxiliary wheels or casters A and A^2, mounted on the vibrating-arms B and B^2, attached to and connected with the velocipede, substantially in the manner and for the purpose above described.

2. The device and mechanical contrivance for actuating the pivoted vibrating arms B and B^2, and the wheels A and A^2, by means of the vibrating steering-handle *s s*, with the bent levers or bell-cranks *s u v*, and *s* u^2 v^2, mounted on and connected with the forked standard H, substantially in the manner and for the purpose above set forth, and connected with the vibrating-arms B and B^2, by means of the flexible band or chain *y*, the vibrating-arm g^2, the cross-pin *m*, the sheave or pulley *x*, and the connecting-rods *o* and o^2, substantially in the manner and for the purpose above set forth.

92,461.—Alfred Lawton, Philadelphia, Pa., assignor to Francis N. Lawton, same place.—*Apparatus for Raising Coal.*—July 13, 1869.

Claim.—1. The raising of coal or other granular material by means of a bucket or other suitable vessel, arranged to slide in a shaft, or its equivalent, which extends so far below the ground or platform, on which is deposited a mass of coal or other material to be raised, that the latter will of itself pass into the bucket, all substantially as set forth.

2. In combination with the said shaft, or its equiv-

alent, the opening *e*, in the same, the inclined plane *f*, and movable door *h*, arranged in respect to the ground or platform on which the coal is deposited, substantially as and for the purpose specified.

92,462.—PETER MAYO, Richmond, Va.—*Machine for Making Plug Tobacco.*—July 13, 1869.

Claim.—1. The revolving endless trough C, constructed with sides, adapted to open or be pressed apart to release the strip or bar, substantially as described.

2. In combination with the revolving endless trough C, and compressing-roller D, the scrapers L L′ L″, and brush M, employed and operating substantially as set forth, for the purposes named.

3. In combination with the revolving endless trough C, the table G, and the steam or spray pipe O, arranged and operating as described, for the purpose specified.

4. In combination with the revolving-trough C, constructed in sections, with sides adapted to open or be pressed apart, as described, the tables *a* and *g*, and flanges or guides E, F, *g*, arranged substantially as represented and described, for the purposes specified.

5. In combination with the revolving-trough C, the gearing *c‴*, H, K, for connecting said trough with the driving-shaft J, and imparting a positive motion thereto from said shaft, as described.

6. The tongue or wedge P, arranged and operating substantially as described, to free the strip or bar from the bottom of the revolving-trough, and cause it to pass on to a stationary table, as set forth.

7. The tongue or wedge P, constructed tapering in width to adapt it to force apart the sides of the revolving-trough, to release the bar or strip, substantially as described.

8. The rotary knives V, one or more, mounted eccentrically in a slotted drum, T, and operated by said drum, thereby causing them, in their rotation, to protrude at the proper moment to sever the plug or lump, and then withdraw within said drum, so as to be protected thereby, and to cleanse themselves.

9. The spring-scrapers Y, arranged within the drum T, and employed to cleanse the knives V, as they are drawn into said drum, substantially as described.

10. The knives V, mounted loosely and separately on their shaft, and employed, in combination with a drum, T, provided with a plurality of slots, *t*, for their reception, as described, for the purpose of adapting the apparatus to be adjusted to cut different lengths of plug or lump.

11. In combination with the stud-shaft W of the knives, the standard X, slotted as described, to adapt said knives to project a greater or less distance, as desired.

12. The cutting-apparatus R T V, connected with the forming-mechanism by gearing S U, as represented and described, for the purpose specified.

92,463.—GEORGE L. MCCAHAN, Baltimore, Md.—*Saw-Mill.*—July 13, 1869.

Claim.—1. The vertically movable journal-box P, constructed to operate in connection with lever L and spring Q, substantially as and for the purposes set forth.

2. The combination of the vertically movable journal-box P, with shaft G, grooved friction-wheels E F, lever L, belt K, and pulleys R M N, when constructed to operate as and for the purposes set forth.

92,464.—JAMES H. MCCONNELL, Newcastle, Pa., assignor to himself and J. R. RICHARDSON.—*Cooking-Stove.*—July 13, 1869.

Claim.—1. In combination with a cooking-stove, the pan A, constructed as described, and provided with an extension, B, substantially as and for the purposes herein set forth.

2. In combination with the pan A and extension B, the plate C, constructed as described, and for the purposes set forth.

3. The combination of the pan A, extension B, and cover D, all substantially as and for the purposes herein set forth.

4. The combination of the pan A, extension B, and boiler E, substantially as shown and described.

92,465.—WILLIAM NEEDHAM and JAMES KITE, Vauxhall, England.—*Apparatus for Depurating Liquids.*—July 13, 1869.

Claim.—1. Securing filtering-paper from breakage under high pressure, by the use of plane diaphragms and textile fabrics, applied substantially as herein set forth.

2. Forming continuous supply and discharge conduits, by simple contact of the frames, substantially as described and shown.

92,466.—JOHN ORM, Paducah, Ky.—*Circular-Saw Mill.*—July 13, 1869.

Claim.—The device herein described, for guiding and controlling the lateral motion of a circular-saw mill-carriage, consisting of the parts *m*, *n*, R, P P, in combination with the feeding guide-bar F, when the same are constructed to operate substantially in the manner and for the purpose set forth.

92,467.—AMOS T. PEIRCE, Fair Haven, Mass.—*Bowling-Alley.*—July 13, 1869.

Claim.—1. The construction of a bowling table or alley with a pit, B, having an inclined bottom leading into an inclined trough, E, which trough is provided at its depressed end with a spring-stop, R, and an elevator, N, whereby balls which have been bowled at the pins will return toward the front end of the table or alley, and may be raised and deposited into a receptacle, C, substantially as described.

2. The spring-stop R, constructed with a ledge, *r*, and applied to the depressed end of a ball-trough or conveyor, E, in combination with an elevator, N, substantially as described, and for the purposes set forth.

3. The elevated receiving-trough C, provided with a tilting-lip, *c*, in combination with a ball-elevating box, N, substantially as and for the purposes described.

4. The vertically movable suspension-board G, having the pins *a* connected to it by cords *b*, and springs *b′*, in combination with the vertically movable perforated centering-board H, said boards being suspended, guided, and operated substantially as and for the purposes described.

5. The combination of setting-up devices, constructed so as to operate substantially as described, with ball returning and lifting devices; said parts being connected to a pulley, *q*, or its equivalent, in such manner that the two operations of setting up the pins *a* and lifting the balls can be effected at one and the same time, substantially as described.

6. Pins *a*, which are hung from a setting-up board, G, in combination with a vertically movable perforated centering-board, H, substantially as described.

92,468.—BENJAMIN D. REED, Westfield, Mass.—*Butter-Knife Rest.*—July 13, 1869.

Claim.—The combination of the upright forked rest A and shank B, with spring-tongue C, the parts being arranged and constructed so that the forked rest A can be turned horizontally, when the device is set upon a plate or dish, substantially in the manner and for the purpose set forth.

92,469.—JACOB REESE, Pittsburgh, Pa.—*Method of Making Bands for Shingle-Bundles.*—July 13, 1869.

Claim.—1. A machine cut and punched shingle-strip or bale-fastening, made substantially in the manner described, from sheet as distinguished from hoop iron.

2. The combination, substantially as described, of the vibratory cutter *n*, gauge *n′*, and adjustable punches *s s*, with the stationary cutter *b′*, provided with holes *s′ s′*, for the purposes hereinbefore set forth.

92,470.—JOSHUA REGESTER, Baltimore, Md.—*Rotating Bell and Bell-Wheel.*—July 13, 1869.

Claim.—1. Fastening the bell to its yoke by means of the keys *c c*, substantially as described, and for the purpose set forth.

2. The groove in the hub of the bell, in combination with the groove in the yoke, and with the keys *c c*, substantially as described.

3. The combination of the metal hub, having sockets, the wooden spokes, and the overlapping socket-

ed flanged felloes, the same constituting an improved bell-wheel, as set forth.

92,471.—George L. Richardson and James C. Moody, Brunswick, Me.—*Picker-Cushion for Looms.*—July 13, 1869.

Claim.—The ring A, with flange *a*, nails *e*, and projections *d*, also having nails, when applied to a picker-cushion, as herein set forth.

92,472.—Horace T. Robbins, Boston, Mass.—*Umbrella-Frame.*—July 13, 1869.

Claim.—The supports *i*, in combination with the ribs *g*, and stretchers *f*, for the purpose of strengthening the frames of umbrellas and parasols, substantially as described.

92,473.—Cyrus Roberts and John A. Throp, Three Rivers, Mich.—*Horse-Power.*—July 13, 1869.

Claim.—1. The arrangement of the grease-plate E upon the bed-plate, between the upper gears and bevel-wheels, substantially as and for the purpose set forth.

2. The combination of the frame, the bed-plate, the bevel-wheel, and the haugers, with the longitudinal line-shaft and its pinion, all constructed and arranged as set forth, for joint operation.

3. The pivoted boxes *d*, in combination with the line-shaft D and bevel-wheels C^1 d^2, substantially as and for the purpose set forth.

4. The combination, as set forth, of the bed-plate, the open-bottomed hangers, and the pivoted boxes, with line-shaft, all these parts being constructed for joint operation, as described.

5. The combination of the thrust-brace F, the tension-brace G, and the holding-down brace H, intersecting the thrust-brace, all constructed for joint operation, substantially as set forth.

92,474.—Cyrus Roberts and John A. Throp, Three Rivers, Mich.—*Horse-Power.*—July 13, 1869.

Claim.—1. A line-shaft, extending outward at the rear of a horse-power, supported in a box or bearing below the bed-plate, and a bearing on the rear axle substantially as described, and for the purpose of enabling the shaft to be hung at any desired angle, as set forth.

2. A hinged rear frame, carrying a tumbling-rod, connected with the line-shaft by a pivoted coupling, substantially as described, and for the purpose of enabling the angle of the tumbling-rod and line-shaft to be varied, as set forth.

3. The combination of the frame, the bed-plate, and the diagonal braces C^2, connecting the frame and bed-plate, all constructed for joint operation, substantially as set forth.

4. The combination of the frame, the thrust-brace H, the tension-rod H^1, the chain H^3, and the fastening-stakes h^2 h^4, all constructed for joint operation, substantially as set forth.

5. The combination, substantially as set forth, of a rigid thrust-brace and a flexible tension-brace.

92,475.—Cyrus Roberts and John A. Throp, Three Rivers, Mich.—*Horse-Power.*—July 13, 1869.

Claim.—1. The combination of the frame, the longitudinal line-shaft, and the inclined bed-plate, all constructed and arranged substantially as set forth, for joint operation.

2. The combination, with the bevel-wheel, of the adjustable friction-roller, arranged above the bevel-pinion and line-shaft, and the adjustable side-roller, as constructed and arranged for joint operation, as set forth.

3. The combination, with the bevel-wheel E, of the vibrating friction-roller e^4, and adjustable stop, as set forth.

4. The combination of the hinged frame F, rod *f*, and catch *f'*, with the frame of a four-wheeled horse-power, so arranged as to rest upon two wheels when in operation, substantially as set forth.

5. The adjustable transverse braces G G', for securing the machine in position when in operation, substantially as described, constructed, and arranged.

92,476.—Samuel S. Roberts, Elizabeth, Pa.—*Coal-Loading Apparatus.*—July 13, 1869.

Claim.—1. A dumping frame or tipple, *a*, adjustable so as automatically to dump the coal from the car at any desirable elevation, and provided with hooks, *c*, which, engaging a fixed part of the frame, prevent the tipple and car from swinging forward, and also provided with a hoisting-apparatus, substantially as described.

2. A chute or screen, *d*, adjustable so as to be raised or lowered at either end separately, or at both ends together, in combination with a tipple, *a''*, constructed and operated substantially as and for the purposes set forth.

92,477.—William Robson and George W. Robson, Cincinnati, Ohio.—*Still for Alcoholic Spirits.*—July 13, 1869.

Claim.—1. The described double distillation, first, with the ordinary steam-distillery, and, secondly, with the finishing-still L, of copper, heated by fire, or by fire and steam combined.

2. The close low-wine tank or reservoir I, between the steam-distilling worm-tub and the copper or finishing still, to receive the low-wine from the steam or other primary distillation, and to deliver the same into the said finishing-still.

3. While disclaiming the general principle of introducing purifying or flavoring matters between the still and condenser, we claim the construction and arrangement of the drum K, and removable colanders *k k*, as and for the purposes herein shown and described.

4. The low-wine worm F, reservoir I, finishing-still L, high-wine worm P', tester or separator Q, and low and high wine receivers S and T, with their described or equivalent accessories, the whole being combined and operating substantially as set forth.

92,478.—Henderson Ross and David F. Agnew, Pittsburgh, Pa.—*Furnace for Manufacturing Iron and Steel.*—July 13, 1869; antedated June 30, 1869.

Claim.—The extension of the water-chamber above the water-level, said water-chamber being constructed, arranged, and operating substantially in the manner and for the purpose herein described and set forth.

92,479.—Charles B. Sawyer, Fitchburgh, Mass., assignor to himself and Frank G. Allen, Providence, R. I.—*Dough-Kneader.*—July 13, 1869.

Claim.—The improved kneading-machine herein described, consisting of the revolving-pan H, the mixers E and G, and the crank-shaft D, with the necessary frame-work and supports, the whole arranged and operating substantially as set forth, for the purposes specified.

92,480.—Thomas Shaw, Philadelphia, Pa.—*Apparatus for Shotting Metals.*—July 13, 1869; antedated April 30, 1869.

Claim.—The blowing of molten metals in a fountain into the air, whereby they are shotted, in the manner and for the purpose substantially as set forth.

92,481.—Joseph Shearer and M. B. Armstrong, Timbersville, Ill.—*Cotton-Seed Planter.*—July 13, 1869.

Claim.—1. In combination with the adjustable bed-piece or frame A, two ridging-plows, arranged in front of the drill-tooth, and a seed-distributer.

2. The rake F, in combination with the ridging-plows C C and drill-tooth D, substantially as set forth.

3. In combination with a device for drilling or planting seed, an adjustable scraper or rake, supported by means of elastic or yielding rods, or their equivalents.

4. In combination with a device for drilling or planting seed, a rake or scraper, for covering the seed, made adjustable, and located between the drill-tooth and roller.

5. Supporting the rake or scraper of a seed-drill against backward strain by connecting it with the shanks of the ridging-plows.

6. The combination, in a seed-drill, of two ridging-plows, a drill-tooth, a rake, and a roller.

92,482.—Corelli W. Simpson, Bangor, Me.—*Book-Holder.*—July 13, 1869.

Claim.—A book-holder, constructed with bar A, spring-clasps B B, with the holding-device as constructed, with the lever *b*, springs *c*, and arms *f g*, and arranged to operate substantially in manner as and for the purposes specified.

92,483.—Albert Sinclair, West Waterville, Me.—*Broom.*—July 13, 1869.

Claim.—The rubber cylinder *a*, when applied to a broom, substantially as and for the purposes herein described.

92,484.—Christian Smith, Bellaire, Ohio, assignor to himself, August Briel, and Godfrey Rusck.—*Process of Tanning Skins.*—July 13, 1869.

Claim.—The within-described process for tanning leather, substantially as set forth.

92,485.—William H. Smith, Newport, R. I.—*Velocipede.*—July 13, 1869.

Claim.—1. Clutch-pulleys *a a*, applied to the axle A′ of the driving-wheel A, and operated by means of cords and pulleys, and reciprocating treadles, which are applied to adjustable guides *b*, substantially as described.

2. The adjustable treadle-guides *b b*, pivoted to axle A′, at their lower ends, and connected at their upper ends by a slide, *d*, and screw *d′*, to a segment, D, substantially as described.

3. Spring *g*, applied to the steering-lever, substantially as described.

4. The spring *t*, applied between the reach E and pivoted standard H, substantially as set forth.

92,486.—Enos Stimson, Montpelier, Vt.—*Door-Spring.*—July 13, 1869.

Claim.—1. The combination and arrangement of slotted ratchet D, spring E, hook F, and link G, in manner and for the purposes substantially as herein set forth and described.

2. The combination and arrangement of slotted ratchet D, spring E, hooks *i i*, and crank-bar H, substantially as herein set forth and described.

92,487.—Paul Emil Louis Wilhelm Stockmann, Keppel street, Russell Square, England.—*Tent.*—July 13, 1869; patented in England September 21, 1868.

Claim.—1. The tent-frame, composed of feet *c* d^3, uprights *a d*, longitudinal tubes or rods *b c*, and stretchers or braces *f g*, combined and arranged substantially as shown and described, for the purposes set forth.

2. The tent covering, composed of the double roof *i j* and separate sides *k k*, combined and arranged substantially as shown and described, for the purposes set forth.

3. The feet *c* d^3, constructed as shown and described, in combination with the posts or uprights *a d* of a tent-frame, as and for the purpose set forth.

4. The side covers *k*, partially covering the vertical walls of the tent, and suspended by hooks k^2 k^2, or their equivalent, substantially as herein shown and described.

5. The combined arrangement of the fastenings k^1, i^3, and *j′*, with the side coverings *k*, outer covering *i*, and under covering *j*, substantially as and for the purposes set forth.

92,488.—David M. Strain, Jr., Des Moines, Iowa.—*Clothes-Pin.*—July 13, 1869.

Claim.—The tapered pin A, with a hole, B, in the small end, and a slot, C, in the large end, to be used in connection with the ring D, and a line, wire, or rod, for the purposes specified.

92,489.—B. F. Sturtevant, Boston, Mass.—*Pressure-Blower.*—July 13, 1869.

Claim.—1. A central outlet-blower, having its deflecting-plates extended over the ends of the fan-wheel blades, and between them and the blower-case, substantially as and for the purpose specified.

2. A compounded blower, made up of one or more blowers, having central inlet and delivery passages, diaphragms, and deflecting-plates, extending over the ends of the fan-wheel blades, combined with a tangential delivery-blower, substantially as described.

92,490.—Benjamin F. Sturtevant, West Roxbury, Mass.—*Blast-Apparatus.*—July 13, 1869.

Claim.—An air-blast apparatus, consisting of the combination, with a rotary blower, of the heater or cooler, constructed and arranged for mutual operation together, substantially as described.

92,491.—Robert F. Tompkins, New York, N. Y.—*Machine for Cutting Bead-Miters.*—July 13, 1869.

Claim.—The knife or cutter D, adjustable fences *h h*, with the angular guides or slides *m m*, frame B, guide-plates *l l*, when all are constructed and arranged to operate for the purposes hereinbefore set forth and described.

92,492.—William F. Trautman, Llewellyn, Pa.—*Extension-Ladder.*—July 13, 1869.

Claim.—1. The pivoted frame I and ropes R R′, arranged and operating substantially as described, for the purpose of bracing the ladder when extended, as set forth.

2. The catches T and springs *r*, in combination with the upper section A and ropes R R′, for the purpose of preventing end motion of the ladder when placed in position, substantially as described.

3. The combination of the sockets S S′, straps F F′, pins N N′, and sections A B, when arranged to operate substantially as described, and for the purpose of forming a step-ladder, in the manner set forth.

92,493.—Elbridge G. Turner, New Bedford, Mass.—*Signal-Lantern.*—July 13, 1869.

Claim.—The combination of lantern A′, red light B′, sliding-eye C′, screw-hooks D′ D′, sockets E′ E′, handles F′ F′, lamp G^2, and screw-cap H^2, all operating as and for the purpose set forth.

92,494.—William Van Anden, Poughkeepsie, N. Y.—*Machine for Making Railroad-Chairs.*—July 13, 1869.

Claim.—The pins *c c*, when formed of unequal length, and arranged as described, for the double purpose of keeping the spike-holes open during the process of swaging, and for forming a recess in the solid metal, as and for the purpose set forth.

92,495.—John M. Walker, Rossville, Pa., assignor to himself and John C. Hollinger, same place.—*Horse Hay-Fork.*—July 13, 1869.

Claim.—The within described hay-fork, consisting of the tines A, shank B, ears C, bar E, catch G, and dowel L, when constructed and arranged substantially as and for the purpose specified.

92,496.—G. A. Watkins, Cavendish, Vt.—*Machine for Pressing the Seats and Backs of Chairs and Settees into their Frames.*—July 13, 1869.

Claim.—1. The rising and falling or reciprocating table B, operated by the screw C, or an equivalent means, in connection with the adjustable lid or top G of the frame A, all constructed and arranged to admit of the inserting or pressing the frame E within the frame D, and, simultaneously therewith, of the clamping and straining of the seat-fabric F between the said frames, substantially as shown and described.

2. The yielding guide-pins *a e*, when arranged and used in connection with the parts above described, for the purpose specified.

3. The movable clamps H, or their equivalents, attached to the lid or top G, and arranged, in relation with the opening *d*, for holding the inner frame E to the under surface of the lid or top G, substantially as set forth.

4. The combination of the lid or top G, rising and falling table B, movable clamps H, and the guide-pins *a e*, all arranged to operate in the manner substantially as and for the purpose specified.

92,497.—J. Bertram Webster, Stockton, Cal., assignor to himself, W. E. Greene, and Henry E.

WINSLOW, same place.—*Composition for Tobacco-Substitute.*—July 13, 1869.

Claim.—The composition above described, for the purpose set forth.

92,498.—GEORGE WELLS, Bethel, Conn.—*Work-Table Implement and Spool of Thread Combined.*—July 13, 1869.

Claim.—1. The combination, with a thread-cutter composed of a plate or stock provided with one or more cutting-edges, of a reversible spring, whereby the same is adapted to be secured to a spool of thread, substantially as herein described and shown.

2. The combination, with a thread-cutter and reversible spring, adapted to be attached to a spool, of a cutting-blade, similar to the blade of a knife, arranged to operate substantially as described and shown.

3. The combination, with a thread-cutter, adapted to be secured to a spool, of a thread-retainer, *a*, substantially as described and shown.

4. The combination, with a thread-cutter, of a projecting-plate, P, formed as an ear-spoon or stiletto, substantially as and for the purposes specified.

5. The combination, with a thread-cutter adapted to be secured to a spool, of a worsted needle-threader, *s*, substantially as described and shown.

6. The combination, in one implement, of the blade B, projecting plate P, reversible spring H, and stock C, the latter provided with the cutting-edges *c c c' c'*, thread-retainer *d*, and needle-threader *s*, substantially as herein described.

92,499.—GREENLEAF A. WILBUR, Skowhegan, Me.—*Car-Starter.*—July 13, 1869; antedated December 4, 1868.

Claim.—The sectional cog-wheels, carrying double pawls of described construction and operation, and which gear into double ratchet-wheels on the axis, the whole being moved by the sliding-frame, with its ratchet-bars and attachments, substantially as described, and for the purpose set forth.

92,500.—D. H. WILGUS and S. M. DENNY, Harveysburgh, Ohio.—*Harvester.*—July 13, 1869.

Claim.—The treadle-lever E, arm *p*, rod *j*, shipper *h*, and clutch *c*, arranged and operating in combination with deliverer M and apron H, substantially as and for the purpose described.

92,501.—JOSEPH WITMER, Niagara, assignor to himself and TOBIAS WITMER, Williamsville, N. Y.—*Trestle.*—July 13, 1869.

Claim.—1. The hoops D, arranged below the beam A, and encircling the upper ends of the diverging legs B, with the beam A between them, substantially as and for the purpose described.

2. The arrangement and combination of the beam A and the legs B B with the hoops D D, and braces C C, and the tenon or iron ring or clasp *c*, and the key *e*, for the purposes substantially as herein set forth.

92,502.—THOMAS B. WORRELL, Frankford, Pa.—*Door-Lock.*—July 13, 1869.

Claim.—Two or more interlocking bars, J, having recesses *h*, in combination with the locking-bolts B, the said bars and bolts being constructed and arranged substantially as described, and operating in relation to each other as above set forth.

92,503.—ELIAS M. WRIGHT, Castile, N. Y., assignor for one-half to GARDNER HERRICK, Albion, Mich.—*Three-Horse Equalizer.*—July 13, 1869.

Claim.—The pivoted eam-bar A, having equalizing curves, *i*, in combination with the connecting clevis C, and draught-chains D and D', when constructed, arranged, and used in connection with a three-horse team, and with a plow or other object to be drawn, substantially as and for the purpose set forth.

92,504.—JAMES ARMSTRONG, Bucyrus, Ohio.—*Post-Auger*—July 13, 1869.

Claim.—1. The machine for boring post-holes, provided with the mechanism for transporting it over the ground, and the mechanism for giving it rotary motion, all arranged as described, for the purpose specified.

2. The post-hole auger, constructed of the parts *f* and *f'*, and hinged together, substantially as and for the purpose described.

3. The combination, with the auger constructed as described, of the sleeve Q, handle *r*, and slide *q'* for operating the slide, substantially as and for the purpose described.

4. In combination with the auger, constructed as described, the ratchets and pawls *d e*, rack O, toothed wheel P, sleeve Q, angular slide *q'*, and hand-lever *r*, all arranged and operating as described, for the purpose specified.

5. The combination, with the wheels B, of the spring-bolts b^1, spring-catches b^2, and pins b^4, substantially as and for the purpose described.

6. The guiding-wheel C, constructed as described, in combination with the toothed wheel E and frame A, substantially as and for the purpose described.

7. The sweep *u*, provided with the joint *w*, with means for connecting the horse to the frame for drawing the machine over the gound, substantially as and for the purpose described.

8. The table I, provided with means, as described, for connecting it to frame A, and for adjusting it so as to present the auger in a vertical position, substantially as and for the purpose described.

92,505.—GEORGE ATKINS, Sharon, Pa.—*Blast-Furnace.*—July 13, 1869.

Claim.—A blast-furnace, provided with gas-pipes B, which lead from its upper part into tuyeres *a*, at the lower part of the furnace, and with the blast-pipes C, all arranged substantially as described, to utilize the gases that escape from the ore or fuel, as set forth.

92,506.—SAMUEL AULT, Bridgetown, near Cannock, England.—*Plastering-Trowel.*—July 13, 1869; patented in England November 2, 1868.

Claim.—The improvements in plastering-trowels, hereinbefore described, and illustrated in the accompanying drawing: that is to say, making, on the bottom of the holder of plastering-trowels, a tapering dovetail or connecting plate, and making, on the upper side of the plate of the said trowels, a correspondingly tapering hollow dovetail or seat, to receive the said dovetail or connecting-plate, for the purpose of enabling the holder to be readily connected to or disconnected from the trowel-plate, substantially as described and illustrated.

92,507.—HENRY AXTELL, Yreka, Cal.—*Wire-Cutter.*—July 13, 1869.

Claim.—The improved wire-cutter, constructed as described, of the pivoted parts A B, provided respectively with the cutting-edges *d e*, arranged eccentrically to each other, and on a line with the side of the tool, as herein described, for the purpose specified.

92,508.—JOHN A. BAILEY, Detroit, Mich.—*Excavating-Machine.*—July 13, 1869.

Claim.—1. The combination of the scoop with the pistons, working in cylinders by means of water or other fluids, when directly connected thereto, for effecting the to and fro movement of the scoop, substantially as specified.

2. The combination, with the cylinders C, of the guides E, and arm on slides D, when arranged substantially as specified.

3. The combination of the cylinders, arms, and slides, with the walking-beam, substantially as specified.

4. The combination of the walking-beam, supporting the scoop and its operating devices, with the cylinders L and L^1, or their equivalents, arranged to impart the vertical movements thereto, support the weight of the same and the operating mechanism, and for the axis of oscillation of the whole, substantially as specified.

5. The combination, with the scoop and slide D, of the lever *b d*, arm *e*, catch *f*, and adjustable stud *h*, all substantially as specified.

92,509.—THOMAS BARNES, Wayne, Mich.—*Fence.*—July 13, 1869.

Claim.—The panels, provided with the inclined slots G, in the transverse strips, combined with the posts having the studs H, as specified.

92,510.—Jeremiah Barney, Perry's Mills, N. Y.—*Turbine Water-Wheel.*—July 13, 1869.

Claim.—1. The buckets D, constructed as described, with their upper portions vertical and their lower portions extending spirally downward, the former projecting beyond the latter, and all arranged and operating as described, for the purpose specified.

2. An improved water-wheel, formed by the combination of the wheel B, casing C, provided with an outwardly projecting flange upon its upper edge, buckets D, spout E, and stationary casing F, with each other, substantially as herein shown and described, and for the purpose set forth.

92,511.—Isaac J. Baxter, Peekskill, N. Y.—*Coal-Stove.*—July 13, 1869.

Claim.—1. In combination with a stove, for heating tailors' "irons," the corrugated plates I, more or less in number, arranged substantially as described.

2. The construction, arrangement, and combination of the ash-pit B, fire-box D, top E, and oven F, substantially as and for the purpose herein shown and described.

92,512.—John T. Bennett, Lenora, Minn.—*Wagon-Brake.*—July 13, 1869.

Claim.—The plate *n*, ring *z*, grooved pulley *o*, cord *m*, rods *h* and *i*, band *j*, sliding on the reach *k*, pivoted levers *p p*, rods *q q*, brake-bar *a*, brake-shoes *b*, guide-plates *d*, springs *e*, and rods *g g*, all combined, arranged, and operating as set forth and shown.

92,513.—John Carey, Victoria, Mo.—*Spring-Fan Attachment.*—July 13, 1869.

Claim.—The combination of the fan B, with the duplicate propelling or clock mechanism, the stock A, &c., and clamp D, arranged substantially as specified.

92,514.—Erastus H. Clark, Appleton, Wis.—*Saw-Buck.*—July 13, 1869.

Claim.—The saw-buck A, when provided with the jaw C and clamps G H, all the parts being constructed, arranged, and operating substantially as and for the purposes described.

92,515.—P. J. Clark, West Meriden, Conn.—*Lantern.*—July 13, 1869.

Claim.—The guard-wires of the lantern, when formed in pairs, each pair being composed of one wire, bent at the center *b*, to form shoulders *c*, to which the cap or canopy is secured, by means of the hooks *a*, fitting under said shoulders, whereby the pairs of guards are adapted to be expanded, to accommodate lantern globes of different diameters, as herein set forth and shown.

92,516.—Edward Clarkson, Carbondale, Pa.—*Pipe-Cutter.*—July 13, 1869.

Claim.—The arrangement of the threaded tubular extension C, the thumb-nut E, and cutter I, with relation to the parts A B of the stock, and the feeding-screw G, as herein described, for the purpose specified.

92,517.—E. H. Clinton, Iowa City, Iowa.—*Grain-Binder.*—July 13, 1869.

Claim.—1. The combination of the shaft C, wheel D, pins d^1 d^2, slides E and F, drop-pins c^1 f^1, inclines e^2 f^1, three-armed plate H, pivoted stops h^1, and springs h^2, with each other, substantially as herein shown and described, for the purpose of giving motion to the various parts of the apparatus at the proper times, as set forth.

2. The combination of the connecting-bar I, gear-wheel J, gear-wheel L, forked arm M, forked block T, short crank U, connecting-bar V, hooked arm W, and spring-plate Y, with each other, and with the vertical plates K and N, and needle S, for the purpose of forming the loops of the knot, substantially as herein shown and described.

3. The combination of the connecting-bar F′, gear-wheels D′ E′, crank B′, connecting-bar A′, and hook Z, with each other, and with the gear-wheel J, hooked block T, and spring-plate Y, in connection with the needle S, for forming the bow of the knot, substantially as herein shown and described.

4. The combination of the connecting-bar G′, crank H′, shaft I′, coiled spring J′, crank K′, connecting-bar L′, and knife M, with each other, and with the slide F, for the purpose of cutting off the twine at the proper time, substantially as herein shown and described.

5. The combination of the connecting-bar O′, connecting-iron P′, and slotted plate Q′, having a projecting pin attached to its forward end, with each other, and with the crank K′, substantially as herein shown and described, for the purpose of detaching the bow of the knot from the hook Z.

92,518.—W. W. Cole and T. McGhee, Eudora, Kans.—*Potato-Digger.*—July 13, 1869.

Claim.—1. The combination of the plow E *e′*, constructed as described, frame F, and adjustable connecting-rods G, with each other and with the axle B, substantially as herein shown and described, and for the purpose set forth.

2. The combination of the knives P and knife-bar R, with the frame F and revolving fingers or arms L, substantially as herein shown and described, and for the purpose set forth.

3. The combination of the adjustable standard S, lever R, and long loop or staple T, with each other, and with the axle B and frame F, substantially as herein shown and described, and for the purpose set forth.

92,519.—Joreph H. Davis, Chilicothe, Mo.—*Adjustable Bracket.*—July 13, 1869.

Claim.—1. An adjustable bracket, A, pivoted to the strip B, so that it can be transversely and longitudinally adjusted, substantially as herein shown and described.

2. The combination of the bracket A, cam *g*, and cams *j k*, with the strip B, screw C, notched pin F, and nut *h*, all combined and operating substantially as herein shown and described.

92,520.—M. E. Davis, Folsom, Cal., administratrix of the estate of M. C. Davis, deceased.—*Can-Opener.*—July 13, 1869.

Claim.—1. The combination of the radial arm A, having the center-pin B, with the handle D, supporting the cutter E, and adjustably arranged thereon, substantially as and for the purpose specified.

2. The cutter E, arranged to be thrust through the metal in a direction perpendicular thereto, and adjusted to the inclined position relatively to the same when cutting, substantially as and for the purpose specified.

92,521.—Edward Dorr, Rockford, Ill.—*Horse-Rake.*—July 13, 1869.

Claim.—1. The combination of the hinged rake-teeth, constructed as described, with the pivoted spring-shoes, constructed and operating as described.

2. The combination, substantially as set forth, of spring-shoes and hinged rake-teeth with elevating-belts, working between and vibrating with the teeth.

3. The combination of hinged rake-teeth and elevating-belts with the elevating-mechanism operated by the driver, as set forth.

4. The combination of the elevating-belts with sprocket-wheels, acting on their under surfaces between their supporting-pulleys, substantially as set forth.

5. The combination, substantially as set forth, of the driving-wheels, the main frame, and the hinged teeth, and carrying-belts in front of the frame, with the rigid tongue or perch, the steering-wheel, the driver's stand, and the lifting-lever in rear of the main frame, for the purposes specified.

6. The combination of inclined gathering-teeth and endless belts or conveyers with a main frame, mounted on wheels and propelled from behind, substantially as set forth, to discharge the gathered crop, simply by backing the machine.

92,522.—Samuel A. Fite, Philadelphia, Pa., assignor to himself and John Mansur, same place.—*Necktie-Retainer.*—July 13, 1869.

Claim.—The necktie or collar holder, constructed as described, of the curved wire A B C, the curved spring-wires F F, and the curved spring G, both ends of G and the outer ends of F being connected

to the spring parts C of the wire A, by means of the hoods E, all arranged as described, for the purpose specified.

92,523.—William Gadd and John Moore, Manchester, Great Britain.—*Loom*—July 13, 1869.

Claim.—1.—The combination of the shell-cams, the bowls *e g*, and the radius-link *h*, with the main shaft *a*, and the lay, for the purpose of operating the latter, substantially as herein shown and described.

2. The combination of the ratchet-wheel *i*, pawl *l*, pulleys *j*, straps *k k*, springs *h h e e*, and cords *d d*, with the warp-beam *b*, substantially as described, for the purpose specified.

92,524.—William H. Goodale, Colton, N. Y.—*Gate.*—July 13, 1869.

Claim.—1. The combination of the bar F with the grooved under side of the top bar *b'*, of the gate B, and with the pulley E, substantially as herein shown and described, and for the purpose set forth.

2. The combination of the bar H with the bar F, pulley E, and projecting end of the bar *b'*, substantially as herein shown and described, and for the purpose set forth.

3. The combination of the weight I with the projecting end of the bar *b'*, with the pulley E, and with the bar F, substantially as herein shown and described, and for the purpose set forth.

4. The arrangement of the pulley D with the bar F, post C, and top bar *b'* of the gate, substantially as herein shown and described, and for the purpose set forth.

92,525.—George R. Groot, Cincinnati, Ohio.—*Carriage-Spring.*—July 13, 1869.

Claim.—The combination of the saddle-clips E, and half-elliptic spring F, with the side or parallel springs D and body or box C of a three-spring carriage, whether said saddle-clips E be placed above or below the upper parts or halves of the said side-springs D, and whether the ends of the said spring F be made with or without scrolls, substantially as herein shown and described, and for the purpose set forth.

92,526.—Homer Hamilton, Youngstown, Ohio.—*Blast-Heating Furnace.*—July 13, 1869.

Claim.—1. The air-heating apparatus, consisting of the divided base-pipe H, and of the upright pipes C and G, all arranged in such manner that the air will pass from one compartment of the base-pipe, through all the vertical pipes, into the other compartment of the base-pipe, substantially as herein shown and described.

2. Forming the rounded enlargement on the upper end of each pipe, G, to prevent friction of the air, as specified.

3. So constructing an air-heating apparatus that the air is, in a thin sheet, exposed to the heated surface of a pipe, as specified, the said air surrounding the pipe or tube in which it was conducted to the upper end of the heated pipe, as set forth.

92,527.—H. T. Hartman, Norwood, Va.—*Fire-Escape Ladder.*—July 13, 1869.

Claim.—1. The combination and arrangement of the frame H, supporting-braces L, extension parts B and C of the ladder and supporting-braces S, with each other, substantially as herein shown and described, and for the purpose set forth.

2. The combination and arrangement of the crank-shafts E and M, ropes F and P, pulleys G and R, and bail I, with the supporting-frame H, and with the lower section B of the ladder, substantially as herein shown and described, and for the purpose set forth.

3. The combination of the life-car U, constructed as described, the rope V, and roller or pulley W, with the extension parts B and C, of the ladder, substantially as and for the purpose herein set forth.

92,528.—Richard C. Hemmings, New Haven, Conn.—*Velocipede.*—July 13, 1869.

Claim.—1. In combination with a single-wheel velocipede, the reach C, with its guide-pulleys *e e*, and traverse-wheel B, arranged substantially as and for the purposes herein shown and described.

2. The combination of the traction-wheel A with the traverse-wheel B, substantially as and for the purposes herein shown and described.

92,529.—Isaiah Henton, Shelbyville, Ill.—*Cultivator.*—July 13, 1869.

Claim.—The combination of the pivoted levers P, pivoted cross-bar R, and chains Q, with each other and with the pivoted bars I and plow-beams E, substantially as herein shown and described, and for the purpose set forth.

92,530.—M. C. Heptinstall, Enfield, N. C.—*Fire-Tong.*—July 13, 1869.

Claim.—The combination with tongs having the recess *b* in one prong, and the projection *c* on the other, of the plate *d*, when secured thereto by the pivot-bolt *f* and a screw, *e*, substantially as specified.

92,531.—Henry O. Hooper, Diamond Springs, Cal.—*Door-Clamp.*—July 13, 1869.

Claim.—The arrangement of the clamps C C, carrying the wheels F, and connected with the supporting bed-pieces B B, by means of the tongues and grooves, the right and left screw-rod D, the worm-wheels E, and the screws *c c*, formed on the central shafts F, all operating in the manner described, for the purpose specified.

92,532.—Jabez Jenkins, Philadelphia, Pa.—*Hatchet.*—July 13, 1869.

Claim.—The hatchet, when constructed as herein shown and described, as a new article of manufacture.

92,533.—William H. Joeckel, New York, N. Y.—*Black Board.*—July 13, 1869.

Claim.—An endless black-board, consisting of the prepared belt D, fitted around rollers, substantially as described.

92,534.—F. Jones, Burlington, Iowa.—*Combined Collar and Hames.*—July 13, 1869.

Claim.—The groove or recess *a*, formed on the under side and along the inner edges of the hames B B, one side of the collar A being secured therein, and the other attached to the flat under surface of said hames, as and for the purpose specified.

92,535.—J. E. Jones, Wiretown, N. J.—*Elastic Tackle-Block.*—July 13, 1869.

Claim.—The tackle-block, having its cheeks, above the journal B, slotted to receive the elastic cushions E, which are adapted to be compressed between the arms *a* of the strap D, and the upper end of the slot, all arranged as described, for the purpose set forth.

92,536.—J. R. McAlister, Heuvelton, N. Y.—*Carriage*—July 13, 1869.

Claim.—1. Suspending the front part of the box, body, or bed of a vehicle, by means of braces, and rings or straps attached to the upper part of the front spring, all substantially as and for the purpose shown and described.

2. The stay-rod *d*, in combination with the spring braces and rings, substantially as and for the purpose shown and described.

92,537.—Joseph Melick, New Germantown, N. J.—*Vapor-Burner.*—July 13, 1869.

Claim.—The upward or downward projecting cap *e*, formed on the vapor-burner, substantially as described, to close effectually over or into the wick-tube, as set forth.

92,538.—Edwin Norton, Brooklyn, N. Y., assignor to himself and O. W. Norton, same place.—*Spice-Can.*—July 13, 1869.

Claim.—The combination, with the body A and perforated removable cap B, of paper disks C, or disks of other similar substance, when arranged substantially as specified.

92,539.—Thomas O'Neill, New York, N. Y.—*Outhaul for Booms.*—July 13, 1869.

Claim.—Connecting the sliding-dog B of the out-

haul, on the outer end of the boom, by means of a rope or chain, F, with a sliding-dog, D, arranged on the inner part of the boom, at the under side of the same, so that the outhaul can be operated from deck, as specified.

92,540.—Moses A. Page, La Crosse, Wis.—*Washing-Machine.*—July 13, 1869.

Claim.—The combination of the tub A, with its revolving upright rollers B, arranged around the interior circumference, with the frame C carrying the pendent rubbers H, arranged to operate with relation to the rollers B, as herein shown and described.

92,541.—S. T. Peat, Florence, N. J.—*Auger-Handle.*—July 13, 1869.

Claim.—The metallic holder A, cast in one piece, with the horizontal hole *a*, for the passage of the auger-handle, the vertical passage *b*, for the reception of the auger-shank, and with the interior angular grooves *d e*, adapted to receive the trunnions *f* of the adjustable jaw C, all constructed, arranged, and operating as described, for the purpose specified.

92,542.—William F. Pough, Esopus, N. Y.—*Ice-Planer.*—July 13, 1869.

Claim.—1. The combination, with the frame A, of the cutters C, when arranged in sets of two or more, and otherwise, substantially as specified.

2. The arrangement of the cutters C, slides D, and adjusting-screws E, substantially as and for the purpose specified.

3. The cutters, connected to the sliding-blocks D, as described, and maintained in the said connection by the cross-bars B, uniting the runners, substantially as specified.

92,543.—George F. Reinhardt, Lincoln, Ill.—*Combined Drum and Oven.*—July 13, 1869.

Claim.—1. In combination with a heating-drum, the oven D, constructed with the apertures F and G, substantially as shown and described.

2. Passing the smoke and products of combustion through the oven, substantially as described.

3. The arrangement of the pipes F′, N, and N′, in combination with a combined oven and heating-drum, substantially as set forth.

92,544.—Louis Ringler, New York, N. Y.—*Ironing-Machine.*—July 13, 1869.

Claim.—1. An ironing-machine, consisting of the hollow cylinders B C, one revolving in a fixed position or bearings, and the other having a lateral motion at one end in the slotted frame, by means of a cord, *d*, lever E, and spring *c*, substantially as herein shown and described, to operate as set forth.

2. The seam-ironing attachment, consisting of the collar *e*, which has the projecting lug *f*, adjustable to a fixed position on the cylinder C, by means of the set-screw *g*, substantially as herein shown and described, to operate as set forth.

92,545.—C. C. Rowell and John Belknap, St. Johnsbury, Vt.—*Watch-Makers' Lathe.*—July 13, 1869.

Claim.—The combination of the nut *i* and jaw A, with a ball and socket joint, substantially as and for the purposes herein shown and described.

92,546.—Morris Saulson, Troy, N. Y.—*Coal-Scuttle.*—July 13, 1869.

Claim.—The combination of the removable cover H, with the body A of the scuttle, substantially in the manner herein shown and described, and for the purpose set forth.

92,547.—Joel E. Simpson, Malden Bridge, N. Y.—*Car-Coupling.*—July 13, 1869.

Claim.—1. The connecting-links F, provided with the enlarged pointed and slotted ends and the pivoted T-heads, and combined with the spring-jaws E, substantially as specified.

2. The right-angular spring-jaws E, arranged within the caps C, as described, to slide on the interior surfaces of the same, so that the drawing-force upon the links shall be mostly or wholly sustained by said caps, as herein shown and described.

92,548.—Felix Sims, Ridgeville, assignor to himself and James N. Templer, Portland, Ind.—*Feed-Cutter.*—July 13, 1869.

Claim.—The feed-cutter, constructed as described, of the feed-box B, when its bottom, *b′*, is inclined laterally from one side to the other, the pivoted concave knife C, attached to the handle D, and held in contact with the sharpening-plate F, and the mouth of the feed-box, by means of the spring E bearing against said handle, all arranged as described, for the purpose set forth.

92,549.—William Stanfield, Flora, Ill.—*Sash-Balance.*—July 13, 1869.

Claim.—In raising windows, substituting for the single-pulley wheel the shafts *e e′*, arranged as described, and furnished each with one pulley within the window-frame and one without the same, to which the sash-operating cords are attached, so as to allow the line of direction of the weight of the sash and the power applied thereto to be in a direct line, as herein shown and described, for the purpose specified.

92,550.—W. B. C. Stirling, Batavia, Ohio, assignor to himself and Dale O. Cowen, same place.—*Recording Desk or Table.*—July 13, 1869.

Claim.—The combination of the right and left screw G, and nuts E F, with the hinged adjustable tables C, and frame A of the table or desk, all constructed substantially as herein shown and described, and for the purpose set forth.

92,551.—Leland D. Vermilya, Dayton, Ohio, and William S. Reyburn and Edmond A. W. Hunter, Philadelphia, Pa.—*Lightning-Rod.*—July 13, 1869.

Claim.—The lightning-rod A, consisting of the core *a*, of angle iron, inclosed by the copper strip *b* applied thereto, and twisted with it at the same operation, so as to fit perfectly every portion of the surface of said core, and form a tight joint at the contiguous edges of the copper, as herein set forth, as a new article of manufacture.

92,552.—Charles G. Wilson, Brooklyn, N. Y.—*Cork-Extractor.*—July 13, 1869.

Claim.—An improved machine for extracting corks, formed by the combination of the series of spring-plates C D E, barbed bar H I, rack or racks *f′*, toothed lever J K, guides G, and support F, having a conical opening formed in it, with each other, substantially as herein shown and described, and for the purpose set forth.

92,553.—William Wilson, Jr., Raymond, Ill.—*Portable Field-Fence.*—July 13, 1869.

Claim.—1. An improved portable fence, formed by the combination of the panels A, supporting-braces G, coupling-boards B, whether rigid or hinged, pins C, and keys D and E, with each other, said parts being constructed and arranged substantially as herein shown and described, and for the purposes set forth.

2. The fence, when any desired panel is adapted to be converted into a gate, by means of the hinged coupling-bars B, latch-board I, catch A, pins C, and keys D and E, substantially in the manner herein shown and described.

92,554.—Henry Wolfkill, Mill Creek post-office, Pa.—*Velocipede.*—July 13, 1869.

Claim.—1. The large and small pulleys *e f*, *c d*, and *g h*, arranged as described, on the shafts H G and axle C, to receive the chains I J, and permit their adjustment, in the manner herein set forth, for the purpose specified.

2. The steering-levers E, pivoted to the front axle B, when notched, as shown, to engage with the guide-shafts *b*, arranged as herein set forth, for the purpose specified.

92,555.—Henry York, Smith's Landing, N. J.—*Steering-Apparatus.*—July 13, 1869.

Claim.—The arrangement, upon the tiller D, of the uprights C C, tiller-blocks *f f*, and drums B B, carrying the cog-wheels *d d*, adapted to engage with the pinion *b*, upon the shaft *a* of the steering-wheel, also

having its bearings in the uprights, whereby a traveling steering-gear is produced, as herein shown and described.

92,556.—Wilson Ager, Washington, D. C.—*Grain-Cleaner.*—July 13, 1869.

Claim.—1. The combination of the stones, the screen, and the grain-elevators F, or the equivalents of said devices, substantially as set forth.

2. The stones, the screen, and the grain-elevators, or their equivalents, in combination with a blast of air, substantially as set forth.

3. So arranging the machine that the weight of the grain kept within the screen will regulate the amount of scouring, or the extent to which the kernels are decorticated, substantially as set forth.

4. The adjustable slides, or their equivalents, for the purpose of discharging the grain at a greater or less distance from the shaft, substantially as specified.

5. The continuous self-feed and discharge, in connection with the cylindrical screen revolving on a horizontal shaft, substantially as set forth.

6. Passing the grain and the blast in opposite directions through the horizontal cylindrical screen, substantially as s et forth.

92,557.—William P. Alcorn, New Wilmington, Pa.—*Wagon-Brake.*—July 13, 1869.

Claim.—1. The lever F, in combination with the tooth-segment *f* and tooth-bar *d*, substantially in the manner and for the purpose described.

2. The plate *d'*, provided with tooth-projection *e*, in combination with lever F, cog-segment *f*, and tooth-bar *d'*, all arranged and operating substantially in the manner and for the purpose set forth.

3. A wagon-brake, consisting of the lever F, cog-segment *f*, tooth-bar *d'*, rods *b' b''*, lever *e*, cross-bars E, provided with stops *a a* and cross-rod *a'*, all combined, arranged, and operating substantially in the manner and for the purpose set forth.

92,558.—Edwin Allen, Norwich, Conn.—*Envelope-Gummer.*—July 13, 1869; antedated July 3, 1869.

Claim.—The arrangement of a soft and elastic or flexible packing around the outside of the spout to the gum-box or hopper, and so as to project below it, substantially as specified, and for the purpose herein set forth.

92,559.—S. W. Andrews and L. Godfrey, Greeneville, Tenn.—*Cockle-Separator.*—July 13, 1869.

Claim.—1. The arrangement of the incline I, hinged bale *e*, hopper G, and rollers C D, for the purpose of rendering the "feed" adjustable, substantially as described.

2. The arrangement and combination of the rollers C D, cog-rim *o*, screen F, and arm *f*, substantially as and for the purpose specified.

92,560.—Cornelius Aultman and Joseph Allonas, Mansfield, Ohio, assignors to C. Aultman and H. H. Taylor, same place.—*Horse-Power.*—July 13, 1869.

Claim.—1. The combination of the wedge-shaped plate *k*, the standard d^1, provided with a wedge-shaped face, k^1, and the bolt k^2, substantially as and for the purpose set forth.

2. The combination of an elastic or yielding connecting rod or shaft with the horse-power, for the purpose set forth.

3. The combination of the sheath M with the torsion rod or shaft M', for the purpose set forth.

4. The combination, with the universal joint of the driving-shaft, of the removable ribbed thimble L, which serves to connect the two parts of the joint with the pivots intersecting each other, and also to prevent straw and other substances becoming entangled with said joint, as described.

92,561.—William R. Axe, Rockton, Ill., assignor to Samuel J. Goodwin, Beloit, Wis.—*Paint-Mill.*—July 13, 1869.

Claim.—In a grinding-machine, having the hopper H, with corrugated base flange *h*, and cross-bar I, the described construction and arrangement of the concavo-convex lower disk G, having the grooved surface *g*, the shaft *e*, fixed to the cross-bar I, and rotating the hopper, the hollow shaft D, fixed to and rotating the disk G, the motive-apparatus $a\ a^1\ a^2$ B, the detachable step M, held at one end by the hook *m*, adjustable at the other by the screw *n*, and supporting, in an open socket, *r*, at or near its center, the shaft C, which is cut away to fit the socket, together with the supporting-frame A *b*, all combined and adapted to operate in connection with each other, substantially as and for the purposes set forth.

92,562.—Isaac R. Barbour, deceased, Hannibal, Mo.; William G. Barbour, administrator.—*Furnace-Grate.*—July 13, 1869.

Claim.—1. The combination of the cut-off grate C and main grate B, substantially as set forth.

2. The slotted bearings *g*, of the gudgeons of the main grate, substantially as and for the purposes set forth.

92,563.—Stephen V. Barns, Whitney's Point, N. Y., assignor to himself and Isaac G. Dundore, same place.—*Siding-Gauge.*—July 13, 1869.

Claim.—The combination of the graduated bar A with a stationary pointed leg, B, at one extremity, and the movable pointed leg C and set-screw D at the other extremity, and with the bail E between, all as herein shown and described.

92,564.—Frederick S. Barus, New York, N. Y.—*Low-Water Indicator.*—July 13, 1869.

Claim.—The combination and arrangement of the bucket *g*, vessel H, and weights E, whereby to operate the cock N, by means substantially as shown and described, and in the manner set forth.

92,565.—Benjamin F. Bee, Harwich, Mass., assignor to New York Tap and Die Company.—*Machine for Cutting Milling Tools.*—July 13, 1869; antedated July 10, 1869.

Claim.—1. The combination, in one machine, of the following instrumentalities, viz: the mandrel, to hold the blank, the pitch-wheel and index, the revolving cutting-arbor, the cutter-carriage, the profile-guide, and the directing-instrument, the whole constructed to operate substantially as before set forth.

2. The combination of the above-specified combination with adjusting-mechanism for varying the position of the mandrel relatively to the cutter-arbor, substantially as before set forth, the whole constructed to operate substantially as described.

3. The combination of the combination recited in the first claim, with adjusting-screws, to vary the position of the mandrel laterally to the cutter-carriage, substantially as before set forth, the whole being constructed to operate substantially as described.

4. The combination of the combination recited in the first claim, with mechanism for turning the blank-mandrel, substantially as before set forth, the whole constructed to operate substantially as described.

5. The combination of the combination recited in the first claim, with mechanism for causing the index to move laterally when it is moved longitudinally, substantially as before set forth, the whole constructed to operate substantially as described.

6. The combination of the said blank-mandrel, pitch-wheel, and index, revolving cutter-arbor, cutter-carriage, and directing-instrument, with a profile-guide of larger dimensions than the profile of the blank, the whole constructed to operate substantially as before set forth.

7. The combination of the said cutter-arbor, cutter-carriage, profile-guide, and directing-instrument, with mechanism to move the directing-instrument automatically over the said guide, the whole constructed to operate substantially as before set forth.

8. The combination of the directing-instrument and the mechanism for moving it automatically, by means of a flexible connection guided by pulleys, the whole constructed to operate substantially as before set forth.

92,566.—Charles H. Beeman and Edwin G. Beeman, North Fairfax, Vt.—*Churn.*—July 13, 1869.

Claim.—The arrangement of the churn C, with

partition D, lid F, bars E E, cross-bar G, button H, and staples *c* and *b*, all upon the standards B B, provided with the hooks *a a*, substantially as set forth.

92,567.—Alexis Belaieff, St. Petersburgh, Russia.—*Die for Forming Threads on Bolts.*—July 13, 1869.

Claim.—Forming the threading-dies *b c* of an oval shape in cross-section, substantially as shown and described, and for the purpose set forth.

92,568.—Edwin Bennett, Baltimore, Md., assignor to himself and William T. Gillender, Philadelphia, Pa.—*Machine for Cleaning Sand.*—July 13, 1869.

Claim.—1. The horizontally arranged washing-trough A, provided with a screen, C, and a washing-device, in combination with the horizontally arranged trough E, provided with a conveyer, F, and a screen-bottom chute, D, substantially as described.

2. The arrangement of the influx-spout *g*, and the efflux-spout *g'*, in combination with the horizontal trough E, a conveyer, F, and a screen-bottom chute, D, substantially as described.

3. The tube G, or its equivalent, applied to the conveyer F, arranged horizontally, and combined with a sand-washing machine, substantially as described.

4. The receiving-chamber *e*, in combination with a tube, G, or its equivalent, a trough, E, and a conveyer, F, substantially as described.

5. The inclined plane *e'*, over which the sand is discharged from the trough E, having its highest point above the axis of the conveyer E, substantially as described.

92,569.—S. L. Bignall, Chicago, Ill.—*Tube-Well.*—July 13, 1869.

Claim.—A tube-well, A, provided with a point, G, and wings C, said wings being provided with lips E, for loosening the earth, and with flanges D, for packing the walls of the hole, as set forth.

92,570.—Andrew C. Black, Kaukauna, Wis.—*Lamp-Crane.*—July 13, 1869.

Claim.—A lamp-crane, consisting of an arm or lever suspended from the ceiling of a room by a swivel-joint, so as to be capable of movement around an entire circle, and having a wheel on one end to facilitate its motion, and supporting the lamp at any desired point on the other end, substantially in the manner and for the purpose hereinbefore set forth.

92,571.—George W. Blake, New York, N. Y.—*Air-Trap for Steam and other Enginery.*—July 13, 1869.

Claim.—1. The combination of the three-leaved buckling-spring B, air-shaft A, valve U, and opening spring *e*, all constructed and arranged substantially as shown and described, for the purpose set forth.

2. The valve-box or plug D, resting by its flange *f* against the outer end of the nozzle E, and screwing at its inner end *g* into the hook of the nozzle, in combination with the cavity *m*, formed around the hollow portion of said plug, and openings *h*, made in the sides of the latter, substantially as shown and described.

92,572.—James M. Blanchard, Washington, D. C.—*Steam-Gauge for Heat and Pressure.*—July 13, 1869.

Claim.—A steam-gauge or pressure-indicator, combining in its construction the following elements, viz: A steam-chamber, B, arranged outside of but communicating with the steam-space of the generator; a close chamber, C, containing air or other gaseous substance, which does not liquify in cooling, placed within said chamber B, and a bent pipe, E F, of glass or of metal and glass, containing mercury or any suitable liquid to indicate the expansion of the air or gas; and a scale, to show the pressure, substantially as set forth.

92,573.—L. P. Bradley, New Haven, Conn.—*Tape-Measure.*—July 13, 1869.

Claim.—The arrangement of the spring-cylinder B, within a case, A, combined with the knob D, arranged through the bearing of the cylinder, so as to operate the bar *f*, the whole operating in the manner herein set forth.

92,574.—John Braun, Philadelphia, Pa.—*Method of Propelling Sleds.*—July 13, 1369.

Claim.—1. The vibratiug frame or chair C, hung to a sled, and having its seat above the axis on which it vibrates, in combination with pointed rods I I, operated by the movement of the seat, as specified.

2. The curved and pointed propelling-rods I and I', when hung loosely to the cranked portions *h*, of rock-spindles F and F', for the purpose described.

3. The combination, substantially as herein described, of the rocking-frame B, with the crank-spindles F and F', for the purpose specified.

4. The arms *m*, of the propelling-rods I', for the purpose set forth.

5. The arms K, hinged at their lower ends to the sled, and having handles at their upper ends, in combination with the pointed rods J, hung to the arms, all as set forth.

92,575.—Alexander G, Brawner, Frankfort, Ky.—*Levee.*—July 13, 1869.

Claim.—The described levee, consisting of an impenetrable partition set in a trench, such trench being filled and the partition embanked by suitable material when the posts of the central core extend above the embankments, and form the supports for a fence upon the same, all substantially as described

92,576.—Peter Buckley, Vienna, N. J., assignor to himself and Edwin Bulgin, same place.—*Chair.*—July 13, 1869.

Claim. The method of forming the loop, and constructing the seat and back of the chair with rattan or other material, substantially as herein shown and described, and for the purposes set forth.

92,577.—Edmund F. Burrows, Mystic River, Conn.—*Mast-Hoop.*—July 13, 1869.

Claim.—1. The arraugement of the saddle A', with reference to the gaff-jaws, and the rope C[1], for aiding in raising the hoops, substantially as set forth.

2. The arrangement of the eye-bolts, to which the upper ends of the suspending-ropes are attached, with reference to the pivot-bolt upon which the saddle turns, substantially as shown, and for the purpose set forth.

92,578.—George Burson, East Palestine, Ohio.—*Method of Retarding the Growth of Strawberry-Vines.*—July 13, 1869.

Claim. The herein-described treatment of strawberry plants, for the purpose set forth.

92,579.—Clark T. Bush, Middleburgh, N. Y.—*Iron-Fence.*—July 13, 1869.

Claim.—1. The combination and arraugement of post A, (provided with recess,) rails *r r*, and metal links L L, as shown and described.

2. The kerfed rails *r r*, band B, and key *k*, when said several parts are arranged as shown and specified.

3. The combination and arrangement of the herein-described posts A A, rails *r r*, pickets P P, and braces *b*, substantially as described.

92,580.—John S. Butler and Andrew J. Stucker, Silver City, Idaho T.—*Reciprocating-Bellows.*—July 13, 1869.

Claim.—1. The combination, with the chamber A, provided with the reservoir D, of the alternately-acting pumps or bellows E E, substantially as and for the purpose described.

2. The arrangement, with reference to each other, of the several parts of the improved blowing apparatus above described, sbstantially as set forth.

92,581.—Philander Byrns, Mindoro, Wis.—*Hand Garden-Cultivator.*—July 13, 1869.

Claim.—The combination of the barrow A, pivoted frame B, cultivators *c c c*, water-tank D, provided with sliding door *d*, lever *a*[1], pipes B' B', and sprinkler E, all combined, arranged, and operating substantially in the manner and for the purpose described.

92,582.—JOHN CARR, Emerald Post Office, Ohio.—*Fence.*—July 13, 1869.

Claim.—A portable fence, having braces A, cross-bar B, bottom-board C, rails D, and pivot-pins *a*, constructed and arranged substantially as specified.

92,583.—DANFORD CHAFFEE, Rome, Pa.—*Straw-Cutter.*—July 13, 1869

Claim.—1. The combination of the bar H, levers J J^1 J^2, and bar K, carrying the cutting-knife L, all constructed as described, and for the purposes set forth.

2. The combination and arrangement of the standards A A, box C, hinged part E of bottom, spring F, inclined roof G, inclined bar H, connecting-levers J J^1, and J^2, cutting-knife L, guide N, and with or without the stationary knife L, all constructed and operating substantially as and for the purposes herein set forth.

92,584.—JULES A. CHERON, New York, N. Y.—*Portable-Pump.*—July 13, 1869.

Claim.—The pump *h* and pipe *m*, within the air-vessel *l*, and fitted with the valves *i k n o*, as specified, in combination with the suction-pipe *f*, delivery-pipe *s*, and tank *d*, with the opening *e*, the apparatus being set on wheels, so as to be portable, as set forth.

92,585.—WILLIAM COGGESHALL, Springfield, Ohio, and JOHN W. STANLEY, Chicago, Ill.—*Pulverizing and Mixing-Cylinder.*—July 13, 1869.

Claim.—The cylinder D, provided with annular flanges G, stationary rods or bars H, flights *h*, rollers F, all arranged to operate substantially as described, and for the purposes specified.

92,586.—ALBERT A. DAVIS and BENJAMIN F. WALKER, Lowell, Mass., assignors to B. F. WALKER and M. R. FAVOR.—*Lubricating-Device for Spindles.*—July 13, 1869.

Claim.—A separate and independent oiling-device with each spindle of a speeder or other roving-frame, when constructed and arranged to operate as and for the purpose specified.

92,587.—STEPHEN S. DAVIS, Edgerton, Wis.—*Compound for Curing Piles.*—July 13, 1869; antedated June 30, 1869.

Claim.—The above-described compound, when made of the ingredients and substantially in the proportions herein set forth.

92,588.—HERVEY B. DENNY, Washington, D. C.—*Copy-Holder.*—July 13, 1869.

Claim.—1. The holder consisting of the frame C *c*, rollers A B, spring or springs D, and handle or handles *a b*, adapted to operate substantially as described, for the purpose specified.

2. The wire of bar E, or its equivalent, arranged substantially as described, for the purpose set forth.

3. The rod or arm F, connected to the holder in any desired manner, and to the base or fastening by a horizontal hinge, *g*, as represented and described, for the purpose stated.

4. The clamp H, consisting of a pair of hinged jaws, provided, on their opposing faces, at their lower end, with spurs *h'*, and pressed apart above their hinge by a spring *h''*, in combination with the base-plate G, as and for the purposes specified.

92,589.—COELLESTIN DIERINGER and MORRIS LINDAMANN, Cincinnati, Ohio.—*Automatic Fan.*—July 13, 1869.

Claim.—In combination with suitable mechanism for imparting motion to the fan, the balance-wheel P, adjustable winch or crank C, connecting-arm V, with adjustable nuts N and fan-frame G, having a governor or adjustable weight, E, and sliding weights F, for regulating the motion of the fan, when all the parts are arranged to operate substantially in the manner as herein described.

92,590.—JOHN DOOLEY, St. Paul, Minn.—*Combined Plow, Cultivator, and Marker.*—July 13, 1869.

Claim.—1. An adjustable plow, cultivator, and marker, having cultivators *s*, plowshare *n*, and marker B, constructed and arranged substantially as and for the purposes specified.

2. In combination with an adjustable plow and cultivator, nut and screw H, when working in the slotted standard, as described, and the perforated rods *v*, arranged and operating substantially as and for the purposes specified.

92,591.—JOHN B. DOUGHERTY, Rochester, N. Y.—*Shingle-Machine.*—July 13, 1869; antedated June 30, 1869.

Claim.—1. The swinging-frame C, with carriage-ways *r*, and having the head-block or carriage G sliding thereon, all constructed to operate in the manner and for the purpose substantially as set forth.

2. The combination of friction-rollers R and *i*, jaws J, and carriage G, with the rails or ways *r*, in the manner substantially as described.

92,592.—ROBERT DUTCH, Jersey City, N. J.—*Railway-Car Axle.*—July 13, 1869.

Claim.—The combination and arrangement of the divided axles A A, each with two flanges *c d*, in combination with the coupling-tubes F F, having heads *k k*, substantially as and for the purpose herein specified.

92,593.—JOHN EARLE and ALFRED B. STEEL, Philadelphia, Pa.—*Printing Revenue-Stamps, &c., in Two or More Colors.*—July 13, 1869.

Claim.—In combination with two or more engraved plates, made and fitted together as described, and from which printing is to be done, by a single impression, in two or more colors, the separately inking of said plates by means of "forms," to prevent their vertical sides or walls from being covered with the ink, or causing blurred impressions, substantially as set forth.

92,594.—WILLIAM B. ELTONHEAD, Philadelphia, Pa.—*Gold-Washing Machine.*—July 13, 1869.

Claim.—The combination of the revolving shaft B, having arms or agitators B^1, and scraper or rake B^2, with the vessel A, either singly or in series, having the auxiliary bottom A^1, and the door A^2, all constructed to operate in the manner and for the purpose substantially as described.

92,595.—JOHN FARREL, New York, N. Y.—*Door of Burglar-proof Safes.*—July 13, 1869.

Claim.—Packing the joints at the junction of the door with its frame, substantially as and for the purpose specified.

92,596.—ELIAS T. FORD, Stillwater, N. Y.—*Paper-Making Machine.*—July 13, 1869.

Claim.—1. The forming a vacuum inside of the perforated cylinder B, by means of the air-chamber W *g*, as described in the above specification.

2. The perforated cylinder B, with interior suction-box W, carrying the wire-cloth A without friction and wear, in the manufacture of paper, as described, and illustrated in the drawings.

3. The intermediate couch-roll D *c*, for the purpose specified.

4. The rubber packing *z z* and recesses *b z*, *b z*, the metallic plates I I, and plunger-packing G, with their metallic caps V V.

5. The combination of the perforated cylinder B with the inside section-box W *g*, plungers C C, metallic caps V V, with their interior packing G; also the side rubber packing *z z*, with the metallic caps I I, and the double couch-rolls D *c* D, as herein set forth and described, substantially as and for the purpose specified.

92,597.—J. G. FOSTER, Nashua, N. H.—*Counterpoise Gun-Carriage.*—July 13, 1869.

Claim.—1. The combination of the traverse-carriage A and the gun-carriage C, the two being connected by the parallel arms I, by which the gun is made to move in the arc of a circle, substantially as and for the purpose set forth.

2. The counterpoise-shaft D, arranged to support the chassis B, and passing through the center of motion of the traversing-carriage A, whereby the gun can be freely traversed in any direction, whether in or out of battery, substantially as described.

3. The combination of the chassis B, traverse-carriage A, and gun-carriage C, with the parallel arms

I, when arranged to operate substantially as herein described.

4. The combination of the chassis B, rotating shaft D, mounted in a sliding step, V, and the counterbalance or weights W, when constructed and arranged to operate substantially as described.

5. So arranging the counterbalance-weights that they shall come into operation, and be taken up, successively, substantially as and for the purpose herein described.

6. The application of the brake O, or its equivalent, to the counterpoise-shaft D, for the purpose of regulating the movement of the gun, as set forth.

92,598.—J. B. FRANTZ, Cleveland, Ohio.—*Telegraph Fire-Alarm.*—July 13, 1869.

Claim.—The herein-described circuit-breaker, consisting of the insulating plate A, insulated notched arc B, lever E, and point *c*, as constructed and arranged in combination with the mechanism H, and operated thereby, in the manner substantially as and for the purpose set forth.

92,599.—D. R. FRASER, Chicago, Ill., assignor to himself and P. W. GATES, same place.—*Balance Slide-Valve for Steam-Engines.*—July 13, 1869.

Claim.—1. The self-adjusting device D D^2 with its other parts, constructed and adapted for sustaining the valve E, in the manner substantially as described.

2. The construction of the valve so that it may be suspended upon rollers arranged upon external flanges D^2, in the manner substantially as described.

3. The combination and arrangement of the anti-friction rollers *g'*, jaws G, on valve E, shelves D^2, and disk D, substantially as described.

4. The combination, with the slide-valve E, of the counterbalancing-device D and anti-friction rollers *g'*, all constructed and arranged substantially as described.

92,600.—J. G. GASTON, Cincinnati, Ohio.—*Paper-Perforator.*—July 13, 1869.

Claim.—The metallic blades or plates A, having their teeth B constructed in form and shape substantially as herein shown and described, for the purpose of perforating sheets of postage-stamps and similar articles, as set forth.

92,601.—WILLIAM H. GIBBS, Cincinnati, Ohio.—*Bottle-Stopper.*—July 13, 1869.

Claim.—The combination and arrangement of the rubber A, or its equivalent, frame B C *c*, wire F, and holding-ring G H, substantially as described.

92,602.—DAVID GORE, Carlinville, Ill.—*Saw for Cutting Hedge for Plashing.*—July 13, 1869.

Claim.—The saw B, connected to the handle A, this being curved to the form indicated in the drawings, and having a grip, C, substantially in the manner set forth.

92,603.—MAHLON GREGG, Rochester, N. Y.—*Turbine Water-Wheel.*—July 13, 1869.

Claim.—1. The gate E, applied directly to the exit-ports of a water-wheel, in combination with an inlet-gate, for the purpose set forth.

2. The gate B, having its edge formed in the shape of two or more inclined planes, resting on suitable bearings, and having a screw-gear in the edge of one or more of them, in combination with the screw *a'*, as and for the purpose set forth.

3. The annular gate B, when placed between the direction-chutes and the water-wheel C, substantially as described.

4. The curved buckets of central-discharge wheels, toward the center downward, whereby the water, after entering horizontally, passes through and leaves them in a natural curve.

92,604.—GEORGE V. GRIFFITH, Fort Wayne, Ind.—*Machine for Bending Plow-Handles.*—July 13, 1869.

Claim.—The combination of the lever B with the pressure-roller *g*, by means of the radial arms *f*, pivoted in the lever B, and with the formers A, all constructed and arranged to operate substantially in the manner described.

92,605.—EDWARD HALE, Jr., St. Louis, Mo., assignor to himself and JOSHUA ALEXANDER, same place.—*Means of Attaching Artificial Teeth to their Base-Plates.*—July 13, 1869.

Claim.—A base for artificial teeth, provided with a channel, *a*, and perforations *b*, for the reception of the vulcanite, by which the teeth and plate are united, substantially as described.

92,606.—DAVID HAM, Iowa City, Iowa.—*Mode of Attaching Rubber Tires to Carriage-Wheels.*—July 13, 1869.

Claim.—The application of an elastic and movable band A to the rim F of a velocipede-wheel, B, when secured by lacers C and eyelets D, or their equivalents, so as to be easily attached to the wheel and quickly removed, when required, as herein described and for the purposes set forth.

92,607.—THOMAS U. HAMILTON and HENDRICK H. HAMILTON, Panama, N. Y.—*Device for Propelling Carriages.*—July 13, 1869.

Claim.—1. Springs C, cog-wheel D, provided with pawl and ratchet, beveled gear E, in combination with the pinion F and dog H, when all are used substantially in the manner and for the purpose set forth.

2. The cog-wheel I when used to connect the two springs, and to impart motion to the wheel K, substantially as set forth.

3. The wheels K and L, in combination with the shafting-axle M and slides P, when used substantially as described.

4. The lever N, whose arm or rod O is used to throw the wheels L in and out of gear, for the purpose of reversing the motion, substantially as described.

5. The slides P, when used to hold the wheels L in gear, substantially as specified.

6. The springs C, wheels D, E, F, K, and L, slides P, lever N, and rod O, and cog-wheel I, when arranged and combined so as to form a mechanism for propelling vehicles, substantially as set forth.

92,608.—EDMUND A. HARVEY, Wilmington, Del.—*Thill-Coupling.*—July 13, 1869.

Claim.—1. The slotted or oblong holes in each of the lugs or jaws of the ordinary clip, each hole terminating, at one or both ends, with a bevel or inclined plane, for the purpose described.

2. The bolt, with or without an inclined plane inside the head, in combination with a key or keys, with or without washers attached.

3. The clip and bolt, with keys, as described, in combination with a gum or metallic spring, as and for the purposes described.

92,609.—JAMES HATCH, San Francisco, Cal.—*Variety Molding-Machine.*—July 13, 1869.

Claim.—1. Constructing the guards of variety molding-machines with the socket *f* and bonnet *o*, substantially in the manner and for the purpose set forth.

2. The clamp herein set forth, provided with the shoe *l*, Fig. 4, when all the parts are constructed to operate substantially in the manner and for the purposes set forth.

3. The guides A and B, constructed and arranged relative to the cutter, substantially as set forth.

92,610.—ANDREW GEORGE HUTCHINSON, Stoneycroft, near Liverpool, Great Britain, assignor to THOMAS ROWLAND and HENRY ROWLAND.—*Burglar-Alarm.*—July 13, 1869.

Claim.—1. The combination of the pivoted lever D, catch *a*, and alarm, all substantially in the manner and for the purpose described.

2. The button *b'*, in combination with the catch *a*, lever D D', and the alarm, all substantially as herein specified.

3. A portable burglar's alarm, constructed substantially in the manner and for the purpose described.

92,611.—JOHN W. JARBOE, Green Point, N. Y.—*Composition Wagon-Body.*—July 13, 1869.

Claim.—A wagon or vehicle-body, having its sides, back, and dash-board made of paper, treated with water-proof material, substantially as specified.

92,612.—Barton H. Jenks, Bridesburgh, Pa.—*Shuttle-Box-Operating Lever for Looms.*—July 13, 1869.

Claim.—The box-lever D, or its equivalent, provided with the yielding extension D^1, acted upon by the counterbalancing weight B, applied upon the arms D^2 of said extension, substantially as and for the purposes described.

92,613.—Charles A. Judd, Milwaukee, Wis.—*Weather-Strip.*—July 13, 1869.

Claim.—The weather-strip for doors and windows, formed of the rubber strip B and metal strip A, when the same are arranged as described, and the united strip folded upon itself, substantially as and for the purpose set forth.

92,614.—Albert Kane and Nelson Kane, Newport, N. Y.—*Harrow.*—July 13, 1869.

Claim.—1. In combination with a harrow-frame, the runners, so hinged to it that when it is to be conveyed to or from the place where it is to be used, said runners can be lowered to the ground, and, at the same time, and by the same mechanism and operation, the harrow is raised; and when the harrow is to be used, said runners can be raised and the harrow lowered, by the same mechanism and operation, substantially as herein described and represented.

2. In combination with the harrow-frame and the runners, the hinges in the runners, and the guides on the frame, so that the front or curved parts of the runners shall be turned backward from the front of the harrow when they are raised, substantially as described.

3. In combination with the frame and runners, the crank-rods or axles, and the lever, for raising or lowering one upon the other, substantially as described.

4. In combination with the lever and crank-rods, for raising or lowering one part upon the other, the hook and catch, and their equivalents, for holding the runners up upon the frame, substantially as described.

5. The combination of drag-bar and rail with the mechanism by which they are made adjustable, substantially as described.

92,615.—John E. Kauffelt, Shrewsbury, Pa.—*Atmospheric Tanning-Apparatus.*—July 13, 1869.

Claim.—The described combination and arrangement of an apparatus, C, for forcing atmospheric air, the coiled, convoluted, or folded pipe *d*, the cylinder D, inclosing the pipe *d*, and connected with the exhaust-pipe of a steam-boiler; the pipes *e*, *e'*, *e''*, and the vats and leaches A B, substantially as and for the purposes set forth.

92,616.—John L. Kreider, Chestnut Level, Pa.—*Automatic Check-Row Corn-Planter.*—July 13, 1869.

Claim.—1. The pulley-wheel 5, or its equivalent, on the outer rim of a wheel or spoke, to adjust and regulate the same to the seeding or dropping apparatus, by means of a mark or furrow, for checker-planting in or between the furrows.

2. The arrangement of the box-hub 6 with its sleeve 10, with or without the notched ring 7, for extending the radius of the spokes 4 5, in combination with the pulley-wheels, constructed substantially in the manner and for the purpose specified.

3. The arrangement of the drum X, with its double row of pins *x*, in combination with the half-circular cam J, with its lever-arm *j* and connecting-rod K, to operate the single or double pair of slide-valves O Q, in the manner and for the purpose set forth.

4. The star-cam L, in combination with the click M, springs *m n*, and valve P, with its tongue and lip operated by the joint action of the combined valves O Q, at certain fixed intervals, in the manner and for the purpose described.

5. The lever-guide pole F, when connected to the end of an ordinary rigid pole E, substantially in the manner and for the purposes specified.

92,617.—Robert H. Lecky, Allegheny City, Pa.—*Exhaust Device for Locomotive Smoke-Stacks.*—July 13, 1869; antedated June 29, 1869.

Claim.—The combination of the sleeve A with the inverted cone B, said sleeve and cone being constructed and arranged with relation to each other substantially as herein described.

92,618.—John N. Leonard, Rockville, Conn.—*Spool Show-Case.*—July 13, 1869.

Claim.—The suspended trays F, in combination with revolving-beam A, cover J, and hollow shaft K, operated and arranged substantially as described.

92,619.—John N. Leonard, Rockville, Conn.—*Apparatus for Displaying Spools of Silk, Cotton, &c.*—July 13, 1869.

Claim.—The combination of hollow columns A A with spur-wheels C C, with the revolving base B, cap D, column G, and base J, all as described.

92,620.—Leon Lindquest, Pittsburgh, Pa.—*Chair.*—July 13, 1869.

Claim.—The combination of the chair and rocking-chair, when arranged with the adjustable backs A and B, writing-table M, springs L, on the legs E, and revolving-seat D, all portable, as herein described, and for the purposes set forth.

92,621.—Samuel T. Lount, Rathbone, West Va.—*Pump for Continuous Discharge.*—July 13, 1869.

Claim.—1. A pump having but one water-passage, in which are combined three or more pistons, F F^1 F^2, with valves, when so constructed that the intermediate one operates in a direction opposite to that of the two extreme ones, substantially in the manner and for the purposes specified.

2. The combination and arrangement of the shaft S, cam-wheel C, rods B B^1 B^2, cylinders A A^1 A^2, pistons F F^1 F^2, and valves *a* a^1 a^2, when constructed to operate substantially as and for the purposes herein set forth.

92,622.—William B. Mack, Detroit, Mich.—*Steam Water-Heater.*—July 13, 1869.

Claim.—The construction and arrangement of the tapering corrugated pipe E, embouchure-nozzle G, and check-valve C, with the steam-casing E, and steam and water casings D A, when the same are connected with steam and water supply-pipes P H, substantially in the manner set forth.

92,623.—Charles Maguire, Chicago, Ill.—*Cooking-Stove.*—July 13, 1869.

Claim.—The dome A, provided with hinged leaves B, an opening R, to allow the stove-pipe E to pass through, and with pipes G F, to conduct odor and smoke into a chimney, the pipe G being arranged to slide in the vertical part of pipe F, and the dome to raise and lower by means of the looped rod H', pulley H, and chain or rope L, as described.

92,624.—W. Mallerd, Bridgeport, Conn., assignor to himself and John Barr, same place.—*Mop.*—July 13, 1869.

Claim.—In combination with the scrubber E and drier L, with the holder A and C, formed in two parts, the scraper *d*, as shown and described.

92,625.—John F. Mallinckrodt, St. Louis, Mo.—*Brick-Machine.*—July 13, 1869.

Claim.—1. The pinion *b*, spur-wheel C, provided with cam-groove c^2 and tappet c^1, the rollers D, guide G, and hopper E, when provided with a sand-box, F, at each side, and all constructed, arranged, and operating substantially as and for the purposes set forth.

2. The flier H, with its head-board h^1 and ribs h^2, vibrating on the shaft *h*, and operating to throw the clay into the mold, substantially as set forth.

3. The cam-groove c^2, pin *k*, rod K, rack *k'*, when combined with the pinion h^3 and flier-shaft *h*, substantially as set forth.

92,626.—Jeremiah A. Marden, Boston, assignor to Charles E. and John H. Abbott, Malden, Mass.—*Prison-Bar.*—July 13, 1869.

Claim.—The iron prison-bar, constructed as described, and for the purpose set forth.

92,627.—James R. Maxwell and Ezra Cope, Cincinnati, Ohio.—*Steam-Lift and Force-Pump.*—July 13, 1869.

Claim.—1. The separate throttle or regulating valves *b b'*, arranged to control the flow and quantity of steam admitted through separate passages to each end of the steam-cylinder, substantially as described.

2. The cylindrical slide-valve C, with passages *x y*, to convey the steam to opposite ends of the steam-cylinder, substantially as described.

3. The valve C, with the openings I I, constructed and arranged with reference to the chamber C', and the induction and eduction ports thereof, substantially as described.

4. The arrangement of the piston-head and pump-ram, and the main steam-valve, moved direct by pressures of steam, admitted through separate passages into each end of the steam-cylinder, and controlled by separate throttle or regulating valves, substantially as specified.

5. The arrangement of the pumping-engine A B, the pump and ram O M, the base N, and pump F, with reference to each other, substantially as described.

92,628.—William K. Miller, Canton, Ohio.—*Pitman-Connection.*—July 13, 1869.

Claim.—In combination with the conical bearing and journal, and through screw-bolt, for drawing and holding them together, a scalloped or turreted nut, and a key for preventing said nut from turning on said screw-bolt, substantially as described.

92,629.—William K. Miller, Canton, Ohio.—*Grain-Separator.*—July 13, 1869.

Claim.—1. The arrangement and location of the secondary fan-blower, in relation to the grain-board *b* and the shoe C, so that the blast from said fan shall strike the grain, chaff, &c., as it falls from said grain-board into the shoe or upon the riddles, as and for the purpose described.

2. In combination with the laterally-vibrating shoe, the vertically-reciprocating shoe-rake *i*, as and for the purpose herein described and represented.

3. In combination with the vibrating-shoe and reciprocating shoe-rake, the revolving shoe-rake *j*, acting in connection therewith, as and for the purpose substantially as described.

92,630.—J. G. Millholland, Harrisburgh, Pa.—*Balanced Cylindrical Slide-Valve.*—July 13, 1869.

Claim.—1, The construction and arrangement of the longitudinally sliding cylindrical valve I, circumferential groove *t*, and the two bearing-surfaces *i i'*, as described.

2. The arrangement of the series of ports D D', E, on all sides of the valve chamber, substantially as specified.

92,631.—Levi Moore, Baraboo, Wis.—*Animal-Trap.*—July 13, 1869.

Claim.—1. In animal-traps, the tilting-floor B, post L, springs C, lever D, rock-shaft E, cord F, drum G, and pawl H, arranged and operating substantially as and for the purposes set forth.

2. The door I, latch J, in connection with the post L, or other tripping-device, attached to the tilting-floor, when arranged and operating substantially as and for the purposes set forth.

92,632.—Albert More, Moresville, N. Y.—*Hand Seed-Planter.*—July 13, 1869.

Claim.—1. The construction of the double-chambered seed-rod, or slide D, substantially as and for the purpose set forth.

2. The combination and arrangement of the seed-boxes A^1 and A^2, and the double-chambered slide D, substantially as and for the purpose set forth.

3. The combination of the plunger E, lips C^1 and C^2 of the drill C, and elastic band, or spring *c'*, substantially as and for the purpose set forth.

4. The arrangement of the partitions a^1 and a^2, with reference to the inclined bottoms of the seed-boxes and the double-chambered slide D, substantially as shown and described.

5. The arrangement of the scraper *a*, with reference to the double-chambered slide D, substantially as and for the purpose set forth.

6. The combination and arrangement of the seed-boxes A^1 and A^2, double-chambered slide D, and spout B, substantially as and for the purpose set forth.

92,633.—Edmund L. Morse, St. Louis, Mo.—*Apparatus for Ageing Spirits.*—July 13, 1869.

Claim.—1. The combination of air-pump B, pipe *b*, vessel C, pipe *e*, heater D, having the coil-pipe inclosed, with pipe *d*, and still A, and coil A', when used for purifying liquors, in the manner substantially as described.

2. The combination of the air-pump, B, pipe H, and tube G, for the purpose substantially as described.

92,634.—Walter Murray, Chicago, Ill.—*Boots and Shoes.*—July 13, 1869.

Claim.—1. The spring C, having its rear end attached rigidly to the heel, and having its front end secured to the sole by means of the spur *f* and the slot *d*, substantially as and for the purpose set forth.

2. The inner heel A, constructed and applied, as shown and described, for the purpose of giving greater curve to the sole, as set forth.

92,635.—William J. Nichols, Buffalo, N. Y.—*Carbureter for air and Gas.*—July 13, 1869.

Claim.—1. The arrangement, within the case A, of a series of incline plates, which are covered with cloth, or other suitable material, said plates open at one end, and provided with receptacles, *x*, at the opposite ends, substantially as shown and described.

2. Passing the liquid through the reservoir in a pipe, the lower end of which is open, and which extends down near the receptacles in the upper inclined plate, so as to form a liquid seal, and an automatic feed of the liquid over the plate, substantially as herein set forth.

92,636.—Walker Olds, Albany, Ill.—*Brick-Machine.*—July 13, 1869.

Claim.—1. The combination of the pug-mill shaft B, segmental head D, and adjustable segmental heads E E, for giving an oscillating rotation to the shaft E', substantially as and for the purpose set forth.

2. The reciprocating molds G, in combination with the oscilliating-segments F, and plungers N and N^2, substantially as described.

3. In combination with the press-heads K, and arms K^2, the lever L, rods L^1, and knife L^2, substantially as set forth.

4. In combination with the knife L^2, rods L^1, and lever L, the wooden pins L^3, substantially as and for the purpose set forth.

5. In combination with the shaft B and press-heads N, the cam N, beams O, arms O^1, springs O^2, and wrist-pins M^1, and bosses M^2, substantially as set forth.

6. In combination with the reciprocating-molds G, the slotted vertical posts A^2, and set-screw G^2, substantially as described.

7. The combination of the reciprocating-molds G, and press-heads N, and plungers N^2, arranged to operate substantially as set forth.

8. The reciprocating-molds G, when so arranged as to receive the clay in the center of the machine, and to discharge the bricks alternately on each side of the press, as set forth.

9. The combination of the press-heads N and Q, and parts Q^1, Q^2, Q^3, and Q^4, substantially as herein set forth.

10. In combination with the reciprocating-molds G, and plungers N^2, the boards R, reciprocating-points R^1, and oscillating-arms R^2, substantially as set forth.

92,637.—Frank Osborne, South Hanson, assignor to himself and W. Herbert Keene, East Bridgewater, Mass.—*Instrument for Cutting Pegs from Boots, &c.*—July 13, 1869.

Claim.—1. An instrument for cutting pegs from boots or shoes, provided with a removable knife, E, substantially as described.

2. The slotted-socket C, and block D, in combination with the knife E, and rod A, with its screw-

thread *a*, operating substantially as described, for the purpose set forth.

92,638.—NATHANIEL OTIS, Charles City, Iowa.—*Lightning-Rod.*—July 13, 1869.

Claim.—Constructing a lightning-rod of a single oblong strip of copper, with a point upon its end, by forming said pointed strip into a hollow tube, substantially as shown and described.

92,639.—WILLIAM S. PADDOCK, Albany, N. Y.—*Elastic Tip for Furniture, &c.*—July 13, 1869.

Claim.—The centrally-perforated elastic cover or cap A, in combination with a centrally-perforated metallic washer B, and an independent screw, *c*, substantially as herein shown and described.

92,640.—C. C. PARSONS, New York, N. Y.—*Process of Purifying Alcohol and other Spirits.*—July 13, 1869.

Claim.—1. The use of paraffine in the purification of alcohol or other distilled spirits, substantially as set forth.

2. The process of purifying alcohol or other distilled spirits, by treating the same in the manner and by the means herein described; that is to say, first forming at the requisite temperature an intimate mixture or solution of the paraffine and alcohol, then reducing the strength of the alcohol with water at the same temperature, and then reducing the temperature of the alcohol, and agitating it to separate and agglomerate the particles of the paraffine, and filtering it, substantially as set forth.

92,641.—R. F. PATTON, Quiney, Ohio.—*Corn and Cotton Cultivator.*—July 13, 1869.

Claim.—1. The draught-beam A, provided with the lugs or eyes *a a*, &c., both in front and in rear, in combination with the cross-bar B, substantially as and for the purpose shown.

2. The cultivator or harrow-bars C C and E E, when so constructed as to permit of their being pivoted at their center to the cross-bar B, and attached at either end to the eyes or lugs *a a*, &c., upon the draught-beam A, substantially as shown and for the purpose specified.

3. The handles F F, brace *f*, quadrant G, and set-screw *g*, all combined and arranged substantially as and for the purpose shown.

4. The within-described agricultural implement, consisting of the draught-beam A, provided with the eyes or lugs *a a*, &c., cross-bar B, harrow or cultivator bars C C and E E, handles F F, brace *f*, quadrant G, and set-screw *g*, all constructed and arranged substantially as and for the purpose shown and described.

92,642.—OLIVER L. PAYNE, Batavia, Ill.—*Clamp.*—July 13, 1869.

Claim.—The machine or press herein described and shown, and having upon its bed or frame the graduated and tabular scale, substantially as specified.

92,643.—J. E. PENCILLE, Lockport, N. Y.—*Bedstead.*—July 13, 1869.

Claim.—The removable nuts *g*, formed each with an internal longitudinal screw-thread, and made plain on the outside, when used in connection with the cross-pieces *k s*, and screws *d*, and so fitted as to adapt themselves to the position of the screws, as herein set forth.

92,644.—NOAH POMEROY, Hartford, Conn.—*Dead-Beat Verge for Clocks.*—July 13, 1869.

Claim.—A dead-beat verge, constructed substantially as described, and for the purpose specified.

92,645.—WILLIAM OSCAR REIM, Springfield, Ohio.—*Ship's Cargo-Indicator.*—July 13, 1869.

Claim.—A gauge so constructed as, when placed on a ship's side, to admit water to indicate the displacement effected by the cargo, and to retain its water and continue a reliable indicator when removed from the ship's side and carried to any convenient place for observation, substantially as described.

92,646.—WOODSON RICE, London, Ohio.—*Shock-Tier.*—July 13, 1869.

Claim.—The corn-compress described, consisting of the stakes A B, and strap C, when combined as described, and operated in the manner and for the purpose set forth.

92,647.—ISAAC P. RICHARDS, Whitinsville, Mass.—*Spindle-Bolster.*—July 13, 1869.

Claim.—The improvement in bolsters, which consists in constructing the wall of the oil-reservoir, B, next to the bearing, with its face *a a* inclined to the axis of the spindle, substantially as described, for the purpose specified.

92,648.—JOHN B. ROOT, New York, N. Y.—*Direct-Acting Engine Valve-Gear.*—July 13, 1869; antedated July 3, 1869.

Claim.—The arrangement and combination of the sliding-bar J, lever I, and beams H, with the valves G and G′, for operating said valves by the travel of the piston B, substantially as set forth.

92,649.—CLEMENT RUSSELL, Massillon, Ohio.—*Shaft-Coupling.*—July 13, 1869.

Claim.—A "tubling-rod" coupling, composed of the two bearing-plates and two journaled sockets or heads united together, as represented, so as to have a yielding motion, and the journals thereof covered, in the manner and for the purpose described.

92,650.—CLEMENT RUSSELL, THOMAS H. RUSSELL, and WILLIAM K. MILLER, Massillon, Ohio.—*Thrashing-Machine.*—July 13, 1869.

Claim.—1. The combination of the ratchet-lever and dog, with the shaft and cam-arms working in connection with the hinged concave, for raising, lowering, adjusting, and holding said concave, substantially as described.

2. The shield or cover *c*, for shielding the joint in the coupling-rod, as set forth.

3. The three hitching-points *b*, *a*, and *i*, in combination with the driving-gear, arranged and supported substantially as herein described and represented.

92,651.—GEORGE SANGER, Beloit, Wis.—*German Erasive Soap.*—July 13, 1869.

Claim.—The soap, consisting of the above-enumerated ingredients, in about the proportions set forth, and prepared substantially in the manner herein described and specified.

92,652.—GEORGE SANGER, Beloit, Wis.—*Chemical Olive-Soap.*—July 13, 1869.

Claim.—The soap, consisting of the above-enumerated ingredients, in about the proportions set forth, and prepared substantially in the manner herein described and specified.

92,653.—GEORGE SANGER, Beloit, Wis.—*Combined Scouring and Fulling Soap.*—July 13, 1869.

Claim.—The combined scouring and fulling soap, consisting of the above-enumerated ingredients, in about the proportions specified, and prepared substantially in the manner herein described and set forth.

92,654.—GEORGE SANGER, Beloit, Wis.—*Detersive Soap.*—July 13, 1869.

Claim.—The soap, consisting of the above-enumerated ingredients, in about the proportions set forth, and prepared substantially in the manner herein described and specified.

92,655.—GEORGE SANGER, Beloit, Wis.—*Fulling-Soap.*—July 13, 1869.

Claim.—The soap, consisting of the above-enumerated ingredients, in about the proportions set forth, and prepared substantially in the manner herein described and specified.

92,656.—GEORGE SANGER, Beloit, Wis.—*Process for Refining Tallow.*—July 13, 1869.

Claim.—The herein-described process of refining tallow, substantially as and for the purpose specified.

92,657.—Leonhard Schmidt and Fred. E. Held, Chicago, Ill.—*Stenciling-Apparatus.*—July 13, 1869.

Claim.—1. A stencil-apparatus, consisting of the frame A, made up of the oblong hinged frames *a*, *b*, and *c*, box *e*, and detachable handle *p*, when constructed and arranged substantially as described, for the purpose set forth.

2. The combination of the frame A with the box B, provided with the compartments *r*, when constructed and arranged substantially as and for the purpose set forth.

92,658.—Peter J. Schmitt, Carlinville, Ill., assignor to Siegel, Schmitt & Co., same place.—*Grain-Drill.*—July 13, 1869.

Claim.—1. Attaching the flukes to the drill-frame, in such wise that those flukes which move in the direction to which they are impelled by the soil-resistance shall cause the other flukes to move in the opposite direction, to produce a zigzag from a right line setting, or a right line from a zigzag setting, substantially as described.

2. Connecting the flukes to the bars H^1 and H^2, the alternate flukes being connected with the same bar, or any similar attachment, by which, in operating the flukes to a right or zigzag line, those flukes moving against the resistance of the soil may be raised out of ground, substantially as and for the purposes set forth.

3. The manner of locking the bar E and the flukes in their setting by the lever I, slide K, and spring-lever L, substantially as set forth.

4. The attachment of the pole C, or other draught-device, to operate the flukes, substantially as set forth.

5. The rock-bar E, formed of a wooden body, E′, metallic journals e^1, and arranged with staples e^2, substantially as set forth.

92,659.—James Selby, Peoria, Ill.—*Corn-Planter.*—July 13, 1869.

Claim.—1. The seed-tube E, with the partition *f*, and its rear inclined plate G, constructed and arranged substantially as and for the purpose described.

2. The lever or valve F, pivoted upon the outside of the seed-tube, and having its lower end bent to adapt it to the inclined face of the plate G, and arranged to operate substantially as described.

3. The combination of the tube E, valve F, and slide C, when constructed and arranged to operate substantially as described.

92,660.—William G. Semple, Cincinnati, Ohio.—*Cooking-Stove.*—July 13, 1869.

Claim.—1. The convertible four and six hole cook-stove, substantially as set forth.

2. The elevated and open-bottomed addition O P, to replace the rear top-plate B of an ordinary four-hole cook-stove, in the manner described.

3. The skeleton-plate O, boxed or elevated plate P, flue-strips R Q′, deflecting-plate I, and damper K, the whole being arranged and operating as set forth.

4. The arrangement of hinged damper-handle U, and rack V, for the objects herein designated.

5. In combination with the strips E E′, and R R′, or their equivalents, the deflector I and damper K, formed and arranged as and for the purposes set forth.

92,661.—John W. Shehan, San Francisco, Cal.—*Lamp.*—July 13, 1869.

Claim.—1. In combination with a double lamp-globe, arranged to contain a fluid, the supply-pipe C, substantially as herein described.

2. In combination with the double-globe B, the safety-tube E and cup F, substantially as and for the purposes set forth.

92,662.—John D. Shepard and Richard W. English, Buffalo, N.Y., assignors to John D. Shepard.—*Hinge.*—July 13, 1869.

Claim.—A hinge, having its leaves provided with the two projections or inclines *h*, and the two shoulders *g*, arranged to rock against the rear edges of the flanges *a*, substantially as described, whereby the hinge is rendered automatically double-locking, as set forth.

92,663.—Daniel Sherwood, Lowell, Mass., assignor to Woods, Sherwood, & Co.—*Toast-Rack.*—July 13, 1869.

Claim.—As a new and improved article of manufacture, a toast-rack, constructed of twisted wire, substantially in the manner described and specified.

92,664.—Charles J. Shuttleworth, Springville, N. Y.—*Horse-Power.*—July 13, 1869.

Claim.—The general arrangement of the bevel-gear wheels H H, wheel and pinion E E′, and pinion I, with the gear-frame, axis C, and said driving-gear, substantially as set forth.

92,665.—Elihu Smith, Albany, N. Y.—*Cooking-Stove.*—July 13, 1869.

Claim.—1. The arrangement of a movable boiler upon the top of the stove, constructed and used in the manner and for the purposes substantially as described.

2. The elevated boiler upon the extended and cross-flues, having the cross-flue *k*, as a part and support of the same, constructed substantially in the manner and for the purpose above set forth.

3. The superficial oven, constructed substantially as above described, in combination with the upright and cross flues, above represented and described.

4. The extension-top plate B, in combination with my movable boiler and railway, substantially as above described.

92,666.—Gilbert H. Smitson, Ripley, Ohio.—*Artificial Honey.*—July 13, 1869.

Claim.—The within-described process for manufacturing artificial honey, when composed of the ingredients and substantially in the proportions herein set forth.

92,667.—David Stewart, Kittanning, Pa.—*Manufacture of Iron.*—July 13, 1869.

Claim.—1. Partially purifying and partially converting, and intensely heating molten cast iron while it is subdivided into small particles or globules, prior to the mixing of the same with a metallic oxide, for the purpose of forming a "concrete bloom" or ingot by a single operation, as herein described.

2. The tubes or pipes A B, block C, blast-pipes *f*, chutes *e*, and receiving-vessel D, in combination with bloom or ingot molds, the whole operating substantially as herein described and for the purpose set forth.

92,668.—Daniel Swank, Newton, Iowa.—*Apparatus for Propelling Carriages.*—July 13, 1869.

Claim.—1. The crank-axle B, in combination with the plates C, when attached in the manner described, forked arms D, and rods E, when used in the manner specified.

2. The forked arms D, when their prongs are cut like screws upon their ends, and made to secure the plates C, as set forth, and have their end slotted, so as to receive the connecting rods E, in the manner and for the purposes described.

3. The double levers F, and double slotted-rod H, in combination with the handles H and braces or supports I, when used in the manner and for the purpose set forth.

4. The crank-axle B, forked arms D, plates C, rods E and H, levers F, and handles H, when all are arranged and operated in the manner and for the purpose specified.

92,669.—James M. Taylor, Lexington, Ky., assignor to Charles Parker, Meriden, Conn.—*Cartridge-Loader.*—July 13, 1869.

Claim.—The arrangement of the hollow rammer B in its support C upon the base A, the whole constructed and operating substantially as set forth.

92,670.—H. Uhry, New York, N. Y.—*Stair-Rod.*—July 13, 1869.

Claim.—1. The combination of the hollow button B, screw-eye T, and rod A, constructed and arranged as shown.

2. The hollow button C, having a glass top or

face, for the purpose of seeing the screw-eye when it is inserted therein.

92,671.—H. Uhry, New York, N. Y.—*Stair-Rod.*—July 13, 1869.

Claim.—The combination of the cap B, pin P, and screw-eye T, with the rod A, arranged and operating in the manner set forth and shown.

92,672.—H. Uhry, New York, N. Y.—*Stair-Rod.*—July 13, 1869.

Claim.—The combination and arrangement of the rod A, screwed eye T, and thimble B, operating as shown, and for the purpose set forth.

92,673.—Zdeuko Ritter Von Wessely, New York, N. Y., assignor to Providence Tool Company, Providence, R. I.—*Breech-Loader.*—July 13, 1869.

Claim.—1. The combination of the vibrating breech-block with the vibrating hand-lever and the vibrating hammer, the two latter working on a common pivot, the combination being and operating substantially as set forth.

2. The combination, substantially as set forth, with the hammer, of the eccentrically recessed vibrating breech-block, which recess causes the cocking of the hammer to be completed by the opening of the breech.

3. The combination of the breech-block, hammer, hand-lever, main-spring, and sere, the combination being and operating substantially as set forth.

4. The combination of the sliding striker, recoil-spring, recessed breech-block, vibrating hammer, main-spring, and hand-lever, the combination being and operating substantially as set forth.

5. The combination of the hand-lever, main-spring, and hammer, with the collar *g*, and solid pin *f*, as set forth.

6. The combination of the breech-block, striker, and recoil-spring, with the hammer, the main-spring, and its adjustable stop *h*, as set forth.

7. The combination of the trigger with the stop-wedge, operating as set forth, to prevent accidental explosions.

92,674.—Samuel D. Vose, Milwaukee, Wis.—*Stove-Cover.*—July 13, 1869.

Claim.—The method of constructing a cover for stoves by making the outer part B in the form of a ring, and the inner part O in the form of a separate circular plate, capable of expanding and contracting by itself, these parts being riveted or connected so as to form, when finished, a portable cover, as herein described.

92,675.—Jacob Waldron, North Creek, N. Y.—*Milk-Safe.*—July 13, 1869.

Claim.—The arrangement of the octagon frame B *b c*, with wire screen on sides and bottom, a series of shelving, *d d*, supporting-tubes *e e*, and rods *i i*, with the braces C C, and pivoted shelf A, all as shown and described.

92,676.—Nathan Washburn, Worcester, Mass.—*Mode of Repairing Plumbago Crucibles used in Melting Steel.*—July 13, 1869.

Claim.—The employment of a composition, as set forth, or its equivalent, in the form of a mortar, and plastering it on the injured crucible, and working it when thereon, so as to expel the air from the said repairing medium, and bring the crucible to its normal or required thickness, and impart to it a smooth outer surface, as specified.

92,677.—Adam Weaber, Philadelphia, Pa.—*Apparatus for Making Molds for Metal Castings.*—July 13, 1869.

Claim.—1. Moving at one and the same time both the sand and the pattern to the flask by the forward motion of the piston, when the said pattern is attached to the piston-head, so as to be withdrawn from the sand by the direct return-stroke of the said piston, all the said parts being constructed and arranged to operate substantially as and for the purposes specified and set forth.

2. In combination with the case E and platform A, arranged as described, the two racks *e' e'*, the pinion *e''*, the crank *e'''*, and the clutch-blocks e^4, the said parts being arranged and combined to operate together, substantially as and for the purpose described.

3. The spring-extension O of the treadle O', in combination with the clutch N, and hand-lever P, constructed and arranged substantially as described, for the purpose of enabling the attendant to interlock the said clutch N with the pinion M, as occasion may require, as described.

4. The construction and relative arrangement of the clutch N, spring O, treadle O', and piston-rod D', whereby the said piston-rod, as it reaches its lowest position, presses the said treadle downward, and thus causes the said spring to draw the said clutch out of connection with the rotating pinion M, substantially as described.

92,678.—William Weusthoff, Dayton, Ohio.—*Grain-Drill.*—July 13, 1869.

Claim.—The circular rack E and pinion F, in combination with the wheel-shaft A, substantially as and for the purpose shown.

92,679.—William Weusthoff, Dayton, Ohio.—*Grain-Drill.*—July 13, 1869.

Claim.—Suspending the funnel B or its equivalent upon or from the seed-wheel shaft A, substantially as and for the purpose herein shown and described.

92,680.—William Weusthoff and Charles Schmidt, Dayton, Ohio.—*Seed-Wheel for Grain-Drill.*—July 13, 1869.

Claim.—The within-described expansible seed-wheel, consisting of the sections *b b*, *b'*, and *b'*, and disks C and C, all constructed and arranged to operate substantially as and for the purpose shown.

92,681.—William Weusthoff and Charles Schmidt, Dayton, Ohio.—*Seed-Wheel for Seeding-Machines.*—July 13, 1869.

Claim.—1. The employment of the sheet-metal casing C upon the corrugated surface of the seed-wheel, substantially as and for the purpose shown.

2. The within-described seed-wheel, consisting of the grooved wheel and collar B and *b*, casing and drum C and D, cylindrical piece E, or its equivalent, and the casing F, all constructed and arranged to operate substantially as shown, and for the purpose described.

92,682.—William C. Whipple, New Haven, Conn.—*Drilling-Machine.*—July 13, 1869.

Claim.—1. In combination with the threaded mandrel C and its fixed pulley D, the open nut *a*, and its pulley E, of a larger diameter than the pulley D, so as to operate substantially as set forth.

2. In combination with the above, the sliding-rod L, with its trip P, so as to operate the latch H, substantially as set forth.

92,683.—Jesse Windward, East Cambridge, Mass.—*Manufacture of Glue from the Pith of Horns.* July 13, 1869.

Claim.—1. The within-described process of preparing the piths of horns, substantially as and for the purpose described.

2. As a new article of manufacture, glue prepared from the piths of horns, substantially as set forth.

92,684.—Michael Winter, New York, N. Y.—*Tobacco-Cutting Machine.*—July 13, 1869.

Claim.—The roller G, arranged in relation to the throat-piece F, endless chain B, and its driver E, substantially as and for the purpose or purposes herein set forth.

92,685.—Ludwig Wolff, Chicago, Ill.—*Apparatus for Rectifying and Flavoring Spirits.*—July 13, 1869.

Claim.—1. A device for flavoring spirits, consisting of a hollow column or cylinder, A, provided with a closely fitting cover, E, and one or more perforated baskets I, when constructed and arranged to be operated in connection with a still, substantially as herein described.

2. A device for flavoring and refining spirits, con-

sisting of a hollow column or cylinder, A, provided with a closely fitting cover, E, and one or more perforated baskets I, and one or more rectifying baskets J, when constructed and arranged to be operated in connection with a still, substantially as herein described.

92,686.—JOHN P. ZELLER, South Bend, Ind.—*Cultivator.*—July 13, 1869.

Claim.—1. The arrangement of the bar A, stationary buttons B B, and movable buttons C C, substantially as and for the purposes set forth.

2. The arrangement of the bar A, vertical pins *a a*, and beams D D, the latter having the plow-beams E E, plows F F, and braces G G, all substantially as shown and described.

3. The arrangement of the beams D D, brackets *b b*, bars H H, and chain I, all substantially as shown and described.

4. The arrangement of the brackets *e e*, bar J, handle K, arms L L, and chains *d d*, all substantially as shown and described.

5. The combination of the bar A, buttons B C, beams D D, plows F F, connecting-bars H, brackets *e e*, bar J, handle K, arms L L, and chains *d d*, all constructed and arranged as described, on an adjustable carriage, so that said carriage may be used with any other agricultural implement, if properly constructed, substantially as herein set forth.

92,687.—RODNEY M. WHIPPLE and AUGUSTIN I. AMBLER, Chicago, Ill.—*Steam Petroleum-Gas Generating-Apparatus.*—July 13, 1869.

Claim.—1. The oil-chamber A, piston C, and steam space B, so arranged as to use steam for the combined purpose of heat and pressure, in the manufacture of gas from petroleum, substantially as shown.

2. The generator, as constructed, with a steam space round the cylinder, when combined with perforated plates and porous substances, substantially as shown, and for the purpose set forth.

3. The follower C, when used with a cylinder constructed substantially as shown, and for the purpose set forth.

4. The receiver K, the follower and rod, with the weights and guides, when used in combination with a gas-generator, substantially as shown, and for the purpose set forth.

92,688.—MARCUS P. NORTON, Troy, N. Y.—*Hand-Stamp.*—July 13, 1869; antedated June 10, 1869.

Claim.—1. The combination of the central frame-piece A, constructed in one piece, and containing the recesses G and D and H, substantially as described, with the post-marking device F, and with the postage-stamp canceling-device G, in the manner and for the purposes substantially as herein described and set forth.

2. The arrangement and combination of the operating-handle B with the central part or piece A, containing the post-marking device F and the postage-stamp canceling-die G, by means of the connecting-piece E and ferrule *e*, substantially as herein described and set forth.

3. The arrangement of the post-marking device F and the postage-stamp or canceling die G upon the face or lower part of the central frame-piece A, constructed as described, in the manner and for the purpose substantially as described and set forth.

92,689.—DANIEL W. ATHERTON, Detroit, Mich.—*Velocipede.*—July 20, 1869.

Claim.—The combination of the axle A, wheels B and M, frame C, brake-wheel D, standards E, I, *l*, and *m*, countershaft F, pulleys G, H, and *f*, cranks J, belts *g* and *j*, boxes *a*, reach *b*, hollow standard *c*, brake *d*, seat *e*, crank-shaft *h*, saddle L, spring *k*, foot-cranks N, guiding-lever *n*, mud-shield O, step P, and bar-rest *p*, when constructed and arranged substantially as herein described, and so as to be operated by one or two persons at the same time, as herein set forth.

92,690.—CHARLES S. BAILEY, New York, N. Y.—*Centrifugal Hulling-Mill.*—July 20, 1869.

Claim.—1. The hulling-knives or cutters F′, constructed with shoulders upon their ends, substantially as herein shown and described, and secured in radial grooves in the faces of the disks A′ B′ by the ring-plates G′, substantially as herein shown and described, and for the purpose set forth.

2. The combination of the shaft N and magnetic bars or arms O with the hopper I, substantially as herein shown and described, and for the purpose set forth.

3. The revolving carrier P Q, constructed as described, in combination with the hopper I, revolving tube or cylinder U, revolving shaft B, and disks A′ and B′, as and for the purpose set forth.

4. The combination of the scraper E′ and internally grooved rim C′, with the disks A′ B′, constructed as herein shown and described, and for the purpose set forth.

92,691.—PHINEHAS BALL and BENAIAH FITTS, Worcester, Mass.—*Fluid-Meter.*—July 20, 1869.

Claim.—1. The rotating valve H, with its charge and discharge ports and bevel-gear, substantially as described.

2. The valve-seat, with its ports *w w*, *v v*, and passages x^1 x^2 x^3 x^4, in combination with the valve H, and operating substantially as set forth and described.

3. The cap *m*, secured by soft metal and other packing, and by cap *n* and set-screw *t*, all combined and arranged and operating as set forth.

4. The disks G G, having projecting pins, in combination with the slotted connecting-rods F *f*, the slots *o o o o* being so formed as to give to the piston a varying velocity, in proportion to the opening through the ports, substantially as described.

5. In combination with the cylinders and their pistons, piston-rods, and disks, substantially as shown, the rotary shaft, so constructed as to receive its motion from the piston-rods, communicating it to the valve, substantially as shown and described.

92,692.—HENRY C. BARTLESON, Toledo, Ohio.—*Hemmer for Sewing-Machines.*—July 20, 1869.

Claim.—1. The frame A, provided with the orifice *a*, lips *b b*, toe *e*, graduated bar *d*, elastic spring-guide *l*, and the stationary convolute *k*, attached to the said graduated bar *d*, when arranged and operating substantially as and for the purposes herein specified.

2. The combination of the foregoing named parts, consisting of the frame A, with its attachments sliding within and upon the frame B and its attachments, when arranged and operating substantially in the manner described, set forth, and shown.

92,693.—SAMUEL K. BASSETT, Galesburgh, Ill.—*Mechanism for Starting Sewing-Machines.*—July 20, 1869.

Claim.—The combination and arrangement of slide H, piece F, lever E, arm D, springs R and L, and plate A, substantially as described, and for the purpose set forth.

92,694.—C. J. BILLINGHURST, McArthur, Ohio.—*Mounting Pictures.*—July 20, 1869.

Claim.—1. The block C and the rabbeted frame D, in combination with the adjustable hooks *f*, substantially as and for the purposes herein shown and described.

2. Imparting to the hook *f* a vertical and a lateral motion simultaneously, substantially as and for the purposes set forth.

3. The wires *g*, block *h*, thumb-piece *i*, and the vertical piece *j*, in combination with a machine for mounting photograph pictures, arranged substantially as described.

92,695.—EBENEZER BLACKMAN, Norwalk, Conn.—*Lamp-Burner.*—July 20, 1869.

Claim.—The sliding-plate E, provided with a thin piece of leather, and the spring-lever G, when arranged to operate as herein described, and for the purpose set forth.

92,696.—GEORGE N. BOWMAN, Pottsville, Pa.—*Hydrant.*—July 20, 1860.

Claim.—1. A hydrant, consisting of a casing, B C; a stock, D D′, constructed in separable sections, and provided with a screw-thread, for connection

with the supply pipe or main; a valve-chamber, G, at the point of connection of its sections; a screw-cap, E, a discharge-nozzle, F, and a waste-aperture, *d*, a buoyant elastic main valve, H, a waste-slide, M, and a rod, I, for opening the main valve and operating the waste-slide; all constructed and arranged substantially as herein described, for the purposes set forth.

2. In combination with the buoyant valve H, the rod I, constructed with the disk I and stop *i*, the button J, spring K, and catch *j l*, all constructed and arranged to operate substantially as and for the purpose described.

92,697.—Henry C. Briggs, Fishersville, N. H., assignor to D. Arthur Brown & Co., same place.—*Wind-Wheel.*—July 20, 1869.

Claim.—1. The wings, connected with the governor, through the medium of the sliding-shaft F, arranged within the shaft A, and connected to the vanes by the adjustable rods E, substantially as and for the purpose specified.

2. The combination with the shaft F and vanes of the adjustable rods E, substantially as specified.

3. The arrangement of the vanes C, arms D, flanged head B, and hoop I, substantially as specified.

92,698.—T. E. C. Brinly, Louisville, Ky.—*Plow.*—July 20, 1869.

Claim.—1. The construction of the share or point E, with its groove or recess *e*, substantially as and for the purpose specified.

2. The helve or standard C, and the mold-boards D, when so arranged as to be capable of being used as a furrow-turning plow, or as a subsoil-plow, substantially as shown, and for the purpose set forth.

3. The construction of the mold-board and share, shown in Figs. 5, 6, and 8, they having the prolongations thereon, as shown, and the thickened portions extending along the under and upper surface thereof, substantially as and for the purpose set forth.

92,699.—Austin Burt, Detroit, Mich.—*Composition Core or Form for Making Castings.*—July 20, 1869.

Claim.—The employment of lime, in any of its known forms, as one of the ingredients from which to make cores or forms, for the purposes herein described.

92,700.—Thomas B. Carroll, Indianapolis, Ind.—*Fruit and Clothes Drier.*—July 20, 1869.

Claim.—1. The cones K K and L L, when constructed with the partitions M and the cover Y Z, and otherwise made and used substantially as herein set forth.

2. The revolving dampers *a w w b*, when constructed and used substantially as herein set forth.

3. The combination of the said cones K K and L L, and the cover Y Z, and the revolving dampers *a w w b*, in one device for the purpose, in the way substantially as herein set forth.

92,701.—Ezra Caswell, Lyons, N. Y., assignor to himself and Philip Ganse, Jr., same place.—*Tub.*—July 20, 1869.

Claim.—1. In combination with the tub A, rabbeted on its upper edge, the cover B, provided with the flange *b'*, the rod D, the eye-bolt E, and its nut, the supports C, eye-bolt F, nut I, and the bar H, all arranged substantially as herein shown and described, for the purpose specified.

2. The toggle-bars L N, in combination with the frame J K M and cover B of the tub, substantially as and for the purpose set forth.

92,702.—W. V. Cecil, Monmouth, Ill.—*Brick-Kiln.*—July 20, 1869.

Claim.—The ear I, when formed of the two plates C and D, with cold air space between them, in combination with openings *a*, ledges *b*, levers V, and rods X, all constructed and arranged as and for the purpose herein set forth.

92,703.—Hannah F. Chase, Boston, Mass.—*Vegetable-Masher.*—July 20, 1869.

Claim.—1. The arrangement of the ribs and the supporting-disk with the vessel A or the foraminous bottom thereof, in manner as specified.

2. The bottom supporter, made as described, viz, of the disk and peripheral and parallel ribs, disposed as specified, such being for use with the vessel A, having strainer foraminous bottom, and for use with an expresser and a masher, or either, as set forth.

92,704.—Edward S. Cheney and George P. Perry, Providence, R. I.—*Enameled Hat.*—July 20, 1869.

Claim.—The improvement in the manufacture of hats, which consists in the application of a coating of enameling-compound, substantially as described, upon a suitable foundation, and developing such composition by heat, as herein set forth, for the purposes specified.

92,705.—William Clissold, Dudbridge Works near Stroud, England.—*Machine for Feeding Wool, &c., to Carding and other Machines.*—July 20, 1869.

Claim.—1. The bars B, forming the bottom of the box, when moved both longitudinally and vertically, substantially in the manner and for the purpose herein shown and described.

2. In combination with the above, the transversely sliding toothed plate N, as and for the purpose set forth.

3. The rotating comb H, in combination with a fixed grid, I, and roller K, and with the moving bars B, all made and operating substantially as and for the purpose above set forth.

4. The arrangement of the stripper L and curved shield I*, with reference to the rotating comb H, and grid I, as herein described, for the purpose specified.

5. The combination of the box A, bars B, toothed drum H, grid I, stripper L, roller K, and plates M N G, all arranged and operating substantially as herein shown and described.

92,706.—Ezra Cole, Fairfield, Mich.—*Attachment for the Ends of Swingle-Trees.*—July 20, 1869.

Claim.—The eock-eye or hook, when constructed in the manner and for the purposes set forth.

92,707.—Robert Conarroe, Camden, Ohio, assignor to himself, Howard Young, William Kenworthy, Jesse Jacoby, and David J. T. Smyers, same place.—*Ditching-Machine.*—July 20, 1869.

Claim.—1. The arrangement of the caster-wheel, elevators, driving-wheels, and framing, substantially as and for the purpose specified.

2. The arrangement of the journals of the chain-wheel *b*, and suspending-frame in elongated bearings, substantially as specified.

3. The arrangement of the suspending-arms *h*, *k*, trough, and shaft, *i*, all substantially as and for the purpose specified.

4. The arrangement of the draught-rod *l* with the tongue, substantially as specified.

92,708.—Robert R. Croasdale and Peter Rink, Reaville, N. J.—*Adjustable Step-Ladder.*—July 20, 1869.

Claim.—The adjustable step-ladder, which consists of the steps A A, of which each has two pairs of tenons, of the double side-bars B C, slotted brace-frame D, up and down adjustable cross-bar *b*, and connecting-rod E, all combined and arranged substantially as herein shown and described.

92,709.—Elon C. Denio and George K. Babcock, New Hartford, N. Y.—*Construction of Spading and other Forks.*—July 20, 1869.

Claim.—The raised projection upon the back or resisting part of a fork or hook, substantially as and for the purpose specified.

92,710.—John Doyle, Hoboken, N. J.—*Curtain-Fixture.*—July 20, 1869.

Claim.—The shell or case A, provided with the two parallel flanches *b b*, having the space or opening *c* between them, and provided with inclined outer edges, in combination with the slide B, fitted within the shell or case, the cap *h*, and the screw *g*, all arranged to operate substantially in the manner as and for the purpose set forth.

92,711.—C. K. EDWARDS, New York, N. Y.—*Range.*—July 20, 1869.

Claim.—1. The arrangement of the fire-pot A, for adjustment relatively to the front and rear of the range, and the adjustable dampers B C, all substantially as specified.

2. The arrangement, with the cooking-range herein described, of the radiators G H and heating-chambers I K, all substantially as specified.

92,712.—HENRY FARMER, Pontiac, Mich.—*Potato-Digger.*—July 20, 1869.

Claim.—1. The combination of the rake-head T, pivoted in the endless chains U, with the guides V, and hinged guide-rods W, working on suitable drums, as and for the purpose set forth.

2. In combination with the above, the shaft P, rotated by the traction-wheel, through its ratchet *c*, engaging with the pawl *h* of the spur-wheel O, rotating the pinion *p* of said shaft, through the intermediate gear *p'*, hung in the forked lever *q*, the shaft R rotating in the vibrating-frame S, and carrying the drums *r*, rotated by the endless chains U, from the drums Q, on the shaft P, when constructed, arranged, and operating substantially as and for the purposes specified.

3. The arrangement of the rock-shaft F, the arms *f*, the axles G, the gauge-wheels H, the lever I, and the quadrant *i*, as and for the purpose above described.

4. The combination and arrangement of the tongue J, the chain *k*, the hounds K, the drum L, the shaft M, the pawl-lever N, the ratchet *l*, and the spring-pawl *m*, as and for the purpose above mentioned.

5. In combination with the foregoing parts, the frame A, axle B, traction-wheels C, seat-frame D, and grated shovel E, when constructed, arranged, and operating substantially as herein described, and for the purposes specified.

92,713.—J. R. FINLEY, Delphi, Ind.—*Harvester-Rake.*—July 20, 1869.

Claim.—1. The rotating band A, with the upright studs F, in combination with the bell-crank H, substantially as described.

2. The bell-crank or elbow-lever H, in combination with the gaveling-attachment L, with its slotted crank K and axis-bar M.

92,714.—WILLIAM J. FUNK, Portland, Oreg., assignor to himself and HARRISON B. OATMAN, same place.—*Combined Harrow and Cultivator.*—July 20, 1869.

Claim.—1. The cultivator and harrow frame B, as constructed and arranged, in combination with the main frame A.

2. The toggles K, in combination with crank R, levers E and F, and rods J J.

3. In combination with the cultivator and harrow frame, cultivator and harrow teeth, the latches P, for the purposes specified.

4. In combination, the frame B, frame A, toggles K, crank-rods R, levers E and F, rods J J, lever H, rod J', and latches P, all as constructed and arranged.

92,715.—PETER GARDNER, Gloucestershire, England, assignor to himself, D. E. ATHERTON, and E. A. VAN CISE, Mount Pleasant, Iowa.—*Clothes Pin or Clamp.*—July 20, 1869.

Claim.—The conical tubular slotted clothes fastener or pin, constructed, applied, and operated as herein described.

92,716.—JAMES GARGETT, Alma, Mich.—*Method of Hanging Reciprocating-Saws.*—July 20, 1869.

Claim.—The adjustable radius-bars H, herein described, in combination with the rock-shaft I and slotted pitman E, when all these parts are arranged, constructed, and operating as and for the purpose above set forth.

92,717.—GEORGE D. GILLETT, Meridian, N. Y.—*Harness Saddle-Tree.*—July 20, 1869.

Claim.—The herein described saddle-tree for harness, composed of the part A, cast with lugs *a a*, *a' a'*, the crupper-loop D, and check-rein hook C, having dovetailed shanks, and the part B, all secured together by means of screws *e e*, and constructed and arranged substantially as shown and described.

92,718.—GEORGE W. GLASS, New Brighton, Pa.—*Ejector.*—July 20, 1869.

Claim.—1. The combination of the pipes *b* and *c*, so arranged as to be used for the purpose of foreing, blowing, or ejecting liquids from wells, ships, or other place, as herein described and set forth.

2. The ejector, composed of the pipes *b* and *c*, the lower end of pipe *b* entering within the coniformed mouth of the pipe *c*, substantially as herein described.

3. The construction and combination for immersing in oil or water, in wells or other place, the lower end of pipes arranged so that, by the use of steam or air forced down one pipe, liquids will be forced up the other, substantially upon the principle as herein described and set forth.

92,719.—E. A. GOODES, Philadelphia, assignor to himself, S. F. MATHEWS, and W. MATHEWS, Mechanicsburgh, Pa.—*Harrow.*—July 20, 1869.

Claim.—1. The combination of the bars A B and truck, when arranged substantially as specified.

2. The combination, with the bars A B, of the hooks H and clamping-bar G, when arranged substantially as specified.

92,720.—LEWIS GRANGER and LUKE PHILLIPS, Memphis, Mich.—*Eave-Trough Former.*—July 20, 1869.

Claim.—The adjustable plate or bar F, in combination with the dies B and D and beader C, substantially as herein shown and described, and for the purpose set forth.

92,721.—THOMAS HAGAN, Rochester, Pa.—*Lock-Nut.*—July 20, 1869.

Claim.—A screw-nut, provided with recesses or chambers for keys, said recesses or chambers and keys being so arranged with relation to the openings of the nut as to secure it on the bolt through the medium of keys, as herein described.

92,722.—CHARLES HEPTONSTALL, Providence, R. I., assignor to ORVILLE PECKHAM, trustee; and ORVILLE PECKHAM, trustee, assignor to C. HEPTONSTALL, PARDON M. STONE, and JONATHAN BOYD, same place.—*Loom for Weaving Irregular Fabrics.*—July 20, 1869.

Claim.—1. The combination, with "take-up" rollers I and J, and vibrating pawl-levers N, of the intermediate worm-gears *a*, arranged and operating substantially as described.

2. The combination, substantially as specified, of the warp-weighted "let-off" apparatus with the "take-up" apparatus, constructed and operating as described, whereby the two mechanisms are made to work in more complete harmony with each other in the organized loom.

92,723.—L. B. HOIT, Cedar Falls, Iowa, and MATTHEW LAFLIN, Chicago, Ill., said HOIT having assigned his right to said LAFLIN.—*Harvester.*—July 20, 1869.

Claim.—1. The oscillating shoe C, constructed with partitions H H and recess K, and provided with the curved rods D and braces E E, substantially in the manner and for the purpose set forth.

2. The connecting lock-joint formed by the cylindrical pin I, and hooked end of finger-bar J, constructed to operate in the manner and for the purpose set forth.

3. Giving a reciprocating motion to the sickle while in different positions, by means of the combination of the cam or eccentric wheel A, pivoted lever F, rod L, jointed to lever F, in the manner described, and connected to the sickle-bar by the head N, substantially in the manner described.

92,724.—WILLIAM J. HORTON, Newburgh, assignor to himself and JOHN S. NAPIER, Mount Hope, Ala.—*Cotton-Gin Rib.*—July 20, 1869.

Claim.—The cotton-gin rib, provided with a plate, B, which has a recess, *b*, on each side, substantially as and for the purpose herein shown and described.

92,725.—Gardner Howland, Brunswick, and Elias T. Ford, Stillwater, N. Y.—*Faucet-Plug.*—July 20, 1869.

Claim.—As a new article of manufacture, a plug for a faucet, consisting of a loop, C, of wrought metal, and part B, of cast metal, both constructed as described, when the part B is cast upon said loop, as set forth.

92,726.—Daniel Hussey, Lowell, Mass.—*Method of Hanging Shafting.*—July 20, 1869.

Claim.—1. The rail *g*, in combination with the shaft *p*, when arranged substantially as described, and for the purposes specified.

2. In combination with the rail *g*, the stands *c c*, arranged and operating as described and specified.

3. The arrangement and construction of the sliding hanger *i*, when used in connection with the rail *g*, as described and specified.

4. In combination with the sliding hanger *g*, the movable foot *k*, when operating as described and specified.

92,727.—George W. C. Jarvis and Charles Graves, Lapeer, Mich.—*Portable Picket-Fence.*—July 20, 1869.

Claim.—The arrangement of the rails A, inclining toward each other in each panel, the pickets B, nailed to said rails, the connecting-pins C, and the supporting-stakes D, constructed and operating as above described.

92,728.—John B. Johnson, Rock Island, Ill.—*Corn-Planter.*—July 20, 1869.

Claim.—1. The slide *g*, having the plates *h*, *t*, and *u* attached thereto, and arranged to operate in connection with the plate *j*, substantially as herein described.

2. The combination of the treadles *e*, rock-shaft *d*, with the arms *d'*, and pendants or levers *f* attached, and the seed-slides *g*, all arranged to operate as herein set forth.

3. The combination of the removable plate *j*, held in position by the lugs *p*, and the detachable hoppers *n*, secured by the hooks *o*, whereby all the parts may be readily detached or replaced, as set forth.

92,729.—August Wilhelm Kientoff, Oakland, Cal.—*Watch-Wheel Holder.*—July 20, 1869.

Claim.—The improved tool herein described, its constituent parts being constructed and fitted together as and for the purpose specified.

92,730.—Marcus D. Kirk and William H. Belknap, Sturgis, Mich.—*Fishing-Jack.*—July 20, 1869.

Claim.—The burner, consisting of the plates I I', cylinder V, spring P, and nut N, in combination with the pipes D B F C, stop-cock G, and reservoir A, as described.

92,731.—William Koch and George Koch, Cass, Pa.—*Shelving for Stores.*—July 20, 1869.

Claim.—Constructing the shelving in section C, provided with friction-wheels D and E, either or both, substantially as herein shown and described, and for the purpose set forth.

92,732.—Joseph B. Koon, Aurelius, assignor to Alden & Co., assignors to George J. Letchworth, Auburn, N. Y.—*Horse-Rake.*—July 20, 1869.

Claim.—The relative arrangement of the guard-board C to the teeth and axle of the rake, and the method for fastening the same, as represented and described.

92,733.—George B. Lothrop, Boston, Mass.—*Door-Knob.*—July 20, 1869.

Claim.—The improved door-handle, as made with its head B and shank A, arranged as set forth, and with the recess *c* in the head, and the passage *b* in the shank for the reception of the metal *e*, when cast into them, as and for the purpose set forth.

92,734.—David Lown, Poughkeepsie, N. Y.—*Butter-Tub.*—July 20, 1869.

Claim.—The fastening for the lid D, composed of the two parts B C, one of said parts, B, having two fixed lips, *b c*, the former of which, *b*, projects outward, and the other, *c*, inward over the lid, the part C also having a fixed outwardly projecting lip, *b'*, and a latch *f*, with a pivoted button, *h'*, underneath; the above-named parts being arranged and combined with a butter-tub and its lid, substantially as herein shown and described.

92,735.—Stephen Mapes, Buffalo, N. Y.—*Thrashing-Machine.*—July 20, 1869.

Claim.—1. The segments H H', and racks F F', or their equivalents, when arranged and connected together so as to be simultaneously actuated by a single lever, for adjusting the concave, substantially as set forth.

2. In combination with the two pairs of segments H H', and shafts I I', the arm J, lever K, and connecting-rod L, operating substantially in the manner and for the purpose set forth.

3. The manner of adjusting the connecting-rod L, so as to enable the concave to be eccentrically adjusted by a movement of the lever K, substantially as set forth.

4. Hinging the grain-rack P, and connecting it with the adjustable concave by means of the rod and roller *r*, and slotted bars *t*, as herein set forth.

5. Making the sides of the teeth of the cylinder and concave with a uniform taper, when combined and operating with an adjustable concave, in the manner and for the purpose shown and described.

6. Constructing the feed-table with the curve or bend *x*, as shown, and so arranged as to cause the grain, before it reaches the cylinder, to assume the proper inclination for passing between it and the concave, as herein set forth.

92,736.—T. M. Mitchell, Philadelphia, Pa., assignor to the Anthracite Fuel Manufacturing Company, Philadelphia.—*Process and Apparatus for Utilizing the Waste Coal of Mines.*—July 20, 1869.

Claim.—The process described, the same consisting in intimately mixing the purified waste coal and the agglutinating or resinous matter together in a hot state, condensing the same into solid lumps, and finally depriving the said lumps of their volatile and odorous matter, substantially as and for the purpose described.

92,737.—T. M. Mitchell, Philadelphia, Pa., assignor to the Anthracite Fuel Manufacturing Company, Philadelphia.—*Drying and Baking Apparatus for Preparing Fuel from Waste Coal.*—July 20, 1869.

Claim.—1. The heat-generating furnaces A A', the hot-air and gas-consuming chamber B, and the drying and baking ovens E E', the said parts being constructed, arranged, and inclosed together within suitable walls, D D, and operating together, substantially as described, for the purpose specified.

2. When used in connection with a drying and baking oven, constructed and arranged to operate substantially as and for the purpose described, a railway-car, F, having its containing body and its platforms made of perforated plate-iron or coarse woven wire, substantially as and for the purpose described.

92,738.—T. M. Mitchell, Philadelphia, Pa., assignor to the Anthracite Fuel Manufacturing Company, Philadelphia.—*Mixing-Apparatus for Preparing Waste Coal for Fuel.*—July 20, 1869.

Claim.—1. The mixing-vessel B, in combination with a surrounding steam-jacket, A, opening into the vessel B, through the series of small perforations 3 3, in the sides of the said vessels, substantially as and for the purpose described.

2. In combination with the vessel B, and the steam-jacket A, communicating therewith, as described, the series of armed shafts C C C C, arranged and operating together simultaneously, as and for the purpose described.

3. In combination with the arms *c' c'* of the rotary shafts C C, the pointed, flat, and vertical projections or fingers 2 2, arranged to operate substantially as and for the purpose described.

92,739.—Robert Moore, Oswego, N. Y.—*Artificial Leg.*—July 20, 1869.

Claim.—The lever I, with the spiral spring H, and circular spring R, and wheel J, and hinge L, when connected with the foot, as stated, and combined and connected together substantially as stated, and for the purpose described.

92,740.—George W. Morrill, Sterling, Ill.—*Spring Bed-Bottom.*—July 20, 1869.

Claim.—Improved elastic, flexible, and adjustable bed-bottom, composed of slats C C, united in pairs by central blocks D, carrying elastic loops or rings, to receive the movable ends of the short levers F, whose fulcrum ends rest upon the bedstead-frame, and by intermediate bearing-blocks E, bearing upon said levers, when these double slats are united in a series, by transverse flexible bands G, secured thereto and to the bedstead-frame, all substantially as herein set forth.

92,741.—Howell Mulford, Philadelphia, Pa.—*Propelling-Apparatus.*—July 20, 1869.

Claim.—The combination and arrangement of the connecting-rod D, the double-crank gearings B and E, with the paddle-shafts I and K, provided with paddles *s s*, the whole operated as and for the purposes substantially as described.

92,742.—T. Brod. Myers, Palatine, W. Va.—*Stock Shed and Rack.*—July 20, 1869.

Claim.—1. The combination of the pivoted roof-plates G G with the wall-plates H H, cords *i* and *l*, all arranged and operating as described, to be adjusted as specified.

2. The sheep-rack, supported on a head, A, which is, by means of inclined bars *a a*, connected with the runners B B, as described, and which carries the troughs E, as specified, all made and operating substantially as set forth.

92,743.—James H. Newton, Holyoke, Mass.—*Imitation Fabric of Paper Cloth.*—July 20, 1869.

Claim.—As a new article of manufacture, a paper-cloth material, in which the cloth surface is stamped in imitation of linen or other woven material, substantially in the manner herein described.

92,744.—Joshua G. Nickerson, Boston, Mass.—*Fertilizer from Sea-Weed.*—July 20, 1869.

Claim.—1. The process, as described, of preparing the algæ or sea-weed for being mixed with one or more other fertilizers.

2. The mixing of it, so prepared, with one or more animal, mineral, or vegetable matters, known as fertilizers, and subsequently grinding the whole together in a grinding-mill, the whole being productive of an improved article of manufacture, for use as a fertilizer.

3. The new manufacture or fertilizer, as made, in manner as set forth.

92,745.—William I. Page, Boston, Mass.—*Water-Closet.*—July 20, 1869.

Claim.—1. The arrangement and combination of the hooked or bent arm *f*, and the weight and arm or weighted arm *e*, with the valve-stem *d*, the cock of the supply-conduit of a water-closet, and with the seat hinged to the body supporter or frame, as described.

2. The arrangement and combination of the two stops *h i*, with the hooked and bent arm *f*, and the weight and arm, or weighted arm *e*, when applied to the valve of the cock of a water-closet supply-pipe, and arranged with the seat B, hinged to its frame A, as described.

92,746.—Zadock Pangborn, Algonac, assignor to George Clark, William P. Campbell, and Andrew H. Mills, Detroit, Mich.—*Alarm for Sailing-Vessels.*—July 20, 1869.

Claim.—The arrangement of the bellows A, head B, ears C, pitmen D, arms E, rock-shaft F, lever G, guides H, fixed cylinder I, frame J, flexible reservoir K, pipes L, head M, ears N, guiding-rods O, hollow-standards P, and coil-springs R, or their equivalents, with any suitable whistles or horns, the whole combined and operating substantially as shown and for the purposes described.

92,747.—Charles Parkin and Samuel Trethewey, Allegheny County, Pa.—*Tempering Steel Castings.*—July 20, 1869.

Claim.—1. In tempering rolls or other articles made of steel, inclosing the part or parts to be preserved from the action of the tempering agent by a metallic cap placed on each, so as to make a water-tight joint at its base, substantially as above set forth.

2. In the process of tempering the body of a steel roll, the use of caps *c*, having outwardly projecting flanges *e'*, and so made that their bases can be drawn tightly against the ends of the body *a* of the roll, with or without interposed packing, substantially as above set forth.

92,748.—Thomas Ramsden, Allegheny City, and Henry M. Davis, Pittsburgh, Pa.—*Valve-Cock.*—July 20, 1869.

Claim.—1. Guiding-ribs *e*, in any desirable number, on the sides of a loose disk-valve, or on the sides of that part of the valve-shell through which the valve plays, substantially as and for the purposes above set forth.

2. The arrangement of long screw-threads on the center-piece, and in the valve-shell of a disk-valve, in connection with threads on the stem and in the center-piece, so combined that, by a partial unscrewing of the center-piece out of the shell, the stem-thread may be screwed out of the center-piece, and the valve be rotated freely, substantially as and for the purposes set forth.

3. A head, *n*, on the end of the valve-stem, in combination with a correspondingly shaped recess in the bottom of the valve-cup, substantially as and for the purposes set forth.

4. A valve, *a'*, attached by a lock-nut, *o*, to a stem, *d*, having the rim *m* projecting above the upper face of the lock-nut *o*, and ground, so as to operate, in connection with the center-piece, to form a steam-tight joint, substantially in the manner and for the purposes set forth.

92,749.—Benjamin Reamer and Cornelius Van Derzee, Albany, N. Y.—*Potato-Digger.*—July 20, 1869.

Claim.—The construction of the frame of a potato-digger, consisting of the front side-pieces or levers G, with their arms G', and whose center of motion is in the center of the axle R, in combination with links E, H, and I, and levers F and K, substantially as and for the purposes herein shown and described.

92,750.—Lyman Robinson, Matteawan, N. Y., assignor to John Falconer, same place.—*Machine for Crossing Fibers in Forming Bats for Felting.*—July 20, 1869.

Claim.—1. The improved method of crossing the fiber of felts, bats, &c., by means of laying-rollers, arranged to work to and fro across the main portion of the fabric, moving perpendicularly to the movement of the said rollers, over a table, substantially as and for the purpose described.

2. The combination, with a table, B, of the laying-rollers E and E', arranged to have a to and fro motion over the same, and to change their positions at the end of each movement, substantially as and for the purpose described.

3. The combination, with the laying-rollers, pivoted to the slides F^1, of the stops K and K', substantially as and for the purpose described.

4. The combination, with the slides F, carrying the laying-rollers, of the rack F^3 and the system of change-gearing, and the means for changing it, substantially as and for the purpose described.

92,751.—John Rogers and Laurence Reid, Brooklyn, N. Y.—*Treating and Revivifying Bone-Black.*—July 20, 1869; patented in England April 1, 1869.

Claim.—1. The process herein described of neutralizing the excess of lime in bone-black resulting from its previous use in the refining of sirups and sugar, by first digesting or steeping it in a solution of superphosphate of lime or phosphoric acid, as de-

scribed, and afterward subjecting it to the process of calcination, for the purposes set forth.

2. The process herein described of removing excess of organic matters in bone-black, resulting from its previous use in the refining of sirups and sugar, by steeping it in a solution of nitrate of ammonia, as described, and afterward subjecting it to the process of calcination, for the purposes set forth.

3. The combined processes herein described, whereby previously exhausted bone-black is rendered capable of again neutralizing and absorbing both the free lime and organic matters contained in but foreign to the raw sugars and sirups being refined, or in the matters used for their defecation, as set forth.

92,752.—MITCHELL A. SALOMONS, Boston, Mass.—*Boiler-Flue Scraper.*—July 20, 1869.

Claim.—1. The construction of the jaws *a b* with their enlargement 5 6, and lips or flanges *c c*, arranged substantially as described.

2. The combination of the circular plate or washer *g* and rod *f*, with the jaws *a b* and flanges *c c*, substantially as set forth.

92,753.—CYRUS SANBORN, Chichester, N. H., assignor to himself and BENJAMIN F. LEAVITT, same place.—*Railroad Car Heater.*—July 20, 1869.

Claim.—An improved stove, divided into two compartments, A and B, by the double-walled partition C, and provided with a water-reservoir, D, and the pivoted plates or valves E G, said parts being constructed and operating in connection with each other substantially as herein shown and described, and for the purpose set forth.

92,754.—P. A. SCHANCK, Matawan, N. J. assignor to himself and R. L. MERRITT, Boston, Mass.—*Dust-Pan.*—July 20, 1869.

Claim.—The strengthening-plate A B, in combination with plate C′ and lugs C, as shown and described.

92,755.—BRONSON SCHOONMAKER, Plainwell, Mich.—*Ladder.*—July 20, 1869.

Claim.—The combination of the ladders B B, provided with brace-bars F F and bands *g g*, with the platform A, provided with standards C C, lever D, and arms *e e*, arranged and operating as above specified.

92,756.—LYMAN SHERWOOD, Springfield, Ill.—*Spading-Machine.*—July 20, 1869.

Claim.—1. A spading-machine, constructed and arranged with the revolving-cylinder A, stationary shaft B, frame C, spades D, shank and toggles *a*, fingers *b*, studs *e*, grooved wheel E, studs *d*, slots *e e*, substantially as herein described, and for the purposes set forth.

2. The stationary grooved wheels E, constructed and arranged with the studs *d* and slots *e e*, substantially as herein described, and for the purposes set forth.

3. The combination of the spades D, shank and toggles *a*, with the revolving cylinder A, arranged substantially as herein described, and for the purposes set forth.

4. The combination of the shank and toggles *a*, fingers *b*, and studs *c*, with the grooved wheel E, studs *d*, and slots *e e*, for the purpose of creating the semi-revolution of the spades D, substantially in the manner herein described.

92,757.—ROBERT SIM, Naples.—*Composition for Preventing the Fouling of Ships' Bottoms.*—July 20, 1869; patented in England August 12, 1868.

Claim.—1. The combination, in such compositions, of compounds or mixtures of iodine and mercury, by preference, the red iodide of mercury, as herein described.

2. The compound, consisting of red iodide of mercury, red lead, boiled linseed-oil, and turpentine, as herein described.

92,758.—HARLOW C. SMITH, Washington, D. C.—*Spring-Chair.*—July 20, 1869.

Claim.—In combination with the fore-feet of a chair, the springs B, hinged substantially as set forth.

92,759.—J. B. SMITH, Milwaukee, Wis.—*Shoulder-Support.*—July 20, 1869.

Claim.—1. A shoulder-support, made substantially as described.

2. A shoulder-support, with the abdominal supporter E, substantially as and for the purpose described.

92,760.—ADAM STORCK, Cincinnati, Ohio.—*Organ-Action.*—July 20, 1869.

Claim.—1. A melodeon or organ action, provided with two reeds or pipes for each key, and separate connections F G, so adjustable that either one of them may be acted on by the key to which they belong, substantially as and for the purposes set forth.

2. The cam-cylinder I *f*, constructed and operating in combination with the frames H, substantially as described, for the purpose stated.

3. The frames H, employed to hold the valve-rods F G, of two sets of reeds, in the requisite positions, and bring either one into connection with its key, B, as described, by the action of a cam-cylinder, I, or any other suitable mechanism.

4. The combination of the ring K, spring *g*, and treadle, with the ring M, springs *i*, and disk J, of the roller I, all arranged and operating substantially as herein shown and described.

5. The valve-rods F and G, of an organ or melodeon action, when supported, in pairs, by adjustable frames, substantially as herein shown and described, for the purpose specified.

92,761.—STEPHEN P. M. TASKER and ROBERT BRIGGS, Philadelphia, Pa.—*Apparatus for Drawing Tube-Skelps.*—July 20, 1869.

Claim.—1. The permanent or fixed mandrel, in combination with two permanent and fixed dies, whose upper edges are separated longitudinally, so that the tongs can be passed along and between them, to lay hold upon the skelp, substantially as described.

2. The slot or groove along the mandrel, in which the lower bit or jaw of the tongs can pass, while the end of the skelp, to which the tongs are attached, is passing the dies, substantially as described.

3. The pin or carrier for supporting the nose or end of the tongs while passing along the dies, substantially as described.

4. The flanges or sliding surfaces F F, formed upon the dies or independent of them, upon which the pin, or its equivalent mechanical device, can be made to move, substantially as described.

92,762.—JOHN F. THOMAS, Ilion, N. Y.—*Horse Hay-Fork.*—July 20, 1869.

Claim.—1. So arranging the tripping-bar in relation to the locking-lever, that the trip may be thrown over the locking-lever before the fork is closed, substantially as and for the purpose specified.

2. The combination of guard *o* with trip *i* and tripping-bar *d*, substantially as and for the purpose set forth.

3. The combination of the divided tine *a*, toggle-joint *b* and *e*, tripping-bar *d*, locking lever *b′*, and trip *i*, substantially as and for the purpose herein specified.

92,763.—JOHN H. TUTTLE, East Hampton, Mass.—*Manufacture of Rubber Balls.*—July 20, 1869.

Claim.—As a new article of manufacture, rubber balls made from pulverized rubber waste, without the necessity of admixture with pure rubber or gutta-percha, by introducing said waste under pressure into molds, which are afterward subjected to heat, as specified.

92,764.—JOHN H. TUTTLE, East Hampton, Mass.—*Process of Treating Vulcanized Rubber-Thread Waste.*—July 20, 1869.

Claim.—The application of ground vulcanized rubber-thread waste, without the necessity of being mixed with pure rubber or gutta-percha, to the manufacture of molded and other articles, by subjecting the said ground waste to pressure and heat, as specified.

92,765.—JONATHAN WALTON, Brooklyn, N. Y., assignor to VICTOR E. MAUGER, New York City.—*Lithographic Press.*—July 20, 1869.

Claim.—1. The slotted or perforated tubes D C B, arranged one within the other, and made adjustable, to regulate the flow of water through them, substanstantially as herein shown and described.

2. The tube D, when provided with slots or rows of apertures, which have V-shaped sides, substantially as herein shown and described, to adjust the flow of water to the length of stone, as set forth.

3. The handles *a b* of the tubes C D, when arranged to serve as pointers, and also to lock the tubes in the various positions, substantially as herein shown and described.

92,766.—ABEL WHITLOCK, Danbury, Conn.—*Lamp-Chimney.*—July 20,1869.

Claim.—A lamp-chimney, constructed substantially as herein described and shown, and for the purposes set forth.

92,767.—ABEL WHITLOCK, Danbury, Conn.—*Saw-Frame.*—July 20, 1869.

Claim.—The saw-frame A, provided with the hinge H and tension-arms K K, where all the parts are constructed and arranged to operate as described.

92,768.—WILLIAM WORLEY, Newark, W. Va.—*Implement.*—July 20, 1860.

Claim.—The improved implement, consisting of the large nail-claw B, recess B′, plate-lifter C, hammer D, tack-claw E, and pot-lifting hook F, all constructed and arranged as herein shown and described, for the purpose specified.

92,769.—JAMES M. YOUNGBLOOD, St. Louis, Mo., assignor for one-half to A. J. P. GARESCHE.—*Stomach-Pump.*—July 20, 1869.

Claim.—The pump A, its perforated tube B, and the covering-tube C, with its attaching-branches *g g′*, combined substantially as and for the purpose set forth.

92,770.—HENRY W. ADAMS, Philadelphia, Pa.—*Brick-Kiln.*—July 20, 1869.

Claim.—1. The arrangement in a brick-kiln, of furnaces, with jets of steam discharging into the furnaces, both above and below the fires, substantially as and for the purpose set forth.

2. In combination with the furnaces C C′, arranged in tiers in front of the several burning compartments B B^1 B^2, &c., the furnaces H, placed in the sides of the kiln, substantially as and for the purpose set forth.

3. The kiln, when constructed with the side walls E′, converging from front to rear, and also with a rear pigeon-hole wall, substantially as set forth.

4. The wall F, when constructed of a tight partition, F^3, and a series of perforated walls, F^2 F^1, substantially as and for the purpose set forth.

5. The construction and arrangement, with relation to each other, of the walls F^1 and F^2, so that the solid portions of each shall stand opposite to the perforations of the other, substantially in the manner set forth.

6. The arrangement of the compartments B, B^1, B^2, and B^3, and flues I, I′, and flues under the hearth K, as shown, and dampers N, N^1, &c., and O O′, substantially as set forth.

7. The combination of a kiln or kilns, and hearth K, under which the draught is made to pass, substantially as and for the purpose set forth.

8. The chimneys M M′, constructed as described, arranged to serve not only as uptakes for the kilns, but also to form bulkheads between the furnaces, and also buttresses, to support the inner walls A, substantially as set forth.

9. The arrangement within the flue, under the hearth, of steam jets G^5 and G^6, to discharge jets of steam in either direction, substantially as and for the purpose set forth.

10. The combination of a series of kilns with intercommunicating flues, and a series of steam jets, for carrying the surplus heat from one kiln into another for utilization, substantially in the manner set forth.

11. The combination, in a kiln, substantially as described, of a burning-chamber, as shown, and a draught-chamber formed in rear thereof, between the solid wall F^3 and pigeon-hole wall F^1, substantially in the manner and for the purpose set forth.

12. The pigeon-hole wall A^1 and partitions A^2, arranged in relation to the front wall and furnaces, substantially as set forth.

13. The arrangement, in connection with the furnaces of a kiln, of a steam-generator, so that the same fire which burns the brick shall generate the steam, when combined with the series of pipes to conduct the steam from said generator, and discharge it into the series of furnaces and flues, substantially in the manner set forth.

14. In combination with two tiers or sets of furnaces, as herein shown, the interposed partitions A^2, to form subdivisions of the draught-chamber, to prevent the interference of one furnace or set of furnaces with another, substantially as set forth.

15. The burning-chambers of a kiln, constructed with converging side-walls, and having also communicating flues, through which the heat is conducted from the rear of one chamber, passing thence into the rear of another burning-chamber, to escape at the combustion-end of said last-named chamber, substantially as set forth.

16. The rear partition wall or walls, constructed with pigeon-holes, increasing in diameter, in series, from bottom to top, substantially as and for the purpose set forth.

92,771.—THOMAS ADAMS, Hudson City, N. J., assignor to MARY A. VAN ALEN, Brooklyn, N. Y.—*Lamp-Burner.*—July 20, 1869.

Claim.—1. The dividing-plate *h*, introduced within the wick-tube, and acting to separate and guide the wick or wicks, substantially as set forth.

2. The chimney-holder *g* and tapering sleeve *g′*, in combination with the cone *k*, to allow the chimney and holder to be removed from the argand burner, substantially as set forth.

92,772.—JOHN AHEARN, Baltimore, Md.—*Plant-Protector Attachment to Plows.*—July 20, 1869.

Claim.—1. As an article of manufacture, an independent plant-guard, A, connected to a socket, B, which can be fastened upon the edge of a plow mold-board, substantially as and for the purpose described.

2. The combination of the parts A B, *s*, *b*, C, *c c*, constructed to operate in connection with each other, substantially in the manner and for the purposes specified.

3. In a device having a guard-plate, A, and a socket, B, for the purposes referred to, making the guard-plate adjustable toward and from the mold-board, substantially as and for the purposes specified.

92,773.—F. A. ARCHIBALD, Concord, N. C.—*Land Level and Measure.*—July 20, 1869; antedated July 15, 1869.

Claim.—The hinged legs A B, provided with feet G G, pivoted thereto, in combination with the pivoted cross-bars D F and slotted piece H, having the scale S on its outer surface, all arranged, constructed, and operated in the manner and for the purpose set forth.

92,774.—JOSHUA ASHTON, Red Wing, Minn.—*Fanning-Mill.*—July 20, 1869.

Claim.—1. The arrangement of the opening and the adjusting slide on the part G of the hopper, the shoe H, and distributing-board I, all substantially as specified.

2. The sieve-shoe, suspended by the elastic metallic bands K, when arranged substantially as specified.

3. The improved sheet-metal sieves, provided with orifices L, formed substantially as specified.

4. The arrangement of the shoe in two parts, M and N, when the part N is hinged and suspended by thumb-screw P, substantially as specified.

5. The adjustable slide U, arranged between the final sieve and the upper sieves, substantially as and for the purpose specified.

92,775.—JAMES L. BALDWIN, Troy, Pa.—*Plow-Beam Clevis-Attachment.*—July 20, 1869.

Claim.—The combination of a rubber block, B, or equivalent, with the mortised forward part of the plow-beam, to sustain the draught of the clevis-pin or bolt, substantially as herein shown and described, and for the purpose set forth.

92,776.—O. W. Bean, Farmington, Texas.—*Machine for Breaking and Scouring Hides.*—July 20, 1869.

Claim.—The combination of the endless belt B, rollers C and G, beater-roller E, and apron H, all substantially as specified.

92,777.—Timothy Beaudry, Levis, Canada,—*Saw-Mill.*—July 20, 1869.

Claim.—1. The method herein described of operating a series or gang of saws, without the use of gates or devices for straining them.

2. The chain-carriage *v*, in combination with the pressure-rollers *t* and *s*, when constructed and arranged to operate substantially as described, and for the purpose specified.

3. The buckle *b*, to which saws *a* are attached, in combination with the cross-head *i* and pitman *c*, when constructed to operate as described, and for the purpose specified.

4. The strengthening-rod *u*, attached to the bar D, in combination with the gauge *r*, when used as and for the purpose set forth.

92,778.—S. W. Bennett, Jr., Monroe, La.—*Brick-Machine.*—July 20, 1869.

Claim.—The brick-press, with the gearing E F, shaft G, crank H, and slides I and L, constructed and arranged as described, and to operate in combination with the roller J and scraper K, in the manner and for the purpose substantially as set forth.

92,779.—George Benns, Rockford, Ill.—*Camp-Stove.*—July 20, 1869.

Claim.—The stove described, consisting of the cylinder A, constructed as described, grate B, and funnel C, the whole being combined and arranged as and for the purpose set forth.

92,780.—H. C. Beshler, Berrysburgh, Pa.—*Corn-Planter.*—July 20, 1869.

Claim.—1. The dropping-cylinders H, when made adjustable upon the axle B, and provided near one end with a continuous row of recesses, and near the opposite end with groups of recesses, whereby said cylinders are adapted to drop the seeds from the hoppers, either in hills or in continuous rows, as herein set forth and shown.

2. An improved corn-planter, formed by the combination of the wheels A, axle B, dropping-cylinders H, hopper E, spouts I, conductor-tubes J, hollow standards K, double mold-board plows L, hinged covering-plows M *m'*, plow-beams N, adjustable braces O, and rod P, provided with the loops P' and lever Q, said parts being constructed, arranged, and operating substantially as herein shown and described, and for the purposes set forth.

92,781.—Bentley C. Bibb, Baltimore, Md.—*Fire-Place Heater.*—July 20, 1869.

Claim.—A movable evaporating-vessel and a movable screen, combined and applied to the top of a heater, substantially as described.

92,782.—Dominicus L. Bollerman and Richard Bollerman, New York, N. Y.—*Device for Closing Bottles and Pipes.*—July 20, 1869.

Claim.—The combination of the side tube D, cap E, and sliding-plunger F, with the fixed socket B and its flexible lining A, all constructed and arranged as shown and described.

92,783.—James B. Bowen, Charles A. Whelan, and Cleanthus A. Reed, Madison, Wis.—*Harvester-Rake.*—July 20, 1869.

Claim.—1. The teeth E E E E, or their equivalent, working up and down at the discharge-edge of the harvester-platform, in the manner and for the purposes stated.

2. The teeth E E E E, the lever B, the rod C, and the spring D, combined in the manner and for the purpose stated.

92,784.—William H. Boyden, Rockland, R. I.—*Machine for Dressing Warp-Threads.*—July 20, 1869.

Claim.—1. The racks H, bars I, and rod J, or any of them, when receiving a reciprocating movement from a power independent of that which works the thread, substantially as and for the purpose specified.

2. The combination of the rocking-frame G, with the racks H, bars I, rods J, cords *j k*, and springs or weights K, substantially as and for the purpose set forth.

3. The racks H and bars I, hung in the manner described, so that they can be slid apart, to allow them, or either of them, to be turned down on their side, substantially as described, and for the purposes specified.

4. The racks H, constructed with a removable top-piece, *i*, substantially as and for the purposes set forth.

92,785.—Thomas W. Bracher, New York, N. Y.—*Hat-Ventilator.*—July 20, 1869.

Claim.—The dust-valve D, in combination with the corrugated strips C and hat A, substantially as set forth.

92,786.—John A. Bradshaw, William H. Brown, and Darius Whithed, Lowell, Mass.—*Mechanism for Driving Sewing-Machines.*—July 20, 1869.

Claim.—1. The arrangement of the segment-gears *e'* and *f*, ratchets *k* and *k'*, pawls *j* and *j'*, and rods *f'* and *g*, substantially as herein described and specified.

2. The caster-plates or rods *r* and *o*, with casters *p'*, *q q'*, and *r*, when arranged in reference with each other, and operated substantially as herein described and specified.

3. The adjustable slide *o' o'* and *p p*, in combination with the caster-plates *n'* and *o*, for the purposes as specified.

92,787.—Charles Bradway, Maquoketa, Iowa.—*Bed-Bottom.*—July 20, 1869.

Claim.—1. The cross-slats G, in combination with the side-bars D, the suspending-springs C, and the intermediate springs *J*.

2. Suspending the cross-slats G, by their notched ends H, to the stirrup-ends F of the spiral-spring stem C, as herein described, and for the purpose set forth.

92,788.—William W. Brigg, Home, Tenn.—*Churn.*—July 20, 1869.

Claim.—1. The hollow shaft B, when the same is so placed that it works in suitable bearings on the opposite sides of the tub, and is provided with two or more tubes, D D D' D', and blades. *c c*, the latter being so attached as to run in angular directions, the whole being combined and arranged in such a manner that when motion is imparted to the dasher it will work on the principle of the screw, substantially as described.

2. Pinion-wheel F, having a hollow neck, F', center opening *f*, hollow tube B, step *b*, and when the same are arranged and operate as described, as and for the purpose specified.

92,789.—S. W. Broadwell, Logan, Iowa.—*Water-Motor.*—July 20, 1869.

Claim.—1. The weighted valves T, provided with adjustable nuts V, in combination with the slotted levers L, depending gate-rods K, oscillating walking-beam I F, provided with ties *h*, and buckets G, as described.

2. The buckets G, provided with valves S, attached to rods J, which are made to discharge water by striking bumpers Z', in the bottom of the race, and provided with plates N, which project down into them, to prevent water from being splashed over their edges, and with plates *d*, which project down to form suitable bearings, as set forth.

92,790.—Lester B. Brown, Petroleum Centre, Pa.—*Boiler-Flue Scraper.*—July 20, 1869.

Claim.—The combination of the yielding spring-scrapers B B with the cone-slide D, adjusting-rod *d*, and tube-handle A, when constructed and arranged to operate substantially in the manner as herein described and set forth.

92,791.—George W. Burwell, Zanesville Ohio.—*Measure-Holder.*—July 20, 1869.

Claim.—An improved measure-holder, A *a'* B C E, constructed substantially as herein shown and described, and for the purpose set forth.

92,792.—D. P. BUTLER, Boston, Mass.—*Lifting-Bar.*—July 20, 1869.

Claim.—The improvement in surfacing handles, substantially as and for the purpose specified.

92,793.—D. P. BUTLER, Boston, Mass.—*Spring Lifting-Apparatus.*—July 20, 1869.

Claim.—1. A spring lifting-apparatus, in which the muscular force is exerted against a series of springs, substantially as described.

2. In combination with the series of lifter-springs *g h*, the side and center lifter-rods, substantially as described.

3. In combination with the lifter-rods, lifter-plate, and springs *h i*, the platform *e*, supported upon springs, substantially as described.

92,794.—CYRUS CARRIER, Oswego, N. Y.—*Clothes-Drier.*—July 20, 1869.

Claim.—1. The plate F, provided with lugs C and D, in combination with the pivoted bars of a clothes-drier, as and for the purpose set forth.

2. In combination with the arms 1, 2, and 3, and plates F, constructed as described, the dogs or buttons A and B, as and for the purpose set forth.

92,795.—JULES JOSEPH CHAUDUN, Paris, France, assignor to himself, JEAN JEAN DEXANT, and ALFRED BERNARD.—*Metallic Cartridge.*—July 20, 1869; patented in France March 31, 1865.

Claim.—The anvil, substantially as shown and described, which serves to receive the blow from the hammer or firing-pin to explode the cap, and to remove the same after being fired, or before, by pressing upon the end of the stem of the anvil, as herein described.

92,796.—H. CLARKE, Baltimore, Md.—*Door-Lock.*—July 20, 1869.

Claim.—The herein-described arrangement, with reference to each other, of the flanged case H, slotted key-hole plate E, knob and stem C, bolt B, having the notched and recessed end *d*, the spring *e*, and slotted spring-tumblers *a b c*, for the purpose specified.

92,797.—EDWARD P. CLARK, Millbury, Mass.—*Clothes-Drier.*—July 20, 1869.

Claim.—As an improvement on a clothes-drier, the stand A, spindles D, ears or plate C, sockets B, and arms E, all constructed, combined, and arranged in the manner and for the purpose specified.

92,798.—GEORGE S. CURTIS and HENRY CURTIS, Chicago, Ill.—*Drawer-Guide.*—July 20, 1869.

Claim.—The drawer-guides E, arranged as described, in combination with the slot *a* in the drawer-back, as and for the purposes hereinbefore set forth.

92,799.—L. T. DELASSIZE, New Orleans, La.—*Breech-Loader.*—July 20, 1869.

Claim.—The combination of the forked bar M, having the hooks *o'*, the spring *x*, and pin *p*, with the slotted sliding-bar K, and hammer *q*, all arranged and operating as described, for the purpose specified.

92,800.—JOHN DENNISON, Hillsborough, N. H.—*Current-Wheel.*—July 20, 1869.

Claim.—The combination, with the shaft A, of the fixed arms D, adjustable buckets C, sliding-collar H, connecting-rods G, and shifting-lever I, when all constructed and arranged substantially as specified.

92,801.—W. EDSON DOOLITTLE, West Haven, Conn.—*Mode of Attaching Screws to Knobs.*—July 20, 1869.

Claim.—The knob, when secured to the screw and shell or cap B, by means of corrugations or holes, and the material forced into the cap when in a limpid or plastic state, as shown and described.

92,802.—WILLIAM H. ECKERT and JAMES A. BLACK, Dayton, Ohio.—*Station-Indicator for Railroad-Cars.*—July 20, 1869.

Claim.—The combination of the rollers B B' and belt P, when the tension of the belt is regulated by springs O, arranged between the boxes in which the journals of the rollers move, such boxes moving in grooves formed in the sides of the case, substantially as and for the purposes set forth.

92,803.—A. N. EDWARDS, Greenville, Ala.—*Plow.*—July 20, 1869.

Claim.—1. The T-shaped bolt D, when arranged to clamp the notched plow or shovel-share C to the perforated standard, having the projecting rib *a*, all made and operating substantially as herein shown and described.

2. The brace E, when arranged in combination with the notched share C, T-shaped bolt D, and standard A, having the rib *a*, all combined and operating substantially as herein shown and described.

92,804.—J. M. ELLIOTT, Winnsborough, S. C.—*Cotton-Seed Planter.*—July 20, 1869.

Claim.—1. The arrangement of the plow E relatively to the wheel A, and for adjustment by means of the slide F, substantially as specified.

2. The arrangement in the hopper, having the passage K, shaped as described, of the bent rotating fingers L, and fixed fingers, all substantially as specified.

92,805.—THOMAS ELLISON, Abingdon, Ill.—*Sliding Farm-Gate.*—July 20, 1869.

Claim.—1. In a sliding-gate, the construction, combination, and arrangement of the posts A and B, tracks C C, and guard-rails E, in the manner shown, and for the purposes described.

2. The gate D, with its top rail projecting as shown, and provided with the pulleys *c* and *c'*, for the purposes herein set forth.

3. The cap G of the post B, provided with the pulley-wheels d^1, d^2, d^3, and d^4, arranged as shown, and for the purposes described.

4. The arrangement of the operating chains *g* and *h*, as herein shown, and for the purpose described.

92,806.—PHILIP FALKER, Lanesville, Ind.—*Plow.*—July 20, 1869.

Claim.—1. The arrangement of the clevis E, bar D, and box F, which is regulated to slide freely over the clevis, and is controlled by the screw G, as specified.

2. In combination with the box F, clevis E, and bar D, the bar C, when connected to a loop, which passes from the under side of the beam over the top thereof, and passes back down through the beam and connected to the upright, as shown and described.

92,807.—DAVID J. FARMER, Wheeling, W. Va.—*Land and Water Velocipede.*—July 20, 1869.

Claim.—1. The floats J J J', arranged substantially as described, for the purpose set forth.

2. The floats J J J', adapted to be adjusted as described, for the purpose set forth.

3. The float J', constructed with the cavity or recess *l*, as represented and described, for the purpose set forth.

4. In combination with the removable floats J J J', arranged as described, the combined draught and paddle-wheels F F, constructed as represented and described, for the purpose set forth.

92,808.—DAVID J. FARMER, Wheeling, W. Va.—*Velocipede.*—July 20, 1869.

Claim.—1. The wheels G G, when constructed in the form of a hollow cylinder, having the circumferential flanges *g g* and the radial flanges *g' g'*, substantially as and for the purpose set forth.

2. A float, M, arranged in relation to the standard C and the rear-wheels G G of a velocipede, substantially as and for the purposes set forth.

3. The combination of a rubber, R, with float M, and treadles or cross-head *c*, substantially as and for the purpose set forth.

4. The arrangement of the rudder R, wheel *m*,

float M, standard C, socket *s*, and ropes *o o*, substantially as and for the purpose described.

5. The combination of the float M, wheel *m*, standard C, reach B, levers D, rods E, cranks and gear-wheels F *e'* I, axle A, and wheels G G, when constructed to operate together, substantially as and for the purposes set forth.

92,809.—JOHN FERGUSON, Fall River, Mass.—*Grain-Cleaner and Smut-Machine.*—July 20, 1869.

Claim.—1. The arrangement and combination of the series of foraminous troughs and the series of brushes of the hollow cylinder with the rotary stone, all constructed as herein described, and so disposed within a case, provided with a fan-blower, as to operate therewith, substantially as hereinbefore specified.

2. The series of deflectors within the foraminous troughs and the series of brushes of the hollow cylinder, all constructed as herein shown, and combined with a rotary stone, as described, the whole being arranged to operate together within the case R, provided with a fan-blower, substantially as set forth.

3. The arrangement and combination of the conduit S^2, (Fig. 2,) with the case R^2, the fan-blower j^2, the stone o^2, and the hollow cylinder B^2, furnished with brushes and foraminous troughs, with their deflectors, all constructed and operating as herein specified.

92,810.—RANDALL FISH, Washington, D. C.—*Fertilizer.*—July 20, 1869.

Claim.—The fertilizer herein described, compounded of the ingredients named, substantially as specified.

92,811.—EDWARD FLEISCHER, Cincinnati, Ohio.—*Hoop-Skirt.*—July 20, 1869.

Claim.—The improved skirt herein described, provided with upper and lower hooped sections C and D, suspenders B, and knee band or tape F, arranged substantially as and for the purposes set forth.

92,812.—J. W. FOARD, San Francisco, Cal.—*Curtain-Fixture.*—July 20, 1869.

Claim.—1. The curtain-fastening, consisting of the sheave *c*, supported upon a movable frame, E, the screw-clamp H, for fixing the sheave at any required height, and the connecting-cord F, that extends from the sheave to the screw-clamp, all constructed to operate together, substantially in the manner and for the purpose set forth.

2. The construction of the pulley or sheave *c*, as herein described, and for the purpose specified.

92,813.—I. N. FORRESTER, Bridgeport, Conn.—*Valve-Gear for Actuating Steam and other Engineery.*—July 20, 1869.

Claim.—The arrangement of the rod *i*, provided with the adjustable collar *l* and springs *m*, and the setting adjustable arm *j*, with relation to each other, and the beam L, valve K, piston H, valve C, and piston D, constructed substantially as herein shown and described.

92,814.—SAMUEL FOSTER, Jr., Des Moines, Iowa.—*Fanning-Mill.*—July 20, 1869.

Claim.—The arrangement of the fan B, crank C, pitman B, levers E and G, arm F, rods H and K, screens I, M, and N, frame L, springs O, box S, and arm T, all constructed as described, and combined to operate in the manner and for the purposes set forth.

92,815.—ORRIN B. GALLUP, Summit, R. I.—*Round Comb.*—July 20, 1869.

Claim.—A round comb, having a joint at or near its center, substantially as and for the purposes herein described.

92,816.—ISAAC M. GATTMAN, New York; N. Y.—*Manufacture of White Lead.*—July 20, 1869.

Claim.—1. Manufacturing white lead in a pure amorphous form, by subjecting metallic lead to a blast of air, carbonic and acetic acid under superatmospheric pressure, by means of a hydrostatic column, substantially as set forth, whereby the same gaseous elements are kept constantly in contact with the metal, with unvarying pressure, from the beginning to the end of the process.

2. Equalizing the pressure by means of the hydrostatic column, as described.

3. Condensing the surplus acetic-acid vapors in the hydrostatic column, substantially as set forth.

4. Preventing the escape of white-lead dust in the room by watery vapor, substantially as described.

5. Exposing metallic lead to the simultaneous action of the gases and vapors under a higher than atmospheric pressure.

6. Subjecting atmospheric hot air to metallic lead, in combination with currents of acetic and carbonic-acid gas.

7. The combination of acetic and carbonic-acid gas with a blast of atmospheric air.

8. The manufacture of pure amorphous white lead by the corroding process, substantially as described.

92,817.—PETER GEISER, Waynesborough, Pa.—*Gauge for Making Axles.*—July 20, 1869.

Claim.—The described templet or gauge for marking the timbers, and also at the same time centering the spindles of axles, substantially as set forth.

92,818.—ROBERT GLORE, Nashville, Tenn.—*Machine for Dressing Feathers.*—July 20, 1869.

Claim.—1. The arrangement of the valve-tubes G, valves H, springs I, bell-cranks L, and rods K, all substantially as specified.

2. The arrangement of the valve-boxes M and rods K with the central tube B, as specified.

92,819.—ALBERT J. GOODRICH, Wolcottville, Conn., assignor to TURNER, SEYMOUR & JUDDS, same place.—*Twine-Holder.*—July 20, 1869.

Claim.—1. The weight *f* and socket *e*, in combination with the shell of the twine-holder, as and for the purposes set forth.

2. The lever-arm *g*, with an eye at the end, in combination with the weight *f*, socket *e*, and twine-holder, as and for the purposes set forth.

92,820.—JOHN P. HAINES, New York, N. Y.—*Oil-Cup.*—July 20, 1869.

Claim.—As a new article of manufacture, the pocket oil-can, when the shank *a* of its nozzle B is provided with the left-hand screw-thread fitting into a corresponding female-screw thread in the mouth of the body A, and with a right-hand screw-thread, *b*, adapted to receive the cap C, in which a similar female-screw thread is formed, all operating as described, for the purpose specified.

92,821.—BENJAMIN F. HARRISON, Newark, N. J.—*Thill-Coupling.*—July 20, 1869; antedated July 15, 1869.

Claim.—The combination of the screw-cap *s t* with the collar-packing V, constructed and arranged in the manner and for the purpose shown.

92,822.—ORANGE N. HART, Winona, Minn.—*Hot-Air Furnace.*—July 20, 1869.

Claim.—1. The adjustable gas-burner M and plates J and J', arranged as described, for the purpose of adapting the furnace to the use of various sizes and kinds of fuel, as herein set forth.

2. The combination of the furnace or fire-chamber, constructed as herein described, with the air-heating devices, consisting of the drums D E, flues B and B', with the stationary diaphragm D and deflector L, all constructed and arranged substantially as described.

92,823.—DANIEL HARWOOD, Dutch Flat, Cal., assignor to himself and SETH WHITE, same place.—*Animal-Trap.*—July 20, 1869.

Claim.—The combination of the spring A, the jaws B B, the blades C C, when the trap is operated by the sliding-bar H, inclined projection J, and catch-spring K, and its projections S, held by the projection T on the bait-pan, substantially as and for the purpose set forth.

92,824.—M. C. HEPTINSTALL, Enfield, N. C.—*Rein-Holder.*—July 20, 1869.

Claim.—Rein-holders A, either provided with the

clamps B and turn-buttons C, or the annular grooves D, and applied to driving-reins, substantially as specified.

92,825.—J. E. Higgins, Charles Merriam, and Curtis O. Luce, Brandon, Vt.—*Hand-Stamp.*—July 20, 1869.

Claim.—1. The spring-catch *s*, in combination with the recessed type-wheel and cap A or plate *t*, constructed and operating substantially as and for the purposes set forth.

2. The arrangement and combination of the wheels *a*, *b*, *c*, *d*, and *e*, plate *t t*, springs *s s s*, cap P, and case A, substantially as and for the purposes set forth.

92,826.—Albert Hodgson and Edwin Hodgson, El Paso, Ill.—*Corn-Planter.*—July 20

Claim—1. The appliance G, composed of the curved plate *g*, hinge g^2, and spring g^1, substantially as described.

2. The said appliance G, in combination with the runner A'.

3. The device P, composed of the hook p' and the spring p'', when arranged and applied as herein set forth, for the purpose of holding the runners above the ground in turning.

92,827.—T. S. Howard, Savannah, Mo.—*Machine for Cutting Stone and Marble.*—July 20, 1869.

Claim.—1. The saw D, constructed as described, having a movable rim made in sections, and consisting of center-piece *a* and side-pieces *b b*, all arranged and combined substantially as shown and described.

2. The arrangement of the wheels, belts, and pulleys herein described, for the purpose of imparting the necessary degree of rotary motion to the shaft S, and pinion T, whereby the main carriage A' is moved either to or from the saw, substantially as herein set forth.

3. The arrangement of the carriage C' with its graduated plates *h h*, provided with series of holes, pins *i i*, pointers *k k*, slotted bar *n*, bolt *m*, and screw *o*, all substantially as and for the purposes herein set forth.

4. The combination of the carriage D', turning upon its center-pin *p*, and rollers *r r*, and having set-screws *s s*, with the brace E', substantially as and for the purposes herein set forth.

5. The combination of the carriages A', C', and D', all constructed and arranged to operate substantially as and for the purposes set forth.

92,828.—Nathan Hunt, Salem, Ohio.—*Head-Block.*—July 20, 1869.

Claim.—1. The combination of the bracket A, nut C, screwed rod E, and bracket H, when arranged for operation, substantially as specified.

2. The combination, with the above, of the swinging-dogs K, substantially as specified.

92,829.—George A. Huntley, Quincy, Ill.—*Coal-Stove.*—July 20, 1869.

Claim.—The arrangement, in a stove, of the horizontal partitions *h h* and vertical partitions I I, in connection with the walls A G and small passages *a a'*, as described, whereby the air is made to circulate slowly around the fire-pot in the large horizontal passages H H' H'', escaping rapidly from one passage to another through the small holes *a a*, substantially as and for the purposes specified.

92,830.—Eugene Huret and François L. Debruyn, Condette, Pas-de-Calais, France.—*Device for Stopping the Revolution of Spindles in Spinning-Machines, &c.*—July 20, 1869.

Claim.—The combination of the driving-mechanism herein described, the spindles A, and the plates K, provided with slots L L, and bent ends, all constructed and arranged for adjustment on the frame of a spinning-machine, as specified.

92,831.—Gustav L. Jaeger, New York, N. Y.—*Paper Box.*—July 20, 1869; antedated June 7, 1869.

Claim.—The arrangement of an outwardly projecting flange, *a*, on the body A of a paper box, substantially as shown and described.

92,832.—George Henry James and Josiah James, London, England.—*Card-Case.*—July 20, 1869.

Claim.—The halves A A^2, combined, as shown, with the receptacles *a a*, spring C, and cover B, substantially as and for the purposes set forth.

92,833.—Granville E. Jarvis, Grafton, W. Va.—*Railway-Rail Joint.*—July 20, 1869.

Claim.—As an article of manufacture, a railroad-track brace made from a flat plate of iron, and having the bent-up tongues *e e'*, the spurs *c c*, the long shank c^2, and the spike-holes, all arranged and constructed substantially as and for the purposes set forth.

92,834.—James G. Johnson, Carthage, Ill.—*Cultivator and Stalk-Cutter.*—July 20, 1869.

Claim.—The construction of the machine herein described, consisting of the combination outer frame A, hinged frame C, roller L, cutters M M, and prongs O O, whereby I am enabled to furnish, in one machine, a corn-stalk cutter, which, by a slight interchange of parts, as set forth, may be used as a meadow-cultivator, substantially as specified.

92,835.—C. H. Johnson, Morristown, N. J.—*Cultivator.*—July 20, 1869.

Claim.—1. The attachable and removable curved teeth *a*, constructed and applied for operating substantially as herein described.

2. The attachable and removable scrapers *a'*, with horizontal cutting-edges, substantially as and for the purpose herein set forth.

3. The combination of the rollers C C and knives *b*, as applied to a cultivator, substantially as and for the purpose herein set forth.

92,836.—John Robert Johnson, London, England.—*Manufacture of Photographic Pictures.*—July 20, 1869.

Claim.—1. The use of shellac and its analogues, used in the way described, for the purpose of receiving and mounting the pigment picture-film upon its permanent support.

2. The mode of mounting and developing the pigment picture-film upon a temporary support, by means of the intervening surface of a solid, fatty, or resinous body, infusible at the temperature of development, and retaining the picture during that process, but which allows of the removal of the picture, when cemented, to its permanent support.

92,837.—M. J. Kavanagh, Joliet, and M. Gregg, Chicago, Ill.—*Combined Corn-Planter and Cultivator.*—July 20, 1869.

Claim.—1. The combination of the grooved cams H, hollow spokes D, hollow hubs E, dropping-slide G, provided with chambers X, and lugs Z, eccentrics N, and springs J V, as and for the purpose set forth.

2. The combination of the beams P, standards Q, and slotted plates T, as and for the purpose set forth.

92,838.—Lawson P. Keach, Baltimore, Md.—*Blacking-Cabinet.*—July 20, 1869.

Claim.—1. Arranging the foot-rest upon the bottom of a box, whose sides and ends open outwardly on either side, as and for the purpose set forth.

2. In combination with a box thus constructed, the blacking receptacles and covers, constructed as described.

3. Making the foot-rest in sections, to serve as a receptacle for the brush-handle, as described.

92,839.—Orson Kelsey, Commerce, Mich.—*Railway-Car Coupling.*—July 20, 1869.

Claim.—The car-coupler, herein described and shown, having shafts C and D, rollers E, cylinders G, H, and K, plates *a*, pulleys *s*, disk P, cord *n*, and link Y, constructed and arranged substantially as specified.

92,840.—D. A. Kennedy, Darien, Wis., assignor to himself, William Wadsworth, and E. D. Murray, same place.—*Rotary Oven.*—July 20, 1869.

Claim.—1. The stationary grooved collar D, friction-balls F, revolving grooved collar E, radial arms G, rim H, and plate I, in combination with each other, and with the stationary central shaft C and shoulder a^1 of the wall A, substantially as herein shown and described and for the purpose set forth.

2. The combination of the friction wheels or rollers B, with the arms G and rim H, either or both, and shoulder a^1 of the wall A, substantially as herein shown and described, for the purpose set forth.

92,841.—S. KEPNER, Pottstown, Pa.—*Window-Sash.*—July 20, 1869.

Claim.—The casing or beading-strip F, when raised or increased in height, as shown, in combination with the self-balanced sash D and D′, substantially as and for the purpose specified.

92,842.—A. H. KNAPP, Needham, Mass.—*Rotary-Pump.*—July 20, 1869; antedated July 17, 1869.

Claim.—1. The two piston-wheels H I, of unequal size, and constructed as described, and arranged and operating in combination, substantially as and for the purpose herein specified.

2. The combination of the projecting bearing *p p*, outside of the water-chambers G T, and the close tubes *u u*, extending through the said water-chambers, substantially as and for the purposes set forth.

92,843.—ISAAC W. LAMB, Salem, Mich.—*Stove-Pipe Fastener.*—July 20, 1869.

Claim.—Securing the pieces of pipe together by means of the fasteners *m*, entering suitable openings *a a′*, made through the pipe, substantially as and for the purpose herein explained.

92,844.—ISAAC W. LAMB, Salem, Mich.—*Combination-Lock.*—July 20, 1869.

Claim.—The combination of the dial E, with the tube W″, drive-wheel W′, and spindle S, substantially as and for the purpose herein explained.

92,845.—WILLIAM M. LANHAN, Noblesville, Ind.—*Plow.*—July 20, 1869.

Claim.—1. The cross-piece H, formed of a metal plate, in combination with the plow G, and beams A, when used to change the plow into a harrow, substantially as set forth.

2. The pronged bar F, in combination with the plates D, for hinging the beams A together, substantially in the manner and for the purpose set forth.

3. The plates D, bar F, plow C and G, cross-pieces E and H, and brace I, when all are arranged and combined in the manner and for the purpose set forth.

92,846.—HENRY A. LANMAN, Columbus, Ohio, assignor to himself and JAMES OHLEN, same place.—*Saw.*—July 20, 1869.

Claim.—The clearers *d d*, separated below their beveled top sides *f f*, down to a point which will be intersected by a curved or straight line, extending from the corners or lowest ends of one pair of the teeth to the corners or lowest ends of another pair of teeth, substantially as described.

92,847.—JAMES S. LESTER, Knoxville, Tenn., assignor to himself and L. C. SHEPARD.—*Elevator.*—July 20, 1869.

Claim.—1. The adjustable elevating-apparatus, so constructed that when one receptacle moves up another moves down, substantially as herein set forth.

2. The adjustable elevating-apparatus, so constructed that when the hoisting-rope is moved in one direction, one end is raised, and when moved in the opposite direction, the other end is raised, lowering the opposite side each time, substantially as herein set forth.

3. The combination of the horizontal beam A, brace-bars B B, pivoted frame D, and counterbalancing-lever F, all substantially as and for the purposes herein set forth.

4. In combination with the pivoted frame D, on the outer end of the horizontal beam A, the pulleys *a a*, pulley-blocks *b c*, rope *d*, and receptacles E E, all constructed and arranged to operate substantially in the manner and for the purposes herein set forth.

92,848.—JOSEPH F. LOTELLIER, Grand Rapids, Mich.—*Steam-Engine Governor.*—July 20, 1869.

Claim.—1. The construction of the sleeve I, with its projecting arm or socket, O, for the reception of the shaft P, and the inclined planes upon its lower surface, substantially as set forth.

2. The construction of the cap L L′, upon the upper end of the spindle D′, substantially as shown and described.

3. The combination of the stationary inclined plane I′, or its equivalent, with the movable inclines upon the socket I, substantially as and for the purpose set forth.

4. The stop R, when constructed and arranged substantially as set forth.

5. The construction of the hangers *k*, having the swinging-arms *l′*, substantially as shown and described.

6. The arrangement of the hangers *k* and pulleys *h*, with reference to the pulley Q of the governor, substantially as set forth.

92,849.—HENRY C. LEZOTT, Osage, Iowa.—*Harrow.*—July 20, 1869.

Claim.—The yoke E, supported and connected to the harrow, as described, and levers I K, also connected to the harrow, combined therewith and with the truck, substantially as specified.

92,850.—EDWARD A. LOCKE and WILLIAM N. WEEDEN, Boston, Mass.—*Paper-Collar Box.*—July 20, 1869.

Claim.—A box adapted for containing paper collars or other articles, and having an eye-glass or aperture at one end, and an object-glass, or transparent or semi-transparent medium at the opposite end, substantially as and for the purpose set forth.

92,851.—WILLIAM E. LOCKWOOD, Philadelphia, Pa.—*Fabric whereof to make Collars, Cuffs, Bosoms, and other Articles of Wearing Apparel.*—July 20, 1869.

Claim.—1. Improved fabrics, to be used in the manufacture of seamless shirt-collars and similar articles, prepared substantially as and for the purpose above described.

2. Shirt-collars, cuffs, bosoms, and similar articles, made out of either of the above-described improved fabrics, as new articles of manufacture.

92,852.—JAMES W. LOVELESS, Clark's Hill, Ind.—*Clod-Fender.*—July 20, 1869.

Claim.—1. The clip C, substantially as shown and described.

2. The combination and arrangement of the fender A, forked bar B, and clip C, with reference to a plow, substantially as shown and described.

92,853.—WILLIAM A. LUDDEN, Brooklyn, N. Y.—*Pencil-Case.*—July 20, 1869.

Claim.—The tubes *b* and *c*, slotted in the manner described, in combination with the extension-case *d* and point *h*, with their respective pins 2 and 5, and the inclosing-case *a*, as and for the purposes set forth.

92,854.—SAMUEL WILLIAM MAQUAY, Footscray, near Melbourne, Victoria.—*Device for Raising Sunken Vessels.*—July 20, 1869.

Claim.—1. The apparatus for producing hydrogen-gas under water, and conveying it to the gas-receivers or balloons, consisting of the case A, acid-jar D, rod E, and pipe H, substantially as specified.

2. The gas-generating apparatus, herein described, in combination with the balloon H, provided with the link M and toggle N, as set forth, for the purpose specified.

92,855.—FELICIE F. N. MARIAS, New York, N. Y.—*Washing and Cleansing Fluid.*—July 20, 1869.

Claim.—The washing and cleansing fluid, substantially as herein specified.

92,856.—JOHN MARSDEN, Halifax, England, assignor to JOHN CROSSLEY and Sir FRANCIS CROSSLEY, same place.—*Loom for Weaving Carpets.*—July 20, 1869; patented in England September 9, 1867.

Claim.—1. The combination of the batten of the loom with the slotted connecting-rod, the oscillating

guide, and the crank, substantially as before set forth.

2. The combination of the series of traversing shuttle-boxes, with the rack and pinion, the change-wheel, and the reciprocating catch-levers, for moving the change-wheel, according to the indications of the pattern-mechanism, all constructed to operate substantially as before set forth.

3. The combination of the catch-levers, the slotted sliding-frame which carries them, the crank, and the spring clutch-box, substantially as before set forth.

4. The combination of the said catch-levers, the slotted-sliding frame, the crank, the spring clutch-box, and the stop-motion, substantially as before set forth.

5. The combination of the two catch-levers, the coupling-rod connecting them, the recessed curved arc, and the spring-catch that engages in the recesses of said arc, to hold the levers in the positions determined by the pattern-mechanism, substantially as before set forth.

6. The combination of the catch-levers with the pattern-mechanism, through the intervention of divided connecting-rods, the parts of which are held together by a spring, substantially as before set forth.

7. The combination of the series of shuttle-boxes with the stop for locking said series in the required position, and with the cam, to control said locking, substantially as before set forth.

8. The combination of the instruments for moving the traversing series of shuttle-boxes, with the crank-shaft, through the intervention of the spring-clutch, so as to prevent breakage, in case a shuttle fails to box properly, substantially as before set forth.

9. The combination of the instruments for moving the traversing series of shuttle-boxes, the shaft, for imparting motion to them, the spring-clutch, and the T-shaped lever connected with the stop-motion of the loom, substantially as before set forth.

10. The combination of the picker-staff, the picking-shaft, the clutch, and the pattern-mechanism, operating said clutch for the purpose of controlling the throwing of the shuttle, substantially as before set forth.

11. The combination of the picker-staff, the picking-shaft, and the spring-clutch, which yields and prevents breakage when the picker-staff strikes the end of a shuttle-box, substantially as before set forth.

12. The combination of the batten of the loom, the stop-rod, the vibratable frog, the spring, and the rod connected with the disengaging-mechanism of the loom, so as to stop the loom in case the shuttle fails to box, substantially as before set forth.

13. The combination of the warp-beam, the brake-pulley, the curved arms, the vibrating brake-lever, and the whip-roller, substantially as before set forth.

92,857.—FRANZ O. MATTHIESSEN, Jersey City, N. J.—*Globe-Valve.*—July 20, 1869.

Claim.—1. The slotted socket B, having a graduated scale, *f*, and the sliding indicator C, having a pointer, *c*, and a yoke, *b*, combined for operation in connection with the fixed case A, and the hand-wheel G, substantially as and for the purpose herein set forth.

2. The construction and arrangement of the socket B and indicator C *c*, in relation to the valve-case A, and hand-wheel G, substantially as set forth.

92,858.—E. M. MAYO, Cincinnati, Ohio.—*Hanger for Shafting.*—July 20, 1869.

Claim.—A hanger for shafting, consisting of the frame A, having grooves, *b*, formed therein, and the sliding-box C, with set-screw B, constructed and arranged substantially as described.

92,859.—THOMAS MAYOR, Providence, R. I., assignor to ORVILLE PECKHAM, trustee; and said trustee assigns to said MAYOR and GEORGE CHATTERTON, same place.—*Speeder for Spinning and Twisting Roving.*—July 20, 1869.

Claim.—1. The method, substantially as herein specified, of driving and steadying a bobbin, by combining the bobbin J with the driving-spindle C, and the stationary bolster G, so that while the bobbin is driven by the former, it shall, in all positions, be steadied by the latter, as herein set forth and described.

2. In combination with the neck L of the flier, where such neck is constructed with two lateral orifices, for the passage of the roving, as described, the employment of a slit, *g*, connecting the axial hole in the neck of the flier with the lower one of such lateral orifices, as herein described, for the purpose of breaking the yarn, whenever the roving has not been properly led to the flier.

3. The arrangement, with reference to the long bolster G and step-rail D, of an intermediate spindle-bearing, attached to the same yoke or frame which supports the bolster G, for the purpose of furnishing a rest for the bevel driving-gear K′, and also the arrangement of the fellow bevel-gear K with such driving-gear K′ and intermediate bearing, substantially as shown, whereby the height of the machine and the length of the spindle are enabled to be reduced, as herein set forth.

92,860.—WILLIAM S. MCKINNEY, Cincinnati, Ohio.—*Shaft-Coupling.*—July 20, 1869.

Claim.—The cylindrical split-bushing C, in the described combination with the sleeve E and keys B D, constructed and operating substantially in the manner and for the purpose set forth.

92,861.—WILLIAM MCLUCAS, Reinersville, Ohio.—*Corn-Planter.*—July 20, 1869.

Claim.—1. The lever D, rods E E′ *e*, and fulcrum bolt or pin e^1, when the same are so combined and arranged as to act as a clamping-brake for the wheel B, substantially as described, as and for the purpose specified.

2. The lever D, rods E E′ *e*, upright C, and caster-wheel C′, when the same are so combined and arranged that simply by raising the lever the wheel B, by a simultaneous movement, shall be elevated and clamped, substantially as described.

3. The wheel B, and guide-post b^2, when the same are so combined and arranged as to operate substantially as described, as and for the purpose specified.

4. The curved elbows K K, when the same are so arranged as to furnish bearings for the adjustable arm I and the axle to which the roller-wheels K′ K′ are attached, substantially as described, as and for the purpose specified.

92,862.—FERDINAND MEHRMANN, Fountain City, Wis.—*Water-Wheel.*—July 20, 1869.

Claim.—The core of the wheel, formed by the spool-shaped block B, and the rim C, supported from the upper flange of the block, the annular space between the block and rim being provided with the buckets D, of the form shown in Fig. 3, all operating as described, for the purpose specified.

92,863.—SERENO T. MERRILL, Beloit, Wis.—*Straw-Board.*—July 20, 1869.

Claim.—The continuous sheets of straw-boards, rolled for handling or transportation, substantially as specified, as an improved article of manufacture.

92,864.—JACQUES MEYER, Williamsburgh, N. Y.—*Horse-Collar.*—July 20, 1869.

Claim.—The horse-collar, consisting of the wooden frame *a*, lined with the cushion C, and faced with the metal plates *b b*, hinged together at their upper ends, the whole being covered with leather, and adapted to receive at the lower end the removable V-shaped block B, as herein described, for the purpose specified.

92,865.—ZEPHANIAH MILLER, Canal Fulton, Ohio.—*Machine for Thrashing and Hulling Clover-Seed.*—July 20, 1869.

Claim.—1. The carrier-belt D, formed by eccentrically pivoting the ends of the notched slats d^1 to the endless chain of hinged blocks or links d^2, in combination with the toothed or thrashing cylinder C, of a clover-seed machine, substantially as herein shown and described, and for the purpose set forth.

2. The hopper J, in combination with the thrashing-cylinder C and hulling-cylinder H, substantially as herein shown and described, and for the purpose set forth.

3. The combination of the elevator I with the hull

ing-cylinder H of a clover-seed machine, substantially as herein shown and described, and for the purpose set forth.

4. The combination and arrangement of the thrashing-cylinder C, endless belt or carrier D, constructed as described, hulling-cylinder H, elevator I, and hopper J, with each other, substantially as herein shown and described, and for the purpose set forth.

92,866.—ISAAC N. MITCHELL, Areanum, Ohio.—*Car-Coupling.*—July 20, 1869.

Claim.—1. The clevis E, constructed as described, so as to surround the draw-bar and be pivoted to the same, and having a slot on one side to pivot the coupling-link, and another slot on the other side to receive the head of the link, substantially as herein set forth.

2. The combination of the clevis E, and coupling-link F, constructed as described, and arranged on the draw-bar of a railroad-car, substantially as and for the purposes herein set forth.

3. In combination with the clevis E and coupling-link F, the link or chain *i*, arm *h*, and shaft *f*, substantially as and for the purposes herein set forth.

4. The arrangement of the shaft F, notched wheel *k*, and slotted slide *m*, substantially as and for the purposes herein set forth.

5. In combination with the shaft *f*, notched wheel *k*, and slotted slide *m*, the draw-bar B, provided with a wire, *o*, or its equivalent, substantially as and for the purposes herein set forth.

92,867.—OTIS M. MITCHELL, Marathon, N. Y.—*Culinary Vessel.*—July 20, 1869.

Claim.—1. The improved culinary vessel herein described, provided with a perforated hinged bottom, C, and the bar or catch D, arranged and operatiug substantially as shown and specified, for the purposes set forth.

2. In combination with the culinary vessel herein described, provided with a perforated hinged bottom, C, and the bar or catch D, the steamer E, arranged and operating substantially as shown and described, for the purposes specified.

92,868.—OTIS M. MITCHELL, Marathon, N. Y.—*Washing-Machine.*—July 20, 1869.

Claim.—The improved washing-machine herein described, consisting of the cover D, provided with the cleats *d*, the radial arms or spokes C, and the standard B, combined with and operated by the crank-shaft E, substantially in the manner and for the purposes specified.

92,869.—DAVID M. MOORE, Windsor, Vt.—*Car Brake and Starter.*—July 20, 1869.

Claim.—1. The combination and arrangement of the gear-wheels C C′ and D, drum D^1, and spring E, and axle B, substantially as and for the purpose set forth.

2. The combination and arrangement of the gear-wheel D, drum D^1, and vertical shaft D^2, substantially as and for the purpose set forth.

3. Supporting the vertical shaft D^2 in a bearing formed upon the axle B, of the car, substantially as and for the purpose set forth.

4. The arrangement of the pawl *d* and spring *d′*, with reference to the drum D^1 and gear-wheel D, substantially as and for the purpose set forth.

5. The arrangement of the tube F, which incloses the spring, with reference to the drum D^1, substantially as and for the purpose specified.

92,870.—CHARLES H. MORGAN, Worcester, Mass.—*Machine for Making Wire Rope.*—July 20, 1869.

Claim.—1. The combination of the mechanism herein described, constructed and operating substantially as set forth.

2. The spool-carrier, with its adjustable brake, constructed and operating to produce uniform tension on the wire, substantially as described.

92,871.—DAVID MORRIS, Bartlett, assignor to himself and AARON P. DEWEES, Pennsville, Ohio.—*Mining-Machine.*—July 20, 1869.

Claim.—1. In a machine for the purpose indicated, having a pivoted arm, C, carrying two saws at its forward end, the endless chain E, provided with the teeth *e e*, and operating as and for the purpose described.

2. The arrangement of lever L, pawls *i i*, wheels N N, each having a cog-rim, O, and bevel cog-rim *n*, pinion *m*, shaft *a*, and spindle T, when used for the purpose of rotating an endless chain, E, in a machine constructed and operating as above described.

92,872.—CHARLES A. MORTON, Biddeford, Me.—*Oiler for Machinery.*—July 20, 1869.

Claim.—The portable hand-oiler, consisting of the vessel A, pump B, and the vertical discharge and directing tubes, the pump being arranged within the vessel, upon the perforated convex disk C, with its piston-rod extending through the screw-plug E in the top of the vessel, and with its lateral pipe communicating with the discharge-tube upon the side of the vessel, all as herein described, whereby the oiler is adapted to be held and the pump operated by one hand, while the directing-tube D is guided by the other, as herein set forth and shown, for the purpose specified.

92,873.—FRITZ MUELLER and HERMANN KOELLER, New York, N. Y.—*Tailors' Measuring-Apparatus.*—July 20, 1869.

Claim.—The sliding and adjustable blade or plummet F, in combination with the graduated strip or blade A′, and the two sliding and adjustable frames C C′, in the manner and for the purpose herein described and represented.

92,874.—W. C. COCKBURN MUIR, Westminster, England.—*Railway.*—July 20, 1869.

Claim.—1. The within-described sleeper, curved at the upper portion, having vertical sides and a horizontal flange, D, above the vertical portions, as set forth.

2. The two ledges *a a*, arranged on the upper portion of the sleeper, beneath and parallel to the edges of the lower flanges of a rail, as set forth.

3. The piece C, in combination with the jaw *d*, the rail, and the wedge *f*, when the said piece is constructed as described.

4. The clip *c*, with its projection *h*, in combination with the sleeper, recessed to allow the passage of the projection *h*, and with the bar *g* notched to receive the said projection.

5. The sleeper, with its recess for the reception of the detachable block *i*, in combination with the tie-rod *g*, notched and adapted for the reception of the block, as described.

92,875.—BYRON W. NICHOLS, Canton, Ohio, assignor to himself, C. AULTMAN, GEORGE H. BUCKIUS, P. S. SOWERS, and A. CLARK TONNER, same place.—*Composition of Matter to be Used in the Process of Restoring Steel.*—July 20, 1869.

Claim.—1. The employment of manganese and resin in the process of restoring or refining and improving steel.

2. The employment of the ingredients herein named, when compounded and used about in the proportions and substantially in the manner and for the purpose set forth.

92,876.—BYRON W. NICHOLS, Canton, Ohio, assignor to himself, CORNELIUS AULTMAN, GEORGE H. BUCKIUS, PERCY S. SOWERS, and A. CLARK TONNER, same place.—*Converting Articles of Cast Iron into Steel.*—July 20, 1869.

Claim.—1. The use of the ingredients herein named, when compounded and used in the manner and in about the proportions herein described, and for the purpose set forth.

2. The employment of iron oxides, or their chemical equivalents, as a packing in the process of converting into steel articles of iron which have previously been cast into the desired form for use.

92,877.—JOHN D. PARSONS, Yonkers, N. Y.—*Hat-Brushing Machine.*—July 20, 1869.

Claim.—The described arrangement upon the frame, and with relation to each other, of the revolving mandrel and cap *a f*, and the sliding-shaft *d*, carrying the revolving-cap *g*, all operating, as set forth,

to hold and revolve a hat in such a manner as to leave both sides of its brim exposed above the frame and operating-mechanism for brushing and cleansing, as herein described and shown.

92,878.—BYRON PARTELLO, Detroit, Mich.—*Bed-Bottom.*—July 20, 1869.

Claim.—1. The posts E E′, when combined with the wire F in such a manner as to hold the latter nearly in a horizontal line, as and for the purpose described.

2. The combination and arrangement of the frames A B, slats C, springs *c*, and wire F, in the manner and for the purpose described.

92,879.—CHARLES B. PAYNE, Clinton, Ill.—*Check-Hook.*—July 20, 1869.

Claim.—The flat plate A, with shoulder *a*, loop C, and tongue E, which projects above the surface of the leather B, and with hook D, all connected to the parts of the leather by the rivets, as herein shown and described.

92,880.—E. B. PRATT, Monroe, Wis.—*Cultivator-Teeth.*—July 20, 1869.

Claim.—A double-winged harrow-tooth, constructed with an inclined cutting-edge, extending in a direct or straight line from top to base, and having the entire upper portion of each wing bent at right angles, thus giving additional strength to the tooth, and also enabling it to be more securely attached to the under side of the frame, substantially as described.

92,881.—N. P. QUICK, Carmel, N. Y.—*Smiths' Anvil-Clamp for Holding Tires while being Upset by Hand-Forging.*—July 20, 1869.

Claim.—1. An improved tire-clamp for attachment to anvils, formed by the combination of the plate C, arm D, arms E, arms F, jaws G, arms H, bail or connecting-bar I, connecting-bar J, treadle K, and springs L, with each other, substantially as herein shown and described, and for the purpose set forth.

2. The combination of the tire-clamp with the anvil A and block B, when arranged as herein shown and described.

92,882.—JONATHAN RADER, Daleville, Ind.—*Corn-Planter.*—July 20, 1869.

Claim.—1. The combination of the drill D with standard D′, substantially as shown and described.

2. The combination of the scrapers E, bars *e*, with connecting-rod F and lever G, arranged to operate substantially as set forth.

92,883.—HENRY F. READ, Brooklyn, N. Y.—*Water-Meter.*—July 20, 1869; antedated July 13, 1869.

Claim.—1. The sleeve or shield M, having the two radial flanges *t t*, and the flange *r*, on the opposite side, and slot *m*, constructed substantially as and for the purpose specified.

2. The endless screw H, the driving-wheel J, and the wheel-house R, in combination with the shield M, when used together, in the construction of a water-meter, and all constructed substantially as and for the purpose described.

92,884.—HENRY F. READ, Brooklyn, N. Y.—*Molding Propeller for Water-Meters.*—July 20, 1869.

Claim.—1. The hollow cylindrical metallic mold, formed by spiral segments G G, and leaving spiral openings E′ E′ between said segments, constructed substantially as and for the purpose described.

2. The collars J and J′, in combination with the spiral segments G G, and the screws *f f*, whereby said parts are securely fastened in position, constructed substantially as and for the purpose described.

3. The opening E′ E′ between the segments, in which the wings of the propeller are molded, when constructed substantially as and for the purpose described.

4. The cap H, holding the body of the mold, and securely covering the several spiral segments and openings, constructed substantially as and for the purpose described.

5. So forming the mold for casting spiral propellers that, by removing the cap at one end, the thing cast may be drawn from the mold by being turned upon the same spiral pitch, as shown in Fig. 7, substantially as described.

6. The caps A and A′, in combination with the plungers K and K′, for holding the mandrel and shaft in position, and forcing the material to be molded into every part of the mold, constructed and arranged substantially as described.

7. The steel mandrel I, with its male-screw thread, upon which is formed the female-screw *p′*, in the body of the propeller, in combination with the plungers K K′, and collars J J′, as set forth.

8. The screw-propeller, as shown in Fig. 6, when made in metallic molds, substantially as described, and for the purpose set forth, as a new article of manufacture.

92,885.—GEORGE RIGHTER, Radnor, Pa., assignor to himself, GEORGE RIGHTER, Jr., and J. G. MAXWELL.—*Barrel-Head.*—July 20, 1869.

Claim.—Forming the head of a barrel of a single disk of wood, in the manner described.

92,886.—JOHN RIORDAN, Six Mile, Ind.—*Fence.*—July 20, 1869.

Claim.—The forked brace B′, pivoted, as at *x*, to the ground-sill B, and provided with adjusting holes *e*, and pins *i i*, for supporting the end posts of two adjacent panels, A, substantially as shown and described.

92,887.—MARVIN OWEN ROYCE, Boston, Mass.—*Miter-Box.*—July 20, 1869.

Claim.—1. The traversing guiding-bar U, provided with clamping screws, substantially as described, for straightening, stiffening, holding, and guiding the saw, either with or without the groove in the bar.

2. The guiding-bar U, in combination with the guiding-stand S, when arranged to operate substantially as described.

92,888.—PETER SCHMITT, Stewartsville, Mo.—*Sulky Land-Roller.*—July 20, 1869.

Claim.—The ground-rolling apparatus herein described, having rollers A and B connected with the cross-head, substantially in the manner specified.

92,889.—AMOS SHELLABARGER, Miami County, Ohio.—*Corn Planter.*—July 20, 1869.

Claim.—1. The arrangement of the grain wheel or disk G, with its projecting lips or spaces *i i*, and pin-wheel P, with set-screw S, for regulating the sizes of discharge-holes *f f*, with slot S′, for adjusting the same, as shown and described.

2. The lever *a*, with springs *b* and *c*, arranged for operating the rotating wheel or disk P, the valve V, and punch M together, as shown and described.

3. The combination of levers Z X L, cam J, and lever *a*, with springs *b* and *e*, for operating the dropping-mechanism, as shown and described.

4. The arrangement of the punch M, brush *g*, and disks G and P, as shown and described.

92,890.—JOSEPH SIMPSON, Millbury, Mass.—*Temple for Loom.*—July 20, 1869.

Claim.—1. The wedge-shaped piece *d′* and bolt *d*, in combination with the guide *e*, piece *e′*, spring C, and shank B, arranged and operated substantially as and for the purpose set forth.

2. The combination, with a temple, constructed as described, of the hinged shank E, with its slotted portion *e*, in combination with the plate F and spring *f*, as and for the purpose described.

92,891.—SAMUEL W. SLOCUMB, Albany, Ill.—*Wagon-Axle.*—July 20, 1869.

Claim.—1. The projections *a* a^1 a^2 and *b* b^1 b^2, formed upon the outer surfaces of axle-skeins or axles themselves, eccentrically thereto, substantially as and for the purpose described.

2. The packing B, in combination with the skein A, substantially as and for the purpose set forth.

92,892.—BYRON SLOPER, St. Louis, Mo.—*Hydrogen Generator and Carbureter.*—July 20, 1869.

Claim.—1. The arrangement of the gas-holder so as to be adjusted in accordance with the accumulation of salt and sediment thereunder, substantially as set forth.

2. The arrangement of the gas-holder to be rotated with its tray, and thus wash the metal on the latter, substantially as set forth.

3. The gauge *a*, arranged on the vessel A, acting with the fluid and stationary gas-holder, to indicate the acid action in generating gas, substantially as set forth.

4. The vessel A, gauge *a*, adjustable holder C, connected tray B, carbureter E, pipe F, service-pipe G, and its safety-stuffing, when combined and arranged substantially as set forth.

92,893.—CHARLES D. SMITH, Drytown, Cal.—*Ore-Concentrator and Endless Sluice-Blanket.*—July 20, 1869.

Claim.—1. The revolving endless belt B, having the sides constructed of the blocks *c c*, so as to form a moving sluice, and having the bottom of this moving sluice covered with alternate strips of blanket, *b b*, and amalgamated metal plates *c c*, each overlapping the other, so as to form a surface for collecting both the sulphurets and gold, quicksilver, and amalgam, in the manner substantially as described.

2. The adjustable roller E, both for the purpose of regulating the tension of the belt and for supporting the belt while passing between the drums B and C, substantially as described.

3. The chamber N, having the elongated orifices *n* and *n'*, and the short hose-pipe *o*, for directing a stream or streams of water upon the belt, substantially as and for the purpose described.

4. The hammers I I, attached to the shaft F', and operated by means of the cams K K, placed on the parallel shaft F, so as to strike the moving belt B, substantially as and for the purpose described.

5. The blanket-adjuster S, arranged so as to bear upon the belt, and place the blankets in a proper position to receive the ore, substantially as above described.

92,894.—GEORGE HAND SMITH, New York, N. Y.—*Manufacture of Wrought Iron and Steel Direct from the Ore.*—July 20, 1869.

Claim.—Heating the ore to a white heat, by what I have herein described as neutral heat, and, while the ore is in that state, applying to it the required charge of carbon, in the gaseous form, from a source separate from the heating-fire, to effect the conversion of the ore, substantially as and for the purpose specified.

92,895.—T. J. SOUTHWORTH, Rochester, N. Y.—*Tag.*—July 20, 1869.

Claim.—As an improved article of manufacture, a label-tag, composed of paper having an increased thickness of material across one end, which increase is formed in the manufacture of the paper, as set forth.

92,896.—LEWIS SPERRY, East Windsor Hill, and LESTER ROBINSON, New Haven, Conn., assignors to LEWIS SPERRY and ADELIA SPERRY.—*Cradle.*—July 20, 1869.

Claim.—1. The disk K, provided with a crank-pin and clock-work, H, in combination with the plate G, when used for rocking-cradles, substantially as shown.

2. The frame A, standards C, pins D, plate G, and clock-work H, and cradle B, when all are combined, substantially as described.

92,897.—WILLIAM M. SPRINGER, Springfield, Ill.—*Legislative Voting-Apparatus.*—July 20, 1869.

Claim.—The combination of the vertically acting catches *d* and pivoted keys *a*, controlled by springs *f*, connected to the L-shaped standards *h*, all arranged upon a suitable frame, and operated by cords or their equivalents, for recording the votes of a legislative or other body by weight, substantially as specified.

92,898.—HENRY STEM, Mifflinburgh, Pa.—*Plow.*—July 20, 1869.

Claim.—1. The metal plates E and F, when used to attach the beam D to the share, in combination with the slotted plate G, substantially in the manner and for the purpose set forth.

2. So constructing the top of the frame H, with a groove formed upon its landside, that two kinds of beams can be used, in the manner and for the purpose specified.

3. The combination of the frame H, share *a*, moldboard A, handles B B, plate G, and the beams D or C, when the several parts are constructed to operate substantially as set forth.

92,899.—JACOB STEUER, Albany, N. Y.—*Carriage-Jack.*—July 20, 1869.

Claim.—The rack B, rollers *g g*, pinions *e e*, gear-wheel *d*, ratchet-wheel D, pawl K, and stock A, all constructed, combined, and arranged as and for the purpose described.

92,900.—ENOCH P. TERREL, West Liberty, Ohio.—*Mechanism for Operating the Picking-Staff in Looms.*—July 20, 1869.

Claim.—1. The combination of the disks F, their cut-out section being arranged in opposite directions, with treadles G, springs I *i*, ropes or bands *g*, and rollers *h*, arranged to operate the picker-staves, substantially as described and shown.

2. In combination with the above, the pawl *j* and ratchet-wheel J, on shaft H, substantially as and for the purpose set forth.

92,901.—MACKLOT THOMPSON, St. Louis, Mo.—*Mashing Grain for Distillation.*—July 20, 1869.

Claim.—The method, herein described, of preparing or mashing grain for distillation, by grinding or pulping the same after it has been boiled or mashed, and before it is subjected to the action of the malt or other saccharifying agent, substantially as and for the purposes set forth.

92,902.—W. C. TILTON, Spring Place, Ga.—*Railway-Car Coupling.*—July 20, 1869.

Claim.—The coupling-link, constructed as described, of the slotted wedge-shaped extension A, cast upon one end of the link B, whereby, when adjusted in the sockets of the buffers, the weighted end A will overbalance the link B, and maintain it in a horizontal position, as herein set forth, for the purpose specified.

92,903.—GILES A. TITUS, Mantorville, assignor to himself and SAMUEL B. PINNEY, St. Cloud, Minn.—*Machine for Sowing and Drilling Grain.*—July 20, 1869.

Claim.—1. The double feed-rollers B, triangular cup or bucket, in combination with the triangular hopper A and openings C, when constructed and operating as described.

2. The drill-tubes, and the method herein described for attaching the tube-receiver N to furrow-opener H, when constructed and operating as described.

3. In combination with the tubes N, the pivoted furrow-opener H and spring *i*, when secured by a bolt passing through a rubber roll.

4. The grain-conductor and the device *m*, for changing from drilling to broadcast-sowing, and *vice versa*, when constructed and operating as described.

5. The double lever used to regulate the amount of grain sown per acre, when constructed and operating as described.

6. In connection with two draught-wheels, the solid hub, cast with a journal upon the inner end or side thereof, having the bearings upon the frame of the machine, and terminating in the clutch on the end of the journals, and fitted to receive the clutch and the rod upon which the feed-rollers B are rigidly attached.

7. The construction, arrangement, and operation of the rollers L, separately and together, in raising the drag-bars of the machine, when constructed and operating as described.

92,904.—GILES A. TITUS, Mantorville, assignor to himself and SAMUEL B. PINNEY, St. Cloud, Minn.—*Distributer for Sowing and Drilling Grain.*—July 20, 1869.

Claim.—1. The cylinder, with slots, and the slides

or buckets *b*, contracting and extending to and from the center of said cylinder.

2. The cone *a*, for the purpose of extending the said slides or buckets *b*.

3. The rubber rings *c*, for the purpose of contracting, and the withdrawing of said slides or buckets *b* toward the center of said cylinder, and whenever applied to drills or broadcast seeders, using for that purpose the aforesaid cylinder, slides, or buckets, rubber ring, and cone, or any other substantially the same, which will produce the intended effect.

92,905.—LEWIS A. TOWNE, La Crosse, Wis.—*Clothes-Drier.*—July 20, 1869.

Claim.—A clothes-rack, consisting of standard A, bar *b*, pitman *e*, lever *g*, plate *n*, pinion *p*, hook *d*, and rack B, all combined, arranged, and operating substantially in the manner and for the purpose described.

92,906.—CHARLES TRUESDALE, Cincinnati, Ohio, assignor to himself and WILLIAM RESOR & CO., same place.—*Stove-Grate.*—July 20, 1869.

Claim.—1. In the described combination, with a series of pendent front bars, D, the series of interposed bottom bars E, upon the rock-shaft F, substantially as set forth.

2. In combination with the elements of the preceding clause, the upturned fingers *e* of the movable bars E, for the purpose designated.

3. The arrangement of pendent bars D, rock-shaft F, movable bars E, and rests H.

4. In this connection, the provision of the guard I, as and for the purpose explained.

92,907.—CHARLES LAFAYETTE TUCKER, Chicago, Ill.—*Manufacture of Chipped Beef.*—July 20, 1869.

Claim.—1. The mode herein described of preserving dried or smoked beef, by chipping or slicing, and compressing such slices into a compact form, and inclosing such packages in air-tight integuments, substantially as specified.

2. As a new article of manufacture, smoked or dried beef, when sliced or chipped ready for use, and inclosed in any close-fitting integument, substantially as and for the purposes specified.

92,908.—CHARLES M. TYLER, Indianapolis, Ind.—*Combined Lamp-Wick Trimmer, Chimney-Cleaner, and Lifter.*—July 20, 1869.

Claim.—A combined lamp-wick trimmer, chimney-cleaner, and lifter, having sections A and B, pincers C, knives D and E, and fingers G and H, constructed and arranged substantially as specified.

92,909.—JOHN P. TYLER, Penn Yan, N. Y.—*Saw.*—July 20, 1869.

Claim.—A saw, formed with a space between the pairs, B C, of fleam-teeth, and with pairs of tapering clearing-teeth A A, having larger spaces between the fleam-teeth and the clearing-teeth than between the clearing-teeth in each pair, as and for the purposes set forth.

92,910.—BENJAMIN VAN BRAEKLIN, Le Roy, N Y.—*Cultivator-Teeth.*—July 20, 1869.

Claim.—A tooth, having its shank, A, provided with one or more spurs *e*, for the purpose of securing it in position, substantially as described.

92,911.—THOMAS B. VAN PEIT, Westport, Mo.—*Animal-Trap.*—July 20, 1869.

Claim.—1. The construction and arrangement of the wings B B, the disk-wheels J J′, triggers *m m′*, sector-levers *g g*, with their pinions *f f*, and the pan R, operated by either a spring or weight, or by both combined, substantially as and for the purposes herein shown and described.

2. In combination with the above, the cage W, when said cage is provided with the drop X, engaging with the trigger *m′*, whereby the animal entering the cage raises the drop, to operate the trigger and set the trap, as herein shown and described.

92,912.—FRIEDRICH VETTER, New York, N. Y.—*Sewing-Machine for Sewing Turned Shoes.*—July 20, 1869.

Claim.—1. The frame D, constructed as described, in combination with the sewing-mechanism, when made longitudinally adjustable, to suit shoes of different width, by means of the toothed bar *d* and spring-pawl *c*, as set forth.

2. The combination of the curved needle J and thread-guide L with the hooks M N, sole support R S, and feed-pinion *x*, all arranged and operating substantially as herein shown and described.

92,913.—SIMON VREELAND, Cuba, N. Y.—*Bee-Hive.*—July 20, 1869.

Claim.—The manner of supporting a series of comb-racks, *a a a*, on the projecting ends of the middle bars *b b*, so as to provide for the circulation of air between the outer and inner case, for the purposes herein described.

92,914.—SIMON VREELAND, Cuba, N. Y.—*Farm-Gate.*—July 20, 1869.

Claim.—The flanged friction-roller hinge G, as constructed, in combination with the pin *i*, to lock into it, the steadying-hook *b* and stationary flanged roller *d*, all arranged to operate substantially as and for the purposes set forth.

92,915.—SIMON VREELAND, Cuba, N. Y.—*Carriage-Wheel.*—July 20, 1869.

Claim.—1. The metal hub, as constructed, with a wrought-iron cylinder, C, whose ends are beveled off to fit into V-shaped grooves, *c c*, in the flanges *b* and D′, in combination with the pipe-box B, screw-cap D, holding-caps *d d*, secured by set-screws *i i*, and collar *a*, on the axle A, substantially as and for the purposes specified.

2. In combination with the metal hub, as above described, the metal spokes E E, as constructed, they being the largest at the ends, tapering toward the center, and are provided with square heads, *e e*, elastic washers *f f*, they being inserted and secured in the cylinder C, as herein described.

92,916.—JAMES WALTON, Roseburgh, Oreg.—*Fleece-Bundling Apparatus.*—July 20, 1869.

Claim.—1. The combination, with the permanent sides of a case, of the hinged side E and pronged cover, when arranged substantially as specified.

2. The combination of the same of a movable bottom and pivoted hooks, when arranged for discharging the cork by the movement of the bottom, substantially as specified.

3. The foregoing combination of devices, forming a machine whereby fleeces of wool or other compressible substances may be compressed and tied, substantially as specified.

92,917.—JOHN L. WELLINGTON, Dansville, N. Y.—*Fence.*—July 20, 1869.

Claim.—A portable fence, consisting of the panels A, having rails *b*, front strips *c*, top pieces *d*, and bars or uprights *a*, provided with holes *e* and posts B, provided with projections *f* and holes *h*, constructed and arranged as herein described, so that the panels may be attached or detached from the posts by pins *g*, as set forth.

92,918.—FRANKLIN WESSON, Worcester, Mass.—*Combined Pistol and Dirk.*—July 20, 1869.

Claim.—The combination of a dirk-knife, provided with a spring-catch, *c*, with a two or more barrel revolver, and arranged within a central sheath, substantially as described.

92,919.—M. ALLISON WHEELER, San Francisco, Cal.—*Sleeping-Car.*—July 20, 1869.

Claim.—1. The seats B of the car, provided with backs composed of two parts, C C, connected to branched arms D, constructed and applied to the side rails of the seats, to admit of said parts C being adjusted, in the manner substantially as and for the purpose set forth.

2. The frame or boards E, suspended from the side and top of the car by means of the hooks *j*, the jointed arms F, the pendent loop G, substantially as herein shown and described.

92,920.—JOSEPH B. WILKINSON, Troy, N. Y.—*Cooking-Stove.*—July 20, 1869.

Claim.—1. The employment of a self-feed, made in two parts, so as to close up telescopically, constructed and located substantially as described and set forth.

2. A front-plate of a cooking-stove, having a portion removed at the top, to permit a self-feed to pass through and in combination therewith, in manner and for the purpose as described and set forth.

3. The employment of the chambers *i* and *l*, divided by the division-plate *h*, with the apertures *n* and dampered apertures *m*, constructed substantially in manner and for the purpose as described and set forth.

4. The employment of the chambers *q* and *r*, divided by the division-plate *s*, with the apertures *u*, and dampered apertures *v*, constructed and located in manner and for the purpose substantially as described and set forth.

92,921.—Elias Woodward, Brooklyn, N. Y.—*Neck Tie and Bow.*—July 20, 1869.

Claim.—1. The tongue *e*, and straps 5 and 6, in combination with the metal cravat-frame, as and for the purposes set forth.

2. The hook 3, on the portion 2 of the frame *a*, in combination with the tongue *e*, for connecting the bow to the metal frame *a*, as set forth.

92,922.—John M. Woolwin, Mechaniesburgh, Ohio.—*Tinners' Gutter-Trough.*—July 20, 1869.

Claim.—1. The arrangement of rod *r*, lever E, and loops, cranks, or levers *l l*, for operating the clamp, as shown and described.

2. The arrangement of the dowel-pin *t*, entering-support B, in combination with the semi-cylindrical sliding ends *e e* of trough A, for holding the same in position while clamping the gutter-plates, as shown and described.

3. The segments or forms C C, and springs S S, in the clamp-frame F, with rod *r*, semicircular lever E, boxes *b b*, and loops or levers *l l*, when the same are used in combination, as shown and described, as and for the purpose specified.

92,923.—Alfred J. Works, Fair Haven, Conn.—*Brick-Kiln.*—July 20, 1869.

Claim.—The combination and arraugement herein described of the drying-chamber A^2, burning-chamber A^1, with valves or damper D, the perforated movable platform or car C, with a heat-distributing reservoir, consisting of chamber *f* and pipe *g*, and furnaces B^1 and B^2, all constructed and operating substantially as set forth.

92,924.—William K. Wyckoff, Ripon, Wis.—*Compound Oil for Coating Leather and Metals.*—July 20, 1869.

Claim.—The improved water-proof oil-preservative for leather and metals, with the ingredients combined in about the proportions herein named, with the addition of the specific oil mentioned, and not heretofore used, the whole prepared substantially as set forth.

92,925.—P. W. Derham, Brooklyn, N. Y.—*Paper-File.*—July 20, 1869.

Claim.—The combination, in a banker's file, of the leaves E, made of stiff brown paper, cut and numbered from one to thirty-one; the intermediate guards or strips A, with the stiffened ligatures B, and the elastic band C, the whole arranged and made as described, and forming a banker's file, in which may be arranged and secured all the notes, bills, &c., maturing during the month.

92,926.—Marcia Adkins, Oswego, N. Y.—*Hair-Curling Apparatus.*—July 27, 1869.

Claim.—The combination, with the heating and winding mandrel A, of the spiral band C, spring-pad D, comb E, and guide-pin F, substantially as specified.

92,927.—Arthur Amory, New York, N. Y.—*Guide-Attachment for Boring-Instruments.*—July 27, 1869.

Claim.—The guide-attachment for boring-instruments, consisting of the adjustable clamp A, constructed as described, the spirit-levels B C, one of which is pivoted, and the scale F, all arranged with reference to each other and the clamp, and adapted for attachment to the shank of a boring-tool, in the manner described, for the purpose specified.

92,928.—Solomon Andrews, Perth Amboy, N. J.—*Velocipede.*—July 27, 1869.

Claim.—In the velocipede having a single driving-wheel in the rear, and two guide-wheels in front, the arrangement of the several parts which constitute the velocipede, as and for the purpose set forth.

92,929.—J. B. Baker, Syracuse, N. Y., assignor to himself, Hiram R. Olmstead, and Richard W. Jones, same place.—*Carpet-Sweeper.*—July 27, 1869.

Claim.—1. The adjustable collar, carrying the driving-pulley, when constructed and arranged substantially as described, for the purpose of tightening the belt.

2. The combination of the dust-box A, rotary brush B, frame C, handle D, adjustable driving-pulley *e*, and band *f*, all constructed, arranged, and operating substantially as herein described.

92,930.—George H. Bliss, Brooklyn, N. Y.—*Tobacco-Box.*—July 27, 1869.

Claim.—The sliding-rammer *e*, sustained in guides within the tobacco-box, and provided with a ring or head by which to move the same, in combination with the said box *a*, and the socket *e*, as set forth.

92,931.—A. L. Bogart, New York, N. Y.—*Gas-Heater.*—July 27, 1869.

Claim.—As a new article of manufacture, the within-described gas-stove burner A, with its mixing-chamber B, the whole device constructed and arranged to operate substantially as and for the purpose shown.

92,932.—Martial Bonnin and Charles Escudier, New Iberia, La.—*Sugar-Boiling Apparatus.*—July 27, 1869.

Claim.—1. The setting of square kettles in a graduated scale and position, as shown, with the expanding flue corresponding, for the purpose of evaporating cane-juice or other product substantially the same; also, the two methods of setting the same.

2. The pivot-damper, as here constructed and applied, in sugar or other evaporating apparatus, the whole operating and being substantially the same.

92,933.—John W. Bowers, Newton, Mass.—*Manufacture of Braid.*—July 27, 1869.

Claim.—1. The braid herein described, composed of two kinds of single yarns, prepared for the braiding-machine in spinning, substantially as described.

2. The method, herein described, of making single-yarn braids, consisting in preparing the yarns for braiding by spinning them with two different degrees of twist adapted to the operations of the braiding-machine, and which are spun and wound respectively upon two sets of braiding-bobbins, and which yarns, in the condition in which they are spun and wound, are formed into braid on a braiding-machine, all substantially as described.

92,934.—Edwin D. Brainard, Albany, N. Y.—*Method of Preserving the Aromatic Principle of Hops.*—July 27, 1869.

Claim.—The improved mode of preserving the aromatic principle of hops, as herein described.

92,935.—Potto Brown, Houghton and Bateman Brown, Huntingdon, England.—*Millers' Staff.*—July 27, 1869; patented in England June 23, 1868.

Claim.—The skeleton millers' staff, hereinbefore described, the same being composed substantially of two straight edges rigidly connected together, so as to form a skeleton frame, with a plane surface, for the reception of the coating of color, which is to be transferred to the high parts of the millstone.

92,936.—George Brownlee, Princeton, Ind.—*Pedecycle.*—July 27, 1869.

Claim.—1. A pedecycle, made and operating substantially as herein shown and described.

2. A vehicle in which the weight to be conveyed

is suspended from the top of the wheel or wheels, substantially as herein shown and described.

3. The brakes *f g*, applied automatically to the bearing-roller *a*, to prevent either backward or forward motion of the hoop, substantially as herein shown and described.

4. The pivoted tube C, containing the ball *h*, to operate the brakes *f g* automatically, substantially as herein shown and described.

92,937.—THOMAS J. BUTCHER, Wenona Station, Ill.—*Medical Compound.*—July 27, 1869.

Claim.—The medical compound composed of the ingredients above mentioned, in about the proportions named, and prepared substantially as described, for the purposes set forth.

92,938.—JAMES D. BUTLER, Lancaster, Mass.—*Braiding-Machine.*—July 27, 1869.

Claim.—1. The hooked traveler-tops, substantially as described.

2. The combination of the hooked traveler-tops with the upper table, substantially as described.

3. The combination of the spool-catch with its weight, substantially as described.

4. The means for operating the spool-catch by the thread, undisturbed by the jumping of the weight, substantially as described.

92,939.—WILLIAM F. COLLIER, Worcester, Mass.—*Corn-Popper.*—July 27, 1869.

Claim.—1. The clamp C, for holding the rim body, wires, and handle, substantially as described.

2. The making the hinge-wire in the form, and applied in the manner shown and described, and both holding the parts together, and making an eye or hinge for the cover.

92,940.—JOHN H. CROWELL, Providence, R. I.—*Bobbin for Spinning.*—July 27, 1869; antedated July 23, 1869.

Claim.—The spiral spring C, in combination with the chambered bobbin A B, as and for the purposes set forth.

92,941.—T. J. DEAN, St. Louis, Mo.—*Condenser for Stills.*—July 27, 1869.

Claim.—1. A condenser for stills, having the vapor delivered into a condensing-chamber, among a series of tubes, through which a current of cold water is passing, substantially as described.

2. The combination of the chamber A and tube B with the water-chamber D, tubes F, chamber C, and overflow E, all constructed and arranged to operate substantially as described.

3. The supplementary chamber A, for the condensation of the fusel-oil, so arranged that the vapor must pass through it, on its way from the heater to the condensing-chamber, as set forth.

92,942.—W. U. DUDLEY, New York, assignor to himself and LAWRENCE W. CLARK, Brooklyn, N. Y.—*Hand-Mirror.*—July 27, 1869.

Claim.—A hand or portable toilet-mirror, constructed substantially as described, of a base-piece, B, with its handle-extension piece or stiffener C, glass A, and outer back and handle D, made of any suitable composition or cement, substantially as specified.

92,943.—CLEAVELAND F. DUNDERDALE, New York, N. Y.—*Machine for Generating and Carbureting Gas.*—July 27, 1869.

Claim.—The combination of valves *a* and *w* with the hydrocarbon-chamber and pipes, the flanch, or skirt N, surrounding the perforated compartments of the chamber D, and the wire-cloth *x* on the inside of said chamber, the screw-cap, or man-hole W, and the condensing-receptacle M, arranged and combined and used in connection with a gas-generator, substantially as herein specified and described, and for the purpose set forth.

92,944.—P. DUNHAM, Leeds, Mass.—*Stop-Motion for Silk Stretching and Winding Machine.*—July 27, 1869.

Claim.—The arrangement of the lever I, with hook-arm *k*, upon the frame, and the spring-catch *l* upon the pulley B or its shaft, all substantially as described, and so that the breaking of the thread causes them to engage and stop the machine, as set forth.

92,945.—JOSEPHUS EASTERDAY, Frederick County, Md., and J. B. CROWELL, Greencastle, Pa.—*Grain-Drill.*—July 27, 1869.

Claim.—1. The device *n*, when constructed as and for the purpose set forth.

2. The bar G, when furnished with staple K, in combination with device *n*, pulleys *m*, *h*, and *h'*, cords *j* and *d*, and bar H, the whole constructed, arranged, and operating substantially as described.

92,946.—JOHN EIBERWEISER, Cincinnati, Ohio, assignor to himself and FREDERICK GROENE, same place.—*Fodder-Cutter.*—July 27, 1869.

Claim.—1. The described construction and arrangement of knife H, whose wrists *h* occupy eyes 1 in bolts 2, which pass horizontally through the free ends of the vibrating arms F F', in the manner set forth.

2. The described arrangement of adjustable apron and weighted pressure-roller, whose operating-handle is provided with a notch and button, as and for the purpose explained.

92,947.—HIRAM FILSON, Monongahela City, Pa.—*Bee-Hive.*—July 27, 1869.

Claim.—The construction of the removable side and half top of the upper and lower sections, (either or both,) in such manner that said slide and half top, when united, either rigidly or by a hinged connection, may be removed together, substantially as herein shown and described, and for the purpose set forth.

92,948.—A. FINLEY, Bainbridge, Ind.—*Front Gear for Wagon.*—July 27, 1869.

Caim.—1. The combination, with the hounds, the axle, and curved bar D, of the bar A, arranged as specified.

2. The tongue, constructed of two parts E, and connected to the hounds in the two recesses by the bolt G and braces I, all arranged as specified.

3. The arrangement of the bolster K, sand-board M, and fixed bolt L', all substantially as specified.

92,949.—JEREMIAH FISK, Augusta, Me.—*Spring-Bed.*—July 27, 1869.

Claim.—A compound spring, made up of a series of springs formed from wire coiled and arranged to be united by rods or ties *b*, substantially as described.

92,950.—WILLIAM S. FOSTER, Montgomery, Ala.—*Shoes.*—July 27, 1869.

Claim.—The extension of the uppers or quarters, or both, in boots or shoes, and uniting them at the bottom, so that the shank of the sole will be dispensed with, substantially as described.

92,951.—DANIEL D. FRANKLIN, Flora, Ill., assignor to himself and JOHN S. UNDERWOOD, same place.—*Corn and Seed Planter.*—July 27, 1869.

Claim.—1. In combination with the driver's or planter's seat, supported by the furrowing-teeth, the spring I, interposed between the seat and the furrowing-teeth, substantially as described, for the purpose set forth.

2. In combination with the arrangement covered by the first claim, hanging the axle of the center carrying-wheel D, so that the wheel can vibrate vertically, and adapt itself to uneven ground, substantially as described.

3. In combination with the devices for setting the furrowing-teeth nearer together or farther apart, the devices for adjusting the covering-wheels to follow the track of the furrowing-teeth.

4. The devices for setting the lower ends of the planting-tubes forward and backward, to plant the rows obliquely, substantially as described.

5. The grid, or rack L over the traversing seed-bar, or between the bar and brush.

92,952.—CHARLES H. FRANKLIN, jr., New York, N. Y.—*Steam-Generator.*—July 27, 1869.

Claim.—A steam-boiler having a third combus-

tion-chamber, E, the same being set in the boiler in the manner substantially as herein shown and described.

92,953.—Samuel H. Frederick, Matteson, Mich.—*Three-Horse Clevis.*—July 27, 1869.

Claim.—The hook marked 1, slotted at one end, to receive the hook 2 and hook 3, slotted at the rear end, to receive the upper end of hook 2, in combination with hook 2, all constructed and arranged as described and shown.

92,954.—John H. George, Newark, N. J.—*Hose-Coupling.*—July 27, 1869.

Claim.—1. The hose-coupling, constructed with the male and female sections B, substantially as and for the purpose specified.

2. The tube C, or its equivalent, in combination with the coupling B D, substantially as and for the purpose specified.

92,955.—John Gibbs, Brooklyn, E. D., N. Y., assignor to himself and Calvin H. Carter, Waterbury, Conn.—*Match-Safe.*—July 27, 1869.

Claim.—The tubular match-holder, formed of a strip of sheet-metal, rolled up and closed at the end, as set forth, in combination with the ring or band *c*, that keeps the joint of the tube from opening, and forms the base for the tubular cap *d*, as set forth.

92,956.—Thomas Gill, Waltham, Mass., assignor to himself, John Stark, and John Stark, jr., same place.—*Governor for Steam and other Enginery.*—July 27, 1869.

Claim.—1. The clock-escapement mechanism, substantially such as herein described, to regulate or govern the speed of the engine or other motor with which it is connected, substantially in the manner shown and set forth.

2. The combination with the aforesaid escapement-governing mechanism, for regulating the speed of the engine or other motor, of the friction-sleeve or device which connects the same with the driving-shaft, substantially as herein shown and set forth.

3. The arrangement, with the escapement-mechanism and friction-brake or sleeve, of the gears *r s t*, toothed wheel *q*, lever *w*, and sectoral rack *b′*, for transmitting power from the escapement to the engine.

92,957.—Roscoe J. Gould, Newark, N. J.—*Steam-Pumping Engine.*—July 27, 1869.

Claim.—The combination of the springs C with steam-pumps, as shown in Fig. 1 of the drawings, or in any other mechanically-equivalent way to produce the same effect.

92,958.—C. J. Greene, Olneyville, R. I.—*Mule for Spinning.*—July 27, 1869.

Claim.—1. The combination with the quadrant-wheel I, of the rocker-shaft, with the gear E, for operating the friction-shaft to back off the yarn from the spindles, substantially as described.

2. The combination with the shipper-lever K and the friction-clutch, of the gearing-mechanism, consisting of the bell-crank O Q and connecting-apparatus, substantially as described, for the purpose specified.

3. The combination, with the bell-crank O Q, of the lever R, actuated by a pin on the wheel E, substantially as and for the purpose specified.

4. The combination with the friction-shaft A, of the drum *i*, when arranged relatively to each other, and to the main rack, and provided with actuating mechanism, substantially as and for the purpose described.

5. The combination, with the clutch-pinion *a*, of the shifting-lever *d*, arranged to be actuated by the return movement of the rocker-shaft, substantially as and for the purpose described.

92,959.—Richard Groom, Albany, N. Y.—*Device for Cleaning Plows.*—July 27, 1869.

Claim.—1. The shear-blade A, in combination with colter B, substantially as herein shown and described.

2. The horizontal shear-blade C, and the two-edged movable shear-blade A, in combination with an upright blade or colter, B, substantially as herein shown and set forth.

92,960.—William Guest, London, assignor to James Buckingham, Walworth, England.—*Machine for Making Cord.*—July 27, 1869.

Claim.—1. A circular woven cord or rope with a solid center, made by weaving the threads or strands together across the center of the cord or rope, substantially in the manner herein set forth.

2. The combination of the spindles *b* with the plates *c*, *d*, and *e*, when said parts are all constructed, arranged, and made to operate conjointly, substantially in the manner and for the purpose herein set forth.

3. The conductors *g* and *h*, when combined with the spindles *b*, and with the levers *g*x and *h*x, and so arranged as to select automatically the desired number of spindles from the central plates *c*, and guide them into the recesses *d*x *e*x, in the peripheries of the plates *d* and *e*, while the other spindles are carried round with the said central plate, all substantially as and for the purposes set forth.

4. The spindles *b*, plates *c*, *d*, and *e*, the conductors or tappets *g* and *h*, and central hollow axis c^1, combined and operating together, substantially as and for the purposes set forth.

92,961.—John H. Holbert, Ottawa, Ill., assignor to himself, Elias P. Read, and T. W. McFarland, same place.—*Hedge-Setter.*—July 27, 1869; antedated July 5, 1869.

Claim.—1. The trench-opener, when constructed of a front-cutter, D, and two vertical wings D′ D′, at the rear thereof, forming a space between, entirely open and unobstructed at the top and rear, so that the plants may be put down through the top, and fixed in the ground, without being displaced by the onward progress of the machine, as and for the purposes set forth.

2. So attaching and connecting said trench-opener D D′ to the frame of the machine that the same may be moved upon its pivoted attachment, in the manner and for the purposes specified.

3. In combination with said trench-opener, the bar S and lever F, arranged and operating as and for the purpose shown and described.

4. In combination with said trench-opener D D′, the arrangement of the vertical curved runner R, in such a manner as to move the soil laterally toward the row of plants, and press the soil close against the said plants, in the manner herein shown and specified.

5. In combination with said trench-opener and runner R, the beveled rollers M, arranged and operating as and for the purposes set forth.

6. The belt H, when provided with a series of pincers or plant-holders, arranged and operating substantially as and for the purposes described.

7. The gripe J, in combination with a crank, K, and inclined block, L, in the manner and for the purposes specified.

8. The combination of the shaft K, and gearing connecting the same, with the pulley G and belt H, with pincers I, in the manner set forth.

92,962.—James P. Hall, New York, N. Y.—*Compound for Cutting and Polishing.*—July 27, 1869.

Claim.—A compound for cutting and polishing purposes, having the within-named ingredients thoroughly mixed, substantially as herein described and set forth.

92,963.—Israel C. Hall, Sanbornton, N. H.—*Whiffletree.*—July 27, 1869.

Claim.—The arrangement and combination of the spring C, the hook *a*, and the lever D, with the whiffletree A and its hitching-head B, as set forth.

92,964.—John C. Ham, New York, N. Y.—*Carriage.*—July 27, 1869.

Claim.—The top D and seat B, extended in line with each other, in combination with the curved front C, substantially as described, for the purpose specified.

92,965.—Alexander Harroun, Jr., Onondaga, N. Y.—*Sewing-Machine for Working Button-Holes.*—July 27, 1869

Claim.—The rotary reciprocating hook *b*, in combination with the holding-points *i* and *k*, for laying the thread, substantially as and for the purpose set orth.

92,966.—Otto Hennig, Chicago, Ill.—*Street-Reflector for Windows.*—July 27, 1869.

Claim.—The arrangement and combination of hinges E F H I, rod P C G, socket B, thumb-screws L J. K and frames *o o'*, when made and operated substantially as and for the purpose set forth.

92,967.—Benjamin B. Hill and John R. Hill, Worcester, Mass.—*Corn-Popper.*—July 27, 1869.

Claim.—Forming the guard, the eye or loop S, making the hinge for the cover and the handle or tang of one and the same continuous piece of wire, when constructed and operating in the manner and for the purposes above set forth and described.

92,968.—Laban Holloway, San Francisco, Cal.—*Gang-Plow.*—July 27, 1869.

Claim.—1. The movable arms C C, pivoted to the sides of the frame, and the treadle-lever J attached to the pole, so that by their simultaneous movements the plow-frame can be raised and lowered, substantially as described.

2. The slotted stops H at each side of the driver's seat, and the strap or bar L, beneath the frame, substantially as and for the purposes set forth.

92,969.—Henry A. House, Bridgeport, Conn.—*Screw-Wrench.*—July 27, 1869.

Claim.—1. A screw-wrench, having its sliding jaw held back by a spring connecting it with the fixed portion *b*, substantially as and for the purpose herein set forth.

2. The combination and arrangement of the spiral spring C, the hollow screw B, and the sliding jaw A, substantially as herein described.

92,970.—Leonard D. Howard, St. Johnsbury Vt.—*Shutter-Fastener.*—July 27, 1869.

Claim.—The pivoted levers *f g*, when provided with the lateral-operating prongs *k k*, arranged, with relation to each other, in the manner herein shown and described, for the purpose specified.

92,971.—William C. Howard, Belle Plaine, Iowa.—*Grain-Register.*—July 27, 1869.

Claim.—The adjustable block, carrying the pulley X, in combination with the box B 2 3 4, and spring-pawl Q R, for holding the half-bushel, and operating a registering device, as set forth.

92,972.—Thomas Huckans, New Baltimore, and J. Wesley Carhart, Troy, N. Y.—*Needle-Protector for Sewing-Machine.*—July 27, 1869.

Claim.—The needle-guard, constructed as described, consisting of the bar B, secured at *a a* to the needle-bar A, and provided with bearings *b b*, for the reception of the movable guard-rod C, adjusted by the collar I, and surrounded by the spiral spring G, as herein described, for the purpose specified.

92,973.—James Ives, Mount Carmel, Conn.—*Harness-Buckle.*—July 27, 1869.

Claim.—1. The buckle, consisting of the frame C E D, tongue *b* and pivot *a*, all arranged, combined, and operating substantially as described.

2. The reduced arched portion D of the buckle, in combination with the tongue *b b'* and pivot *a a*, substantially in the manner and for the purpose described.

92,974.—William H. Jackson, New York, N. Y.—*Ornamental Back for Fire-Place.*—July 27, 1869.

Claim.—An ornamental back and sides for open fire-places, consisting of a cast-metal frame, enameled on its face with diamond or other shaped spaces filled with tile of various colors, the said back and sides locking together in the manner and for the purpose substantially as herein set forth, shown, and described.

92,975.—Thomas C. Kelly, West Liberty, Pa.—*Horse Hay-Fork.*—July 27, 1869.

Claim.—The tines A, head B, jointed arm C, sheave D, spring-catch, and cords H and I, all combined and arranged substantially as specified.

92,976.—John Lauer, Chicago, Ill.—*Velocipede.*—July 27, 1869.

Claim.—The combination of the wheels A B, reach E, connecting-rod M, lever P, disk O, standard F F, spring-standards K, spring-seat plate J, and seat I, all combined, arranged, and operating as herein shown and described.

92,977.—James Lee, New York, N. Y.—*Chair.*—July 27, 1869.

Claim.—The seat-frame D, hinged board E, straps or webbing F, springs G, and upholstering or cloth back H, in combination with each other and with the chair-frame A, secured together by the screw-bolts B and nuts C, substantially as herein shown and described, and for the purpose set forth.

92,978.—Johan Linnemann, Copenhagen, Denmark.—*Turret for Vessels.*—July 27, 1869.

Claim.—A turret, so supported as to permit its elevation and depression, substantially in the manner and for the purpose set forth.

92,979.—David Lithgow, Philadelphia, Pa.—*Water-Gauge.*—July 27, 1869.

Claim.—The chamber G, tube H, and glass gauge-tube E, in combination, substantially as and for the purposes described.

92,980.—George S. Lovell and Mary F. Lovell, Philadelphia, Pa.—*Probang, or Instrument for Treating Diseased Orifices.*—July 27, 1869.

Claim.—The combination, with the handle A, of the elastic supporting and retaining cap C, retained thereon by means of the stem B, substantially in the manner and for the purposes set forth.

92,981.—William John Lynd. Golden City, Colorado Ter.—*Method of Extracting Iron and other Oxides from Clay, Porcelain-Earth, &c.*—July 27, 1869.

Claim.—1. The method of removing iron and other discoloring matters and impurities from potters' clay, and other argillaceous substances, substantially in the manner and by the means herein described, that is to say, by the employment of unmagnetized plates of iron or steel, immersed or placed in a solution of the clay to be purified, substantially as set forth.

2. The employment, with the unmagnetized iron or steel plates, immersed in the bath of clay to be purified, of electricity, substantially in the manner specified, whereby the action of said plates may be rendered more energetic.

3. The use in combination with unmagnetized steel plates, whether the action of the same be aided or not by electricity, of artificial or natural permanent magnets, substantially as and for the purposes set forth.

92,982.—Henry G. Mack, Oswego, N. Y.—*Clothes-Drier.*—July 27, 1869.

Claim.—The standards *a*, with side-pieces *b*, hinged at the top and the bottom, in combination with the metallic braces *c*, when constructed and used substantially in the manner and for the purpose described.

92,983.—William C. Marr, Peru, Wis.—*Combined Drill and Saw-Gummer.*—July 27, 1869.

Claim.—1. The bar or frame A a^1, drill-shaft B, screw-sleeve D d', jaws a^2, and set-screws E, in combination with each other, substantially as herein shown and described, and for the purpose set forth.

2. The combination of the flange plates G, screws H, bar I, and nuts J, with each other and with the jaws a^2 of the frame or bar A a^1, substantially as herein shown and described, and for the purpose set forth.

3. The oiler K L, constructed as described, in combination with the bar or frame A of the machine, substantially as herein shown and described, and for the purpose set forth,

92,984.—DANIEL MCCULLOUGH, Oxford Township, Ontario, Canada, assignor to himself, WILLIAM J. SCOTT, Jr., and PATRICK HARTY.—*Corn-Planter.*—July 27, 1869.

Claim.—1. In connection with the hopper-bottom E, having the seed-passage *e*, the alternately-reciprocating slides F F′, arranged above and below the bottom E, and operated by means of the spring-arms H H′, and pins I J, or their mechanical equivalent, all said parts being constructed to operate substantially as and for the purposes set forth.

2. The parts M M, when arranged upon the rim of a wheel, as and for the purposes described, said parts consisting essentially of the fixed plates *m m n*, pivoted plates O *n*′, rod *r*, and spring *s*, constructed to operate together, substantially in the manner specified.

3. The combination of the parts M M, constructed to operate as described, with the wheel B, pins I J, arms H H′, levers or bars G G, slides F F′, and hopper-bottom E, all operating together substantially as described and for the purposes specified.

92,985.—THOMAS MCKINLEY, New York, N. Y.—*Plastering-Machine.*—July 27, 1869.

Claim.—The box A, piston C, tube O, and delivery-tube R, arranged to operate substantially as herein shown and described, and for the purpose specified.

92,986.—GEORGE V. METZEL, Baltimore, Md.—*Card-Case.*—July 27, 1869.

Claim.—The false bottom B, furnished with springs *f f*, in combination with press-plate *g* and case A, all combined to operate substantially in the manner and for the purpose described.

92,987.—ELIE MONEUSE and LOUIS DUPARQUET, New York, N. Y.—*Coffee-Pot.*—July 27, 1869.

Claim.—1. The cover *f*, with the flange sitting down inside the cylinder of the urn, in combination with the flange *e* and water-ring *c*, as and for the purposes set forth.

2. The urn for coffee or tea, formed of sheet-copper, with a lining of sheet-tin fitted and attached to the inside of the copper vessel, as and for the purpose set forth.

92,988.—DANIEL MOORE and EDWIN MOORE, Brooklyn, N. Y.—*Filtering-Tube.*—July 27, 1869.

Claim.—The tubular case *b*, formed with segmental springs, in combination with the clamping-band *e*, and filtering diaphragm *d e*, as and for the purposes set forth.

92,989.—EDWIN MOORE, Brooklyn, E. D., N.Y.—*Hay and Manure Fork.*—July 27, 1869.

Claim.—The movable tines, with shanks that are wider at their back end than toward the front part of the shanks, so as to be retained within the metal socket by the handle, in the manner set forth.

92,990.—SAMUEL MOORE, Providence, R. I.—*Throttle-Valve Gear.*—July 27, 1869.

Claim.—The combination, with the stem and operating-lever of a throttle-valve, of a segment, B, a friction-pinion and a friction-device, substantially as specified.

92,991.—THOMAS N. MORSE, Fairhaven, Mass.—*Velocipede.*—July 27, 1869.

Claim.—The frame A of a velocipede, when made of one single piece, by bending the side-bars *b* and the front extension *c*, on the plate *a*, substantially as herein shown and described.

92,992.—WILSON NOBLE, New Haven, Conn.—*Plow.*—July 27, 1869; antedated July 3, 1869.

Claim.—The wheel D, constructed with a corrugated surface, in combination with the plowshare, substantially as and for the purpose set forth.

92,993.—GEORGE OAKLEY, Quincy, Ill.—*Composition for Curing Corns.*—July 27, 1869.

Claim.—The within-described composition or tincture, substantially as and for the purpose specified.

92,994.—GEORGE OSBORN, Lakeville, Mass., assignor to himself, FREDERICK LEONARD, and JOSEPH C. OSBORN, same place.—*Nail-Machine.*—July 27, 1869.

Claim.—The arrangement and combination of the movable gauge-guards *r r*, provided with mechanism for operating them as described, with the intermediate guard E, the two series of cutters A F B G, and the vibratory nail-plate carrier I, the whole being essentially as set forth.

92,995.—GEORGE OSBORN, Brooklyn, assignor to ABRAHAM G. JENNINGS, New York, N. Y.—*Lace-Making Machine.*—July 27, 1869.

Claim.—In combination with the needles B, the sinkers C and the slotted frame D, the bar or strap E, arranged to slide upon the pins *a*, substantially as described, for the purpose specified.

92,996.—RICHARD A. PARSONS, Clinton, Iowa, assignor to himself and TEN BROCK & NOYES, same place.—*Guide for Gang-Saw Gates.*—July 27, 1869.

Claim.—The combination and arrangement of the fender-posts A A, the adjustable inclined pieces B B B B, the arms P P P P P P P P P P P P, supporting and fixing the guide-bars C C C C, when constructed and arranged substantially as and for the purpose herein set forth.

92,997.—GEORGE H. PEABODY, New York, N. Y.—*Cotton-Seed Huller.*—July 27, 1869.

Claim.—The concave receptacles *e*, in combination with the adjustable and fixed knives *c* and D D, substantially in the manner and for the purpose as herein set forth.

92,998.—JOHN H. PEAKE, Washington, D. C.—*Zincing-Iron.*—July 27, 1869.

Claim.—A composition of saturated solution of chloride of ammonium, hydrochloric acid, and metallic zinc, dissolved in hydrochloric acid, with the addition of chloride of potassium, in the proportions stated, or equivalent proportions, for the purpose specified.

92,999.—J. J. PEMBERTON, Oakland, Ill.—*Ventilator for Chimney.*—July 27, 1869.

Claim.—Metallic ventilating-arches A B, constructed and arranged for application to the chimneys, substantially as specified.

93,000.—TIMOTHY G. PHELPS, Belmont, Cal.—*Scraper.*—July 27, 1869.

Claim.—The scraper, consisting essentially of the carriage A, draught-bar G, semicircular turn-plate E, and scraper C, the whole being combined substantially in the manner and for the purpose described.

93,001.—HERMAN PIETSCH, New York, N. Y.—*Pitcher for Cooling Liquid.*—July 27, 1869.

Claim.—An improved cooling-pitcher, formed by the combination of the double walls A B, interior wall D, flanged bottom F G, bottoms C H, pipe or pipes K, tube L, tube N, spout P, and air-holes *o*′, with each other, said parts being constructed, arranged, and operating substantially as herein shown and described, and for the purpose set forth.

93,002.—JOEL PUTNAM, Danvers, Mass.—*Finishing Split Leather.*—July 27, 1869.

Claim.—1. The above-described method of preparing the surface of split leather, the same consisting in applying thereto a composition substantially as set forth, and glassing and boarding it.

2. The improved manufacture of split leather as so made or treated.

93,003.—HENRY F. READ, Brooklyn, N. Y.—*Mold for Casting the Cylinder and Dial-Box of Water-Meter.*—July 27, 1869.

Claim.—1. The mold for the cylinder and dial-box, composed of parts C and F, and the mandrel D, with its removable collar *d*, when constructed substantially as and for the purpose described.

2. The mold for the cap of the dial-box, composed of the parts L, Q, and K, constructed substantially as and for the purpose described.

3. The cylinder A and the dial-box B and cap P when cast in metallic molds, constructed substan-

tially as described, and substantially in the manner described, as a new article of manufacture.

93,004.—Nelson Read, Winchendon, Mass.—*Mechanical Movement.*—July 27, 1869.

Claim.—The transmitting of motion from a driving-shaft, C, to two counter-shafts, A B, through the medium of the bent or curved connecting-rod D, made in one piece, and cranks or crank-pulleys A′ B′ C′, arranged to operate in the manner substantially as shown and described.

93,005.—Jacob Rebhun, New York, N. Y.—*Clarionet.*—July 27, 1869.

Claim.—1. The B-key B, connected with the lever C, which has the ear *d*, to actuate the C-key D, substantially as herein shown and described.

2. The lever F of the C-sharp key E, when provided with the ear *e*, to close the key D, as set forth.

3. The lever J, pivoted between the levers C and F, to act at once on the keys D and G, substantially as herein shown and described.

4. The plate I, pivoted to the clarionet, to close the key G, and to produce the B-C-sharp trill, substantially as herein shown and described.

5. The application, to a clarionet, of a second C-sharp key G, to operate substantially as herein shown and described.

6. The application, to a clarionet, of a second E-flat key L, substantially as herein shown and described.

7. The combination of the seeondary E-flat key L with the key N and levers M, substantially as herein shown and described.

8. The keys P and Q, or either, provided, together with the G-sharp keys, to produce A and the G-sharp and A trill, substantially as herein shown and described.

93,006.—E. L. Roberts, Brooklyn, N. Y.—*Bolt.*—July 27, 1869.

Claim.—The combination, with the door C, of the bolts E, A, and D, when the bolt A is arranged to be thrown out when the said bolts E A are withdrawn, and *vice versa*, and when the bolt D is arranged to permit the bolt E to be shot and the bolt A to be withdrawn, whether the said bolt D falls into its notch or not, substantially as specified.

93,007.—E. L. Roberts, Brooklyn, N, Y.—*Ventilating-Apparatus.*—July 27, 1869.

Claim.—The arrangement of cold and hot air passages, heater, and valve-devices for opening the one passage and closing the other, and *vice versa*, simultaneously, by one and the same movement of the valve-apparatus, substantially as specified.

93,008.—Mark L. Roberts, New Brunswick, N. J.—*Knitting-Machine.*—July 27, 1869.

Claim.—1. The combination of the needle-guide Q and needle-board opener and yarn-guide P, when all are constructed and arranged substantially as and for the purpose described.

2. The combination of the same with the needles and the needle-cylinder, substantially as and for the purpose specified.

3. The adjustable cylinder F, arranged to be geared with the spiral flange G, or ungeared therefrom, substantially as described, to be operated by the shaft H, for the purpose set forth.

4. The needle-cylinder F and needles, combined in one machine with the two sets of needle-operating mechanisms herein described, as and for the purpose set forth.

5. The combination, with the needle-cylinder and its needles, of the slide B, made adjustable in the supports C C, substantially in the manner and for the purpose set forth.

93,009.—George A. Robinson, Mount Pulaski, Ill.—*Bee-Hive.*—July 27, 1869.

Claim.—The construction and arrangement of the moth-box A, the platform B, the bee-orifice I, and the slide E, substantially as and for the purposes described.

93,010.—Anna P. Rogers, Quincy, Ill.—*Guide for Sewing-Machine.*—July 27, 1869.

Claim.—The combination of the recessed portion C of the gauge-plate, and the curved adjustable spring F, with the concave pad E, all arranged and operating as described, whereby all lateral movement of the pad is prevented, and its pressure upon the cloth adjusted, as herein described, for the purpose specified.

93,011.—G. D. Rowell, Menomonee Falls, Wis.—*Adjustable Mold-Board and Colter.*—July 27, 1869.

Claim.—A colter and mold-board, consisting of colter A, mold-board B, slots C, and bolts D, substantially as described.

93,012.—Francis Schleifer, San Francisco, Cal., assignor to himself and Francis Cutting.—*Method of Manufacturing Vinegar.*—July 27, 1869; antedated July 16, 1869.

Claim.—1. Mingling oxygen with a vapor intended to be acetified before the same is condensed, by injecting atmospheric air, or the prepared gas, into the vessel or compartment in which the vapor is generated, substantially as described.

2. The generator F′, consisting of the compartment A, provided with the air-injection pipe *b′*, and the compartment B, divided by the perforated plate F, and provided with the pipe D and cap E, the whole being constructed and arranged substantially as and for the purposes set forth.

3. In combination with the generator F′, the acetifier H, one or more, for completing the process of acetification, substantially as described.

93,013.—William A. Sharpe, Syracuse. N. Y.—*Harvester.*—July 27, 1869; antedated July 16, 1869.

Claim.—1. The combination of the box B and link C, substantially as and for the purpose set forth.

2. In combination with the box and link, the rack or racks G and pinion-wheel F, substantially as and for the purposes mentioned.

3. Pivoting the link *c*, and swiveling the same, substantially as herein specified.

4. The entire combination of parts forming a caster-wheel for a reaping-machine, consisting of the wheel A and the box B, link C, adjustable pivoting-plate D, rack G, and pinion F, as and for the purposes described..

93,014.—Wesley Sherman and Giles Bishop, Middletown, Conn.—*Stop for Preventing Retrograde Motion in Sewing-Machines.*—July 27, 1869.

Claim.—The self-acting hanging pawl or stop-lever A in two parts, constructed and operating substantially as hereinbefore described, when applied to sewing machines, as and for the purpose described.

93,015.—John Sherwood, Ottumwa, Iowa.—*Potato-Digger.*—July 27, 1869.

Claim.—1. An improved potato-digger, formed by the combination of the plow or shovel A, curved bars B, rods D, cross-bar E, hinged cross-bar F, rods G, and handles H I, with each other, substantially as herein shown and described, and for the purpose set forth.

2. The apron F G, constructed as herein described, and provided with the lever K, working in the keeper *h′*, when arranged with reference to the rods D, curved bars B, and handle H, as set forth and shown.

93,016.—David R. Smith, San Francisco, Cal., assignor to himself and Norbert Landry.—*Velocipede.*—July 27, 1869.

Claim.—In the velocipede as constructed, and in combination therewith, the friction-clutch J J, spurs L L, arms K K, cross-bar M M, cam N, guide-wheel V, with hollow rim R′ and axle X, arranged and operated substantially as described.

93,017.—Walter Smith, Boonville, Ind.—*Cultivator.*—July 27, 1869.

Claim.—The frame B, the wheels C L, the gauge H, the gauge-lever I and gauge-spring J, the slides E, the regulators G, and the setter-screws O, and their application to, and co-operation with the plows, handles, and clevis.

93,018.—Hiram Staples, Nashua, N. H., assignor to himself and Elbridge M. Dudley, same place.—*Composition for Pavements, Roofing, &c.*—July 27, 1869.

Claim.—1. The employment of bitumen and coal-tar in or about in the proportions stated, with gravel, or its equivalent, and wood sawdust, in the formation of a composition for the fabrication of a pavement or roof-covering.

2. The combination of a finishing-layer of pulverized granite or comminuted stone with the composition made, as explained, of bitumen, coal-tar, gravel, and wood sawdust.

93,019.—Francis Stein and Henry Haering, New York, N. Y.—*Adjustable-Scaffold.*—July 27, 1869.

Claim.—1. The friction-wheels L L, arranged with relation to the post C and case A, as and for the purpose set forth.

2. The metallic wheel or ring F, supporting the socket B, combined with the platform A, substantially as specified.

3. The combination, with the ratchet-wheel, pinion N, and rack O, of the pawls, brake, and lever, when arranged substantially as specified.

93,020.—Richard Straubel, Williamsburgh, N. Y.—*Eye-Glass.*—July 27, 1869.

Claim.—The nose-pieces B′, suspended from the spring B, and pivoted to the glass frames A by means of the lugs *a b*, inclosing the spring *d*, as herein described, for the purpose specified.

93,021.—John Blake Tarr, Fairhaven, Mass.—*Steam-Generator Feed-Device.*—July 27, 1869; antedated July 12, 1869.

Claim.—1. The feed-water receiver D, arranged upon the feed-pipe E, leading into the boiler, the steam-pipe C leading to the steam-space in the boiler, the blow-off cock *c*, and the feed-water pipe *s*, said pipes being provided with cocks, and said parts being combined and adapted to operate substantially as described.

2. The feed-pipe E, leading from tank D into the boiler, and beneath the water-line therein, in combination with the feed-water apparatus, as herein described.

93,022.—Cebra L. Taylor, Norwich, Conn.—*Toy-Hoop.*—July 27, 1869.

Claim.—1. The arrangement and combination of the furcated handle A, the hoop or wheel B, the toy-engine L, and the mechanism applied thereto, and to the hoop or wheel, for the purpose of transmitting motion to the engine from the hoop or wheel, while being trundled or revolved, as explained.

2. The combination of the cross K, or crosses K N, with the furcated handle A, the hoop B, the toy-engine L, and the mechanism for operating the engine, by means of the hoop B, while being revolved, as specified.

93,023.—George H. Todd, Montgomery, Ala., assignor to himself and C. W. Kennedy, same place.—*Breech-Loading Fire-Arm.*—July 27, 1869.

Claim.—1. The combination of the catch *k*, trigger J, and spring *g*, when arranged within the breech, as and for the purpose described.

2. The rib D, substantially in the manner and for the purpose specified.

93,024.—William R. Walker, Concord, N. H.—*Fountain-Pen.*—July 27, 1869.

Claim.—The combination and arrangement of the air-passage through the valve *e*, and its stem B, with such valve and stem, the spring E, the flexible or elastic membrane or head *h*, and the reservoir *i*, of the pen-handle A, the whole being to operate substantially as set forth.

93,025.—Elias Werden, Pittsfield, Mass.—*Clothes-Rack.*—July 27, 1869.

Claim.—A clothes-rack, consisting of the posts A, which have the shoulders *a a*, and of the pivoted swinging bars B, which are arranged in sections, substantially as herein shown and described.

93,026.—Andrew E. Whitmore, Boston, Mass.—*Sliding Caliper.*—July 27, 1869.

Claim.—The combination and arrangement of the swiveling or socket-screw, and sectional saddle-nut *h*, with the movable jaw of a beam caliper, substantially as and for the purposes shown and set forth.

93,027.—Maximilian S. G. Wilde, Somerville, assignor to himself and James H. Noble, of Pittsfield, Mass.—*Gate.*—July 27, 1869; antedated July 15, 1869.

Claim.—1. The sliding bar C, in combination with a swing-gate or door, for the purpose as above specified.

2. The combination of the sliding bar C with a strap and weight, K, in the manner and for the purpose substantially as described.

93,028.—Irvin Willits, Deer Plain, Ill.—*Wagon-Brake.*—July 27, 1869.

Claim.—The brake-bar A, carrying the pivoted shoes F, hinged at its forward edge to the upper side of the tongue, and attached to the loose double-tree bolt by means of the adjustable link E, whereby, when the draught of the team ceases, the brake-bar falls, by its own gravity, to carry the shoes F against the periphery of the forward wheels, substantially as described, for the purpose specified.

93,029.—John W. Williams, Syracuse, N. Y.—*Detachable Foot-Valve and Seat for Pumps.*—July 27, 1869.

Claim.—The conical attachment C, containing the conical valve D, such attachment being secured to any ordinary pump, all substantially as herein shown and described.

93,030.—Simon Wortmann, New York, N. Y.—*Velocipede.*—July 27, 1869.

Claim.—1. The combination, with each other, of the frame A, wheels B C, steering-post D, shafts F I J, pinions *e d f*, lever *g*, fly-wheel K, pitmen *c*, levers H, and seats E and G, all arranged and operating substantially as herein shown and described.

2. The fly-wheel K, mounted on a separate shaft, J, the sliding pinion *f*, in combination with the lever *g*, substantially as herein shown and described, for the purpose specified.

93,031.—Lorenzo Zimmerman, Waukeshma, Mich.—*Grinding Edge-Tools.*—July 27, 1869.

Claim.—In combination with a grindstone, the bar C, socket D, lever G, and jaw I, constructed, arranged and operating substantially as herein shown and described, for the purposes set forth.

93,032.—John L. Agnew, Negaunee, Mich.—*Appendage to Blast-Pipes of Blast-Furnaces.*—July 27, 1869.

Claim.—An air-tight plug and cylinder, with substantially the arrangement and combination of holes and glass or glasses in same, as is above particularly set forth, and for the purpose herein described.

93,033.—John M. Allison, Salina, Pa.—*Broom-Head.*—July 27, 1869.

Claim.—The broom-forming apparatus herein described, having shank B, former D, and clamp E, constructed and arranged to operate substantially as specified.

93,034.—J. B. Andrews, Bridgeton Centre, Me.—*Saw-Horse.*—July 27, 1869.

Claim.—The arrangement of pedal *e*, rod *h*, V-spring *f* and toothed arm *k*, on a saw-horse, in connection with the fixed teeth *n* and rest *o*, for the purpose of easily holding the saw and wood to be sawed, the whole operating as herein set forth.

93,035.—John Baker, Fairbury, Ill.—*Grain-Binder.*—July 27, 1869.

Claim.—1. The combination of the gatherers B B B B with the troughs *a a*, A A, the treadle E, as and for the purpose specified.

2. In combination with the gatherers B B B B and troughs *a a*, A A, the trough H and elevator G, when arranged in the manner and for the purpose specified.

93,036.—JOHN BALL, Canton, Ohio.—*Plow.*—July 27, 1869.

Claim.—1. A plow-beam, constructed of two or more bars of iron or steel, when used in combination with a cast metallic standard, constructed as herein described, substantially as and for the purpose herein specified.

2. The plow-standard herein described, the same being composed of the standard A, with flanges *a a*, share-seat B, shoe-bar C, landside-bar *b*, post D, standard E, and corrugated segment F, and the said parts being so arranged as that the whole can be cast in a single casting, substantially as and for the purpose specified.

3. So constructing and arranging the landside of a plow as that the ends of said landside shall extend to the front of the plowshare and form the plow-cutter, and also, so that said landside can be turned end for end, so as to bring either of its cutter-edges into action, substantially as is herein specified.

4. The combined point and shoe herein described, composed of the bar M, with pointed ends *x x*, and flukes *r s*, when the same is used in combination with the plow-standard, landside, and movable share-piece, substantially as and for the purpose specified.

5. The spring K, when used in combination with the plow-standard A D and draught-rod or chain L, substantially as and for the purpose specified.

6. Providing the lower ends and inner-faces of the plow-handles with corrugated irons, pivoting said handles by means of a pivot-bolt to the plow-standard, and securing them at any desired angle with the beam, by clamping the corrugated irons against a corrugated segment on the plow-standard, by a clamping-bolt placed above the pivot-bolt, and passing through holes in the handles and a slot in the plow-standard, substantially as is herein specified.

93,037.—S. H. BARNES, Lanesborough, Pa.—*Water-Wheel.*—July 27, 1869.

Claim.—1. The plano-convex gates E, arranged in the mouths of the chutes, and geared with the wheel H, substantially as specified.

2. The arrangement of the hollow convex bearing I, upon the case or other support, about the wheel, and the concave bearing K, substantially as specified.

93,038.—B. F. BARNEY, Pontiac, Ill.—*Combined Harrow and Marker.*—July 27, 1869.

Claim.—The combination and arrangement of the sectional harrow C, marking-frame D, and levers *a* and *s*, constructed and operating substantially as and for the purposes specified.

93,039.—THOMAS BARRETT, Charlestown, Mass.—*Tool for Forming Lips on the Necks of Bottles.*—July 27, 1869.

Claim.—1. The combination of a neck-shaping and lip-forming tool, substantially as shown.

2. The retractile lip-former and lip-forming recess in the die, substantially as shown, and for the purpose set forth.

93,040.—RUFUS E. BEAN, Franklin, N. H.—*Device for Suspending Picture-Frames and Mirrors.*—July 27, 1869.

Claim.—The corrugated wire B, when used in connection with the frame A and cord C, substantially as described and shown, for the purpose set forth.

93,041.—UDNEY N. BEARDSLEY, Lawton, Mich.—*Dumping-Wagon.*—July 27, 1869.

Claim.—1. The arrangement of the frame A, boxes B C, board G, and stirrups H H, all constructed and operating substantially as set forth.

2. The stirrups H, when used to secure the bed to the wagon, and to dispense with the continuous reach, substantially as described.

93,042.—HIRAM BENEDICT, Detroit, Mich., assignor to himself and ALLEN CHANEY, same place.—*Cultivator and Harrow Combined.*—July 27, 1869; antedated July 16, 1869.

Claim.—1. The center bar A, the side bars D, and other bars G, when pivoted together and arranged relative to each other, as shown, for the purpose of expanding the implement.

2. The harrow-teeth M, in connection with the bars D and G, and the cultivator-teeth K and L, when arranged substantially as and for the purposes herein set forth, described, and shown.

93,043.—GEORGE W. BENSON and FRANK F. DOLAND, Sacramento, Cal.—*Sawing-Machine.*—July 27, 1869.

Claim.—In combination with the sliding block I, the spring R, when secured to the block, so as to rise and fall with it, substantially as set forth.

93,044.—BENJAMIN BEST, Dayton, Ohio.—*Compound for Destroying Insects.*—July 27, 1869.

Claim.—A composition compounded of the above-named ingredients, and applied for the protection of trees and vines, substantially as set forth.

93,045.—JAMES W. BRADY, Catonsville, assignor to M. W. BRADY, Baltimore, Md.—*Coffee-Cleaner and Polisher.*—July 27, 1869.

Claim.—1. The oblique deflecting-plates *e e*, arranged upon the inner surface of the perforated metal plates C′, in combination with the polishing-plates *m* of leather, or equivalent material, substantially as described, for the purpose specified.

2. The polishing-plates *m m*, of leather or equivalent material, arranged alternately with the perforated metal plates C′, substantially as described, for the purpose specified.

3. A cylinder constructed with solid longitudinal plates *c c*, lined with the rubbers *m*, of leather, or equivalent material, alternating with plates, *c′ c′*, of foraminated boiler-plate iron, or other equivalent plate-metal, substantially as and for the purposes set forth.

93,046.—EDWIN D. BRAINARD, Albany, N. Y.—*Refrigerator.*—July 27, 1869.

Claim.—A refrigerator, having the frame or body constructed with double side casings *a* and *b*, end casings *c* and *d*, and bottom casings *e* and *g*, inclosing dead-air chambers 1, 2, and 3, when said frame or body is sheathed both externally and internally with a continuous and hermetically sealed sheet-metal wrapper, *s*, substantially as and for the purposes herein described.

93,047.—BENJAMIN F. BREWSTER, Norwich, Conn.—*Bitting-Harness.*—July 27, 1869.

Claim.—The arrangement of the spring holding-case D, on the crupper-strap C, in combination with the girth B, bridle A, and reins *a a a*, substantially as shown and described.

93,048.—JOSHUA W. BROOKS and HENRY RUDOFF, Ashley, Ill.—*Drier.*—July 27, 1869.

Claim.—A fruit-drier, having reflecting roof A, reflecting doors B, fire-place D, and pipe E, constructed and arranged substantially as specified.

93,049.—FRANCIS M. BUCKLES, Altona, Ill., assignor to himself and JOHN A. STUCKEY, same place—*Harvester-Rake.*—July 27, 1869.

Claim.—1. The combination and arrangement of the lever D, shaft H, pitman J, shaft K, rod L, levers M, P, and R, for giving motion to the chain of levers S S S S S S S, and operating in combination with the said chain of levers, substantially as described, and for the purpose set forth.

2. The link T, combined with the chain of levers S S S S S S S, and rake-head U, and rods V V, substantially as described, and for the purpose set forth.

93,050.—JOHN M. BURKE, Dansville, N. Y.—*Potato-Digger.*—July 27, 1869.

Claim.—1. The above-described machine, for digging potatoes and freeing them from dirt at one continuous operation.

2. The pivoted grate F, in combination with the plow E, spike-wheels, axle, and pins, as described, constructed, arranged, and operating substantially as specified.

93,051.—CHARLES BURLEIGH, Fitchburgh, Mass.—*Steam and Air Engine.*—July 27, 1869.

Claim.—1. The arrangement of cranks which make entire rotations, substantially as herein speci-

fied, in the combination of a steam-engine with single-acting air-compressing pumps.

2. Devices for introduction of water into vertical air-compressing pumps, arranged to deliver the water between the tops of the pump-pistons and the pump delivery-valves, substantially as herein specified.

93,052.—JOHN BURNHAM, Batavia, Ill.—*Water-Tank for Railroads.*—July 27, 1869.

Claim.—The water-tank for railway-stations, herein described, having chambers C, man-holes and trap-doors *v*, pipes E and F, and conduit G, when constructed and arranged substantially as and for the purposes specified.

93,053.—W. H. CARR, New York, N. Y.—*Steam-Engine.*—July 27, 1869.

Claim.—1. The combination of the reciprocating cylinder B with the piston H, arranged to have a stationary position in relation to the reciprocating cylinder, and both free to oscillate on or in connection with a rock-shaft, K, to which the piston-rod is attached at its outer end, or beyond the one end of the cylinder, substantially as specified.

2. The arrangement of the valve I, by which the admission and discharge of the steam to and from the working-cylinder are controlled within the piston, for operation in connection with the ports or passages *a* and *b b*, essentially as described.

3. The arrangement, with relation to the main valve and ports, of the hollow piston-rod J, constructed with diaphragm *c*, forming inlet and exhaust passages *d e*, and terminating in a hollow oscillating bearing, substantially as shown and described.

93,054.—GEORGE W. CHANDLER, Fitchburgh, assignor to himself and JOHN G. FOLSOM, Winchendon, Mass.—*Balance-Scale.*—July 27, 1869.

Claim.—1. The combination of the knife-edged lever N with the smooth-faced lever Q, for varying the leverage of a balance-scale, substantially as set forth.

2. The combination, with rods F and G, and frame A, of the joint-pieces *a b* and pin *d*, substantially as and for the purposes set forth.

93,055.—WILLIAM H. H. CLARK, Burlington, Iowa.—*Car-Coupling.*—July 27, 1869.

Claim.—The draw-bars A, attached to the springs B, when provided with the curved edges in rear of the walls *b*, in combination with the guide-bar C, having a correspondingly curved end, the bar C, and the spring D, all arranged and operating as described, whereby the draw-bars are permitted greater lateral play at their front ends, as herein described, for the purpose specified.

93,056.—MILTON W. CLARK, Worcester, Mass.—*Cutter-Head.*—July 27, 1869.

Claim.—The cutter-head herein described, having one stationary and two laterally adjusting sections, substantially as shown in the drawings, and for the purposes set forth.

93,057.—LEWIS T. CLEMENT, Smyrna, Tenn.—*Machine for Ginning and Cleaning Cotton.*—July 27, 1869.

Claim.—1. The rotary brush D, having a continuous surface, in combination with the saws C and carding-cylinder A, substantially as and for the purpose herein described.

2. The combination, with the above, of the cam-disk *d*, operating in a fixed guide, secured to the frame, for communicating a reciprocating motion to the rotary brush D, as set forth.

3. The combination, with the saws of a cotton-ginning machine, of revolving, beating, or combing plates *f*, having slotted outer edges, whereby motes and other extraneous matter may be separated from the lint, while it is being carried upon the saws, substantially as herein described.

4. The rotary brush D, having a reciprocating motion in direction of its axis, substantially as and for the purpose set forth.

93,058.—CALVIN COLE, Ithaca, N. Y.—*Hinge.*—July 27, 1869.

Claim.—1. The arrangement and combination of the slot *d*, in the knuckle, and shoulder *e*, in the pin, substantially as shown and described, for the purpose set forth.

2. The construction of the pin C, with swells *c c c'*, fitting the bore of the knuckle, and reduced intermediate portions, substantially as and for the purposes specified.

93,059.—JAMES A. COLE, Adams, N. Y.—*Car Brake and Starter.*—July 27, 1869.

Claim.—1. The combination, substantially as described, with the axle B and spring-shaft D E, of the gears F F', sliding on said axle D, the distending-spring G, forks H H', and levers I I', all arranged to operate in the manner described, for the purpose specified.

2. The supplementary lever L, operated automatically by the spring-shaft, substantially in the manner described, in combination with said spring-shaft D E, the gear F', and axle B, substantially as and for the purpose set forth.

3. The traversing-nut M, operated by means of the screw *d* on the spring-shaft D E, and provided with the cam surface *m*, in combination with the lever L, gear F', and shaft B, substantially as and for the purpose described.

93,060.—EZRA COLEMAN, San Francisco, Cal., assignor to himself and ALMOND F. COOPER, same place.—*Sluice and Blanket for Collecting Gold and Silver.*—July 27, 1869.

Claim.—1. Forming the bottom of the sluice into transverse depressions C C, for the purpose of receiving and being filled with quicksilver, substantially as described.

2. Passing the pulp or tailings over an extended sheet of quicksilver, or over successive bodies of quicksilver, said sheet or bodies being contained in transverse depressions in the bottom of the sluice, substantially as described.

3. The blanket D, secured or arranged so as to sweep or impinge upon the surface of the moving pulp or stream, for the purpose of arresting and detaining fine particles of float-gold, substantially as above specified.

4. The descending graduated concentrating-troughs, either with or without the adjustable false bottoms F, constructed and arranged substantially as and for the purpose described.

93,061.—JOHN A. COZAD, Mercer, Pa.—*Churn.*—July 27, 1869.

Claim.—The angular self-locking slotted bars *e e*, in combination with the frame D D' and shafts *a a*, when constructed and operated substantially as shown and described.

93,062.—E. D. CRAWFORD, North Star, Pa.—*Sheep-Tagging Box.*—July 27, 1869.

Claim.—1. A sheep-tagging box, having the bars E, beveled sides A, and neck-rest in the forward end, all substantially as and for the purpose set forth.

2. In combination with the box A, the hook F, or equivalent, arranged as and for the purpose specified.

93,063.—JOB A. DAVIS, Watertown, N. Y.—*Gathering-Attachment for Sewing-Machines.*—July 27, 1869.

Claim.—1. In combination with the reciprocating gatherer, springs, to give a downward pressure and a forward movement to the gatherer, and a lever for imparting to it backward movement, and which receives its motion directly from the descending needle-bar, substantially as shown and described.

2. The combination of the inclined surfaced slide with the lever and its friction-roller, on the short arm of the lever, substantially as and for the purpose set forth.

3. The combination, with the reciprocating gatherer, of the adjustable gauge M, for varying the size or length of the gatherer, substantially as shown and described.

4. The combination, with the reciprocating gathering-edge D, of the plate R, adapted to be pressed down upon the under piece of fabric, and the spring

Q, which bears it down, and which also bears upon the upper piece of fabric interposed between the spring and plate, both these devices being located in rear of and out of reach of the gathering-edge.

5. The combination, with the gathering edge D, of the lever P and upright P′, to lift the gathering-edge from the fabric, and draw it back out of operative action, for the purpose set forth.

6. The spring-piece S, arranged to be interposed between the ordinary presser-foot of a sewing-machine and the fabric, to keep the work smooth after it is sewed, and prevent the tightening of the stitch from drawing it back.

7. The described gathering-mechanism as a whole, constructed and operating as shown and described.

93,064.—JOB A. DAVIS, Watertown, N. Y.—*Tuck-Creasing Attachment for Sewing-Machines.*—July 27, 1869.

Claim.—1. The combination, with a tuck-creasing device, which presses upon the cloth, of devices which impart to such creaser a positive motion, forward and backward, substantially for the purpose set forth.

2. The combination, with the arm which supports or carries the upper creasing-device, of a lever, to carry back the arm and then lift the creaser from the cloth, such lever being operated by the needle-bar of the sewing-machine, substantially as shown and described.

3. The combination, with the creasing-mechanism, of the spring-smoother, projecting under the presser-foot, and having an upright part thereon, hooking over the presser-foot, as and for the purpose set forth.

4. Combined with a piece or block, H, the arrangement, shown and described, of the spring-smoother and lifting-lever, so that, under all adjustments of the other parts, the lever and smoother may always preserve the same relative positions to each other and to the needle.

93,065.—JOB A. DAVIS, Watertown, N. Y.—*Sewing-Machine.*—July 27, 1869.

Claim—1. The combination of the needle-bar with the helper-bar, by means of a projection on the one and a recess on the other, a spring serving to force the two in opposite vertical directions, when the helper-bar is arranged between the presser-bar and needle-bar, and its metallic acting surface is in immediate proximity to the needle, substantially as and for the purpose described.

2. The combination of the shuttle-driving lever H, vibrating in one plane, with its motor-lever K, vibrating in another plane, and hung so as to be free to move in a plane transverse of the plane of its vibration, when such levers are connected together by a ball and socket joint, as shown and set forth.

93,066.—JOB A. DAVIS, Watertown, N. Y.—*Apparatus and Process for the Manufacture of Salt.*—July 27, 1869.

Claim.—1. The process, substantially as described, of purifying and evaporating, by supplying the evaporating-kettles with the liquid, already heated and purified, by means of the same heater which heats such kettles.

2. An evaporating-kettle, so constructed and applied as to serve also as a fire-back to the fire-chamber, substantially as described.

3. An evaporating kettle, constructed with longitudinal corrugations or hollow ribs, for receiving heat, and corresponding ones for containing the liquid to be evaporated, substantially as described.

4. A purifying-kettle, having corrugations or ribs, as last named, and communicating-channels, to give a long route or passage from the first to the last chamber thereof, and a discharging-outlet, substantially as described.

5. The combination of the fixed grating *f* with the movable grate-bars, arranged to receive a rocking motion in their bearings, substantially as described.

6. The combination of the adjustable heat-deflectors G with the corrugated troughs, substantially as described.

7. The construction, in an evaporating-apparatus, of the fire-chamber and its feed-chamber, so that the fuel may be supplied without opening any door directly admitting cold air to the ignited fuel, substantially as described.

93,067.—D. P. DAVIS, New York, N. Y., assignor to himself, WILLIAM J. COOMBS, and GEORGE H. GARDNER.—*Carriage-Wheel.*—July 27, 1869.

Claim.—The spokes *b b*, formed with forked ends, in combination with the two rims, connected with, and sustained, at the desired distance apart, by said forked spokes, as specified.

93,068.—FRANCIS E. DAY, New York, N. Y., assignor to himself and LYMAN H. DAY, same place.—*Covered Clasp for Hoop-Skirts.*—July 27, 1869.

Claim.—A covered fastening, for securing the hoops to the tabs and tapes, in the manufacture of hoop-skirts, substantially as herein specified.

93,069.—FRED. DENGLER, North Vernon, Ind.—*Dumping-Cart.*—July 27, 1869.

Claim.—1. The catch D, when constructed and arranged as described, and released by means of the roller *f*, substantially as and for the purpose shown.

2. The shaft E, provided with the arm F and roller *f*, and operated by means of the crank G, in combination with the catch D, and curved block H, substantially as shown, and for the purpose specified.

3. The within-described devices for locking, releasing, and tilting the box of a dumping-cart, consisting of the catch D, provided with the arm *d* and spring *x*, the shaft E, actuated by means of the shaft G, and provided with the arm F, and roller *f*, which operate upon the curved block H, all constructed and arranged substantially as and for the purpose specified.

93,070.—JONATHAN DILLON, New York, N. Y.—*Center-Board for Vessels.*—July 27, 1869.

Claim.—The laterally folding center-board B, composed of one or more folding leaves, having sockets *c*, the removable locking-rod *f*, the fixed socket *a*, and the guy *e*, combined for operation, substantially as herein described.

93,071.—J. S. ELKINS, Marquette, Wis.—*Sash-Holder.*—July 27, 1869.

Claim.—The combination of the tapering cap or housing H, open at its upper end, with the spool G, when constructed to operate substantially as and for the purposes specified.

93,072.—LEVI S. FALES, New York, N. Y.—*Apparatus for Evaporating Ammoniacal and other Liquids.*—July 27, 1869.

Claim.—The evaporating-apparatus, composed of the superposed intercommunicating evaporating-chambers B^1 B^2 B^3 B^4 B^5 B^6, interposed steam-passages C^1 C^2 C^3 C^4 C^5, steam-pipes *g*, overflow-pipes *e*, and vapor-conducting pipes *f*, the whole combined to operate substantially as herein described.

93,073.—JOSEPH BEVERLEY FENBY, Birmingham, England.—*Valve for Hydraulic Press.*—July 27, 1869; patented in England October 30, 1867.

Claim.—The improvements in valves for hydraulic presses, and for other purposes hereinbefore described, and illustrated in the accompanying drawings, that is to say, the said valves, constructed of a hollow cylinder and a piston or plunger working therein, the said hollow cylinder and piston or plunger being packed, and the parts connected therewith being constructed and arranged substantially as described and illustrated, whether the valve be worked by the direct motion of the piston or plunger, or by a small supplementary valve of similar construction.

93,074.—WILLIAM C. FREDERICK, Chicago, Ill.—*Coal-Sifter.*—July 27, 1869.

Claim.—The arrangement and combination of the grate B, handle H, spring-cover No. 2, incline collars D D, bottom slide E, in combination with the hod, as shown and described.

93,075.—JOSEPH FRY, New Orleans, La.—*Manufacture from Bananas and Plantains.*—July 27, 1869.

Claim.—1. The process herein described for desic-

cating bananas and plantains, substantially as specified.

2. Desiccated bananas and plantains, as a new article of food and commerce.

93,076.—William B. Gage, Saratoga Springs, and William H. Staats, Crescent, N. Y.—*Railway-Frog.*—July 27, 1869.

Claim.—The within-described construction and arrangement of the plates B B, as a consequence of which they are made capable of being reversed, and so changed in position as to present their upper and lower surfaces alternately to the wearing-action of the wheels, as and for the purpose specified.

93,077.—Charles F. Gay, Albany, Oreg.—*Gang-Plow.*—July 27, 1869.

Claim.—The cultivator herein described, having beam A, rods *d*, levers D, G, and P, ratchet H, chain *h*, curved arm *n*, and attachment Y, constructed and arranged substantially as specified.

93,078.—E. L. Gaylord, Terrysville, Conn.—*Hasp-Lock.*—July 27, 1869.

Claim.—The lock-bolt *d* and thumb-bolt *f g*, constructed substantially as described, when so arranged that the spring *e* presses directly against the former, and, through it, exerts pressure on the latter, substantially as and for the purpose set forth.

93,079.—Lewis Gibbs, Canton, Ohio.—*Sash-Holder.*—July 27, 1869.

Claim.—1. The combination of the circular sash-case B and retaining-shell F, when said retaining-shell is so constructed as that its back shall fit the inner face of the sash-case, and its movement shall be effected by its sliding within the sash-case, instead of rolling therein, or turning on an axle-pin, substantially as is herein specified.

2. The sliding-bolt A, when used in combination with the retaining-shell F, which is fitted to the sash-case B, and slides on the inner face thereof, instead of rolling thereon or turning on an axle-pin, substantially as and for the purpose herein specified.

3. The flange *d*, on the sliding-bolt A, when used in combination with the slot D in the case B, substantially as and for the purpose specified.

4. The case B, provided with the raised plate C, when used in combination with the retaining-shell F and sliding-bolt A, substantially as and for the purpose herein specified.

5. The improved sash supporter and lock herein described, consisting of the case B, with flanges *f* and raised plate C, with slot D, retaining-shell F, and sliding-bolt A, with flange *d*, the several parts being constructed, combined, and operating substantially as and for the purpose specified.

93,080.—J. H. Gill, Mount Pleasant, Ohio.—*Hand-Cultivator.*—July 27, 1869.

Claim.—A hand-cultivator, with detachable hoes, when secured to the handle by means of a collar and key, substantially as shown and described.

93,081.—Miller Graham, Coshocton, Ohio.—*Bee-Hive.*—July 27, 1869.

Claim.—1. The frame F, in combination with box G and perforated cover *g*, as and for the purpose set forth.

2. The hive above described, consisting substantially of the sections A A A′, &c., bottom piece C, frame F, feeding-box G, with lid *g*, and perforated pieces B, as and for the purpose set forth.

93,082.—T. B. Greene and C. Greene, Abington, Ind.—*Scroll-Sawing Machine.*—July 27, 1869.

Claim.—1. The arrangement of the saw-frame H, adjustable rod M, dog N, and worm R, on the adjustable shaft P, all substantially as herein set forth.

2. The arrangement of the segmental rack-bar S upon the under part of the table A, and provided with a pin which projects up through a slot in the table, for operating the carriage T upon the upper surface of the table, all substantially as specified.

3. The arrangement of the carrige T, composed of two adjustable pivoted arms and one central straight perforated arm, provided with a gauge or slide, V, and secured to the table by a pin, all constructed to operate substantially as specified.

93,083.—Nelson C. Gridley, Milwaukee, Wis.—*Manufacture of Sheet and Plate Iron.*—July 27, 1869.

Claim.—1. The process of removing the scale and slag from and at the same time hardening the surfaces of sheet and plate iron by means of one or more soft steel rollers, or their equivalents, substantially in the manner described.

2. In the process of manufacturing sheet and plate iron, the use of one or more soft steel rollers, or their equivalents, for removing the scale and slag, and at the same time making a uniform hardened surface, preparatory to its receiving the desired finish and color, substantially in the manner and for the purpose described.

93,084.—Josiah S. Haley and Samuel Worrell, New York, N. Y.—*Stench-Trap.*—July 27, 1869.

Claim.—The diagonally arranged partitions *a a′*, joined to the shell A, the part *a* descending below the level of the continuous pipe, so as to dip into the water held in the globular enlargement, and provided with a valve-seat and valve, substantially as and for the purpose herein set forth.

93,085.—William Hill, Pottsville, Pa.—*Metallic Kegs.*—July 27, 1869.

Claim.—Uniting the heads B to the body of the powder-keg by means of the joints and bearings *a*, *b′*, *c*, *d*, and *f*, as herein shown and described.

93,086.—Asa Hill, Norwalk, Conn.—*Composition Dental Plate.*—July 27, 1869.

Claim.—1. A dental plate, formed of cotton, woolen, silk, linen, paper, or any similar textile or fibrous material, combined with collodion, substantially as described.

2. The use of perforated metal plates or wire gauze, substantially in the manner herein described.

3. The method of securing teeth to the plate, by means of collodion, as herein described.

93,087.—George Hillegass, Philadelphia, Pa.—*Lamp-Burner.*—July 27, 1869; antedated July 21, 1869.

Claim.—The movable and perforated air-distributer H, with the deflector T at top, and springs V and regulating-screws S and M at the sides, constructed as herein described, and arranged, in relation to the cone F and burner A, substantially as shown, and for the purposes set forth.

93,088.—Ervin Homrighous, Shelbyville, Ill.—*Calendar Movement for Time-Pieces.*—July 27, 1869.

Claim.—1. The wheel B, having on its outer face the months of four years in succession, and pins *e*, arranged on the periphery parallel therewith, in the manner described, for the purpose of controlling the varying lengths of the months, substantially as set forth.

2. The wheel C, having on its face the days of the month, the pins *r*, and the notches S, arranged in relation to the wheel D, substantially as described.

3. The slide G, having springs *g*, for engagement with pins *r* and *e* of the wheels C and B, substantially as described.

4. The dogs *i* and I, pivoted at *k k′*, and arranged to operate in connection with slide G and detent-pawl J, substantially as and for the purposes described.

5. The combination of the actuating-pawl *a*, wheels B, C, and D, arranged in relation to each other, and with the slide, check, and springs, substantially as set forth.

93,089.—B. B. Hotchkiss, New York, N. Y.—*Projectiles for Ordnance.*—July 27, 1869; antedated July 20, 1869.

Claim.—1. So constructing the expanding-buttons B′, and so mounting them in the wedge-shaped cavities *b*, supported by the ridges a^1, as represented, that the buttons shall expand strongly, but slightly by moving forward to a definitely limited extent in

the act of firing, substantially as and for the purposes herein set forth.

2. The cavity *b*, under the packing at the rear, in combination with the wedging-grooves *a*, full cylindrical surfaces a^1, and buttons B′, adapted to move forward, and be expanded by such motion, all as and for the purposes herein set forth.

3. The provision a^2, in combination with grooves *a* and expanding-buttons B′, for receiving and locking portions of the said buttons B′, as herein specified.

4. A projectile, having a packing formed in a single piece, and having the following several qualities in combination: First, an expanding-plate or disk, B, adapted to receive the force of the discharge over the whole rear of the projectile; second, a central locking or fastening thereof; and third, the segmental wedges or buttons B′, directly supported against wringing by the projections *a*, on the exterior of the body A, all constructed, combined, and arranged as and for the purposes herein set forth.

93,090.—Thomas S. Hudson, East Cambridge, Mass.—*Hand-Stamp.*—July 27, 1869.

Claim.—1. The plate I, with an indicator, L, in combination with the printing-wheels of a hand-stamp, substantially as and for the purpose described.

2. A calendar-plate, K, in combination with the plate I, substantially as and for the purpose set forth.

93,091.—Jabez Jenkins, Philadelphia, Pa.—*Razor-Strop.*—July 27, 1869.

Claim.—A razor-strop, with a cork surface, when coated with the composition described, as a new article of manufacture.

93,092.—William E. Jenkins, Auburn, N.Y.—*Oil-Can.*—July 27, 1869.

Claim.—An oil-can, consisting of top A, tube B, spiral spring *a*, rod *b*, and cork *d*, all combined, arranged, and operating substantially in the manner and for the purpose described.

93,093.—William T. Johnston, Ottumwa, Iowa.—*Embroidering-Attachment for Sewing-Machine.*—July 27, 1869.

Claim.—The rod A, provided with the stud or cam C, arms D and E, and grooved plate B, in combination with the posts F, nuts N, and springs L, when all are constructed, arranged, and operated in the manner and for the purpose described.

93,094.—August Klein, New York, N. Y.—*Meat-Cutter.*—July 27, 1869.

Claim.—The combination of the series of curved knives N, beams M *m′*, curved uprights or guides O, connecting-rods L, cranks or crank-wheels K, shafts J, and gear-wheels I, with each other, with the revolving-block B, and with the crank gear-wheel G F, from which the block B is revolved, substantially as herein shown and described, and for the purpose set forth.

93,095.—John M. Klingenmeier, Buffalo, N. Y., assignor to John H. Miller, same place.—*Spittoon.*—July 27, 1869.

Claim.—In combination with box A and post C, the cover B and rod F, the whole to operate for the purpose substantially as described.

93,096.—Alois Kneppler, East New York, N. Y.—*Spring Bed-Bottom.*—July 27, 1869.

Claim.—The conical springs C, in combination with the interwoven spiral springs B, cross-rods *a*, hook or eye bolts B, and frame A, substantially as set forth.

93,097.—Frederick H. Laforge and George E. Somers, Waterbury, assignors to themselves and N. A. Baldwin, Milford, Conn.—*Screw-Press.*—July 27, 1869.

Claim.—The arrangement of the cross-bar F, so as to move up and down with the screw, and supporting the driving-pulleys and friction-wheels, substantially as set forth.

93,098.—Perley Laflin, Warren, assignor to himself and Z. E. Cary, West Brookfield, Mass.—*Detachable Horseshoe-Calk.*—July 27, 1869.

Claim.—1. The combination, with clamp-plate B and set-screw C, of the swiveled plate *e*, substantially as and for the purposes set forth.

2. The detachable calk B, constructed and secured to the shoe in the manner and for the purposes set forth.

93,099.—Herman Lerner, Pomeroy, Ohio, assignor of three-fourths of said invention to August Mayer, George Bauer, and Henry Rectanus, same place.—*Apparatus for Making Bromine.*—July 27, 1869.

Claim.—1. The use of tile for the material of a bromine-still.

2. Making a bromine-still of tile, all in one piece, without joints.

3. The arrangement of the stills E E, with the flues C C, D, by which the evaporating-pan and stills are heated by one fire, or the products of combustion may be conducted past the stills without heating them, substantially as and for the purpose described.

93,100.—William B. Lodge, Danbury, Conn.—*Fulling-Mill.*—July 27, 1869; antedated July 23, 1869.

Claim.—1. The combination of the steam-chest E and the showering-pipe *c c′*, with the chamber B, arranged and operating substantially as and for the purposes herein set forth.

2. The perforated draining-chamber G, arranged all across the trough, substantially as and for the purpose herein set forth.

93,101.—John C. Love, Philadelphia, Pa., assignor to himself and Silas Fuller, same place.—*Attachment for Gas-Burner.*—July 27, 1869.

Claim.—The within-described holder, consisting of the perforated casing D, outer flanged casing E, and openings *x x*, between the casings, when the whole is combined with an ordinary gas-burner, substantially in the manner described.

93,102.—R. O. Lowrey, Salem, N. Y.—*Compound for Rendering Fabrics Water-Repellent.*—July 27, 1869.

Claim.—1. A repellent fluid or composition made of the ingredients and in the manner substantially as herein described, and for the purpose set forth.

2. The treatment of fibrous and porous substances, whether in a raw, felted, or textile state, as well as of articles made therefrom, by the application of the repellent fluid herein described, substantially as and for the purpose set forth.

3. The repellent materials or articles, when so made by the application of my repellent fluid or composition, as herein described.

93,103.—John Macintosh and William Boggett, London, Great Britain.—*Boots and Shoes.*—July 27, 1869; antedated July 22, 1869.

Claim.—A shoe or gaiter, having elastic bands or fillets applied to and connecting the opposite sides of the "vamp" or "upper," so as to be concealed when the edges of the said sides are in contact, substantially as and for the purpose described.

93,104.—Hugh L. McAvoy, Baltimore, Md.—*Hot-Water Apparatus.*—July 27, 1869.

Claim.—The combination, with a hot-water or other heating apparatus, of the isolated chamber B, provided with the tubes C D, the diaphragm-piston F, or its equivalent, and the lever G, arranged to operate substantially in the manner described, for the purpose specified.

93,105.—Edmond P. McCarthy, San Francisco, Cal.—*Hydrocarbon-Burner.*—July 27, 1869.

Claim.—1. The arrangement of the adjustable steam-pipe E, in combination with the bell-mouthed pipe A, whereby said pipe E forms a plug to regulate the quantity of air admitted to mingle with the steam, substantially as described.

2. The combination and arrangement of the double bell-mouthed pipes A and I, for contracting and al-

lowing to expand again the mingled currents of air and steam, whereby the air, steam, and oil are more thoroughly mixed before entering the furnace, substantially as herein set forth.

93,106.—Thomas Meikle, Louisville, Ky.—*Apparatus for Bending Clevis-Blanks.*—July 27, 1869.

Claim.—1. The combination of the double rack B, and its socket and bolt b^1, with the die C, substantially as and for the purpose set forth.

2. The combination of the double rack B and die C, with spur-wheels D D′, and recessed rollers E E′, substantially as and for the purpose set forth.

3. The combination and arrangement of the double rack B, die C, spur-wheels D D′, recessed rollers E E′, bed A, rock-shaft F, and connecting-rod G, substantially as and for the purpose set forth.

93,107.—W. D. Mendenhall, Farmington, Ill.—*Press for Operating, Bending, and Shaping Dies.*—July 27, 1869.

Claim.—1. The combination, in a press for shaping the mold-boards or plates of plows, and for bending similar metal plates, &c., the lever *a*, with its handle H, rod or rods *b b*, with their bolts or connections, the vertical bar or shaft E, with its shoe or head at its lower end, the fulcrum or support *f*, of the lever *a*, and the guides or platforms B and D, all substantially as described, and for the purposes set forth.

2. In combination with the above, and working with them, the adjustable platform C, with its bolts *g g g g*, or equivalent means for adjustment of this platform to the upper one, to suit mold-boards of any thickness to the full power of the lever, substantially as described and for the purposes set forth.

93,108.—George W. Miller, Woonsocket, R. I.—*Drill-Chuck.*—July 27, 1869.

Claim.—A chuck for holding drills, having cylinder A, ring D, chucks *s*, springs *v*, and shaft B, constructed and arranged substantially as specified.

93,109.—Edward Morgan, Washington, D. C.—*Galley-Rest.*—July 27, 1869.

Claim.—The slotted arms C and staples *c*, or their equivalents, when used in connection with the shelf B, as described, substantially as and for the purposes specified.

93,110.—William R. Morris, Cincinnati, Ohio—*Roller-Skate.*—July 27, 1869.

Claim.—The roller-frame G, provided with tenon H, and inclined planes M, in the described combination, with the projections F F′ and jaws D D′, the whole being constructed and operating substantially in the manner and for the purposes set forth.

93,111.—F. B. Morse, New Haven, Conn.—*Trace-Fastener.*—July 27, 1869.

Caim.—In combination with the stud or whiffletree-end B, the loop C, arranged so as to operate substantially in the manner specified.

93,112.—Jacob Mosher, Mendota, Ill.—*Door-Latch.*—July 27, 1869; antedated July 24, 1869.

Claim.—1. The cam-plate D, knob E, with lugs E′, and plate G, constructed as set forth, and arranged to regulate the movement of the plate D, substantially as shown and described.

2. The "Janus-faced" latch-bolt B, in combination with the catch F, spring C, and cam-plate D, substantially as described.

93,113.—George M. Mowbray, Titusville, Pa.—*Method of Exploding Nitro-Glycerine.*—July 27, 1869.

Claim.—An electrical fuse for discharging nitro-glycerine, composed of the priming composition specified, or its equivalent, for inclosing the circuit-wires at their point of interruption, in combination with an intermediate priming-charge of fulminate of mercury, or its equivalent, all inclosed in cylinder O, and arranged substantially as and for the purpose specified.

93,114.—James W. Nathan, Chicago, Ill.—*Skate.*—July 27, 1869.

Claim.—The movable heel-plate E, having lugs F F and pins B D, in combination with the slots C C in the runner A, as and for the purpose set forth.

93,115.—Andrew A. Nuquist, Oneida, Ill.—*Harrow.*—July 27, 1869.

Claim.—A double zigzag harrow, formed of a series of separate bars, A B C D, flat braces G A, and teeth E, secured by nuts F through the zigzag and cross-bars, all constructed and arranged substantially as set forth.

93,116.—John I. Patton, Tiffin, Ohio.—*Corn-Planter.*—July 27, 1868.

Claim.—1. The combination of the slide E, lever F, and spring H, all constructed and arranged to operate substantially in the manner and for the purposes herein set forth.

2. The combination and arrangement of the seed-boxes D D, slide E, plows B B, scrapers C, levers F and I, vibrating-bar G, and the cams upon the driving-wheel, all constructed and operating substantially in the manner and for the purposes set forth.

93,117.—John M. Perkins, Cleveland, Ohio.—*Lamp-Burner.*—July 27, 1869.

Claim.—1. In a burner, provided with the extensible filling-tube C and wick-tube B, the tubes *h* and *i*, all constructed and arranged to operate as herein described and shown.

2. The combination and arrangement of the extensible filling-tube C and wick-tube B with the burner A, as and for the purpose set forth.

93,118.—James Potter, Portland, Me.—*Spring Bed-Bottom.*—July 27, 1869.

Claim.—The combination and arrangement of the springs *f*, constructed as shown, with flexible connections A, the reversible fastenings D, B, and rods *e*, secured by the metal clamps *h*, for the purposes described.

93,119.—A. J. Prescott, Catawissa, Pa.—*Reamer.*—July 27, 1869.

Claim.—A ball or taper-reamer, having a cutting-edge, *c*, and blank or smooth edge, *d*, and the concave sides *e*, substantially in the manner and for the purpose set forth.

93,120.—Louis Pritchard, Brooklyn, N. Y.—*Slate.*—July 27, 1869.

Claim.—The pivoted cross-piece D, when provided with a rod-like projection upon its end, so as to catch in the flat spring E, substantially as set forth.

93,121.—Benjamin B. Redfield, Pontiac Mich.—*Filtering and Ventilating Apparatus for Wells and Cisterns.*—July 27, 1869.

Claim.—The arrangement of the filter B, perforated pipe C, and ventilating-pipe D, all constructed as described, and for the purposes set forth.

93,122.—Nathan Richardson, Gloucester Mass., assignor to himself and Eli F. Stacey, same place.—*Steering-Apparatus.*—July 27, 1869.

Claim.—1. The rubber blocks or equivalent elastic material, interposed between the ends of the shafts *g g* and frame, as and for the purpose set forth.

2. The combination, with the boxes *i i* on one side of the frame, of the connecting-arms *o o* and hub *t′*, the parts operating as and for the purpose set forth.

3. The combination of the wedges *u u* and their nuts, with the boxes *i i*, as and for the purpose described.

93,123.—John Rogers, Cincinnati, Ohio.—*Railway-Car Wheel.*—July 27, 1869.

Claim.—1. The plates A A′, each having a fillet, *a″*, on its periphery, and a section of a recess at or near the point where they come in contact, for the reception of the lugs *b*, upon the tread B, substantially as and for the purpose set forth.

2. The ribbed or tongued tread B, in combination with the plates A A′, substantially as and for the purpose set forth.

93,124.—Thomas Rose, Oxton, and Robert E. Gibson, New Brighton, England.—*Machinery for Breaking Cotton-Seed.*—July 27, 1869.

Claim.—The shallow notched rolls and hopper, as specified, combined, and arranged, relatively to each other and to the clearing-brushes F F′, as herein set forth.

93,125.—C. E. Rymes, Somerville, Mass.—*Steam-Engine Valve-Gear.*—July 27, 1869.

Claim.—An engine valve-gear, in which the valves are arranged to turn constantly in one direction, substantially as described.

93,126.—J. B. Sawyer, East Templeton, Mass.—*Rattan-Cutter.*—July 27, 1869.

Claim.—The combination, with a many-sided rattan-cutter, of separating-fins or cutting-spurs *a*, substantially as and for the purpose set forth.

93,127.—Francis Schleifer, San Francisco, Cal., assignor to himself and Francis Cutting, same place.—*Process of Purifying and Refining Alcoholic Liquids.*—July 27, 1869.

Claim.—The introduction of atmospheric air into the still, below the surface of the liquor, in sufficient quantities to produce, by the presence of the oxygen in the said air, a chemical decomposition of the fusel-oils of alcoholic liquids, in the manner substantially as described, for the purposes set forth.

93,128.—S. R. Scoggins, Baltimore, Md.—*Refrigerator.*—July 27, 1869.

Claim.—A refrigerator, constructed substantially as above described, that is to say, having the wooden inclosing-box A A^1 A^2, the inclosed metallic box B, perforated at *e e e*, the vertical pipe C, the door D, the lid F, and the door opening through the wall A into box B, all constructed and combined substantially as and for the purposes herein set forth.

93,129.—F. C. Semelroth, Logansport, Ind.—*Paint.*—July 27, 1869.

Claim.—The mixture of the above-named materials in proportions mentioned, substantially as and for the purposes set forth.

93,130.—James Sherlock, New York, N. Y.—*Knapsack-Attachment.*—July 27, 1869.

Claim.—1. The combination of the cartridge-box, divided cartridge-box strap, and connecting rings, with the knapsack, knapsack-straps, and supporting-hooks, under the arrangement shown and specified.

2. The two haversacks, when constructed, arranged, and connected with each other, and with the straps from which they are suspended, substantially in the manner shown and set forth.

3. The arrangement, upon the person of the wearer, and with relation to each other, of the knapsack, cartridge-box, canteen or canteens, and haversacks, and straps or attachments, whereby the same are held in place, substantially as herein shown and specified.

93,131.—John E. Siebel, Chicago, Ill.—*Preparation of Iron for Medical Purposes.*—July 27, 1869.

Claim.—1. The process of producing "dialized iron," substantially as herein described, and for the purpose set forth.

2. The substance termed "dialized iron," when produced substantially as herein described, for medicinal purposes, either alone or in combination with other substances.

93,132.—Henry B. Snyder, Cherry Grove, Ohio.—*Sash-Fastener.*—July 27, 1869.

Claim.—The spring-key K, arranged to operate directly upon spring-pawl I, in combination with ratchet-wheel H and rubber-tired roller E, arranged to operate substantially as and for the purpose set forth.

93,133.—Antoine Steber, Utica, N. Y.—*Balance Slide-Valve.*—July 27, 1869.

Claim.—The hollow slide-valve R, with ports *l m i k*, seat D, and steam-chest B, constructed and arranged with reference to each other, substantially as described.

93,134.—David Strollum, Union City, Ind., assignor to himself, William A. Skellen, and E. Milton Glick, Shelby County, Ohio.—*Sack-Holder.*—July 27, 1869.

Claim.—The combination of the box A, notched bar B, prop C, loop D, and clasp E, all constructed and operating substantially as specified.

93,135.—C. W. Strout and Amos Wilder, Hallowell, Me.—*Machine for Varnishing Floor Oil-Cloth.*—July 27, 1869.

Claim.—The mode of applying varnish to oil-cloth or other fabrics, by means of horizontal, rotary, and cylindrical brushes, separately or in combination, substantially as described and set forth.

93,136.—Benjamin J. Talbott, Iowa Falls, Iowa.—*Water-Wheel.*—July 27, 1869.

Claim.—1. The hollow cylinder B, and the gate C, in combination with the shaft and wheel, substantially as set forth.

2. A turbine-wheel, consisting of the wheel A, the registering interior and exterior cylinders B and C, with the register-operating mechanism c^1 c^2 c^3, the projecting covers F E, and the shaft A^1, stepped upon the spider I, all combined, arranged, and operating substantially as set forth.

93,137.—Thomas Taylor, Washington, D. C.—*Alloy for Sabot of Projectile.*—July 27, 1869; antedated July 15, 1869.

Claim.—An alloy or composition of metals for metallic sabots for projectiles, composed of copper, tin, and lead, in all proportions.

93,138.—Alexander Thompson and Zera Waters, Bloomington, Ill.—*Gig Sawing-Machine.*—July 27, 1869.

Claim.—The arrangement of the arms P, head O, block N, spring M, bar K, disk I, pulley F, and lever H, when all are combined in the manner and for the purpose specified.

93,139.—John Trageser, New York, N. Y.—*Construction of Hot-Water Boilers.*—July 27, 1869.

Claim.—The double-folded seam, uniting the head and cylinder of the boiler, combined with the grooves and solder, employed in the manner and for the purposes set forth.

93,140.—W. F. Tunnard, East Baton Rouge Parish, La.—*Corn-Planter.*—July 27, 1869.

Claim.—1. The pitman F, provided with a pin, 1, which works in a slot in a fixed plate-standard, G, in combination with a seed-dropping drum or cylinder C and regulating sliding-covers D D′, when those several parts are constructed, arranged, and operate substantially as herein described, for the purpose set forth.

2. The above combination, in combination with a trench-opening shoe, E, and a covering-fluke, J, substantially as herein described, for the purpose set forth.

93,141.—Amos H. Tyler, Toledo, Ohio.—*Chewing-Gum Compound.*—July 27, 1869.

Claim.—The combination and use of the ingredients, as herein described, when prepared and used substantially as and for the purposes specified.

93,142.—A. Van Camp, Washington, D. C., assignor to himself and M. M. Hodgeman, St. Louis, Mo.—*Concrete Pavement.*—July 27, 1869.

Claim.—1. Crushed or pulverized rock, gravel, &c., when the same is used as an ingredient in the formation of concrete pavements, substantially as described.

2. A concrete pavement, when the same is composed of the materials stated, substantially as described, as and for the purpose specified.

3. Forming the blocks in the metallic molds A, when the same are of the form stated, and are laid with or without the molds in sand, substantially as described, as and for the purpose specified.

4. Laying the concrete pavement, when the same is composed of crushed rock or gravel and asphaltum, by means of hot rollers, substantially as described.

93,143.—William H. Wallack, Corunna, Ind.—*Liniment.*—July 27, 1869.

Claim.—A medical compound or liniment, composed of the ingredients substantially as herein described, as a remedy for rheumatism, sprains, burns, &c., as set forth.

93,144.—Zera Waters, Bloomington, Ill.—*Combined Abdominal and Uterine Supporter.*—July 27, 1869.

Claim.—1. The hinged clamp F, controlled by a set-screw, whereby the pads C C are adjusted laterally, and at different angles of inclination, in fixed positions, upon the longitudinal bar B, substantially as and for the purpose specified.

2. The combination of the cup I with a dependent hollow screw, within the tube M, cap *l*, arm D, and ball *a*, substantially in the manner set forth.

3. The springs A A, pads G G, pivots F F, hinged clamps E E, bars B B, and pads C C, all arranged substantially in the manner set forth.

93,145.—W. C. Wedge, Chicopee, Mass.—*Oven.*—July 27, 1869.

Claim.—1. The construction of the oven herein shown, in which the baking-space G is contained between the inner and outer walls A and B, in which the revolving baking-pan H is also arranged in the manner substantially as set forth.

2. The combination of the walls A and B, chimneys C and D, flues E, and pipe N, the chimneys being arranged with dampers, and the parts being all constructed and arranged substantially as described.

3. In combination with the oven herein shown, the circular rotating baking-pan H, working upon friction-wheels, and operated by rack and pinion, substantially as shown.

4. In combination with the baking-pan H, the bonnet M, arranged as and for the purpose set forth.

93,146.—Ashbel Welch, Lambertville, N. J.—*Railway-Car Truck.*—July 27, 1869.

Claim.—1. The extension of the swinging-frame beyond the outside of the truck-frame, when used for the purpose specified.

2. The extended bolster, used for the purpose specified.

3. The combination of the swinging frame so extended, the elliptic springs placed longitudinally outside of the truck-frame, as well as inside, and the extended bolster, arranged and combined substantially in the manner and for the purposes specified.

4. The combination of the swinging-frame and springs, before described, with the shorter bolster and cross-bars, arranged and combined substantially in the manner and for the purposes specified.

93,147.—Washington Wendell, Milwaukee, Wis.—*Binding-Attachment for Sewing-Machines.*—July 27, 1869.

Claim.—The presser-foot *a*, grooved presser-pad *f*, tongue *d*, needle-hole *e*, finger *e*, and fluke *b*, all constructed, combined, and arranged as described, and in one and the same piece.

93,148.—G. F. White, Aurora, Oregon.—*Shingle-Machine.*—July 27, 1869.

Claim.—1. The river, consisting of the rim D, knives *b b*, plates *b'*, and springs *c*, together with the adjustable gauge-saws *e e'* and the self-retracting rest *g*, all arranged substantially as described, and operating as and for the purpose set forth.

2. The feeder, composed of the plates I K, rollers L, springs M, or their equivalent, and bar N, arranged and operating substantially as described.

3. The rotating-planer G G', with its adjustable knives *l* and rollers *m*, in combination with the feeder I K L M N, as hereinbefore specified, for the purpose set forth.

4. The combination of the width-gauging devices *e e' g*, with the feeder above mentioned, substantially as set forth, and for the purpose described.

93,149.—Eli Whitney, C. Gerner, and F. Tiesing, New Haven, Conn., said Gerner and Tiesing assignors to Eli Whitney.—*Breech-Loading Fire-Arm.*—July 27, 1869.

Claim.—1. The retractor-rod *c*, in combination with the spring *n*, provided with the hook *i*, or its equivalent, arranged to operate as described, whereby the retractor is operated by tipping the barrels, and returned to its place automatically, substantially as herein described.

2. The arrangement of the barrels B, with the retractor applied and operated as described, and the lock-bolt E, all as herein set forth.

93,150.—William E. Wilcox, Peoria, Ill., assignor to himself and Thomas H. Wills, same place.—*Railway-Car Axle-Box.*—July 27, 1869.

Claim.—The combination and arrangement of the cylinders E, with their sectional rollers H, operating on the upper side of the journal of the axle B, and secured by the shoulder C and flange D, as herein described, and for the purposes set forth.

93,151.—William E. Wilcox, Peoria, and T. H. Wills, Beardstown, Ill.—*Railway-Car Axle-Bearing.*—July 27, 1869.

Claim.—The combination of the car-axle B with the revolving hollow cylinders C above, having anti-friction rollers E on the inside, revolving on sectional rings F around the stationary axles D, with beveled washers H at the ends, when arranged and operating as herein described, and for the purposes set forth.

93,152.—Garret Williams, West Middleburgh, Ohio.—*Rain-Water Spouting.*—July 27, 1869.

Claim.—1. The brackets C C' *c'*, employed in combination with the trough A, and attaching plates or lugs *a a*, substantially as and for the purposes set forth.

2. The combined arrangement of the chamber B'' and strainers B''' *b''*, with the spout B'''', for the purpose specified.

93,153.—P. B. Willoughby and H. G. Phelps, Judd, Wis.—*Coffee-Pot.*—July 27, 1869.

Claim.—The combination of the perforated tube C, the lower end of which forms a strainer, the covers B and D, and pot A, when arranged substantially as set forth and described.

93,154.—H. B. Smith, Tremont, Ill.—*Combined Plow, Cultivator, and Potato-Digger.*—July 27, 1869.

Claim.—1. The combination of the tongue L, roller K, bar N, clevis or clevises O, frame E, lever A', and catch-bar B', with each other, substantially as herein shown and described, and for the purpose set forth.

2. The hinged bar V, and pendent swinging-bar T, when arranged with relation to the frame E and the plow-beams, as herein described, for the purpose specified.

3. The combination of the roller X, catch-lever W, and stirrup-rod Z, with the frame E, substantially as herein shown and described, and for the purpose set forth.

4. The combination of the lever D, to which the spindle of the furrow-wheel C is attached, lever G, keeper F, and lever-pawl H, with each other and with the frame E, substantially as herein shown and described, and for the purpose set forth.

93,155.—James J. Johnston, Allegheny City, Pa.—*Manufacture of Iron and Steel.*—July 27, 1869.

Claim.—1. As a new article of manufacture, plates or bars of wrought iron, produced by bringing cast iron into its most fluid condition, and then purifying and refining it, by mixing with it a metallic oxide, and then pouring it, while fluid, into molds, as hereinbefore described.

2. The production of wrought iron from cast iron, by mixing with the latter, while in a fluid condition, a sufficient amount of oxides to purify and refine it, and then pouring the purified and refined metal into molds, as hereinbefore described.

3. The employment of detersive agents, by mixing them with pulverized iron ore, to be used in the process hereinbefore described, for the production of wrought iron.

4. The employment, in the process hereinbefore described, of metallic molds, coated with a pasty material, consisting of pulverized iron ore and water.

93,156.—S. A. B. Abbott, Boston, Mass., and E. F. Fields, Lewiston, Me.—*Flier for Spinning.*—August 3, 1869.

Claim.—The combination, with the flier, of the presser-carrying rod B, and the weight C, when the rod and weight are secured together, in the manner and for the purpose set forth.

93,157.—Isaac Adams, Jr., Boston, Mass.—*Electro-Deposition of Nickel.*—August 3, 1869.

Claim.—1. The electro-deposition of nickel by means of a solution of the double sulphate of nickel and ammonia, or a solution of the double chloride of nickel and ammonia, prepared and used in such a manner as to be free from the presence of potash, soda, alumina, lime, or nitric acid, or from any acid or alkaline reaction.

2. The use, for the anode of a depositing-cell, of nickel combined with iron, to prevent the copper and arsenic which may be present from being deposited with the nickel, or from injuring the solution.

3. The methods, herein described, for preparing the solution of the double sulphate of nickel and ammonia, and the double chloride of nickel and ammonia.

4. The electro-plating of metals with a coating of compact, coherent, tenacious, flexible nickel, of sufficient thickness to protect the metal upon which the deposit is made from the action of corrosive agents with which the article may be brought in contact.

5. The deposition of electrotype plates of nickel, to be removed from the surface on which the deposit is made, and used separately therefrom.

93,158.—Ira R. Amsden, Buffalo, N. Y.—*Hydrostatic Scale for Tonnage of Vessels.*—August 3, 1869.

Claim.—1. The cylinder or case A, connected with the outside water through the boat or vessel, and divided into two separate chambers, A and J, when the same or other equivalent device is combined with the float B, graduated strap C, and counter-weight E, in such a manner as to separate said float and weight, and allow each a free and independent action, substantially in the manner and for the purpose herein specified.

2. The cylinder A, divided into two chambers, one of which, A, opens into the water through the bottom of the boat, and the other chamber, J, is entirely free from contact with water, either inside or outside of the boat, and said cylinder receives a float, B, and counter-weight, E, which are separated from each other, but connected by the graduated strap C, and all adapted to operate as set forth.

3. In combination with two or more scales, set on opposite sides of the dead-center, the employment of a single scale at the dead-center, in the manner and for the purpose specified.

4. In combination with the float B and counter-weight E, the friction-rollers *b b*, arranged and operating as and for the purpose described.

93,159.—John Abel Aspinwall and Charles Montague Perry, New Utrecht, N. Y.—*Velocipede.*—August 3, 1869.

Claim.—The combination of the frame of a velocipede with a supplementary wheel, and an arm sustaining said wheel at one side of said frame, so as to run upon one rail of a railway-track, while the running-wheels of the velocipede run upon the other rail, substantially as before set forth.

2. The combination of the supplementary wheel and arm, constituting a velocipede attachment, suitable to be applied to and to operate in connection with a velocipede, as before set forth.

93,160.—Pardon Austin, Medina, Wis.—*Fanning-Mill Attachment.*—August 3, 1869.

Claim.—The arrangement, with relation to the fanning-mill, the elevator E, and shaft K, of the cord B and adjustable bar H, as herein described, for the purpose specified.

93,161.—William F. Auxier, Mason City, Ill.—*Flood-Fence.*—August 3, 1869.

Claim.—The combination of the base A, transverse planks B, posts C, anchors D, transverse beams E, posts F, and braces I, when all arranged substantially as specified.

93,162.—Henry Barnes, Franklin Township, Iowa.—*Plate for Making Blanks for Mold-Boards and Shares for Plows.*—August 3, 1869.

Claim.—The herein-described improved plates for the manufacture of blanks for mold-boards and shares for plows, substantially as specified.

93,163.—J. C. Bates, Warrensburgh, Mo.—*Head-Block for Carriages.*—August 3, 1869.

Claim.—1. The combination with each other of the malleable iron head-block A, bearing B, lower bar E, and side bars F F, all arranged and operating substantially as herein shown and described.

2. The metallic head-block A, when provided with lips *a*, for retaining the spring, with mortises for the side braces F, and with a backward-extending bar, E, substantially as herein shown and described.

3. The hinge-ears *b b*, formed on the rear ends of the side bars F, substantially as and for the purpose herein shown and described.

93,164.—Barzillai B. Beckwith, Rockville, Conn.—*Washing-Machine.*—August 3, 1869.

Claim.—The movable side pieces *s s*, having the bearings *c c*, c^1 c^1, c^2 c^2, the washer *b*, in combination with said side pieces, the roller-frame *m*, containing the rollers *x x x x x x*, and the movable bottom *o*, all constructed substantially as described, and operating for the purpose described.

93,165.—Jacob Behel, Rockford, Ill.—*Grain-Binder.*—August 3, 1869.

Claim.—1. The combination of the ring-carrier and stationary band-securing instrument with the same driving-shaft, by means of connecting and disconnecting mechanism, substantially as set forth.

2. The arrangement of the transmitting mechanism between the driving-shaft, the ring-carrier, and the band-securing mechanism, in such manner that the said shaft may be revolved in the same direction, whether operating the ring-carrier or the band-securing mechanism, substantially as set forth.

3. The ring-carrier, composed of an internal flange and an external toothed ring, combined by means of radial studs, substantially as set forth.

4. The combination of the detachable strap-holder with a detent, arranged to move to and fro in a circular direction upon the ring-carrier, substantially as set forth.

5. The combination of the ring-carrier and curved belt-guard for the compression belt, substantially as set forth.

6. The combination of the ring-carrier with a curved belt-guard composed of two members, separated by a gate-way, for the insertion of the belt-head, substantially as set forth

7. The arrangement of the curved belt-guard, detachable strap-holder, and ring-carrier, so that the belt-head may be held by the said guard within the range or track of the strap-holder, substantially as set forth.

8. The cord-holder, composed of two jaws, provided with serrated ribs, one of which jaws is constructed to move to and fro relatively to the other, substantially as set forth.

9. The combination of the serrated jaws of the cord-holder with a finger for pushing the binding material into the gripe of said jaws, substantially as set forth.

10. The combination of the cord-holder, composed of jaws, one of which moves to and fro, as above set forth, with a knife for severing the binding material after it is in the gripe of said jaws, substantially as set forth.

11. The combination of the cord-holder, composed of jaws, one of which moves to and fro, with a belay-hook, substantially as set forth.

12. The combination of the cord-holder, composed of jaws, one of which moves to and fro, with a finger and a belay-hook, substantially as set forth.

13. The combination of both the movable jaw of the cord-holder and the detent-stops of the strap-holder with one slide, substantially as set forth.

14. The combination of the ring-carrier, movable

jaw of the cord-holder, and movable shear-blade with rotating cams, substantially as set forth.

15. The combination of the stationary band-securing instrument, ring-carrier, slide, and cams, substantially as set forth.

16. The combination of the band-securing instrument, revolving-shaft, crank, slotted connecting-rod, segment, and pinion, substantially as set forth.

17. The combination of the swinging-stock of the band-securing instrument, stud, and stop, substantially as set forth.

18. The combination of the swinging-stock of the band-securing instrument and separate swinging band-finger, substantially as set forth.

19. The combination of the swinging-frame of the spool with the disk-head that is separate from the spool, substantially as set forth.

20. The combination of the swinging spool-frame, removable shaft, and shaft-holder, substantially as set forth.

21. The combination of the stop for the ring-carrier and the band-securing instrument, substantially as set forth.

22. The combination of the swinging spool-frame, removable spool-shaft, shaft-holder, and spring, substantially as set forth.

93,166.—Norborne Berkeley, Aldie, Va.—*Railway-Car Brake*—August 3, 1869.

Claim.—1. The self-acting brake-operating device, consisting of the buffer L, pivoted frame B, pulleys E H, belt G, and chain-drum D, constructed, arranged, and operating substantially as represented and described.

2. The combination with the pulley E and chain-drum D, employed and operating substantially as described, of the clutch *d e*, as and for the purpose set forth.

93,167.—Henry C. Bowen, New York, N. Y.—*Screw-Press.*—August 3, 1869.

Claim.—1. The differential screw E E^1 E^2, in combination with the movable nut H, adapted to be turned at will, with suitable operating means for turning the screw and the nut so as to operate the press, substantially in the manner and for the purposes set forth.

2. The within-described press, in its entire combination and arrangement, having the tie-rods *a*, serving as guides for the platen C, the hand-wheel I, as a means of operating the turning-nut H, the latter being mounted in a boss in the platen, as represented, and the differential screw E E^1 E^2 being operated by an independent lever and pawl in both directions, obtaining the two degrees of advantage, all substantially as and for the purposes herein represented and described.

93,168.—Lucien F. Bruce, Bridgeport, Conn.—*Alarm-Bell.*—August 3, 1869.

Claim.—1. An alarm, pivoted with two hammers, that strike in different time against a single bell, substantially as herein shown and described.

2. The lever J, sliding-plate H, spring *j*, and pins *k l*, all arranged as described, to operate an alarm-bell, in the manner specified.

3. The secondary lever L, when arranged in combination with the setting-lever J, substantially as herein shown and described, for the purpose set forth.

4. The lever J, when provided with the elbow-slot *o*, to receive the pin *n*, so that it will not be relocked by the closing of a door as specified.

93,169.—Henry Buck, Chardon, Ohio.—*Whiffletree.*—August 3, 1869.

Claim.—1. Hook A, band B, and staple *f*, substantially as and for the purposes specified.

2. Spring-latch J, or its equivalent, in combination with hook C, band D, and staple *h*, for the purposes substantially as described.

93,170.—James Abercrombie Burden, Troy, N. Y.—*Apparatus for Making Pig-Blooms in the Manufacture of Iron.*—August 3, 1869.

Claim.—1. The combination of the spout for delivering the molten iron, with a series of removable box-molds and a turn-table, substantially as before set forth.

2. The combination of the box-mold with a bridge piece, substantially as before set forth.

93,171.—John M. Burghartt, Great Barrington, Mass.—*Milk-Can Stopper.*—August 3, 1869.

Claim.—The combination of the piston D, provided with the packing E H, the spring F, and tube G, with the case or neck A of a milk-can, all arranged substantially as herein shown and described, for the purpose specified.

93,172.—John Campbell, London, Ohio.—*Combined Corn Planter and Cultivator.*—August 3, 1869.

Claim.—1. The shovel-standards D D′, rigid braces *d′ d′*, and sliding-brace E, when combined substantially as and for the purpose described.

2. The brace E, with its connections, when combined with the rod *f* and catch *g*, substantially as and for the purpose described.

3. The catch *g*, when combined with the brace E, and spring H, as and for the purpose set forth.

4. The spring H, provided with the regulating-screw *h*, as and for the purpose described.

5. The standards D D′, constructed as described, when combined with the levers I, as and for the purpose set forth.

6. The standards D D′, constructed as described, when combined with the levers I, chains *k*, and lever K, as and for the purpose set forth.

7. The seed-planting device, consisting of the frame L, hopper M, tube N, cylinder *m*, cords *o p*, spring *p′*, and foot-lever O, the whole being combined as described.

8. The arrangement of the beam a^2 and bars a^5, in connection with the cords *j* and foot-levers J J, as and for the purpose described.

9. The arrangement of the parts A A, and cross-bars C C, as and for the purpose described.

10. The machine described, consisting of the frame A A, planting-devices, L M N *m o* O, and shovel-devices D D′, *d′ d′*, E *f g* H, when combined as described, for the purpose set forth.

93,173.—Heman Carter, Greene, N.Y.—*Washing-Machine.*—August 3, 1869.

Claim.—The construction of roller and bottom of the machine, by which the edges of the rubber are brought in contact with the article to be washed, as shown and described in washing-machines.

93,174.—William C. Chamberlain, Dubuque, Iowa.—*Churn.*—August 3, 1869.

Claim.—1. The combination of the churn-dasher, D, which has eccentrically-hinged blades *d′ d′*, and the balance-driving wheel N, all in such manner as described, that the said eccentrically-hinged wings are caused to positively maintain their proper open and closed positions while churning the milk or cream, and working the butter, as set forth.

2. The churning arrangement, consisting of the dasher D *d′*, gears J K, and balance-wheel N, as and for the purpose described.

93,175.—John Chase, Paterson, N. J.—*Turbine Water-Wheel.*—August 3, 1869.

Claim.—1. A turbine water-wheel, with varying diameter, diminishing from bottom to top, of form and construction substantially as above described, and for the purposes set forth.

2. The combination of the upper drum with diminishing diameter from bottom to top, marked *r f i t* in the drawings, with the lower or annular drum, marked *v v* in the drawings, and with the continuous vanes winding spirally from the lower around the upper drum, substantially as above described, and for the purposes set forth.

93,176.—Robert A. Chesebrough, New York, N. Y.—*Steam-Generator.*—August 3, 1869.

Claim.—The coiled pipes or worm H H, steam-receiver E, and the heating compartments *a b c d*, constructed and arranged, relatively to each other, substantially as described.

93,177.—Anthony Conarro and Zak. Gemmill, Warren, Pa.—*Safety-Switch for Railways.*—August 3, 1899.

Claim.—1. The spring-rails D D, operating by their own elasticity. and controlled in their range of motion by the stops *q q*, when said rails are used in combination with switch-mechanism, constructed, arranged, and operating as described and shown.

2. The combination and arangement of the lipped metallic chair, or bed-plate *h*, wooden plate *k*, and top metallic plate *m*, in the manner and for the purpose specified.

93,178.—Charles L. Coombs, Washington, D. C., and John A. Bassett, Salem, Mass., assignors to Joseph J. Coombs, Washington, D. C.—*Method of Producing Calcium-Light.*—August 3, 1869.

Claim.—The method of producing a strong and brilliant light, by blowing a mixture of atmospheric air and hydrocarbon spirits (or the vapor thereof) upon a piece of lime, or its equivalent, and burning said mixture in contact with the lime, or its equivalent, substantially as set forth and described.

93,179.—R. Crain, Shaffer Farm, Dennison Post-Office, Pa.—*Pipe-Tongs.*—August 3, 1869.

Claim.—The combination of the stationary circular toothed jaw C, the sliding circular toothed jaw D, stationary handle A, movable pivoted handle B, band or socket E, and bar or lever F, with each other, substantially as herein shown and described, and for the purpose set forth.

93,180.—John C. Curran, Philadelphia, Pa.—*Device for Tilting Barrels.*—August 3, 1869.

Claim.—The arrangement and construction of the parts B, J, E, and C, with its screw F, head-supporter H, and points *h*, and hand-wheel G, in combination with the cask A, as shown and described.

93,181.—Daniel Cushing, Lowell, Mass., assignor to himself, George W. Smith, and Franklin Smith.—*Machine for Curving and Shaping Sheet-Metal.*—August 3, 1869.

Claim.—1. The combination of rings or washers *a* with the sectional dies of forming-rolls, constructed and operating together, substantially as and for the purpose specified.

2. The combination of the forming-rolls, constructed and operating as herein described, with the supplementary rolls, all adjusted, arranged, and operated substantially in the manner described.

3. The combination of elongated ways C^6, slides D, stands D^1, clamps *e*, bed F, and rods g^1, or their equivalents, with the forming-rolls, all constructed and operating as shown and set forth.

4. The combination of the slotted arms D^2, swiveled on beam D^3, and clamping-device, with the forming-rolls, all arranged and operating together as described.

93,182.—R. D'Heureuse, New York, N. Y.—*Mode of Preserving Liquid and other Substances.*—August 3. 1869.

Claim.—1. The mode of preserving and improving fluid or semi-fluid organic substances, by impelling air from below through the same, and thus indueing an oxidation of the nitrogenous parts.

2. The mode of arresting or preventing putrefaction or decay in fluid or solid organic substance, by artificial currents of air in connection with sulphurous vapors or other gases through said substances from below, substantially as hereinbefore described and set forth.

93,183.—Julius Edmund Dotch, Washington, D. C.—*Preserving Meats, Poultry, Fish, &c.*—August 3, 1869; antedated February 3, 1869.

Claim.—The preserving of meats, oysters, fish, &c., by the use of the mixtures of glycerine with the above-named antiseptic salts, in connection with aldehyde, formic ether or acid, the solution of them in carbonic acid, water, and glycerine, the covering with wrapping or parchment paper, saturated with these solutions; the sprinkling with wood-ashes; the introduction of carbonate-of ammonia vapors, turpentine vapors, oxysulphide of carbon gas, or ozone, and the use of paraffine and stearine, mixed with tannin, to kill the animal with electricity, and to keep up in the barrels or vessels a continuous electric or galvanic current, (constant battery.)

93,184.—John S. Drake, New York, N. Y., assignor to himself and William H. Burton, same place.—*Carriage and Sleigh Combined.*—August 3, 1869.

Claim.—1. The combination, with the axles and wheels of a vehicle, of the bob-runners A, when journaled on the said axles, curved at the rear ends and arranged relatively to the wheels, substantially as specified.

2. The combination, with the said "bob"-runners, of the lever G, reach K, and a locking-device for the said lever, substantially as specified.

93,185.—Melvin W. Drake, Owasso, Mich.—*Animal-Trap.*—August 3, 1869.

Claim.—The said grapple-hooks H, and upright fulcrum-post E, or their equivalents, in combination with the spring A A′, the catch-bar M, and upright bait-standard N, substantially as hereinbefore described.

93,186.—William H. Elliot, New York, N. Y. *Bedstead-Fastening.*—August 3, 1869.

Claim.—1. The combination of the post *a*, side-rail *b*, and double tenon *c* and *c′*, with its shoulders *i* and *i′*, when the surfaces of the tenon and side rail are fastened together, substantially as described.

2. Curving the diagonal shoulders *e* and *e′* of a self-tightening wooden bedstead fastening, substantially as shown, and for the purpose specified.

3. So constructing a mortise, cut in the solid material of a bed-post, and a tenon attached to the end of side-rail, that the tenon shall enter by a horizontal movement, and then complete its passage into the mortise by a direct downward and upward movement, substantially as set forth.

93,187.—William A. Estes, China, assignor to R. M. Mansur, Augusta, Me.—*Harrow and Cultivator.*—August 3, 1869.

Claim.—1. The triangular-pointed teeth, when provided with a shank or perforated plate, for independent attachment to the harrow-frame, as specified.

2. The harrow herein described, composed of the frame B B′ C, detachable teeth, Fig. 2 or 4, and the draught-bar D, all as set forth.

93,188.—Peter Falardo, Danbury, Conn.—*Clothes-Wringer.*—August 3, 1869.

Claim.—In combination with the rolls A and B of a wringing-machine, the endless apron H, constructed with edges *d*, and arranged upon the adjustable cylinder F, substantially in the manner and for the purpose set forth.

93,189.—Isaac R. Fisher, Reading, Pa.—*Gas-Burner.*—August 3, 1869.

Claim.—In combination with a gas-burner, the cap F, arranged and operating substantially as and for the purposes herein shown and described.

93,190.—William F. Foley, Albany, N. Y.—*Sled-Brake.*—August 3, 1869.

Claim.—In combination with a hand-sled, the brake D and spring *e*, constructed, arranged, and operated substantially as described, for the purpose set forth.

93,191.—Charles J. Fortin and David H. Drake, Cincinnati, Ohio, assignors to Eagle White Lead Company.—*White Lead and Packing-Cans.*—August 3, 1869.

Claim.—The combined arrangement, in a white-lead can and packing-can, of the flange B, flare C, and the flange A, as and for the purposes described.

93,192.—David C. Frazeur, and Peter Ginter, Siddonsburgh, Pa.—*Stump-Extractor.*—August 3, 1869.

Claim.—The combination and arrangement of the posts A A, platform B, sliding-beam C, lever D, blocks E F, links *e f*, lever G, and chains *g m*, all

constructed and adapted to operate together, substantially in the manner and for the purposes herein set forth.

93,193.—JOHN W. GILLAM, Newton, N. J.—*Braid-Guide for Sewing-Machine.*—August 3, 1869.

Claim.—The sewing-machine gauge, constructed as described, of the slotted plates C D, provided respectively with the bars *o* and *p*, and *n*, and adapted for adjustment longitudinally and transversely, as herein set forth, for the purpose specified.

93,194.—ISAAC GRIM, Polo, Ill., assignor to himself and WILLIAM GREGORY, same place.—*Tinners' Bending-Machine.*—August 3, 1869.

Claim.—The lever G, link M, flange I, slots K, studs L, jaws D and E, gauge N, handle O, former A, having teeth C at each end, and the end supports B, all constructed, arranged, and operating as herein shown and described, for the purpose specified.

93,195.—DAVID E. HALL, Detroit, Mich.—*Life Preserving Mattress.*—August 3, 1869.

Claim.—The slats A B, springs C, and floats E, when combined and arranged, in relation to each other, substantially as and for the purpose set forth.

93,196.—HEMAN B. HAMMON, Bristolville, Ohio.—*Blacking-Box Holder.*—August 3, 1869.

Claim.—The arrangement of the key-hole S and key B, in combination with the holder G and slotted forked slide Q, as and for the purpose described.

93,197.—JOHN T. HANCOCK, Jamaica Plain, Mass.—*Steam-Blower.*—August 3, 1869; antedated July 22, 1869.

Claim.—The apparatus described, in combination with mixing-chamber S, as described and specified.

93,198.—THOMAS HARRISON, La Fayette, Wis.—*Fence.*—August 3, 1869.

Claim.—1. The fence-panel, constructed as described, of vertical battens and woven horizontal rails.

2. The alternate arrangement of the extension of the rails of one panel, in combination with the adjacent post of the next panel, as shown.

3. In combination with a fence-panel, constructed as set forth in the first claim, the braces C *c*, constructed substantially as described.

93,199.—ANDREW HARTUPEE, Pittsburgh, Pa.—*Steam-Engine.*—August 3, 1869.

Claim.—In a double-cylinder steam-engine, the cross-ports *h h'*, in combination with the valves *e e'*, and steam-chest *d*, constructed substantially as hereinbefore set forth.

93,200.—HENRY HAYWARD, New York, N.Y.—*Stiffening-Cord for Skirts.*—August 3, 1869.

Claim.—The new manufacture of covered or wrapped horse-hair yarns, herein described, having half the hairs reversed in position relatively to the others, substantially in the manner and for the purposes herein set forth.

93,201.—JUSTIN H. HILL and HOMER C. HILL, Clinton, Ill.—*Trace Support and Buckle.*—August 3, 1869.

Claim.—1. The trace-support A, provided with a long eye, *a*, to receive the trace-loops *b b*, to embrace the hip-strap, and a bent pivoted tongue, C, to secure it in position thereon, substantially as described.

2. A buckle, constructed as described, with a shank or blade, E, as and for the purpose set forth.

93,202.—WALTER H. HOTCHKISS, Bridgeport, Conn., assignor to HOWE MACHINE COMPANY.—*Binding-Guide for Sewing-Machines.*—August 3, 1869.

Claim.—The combination of the plate A with the upper and lower guides *b* and *d*, with their respective nuts or screws, *f* and B, and adjusting-nut *n*, arranged and operating together as and for the purpose specified.

93,203.—SAMUEL HUBER, Danville, Pa.—*Combined Plow and Cultivator.*—August 3, 1869.

Claim.—1. The plate B, provided with several sets of holes, for the adjustable attachment of the plow-standards, substantially as herein shown and described, and for the purpose set forth.

2. The combination of the adjustable plow-standards F with the plate B, substantially as herein shown and described, and for the purpose set forth.

3. The plows E, constructed as described, in combination with the adjustable standards F and plate B, substantially as and for the purpose set forth.

4. The combination of the double mold-board plow I with the adjustable standards F and plate B, substantially as herein shown and described, and for the purpose set forth.

5. The combination of the fingers J with the mold-boards of the double mold-board plow I, adjustable standards F, and plate B, substantially as herein shown and described, and for the purpose set forth.

93,204.—W. H. HULL, Warren, Ohio.—*Steam-Valve Device.*—August 3, 1869.

Claim.—The steam-chest A, with the cap B, the valve C, and channel *m*, constructed and arranged substantially as shown and described.

93,205.—REUBEN HURD, Morrison, Ill.—*Wagon.*—August 3, 1869.

Claim.—The combination, with the sway-bar of a wagon, of the notched plate A, catch-lever B, handle C, notched plate E, and link D, all arranged substantially as specified.

93,206.—A. M. JOHNSTON and H. H. AVRIT, Clarksville, Tenn.—*Hog-Cholera Remedy.*—August 3, 1869.

Claim.—The combination of the above ingredients and the proportions used.

93,207.—WILLIAM KEGG, Lassellsville, N. Y.—*Churn-Dasher.*—August 3, 1869.

Claim.—1. The dasher A, constructed as described, with the inclined wings *d* and V-shaped recesses *e*, said dasher being attached to the tubular shaft B, having the valve C at its upper end, as herein set forth and shown, for the purpose specified.

2. Introducing air into the cream through the tubular dasher-shaft B, by means of the pipe attached to the upper end of said dasher, and communicating with a water-tank, through which the air passes, as herein described, for the purpose specified.

93,208.—EUGEN LANGEN, Cologne, Prussia.—*Apparatus for Emptying the Cooling-Tubes of Bone-Black Furnaces.*—August 3, 1869.

Claim.—The apparatus for removing animal charcoal from the cooling-tubes, the said apparatus being composed of the plate C, with apertures D and compartments E, and operating in combination with the reciprocating plate F, which is provided with apertures J, substantially in the manner herein set forth, all arranged as specified.

93,209.—JOSEPH LLADÓ, New Orleans, La.—*Medical Compound or Bitters.*—August 3, 1869.

Claim.—The medical compound, made of the several ingredients, mixed together in or about the proportions substantially as described.

93,210.—SAMUEL LONG, Ogle County, Ill.—*Implement for Taming and Marking Hogs.*—August 3, 1869.

Claim.—1. The jaws A' B', having grooves *d* d^1 d^2 d^3, and the slot in the jaw A', arranged substantially in the manner shown and described.

2. The shear-blades D D', having projections *e* e^1, in combination with the jaws A' B', as shown and described.

3. The conical convex double-bladed punch F, as constructed and shown.

4. The arrangement of the sliding-plate G, having apertures, as shown and described.

5. The sliding-plates L and H, in combination with the jaws A' B', substantially as and for the purpose described.

6. The punch or die K, capable of the various modifications, as described, in combination with the

jaw A′ and plates G or H, attached thereto, in the manner shown and described.

93,211.—Luther Longley, Leominster, Mass.—*Yoke for Standards for Stove-Shelf.*—August 3, 1869.

Claim.—A yoke, for securing stove-shelf stands or rods to stoves, constructed in the manner herein shown and described.

93,212.—Albert J. Lutz and H. Reiss, New York, N. Y.—*Milling Tool.*—August 3, 1869.

Claim.—The improved milling-tool herein described, as an article of manufacture.

93,213.—Wesley Malick, Erie, Pa.—*Machine for Making Chain.*—August 3, 1869.

Claim.—1. The combination of the former or finger *o*, clamps Z Z, ram Y, and friction-rollers *e l*, all arranged and operating together as set forth.

2. The combination of the concave dies E and F, shaped as described, and for the purposes set forth.

3. The construction and arrangement of the reciprocating yoke G, sectors C D, circular frame K, and adjusting-screw J, as shown and described.

4. The reciprocating finger-bar *e*, hollowed out on its under side for the passage of the blank bar, and provided with the former *o* upon its end, all substantially as shown and described.

5. The arrangement of the shears *h i*, respectively, on the reciprocating stirrup G, and vibrating sector G, as and for the purposes specified.

93,214.—George W. Manson, Jersey City, N. J., assignor to himself, John A. Knoeller, and Michael Bowe, same place.—*Mechanism for Driving Sewing-Machines.*—August 3, 1869.

Claim.—The construction and arrangement, with relation to the stand and the machine to be driven, of the train of toothed gear and pulleys, actuated by spring-power, as described, and the brake, its rock-shaft, and handle, for regulating the speed or arresting the motion of said gear, in the manner herein shown and specified.

93,215.—John McWilliams, Providence, R. I.—*Die-Holder for Screw-Presses.*—August 3, 1869.

Claim.—The combination of the slotted frame B, sliding-piece A, and central screw C, the latter being connected to the jaw A, in the manner substantially as described.

93,216.—John M. Murphy, Olympia, Wash. Ter.—*Printers' Galley-Rest.*—August 3, 1869.

Claim.—In combination with the stand and case A B, the adjustable galley-rest C, arranged and operating substantially as herein shown and described, for the purposes set forth.

93,217.—David Nevin, Boulder City, Colo. Ter.—*Flooring-Clamp.*—August 3, 1869.

Claim.—The flooring-clamp, constructed as described, of the right-angular stock A B C, having the set-screw D and pivoted tongue or guard E, the right-angular pivoted lever F, the adjustable lever I, the rack H, and pawl K, all arranged and operating as described, for the purpose specified.

93,218.—Edwin Norton, Toledo, Ohio, assignor to himself, O. W. Norton, and Alton H. Fancher.—*Transportation-Case.*—August 3, 1869.

Claim.—The improved packing-case for transportation, its nozzle and cover being constructed and located, as shown and described.

93,219.—Thomas S. Nutter, Harrisburgh, Ohio.—*Churn.*—August 3, 1869.

Claim.—1. The dasher M N Q, herein described, composed of the shaft M, upper and lower slats N Q, with arms of triangular cross-section, and two or more central slats, O P, with arms of diamond cross-section, when said slats are so arranged as to bring the upper and lower edges of the arms of any two contiguous slats into the same horizontal plane, the several parts being constructed and combined substantially as and for the purpose herein specified.

2. The combination of the churn-box A, with extended sides B B, provided with slots F F, the slides G G, gearing-frame *h* H *h*, driving-shaft I, with crank R, bevel-gears J K, dasher-shaft L M, with pinned connection *a*, and bearing-spindle E, and dasher N O P Q, the several parts being constructed and arranged with respect to each other substantially as is herein specified.

93,220.—Robert T. Osgood, Orland, Me.—*Fishing-Line Sinker.*—August 3, 1869.

Claim.—1. The chambered line-sinker A, having the shape of an egg, with a concavity, B, in the larger end, in combination with the link L, as and for the purpose described.

2. The combination of the rod G, sliding-thimble N, and spring H, with the swinging-pawl E, as and for the purpose described.

3. The pin P, spring R, and lever E, in combination with the strap S, as and for the purpose set forth.

4. The arrangement, within the sinker A, of the spring H, sliding-thimble N, and sliding-rod G, as and for the purpose specified.

93,221.—Joseph Edlyn Outridge, Newport, England.—*Steam-Valve Devices.*—August 3, 1869; patented in England August 1, 1868.

Claim.—1. The valve-seat *c*, ports *g h i*, valve *d*, the valve-rod and weight-levers *x*, constructed and arranged relatively to the ports *e f m* of the cylinder *a*, substantially as described.

2. In combination therewith, the bands *n*, as herein set forth.

93,222.—S. W. Palmer and J. F. Palmer, Auburn, N. Y., assignors to the Metropolitan Washing-Machine Company, Middlefield, Conn.—*Faucet.*—August 3, 1869.

Claim.—1. The combination of the valve, and the valve stem and stud, and thumb-piece, mounted on the same, as described, with the tubular bearing for supporting said stem, having its outer end so constructed as to form an incline, upon which said stud, when rotated, will move so as to cause the opening or closing of the valve, substantially as shown and set forth.

2. The combination, with the valve and devices for operating the same, hereinbefore recited, of the tubular bearing for the valve-stem, and the discharge-pipe, with which said bearing is connected, said parts being constructed and operating substantially as set forth.

3. The combination, with the valve and valve-operating devices, as hereinbefore described, of a spring, arranged, substantially as set forth, so as to hold the valve open against the pressure of water passing through the faucet.

4. A faucet for washing-machines and other purposes, all parts of which are constructed and arranged for operation, as herein shown and set forth.

93,223.—Edward L. Perry and Charles Manheim, New York, N. Y.—*Wringing-Machine.*—August 3, 1869.

Claim.—1. The combination of the bearings A and H with the bolts G and springs K, arranged upon both sides of the rollers, the bolts extending through the lower bearing A, substantially as and for the purpose specified.

2. The brackets B, when extended at F to support the bearings for the lower roller, and to receive the outer bolt G, which connects the two bearings together, substantially as and for the purpose described.

3. The combination of the brackets B, with their extensions F, the bearings A and H, bolts G, springs K, and rollers O and P, all arranged substantially as and for the purpose described.

93,224.—John Phelps, Owego, N. Y., assignor to himself and C. W. Merchant, same place.—*Lamp.*—August 3, 1869.

Claim.—1. The combination, with the neck of a lamp having a filling-orifice, C, of a spring-closing band, A, substantially as specified.

2. The combination, with the above, of the projection G, arranged substantially as specified.

93,225.—John Phillips, Jr., Chicago, Ill.—*Dovetailing-Machine.*—August 3, 1869.

Claim.—The arrangement of the cutting-head E, with its knives F and G, sliding-keeper K, sliding-way N, gauge O, stop P, stop M, and set-screw L, and sliding-way S, and stop R, when constructed to operate substantially as described.

93,226.—William Porter, Sr., and William Porter, Jr., New York, N. Y.—*Lantern.*—August 3, 1869.

Claim.—1. The eye *a*, formed on the upper end of the upright guard-wire A, above the upper guard-ring D, to be fitted through the cap, and locked to the same, substantially as herein shown and described.

2. The upper guard-ring D, when made of sheet-metal, in form of a trough, substantially as herein shown and described.

93,227.—Joseph Potts, Harrisburgh, Pa.—*Buildings.*—August 3, 1869.

Claim.—In the construction of buildings, laying up the bricks B upon the side of the wooden frame A, with the laths C or D imbedded in the mortar between each course, and nailed to the frame, as herein shown and described, for the purpose specified.

93,228.—F. C. Richer, Gilmer, Tex.—*Lamp.*—August 3, 1869.

Claim.—The oil-reservoir A, provided with the long tubular neck B, when the latter is adapted to receive, in the manner described, either the conical candle-holder F or the burner C, conical case D, and long wick-tube E, as herein set forth, for the purpose specified.

93,229.—Almon Roff, Southport, Conn.—*Lock-Nut.*—August 3, 1869.

Claim.—The set-screw C, fitted eccentrically in the end of the bolt A, its head *a* resting partly on the surface of the nut B and partly on the end of the bolt, the latter and said screw having threads cut in opposite directions, as and for the purpose herein set forth.

93,230.—Henry Rosamyer, Rochester, Pa.—*Lock-Nut.*—August 3, 1869.

Claim.—A screw-nut for bolts, when said nut is recessed as herein described, and provided with springs for catching in recesses in the bolt, and thereby preventing any back movement of the nut.

93,231.—Joshua A. Rosbeck, Herman, N. Y.—*Grain-Measure.*—August 3, 1869.

Claim.—The removable bottom or partition A and sliding-piece B, in combination with a grain-measure having the slots C C and guide-ways D D, for the purpose of making a variable measure, substantially as described.

93,232.—Silas C. Salisbury, New York, N. Y.—*Steam-Generator.*—August 3, 1869.

Claim.—1. The arrangement, in combination with the main water-chamber of a boiler, of an inner water-chamber, forming the shell of the fire-chamber, such inner and outer water-chambers being connected together, substantially as described.

2. The arrangement, in combination with such an inner water-chamber, forming the fire-chamber, of the fire-tubes *e e*, passing through such water-chamber, substantially as described.

3. The combination of the portion of the water-chamber of a boiler within the furnace-chamber, or between that part of the furnace where the coal is burned and that part where the gases and products of combustion are consumed, substantially as described.

4. The combination, with a boiler, consisting of two water-chambers, an inner and an outer, connected together, of a furnace, having two, or a preparing and combustion chamber, when the inner water-chamber is between the preparing and combustion chambers of the furnace, and combustion-chamber of the furnace is between the inner and outer water-chambers, substantially as herein set forth.

93,233.—F. M. Schaeffer, Blooming Grove, Kans.—*Extension-Hame.*—August 3, 1869.

Claim.—1. The parts A, B, and C, constructed, combined, arranged, and operating substantially as and for the purposes herein shown and described.

2. The adjustable staple E and sleeve C, carrying the ring *h*, or either of them, in combination with an extension-hame, substantially as described, for the purpose specified.

93,234.—Benoni C. Scott, Paxton, Ill.—*Feeding-Door for Animal-Pens.*—August 3, 1869.

Claim.—The feed-doors for animal-pens, above described, consisting of the door C, suspended from its top, and working in the frame B, and the spring E, with its stop *e*, to regulate and control the movements of said door, when used in connection with the troughs D and the pens A, as and for the purpose above set forth.

93,235.—L. Sears, Perrysville, Ohio.—*Straw-Cutter.*—August 3, 1869.

Claim.—1. The cross-bar W, provided with the slots *v v* and crank-pin X, when used in combination with the pinion I, for the purpose of adjusting the length of cut for the straw, substantially as is herein specified.

2. The combination of the ratchet-boxes P and Q, links *r* and *s*, and connecting-rod *q*, cross-bar W, with crank-pin X, and slots *v v*, and pinion T, the several parts being arranged substantially as and for the purpose herein specified.

3. The standard *o*, with pivoted arm *u*, when used in combination with the side-piece A, and connecting-rod *q*, substantially as and for the purpose herein specified.

4. The sliding feed-roller box *b*, provided with an arm, *d*, when used in combination with the rod O, provided with jam-nuts at its lower end, and the spring N on the side-piece A, substantially as and for the purpose specified.

5. The cutter-bar R, when constructed with the double T cross-section herein shown, substantially as and for the purpose specified.

6. The presser-block *f*, provided with the tightening-nut *h*, when used in combination with the arm *g* and end of cutter-bar R, substantially as and for the purpose specified.

7. The combination of the cutter-bar R, provided with the slots *e e* and clamping bolts *y y*, side-plates D D, provided with the arms *g g*, side-pieces A A, and pressure-block *f f*, with the tightening-nuts *h h*, the several parts being constructed and arranged substantially as and for the purpose herein specified.

8. The combination of the shaft I, having the cutting-knife K and gear-wheel S secured thereon, pinion T, provided with adjustable cross-bar W, connecting-rod *q*, with links *r s*, ratchet-boxes P Q, feed-rollers J U, and cutter-bar R, with pressure-blocks *f f*, the several parts being constructed and arranged, with respect to each other, substantially as and for the purpose herein specified.

93,236.—Samuel B. Secrist and Isaac Seyster, Ogle County, Ill.—*Hay-Elevator.*—August 3, 1869.

Claim.—1. The double catch G, substantially as and for the purpose described.

2. The combination of the cone I, tackle H, levers E, springs *e*, latches F, and double catch G, substantially as and for the purpose set forth.

93,237.—Peter Shellenberger, Millerstown, Pa.—*Corn-Planter.*—August 3, 1869.

Claim.—The combination of the plows C D, constructed as described, and drag N O, with the frame A, spout E, dropping-device F G H I J K L, and wheel M, substantially as herein shown and described, and for the purpose set forth.

93,238.—Brede E. Sivertsen, Pittsburgh, Pa.—*Rotary Spade.*—August 3, 1869.

Claim.—An improved rotary spader, consisting of the several parts specified, all combined, constructed, and arranged as described.

93,239.—D. B. Skelly, Lockport, N. Y.—*Railway-Chair.*—August 3, 1869.

Claim.—The combination, with the chairs having the recesses A and mortises B, of the elastic beds F, and the blocks G, having the projections H and elevated ridges I, when arranged and keyed together and against the rails, all substantially as specified.

93,240.—HIRAM B. SMITH and J. V. STEVENS, Pomeroy, Ohio.—*Steam-Generator.*—August 3, 1869.

Claim.—1. The tubes A, and chamber or head B, formed in one piece, as herein shown and described,

2. The hollow bridge C, mud-chamber D, and tubes A, combined and arranged substantially as specified.

3. The combination of the tubes A and drums I, when arranged and united substantially as specified.

93,241.—PELEG STAPLES, Stockton, Me.—*Clamp for Planking Ships.*—August 3, 1869.

Claim.—1. The apparatus, consisting essentially of the T-piece *h*, provided with prongs and with the swiveling-eye *h'*, the hooked and bent bar *h''*, the screw-bolt *h'''*, and the braces *k*, combined and operating as and for the purpose described.

2. The clamp or holder, made up of the bar *e*, provided with prongs, the bar *e'*, projecting from the former at right angles, and the T-piece *e''*, all arranged to operate as explained.

3. Attaching the windlass *b* to the ribs of the ship by means of the brackets *z z* and suitable wedges, as and for the purpose specified.

93,242.—J. M. STARR, Jr., Fond du Lac, Wis., assignor to himself and GEORGE D. TROMBLY, same place.—*Washing-Machine.*—August 3, 1869.

Claim.—The rollers H, in combination with the double-ended beaters C, the curved longitudinal ribs B, in the tub or box, and the false bottom I, all arranged and operating as described, for the purpose specified.

93,243.—FRANK J. STEINHAUSER, Lancaster, Pa.—*Balancing the Keys of Pianos, &c.*—August 3, 1869.

Claim.—The application of the weighted screw or adjusting-balance B *b*, when employed on the keys of musical instruments, in the manner and for the purpose specified.

93,244.—EDWIN R. STILWELL, Dayton, Ohio.—*Water-Heating Device.*—August 3, 1869.

Claim.—1. Corrugated or plain-faced shelves C, constructed and arranged substantially as described.

2. The door A', applied to shell A, by means of the adjustable bars *e e*, and bolts and nuts, substantially as described.

3. The filtering-chamber D, constructed and arranged substantially as described.

4. The mud-well G', arranged below a filtering-chamber, D, in combination with the shelves and steam-inlets, substantially as described.

93,245.—LUCIUS S. STIMSON, Lowell, Mass., assignor to himself and NELSON F. LIBBY, same place.—*Composition for Roofing.*—August 3, 1869.

Claim.—The composition of soapstone, resin, and petroleum, substantially in the proportions and in the manner herein specified.

93,246.—WILLIAM O. SUMNER, Brooklyn, E. D., N. Y.—*Safety Watch-Pocket.*—August 3, 1869.

Claim.—The pocket watch-safe, constructed as described, of the parts A B, hinged together at C, and provided with the pivoted notched latch E, spring G, pins H K N, and notched spring-plate L, all constructed and arranged as described, for the purpose specified.

93,247.—JOHN F. THOMAS, Ilion, N. Y.—*Grapple.*—August 3, 1869.

Claim.—Pivoting the connecting-bar *b'* to the hooks *a* and *a'*, between the points *o* and *o'*, and the joints *e* and *e'*, substantially as set forth.

93,248.—WILLIAM B. TREADWELL, Albany, N. Y.—*Base-Burner.*—August 3, 1869.

Claim.—1. The construction and arrangement of the front of my combustion-chamber and revertible flues, in such a manner, relatively, as to increase the radiation and illuminating surface of the front of the stove, in the manner set forth and described.

2. Portable mouth to my magazine, in combination with the enlarged mica door or opening in front, for the purpose of permitting the portable mouth to be removed or adjusted through said door.

3. Improved feed-cylinder, constructed with the dissipating-flue J, substantially in the manner and for the purpose above described.

4. The universal ball and socket joint, constructed in the manner and for the purpose above described.

5. The relative shape and position of the fire-chamber, feed-cylinder, portable mouth, and revertible flues, substantially as described.

6. The air-chamber H, in combination with my combustion-chamber and revertible flues, substantially as described.

93,249.—HENRY TREBE, Indianapolis, Ind., assignor to himself and FREDERICK KLARE.—*Toy-Ball.*—August 3, 1869.

Claim.—The combination of a return-ball, B, with spherical concavo-convex cup A, when the two are strung upon the end of an elastic string, S, as shown and described, and for the purposes set forth.

93,250.—J. J. TUCKER, Albia, Iowa.—*Hedge-Planter.*—August 3, 1869.

Claim.—The within-described devices for sowing hedge-seed, consisting of the hopper I, funnel K, cylinder L, provided with the pins *l l*, shaft M, pulleys N and *m*, and slide O, in combination with the body A, wheels B B, standard D, plow E, rollers F F, and covering-shovels G G, all constructed and arranged to operate substantially as and for the purpose specified.

93,251.—P. W. VAIL, Newark, N. J.—*Hat.*—August 3, 1869.

Claim.—A hat or cap, the crown of which is formed with a shelf or shoulder, *a*, perforated, to admit air, as herein above specified and shown.

93,252.—J. B. VANNAN and N. P. CRAMER, Carbondale, Pa.—*Sheave-Pulley.*—August 3, 1869.

Claim.—As a new article of manufacture, a sheave-pulley, having the bottom only of the groove chilled, substantially as set forth.

93,253.—C. H. VAN ORSTRAND, New York, N. Y.—*Machine for Cutting and Slicing Vegetables.*—August 3, 1869.

Claim.—The combination of the cutter-plate D, and the series of cutters C C' C'', with the driving-gears F and G, the hopper H, and the cutting-plate I, all arranged and located as and for the purposes set forth.

93,254.—ASEL M. WADE, Lawrence, Mass.—*Machine for Spooling Thread.*—August 3, 1869.

Claim.—1. The improved spooling-machine, as constructed, with the celled bar E arranged as described, with the series of guides and the spooling bobbins and spindles, or the equivalent thereof, to operate as and for the purpose described.

2. The bar as made, with each cell open at its front end, closed at its rear end, and provided with a slot through its top, as explained.

93,255.—CHARLES F. WALKER, Benford's Store Post-Office, Pa.—*Washing-Machine.*—August 3, 1869.

Claim.—In a washing-machine of the described construction, the handle F, rope E, and bar K, in combination with the lever C and its attachments, as and for the purpose set forth.

93,256.—JAMES C. WARR, Wareham, Mass.—*Straightening-Machine.*—August 3, 1869.

Claim.—The combination and arrangement of the adjustable rollers *f*, with the bed A, and with the platen G, substantially in manner as represented, and so as to operate therewith, as and for the purpose described.

93,257.—ZADOCK WASHBURN, Hopedale, Mass. —*Casting Hollow Metal Rollers with Shafts.*—August 3, 1869.

Claim.—1. The employment of the shaft in the two parts B C, socketed and tenoned, and arranged in the core and mold, as described, the whole being as and for the purpose specified.

2. The shaft, as made in two or more parts, socketed and tenoned together as described, and provided with cavities, for the metal of the heads to flow into, when cast upon the shaft, as described.

3. The new or improved manufacture of metallic roller, as made with its shaft constructed in two or more parts, socketed and tenoned, and arranged as described, and with the metal of the heads cast into cavities of the shaft, or upon projections from such shaft, the whole being as explained.

93,258.—EDWARD WHITELEY, Cambridge, Mass. —*Grease-Trap.*—August 3, 1869.

Claim.—The within-described grease-trap, consisting of the tank A, in combination with the sink-pipe *b*, and the siphon B, connected with the pipe leading to the drain or sewer, all arranged to operate substantially as described.

93,259.—JAMES M. WHITING, Providence, R. I. —*Carriage-Hub.*—August 3, 1869.

Claim.—The packing-nut on the end of the box, in combination with the metallic center-piece, the wooden sleeve, and the elastic collars.

93,260.—JULIUS WILCKE, Chicago, Ill.—*Harvester-Rake.*—August 3, 1869; antedated July 23, 1869.

Claim.—1. The post I, bracketed standard A A′, with its geared segment J, and inclined plane T, the shaft S, and driving-pulley H, crank D, fitted with lug *d*, and recesses *e e* on its hub, and guide-holes *x x* on its wrist-end, in connection with the bars *v v′*, stop-pin *y*, lift-pin *z*, and springs *s s*, the pinion B, pinion-shaft P, crank C, and crank-sleeve *u*, substantially as described, and for the purposes set forth.

2. The guide-sleeve M, provided with spiral groove *m*, the rake K, and rake-rod R, provided with spring *w*, pin *r*, and bell-crank levers *a* and *b*, and link *e*, in connection with the flange of the sleeve M, or its equivalent, operating in the manner described, and for the purposes specified.

3. The double clutch N, provided with flange *f*, ribs *e e*, and recess *n′*, in connection with the pin *n*, the sectional clutch E F, provided with semicircular coupling-studs *g*, and recesses *d′*, clutch-spring O, and clutch-lever G, or their equivalents, substantially as described, and operating for the purposes specified.

93,261.—DARIUS WILCOX, Birmingham, assignor to himself and WARREN WILCOX, Ansonia, Conn. —*Fifth Wheel for Carriages.*—August 3, 1869.

Claim.—1. The tubular spring *a*, arranged within the head E of the yoke D, with the hardened steel plate *b*, bearing upon the fifth wheel C, as set forth.

2. In combination with the above, the adjusting-screw F, with its plate C, substantially as described.

93,262.—EZRA WILDER, South Hingham, Mass. —*Horse Collar and Hames.*—August 3, 1869.

Claim.—1. A horse-collar, made in two parts, fastened to the two bars of the hames, said hames-bars being jointed at top, and being connected at bottom by an adjustable connector, substantially as shown and described.

2. In combination with hames-bars constructed as described, collar-pieces, made of wood.

3. In combination with a collar or hames, the neck-piece *n*, arranged to vibrate with a universal movement, substantially as described.

4. In combination with the collar or hames, the adjustable neck-piece *n*, substantially as described.

5 In combination with the tug-pieces *i*, the removable or screw-spindle caps *l*, substantially as described.

93,263.—ROBERT WILSON, Burdett, N. Y.—*Washing-Machine.*—August 3, 1869.

Claim.—The within-described washing-machine, consisting of the box B B, C, D, and E, standards F F, cross-bar G, rubber H, and handle I, in combination with the roller L and shaft M, all constructed and arranged substantially as and for the purpose specified.

93,264.—ROBERT WILSON, Rees Corners, Md. —*Churn.*—August 3, 1869.

Claim.—The churn, composed of the outer wooden body or case A, the metallic strainer B, provided with the handle *b′*, dasher rod and dasher G H J I, small gear-wheel F, bevel gear-wheel E, supporting metallic frame D, and cover C, all constructed, arranged, and operating in the manner herein shown and described.

93,265.—GEORGE T. WRIGHT, New Preston, Conn., assignor to himself and WALTER BURNHAM, same place. — *Cord-Making Machine.* — August 3, 1868.

Claim.—The arrangement of the spindle A, pulley C, hollow platform D, sleeve E, pulley G, gear-wheels F I, disks J, horizontal bobbins K, eyes *m*, and bent wires *n*, all constructed as herein described, for the purpose specified.

93,266.—H. C. YOUNG, Bridgeport, Conn., assignor to the HOWE MACHINE COMPANY.—*Embroidering-Attachment for Sewing-Machine.*—August 3, 1869.

Claim.—The thread-carrying arms C D, (one or more, or both,) arranged so as to vibrate across the path of the needle, and combined with the spring-rod E, loop H, and needle-bar B, all constructed so as to operate substantially in the manner herein set forth.

93,267.—J. F. BARKER, Springfield, Mass., and C. N. GILBERT, New York, N. Y.—*Apparatus for Carbureting Air.*—August 3, 1869.

Claim.—1. The carbureter, having the reservoir D placed therein, and used in connection with the pipes for the circulating heating-fluid, all constructed and operating substantially as herein described and set forth.

2. The arrangement of the tube L, with a carbureter, wherein the apertures opening from the lower part of each chamber of the carbureter into said tube are opened and closed by valves, said tube with its valves, operating to draw the contents of any upper chamber into any lower one, or to draw said contents of any one, or of all of said chambers, entirely away from the carbureter, substantially as herein described and specified.

3. A gauge, composed of two or more compartments, and having one or more partitions, *o*, therein, the same being made in one piece, with a corresponding front plate, *s*, also made in one piece, the whole constituting a series of gauges, and all constructed and operating substantially as and for the purposes herein described and set forth.

93,268.—J. F. BARKER, Springfield, Mass., and C. N. GILBERT, New York, N. Y.—*Apparatus for Carbureting Air.*—August 3, 1869.

Claim.—1. The arrangement of the carbureter with a meter-wheel, said wheel being driven by a descending weight, or other equivalent mechanical power, applied to force the air through the carbureter to the burners, said carbureter being placed within a vault by itself, separate from the building to be lighted, the whole arranged and connected with pipes, substantially as herein described and set forth.

2. The heating-coil P and pipes R R′, connected with a carbureter, said carbureter being placed within a vault by itself, while the coil is placed within the cellar or building to be lighted, the whole arranged substantially as herein described, and for the purpose specified.

93,269.—STEPHEN V. BARNS, Triangle, N. Y.—*Hop-Pole Sharpener.*—August 3, 1869.

Claim.—The arrangement, upon a suitable frame, of the hollow cone-shaped cylinder *g*, and its interior projecting blade *b*, saw *d*, sliding grooved frame and lever *a*, all the parts being constructed as described.

93,270.—ALFRED BAUMGARTEN, New York, N. Y., assignor to himself and CHARLES W. WALTER,

same place.—*Receivers or Carboys for the Manufacture of Muriatic and other Acids.*—August 3, 1869; antedated August 2, 1869.

Claim.—1. The carboys of condensation for acids, made substantially in the manner and for the purposes set forth.

2. The tubes and stoppers, applied to and combined with the said carboys of condensation, in the manner and for the purposes set forth.

93,271.—J. H. Bigelow, Worcester, Mass.—*Corn-Popper.*—August 3, 1869.

Claim.—1. The combination, with the corn-popper, of the doubled wire D, having a portion of its length bent or twisted, substantially as described, so as to form a socket for the reception of the handle.

2. The combination, with the corn-popper and its handle, of the doubled wire D, its socket *b*, and the staple-retaining wire *e m h*, substantially as and for the purpose set forth.

3. The combination, with the popping-box B, cover G, and handle A, of the wire socket *b* and wires D E, as shown and described.

93,272.—W. E. Bond, Cleveland, Ohio.—*Mode of Constructing Billiard and other Game Tables.*—August 3, 1869.

Claim.—1. Forming the beds of billiard and other gaming tables of cement, substantially as herein described.

2. A billiard or other gaming table, the bed of which is composed of cement, inclosed in a suitable frame-work, substantially as herein set forth.

93,273.—William R. Brown, Bath, N. Y.—*Piston-Spring.*—August 3, 1869.

Claim.—The construction of a piston-spring, consisting of two parts, A and B, made of flat bar or ribbon steel, substantially in the manner and for the purpose as herein shown and described.

93,274.—Daniel Bull, Amboy, Ill.—*Sash-Fastener.*—August 3, 1869.

Claim.—1. The bar or stop O, when so constructed and arranged in a sash-fastener, that it vibrates upon its center to project either end thereof, substantially as described, to lock the sash up or down, as may be desired.

2. The combination of the vibrating bar or stop O, and thumb-piece H, when so constructed and arranged that one end of the thumb-piece rests upon the bar in such a way that the bar or stop is vibrated by it when it is moved, substantially as and for the purposes shown and specified.

3. The combination of the bar or stop O, thumb-piece H, and spring J, when constructed and arranged substantially as and for the purposes herein set forth.

93,275.—George P. Clarke, Marmont B. Edson, and Jarvis B. Edson, New York, N. Y., assignors to the Recording Steam-Gauge Company same place.—*Self-Recording Pressure-Gauge.*—August 3, 1869.

Claim.—1. The combination and arrangement of the spring pressure-gauge, carrying a spring recording-pencil and parallel guide, S, with the spring ratchet-barrel H, for giving an intermittent rotary movement to the drum B, so that the pencil will trace vertical lines during the increase of pressure and oblique lines during the decrease of pressure, for the purposes and in the manner substantially as described.

2. The slot N^2 in drum B, in combination with the spring D^2 and the inclined hook c^2, for the purposes described.

3. The arrangement of the barrel H, containing the coiled spring E^2 in one side and the pawls H^2 in the other side, in combination with the toothed or ratchet wheel I, secured to the revolving spindle K, which passes through the bracket L, and is secured to the drum paper-holder B, operating in the manner and for the purposes described.

93,276.—L. H. Colborne, Albion, N. Y.—*Steam-Generator.*—August 3, 1869.

Claim.—1. The receiver C, combined as herein set forth, whereby the saturated and superheated steam is commingled, as above set forth.

2. The pipe D, superheater B, and intermediate devices, in combination with the receiver C, substantially as shown and described.

3. The arrangement of the devices whereby to exhaust steam into the receiver C, as set forth.

93,277.—G. W. Cole, Farmington, Ill.—*Garden-Plow.*—August 3, 1869.

Claim.—The garden-plow described, consisting of the handles A A, wheel B, U-shaped rod C, and slotted standard D, rod E, cone-shaped blocks F F, and braces G, when constructed substantially as described, for the purpose set forth.

93,278.—John B. Cox, James O'Connor, and Michael Cahalan, Columbus, Ga.—*Railway-Switch.*—August 3, 1869.

Claim.—1. The main track A, sliding-track A′, when arranged, with relation to the switch-track A″, in the manner and for the purpose substantially as described.

2. The combination of the switch-track A″ A″, connecting-bars B″, stop-chairs B′, in curved lines, with the connecting-rod C and lever *a*, in the manner and for the purpose substantially as set forth.

3. The removable connecting-bar B″, when constructed in the manner and for the purpose substantially as described.

93,279.—Gustav Cramer and Julius Gross, St. Louis, Mo.—*Photographic Head-Rest.*—August 3, 1869.

Claim.—The rest-prongs B, arranged with the slots B′, and combined with the fulcrum-arm A, substantially as herein set forth, to form a head-rest, the prongs whereof have a longitudinal as well as lateral movement, independent of each other.

93,280.—Henry L. Cranford, Brooklyn, N. Y.—*Composition-Pavement.*—August 3, 1869.

Claim.—The combined stone and composition pavement, prepared and laid substantially as set forth.

2. The wedge-shaped filling of composition, introduced between the stones, as and for the purposes set forth.

93,281.—Joel H. Dalbey, Springfield, Ohio.—*Earth-Scraper.*—August 3, 1869.

Claim.—The arrangement of the scraper A, with blocks F F, and grabs *p p*, handles B B, spring-bolts *m m*, bars *n n*, loops *o*, and lever I, the several parts being constructed and operating substantially as specified.

93,282.—Andrew B. Davis, Catahoula Parish, La.—*Street-Car Starter.*—August 3, 1869

Claim.—The guiding-bar A, when the same is provided with a reciprocating-bar, C, a cross-head, B, and a spring, D, in combination with a lever, J, and a chain, H, the whole being attached to a city railroad-car, and operating substantially as herein described, for the purpose set forth.

93,283.—Andrew B. Davis, Catahoula Parish, La.—*Car-Starter.*—August 3, 1869.

Claim.—The lever B, spring C, and clutch J, in combination with bars G and H, the springs L and M, and the ratchet E, when these several parts are constructed, arranged, and operate substantially as described, for the purposes set forth.

93,284.—Andrew B. Davis, Catahoula Parish, La.—*Plow.*—August 3, 1869.

Claim.—Covering plows on their front faces and on their landsides with a series of thin steel, or hardened iron plates A and C, substantially as herein described, for the purpose set forth.

93,285.—A. B. Dean, Louisville, Ky.—*Churn.*—August 3, 1869.

Claim.—The arrangement of the churn herein described, with the chamber E, blocks G and P, button *c*, slat H, and spring *a*, substantially as specified.

93,286.—Louis Amable De Lime, St. Louis, Mo.—*Apparatus for Purifying Whisky and other Alcoholic Spirits.*—August 3, 1869.

Claim.—An apparatus for refining whisky and other alcoholic productions, composed of tubs A, B, C, D, E, and F, provided with false bottoms covered with blankets, and a filtering substance, as shown and described, and connected the one with the other, by pipes and tubes, in the manner shown and stated, so that the liquid may pass from one to the other, in its passage, forcing the confined air through the liquid, and all arranged for joint operation, and constructed and operating substantially as and for the purpose shown and specified.

93,287.—Thomas H. Denison, Baltimore, Md.—*Portable Clamp for School-Books.*—August 3, 1869.

Claim.—As a new article of manufacture, the extensible clasp for school-books, herein described, consisting of the divided sides A A, constructed with ears G and longitudinal slots *c*, the rivets D D, clamping-screws C H C H, straps B B, and buckles F F F′, combined and arranged to operate substantially in the manner and for the purposes set forth.

93,288.—George B. Dyer, New York, N. Y.—*Gas-Carbureter.*—August 3, 1869.

Claim.—The carbureter herein described, having reservoir B, compartments C D E F, arranged as passages for gas, perpendicular plates *f f*, tubes *h k m*, pipes with stop-cocks *e′ d′ e′*, pipes *b′* N G, opening and screw cap *a*, openings and screw-stoppers *v w x y z*, and gauge *s*, constructed and arranged substantially as specified.

93,289.—D. Elliot and E. Seely, N. Y., assignors to themselves and John A. Holmes.—*Carriage-Jack.*—August 3, 1869.

Claim.—1. The ratchet-sector *h*, lever *k*, and pawl-plate *f*, in combination with the lever *c* of the carriage-jack, substantially as and for the purposes set forth.

2. In combination with the foregoing, the link *g*, legs *a* and *b*, and bolt *d*, as and for the purposes set forth.

3. The India-rubber bearing-surface *n*, combined with the lever of a carriage-jack, as and for the purposes set forth.

93,290.—H. C. Eves, Orangeville, Pa.—*Seed Planter, Fertilizer, and Plow Combined.*—August 3, 1869.

Claim.—The double seeding-slide, screw-fertilizer, and adjustable plow, when constructed, combined, and operating as herein described, and for the purposes set forth.

93,291.—Charles A. Fenn, Edward P. Fenn, and Isaac Cook, St. Louis, Mo., assignors to Charles A. Fenn.—*Machine for Mortising Blind-Stiles.*—August 3, 1869.

Claim.—1. The parts G¹ G² *g*¹ and the slides E′, combined with the bar G, frame *h* H, the ways I, rod I 1, and direction-bar I 2, and operated by the bar K and link *h*¹, substantially as set forth.

2. The frame E E′, slide-bars G, frame *h* H, link *h*¹, and bar K, when arranged in combination with and adjusted by the extension-piece *k*, its slot *k*¹, and set-screw *k*², substantially as set forth.

3. The operating-shaft L, and the cam-plate P, pivoted at *p*, and adjusted at *p′*, combined and arranged with the lever Q and bar K, substantially as set forth.

93,292.—Frederic G. Ford, New York, N. Y.—*Caster.*—August 3, 1869.

Claim.—A caster, the top of which is provided with a transverse cylindrical head, D, and a neck, *d*, for fitting in a horizontal hole and slot made in the side of the foot of the article to which it is designed to be attached, substantially as herein described.

93,293.—Jacob Foster, Philadelphia, Pa.—*Decoy-Duck.*—August 3, 1869.

Claim.—A decoy-duck for sporting purposes, composed of India rubber, and provided with lugs L and L′, and air-valve A, substantially as herein set forth.

93,294.—C. H. Frisbie, Chicago, Ill.—*Exhaust-Nozzle for Steam-Engine.*—August 3, 1869.

Claim.—The construction and arrangement of the exhaust-valve, consisting of the cap A, hinged cover D, projection E, extension H, and spring G, substantially as described.

93,295.—John Gardner, New York, N. Y.—*Capstan.*—August 3, 1869.

Claim.—1. The plate *c*, carrying the gears *d d′*, and fitted with the pawl *e*, in combination with the capstan-barrel *g*, internal gear *i*, gear *f*, and shaft *b*, substantially as and for the purposes specified.

2. In combination with the foregoing, the handspike head *h*, and pawls, or equivalent device for connecting the same with the barrel, for the purposes specified.

93,296.—William H. Gibbs, Cincinnati, Ohio.—*Bottle-Stopper.*—August 3, 1869.

Claim.—The arrangement of the button A, shank D *d*, rubber gasket E, cork F, and pin G, or their equivalents, for the purpose stated.

93,297.—W. W. Goff, Avoca, N. Y.—*Flour-Cooler.*—August 3, 1869.

Claim.—1. The blower H, in combination with curved plates *e e*, when constructed, arranged, and operated as described.

2. Cylinders A and C, when combined with blower H, curved plates *e e*, and conduits *h* and *n*, the whole arranged and operating substantially as described.

93,298.—Charles Greenman, Scott Township, Pa.—*Railway-Switch.*—August 3, 1869.

Claim.—The pieces G, secured to the sides of the movable rails C, in combination with the said rails, springs E, guides H, and plates D, when arranged and operating substantially as shown.

93,299.—Frederick Hale and William Manley, Philadelphia, Pa.—*Drawer-Knob Label.*—August 3, 1869.

Claim.—The combination of the hollow knob A with the glass plate *c* and the detachable annular flange *d*, all arranged as and for the purpose described.

93,300.—Willis C. Hall and Colatres Moore, California, Mo.—*Eye-Sirup.*—August 3, 1869.

Claim.—1. The use of analine compounds, substantially as and for the purpose set forth.

2. The use of the several ingredients, substantially as and for the purposes set forth.

93,301.—S. R. Hathorn, Worcester, Mass.—*Slate and Metal Roofing.*—August 3, 1869.

Claim.—1. The combination, with the slates B, of the metallic strips D, provided with hooks *e*, substantially in the manner described and for the purposes stated.

2. The metal joint strips D, formed with side flanges *f* and top hooks *e*, substantially as and for the purposes set forth.

93,302.—Joseph Hindemyer and Charles C. Savery, Philadelphia, Pa.—*Water-Cooler and Refrigerator.*—August 3, 1869.

Claim.—The ice-chamber A, annular space C, and surrounding air-space K, in combination with a refrigerating-chamber, I, the whole relatively arranged, and operating as and for the purposes described.

93,303.—Benjamin H. Hussey, Portsmouth, N. H.—*Anti-Friction Mast-Hoop.*—August 3, 1869.

Claim.—The combination of rollers placed on the mast-hoop, between shoulders, as aforesaid, and the mast-hoop, made with shoulders, to keep the rollers in place, and a movable staple, made as herein described, or substantially the same, which will produce substantially the same effect.

93,304.—Carleton B. Hutchins, Ann Arbor, Mich.—*Composition for Roofing and Paint.*—August 3, 1869.

Claim.—The compounding of ingredients, as

herein described, to make a composition for roofing and paint.

93,305.—Hanford Ingraham, Naples, N. Y.—*Bedstead.*—August 3, 1869.

Claim.—1. The combination of the plates A A, and pivot screws or bolts *a* and *b*, with the posts B B, and rails C C, substantially as described.

2. The flat steel springs D, as arranged and connected with the slats *d* and cross-bars *e*, when said cross-bars are suspended from springs E, arranged and attached to bracket-plates *e*, substantially as described.

93,306.—John Jay and Joel Coppock, Jonesborough, Ind.—*Harrow.*—August 3, 1869.

Claim.—1. The levers F F, and M, and the wheels I, I, and N, in combination with a harrow, so connected and arranged that the harrow may be raised from the ground, either in whole or in part, substantially as shown and described.

2. The combination of the lever *m*, rock-bar L, pivot-bolt *p*, arm O, and wheel N, with the harrow, substantially as herein shown and described, and for the purpose specified.

93,307.—Moses Johnson, Three Rivers, Mich.—*Potato-Digger and Cultivator Combined.*—August 3, 1869.

Claim.—1. The disks E, when constructed, applied, and operating as described, for the purposes specified.

2. In combination with the disks E, the scrapers *d*, apron G, plows H, and roller C, constructed and arranged substantially as and for the purposes described.

3. In combination with the foregoing devices, the attachable-beam K, cross-bar N, disks R, scrapers *h*, and springs *v*, constructed and arranged substantially as specified.

93,308.—Josee Johnson, New York, N. Y., assignor to himself and William H. Johnson, same place.—*Washing-Machine.*—August 3, 1869.

Claim.—1. Hanging the tub of a washing-machine loosely on the same shaft with which the beatersare connected, and from which they receive their motion, substantially as and for the purposes herein set forth.

2. The combination of the tub B, shaft *a*, curved arms E E, and beaters I I, all constructed as described, and arranged to operate substantially in the manner and for the purposes set forth.

93,309.—Josee Johnson, New York, N. Y., assignor to himself and William H. Johnson, same place.—*Washing-Machine.*—August 3, 1869.

Claim.—1. The reciprocating-box E, provided with rows of pins *a a*, in combination with the pitman H H, and fly-wheels I I, all substantially as and for the purposes hereiu set forth.

2. The arrangement of the table A, box C, and reciprocating-box E, all constructed substantially as described, and for the purposes set forth.

3. The combination and arrangement of the table A, box C, track D, box E, wheels F F, fly-wheels I I, pitmen H H, and guard K, all constructed and operating substantially in the manner and for the purposes herein set forth.

93,310.—Wesley L. Jukes, New York, N. Y., assignor to himself, Frederick McLewee, Prentice H. Putnam, and Johnson Murray, same place.—*Gas-Burner.*—August 3, 1869.

Claim.—1. The revolving gas-burner, with the tube *a*, arms *b b*, and pivot-bearing *c*, all made in one piece of glass, as and for the purposes specified.

2. The tube *d*, with pivot *e* at its end, and the opening *i*, in combination with the cup *f* and revolving burner, when the cup *f* and tube *d* are of glass, and united by cement, as set forth.

3. The rubber tube *m*, in combination with the glass tube *d*, cup *f*, and revolving gas-burner, for connecting the parts with facility, and without risk of injuring the glass, as set forth.

93,311.—William H. Karicofe, Harrisonburgh, Va.—*Corn Harvester and Shocker.*—August 3, 1869.

Claim.—1. The "stacker" C′, constructed substantially as shown and described, and for the purposes set forth.

2. The rotating-beam B′, provided with two rows of arms, *f f*, and a handle or arm, *g*, substantially as and for the purposes herein set forth.

3. The crooked levers *h h*, spring *i*, and hook *k*, or their equivalents, constructed substantially as described, and for the purposes set forth.

4. The rotating-beam B′, provided with two rows of arms, *f f*, handle or arm *g*, and crooked levers *h h*, all constructed and arranged to operate substantially as and for the purposes herein set forth.

5. The combination of the crooked arms *d d*, guide-board A′, rotating-beam B′, arms *f f*, and levers *h h*, all constructed as described, and arranged to operate substantially as and for the purposes herein set forth.

6. The arrangement of the platform M, reel T V, arms *d d*, guide-board A′, rotating-beam B′, arms *f f*, and levers *h h*, all constructed and operating substantially as and for the purposes herein set forth.

93,312.—Michael Keefer, Washington Connty, Md.—*Slaw-Cutter.*—August 3, 1869.

Claim.—A machine for cutting cabbages, having crank and pinion-gearing as described, shaft B, wheel E, knives *s*, removable bar *c*, bent wires *g*, and chute G, constructed and arranged to operate substantially as specified.

93,313.—William G. Kenyon, Wakefield, R. I.—*Hay-Spreader.*—August 3, 1869.

Claim.—The combination of the circular plates G G, having the flanges *w w q*, projections *z z* on them, with the cross-pieces *g g g*, and teeth-bars *n n n*, substantially as herein described, and for the purpose set forth.

93,314.—Martin Landenberger, Jr., Philadelphia, Pa., assiguor to Martin Landenberger & Co.—*Knitted Fabric.*—August 3, 1869.

Claim.—A knitted fabric, in which flattened wire, silvered, gilt, or otherwise polished, is interlooped with fibrous threads, as set forth, for the purpose specified.

93,315.—Jay Lathrop, Lapeer, N. Y.—*Wagon-Brake.*—August 3, 1869.

Claim.—1. The combination of the T-shaped bar G, slotted lever H, and connecting-rods I I, all constructed and operating substantially as and for the purposes herein set forth.

2. The combination of the sliding-tongue C, hounds D D, T-shaped arm G, slotted lever H, connecting-rods I I, brake-bar J, and brake-locks K K, all substantially as aud for the purposes herein set forth.

93,316.—Daniel F. Leach, Forsyth, Ill.—*Farm-Locomotive.*—August 3, 1869.

Claim.—1. The fifth-wheel apparatus as shown in Figs. 4 and 5, consisting essentially of the parts M M′, *m m′*, *n w w*, N, P, I I, all constructed and arranged substantially as specified.

2. The wheel rim or tread, constructed as shown in Fig. 3, consisting essentially of the parts *a*, *u*, *r*, substantially as set forth.

93,317.—John E. Lewis, Kittery, Me.—*Coffee Pot.*—August 3, 1869.

Claim.—The duplex coffee-pot, as made with the two compartments, the communicating passage, and the gate thereof, the two noses or discharging-spouts, and one or more handles, the whole beiug substantially as set forth.

93,318.—John J. Lindly, Lebanon, Ill.—*Gang-Plow.*—August 3, 1869.

Claim.—1. The arrangement of the bars G G′, with the plow-bars H, aud relative to the frame A C, and the draught-attachment N, substantially as and for the purposes set forth.

2. The crank-bar L, its lever *l′*, and straps M, arranged to raise the plow-bars H, substantially as set forth.

93,319.—Harvey A. Link, Columbus, Ohio.—*Harvester-Cutter.*—August 3, 1869.

Claim.—The plates C, having the projection *o* therein, and fitted in the recess *e* of the finger, substantially as shown and described.

93,320.—Seth Lowen, Temperanceville, Pa., assignor to himself and O. D. Lewis.—*Flanging-Machine.*—August 3, 1869.

Claim.—The combination and arrangement of the adjustable centering-piece, consisting of the parts *g*, *f*, and *e*, slide B, disks *h* and J, and adjustable friction-rollers *k*, the whole being constructed and operating substantially as herein described, and for the purpose set forth.

93,321.—James H. Lyon, Wilson Ager, Daniel Breed, and William H. Seaman, Washington, D. C.—*Portable Summer-Furnace.*—August 3, 1869.

Claim.—As an improvement in summer-furnaces, the construction, arrangement, and combination of the furnace A B, vertically adjustable rings C, and smoke-hood F, substantially as set forth.

93,322.—John F. Madison and Henry McLaughlin, St. Louis, Mo.—*Street-Car.*—August 3, 1869.

Claim.—1. The gate A, its loops *a*, the rail B, the prongs a^1 a^2, and the rod D, with its kerf *d*, when arranged with the platform F and dash-board E, substantially as set forth.

2. The gate A, its loops *a*, and the rail B, the prong a^1, and catch *g*, and guard H, all combined and arranged substantially as set forth.

93,323.—Henry B. Malbone, Geneva, N. Y., assignor to himself, D. E. Moore, and William J. Morse.—*Convertible Ladder.*—August 3, 1869.

Claim.—A sectional ladder, the sections of which are connected by the rounds of the ladder passing through slotted holes, the ends being provided with open slots, and the upper section with a notch or stop, in such a manner that the sections may form a continuous or step ladder, substantially as and for the purpose set forth.

93,324.—Emmons Manley, Marion, N. Y.—*Door-Latch.*—August 3, 1869.

Claim.—The arrangement and combination of the handles A and levers C, (pivoted respectively to the rosettes B,) with the horns D of the latch-bolt, substantially as described.

93,325.—J. L. McIntosh, Brooklyn, N. Y.—*Sun-Shade for Horses.*—August 3, 1869.

Claim.—1. The wire frame A, covered with canvas or other suitable material, and adapted to fit upon a horse's head, substantially as herein shown and described, and for the purpose set forth.

2. The combination of the sponge D with the bonnet A B, substantially as herein shown and described, and for the purpose set forth.

93,326.—A. H. Mendell, Adams, N. Y., assignor to himself and William H. H Taylor, same place.—*Wire Fence.*—August 3, 1869.

Claim.—1. Providing a wire fence with a top rail, when the same is constructed in sections, said sections being united by lap-joints, supported and connected substantially as described.

2. The posts A A′, wires E E, bar *e*, plate F, and screws *f f*, when the same are so combined and arranged as to render the wires capable of adjustment, substantially as described.

93,327.—Solomon Mickley, Dover Township, and Samuel Leathery, Warrington Township, Pa.—*Seed-Drill.*—August 3, 1869.

Claim.—1. The shaft T, provided with the spiral gear X, and chains V, and lever W, when used to raise the plows, and throw the wheel C out of gear by the same motion, substantially as set forth and described.

2. The slotted lever G, operated by the spiral gear X, in combination with the movable collar D, wheels C and H, drums K, brushes N, and seed-boxes L, when used substantially as specified.

3. The axle A, wheels C and H, movable collar D, lever G, drums K, brushes N, seed-boxes L, shaft T, provided with spiral gear X, hand-lever W, chains N, and plows O, when used and combined substantially as described.

93,328.—William Miller, Bloomington, Ind.—*Corn-Sheller.*—August 3, 1869.

Claim.—The corn-sheller described, consisting of the frame A, spring-board B, board C, cylinder D, fan E, and cover K, the whole being combined and arranged as described, for the purpose set forth.

93,329.—A. C. Mills, Oaktown, Ind.—*Fly-Trap.*—August 3, 1869.

Claim.—A fly-trap, consisting of case A, provided with flange and glass *b*, sliding-door *c′*, drawer *d*, opening *e*, perforated plate *e′*, chamber D, and plate *g*, all combined, arranged, and operating substantially in the manner and for the purpose described.

93,330.—William Morgenstern, New York, N. Y., assignor to himself and Herman Funke.—*Breech-Loading Fire-Arm.*—August 3, 1869.

Claim.—1. The angle or point *c*, on the forward edge of the extractor, substantially as and for the purpose described.

2. The sight *e*, constructed with beveled teeth about its hub, *h*, in combination with a spring-detent or equivalent holding-device, substantially as shown and described.

3. The device for locking the sere or sere-plate to the breech-block, consisting of a slot or recess in the bottom of said block, seen at R, Fig 1, a notch, seen in Fig. 4, in the edge of the gas-plug, and the lug P, on the sere-plate, substantially as shown and described.

4. The nut or collar N, on the combined firing-pin and hammer, substantially as and for the purposes set forth.

5. The shoulder H, in the interior of the hollow breech-block, to act in conjunction with the nut or collar N, as a stop to the backward movement of the hammer during the operation of raising the breech-block up out of the receiver, substantially as shown and described.

93,331.—Charles N. Morris, Cincinnati, Ohio.—*Printers' Rule.*—August 3, 1869; antedated July 29, 1869.

Claim.—1. The printers' rule A, formed with catches or flanges *a′*, single or double, upon its ends, whether said catches be angular or curved, substantially as herein shown and described, and for the purpose set forth.

2. The combination of the rule or brace B with the rule A, having flanges or catches *a′* formed upon its ends, substantially as herein shown and described and for the purpose set forth.

93,332.—Isaac J. Morrow, Everton, Ind.—*Fence.*—August 3, 1869.

Claim.—In combination with the posts A and panels B, the pieces C, with the pins D therein, whereby the panels are supported, substantially as shown and described.

93,333.—F. Neidhardt, East Saginaw, Mich.—*Roofing-Composition.*—August 3, 1869.

Claim.—A roofing made up of a composition, consisting of the ingredients herein named, in or about the proportions specified, and applied as a coating to felt, as a base or covering to the roof, substantially as described.

93,334.—Addison Norman, Rochester, N. Y.—*Lunch-Box.*—August 3, 1869.

Claim.—1. The hinged sides *b* and *d*, and lugs *x*, in combination with the cover C and hooks *i*, and the flask, for the purposes set forth.

2. In combination with the above, the liquid-flask A, substantially as shown and described, and for the purposes set forth.

93,335.—C. M. O'Hara, New York, N. Y.—*Apparatus for Opening Boxes.*—August 3, 1869; antedated July 30, 1869.

Claim.—The implement for opening boxes, consisting of the lever K, the link G, carrying the hooks

H H, the fulcrum-beam L, bands C C, and adjustable arms D D, provided with the feet E E, all the parts being constructed, arranged, and operating as herein described.

93,336.—H. A. PALMER, Rochester, N. Y.—*Coal-Scoop.*—August 3, 1869.

Claim.—As a new article of manufacture, the scoop herein described, the same consisting of a body, A, having a curved back, *b*, gradually sloping sides, *c*, of dishing form, and a flaring mouth, *a*, when perforated throughout and constructed of cast steel, as set forth.

93,337.—JOSEPH PARADIS, Brooklyn, N. Y.—*Propelling-Apparatus.*—August 3, 1869.

Claim.—1. The air-vessel *m*, safety-valve *n*, and inlet-valve *o*, applied to the inner end of the propeller-cylinder *b*, and combined with the piston *c*, in the manner and for the purposes set forth.

2. In combination with the said air-vessel, valves, piston, and propeller-cylinder *b*, the steam-cylinder *f*, and steam-valve, arranged in the manner specified, so as only to admit steam to act in the same direction as the air of the air-cushion, for projecting the water from the cylinder *b*, as set forth.

3. The return nozzle *s*, fitted as specified, so as to be swung to coincide with the end of the cylinder *b*, as and for the purposes set forth.

93,338.—GEORGE J. PARHAM, Harrodsburgh, Ind.—*Fruit-Picker.*—August 3, 1869.

Claim.—1. The hand or stem A, provided with metal bands, and thumb-screw *b*, substantially in the manner and for the purpose described.

2. A fruit-picker, consisting of stem A, thumb-screw *b*, basket B, pulley *d*, cord *c*, and hook *g*, all combined, arranged, and operating substantially in the manner and for the purpose set forth.

93,339.—J. D. PARROT, Morristown, N. J., assignor to himself and HENRY MCCAULEY, same place.—*Filter.*—August 3, 1869; antedated July 30, 1869.

Claim.—The water-filter, composed of the case A, having the central partition B and the perforated diaphragm E, arranged as described and shown, to produce the chamber F, having perforated walls, the filtering-chambers C D, and the clear-water chamber G, having the discharge-tube H, as and for the purpose specified.

93,340.—RICHMOND PEARSON, Appleton, Wis.—*Bee-Hive.*—August 3, 1869.

Claim.—1. A bee-hive, formed mainly of the wire skeleton-frame, covered with paper, arranged to inclose air-spaces between the interior and exterior air-tight walls, substantially as specified.

2. The part B of the hive, formed of paper straps, secured at the top and bottom only, to form air-tight interior and exterior walls, as specified,

3. The combination, with the part B, of the honey-board, having the bars F, and arranged substantially as specified.

93,341.—A. C. PENNY and MINOR SPICER, Unadilla Forks, N. Y.—*Switch-Holder.*—August 3, 1869.

Claim.—In combination with the stool A, with hinged legs *d d d*, the switch-holder, consisting of the post D, toothed cam C, block E, and rod *m*, all arranged to operate as herein shown and described.

93,342.—GEORGE M. PHELPS, Brooklyn, N. Y., and ROBERT STEWART, Bordentown, N. J.—*Electrical Railroad-Signal.*—August 3, 1869.

Claim.—1. A motor, operated by electricity, and fitted substantially as specified, to remove and retain the danger-signal while the circuit is closed, and to allow said signal to be shown when the circuit is broken, substantially as set forth.

2. The circuit-breaker, formed of the springs *n o*, lever *s*, block *r*, and spring *t*, in combination with the switch-level *l*, substantially as and for the purposes specified.

93,343.—CHARLES J. PHILLEO, Kenyonville, N. Y.—*Carriage-Jack.*—August 3, 1869.

Claim.—The arrangement and combination of the ratchets C and D, the pin G, pawl H, and lever I, with the lever E and standard A, substantially as shown and described.

93,344.—MORRIS POLLAK, New York, N. Y.—*Safety-Attachment for Watch-Chain.*—August 3, 1869.

Claim.—The watch-protector, formed of the slide *c*, points *e*, and case *a*, in combination with the chain or guard, as and for the purposes set forth.

93,345.—JOHN A. A. POST, New York, N. Y.—*Hand Stamp.*—August 3, 1869.

Claim.—A letter canceling-stamp, in which the stamp *a*, cross-piece *b*, tang *c*, and cork-carrier, are all formed of one piece of metal, in the manner shown, so as to insure strength and lightness, and to allow the hole *i* to be inserted, in the manner specified.

93,346.—JOHN RINGEN, St. Louis, Mo.—*Washing-Machine.*—August 3, 1869.

Claim.—The device E and C, for sustaining the stopper A, when elevated, in combination with a washing-machine, as shown and described.

93,347.—HENRY R. ROBBINS, Baltimore, Md., assignor to himself and J. J. MORAN, same place.—*Tobacco and Grain Curer.*—August 3, 1869.

Claim.—1. The combination of the double walls, having the space *a* between them, with the flues F F, chimney C, furnace D, having a water-space or boiler *e*, and pipes G *g g'*, when constructed and arranged to operate substantially as and for the purposes specified.

2. In connection with the furnace D, and arranged within a tobacco-curing house, A A^1, the employment of the tanks I H, and pipes *h* J K, arranged substantially as described, so as to be adapted to the purposes herein specified.

93,348.—OBY ROBIRDS, St. Louis, Mo.—*Railway-Car Axle Journal and Box.*—August 3, 1869.

Claim.—The journal, increased in size as the inner collar D is approached, by reinforcements, which are separated by V-shaped collars E and F, or such thereof as may be deemed necessary, substantially as and for the purposes set forth.

93,349.—WILLIAM ROBJOHN, New York, N. Y.—*Organ.*—August 3, 1869.

Claim.—1. The rock-shafts G, G^1, &c., connected with the pneumatic levers, and provided with projecting stops *c e*, so that they may be worked by the slides F F^1, &c., substantially as herein shown and described.

2. The slides F^1, F^2, &c., for operating the pneumatic levers, when connected with the reverse slides I I, substantially as and for the purpose herein shown and described.

3. The slides F, F^1, &c., when slotted and provided with two sets of pins, *d' g'*, to operate directly the pneumatic levers, substantially as herein shown and described.

4. The valve J, of the pneumatic lever, when held against its seat by a spring, *j*, and when adjustable on the seat by the screw *l*, substantially as and for the purpose herein shown and described.

5. The reversible coupler, consisting of the lever *m*, wedge *n*, slide L, lever M, and bar N, all combined and operating substantially as and for the purpose herein shown and described.

6. The tremolo pneumatic lever D^1, provided with the anchor *t*, rod X, spring *y*, and arm *u*, on the valve, all arranged and operating substantially as herein shown and described.

93,350.—THOMAS ROSSITER, New Haven, Conn., assignor of one-half interest to RUFUS H. SANDFORD and FRANK PRESCOTT, same place.—*Adding-Machine.*—August 3, 1869.

Claim.—The arrangement of the index-wheel C, hollow-shaft *b*, registering disks D and E, actuated by the pin *c*, contained within the case A, constructed as shown and described.

93,351.—SILAS C. SALISBURY, New York, N. Y.—*Hot-Air Furnace.*—August 3, 1869.

Claim.—1. The application and use, in combina-

tion with suitable air chambers and pipes for heating air for dwellings, &c., of a heating-furnace, consisting of an inner fire or preparation chamber, and an outer or combustion chamber constructed and arranged substantially as described, whereby atmospheric air can be applied to both such chambers, and be heated in passing thereto, such inner chamber being also covered by or separated from the outer one by a perforated arch or top, and such chambers being arranged with respect to each other, substantially as and for the purposes set forth.

2. Forming the pipes, or chamber that receives the air, and in which it is heated, of fire-clay, and, in combination with such pipes or chamber, the use of asbestos cloth or fiber within the same, for the purposes mentioned.

3. An apparatus for heating air for warming dwellings, &c., constructed, arranged, and operating substantially as described.

93,352.—William S. Sampson, New York, N. Y.—*Grain-Bin.*—August 3, 1869.

Claim.—1. The grain-bin, constructed of wire-cloth, substantially as herein described.

2. The longitudinal battens or ribs G, applied to the bin-cylinders, as and for the purpose set forth.

3. The congregation of equal cylindrical wire-cloth bins and intervening triangular spaces, to constitute a grain-storehouse, when arranged as shown and described.

93,353.—Joseph F. Sargent, Melrose, assignor to Elmer Townsend, Boston, Mass.—*Eyeleting-Machine.*—August 3, 1869.

Claim.—1. In combination with a reciprocating eyelet-set, or clinching-tool, and with a reciprocating eyelet-chute, an eyelet box or hopper, which not only moves with the chute, but which also has an intermittent rotative movement, substantially as and for the purpose described.

2. In combination with a rotating-hopper, actuated by a ratchet and pawl, such an arrangement of the ratchet and pawl mechanism as to cause the hopper to have a positive rotative movement in one direction, and a friction or slipping movement in the other direction, substantially as described.

93,354.—Moritz Saulson, Troy, N. Y.—*Kettle-Spout Attachment.*—August 3, 1869.

Claim.—The attachment A, provided with the raised flange *a*, as herein shown and described, and for the purpose set forth.

93,355.—Joseph M. Shank, Dayton, Ohio.—*Wire Ear for Metal Buckets.*—August 3, 1869.

Claim.—A wire ear, the portions *b* of which are bent and crossed, in the manner and for the purposes set forth.

93,356.—D. P. Shaw, Elkhart, Ind.—*Apparatus for Chalking Billiard-Cues.*—August 3, 1869.

Claim.—Chalking a cue by means of a train of driven gears, when said gears are set in motion by pressing the cue against the chalk or its holder, and stopped by removing the pressure, substantially as described.

93,357.—Samuel S. Sherman and Silas D. Piper, West Eau Claire, Wis.—*Carriage-Wheel.*—August 3, 1869.

Claim.—1. The oil-chamber C, consisting of an elongated tube, one end of which is closed by packing, and which has a number of openings made through its inside surface, substantially as set forth.

2. Securing two or more spokes by a single burr inside of the hub, substantially as described.

3. The hub A, provided with the two sections B, in combination with the oil-chamber C, burrs *i*, and spokes D, when arranged substantially as set forth.

93,358.—Benjamin Slusser, Sidney, Ohio.—*Sulky-Plow.*—August 3, 1869.

Claim.—1. In connection with such crank-axle, the lug L, constructed and arranged as and for the purposes set forth.

2. In connection with such axle, the movable plate or rest C, capable of shifting position so as to remain horizontal, whether the crank be raised or lowered, substantially as and for the purposes set forth.

3. The combination and arrangement of the plow-beam *p*, axle A, part C, having the straps *c c*, and brace B, all constructed to operate substantially as and for the purposes specified.

4. The weighted treadle N, in combination with the lever M, rack R, catch *o*, and crank *a* a^1 a^4, all constructed to operate substantially as and for the purposes described.

5. The jointed tongue T, in combination with the slotted plate *u*, cross-bar V, and arm *e*, all operating substantially as and for the purposes indicated.

93,359.—Patrick Smith, Newport, Ky.—*Door-Spring.*—August 3, 1869.

Claim.—In combination with the spring C and gasket D, the four-sided adjustable bracket E, constructed with notches J J′, and two screw-holes, H H′, substantially as and for the purposes set forth.

93,360.—Willard H. Smith, New York, N. Y.—*Vapor-Burner.*—August 3, 1869.

Claim.—1. In vapor-burners, the employment of heater-wings, constructed and arranged in such a manner that a flame will protrude above and below them, heating both sides at the same time, without obstructing the light, substantially in effect and for the purpose herein stated.

2. The employment of the plug K, when constructed and arranged and operating in combination with the air-tube A, substantially as and for the purpose herein described.

93,361.—William M. Smith, Augusta, Ga.—*Street-Railway.*—August 3, 1869.

Claim—1. An endless elevated railway, consisting of two separate rails or wire cables, properly supported by elevated frame-work, and carrying the carriages G, which are adapted to be connected to the car running on the track below, the carriages being connected by a cable, and propelled by stationary engine or engines, all arranged and operating substantially as and for the purposes set forth.

2. The peculiar construction of the carriages G, with upper and lower wheels, with a suitable projection above for the attachment of the cable and the arm which connects with the car, all constructed and arranged to operate as and for the purposes set forth.

3. In this described railway, the endless driving-chain, arranged to operate as described, and adapted to the peculiar construction of the cable-carriages, as and for the purposes set forth.

4. The hanger Y, clamp C, and key K, constructed and applied substantially as and for the purposes set forth.

5. The clamp Z, formed and attached to the cables, substantially as and for the purposes set forth.

6. One or more spring-extension draw-bars, arranged to act in connection with the carriages G, as and for the purposes set forth.

7. In combination with the extension draw-bars, when arranged on the platform of the car, the extension-spring Q, as and for the purposes set forth.

8. The extension-spring ring O, operating in connection with the carriages G and car, substantially as and for the purposes set forth.

9. The wheel K, ratchet-wheel L, and pawl *m*, substantially as and for the purposes set forth.

10. In the described railway, the guide-drum S, adapted to the carriages and cable, substantially as and for the purposes herein set forth.

93,362.—Hugh B. Spedden, Baltimore, Md., assignor to himself, William H. Baltzel, and G. A. Moore, same place.—*Plow-Gauge.*—August 3, 1869.

Claim.—The slotted plate G, connected with the plow-beam by the rods C C, and adjusted horizontally and vertically by the nuts *n n*, in the manner and for the purpose described.

93,363.—B. E. Sperry, Aurora, Ill.—*Soda Fountain.*—August 3, 1869.

Claim.—A beverage-drawing apparatus, having pumps A and C, doors P, S, and R, false bottom H, and stirup-compartments, as described, all incased or

forming parts of one box, and arranged and operating substantially as specified.

93,364.—Louis Sterne, London, England.—*Driving Belt and Band of Rubber and Metal*—August 3, 1869; patented in England June 2, 1868.

Claim.—A driving belt, band, or strap, made of India rubber and metal strips, united or joined together during the process of vulcanization, substantially as specified.

93,365.—Alfred Stevens, Georgetown, assignor to Josiah Starling, Manheigan, Me.—*Seam-Puttying Machine.*—August 3, 1869.

Claim.—1. The presser-blocks C C. and adjustable plates *e e*, in combination with a frame or block, A, having a recess for holding the putty, all constructed and arranged to operate substantially as herein described.

2. A seam-puttying machine, composed of the frame A, having a recess, B, the presser-blocks C C, their levers D D, and springs *c c*, the blocks E E, and plates *e e*, the gauge J, the refuse-box G, the scraper *g*, and smoothers H I, combined, when arranged as set forth.

93,366.—John Storer, New York, N. Y.—*Hot-Blast Pressure-Gauge.*—August 3, 1869.

Claim.—1. The protecting-tubes *f g*, fitting and sliding within each other, in combination with the case A, piston B, cross *c*, and spring *d*, substantially as and for the purpose described.

2. In combination therewith, the secondary piston D, elevated above piston B, guiding the latter, and carrying the index *a*, as set forth, for the purpose described.

93,367.—John H. Teahl, Eberly's Mill, Pa.—*Railway-Rail Chair.*—August 3, 1869.

Claim.—A railroad-rail, constructed with two bearing surfaces, said surfaces being at right angles to each other, and formed with a concavity on the under side of that portion of the rail which rests on the sills, in combination with a convex chair, or a convex bed-piece, constructed as described, operating substantially as and for the purpose set forth.

93,368.—John H. Thomas and Phineas P. Mast, Springfield, Ohio.—*Machine for Distributing Fertilizers.*—August 3, 1869.

Claim.—1. The stirrers or plates C, having their periphery serrated, and otherwise constructed substantially as described.

2. The shaft B, having the plates C and arms or rods D attached, and all arranged to rotate within a hopper, substantially as and for the purpose set forth.

93,369.—John H. Thomas, Phineas P. Mast, and Charles O. Gardiner, Springfield, Ohio, assignors to John H. Thomas and Phineas P. Mast.—*Grain-Drill.*—August 3, 1869.

Claim.—1. The combination of the eccentric R, lifting-bar B, and the swinging-plate G, for the purpose of throwing the driving-wheels in and out of gear by the act of raising or lowering the drill-tubes, substantially as described.

2. The spring-arm I, attached to the swinging-plate G, and arranged to operate substantially as described, to prevent injury to the teeth of the wheels when thrown into gear.

3. The combination of the eccentric R, slotted stirrup H, and spring-arm I, with the swinging-plate G, as set forth.

4. The sliding-bars C and D, having the drag-bars W attached thereto, and arranged to operate as described.

5. The guard or lip *g*, arranged, in relation to the wheels *p* and *h'*, substantially as described.

6. The cups J, provided with the internal ledge or projection *e*, substantially as and for the purpose set forth.

7. The conductors K, constructed substantially as described, in two parts, and held together by the pin K, as set forth.

8. A conductor, K, pivoted to the cups which contain the feed-rollers, substantially as and for the purposes set forth.

9. The plates U, provided with grooves or recesses, for receiving, holding, and guiding the cross-bars C D, as shown and described.

10. The combination of the rock-shaft E with its arms *o*, connecting-rods *c* and *c'*, cross-bars C D, and lever O, with rod *n*, arranged to operate substantially as described.

11. The combination, in a grain-sowing machine, substantially such as is herein described, of the devices for sowing grain in drills, and also sowing it broadcast between the drills simultaneously, substantially as set forth.

93,370.—John H. Thomas, Phineas P. Mast, and Charles O. Gardiner, Springfield, Ohio, assignors to John H. Thomas and Phineas P. Mast.—*Grain-Drill.*—August 3, 1869.

Claim.—1. The fixed bar H and the sliding-bar G, each having a portion of the drag-bars attached thereto, and all arranged to operate substantially as and for the purpose described.

2. The conductor C, constructed substantially as described, and pivoted to the under side of the hopper, or to a stationary spout, D, secured to the under side of the hopper, substantially as herein set forth.

3. The plates *n*, secured to the front part of the frame, and arranged to secure the sliding-bar G, with its drill-teeth, in place, substantially as set forth.

93,371.—James E. Thomson and James Tillinghast, Buffalo, N. Y.—*Seal-Lock.*—August 3, 1869.

Claim.—The combining, with the locking-bar B, a series of significant seals, 1b, 2a, &c., applied substantially as and for the purpose herein set forth.

93,372.—Ruggles S. Torrey, Bangor, Me.—*Bee-Hive.*—August 3, 1869.

Claim.—A bee-hive, consisting of the sections B B', comb-frames *b b b*, with troughs *i i i*, glass C, top D, and bottom E, provided with wire-netting *d*, all combined, arranged, and operating substantially in the manner and for the purpose described.

93,373.—Pieter van Dÿk, The Hague, Holland.—*Water-Elevator.*—August 3, 1869.

Claim.—The arrangement of the tipping-buckets for lifting water, in combination with the man-engine, substantially as specified.

93,374.—Henry Wadsworth, Duxbury, Mass.—*Cultivator.*—August 3, 1869.

Claim.—The cultivator G *g* H, connected to the axle A by the single universally turning eye K and vertical sliding-belt C, adjustable by means of the nut C' or its equivalent, and provided with the handles I, or their equivalents, whereby it may be manipulated, all substantially in the manner and for the purpose herein set forth.

93,375.—William V. Wallace, New York, N. Y.—*Railway-Car Coupling.*—August 3, 1369.

Claim.—1. A car-coupling for railway-cars, when constructed and arranged in the manner and for the purpose herein described.

2. The construction and combination of the link B, hook A, with the draw-head or bumper D, in the manner and for the purpose herein described.

3. In a car-coupling, the arrangement and adjustment of the link and hook upon the same rod or bolt, within the bumper or draw-head, in the manner herein described.

4. The arrangement herein shown and described, so that the link may be either raised above or depressed below the bumper or draw-head, when not in use.

93,376.—Daniel Weaver, Dayton, Ohio.—*Fifth-Wheel for Carriages.*—August 3, 1869.

Claim.—The within-described fifth-wheel or circle-iron, when constructed as described, with the axle pivot-hub *d'*, and corresponding recessed boss *b*, and with the radial arm G, substantially as and for the purpose specified.

93,377.—John Wells, Baltimore, Md.—*Steam-Generator.*—August 3, 1869.

Claim.—The combination of the return-pipe or

pipes K, with the cylinders A B C, pipes F F, and jacket N, when said parts are constructed and arranged substantially as described and shown, and the return-pipes are made to connect the bottom of cylinder B with the lower end of cylinder A, substantially as herein set forth.

93,378.—RICHARD WELLS, Bloomington, Ill.—*Railway-Car Coupling.*—August 3, 1869.

Claim.—1. The combination of the cross-bar C with the pin Q or R, and the posts N and springs O, substantially as specified.

2. The combination of the cross-bar C, provided with one or more link-pins, and suitable return-springs O, with the cords or chains I and J, and pulleys L and K, when constructed and operating substantially as shown and described.

93,379.—GUSTAVUS WERLICH, Watertown, Wis.—*Blasting-Charge.*—August 3, 1869.

Claim.—The plug A, shaped as described, and inserted in the drill-hole, with its beveled or inclined side immediately in contact with the blasting-charge, whereby it is caused to assume the same form as the plug, a packing of sand or other suitable material being placed above the latter, as herein set forth and shown, for the purpose specified.

93,380.—EDWARD WHITELEY, Cambridge, Mass.—*Portable Steam-Apparatus for Greenhouses.*—August 3, 1869.

Claim.—1. The boiler B, consisting of the hollow dome *j*, with its flues *o* and the hollow ring or base *i*, connected by a series of pipes, *k*, and surrounded with a casing, in combination with the "flow" and "return" pipes N O, constructed and operating substantially as described.

2. The removable top plate L, with its flanges *t v*, in combination with the casing C, provided with a groove, *s*, substantially as set forth.

3. The smoke-casing I, supported upon a flange, *n*, in combination with the boiler B and the top plate L, substantially as set forth.

93,381.—ORIN M. WHITMAN, North Haverhill, N. H.—*Railway-Car Coupling.*—August 3, 1869.

Claim.—The combination and arrangement of the auxiliary pin-supporter and its operative spring with the main pin-supporter and the link-holder, applied to the draw-bar, substantially in the manner and so as to operate therein as set forth.

93,382.—ARETUS A. WILDER and JOHN WILDER, Detroit, Mich.—*Washing-Machine.*—August 3, 1869.

Claim.—The combination, in a washing-machine, of the cylindrical case A, with door E, turning eccentrically upon journals, and provided with wedge-shaped ribs I, hollow journal F, drip-pipe H, and handle G, all arranged and operating as herein described.

93,383.—JAMES D. WILLOUGHBY, Shippensburgh, Pa.—*Steam-Engine.*—August 3, 1869.

Claim.—1. The construction of the induction and eduction valve H^3, with packing upon its surfaces, which serves to prevent the passage of steam from one of its ends to the other, substantially as shown and described.

2. The construction of the cut-off valve H^3, substantially as and for the purpose described.

3. The combination and arrangement of the valves H^2 H^3 and induction-ports *i i'*, substantially as shown and described.

4. The construction of the link L^1, substantially as shown and described.

5. The combination of the link L^1, eccentric rods G^2 and G^3, and eccentrics F^2 and F^3, substantially as shown and described.

6. The combination of the link L^1, valve-rod H^1, valve H^3, which it moves, substantially as shown and described.

93,384.—CHARLES WOLFF, Washington, D.C.—*Propelling-Apparatus.*—August 3, 1869.

Claim.—The grooves *a*, block *c*, and set-screws H, in combination with chain K, its buckets, as described, wheels B, C, and D, when the same are constructed and arranged substantially as and for the purposes set forth.

93,385.—HENRY BROOK WOODCOCK, Low Moor, England.—*Low-Grade Steel for Axles, Tires, &c.*—August 3, 1869.

Claim.—The process, substantially as herein described, of manufacturing metal possessing the qualities hereinbefore described, by mixing steel with crude iron in the process of puddling, substantially as herein described.

93,386.—GEORGE W. N. YOST, Corry, Pa.—*Railroad-Car Wheel.*—August 3, 1869.

Claim.—1. The combination of a main wheel, disk, and main tire, A, B, and C, when made with a circular, oval, or diamonded groove, *e e' x*, between them, substantially as and for the purpose described.

2. The combination of an elastic felloe, D, when made to fit the said groove *e e' x*, with the said wheel, disk, and tire A, B, and C, substantially as and for the purpose described.

93,387.—DAVID D. YOUNG, Dayton, Ohio.—*Pessary.*—August 3, 1869.

Claim.—1. The improved pessary, constructed substantially as described.

2. The hinged adjustment, composed of the hinges *e e*, nut *n*, and rod *o*, constructed and arranged substantially as described, and for the purposes specified.

93,388.—PETER ZIMMERMAN, Sylvan, Pa.—*Ash-Hopper.*—August 3, 1869.

Claim.—An ash-hopper, having frame A, sides B, and lock-bars *s* and *v*, when all the parts are constructed and arranged substantially as and for the purposes specified.

93,389.—F. W. ZOCHERT, Watertown, Wis.—*Coffee-Roaster.*—August 3, 1869.

Claim.—The cap D, having the doors E E, when combined with the supporting-ring C and roasting-cylinder A, all arranged and operating substantially as herein shown and described.

93,390.—R. L. JONES, Sacramento City, Cal.—*Ladies' Chemise.*—August 3, 1869.

Claim.—A chemise, so constructed as to prevent the bulky folding of the chemise beneath the corsets, by connecting the waist and skirt portions thereof by means of a band, belt, tapes, or strings, substantially as and for the purposes herein set forth.

93,391.—EDWARD A. LOCKE, Boston, Mass.—*Revenue-Stamp for Barrels.*—August 3, 1869.

Claim.—A stamp, the body of which is made of paper or other suitable material, and having a removable slip of metal or other material, displaying thereon a serial number or other specific identifying mark, corresponding with a similar mark upon the stub, and so attached that the removal of such slip must mutilate or destroy the stamp.

2. In a paper revenue-stamp for indicating the contents of a cask, and having thereon a number designating the number of gallons or other measure, providing the stamp, and also its stub or check-piece, with corresponding digital numbers, to be punched out to indicate the units, substantially as described.

3. In combination with a paper stamp, having a check-piece or stub, from which it is detached when applied for use, a coupon slip, whose coupons are to be secured to the face of the stamp, as and for the purpose described.

93,392.—P. W. YARRELL, Littleton, N. C.—*Tide-Water Wheel.*—August 3, 1869.

Claim.—1. The wheel G, constructed of the buckets J, of the curved form, as stated, and having their lower ends beneath each other, substantially as and for the purposes described.

2. The provision for operating a water-wheel in the same direction, by the rise and fall of tides, substantially as described.

93,393.—THOMAS J. ADAMS, Portsmouth, Ohio.—*Railway-Rail Splice and Chair.*—August 10, 1869.

Claim.—As an improved article of manufacture,

the fish-plate B, having the base-plate *a*, and the toe-piece or clutch *b*, all rolled or made of one piece, as set forth, and to be applied substantially as herein shown and described.

93,394.—Benjamin Arnold, East Greenwich, R. I.—*Machine for Mending Stockings.*—August 10, 1869.

Claim.—1. The band C, in combination with the block Q, and plate *x*, or its equivalent, substantially as described, and for the purpose set forth.

2. The hook *p*, or its equivalent, operating to catch a stitch in a row of stitches previously made, and spread and hold it so that the needle shall pass through it, substantially as described, and for the purpose set forth.

3. The combination of mechanism for producing a rotary feed-motion to form a row of stitches, with mechanism for producing a vertical feed-motion, substantially as and for the purpose set forth.

4. Mending or filling up a hole in a stocking or other fabric, by making successive rows of chain-stitches around the opening, the outer row being taken in the edge of the fabric, and the rows joined together, substantially as herein set forth.

93,395.—Thomas Atkinson, Memphis, Tenn.—*Bee-Hive.*—August 10, 1869.

Claim.—1. The removable comb-frames B B and C C, made with hinges R R and clasps S S, when arranged and operated as described, and for the purpose specified.

2. The combination of the sliding-doors E and F with the removable comb-frame B B, the whole arranged as described, and for the purpose specified.

93,396.—William W. Atteberry, Chesterfield, Ill.—*Clevis.*—August 10, 1869.

Claim.—An improved plow-clevis, formed by the combination of the main clevis A, adjusting-gauge D, double tree clevis G, having a hook, K, formed upon the forward end of its upper arm, and connecting-clevis H, with each other, said parts being constructed and arranged substantially as herein shown and described, and for the purpose set forth.

93,397.—Daniel B. Ayres, Brooklyn, Mich.—*Fence.*—August 10, 1869.

Claim.—The combination of the posts A, the wires B, the pickets C, and the subsidiary wire *a*, when constructed, arranged, and operating as and for the purposes aforesaid.

93,398.—W. C. Barber, Van Wert, Ga.—*Flood-Fence.*—August 10, 1869.

Claim.—An improved water-fence, formed by stringing the outer ends of the poles or rails A upon wires or rods B, supported at top and bottom with suitable supports, leaving the inner ends of said poles or rails A free to be laid crosswise upon each other, in the manner of a worm-fence, substantially as herein shown and described, and for the purpose set forth.

93,399.—Frances Lee Barnes, for herself, and as executrix of the estate of S. H. Barnes, deceased, New York, N. Y.—*Corset-Steels.*—August 10, 1869.

Claim.—As a new article of manufacture, the corset-spring, made thicker in the middle, as shown, and tapering gradually from the middle toward both ends, as herein set forth, for the purpose specified.

93,400.—D. C. Battey and Carl L. Svensson, Topeka, Kans.—*Chimney-Cowl.*—August 10, 1869.

Claim.—The chimney A, provided with the collar K and perforations *a* in its lower end, combined with the pipe J and rotating-elbow B, having the V-shaped vane H and tube F G, the latter being extended across beyond the vertical portion of the elbow B, all constructed and arranged as herein shown and described, for the purpose specified.

93,401.—Spencer Bentley, Green Oak, Mich.—*Ditching-Machine.*—August 10, 1869.

Claim.—1. The hoe D, and stops E and F, and crank G, in connection with driving-pulley H, belt I, and driving-wheel A, when constructed and operating substantially as and for the purposes specified.

2. The machine described, consisting essentially of the frame C, shovel M, conveyer N T B, hoe D, and bearing-wheels K L, the whole being combined and operated as and for the purpose set forth.

93,402.—Amos S. Blake, Waterbury, Conn.—*Telescopic Quadrant-Hinge.*—August 10, 1869.

Claim.—An improved hinge, made in parts, so constructed as to slide upon each other, in the manner of a telescope, for the purpose set forth.

93,403.—John D. Blaker, Newtown, Pa.—*Breech-Loading Fire-Arm.*—August 10, 1869.

Claim.—1. The combination, with the parts *a b* of the barrel, hinged as described, of the catch *c*, spring-catch *e*, and disconnecting-lever *f*, when arranged substantially as specified.

2. The combination, with the parts *a b* of the barrel, hinged together as described, of the discharging spring-hook *h*, substantially as specified.

3. The combination, with the hammer and parts of the barrel, when hinged as described, of the cord *k*, arranged as specified.

4. The arrangement, with the part *b* of the barrel, when hinged to the part *a*, as described, of device for simultaneously disconnecting the catches *e c*, discharging the shell and cocking the hammer, substantially as specified.

93,404.—Albert Booth, Springfield, Ill., assignor to A. Booth, Son & Co., same place.—*Coupling for Carriages.*—August 10, 1869.

Claim.—1. The disk C, provided with the lugs *e c*, and hub *x*, in combination with the plate E, provided with the flange *e*, lugs *e' e'*, and flanged arms K K, all constructed and arranged substantially as and for the purpose specified.

2. The combination of the axle A, the head-block or bolster B, the disk C, provided with the lugs *e c* and hub *x*; the flanged plate E, provided with the flanged arms K K; the spring F, the bolts D, G, and I, the clamps *d* and H, the stretchers L L, and the forked brace M, substantially as herein set forth, and for the purpose specified.

93,405.—W. A. Bowyer, Helen Furnace, Pa.—*Lifting-Jack.*—August 10, 1869.

Claim.—1. The lifting-jack, consisting of the stand A, notched slide B, lever D, rod E, spring *b*, and click *c*, all combined and operating substantially as herein shown and described.

2. The combination of the L-shaped frame F and sliding-hook G, with a lifting-jack, constructed and arranged substantially as herein shown and described.

93,406.—Edward Brady, Philadelphia, Pa.—*Manufacture of Iron.*—August 10, 1869.

Claim.—Mingling or mixing and manipulating, by common mechanical processes, iron or iron-ore which may be crushed, or any molten iron or metal, with sulphate of potassa, sulphate of calcia, sulphate of soda, and sulphate of alumina, or with any sulphates of the metals of the alkalies, earths, or alkaline earths, pulverized, and both may be dried or roasted, or may have been assimilated to about equal degrees of temperature, and the smelting and a fusion and decomposition of the iron-ore or melted iron and dried sulphates being effected by the usual methods in any ordinary furnace or vessels, the chemical changes and results consequent thereupon separating, evolving, and combining and depositing the impurities of carbon, phosphorus, silica, sulphur, &c., and leaving the molten iron pure, and it may be converted into malleable iron and steel, substantially as above described and set forth.

93,407.—Henry F. Breneman, Rapho Township, assignor to himself and Martin L. Greider, Lancaster County, Pa.—*Railway-Car Coupling.*—August 10, 1869.

Claim.—The combination and arrangement of a vibrating and adjustable hook-stem, on a pivot, P, within a case, A, said stem terminated by a hook-end, H, and open guard, G, resting on the rounded notched lip of the shield or bumper B, all constructed and operating substantially as and for the purpose specified.

93,408.—F. E. Brown, Springville, Iowa.—*Shutter-Worker.*—August 10, 1869.

Claim.—The combination and arrangement of the guide-rod B, provided at one end with a handle, *a*, and set-screw, D, for securing it in any position, and the pivoted arm *c* jointed as described, and hinged to the blind, as and for the purposes above set forth.

93,409.—James H. Bruce, Nashville, Tenn.—*Ruling-Machine.*—August 10, 1869.

Claim.—1. An independent clamp for each extension-pen, substantially as and for the purpose set forth.

2. The clamp D, constructed as described, in combination with the strip A and beam B of a ruling-machine.

93,410.—John Burnham, Batavia, Ill.—*Insulator for Lightning-Rods.*—August 10, 1869.

Claim.—The housings D C, provided with pipes I, in combination with the staples J L, glass H, and rod G, as and for the purpose set forth.

93,411.—John Butler, New York, N. Y.—*Compound Oil for Producing Gas.*—August 10, 1869.

Claim.—An improved gas-oil, compounded of the ingredients, and in about the proportions and manner substantially as herein described and set forth.

93,412.—Nathan Buttler, Otterville, Mo., assignor to himself and D. S. Butler, same place.—*Cultivator.*—August 10, 1869.

Claim.—1. The bolster E, hinged to the axle B, and beveled upon its rear lower edge, substantially as herein shown and described, and for the purpose set forth.

2. The combination of the rearwardly projecting arms J, sliding-seat L, and foot-rest or platform M, with the hinged bolster E and axle B, substantially as herein shown and described, and for the purpose set forth.

3. The notched plow-standards G, adjustably secured to the hinged bolster E by means of the detachable loops H, in combination with the said hinged bolster E and axle B, substantially as herein shown and described, and for the purpose set forth.

4. An improved cultivator, formed by the combination of the wheel A, axle B, tongue C, hinged bolster E, arms J, sliding-seat L, foot-rest or platform M, and plow-standards G, with each other, substantially as herein shown and described, and for the purposes set forth.

93,413.—A. W. Calder, San Francisco, Cal.—*Mode of Making Corundum-Wheels.*—August 10, 1869.

Claim.—The metallic center, placed in the corundum or emery wheel, in the manner and for the purposes substantially as above set forth.

93,414.—William C. Champlin, Allegheny City, Pa.—*Steam-Engine.*—August 10, 1869; antedated August 3, 1869.

Claim.—1. The adjustable cut-off, in which the pawl *c'*, at the end of each lifter, *c*, shall operate against the ends of the segmental head *d''* and wing *o'*, the latter being adjustable, and all arranged substantially as set forth.

2. The frame *e*, mortised or slotted to receive the sliding-blocks *o*, and hung on the shaft *d*, and connected to an independently operating shaft, *f*, arranged substantially as hereinbefore set forth.

3. The sliding-guide *i*, with inclined slots *s*, and the bolts *s'*, for adjusting the wings *o'* through the blocks *o*, and furnished with a screw, *e''*, all constructed and arranged substantially in the manner above set forth.

93,415.—L. H. Cobbs, Montgomery, Ala.—*Sewing-Machine.*—August 10, 1869.

Claim.—The combination, with the needle-arm B and crank-pin A, or oscillating needle-post C, of the plates D and D', or E and E', and their adjusting-screws and nuts, substantially as described.

93,416.—Ira Cogswell, Jr., La Salle, Ill.—*Vise.*—August 10, 1869.

Claim.—The combination of the adjustable connection of the jaws with the support A, the adjustable connection of the holder A with the holder F, and the adjustable connection of the holder F with the permanent holder K, all substantially as specified.

93,417.—Hudson W. Conkling, Tecumseh, Mich.—*Saw-Mill.*—August 10, 1869.

Claim.—1. The combination of the slides D, the guide-bars C, provided with horizontal slots *c*, embracing the studs B, and the cross-head *d*, when constructed, arranged, and operating as and for the purposes above described.

2. The levers F, the links E and G, the rocker-arm H, the rock-shaft I, the bearings *g*, and the hand-lever K, when arranged and operating as and for the purposes aforesaid.

93,418.—Samuel B. Cranford, Upper Marlborough, Md.—*Bee-Hive.*—August 10, 1869.

Claim.—1. The combination with the slides M, in the doors *a' a'*, of the wire gauze I, in the front of the hiving-box, substantially as and for the purpose specified.

2. The combination of the inclined cleats N, with the lower side edges of the hiving-box H, and with the sliding-bottom C, substantially as herein shown and described, and for the purpose set forth.

93,419.—Wilson Crawford, Streator, Ill.—*Ditching-Machine.*—August 10, 1869.

Claim.—1. The combination and arrangement of the front cross-bar A, longitudinal bars E F, short cross-bar G, rear cross-bar K, and wheels D and H, with each other, substantially as herein shown and described, and for the purpose set forth.

2. The combination of the detachable longitudinal bar I and elevator M with the axle C, of the wheel D, and with the frame K G E F A, substantially as herein shown and described, and for the purpose set forth.

3. The combination of the band P, pulley O, guide and tension-pulley Q R, guide-pulley S, drive-pulley T, shaft U, and bevel-gear wheels V W, with each other, with the shaft N, of the drive wheel H, and with the elevator M, substantially as herein shown and described, and for the purpose set forth.

4. The combination of the plow A' B' and bar or rod C', with the front cross-bar A, detachable longitudinal bar I, and elevator M, substantially as herein shown and described, and for the purpose set forth.

5. The combination of the plows A' B' and F' G', and rods or bars E' and H', with each other, and with the front cross-bar A and seat-frame Y, substantially as herein shown and described, and for the purpose set forth.

6. The combination of the levers L', lever spring-catches M', curved catch-bars N', and chains I', with each other, with the seat-frame Y, and with the plows A' B' and F' G', whether one or both of said plows are used, substantially as herein shown and described, and for the purpose set forth.

93,420.—William Dashner, Point Pleasant, W. Va.—*Gun-Lock.*—August 10, 1869.

Claim.—The improved gun-lock herein described, when all the parts are constructed and arranged substantially as specified.

93,421.—James D. Davies, East New York, N. Y.—*Sad-Iron Polisher and Glosser.*—August 10, 1869.

Claim.—The improved polishing and glossing implement A, provided with the polishing-surfaces B and C, and the glossing-sack for holding spermaceti or other similar substances, all substantially as specified.

93,422.—Alexander De Puy, New York, N. Y.—*Printers' Galley.*—August 10, 1869.

Claim.—A printers' galley, provided with tubular ribs B B B, filled with wood, D D, or composition, arranged and constructed as described, for the purposes set forth.

93,423.—William Derr, Tiffin, Ohio.—*Hay-Elevator.*—August 10, 1869.

Claim.—The master-wheel A, working in pinion

B, turning shaft C, in combination with loose spool D and ratchet-wheels E H, lever F, spring G, and rope M, arranged and operated substantially as described.

93,424.—JACOB DINGEE, Downington, Pa.—*Milk-Cooler.*—August 10, 1869.

Claim.—A milk-cooler, consisting of the vessels A, B, and F, the vessel B, having the vertical pipe C, the inverted conical cover *a*, and the supply-pipe D, while the vessel F is perforated near the rim, all substantially as and for the purpose herein shown and described.

93,425.—SAMUEL EASTER, Charlestown, Mass.—*Sash-Lock.*—August 10, 1869.

Claim.—The combination and arrangement of the flaring recess *e*, the bolt-bar *c*, the shaft *h*, pallet *g*, by means of which the bolts *a b* are actuated and secured in position either when projected or withdrawn.

93,426.—JOHN M. EATON, Charlestown, Mass.—*Composing-Stick.*—August 10, 1869.

Claim.—1. The formation of a longitudinal groove upon the inner face of the back, fitted to receive the head of a clamping-bolt, in such a manner that the gauge may be set at any desired point by slightly slacking the holding-nut, substantially as described.

2. In combination with the groove E, the use of the clamping-bolt F, and the thumb-nut G, arranged and applied substantially as described.

93,427.—JOHN FLEMING, Erie, Pa.—*Cooking-Stove.*—August 10, 1869.

Claim.—The registers D, as shown and described, in combination with the tubes E and A, constructed and operating substantially as and for the purposes set forth.

93,428.—JACOB AUGUSTUS FOLSOM, South Bend, Ind.—*Spurs for Excelsior Machines.*—August 10, 1869.

Claim.—The circular knives C, in connection with the arbor A, when constructed as described, and operating as spurs in machines employed in the manufacture of excelsior, substantially as set forth.

93,429.—CYRUS G. FRENCH, Springfield, Ill.—*Flasks for Vulcanizing Rubber Plates for Setting Teeth.*—August 10, 1869.

Claim.—1. The within-described flask, consisting of the rings or sections A and B, secured together by means of the spring-strips C, substantially as described, and for the purpose specified.

2. The spring-strips C, provided with the catches or detents *c*, when applied to the rings or sections A and B, or to said sections and the detachable cover A′, substantially as shown and described.

93,430.—J. W. GILLIAM, Elkton, Ky.—*Plow.*—August 10, 1869.

Claim.—1. The improved plow-supporting frame, constructed and arranged for adjusting the plows, substantially as specified.

2. The combination, with the said plow-supporting frame, of the plows E, provided with the branched shanks and hinged braces, substantially as specified.

93,431.—WILLIAM GOWEN, Bartlett, Tenn.—*Hand-Plow.*—August 10, 1869.

Claim.—1. The adjustable frame B, constructed as described, in combination with the beam A, as and for the purpose set forth.

2. The combination of the detachable shovel-plow C with the adjustable plow-frame B and beam A, substantially as herein shown and described, and for the purpose set forth.

3. The combination of the detachable turn-plow D, with the adjustable plow-frame B and beam A, substantially as herein shown and described, and for the purpose set forth.

4. The combination of the detachable scraper E with the adjustable frame B and beam A, substantially as herein shown and described, and for the purpose set forth.

93,432.—GEORGES GROS, Bordeaux, France.—*Pocket-Box for Percussion-Caps, &c.*—August 10, 1869.

Claim.—The within-described metallic sliding-box, without hinges, formed in parts, adapted to be operated by the thumb and finger of one hand, and consisting of the body B, cover A, spring E, and stops *m* and *b*, constructed and arranged for joint operation, substantially as and for the purposes herein set sorth.

93,433.—C. B. GUY, Postville, Iowa.—*Velocipede.*—August 10, 1869.

Claim.—1. A velocipede, consisting of a reach, which has the semicircular extensions *a b*, in which the crank-shafts B have their bearings, and of the wheels C C and E, the wheels C being laterally adjustable, substantially as and for the purpose herein shown and described.

2. The saucer-shaped wheels C C, placed with their faces opposite, and adjustable substantially as herein shown and described, for the purpose as set forth.

93,434.—JOHN G. HAM, Newnan, Ga.—*Seed and Manure Dropper.*—August 10, 1869.

Claim.—The saws G, arranged as described, in combination with the fingers K, adjustable gates F, and hopper A, as specified.

93,435.—J. HENRY HAYWARD, New York, N. Y.—*Portable Gasometer.*—August 10, 1869.

Claim.—1. The movable piston-head or compresser, with its several parts, employed for the purpose of containing, hermetically retaining, compressing, and expelling the gas, in a uniform manner, by spring-power or its equivalent, substantially as described.

2. The center-rod and its several parts, applied for the purpose of guiding and supporting the movable piston-head squarely up and down the retort, without external friction; also, as it is applied, as a means of ingress and egress for the contents of the retort, through its center, at the top or botttom ends, essentially as set forth.

3. The sleeve-cup, and its several parts, employed for the purpose of preventing the closing of the vent-holes at the bottom of the rod, by the rubber sleeve-collar, for the purpose and by the means as substantially described.

4. The center-rod sleeve and its several parts, as applied in Fig. No. 1, and shown in detail in Fig. No. 5, used for the purpose of securing a movable gas-tight joint on the rod, without friction, in lieu of the ordinary methods of packing and stuffing, which may also be here employed, as herein set forth.

5. The second method of securing a movable gas-tight joint on the rod, with its several parts, as shown in Fig. No. 4, essentially as herein specified.

6. The peculiar method of uniting the lining or packing, with the head and bottom of sheet-metal, and thus securing a gas-tight joint between the two substances, as shown in Fig. No. 3, and herein fully described.

7. The method of suspending and fastening the swinging-apparatus, by the bottom cross-bars, to a moving body, essentially as set forth.

93,436.—HENRY HEBBARD, New York, N. Y.—*Finger-Guard for Holding Hot Corn.*—August 10, 1869.

Claim.—As my invention, the shield or guards B, with the handle A and points C, constructed substantially as shown and described, for the purpose of holding ears of corn.

93,437.—GEORGE H. HENKEL, Hartford City, Ind.—*Cab and Cradle.*—August 3, 1869.

Claim.—The combination of the extension-pieces H H, the adjusting-transverse pieces I, the prop G, lever F, rocker D, and posts E, the whole constructed and operating as described.

93,438.—JOHN HEUERMANN, Davenport, Iowa.—*Horse-Power.*—August 10, 1869.

Claim.—1. The sliding-shaft D, provided with four pinions, *d*, and coupling-cars D′, at each end, substantially as and for the purpose set forth.

2. In combination with the above, the stops E E, substantially as described.

93,439. — NEWELL HINMAN, Sparta, Mich.—*Horse Hay-Fork.*—August 10, 1869.

Claim.—The combination of the tines A and B, and the locking-dog F, when the said tines A constitute a bifurcated shank, C, and all arranged substantially as specified.

93,440.—JOHN P. HISLEY, Syracuse, N. Y.—*Buckle.*—August 10, 1869.

Claim.—A buckle, composed of frame A, *c c*, serrated cam *b*, and sliding tongue-plate D *d*, all constructed and operating as and for the purpose herein set forth.

93,441.—GEORGE H. HOLMES, New Brunswick, N. J.—*Take-Up for Looms.*—August 10, 1869.

Claim.—The slotted lever J, pawl *k*, ratchet-wheel J, gear-wheel G, the rod L, spring O, nut *p*, and arm *m*, the "lay" B, and cloth-beam F, of the loom, when arranged, with reference to each other, substantially as herein shown and described, for the purpose specified.

93,442.—JULIUS HUBBARD, Montgomery, Ohio.—*Lamp-Burner.*—August 10, 1869.

Claim.—The arrangement of the top A, the bottom C, the chamber B, and any proper wick passing through these parts into the oil of a lamp, and surrounded with salt in the chamber B.

93,443.—ROBERT HUMPHREY, Albany, N. Y.' assignor to himself and R. C. BLACKALL, same place.—*Railway Break-Block.*—August 10, 1869.

Claim.—The metallic wedge C, having its lower edge concave, and carrying the elastic block, arranged as described, for holding the rectangular link B in the transverse slot formed in the upper edge of the brake-shoe A, the wedge being held with its lower edge in contact with the lower bar of the link, by means of the bolt D, passing through the brake, wedge, and link, as herein set forth and shown, for the purpose specified.

93,444.—THOMAS E. HUNT, La Fayette, Ind.—*Sewing-Machine Table.*—August 10, 1869.

Claim.—The device C, for extending and forming a part of a sewing-machine table, as herein shown and described.

93,445.—ANTHONY ISKE, Lancaster, Pa.—*Reclining-Chair.*—August 10, 1869.

Claim.—1. The arrangement of the flange D, hooks E, open slots *a*, on the hinged pieces A^1, A^2, A^3, and A^4, in combination with the headed pins *b* and plates X, on the several parts B, F, C, and P, substantially in the manner shown, and for the purpose specified.

2. In combination with the said arrangement of the parts aforesaid, the perforated disk *f*, on part A^1 of the hinged frame, with the disk L, on the adjustable table-support I J K, with its binding-screw M, when constructed and applied in the manner and for the purpose set forth.

93,446.—C. S. JENKINS, Landsdale, Pa.—*Windmill.*—August 10, 1869.

Claim.—1. The wind-wheel, formed by the combination of the wheels C D and wings E, with each other and with the shaft A, substantially as herein shown and described, and for the purpose set forth.

2. The hub c^1 c^2 of the wheel C, formed in two parts, substantially as herein shown and described, and for the purpose set forth.

3. The detachably pivoted wings E, to the hub c^1 c^2, and to the rims c^3 d^2 of the wheels C D, substantially as herein shown and described, and for the purpose set forth.

4. The combination of the two-armed lever or shaft N, connecting-rod P, and forked lever O, with each other and with the vertical shaft H and hub d^1 of the wheel D, substantially as herein shown and described, and for the purpose set forth.

93,447.—P. C. JOHNSON, Central City, Colo.—*Horseshoe.*—August 10, 1869.

Claim.—The lugs *d*, when formed by the incisions in the side of the sliding-calks, and bent down into recesses in the raised portions, *a*, of the shoe, to form a locking-device, in combination with the dovetail connections *a a c*, all constructed, arranged, and operated as described.

93,448.—BENJAMIN JOHNSON, Carrollton, and WILLIAM JOHNSON, Hanover, Ohio.—*Cutter-Bar for Harvesters.*—August 10, 1869.

Claim.—1. The stationary cutters D, having their forward ends concave, the bar B, provided with the adjustable part *b'*, the cutters C, sickle-bar E, when all combined and arranged with the guards A, as herein shown and described, for the purpose specified.

2. The cutters or sickles C, extended in the rear of the sickle-bar E, in combination with the adjustable part *b'* of the bar B, substantially as herein shown and described, for the purpose set forth.

93,449.—HORACE K. JONES, Hartford, assignor to the HART MANUFACTURING COMPANY, Kensington, Conn.—*Machine for Graduating Carpenters' Squares.*—August 10, 1869.

Claim.—1. The combination of the cams G and bar F with the tool-holders H and tools I, when the parts are constructed and arranged substantially as herein described.

2. The combination of the bar F, spring *s*, tool-holder H, and gauge K, all constructed and arranged substantially as described.

3. The construction of the tool and socket, so that the edge of a tool fits into a V-shaped recess, the angle of which is in line with the working-point of the tool, substantially as and for the purpose herein described.

4. The arrangement of the several sets of tool-holders and tools upon the successive bars F, in the manner described, so that only one line is cut by the same graver, and the several lines of graduation are cut by successive tools, at certain distance to the right or left, substantially as herein described.

5. Regulating the length of the graduated lines, by means of the ends of the bars F acting upon the cams G, substantially in the manner described.

93,450.—EBENEZER L. KELLY, Reading, Mich.—*Grain-Separator and Clover-Cleaning Machine.*—August 10, 1869.

Claim.—The arrangement of the vibrating-bar A with the cords F, sheaves G, friction-rollers H, and sieve C, in any grain-separator or clover-cleaning machine, when operating substantially as and for the purposes herein described.

93,451.—J. A. KIRKPATRICK and G. W. HORNBY, Evansville, Ind.—*Apparatus for Drilling Metal.*—August 10, 1869.

Claim.—1. The combination of the ratchet-feed wheel C, pawl L, lever F, and operating pins I, in the driving-wheel, when all arranged as specified.

2. The combination, with the feeding-screw, ratchet-wheel, and pawl, of the rod N, block M, yoke Q, tripping-arm P, spring-holding plate O, and spring U, all substantially as specified.

93,452.—JACOB J. KISER, Sulphur Springs, Ind.—*Apparatus for Utilizing Wells as Refrigerators.*—August 10, 1869.

Claim.—1. The arrangement of the pump, in connection with a well-refrigerator, in such a manner that the pump will serve the purpose of a guide to the shelving C, a support to the central fixed guide-rod D, a support for the windlass F, and a stop to arrest the ascent of the shelving, substantially as before described.

2. The conical hood H of the shelving, constructed and arranged in such manner that the ascent of the shelving will open the hinged covers G of the well automatically, and maintain them in a position to be closed automatically by the descent of the shelving, substantially as before described.

3. The pump B, located as described, in combination with the refrigerator shelving C, the conical opening hood H, the stop *a*, to limit the ascent of the shelving, and the windlass F, for raising and lowering the shelving into the well, arranged and constructed substantially as before described.

93,453.—P. G. KLEINPETER, Plaquemine, La.—*Cane and Stubble Shaver.*—August 10, 1869.

Claim.—1. A cane-stubble shaver, consisting of the horizontal knife A, and vertical shank B, to be attached to the landside of a plow, substantially as and for the purpose herein shown and described.

2. The rake D, attached to the outer end of the stubble-shaver, substantially as and for the purpose herein shown and described.

93,454.—JAMES LARKIN, Detroit, Mich.—*Vise.*—August 10, 1869.

Claim.—1. The construction and arrangement of the jaws A B, actuating-screw D, provided with annular shoulders N O, and the sheath E, formed with a circular collar at one end, all fitted together, substantially as described.

2. The combination of the screws D I, operated as described, to maintain the parallelism of the jaws, with the sheath *v*, for turning off chips, dirt, and refuse and falling material, as set forth.

93,455.—WILLIAM D. LEAVITT, New Orleans, La.—*Corn-Sheller.*—August 10, 1869.

Claim.—1. Terminating the shells by a series of fingers, 1, 2, 3, 4, 5, 6, and so disposing these fingers as that they shall pass between and interlock each other, substantially as shown and described, for the purpose set forth.

2. The combination of the shells A, when they terminate in fingers 1, 2, 3, 4, 5, 6, with a short upper jaw, D, and a flat spring, E, substantially as described, for the purpose set forth.

93,456.—JAMES E. LINES, Bryan, Ohio, assignor to himself and JOHN W. SMITH, same place.—*Clothes-Pin.*—August 10, 1869.

Claim.—A clothes-pin, formed of a single piece of wire, with one arm turned or twisted once or more around the other arm, and the ends flattened and resting against each other, substantially as shown and described, for the purpose specified.

93,457.—WILLIAM LONG, West Troy, and JAMES GARAND, Troy, N. Y.—*Bung.*—August 10, 1869.

Claim.—The cast-metal bush B, for bungs, having the flange *f*, recess *g*, screw-thread *s*, and projections *e*, when all the parts are constructed as described, for the purpose specified.

93,458.—WILLIAM LOTTRIDGE, Charles City, Iowa.—*Grain-Binder.*—August 10, 1869.

Claim.—1. The arrangement of the receiver E, griping or condensing jaws F F^1, twister G, and tucker L, as herein described, for the purpose specified.

2. The discharger M, constructed as described, in combination with the spring M^3, loose crank M^4, pin M^6, on the wheel M^5, and the slotted receiver E, substantially as described, for the purpose specified.

3. The arrangement of the griping-jaws F F^1 with relation to each other, and the lever F^4, yoke F^7, crank F^8, grooved supports, and slotted and fixed bearings, substantially as herein shown and described, for the purpose specified.

4. The arrangement of the twister G G′, with reference to the griping-jaws F F^1 and tucker L, whereby it is adapted to operate in the manner described, for the purpose set forth.

93,459.—T. A. MACAULAY, Northampton, Mass.—*Tension-Device for Sewing-Machine.*—August 10, 1869.

Claim.—1. The combination, with the disk *a*, of the disk *b*, having the covering rim, with the plate *d*, as and for the purpose set forth.

2. The combination, with a tension mechanism, constructed substantially as described, of the spring *e* and guard d^1, substantially as and for the purpose set forth.

93,460.—T. A. MACAULAY, Northampton, Mass.—*Needle-Holding Block for Sewing-Machines.*—August 10, 1869.

Claim.—The combination, with the needle-bar, of the needle-block *a*, having the slot d^3, and set-screw, by which it is attached to the needle-bar, and also provided with an opening and set-screw, for confining the needle, substantially as described.

93,461.—WILLIAM C. MARSHALL, Hartford, Conn.—*Bell-Rope Supporter.*—August 10, 1869.

Claim.—The construction of a bell-rope supporter, substantially as shown and described, as an improved article of manufacture.

93,462.—JAMES MCELROY, Allegheny City, Pa.—*Churn.*—August 10, 1869.

Claim.—1. The clip *o*, having a loose or removable jaw, *x*, adjustable by a stem, *t*, in a sleeve or socket, *n*, the latter being attached to a sliding-box, *l*, substantially as and for the purposes set forth.

2. In a churn-attachment, the sliding-box *l* and shaft *k*, adjustable in a rotating arm, *h*, in combination with a frame, *c*, so made as to be attached by a bracket, *b*, to the barrel of the churn, substantially as described.

93,463.—R. S. MERSHON, Zanesville, Ohio.—*Bobbin for Sewing-Machine Shuttles.*—August 10, 1869.

Claim.—As an article of manufacture, a shuttle-bobbin, having one of its projecting journals stationary, and the other arranged to move longitudinally in the bobbin, a spring to press on the movable journal, and a pin or projection in the bobbin, entering a groove in the movable spindle, to prevent its falling out, all constructed as described.

93,464.—M. MICKELSON, Ashland Mills, Oreg.—*Truck-Plow.*—August 10, 1869.

Claim.—1. The arrangement, together with the tongue and the frame, of the pivot-bolt D, yoke E, and set-screws F, all substantially as specified.

2. The combination, with the frame and axle, of the bent rod H, lever I, and levers M O, when arranged substantially as specified.

3. The axle, constructed in two parts, hinged together, and otherwise arranged as specified, for governing the plane of the truck, as described.

93,465.—C. W. MONSON, Upton, Iowa.—*Leather-Rolling Machine.*—August 10, 1869.

Claim.—The combination of the rollers A D, fixed housings B, movable housings E, and foot-treadle, when all arranged as specified.

93,466.—AUGUSTUS MOORE and JOHN AYLWERD, San José Mission, Cal.—*Carriage Pole and Shafts Combined.*—August 10, 1869.

Claim.—The device described, consisting of the thills *a a*, uniting to form the pole B, evener *f*, braces *c c*, and cap *g*, the whole being constructed, arranged, and operated in the manner described, for the purpose set forth.

93,467.—D. G. MORRIS, Catasauqua, Pa.—*Machine for Bending Car-Hooks.*—August 10, 1869.

Claim.—The combination of the former B, the straight forked lever G, and the roller I, which performs the double function of bending the turn of the hook and clasping ends thereof, successively, with the pair of retaining brackets D E, arranged out of line with the space between the said former and roll.

93,468.—FRANZ MÖRTH, Vienna, Austria.—*Combined Furnace and Steam-Generator.*—August 10, 1869.

Claim.—1. The combination and arrangement of the boilers *a b c*, with each other and with the furnace thereof, substantially as herein set forth.

2. The arrangement of the hot-air space or chamber with the upper surface of the boilers *a* and *c*, with reference to each other and the hot-water boiler *b*, when constructed substantially as herein described.

93,469.—ROBERT DAVID NAPIER, Birkenhead, England.—*Brake for Machinery.*—August 10, 1869.

Claim.—The within-described arrangement of the pins or joints *c f g*, relatively to each other, and to the lever *c*, brake-band *b*, and wheel *a*, so that as the end joined to *g* is tightened, the end joined to *f* is slackened, but to a less extent, for the purposes herein set forth.

93,470.—A. Onslow, Jersey City, N. J.—*Exhaust-Nozzle Valve Device.*—August 10, 1869.

Claim.—1. In combination with a valve for closing the exhaust-nozzle of a steam-engine, the auxiliary cylinder F, with its piston K, and with the mechanism connected therewith for operating the valve, substantially as shown and described.

2. The cylinder F and piston K, in combination with the passage L, whereby to open and close automatically the exhaust-nozzle of a steam-engine, substantially as herein described.

93,471.—D. K. Overhiser, Williamsport, Pa.—*Churn-Dasher.*—August 10, 1869.

Claim.—The tubes D and E, fitted one within the other, and provided with the holes *d e* and pin E^2, or its equivalent, combined and arranged as represented, relatively to each other, and the parts A and A′ of the rod, or handle of the churn-dasher, as and for the purposes herein set forth.

93,472.—P. C. Perkins, Mishawaka, Ind.—*Windmill.*—August 10, 1869.

Claim.—1. A windmill, so constructed and arranged that the wind-wheel may, by turning upon its vertical axis, have its face brought into a parallel or nearly parallel line with the sides of the vane or rudder, substantially as and for the purpose set forth.

2. Arranging the wind-wheel, or wind-receiving surface, upon the arms or frame H, at one side of the center of its vertical axis, substantially as and for the purpose set forth.

3. The arrangement of the rudder, with reference to the socket F and frame or support E′, substantially as and for the purpose set forth.

4. The combination and arrangement of the socket F, frame or arm H, lever G, and cam *c*, substantially as and for the purpose specified.

5. The combination and arrangement of the rudder C, rope or chain K, pulleys *b* and *b′*, and rod K′, substantially as and for the purpose specified.

6. The combination of the eye-bolts *e*, pipe I′, and the frame A, substantially as and for the purpose specified.

93,473.—Charles A. Peterson, New York, N. Y.—*Piano-Forte.*—August 10, 1869.

Claim.—The plates I, having the supporting-studs *c*, formed on their under sides, and provided on their upper surface with the agraffes J and central block or wire rest K, all constructed and arranged as herein shown and described, and for the purpose set forth.

93,474.—W. Gray Phillips, Brooklyn, N. Y.—*Police-Nipper.*—August 10, 1869.

Claim.—An improved police-nippers, formed by the combination of the two parts A B, and spring-catch C, with each other, said parts being constructed, arranged, and operating substantially as herein shown and described, and for the purposes set forth.

93,475.—L. C. Prindle, Chicago, Ill.—*Newspaper-File.*—August 10, 1869.

Claim.—1. The band-clasp B, when constructed and operating in a filer, substantially as and for the purposes specified.

2. The wire E, when constructed and operating in a filer, substantially as and for the purposes shown and described.

93,476.—C. H. Proessdorf and E. Bauch, Boston Highland, Mass.—*Woven Hose for Water, &c.*—August 10, 1869.

Claim.—As an improved article of manufacture, woven hose or water-pipe, made water-tight by the compound herein set forth.

93,477.—William J. Rand, Brooklyn, E. D., N. Y.—*Process of Preparing Iceland and Irish Moss for Use in Food.*—August 10, 1869.

Claim.—1. Both Iceland moss and carrageen, ground, powdered, cut up, shredded, or in any manner disintegrated or dissolved, and prepared either in its natural state, or mixed with sugar, or any other edible substance or substances suitable for the purpose set forth, and put up in packages, for the convenience of the consumer and the trade, as a new commercial article.

2. The above-described processes, substantially as and for the purpose set forth.

93,478.—William J. Rand, Brooklyn, E. D., N. Y.—*Manufacture from Iceland Moss and Carrageen.*—August 10, 1869.

Claim.—Iceland moss and carrageen, cleansed and put up in suitable packages or boxes for the consumer and the trade, as a new commercial article.

93,479.—George W. Rogers, New York, N. Y.—*Stair-Rod.*—August 10, 1869.

Claim.—As an improved article of manufacture, the combination of the pins *b*, firmly inserted in the inner ends of the recesses *a*, with the pins *c*, having eyes to receive the pins *b*, as herein described, for the purpose specified.

93,480.—Israel M. Rose, West Hampton, N. Y.—*Embroidering-Attachment for Sewing-Machine.*—August 10, 1869.

Claim.—1. The embroidery-attachment to sewing-machines, when composed of the vibrating-arm E, oscilating pinion C, hook *c*, and rim *a*, all arranged in connection with the presser-foot, or its equivalent, substantially as described, and operating as set forth.

2. The combination of the swinging-plate E, with the reciprocating needle-carrier, the former being arranged with reference to the latter, and being operated thereby, substantially in the manner specified, to vibrate, directly or indirectly, an annular ring, pinion, or hub, provided with a hook thereon, as set forth.

93,481.—Augustus Ruoff, Detroit, Mich.—*Metallic Bung with Automatic Vent.*—August 10 1869.

Claim.—As a new, cheap, and superior article of manufacture, the metallic bung with automatic vent, herein described, consisting of the annular ring A, the bung D, provided with vent-hole F, and valve H.

93,482.—Samuel I. Russell and James H. Cole, Chicago, Ill.—*Roofing Composition.*—August 10, 1869.

Claim.—A roofing composition, composed of the substances herein specified, and prepared substantially as described.

93,483.—Thomas Ryan, Scott Bar, Cal.—*Process for Forming the Hub and Spokes of Wrought-Iron Wheels.*—August 10, 1869.

Claim.—Constructing the hubs and spokes of wheels of a single piece of metal, by substantially the method described.

93,484.—John F. Seaman, Cortlandville, N. Y.—*Carriage-Jack.*—August 10, 1869.

Claim.—The construction and arrangement of a wagon-jack, consisting of the lever B, having the slot D, with a shoulder beveled from the upper side, and a cavity or depression on the under side, at the inner terminus of the slot, the step C, and the tapering double-notched standard-board A, all arranged as and for the purpose set forth.

93,485.—Henry F. Shaw, West Roxbury, Mass.—*Mechanical Movement.*—August 10, 1869.

Claim.—As a new mechanical movement, the series of cams C C′ C″, actuating a corresponding fluted bar or compound wheel, substantially as described, and for the purpose set forth.

93,486.—Henry F. Shaw, West Roxbury, Mass.—*Clutch.*—August 10, 1869; antedated August 5. 1869.

Claim.—The eccentric L, operating substantially as described, and for the purpose set forth.

93,487.—John Shaw, Clayton, Del.—*Weather-Strip.*—August 10, 1869.

Claim.—The hinged flap F, adapted to be thrown up by the threshold D, when the door is swung open, and held against the shield E by means of the hook formed upon the sliding-spring rod G, catching under

the plate *h*, attached to said flap, as herein shown and described.

93,488.—GILBERT SMITH, Highland Falls, N. Y. —*Clothes-Wringer.*—August 10, 1869.

Claim.—1. In a twisting wringer, the hollow sliding-ring D, adapted to receive the clothing through its interior into the net-work M *m*, as herein specified.

2. In combination with a twisting wringer, the inclined trough B, jaws B^1, and set-screws C, adapted to support the parts B B^1 B^2, M *m*, and twisting means E G H, all combined and arranged as and for the purposes herein set forth.

93,489.—MARIE T. SMITH, New York, N. Y.—*Corset-Fastening.*—August 10, 1869.

Claim.—The hooked-shaped clip for corsets, constructed as described, and arranged to protrude through the seam formed upon the edge of the corset and extend back over the busk, in the manner herein set forth, for the purpose specified.

93,490.—WILLIAM M. SMITH, Augusta, Ga.—*Hoisting-Machine.*—August 10, 1869.

Claim.—1. The combination of the differential pulley-blocks A B and C D, and the peculiar arrangement of the endless ropes K and L, with operating devices, substantially as and for the purposes herein set forth.

2. In combination with the above, the driving-pulleys T and W, driving-wheel H, gear-wheels Z and *d*, substantially as described.

3. The spring-clamps, represented by Figs. 4 and 5, substantially as and for the purposes herein set forth.

93,491.—NICOLOUS SODERSTROM, Chicago, Ill. —*Mangle.*—August 10, 1869.

Claim.—The combination of the roller J, provided with bearings K, sliding-block L, spiral springs N, stationary block M, block O, screw S, India-rubber springs *x*, block P, and friction-wheels R, with the roller G, provided at either end with crank-handles H, and rotating upon friction-wheels F, and with the roller D pivoted in bearings, which support friction-wheels F, and rest upon spiral springs E, which in turn rest upon a suitable block, and rotating upon friction-wheels C, pivoted upon a suitable block, resting upon India-rubber springs B, which in turn rest upon a suitable block, and with the hinged table-leaves T, all in connection with frame A, constructed and arranged as and for the purposes above set forth.

93,492.—ISAAC H. SPENCER, North Providence, R. I., assignor to ALBERT N. BULLOCK, ALVA C. BULLOCK, and EDWIN R. CLARK.—*Turning-Lathe.* —August 10, 1869.

Claim.—1. The semicircular cutter D, in combination with the cutter-bed C and the vertical carriage B, or their equivalents, when constructed and operating substantially as described.

2. The auxiliary cutters E, in combination with the cutter D, when arranged to operate substantially as described, for the purposes specified.

93,493.—LUCAS STADLER, Bowen, and WILLIAM H. STAATS and AUGUST C. SCHWANKE, Le Prairie, Ill.—*Stalk-Cutter.*—August 10, 1869.

Claim.—1. The shaft E, provided with cutters F and arms G, in connection with the drag-teeth D, frame C, truck A, pulleys B and H, and the belts R, when arranged and operating substantially as and for the purposes herein set forth.

2. In combination with the above-named parts, the bars L and M, caster-wheel N, and lever O, when constructed and operating substantially as and for the purposes described.

93,494.—ANREW JACKSON STEVENS, San Francisco, Cal.—*Steam-Cultivator.*—August 10, 1869.

Claim.—1. The revolving plow-cylinder, having the plows secured thereon, and adjustable in the pedestals, and the system of gearing transmitting motion between the engines, the plow-cylinder, and the driving-wheels, in combination therewith, substantially as herein described, and for the purposes as set forth.

2. The adjustable frame of knives, (set in rear of plow-cylinder,) which slides up and down on the guide-bars, constructed substantialy as herein described, and for the purposes as set forth.

93,495.—JAMES B. STOREY and ISAAC N. ROSS, Butler, Pa.—*Sled-Brake.*—August 10, 1869.

Claim.—The adjustable dogs 5, pivoted to the cranks or elbows 4 of the rock-shaft 3, which has also a center-crank or elbow, to which is pivoted the connecting-rod 9, jointed to the elbow 7, on the sliding-roller 2, all constructed, combined, and arranged as herein shown and described.

93,496.—DANIEL B. STRONG and WILLIAM BUSKIRK, Winchester, Mo.—*Shingle Machine.*—August 10, 1869.

Claim.—The gauge-plate L, in combination with the spindle *b*, slots *f f*, set-screws *e e*, and temper-screws *d d d d*, substantially as and for the purposes set forth.

93,497.—WILLIAM H. SWEETLAND, Marblehead, Mass.—*Pegging-Jack.*—August 10, 1869.

Claim.—The disk C, ratchet R, and dog *s*, when applied to a pegging-jack, substantially as and for the purposes specified.

93,498.—N. A. THORNTON, Conikee, Ala., assignor to himself and MILES L. THORNTON, Lumpkin, Ga.—*Tanning Composition.*—August 10, 1869.

Claim.—In a tanning liquor, the combination of catechu, common salt, and sulphuric acid, in the proportions and manner herein described.

93,499.—THEODORE R. TIMBY, Saratoga, N. Y. —*Toilet Pin-Case.*—August 10, 1869.

Claim.—The toilet pin-case herein described, consisting of a box or receptacle, B, a diaphragm, D, to receive the pins, and a sliding-bottom, F, to elevate or support them, substantially in the manner set forth, either with or without the cover C.

93,500.—WILLIAM TOWNSEND, Seneca Falls, N. Y.—*Loom.*—August 10, 1869.

Claim.—1. The governors F and G, constructed as described, and acting in combination directly with the harness-frames, substantially as herein set forth, for the purpose specified.

2. The sliding-plate *u*, and the parts connected therewith, and marked *a' e' c' v z x*, in combination with the harness or heddle-frames of a loom, arranged substantially as described, for the purposes specified.

3. The friction-plate *f'* and spring *h'*, in combination with the heddle-frames, arranged substantially as and for the purposes described.

4. The combination of the bar D and rock-bars *h h* with the governors F G, arranged as herein described, for the purpose specified.

93,501.—JOHN E. TREAT, Oxford, Mich.—*Permutation-Padlock.*—August 10, 1869.

Claim.—1. In combination locks, the grooved lip N and the hasp A, when provided with the flange O, arranged and operating in the manner and for the purpose herein set forth.

2. In combination with the above, the lock-bar B, provided with studs H, the slotted bolt C, and pin *c*, collars D, G, and E, and bolt-stud *d*, the tumblers F, provided with the recesses I, slots J, and feathers L, and the combination rings K, with their slots M, when constructed, arranged, and operating substantially as and for the purposes herein shown and specified.

93,502.—CALVIN G. UDELL, Chicago, Ill.—*Extension-Ladder.*—August 10, 1869.

Claim.—The combination of the ladders A and D, the strip C, and pieces K, for the purpose of locking the tops of the ladders together, when used as a step-ladder, when constructed and operating substantially as herein set forth.

93,503.—THOMAS W. VAN TASSEL, Washington, D. C., assignor to himself and WILLIAM BEAMAN, same place.—*Bird-Bath.*—August 10, 1869.

Claim.—Constructing a bird-bath of glass, wood,

and isinglass, consisting of the frame A B C D, filled with glass and isinglass, with an aperture therein for the entrance of the bird, and a door in the roof thereof, for supplying the bath with water, substantially as and in the manner described.

93,504.—JOHN H. VICKERS, Norwich, Conn., assignor to NORWICH LOCK COMPANY.—*Combined Knob Latch and Lock.*—August 10, 1869.

Claim.—Pivoting the tumblers of a tumbler-lock upon the hub C of a knob-latch, mechanism combined therewith to facilitate the manufacture and the compactness of the combined mechanism, as herein set forth.

93,505.—JOHN A. WELLS, Holly Springs, Miss.—*Can-Opener.*—August 10, 1869.

Claim.—The frame A, adjustable holding-lever D, screw B, and cutter C, constructed, arranged, and operating in combination with each other, substantially as herein shown and described, for the purposes set forth.

93,506.—CHARLES A. WENTWORTH, Boston, Mass., assignor to ALVIN C. NORCROSS, same place.—*Key Ring and Check.*—August 10, 1869.

Claim.—An improved key-ring, formed by the combination of the open ring A and washers B and C with each other, said parts being constructed and operating substantially as herein shown and described, and for the purpose set forth.

93,507.—EDWARD WIARD, Louisville, Ky., assignor to B. F. AVERY, same place.—*Expanding Double-Shovel Plow.*—August 10, 1869.

Claim.—1. Adjustably connecting the plow-standards to the plow-beam, by means of sockets, formed in the upper ends of said standards, and the hollow spindles E, substantially as herein shown and described, and for the purpose set forth.

2. The plow-standards C, made of a thin plate, with a flange upon both sides of its forward edge, substantially as herein shown and described, and for the purpose set forth.

3. The slotted brace-rods F and posts or arms G, in combination with the standards C and beam A, whether said braces be placed in front or rear of said standards, substantially as herein shown and described, and for the purpose set forth.

4. An improved expanding double-shovel plow, formed by the combination of the plows D, standards C, hollow spindles E, brace-bars F, posts or arms G, beam A, and handles B, with each other, substantially as herein shown and described, and for the purposes set forth.

93,508.—H. C. WILCOX, West Meriden, Conn., assignor to the MERIDEN BRITANNIA COMPANY, same place.—*Casket-Handle.*—August 10, 1869.

Claim.—The thin metal tube, combined with the levers *b*, each having a boss, *b'*, and with the screw-bolt *e* and nuts *f*, substantially as shown and described.

2. The casket-handle, as shown and described, and consisting of the parts enumerated in the preceding claim, and combined with the plates *a*, for receiving the fulcrum-pins, as a new article of manufacture.

93,509.—WILLIAM H. WOODS, San Francisco, Cal.—*Device for Operating Cocks or Steam-Cylinders.*—August 10, 1869.

Claim.—The inclined bars D, slotted arms C C, set-screws G G, and valves F F, arranged as described, and operating in the manner and for the purpose set forth.

93,510.—AARON G. AIKIN, Somerton, Ohio.—*Combined Corn-Planter and Cultivator.*—August 10, 1869.

Claim.—1. In connection with the shaft R, slide K, lever Q, and rock-shaft T, constructed to operate as described, the upright bent arm *u*, when made vertically adjustable, substantially as and for the purposes specified.

2. The device for raising and depressing the plows, seed-box, &c., the same consisting of the rock-bar O, lever L, and eccentrics *i i*, the latter being so constructed as that, when the lever L is thrown down against the axle, the bearing-point of the eccentrics runs forward of the vertical line of its upper end, and forms a lock, as and for the purpose specified.

3. In connection with a seed-planter, and for the purpose of operating as a covering-plow, the plows J J, when constructed with the parts v v^1 v^2, and supported by the part *n*, all constructed and arranged substantially as described.

93,511.—J. F. ANDREWS, Lancaster, Pa.—*Sewing-Machine.*—August 10, 1869.

Claim.—1. The combination, with the needle-bar E, of the portions d^2, d^3, d^4, and the sliding-socket d^1, for operating the needle-bar, substantially as and for the purpose described.

2. The tension-spring F, with its adjusting screw F^1 and projection F^2, in combination with take-up f^1 and pivoted arm f^1, all arranged and operating substantially as described.

3. The shuttle-operating shaft D^1, having the adjustable nut d^7, in combination with socket d^1, as and for the purpose set forth.

4. The needles e^3 and e^4, in combination with the looper e^2, and with its arms, e, e^1, e^2, and adjusting-screws e^6, with clutch E, constructed, arranged, and operated substantially as described

5. The needle-bar E^2, the portions d^2 d^3 d^4, rod D^1, arm D^2, shuttle-carrier D^3, and rods d d, when combined and arranged as and for the purpose described.

93,512.—JAMES B. AUSBOURNE, Milwaukee, Wis., assignor to himself and HIRAM MALLORY, same place.—*Lifting-Jack.*—August 10, 1869; antedated August 5, 1869.

Claim.—A lifting-jack, consisting of fulcrum-post A, lifting-beam B, lever C, and check D, when constructed to operate substantially as described.

93,513.—ARMAND BANARÉ, Paris, France.—*Speed-Indicator for Ships.*—August 10, 1869.

Claim.—1. The arrangement of the revolving helix and air-cylinder, with which it is combined, in a frame connected with the vessel in the manner specified, and consisting of guards and blades, constructed and arranged as herein described, so that the apparatus, while floating independently of the vessel, and following in its wake, may be maintained in proper position to communicate accurate movement to the register, as shown and set forth.

The combination, with the submerged air-cylinder, of the brass casing for the same, constructed as described, so as to protect the cylinder from the force of the water, at the same time that the water is admitted around the cylinder, as and for the purposes stated.

93,514.—JOHN BEAL, Port Gibson, N. Y.—*Implement for Slitting and Joining Rags for Carpets.*—August 10, 1869.

Claim.—The implement for slitting and looping the ends of rags, herein described, composed of the knife D, the rest E, and the post or stem F, combined and constructed substantially as set forth.

93,515.—WILLIS S. BRONSON, Hartford, Conn.—*Base-Burning Stove.*—August 10, 1869.

Claim.—1. The horizontal radiating flues d d^1 d^2, more or less in number, constructed substantially as described, in combination with a fuel-magazine, *b*, air-passage *i*, conducting-tubes *f*, substantially as set forth.

2. The combination of the system of horizontal radiating flues d, d^1, and d^2, and pipe *h*, with a direct-draught pipe, h^1, arranged to operate substantially as set forth.

93,516.—WILLIS S. BRONSON, Hartford, Conn.—*Base-Burning Cook-Stove.*—August 10, 1869.

Claim.—1. The magazine *d*, elongated, and shelving at its bottom substantially as set forth.

2. The arrangement of a water-reservoir, *j*, beneath the oven, and back of the fire-pot, substantially as set forth.

3. A hot-closet, *k*, arranged back of the water-reservoir *j*, and beneath the oven, substantially as set forth.

4. The arrangement of the fire-pot *e*, fuel-magazine *d*, oven h^2, reservoir *j*, and hot-closet *k*, substantially as set forth.

5. The flues h^5, arranged substantially as shown and set forth.

93,517.—Mary E. Capen, Aurora, Ill.—*Stove-Attachment.*—August 10, 1869; antedated August 3, 1869.

Claim.—The stove-attachment shown, consisting of the brackets C, set-screw *g*, one or more perforations, *f*, and one or more projections, *d*, all constructed substantially as set forth, and for the purpose described.

93,518.—William H. T. Clark, San Francisco, Cal.—*Stuffing-Box.*—August 10, 1869.

Claim.—The movable cylinder D, with the inclosed disks *b b*, rings *d*, and the elastic disks *h*, substantially as herein described.

93,519.—John J. Clark and Thomas Clark, Elgin, Ill.—*Rabbeting-Machine.*—August 10, 1869.

Claim.—The laterally adjustable cutter-heads F F^2, in combination with the hinged table L, curved spring-frame P, and guide *m*, when all the parts are constructed and operated as described, for the purpose set forth.

93,520.—Francis Cramer, Chess Springs, Pa. *Horse Hay-Fork.*—August 10, 1869.

Claim.—A horse hay-fork, consisting of the tines A A, with handles B B, having rings G G, the lugs C C, toggle-levers E E, link F, clevis D, and cords H H, when all are constructed, arranged, and operating as described.

93,521.—Loring Coes, Worcester, Mass.—*Monkey-Wrench.*—August 10, 1869.

Claim.—The combination of the thrust-bearing of the screw, the tongue, the nut at the end of the tongue, the strut, (interposed between the thrust-bearing and the nut,) and the handle, the whole constructed to operate substantially as before set forth.

93,522.—Isaac F. Davis, Rockford, Ill.—*Nail-Extractor.*—August 10, 1869.

Claim.—The implement described, consisting of the shanks A A′, having the jaws D D′ and head C, when arranged to operate as and for the purpose set forth.

93,523.—Jonathan Dennis, Jr., Washington, D. C.—*Distilling Alcoholic Spirits and Liquors.*—August 10, 1869; antedated February 10, 1869.

Claim.—1. Injecting and mixing or mingling atmospheric air or gas with the alcoholic vapor while it is in an aeriform or gaseous state, and before it is condensed, for the purpose of neutralizing or destroying the fusil-oil and other deleterious oils and gases, and giving the liquor so distilled the quality technically termed age by liquor-dealers.

2. Inserting a pipe into the goose-neck of the still, or into the pipe that connects the still or retort with the worm or condenser, to conduct air or gas into the vapor or gaseous products of distillation, by the suction of the vapor from the still, or to convey the air from an air-pump, bellows, or other air-propelling device, into the vapor distilled, before it is condensed.

3. Arranging the mouth of the pipe that conducts the air into the goose-neck or pipe, from the still or retort to the worm or condenser, so that the blast of air blown in shall propel the vapor forward in the goose-neck or pipe, toward and through the worm or condenser, substantially as described.

4. Introducing the air or gas into the vapor, at such a temperature as will render it the most available in acting on the vapor from the retort, to produce the greatest benefit to the product of distillation.

5. Utilizing the air or gas blown in, or introduced into the vapor, to improve the product of distillation, by using it to propel the vapor or products of distillation forward into and through the worm, or through the worm or condenser, substantially as described.

6. In combination with the introduction of air or gas into the alcoholic vapor or products of distillation, the application and use of an air-pump, fan, or other pneumatic device, to draw the vapor from the retort, and force it into or through the worm or condenser.

7. Arranging an ice-box at the end of the condenser, to condense whatever may remain in the vapor or air flowing from the water-condenser that is capable of being condensed at the temperature of the ice-box.

93,524.—Charles Dold, Mason, Ohio.—*Wagon-Brake.*—August 10, 1869.

Claim.—In a wagon-brake, constructed as described, the spring D, lever A *a*, and spring-pawl G *g′ g* H, constructed, arranged, and combined substantially in the manner and for the purpose set forth.

93,525.—William B. Eltonhead, Philadelphia, Pa.—*Match-Machine.*—August 10, 1869.

Claim.—1. The screw-shafts K K and K′, gear-wheels K‴, nuts H‴, knife-table H″, knives I, in combination with shaft C, having grooved cams J J, rock-shafts J′ J′, with their arms, pawls, and ratchet-wheels *l l*, constructed and arranged to operate together, in the manner and for the purpose substantially as described.

The combination of the main-shaft C, gear-wheel C′, shaft D, sliding grooved cam E, rock-shaft G, and its arms, screw-shaft H, nut H′, knife-table H″, and knives I, constructed and arranged to operate together, in the manner and for the purpose described.

3. Slot X, in the rim of revolving-wheel B, having spring-plates *b b* and screw-bolt *b′ b′*, arranged to operate in the manner and for the purpose substantially as specified.

4. The combination of screw-shafts L L, nuts L′ L′, push-rods L″ L″, and ratchet-wheels Q Q, when constructed to operate in the manner and for the purpose substantially as described.

93,526.—Jeremiah Fisher, Reading, Pa.—*Treating Clay and Drying Bricks.*—August 10, 1869.

Claim.—The arrangement, herein described, of the two-storied structure, as shown, provided with the clay-pit C, pug-mill D, truck L, elevator E, with its turn-table M and hoist F, hot-air cap G, with its fans I J, and traveling-windlass H, upon its tracks *c c*, all constructed and operated substantially as and for the purposes herein set forth.

93,527.—George Gibbons, Meriden, Conn.—*Addressing-Machine.*—August 10, 1869.

Claim.—1. The mode of mailing or directing newspapers or periodicals simultaneously with the printing of the same, substantially in the manner and for the purpose as herein set forth and described.

2. The hinged links *a a a*, each bearing a subscriber's name, in combination with the block E and feeding-device F, when applied to any hand cylinder, or revolving-type printing-machine, in the manner and for the purpose substantially as herein described.

93,528.—Thomas S. Gilbert, Birmingham, Conn., assignor to himself and George F. Bushnell, same place.—*Corset.*—August 10, 1869.

Claim.—1. A corset, formed of a series of tapes, provided with pockets for stays, connected together with gore-pieces, substantially as described.

2. In combination therewith, a zone, provided with vertical pockets, for the reception of the corset-stays, substantially as described.

93,529.—M. L. Gorham, Rockford, Ill.—*Seeding-Machine.*—August 10, 1869.

Claim.—1. A seed-distributing wheel, B, with that portion of its periphery between the seed-cups beveled upon one side, for the purpose set forth.

2. A seeding-wheel, B, constructed with hub-ends clutched, to receive clutched stirrers, secured to shaft *b*, as and for the purpose set forth.

3. Spout E, and trough *h*, in combination with seed-distributing wheel B, as and for the purpose set forth.

4. The hood *l* and pin O, in spout E, as and for the purpose set forth.

93,530.—E. S. Gregory, Lockport, N. Y.—*Cultivator.*—August 10, 1869.

Claim.—The slotted metal plate D, constructed as described, in combination with the clamp-screw *f*, and bars *g g*, arranged to operate substantially in the manner and for the purpose specified.

93,531.—John Cornell Hackett, Sacramento, Cal.—*Passenger and Station Register.*—August 10, 1869.

Claim.—The combination with the station-indicator C, of the registering-device, consisting of the perforated rim D, and springs L and K, operated by the eccentrics M and N, connected with the car-seats, the whole being constructed and arranged substantially as described, for the purposes set forth.

93,532.—Ivory C. Ham, Charlestown, Mass.—*Device for Attaching Traces to Vehicles.*—August 10, 1869.

Claim.—The hollow bolt A, with its shoulders *b b*, and its nut C, in combination with the bar D, provided with a T-shaped hook, *h*, and the spring *c*, when the same are constructed and arranged, in reference to each other, substantially as and for the purpose described.

93,533.—George Haneline, Akron, Ohio.—*Animal-Trap.*—August 10, 1869.

Claim.—The jaws B B′ and trip E, as arranged, in combination with the ring A, and operated by the spring C, in the manner substantially as described, and for the purpose set forth.

93,534.—Carl Hinz, San Francisco, Cal.—*Mortising-Chisel.*—August 10, 1869.

Claim.—The combination, with a mortising-chisel, A, of an adjustable chisel, D, the parts being constructed and arranged substantially as described.

93,535.—John Hughes, Buchanan, Pa.—*Lantern.*—Augnst 10, 1869.

Claim.—1. The combination and arrangement of the external spring-catch G G′, the hinge *b*, the base-ring *a* of the guard-frame, and the removable or loose globe A, the whole being constructed as described, and so operating that, by a pressure of the thumb upon the spring in an outward direction, the globe-guard will be uncatched from the oil-reservoir stand, and can be turned over on its hinge a full half-circle, and the globe removed for cleaning, and then, by turning it back, the outward pressure of the base-ring upon the spring-catch will force said catch out of the way, and said ring fall below the hook of the catch, and be caught and retained thereby in a firm manner, all as set forth.

2. The combination of the base-ring *a*, which is straightened at the point where it is hinged to the flange *e*, with the said flange, which is constructed to support said ring at all points, and also the portion *g* of the glass globe, and with the external spring catch G G′, all arranged, constructed, and operated in the manner herein described and shown.

93,536.—James M. Keep, New York, N. Y.—*Copying-Press.*—August 10, 1869.

Claim.—1. Surrounding the screws D D with casings D′ D′, as and for the purpose specified.

2. Providing the platen B with lifting-stays E E E, as and for the purpose set forth.

93,537.—Luke Kellogg, Leon Centre, N. Y.—*Pump.*—August 10, 1869.

Claim.—The box *i*, provided with the valve *k*, in combination with the connecting-rod *h*, the said box and rod being arranged to operate in a horizontal direction, and with the lever *e*, connecting-rod *d*, handle *b′*, pump *b*, and passages *a′ a*, the latter passage being turned in a horizontal direction, so as to receive the box *i* and rod *h*, and fit the whole apparatus for use in shallow water, substantially as described.

93,538.—J. Dwight Kellogg, Jr., Northampton, Mass.—*Portable Cooking-Furnace.*—August 10, 1869.

Claim.—The combination of the cylinder A, fire-pot *a*, and pedestal *c*, as and for the purpose specified.

93,539.—Jacob Kemper, Philadelphia, Pa.—*Method of Weaving Galloon.*—August 10, 1869.

Claim.—The method herein described of weaving galloon, and raising thereon pile-loops, formed by laying the weft-threads around strands of horse-hair, or equivalent material, substantially as set forth.

93,540.—John Thomas Jones, New York, N. Y., assignor to the Singer Manufacturing Company, same place.—*Baster-Guide for SewingMachines.*—August 10, 1869.

Claim.—1. The baster-guide, hereinbefore described, consisting substantially of the combination of a set of traveling-points with a holding-plate, to maintain the engagement of the cloth with the points, substantially as before set forth.

2. The combination of the said set of traveling-points and holding-plate with a gauge, to determine the position of the cloth as it enters the implement, substantially as before set forth.

3. The combination of the said set of traveling-points and holding-plate with a gauge, to determine the position of the cloth as it leaves the implement, substantially as before set forth.

4. The combination of the said set of traveling-points to holding-plate, and the swinging-frame, substantially as before set forth.

93,541.—George G. Joyce, Baltimore, Md.—*Can-Opener.*—August 10, 1869.

Claim.—The guards or guides C C, when used in combination with the cutting-blades A B, substantially in the manner and for the purposes described.

93,542.—Alicia Lynch and Mary L. Moffat, Brooklyn, N. Y.—*Slate-Frame.*—August 10, 1869.

Claim.—The washers *c c′*, secured by the springs *a a*, in combination with the slate-frame, substantially in the manner and for the purpose set forth.

93,543.—B. F. McCarty, J. W. Orr, and R. J. Orr, Florence, Ga.—*Combination-Plow.*—August 10, 1869.

Claim.—The combination of beams A D F, spreaders I J, bolts N *m*, plow-standards E G O, bolt *r*, braces H H, standard C, and handles B B, all constructed to operate together, substantially in the manner and for the purposes set forth.

93,544.—Clark S. Merriman, Afton, Iowa.—*Submarine Clothing.*—August 10, 1869.

Claim.—1. The construction and arrangement of a submarine suit of clothing, with spaces intervening between the inner and outer linings thereof, and tubes connected with such spaces, so that the suit of clothing, or the several parts thereof, may be inflated, in the manner and for the purpose herein described.

2. The construction and arrangement of the jacket and pantaloons of a submarine suit of clothing, so that the lower portion of the jacket and the upper portion or waist-band of the pantaloons shall have firmly attached to them elastic pieces of India rubber, when the same is combined with a metallic band, with outwardly projecting flanges thereupon, surrounding the waist of the wearer, into which band the elastic rubber is fitted and adjusted, and secured therein by a belt or strap, in the manner and for the purpose herein described.

3. The supplemental head-piece F, in combination with a suit of submarine clothing, when the same is constructed and arranged in the manner and for the purpose herein described.

93,545.—Isaac M. Milbank, Greenfield Hill, Conn.—*Metallic Cartridge.*—August 10, 1869.

Claim.—1. The metallic disk *e*, having a cavity for the fulminate, in combination with the sheet-metal cartridge-case, when the said disk and case are united around the edges of the cavity, for the purposes and as set forth.

2. The disk, with a cup-shaped edge, when secured within the sheet-metal cartridge-case by solder or other adhesive material, as specified.

93,546.—Isaac M. Milbank, Greenfield Hill, Conn.—*Metallic Cartridge.*—August 10, 1869.

Claim.—1. A sheet-metal cartridge-case, in which the [illegible] is strengthened and stiffened by the metal

itself, that is melted to cause it to flow into intimate contact with the sheet-metal of said case, as set forth.

2. A tubular socket for the fulminate or cap, extending inward from the center of the sheet-metal base of the case, when combined with the metal melted around such socket and within the base of the metallic case, for the purposes set forth.

93,547.—GEORGE R. MOORE, Philadelphia, Pa.—*Valves for Water-Closet Pipes.*—August 10, 1869.

Claim.—1. The combination of the solid-headed valve-barrel A, projection E, packing P, cap I, and valve-stem B, substantially as and for the purposes herein set forth.

2. The aperture *o* and plug-screw *d*, combined and arranged, in relation to the chamber *c* and discharge-pipe G, substantially in the manner and for the purpose herein set forth.

3. The groove or enlargement *a*, constructed and arranged, in relation to the chamber *c* and packing *b*, substantially in the manner and for the purpose herein set forth.

93,548.—NICHOLAS V. MORELLE and LOUIS J. MORELLE, Newark, Wis.—*Stump-Extractor and Press Combined.*—August 10, 1869.

Claim.—In combination with a combined stump-puller and press, the arrangement and employment of the shaft E, rope or chin H, pulley I, pivoted frame c^2, pulley *k*, hook *h*, frame *m*, tub and plunger L, the frame, consisting of the parts A B C D, *a b*, and arms *e*, when the whole is constructed and arranged substantially as and for the purpose set forth, to operate as specified.

93,549.—H. W. NEAL, Sidney, Ohio, assignor to JASON MCVAY, same place.—*Plow.*—August 10, 1869.

Claim.—1. In combination with the swinging-beam E, lever *h'*, operating substantially as and for the purpose specified.

2. The foot-lever *g'*, pulley G, chain H, and swinging-beam E, all combined to operate substantially as and for the purpose specified.

3. The combination of foot-lever *h'*, with pivoted pawl *h* thereto, ratchet-wheels *e' f'*, pulley G, and pawl e^2, substantially as and for the purpose set forth.

93,550.—JAMES L. NELSON, Lewisburgh, W. Va.—*Churn.*—August 10, 1869.

Claim.—The combination of the balance-wheel C, shaft B, adjustable crank D, slotted lever G, and spring *h*, with the bench A, all arranged to operate substantially as herein shown and described.

93,551.—THEODORE OAKLEY, Booneville, N. Y.—*Clothes-Drier.*—August 10, 1869.

Claim.—The device described, consisting of the post *a a b b*, rivets *c*, bars *d*, steady-bar *e*, and cross-bar *f*, when the parts are arranged in such connection with each other that they may be folded into small space, as and for the purpose described.

93,552.—A. W. OWEN and JAMES BARNES, East Canton, Pa.—*Screw-Plate.*—August 10, 1869.

Claim.—Constructing screw-cutting dies *a a* on the enlarged extremities of the spring-forks *b b*, projecting from, but in one piece with, the stock A, and combining therewith the clamp *d* and set-screw *c*, substantially as described.

93,553.—HIRAM PLUMMER, Brooklyn, N. Y., assignor to himself and WILLIAM E. DOUBLEDAY & Co., New York City.—*Sewing-Machine.*—August 10, 1869.

Claim.—1. The feeding-clamp herein described, consisting of the upper spring-arm *d*, connected with the slotted sliding-plate *a'*, supporting the lower feeding-surface *c*, when all are constructed, arranged, and operated as described.

2. The gauge *l*, for the edge of the material, combined with the reciprocating feed, having two moving and pressing surfaces, one on each side of the material, substantially as set forth.

3. The gauge *o* and auxiliary presser *p*, in combination with the spring-clamping surfaces *c* and *d* as and for the purposes set forth.

4. The guide-slot *s* and pin *r*, in combination with the feeding-mechanism aforesaid, for the purposes set forth.

5. The feeding-mechanism, fitted to swing upon the pin that passes through the center of the coil of braid to be sewed, substantially as and for the purposes set forth.

93,554.—H. B. QUICK, Horicon, Wis., assignor to himself and HIRAM BARBER, same place.—*Device for Regulating the Feed in Seeding-Machines.*—August 10, 1869.

Claim.—The arrangement of the guide-pins and agitators I I, in connection with the slots in the metal-strip E, and the reciprocating-board C, substantially as and for the purpose specified.

93,555.—WILLIAM RIDDLE, 10 Larkhall Lane, England.—*Packing-Device.*—August 10, 1869.

Claim.—The combination of the flat band, having its ends formed into loops, without slitting, with a spear inserted through the loops, as described.

93,556.—DANIEL T. ROBINSON, Boston, assignor to WILLIAM B. WICKES, Sharon, Mass.—*Cabinet-Bedstead.*—August 10, 1869.

Claim.—1. In bureau-bedsteads, in which the bed-bottom consists of two portions hinged together, a spring, or the equivalent thereof, so applied and arranged as to contract and elevate the hinged portions, substantially as herein described, and for the purposes set forth.

2. The combination and arrangement of the door or cover *c* and leaf *d*, hinged together, and provided with the links *f f*, slotted ears *i i*, and the catch-bars *k k*, and socket *j j*, or their equivalents, in manner and for the purpose before explained.

93,557.—DANIEL T. ROBINSON, Boston, assignor to WILLIAM B. WICKES, Sharon, Mass.—*Extension Dining-Table.*—August 10, 1869.

Claim.—1. The combination of the movable auxiliary leaves of an extension dining-table, with its primary leaves or end-portions, in such manner that by turning of a shaft in one direction, such auxiliary leaves shall be automatically elevated into a plane horizontal with the said primary leaves and end-portion, and, when the shaft is turned in an opposite direction, shall be lowered beneath the closing primary leaves, in the manner substantially as herein described.

2. As a means of effecting the elevation of the auxiliary leaves, the duplicate series of lifting-grades, the traversing of such grades being effected by the racks *n o* and pinions *l l'*, or their equivalent devices, the whole being in manner and for the purpose substantially as before explained.

3. In combination with the auxiliary leaves *e e'*, and the primary leaves *a a'* and *b b'*, and their operating-mechanism, the spring-catches *f f'*, and *g g'*, operating in manner as explained.

93,558.—JOHN RUNYON, Marshall Township, and GEORGE INGERSOLL, Marshall, Mich.—*Plow.*—August 10, 1869.

Claim.—In combination with a plow, the coulter C, having its cutting-end *e* bent to land, at a suitable angle, and arranged relatively with the plow, substantially in the manner and for the purpose set forth.

93,559.—JAMES F. RUSSELL, Franklin, Ohio.—*Grain-Separator.*—August 10, 1869; antedated August 5, 1869.

Claim.—The combination and arrangement of fans M B, in relation to concave *b*, aprons *f g*, shoe *n*, and carriers C F, in the manner and for the purpose substantially as described.

93,560.—WILLIAM SANDERSON, New York, N. Y.—*Cutlery.*—August 10, 1869.

Claim.—The manufacture or formation of handles of a suitable core of composition, enveloped by a casing or covering, and the two united or connected and formed around the tang by compression, substantially as set forth.

93,561.—Edward Sauter, Hartford, Conn.—*Double Faucets.*—August 10, 1869.

Claim.—A double faucet, constructed and arranged substantially as herein described.

93,562.—Ph. I. Schopp, Louisville, Ky.—*Device for Holding Lids to Cups, &c.*—August 10, 1869.

Claim.—The device for attaching the cover, by means of the jointed ring A, rubber-packing B, and connecting-link C, when arranged to operate as herein described.

93,563.—H. Julius Smith, Boston, Mass.—*Electrical Machine.*—August 10, 1869.

Claim.—1. A generating-plate and a flat condenser, placed parallel to each other within the same casing, substantially as described.

2. A Leyden jar or condenser, constructed of vulcanized rubber and metallic plates, substantially as described.

3. So arranging the jar or condenser that the forward motion of the crank, to generate electricity and charge the jar, moves the jar forward through a small arc, whereby its terminals are moved away from the discharging-knobs.

4. The device for discharging the jar by the retrograde motion of the crank, bringing the posts 1 and 2 into contact with the projections from knobs V and W.

5. Placing the firing-points of the condenser at a distance from the collecting-points, substantially as described.

6. The stop X, limiting the forward movement of the jar, substantially as described.

7. The combination of a generating-plate, a condenser, and a casing, made air-tight, as described, by packing or a rubber band, together with knobs in the casing, and their projections, by which the condenser is discharged, substantially as described.

93,564.—Henry E. Stager, Milwaukee, Wis.—*Automatic Boiler-Feeder.*—August 10, 1869; antedated July 31, 1869.

Claim.—1. Valve H, diaphragms L and M, and ring I, arranged substantially as described.

2. The arrangement of the valve H with the yoke, resting on stem R, fulcrum E, and lever C, substantially as described.

3. Pipes F and G, in combination with valve H, sheets A and B, and ring I, whereby to increase and diminish pressure by alternations of steam and water, substantially as described.

93,565.—William H. Terpening and Clinton W. Terpening, Geneseo, Ill.—*Lamp-Extinguisher.*—August 10, 1869.

Claim.—As a new article of manufacture, the within-described extinguisher, consisting of the sections C and C, stems *c* and *c'*, star-wheel D, and shaft *d*, all constructed and arranged to operate substantially as and for the purpose shown.

93,566.—Jonas Tramblie, Sandwich, Ill.—*Washing-Machine.*—August 10, 1869.

Claim.—The beater D, having the holes *m m* and the ribs *e e*, when hung on swinging-arms *d d*, provided with a handle, H, and arranged in a tub, A, having vertical ribs *c c*, arranged with relation to the ribs *e e* and holes *m m*, as shown, for the purposes herein set forth.

93,567.—W. W. Underhill, Boston, Mass.—*Copying-Press.*—August 10, 1869.

Claim.—1. The combination and arrangement of platen D, table A, standards E E, springs S S, drawer-wedge H, and lever K, in a letter-press, substantially as described.

2. The drawer-wedge H, serving as a drawer and a wedge, as herein set forth.

93,568.—Hiram Veazey, East Hampton, Conn.—*Sleigh-Bell.*—August 10, 1869.

Claim.—The combination of the bell *a*, the pillar *e*, and the spurs *f f*, all constructed and arranged as described, for the purpose described.

93,569.—Hiram Veazey, East Hampton, Conn.—*Sleigh-Bell Fastening.*—August 10, 1869.

Claim.—1. The washer *e*, made as described, and interposed in the manner described between the bell and the belt, for the purpose set forth.

2. The combination of the teated bell *a*, the rivet *d*, the washer *e*, and the belt *c*, the whole constructed and arranged as described, for the purpose described.

93,570.—Job A. Warden, Minnesota Junction, Wis.—*Knee-Clasp for Horses, &c.*—August 10, 1869.

Claim.—The link A A A, in combination with clasp or hinge B, for the purposes set forth, substantially as described.

93,571.—James White, Cleveland, Ohio.—*Apparatus for Holding Hat-Blocks.*—August 10, 1869.

Claim.—1. The adjustable head or table D, in combination with the notched flange E, and rod F, when arranged and operating substantially as and for the purpose set forth.

2. The clamps G, adjustable head or table D, in combination with the notched flange E, rod F, and standards C, in the manner substantially as described, and for the purpose set forth.

93,572.—Rollin White, Lowell, Mass.—*Revolving Fire-Arm.*—August 10, 1869.

Claim.—1. In combination with a revolving cylinder and a cartridge-ejector, consisting of a central sliding-rod, with radial teeth, or equivalent projections, to seize and carry out the cartridge-cases, a ratchet, to revolve the cylinder, made on or attached to the cylinder, substantially as herein shown and described.

2. In combination with a plunger and ejector, unconnected, as described, a lever to operate the plunger, substantially as described.

3. A spring, interposed between the plunger and the ejector, whether the same are connected by a swivel-joint or unconnected, substantially as and for the purpose set forth.

4. In combination with the cartridge-ejector E, the serrated or roughened teeth *i i*, substantially as and for the purpose described.

93,573.—John Whitehead and John McKeever, New York, N. Y.—*Hoop-Skirt.*—August 10, 1869.

Claim.—1. The apron *d*, removably attached at the sides of the open space, which extends from the top to the bottom of the skirt, and covering said space, substantially as and for the purpose herein described.

2. A skirt, formed with an open front extending throughout its length, and provided with a removable apron, *d*, and a removable bottom part, *a*, which does not continue entirely around the skirt, but is attached to the tapes at the sides of the opening, in the front of the skirt, substantially as and for the purposes herein shown and described.

93,574.—David H. Whittemore, Worcester, Mass.—*Apple Parer and Slicer.*—August 10, 1869.

Claim.—1. The combination of the carriage with its holder and the screw, operating substantially as above set forth.

2. The combination of the projection J on the screw with the holder K and its stud *i*, substantially as described.

3. The arrangement and combination of the holding device, consisting of the fork and its shaft, with the paring and slicing device, consisting of the carriage, knives, holder, and slide-rod, the screw-shaft or driving-apparatus, and the solid frame, when constructed and operating in the manner and for the purposes above set forth and described.

93,575.—John P. Adams, New York, assignor to himself, Henry S. Chandler, and Marcus Ormsbee, Brooklyn, N. Y.—*Revolving Ice-Pitcher and Coffee-Pot.*—August 10, 1869.

Claim.—1. The combination of a slop-bowl with a vessel arranged to tilt, revolve, or both, adapted to table use, and arranged to operate substantially as herein shown and described.

2. The improvement in revolving vessels of the character herein described, which consists in mount-

ing the revolving member upon a spindle, so arranged, relatively to its socket, that friction only results from the contact of the surfaces between the under side of such member and the upper side of the base, adjacent to the center, and between the vertical sides of the spindle and the inner side of the socket, substantially as shown and described.

93,576.—William Altick, Dayton, Ohio.—*Machine for Driving Posts.*—August 10, 1869.

Claim.—1. In a machine for driving fence-posts, the construction and arrangement of the post C, ram or hammer D, guides E E, pulleys K and J, tripping-hook I, stop-pin T, substantially as and for the purposes set forth.

2. The adjustable arms H H, secured to the movable cross-bar G, by means of a bolt or key, substantially as and for the purposes specified.

93,577.—Joshua E. Ambrose, Lombard, Ill.—*Lantern.*—August 10, 1869.

Claim.—1. Providing the globe A with a dome, substantially as and for the purposes specified.

2. Combining with a globe, constructed substantially as described, a deflecting surface, for the purposes set forth.

3. The combination, with the band G, of the plates of mica, or some equivalent material, as and for the purposes described.

93,578.—Joseph Anthony and Thomas B. Purves, Greenbush, N. Y.—*Piston-Packing.*—August 10, 1869.

Claim.—The construction and arrangement of the self-setting packing-ring E, having holes H, and grooves I and J, with the uncut or steam-tight inside ring D, substantially as and for the purpose described.

93,579.—T. H. Arnold, Troy, Pa.—*Hay-Elevator.*—August 10, 1869.

Claim.—1. The locking-dog *a*, so constructed and connected with the carrier B as to perform the double purpose of retaining the carrier in position while elevating the load, and of preventing the descent of the fork during the return motion of said carrier, substantially as specified.

2. In combination with the carrier, having its locking hook and dog operating as above, the stationary piece *b*, whereby the carrier is retained and the rope liberated simultaneously, in the manner substantially as shown and described.

93,580.—Joseph R. Bailey, Woonsocket, R. I., assignor to himself and Selden A. Bailey, same place.—*Tool-Holder.*—August 10, 1869.

Claim.—The shank, with its angular groove, the strap, with its angular groove, the gib C, and key C′, in combination with a cutting-tool, substantially as and for the purpose set forth.

93,581.—Joseph R. Bailey, Woonsocket, R. I., assignor to himself, Selden F. Bailey, and Orin Freeman.—*Hay-Loader.*—August 10, 1869.

Claim.—1. The combination of the roller B with the endless rake E, substantially as and for the purpose set forth.

2. The combination of the truck A, adjustable after-rake G, adjustable apron F, adjustable frame C, arched bars C^1, clearing-rake C^2, endless rake E, and roller B, substantially as shown and described.

3. The combination and arrangement of the truck A, adjustable frame C, arched bars C^1, endless rake E, and adjustable apron F, with slotted bars *f*, substantially as shown and described.

93,582.—Anna E. Baldwin, Newark, N. J.—*Milk-Separator.*—August 10, 1869.

Claim.—The milk-separating apparatus, consisting of the vessel A, provided with perforated removable shelves C, lid B *b*, and straining-faucets D *c d*, all arranged to operate substantially as herein described.

93,583.—Anna E. Baldwin, Newark, N. J.—*Milk-Cooler.*—August 10, 1869.

Claim.—The milk-cooling apparatus, consisting of vessel A, tube B, lid *a b*, when provided with paddles C D, and handle E, and faucets *e e′*, substantially as and for the purposes described.

93,584.—David S. Beals, Adrian, Mich.—*Railway Draw-Bar.*—August 10, 1869.

Claim.—1. The draw-head E, constructed with the enlargements or shoulders *e e′*, as represented and described, for the purposes set forth.

2. The combination of the draw-head E, shoulders *e e′*, draw-bar F, disks G H, pin I, spring J, and sills B C, constructed and arranged substantially as described, for the purpose set forth.

93,585.—Jacob H. Beidler, Adrian, Mich.—*Ax.*—August 10, 1869.

Claim.—The ax herein described, having a series of grooves on one or both surfaces, substantially as and for the purposes specified.

93,586.—Charles A. Bikle, Hagerstown, Md., assignor to himself and John W. Garner, same place.—*Grain-Separator.*—August 10, 1869.

Claim.—1. The pivoted sectors C, provided with bars D, and the slots E, or their equivalent devices, for regulating the register and blast, substantially as set forth.

2. The above, in combination with the board F and weighted arms of the sectors, or bar G, substantially as set forth.

3. The peculiar construction of the toothed roller I, for separating the chaff, substantially as described.

93,587.—E. Blunt, Jr., New York, N. Y.—*Coffee-Pot.*—August 10, 1869.

Claim.—The within-described new combination and arrangement, to wit, the cold-water vessel C, with the conical plug E *e*, for letting down its contents at will, and the whistle I, mounted outside on the independent tube H, all substantially as and for the purposes herein set forth.

93,588.—Joseph Bond, Jr., Newark, N. J.—*Sewing-Machine.*—August 10, 1869.

Claim.—1. A spool-case, constructed substantially as described, and retained by, and having the within-described motion imparted to it, in a stationary spool-case holder, in combination with a rotating hook, for seizing the loop of needle-thread and carrying it round the said spool-case.

2. The combination of the said revolving hook with a roller, *q*, or any equivalent device, for imparting the within-described motion to the spool-case, and thereby maintaining between the latter and the spool-case holder an unobstructed opening for the free passage of the thread.

3. The rib o^1, on the spool-case, adapted to the groove in the periphery of the roller *q*, as and for the purpose herein set forth.

4. The hook *m*, in its shoulders *x* and x^1, and notch x^2, the whole being constructed and arranged for operating on the loop, substantially as described.

5. The eccentric on the shaft H, the strap *h′*, and rod *j*, arranged to slide in the said needle-arm, all combined and operating substantially as set forth.

6. The foot D, with its slot and set-screw, in combination with the presser-bar C, and its dovetailed triangular projection *f* fitted loosely to the slot, as and for the purpose described.

7. The combination of the recessed conical end of the bolt F, and the plate C, adapted to the end of the needle-arm E, and arranged for the reception and removal of the needle, substantially as set forth.

8. The box, forming a part of the frame of the machine, inclosing the working-parts below the work-plate, and having at one side a hinged portion, B′, as set forth.

93,589.—Seth D. Bowker, Kansas City, Mo.—*Miter-Box.*—August 10, 1869.

Claim—The arrangement of the table A, back-rests B, and slide-rests G G′, with the sector C, radius-plate E, and saw-guides F, when constructed to operate substantially as and for the purposes set forth.

93,590.—J. H. Brinton, Thornbury, Pa.—*Grapple.*—August 10, 1869; antedated August 6, 1869.

Claim.—A cord, F, connected to the jaws A A′ of grapple, and having a ring or eye, *k*, at its outer end, for the passage of the operating-rope, all substantially as and for the purpose described.

93,591.—Homer Brooke, New York, N. Y.—*Glass-Mold.*—August 10, 1869.

Claim.—1. A glass-mold, for forming articles having one or more depressions in them, made in sections, as described, so that the one section which has a rising and falling motion will leave the depressions free from contact with the mold, while the outer surrounding portion to such cavity or cavities remains embedded in, and continues supported on, the mold, substantially as and for the purpose or purposes herein set forth.

2. The combination, with sectional mold, constructed to operate substantially as described, of a clearance channel, or passage or passages, arranged in relation to the joint established for play of the one mold-section through the other, to provide for the escape of dirt and oil, essentially as specified.

3. The sectional mold A B, constructed substantially as shown and described.

93,592.—Heman P. Brooks, Waterbury, Conn.—*Buckle or Slide for Hoop-Skirt Bands.*—August 10, 1869.

Claim.—In the frame of a slide or buckle, the space *f*, formed in one side, for the introduction or removal of the free end of the band, combined with the bar *h*, fixed or hung to the said frame, substantially as set forth.

93,593.—Willard P. Brooks, Bloomington, Ill.—*Three-Horse Equalizer.*—August 10, 1869.

Claim.—A draught-equalizer, having plate A, hook B, chain C, and clevis D, constructed and arranged substantially as specified.

93,594.—O. B. Brown, Malden, Mass.—*Optical Instrument.*—August 10, 1869.

Claim.—1. An instrument combining the principles of the phenakistoscope and magic-lantern, so constructed that it may be used either as an attachment to an ordinary magic-lantern or as a separate and independent instrument, substantially as shown and described.

2. So combining detachable transparent plates with the slider of a magic-lantern or similar instrument as to represent moving figures upon a wall or screen, substantially as shown and described.

3. The combination of the polygonal plates with the annular gear-wheel, substantially as shown and described, for the purpose specified.

4. Imparting an intermittent rotary motion to the transparent plates when inserted in place in the slider, by the means substantially as shown and described.

5. Representing the figures upon a wall or screen as arranged in a semicircle or less than a semicircle, by the means substantially as shown and described.

6. The revolving perforated disk, for alternately cutting off and admitting the light, in combination with the mechanism for imparting an intermittent rotary motion to the transparent plates, substantially as shown and described.

93,595.—Thomas Carr, Bristol, Great Britain.—*Machine for Disintegrating, Dispersing, and Mixing Fertilizers and other Materials.*—August 10, 1869; patented in England October 22, 1868.

Claim.—The mounting of each of the two sets of cages upon the end of a separate shaft, the two shafts being placed end to end, and in pedestals or plumber-blocks, substantially as hereinbefore described, and illustrated by the drawings.

93,596.—William Carter, Columbus, Ind.—*Device for Applying Steam to Wool, &c.*—August 10, 1869.

Claim.—The combination and arrangement of induction--pipe A, the surrounding perforated pipes or jackets C and E, forming the chambers B and D, and head J, with flanges, to which the jackets are screwed, and the eduction-pipes F, G, and H, furnished with stop-cocks, and connecting the induction-pipe A and chambers B and D with the waste-pipe I, all combined and arranged to operate in the manner substantially as set forth.

93,597.—Charles Chinnock, Brooklyn, N. Y.—*Injector for Insect-Powders.*—August 10, 1869.

Claim.—The disk A, constructed or provided with air-vents *b*, in combination with the nozzle E, back disk B, flexible jacket C, and spiral spring D, essentially as and for the purpose or purposes herein set forth.

93,598.—Thomas J. Clark and George M. Clark, Higganum, Conn.—*Mechanical Movement.*—August 10, 1869.

Claim.—The combination of the lever A, with its two rods C D, guides E E, and operated by the jointed connecting-rods F H, so as to produce the movement herein described.

93,599.—Thomas J. Coulston, Springville, assignor to E. S. Shantz and Joseph Johnson, Royer's Ford, Pa.—*Fuel-Reservoir or Base-Burning Stove.*—August 10, 1869; antedated May 25, 1869.

Claim.—1. Adjustably securing the two parts A and A′ of the reservoir together by means of the interlocking projections 3 4, or their equivalents, constructed and operating together substantially as and for the purpose described.

2. The employment of the catches, each consisting of the parts *b″* and 7, in combination with the flange B and reservoir A A′, the same being constructed and applied substantially as and for the purposes specified.

3. In combination with the reservoir A A′, constructed as described, the bail C, applied and operating substantially as and for the purpose described.

93,600.—Thomas J. Coulston, Springville, assignor to E. S. Shantz and Joseph Johnson, Royer's Ford, Pa.—*Hinge for Stove-Lid.*—August 10, 1869; antedated May 25, 1869.

Claim.—A hinge, consisting of the two parts *a′ b′*, cast simultaneously with the respective plates, and the hinge completed, by simply adjusting the two parts together, substantially as set forth and described.

93,601.—Edward J. Creasey, Philadelphia, Pa.—*Refrigerator.*—August 10, 1869.

Claim.—1. The provision-chamber F, having an arched or peaked roof, *a*, in combination with the surrounding casing B, forming an ice-reservoir above, and a water-reservoir around the chamber F, substantially as set forth.

2. The arrangement described, in respect to the provision-chamber F, and ice-receptacle H, of the tubes *j* and *j′*.

93,602.—James M. A. Dew, Chicago, Ill,, assignor to himself and Oswell A. Bogen, same place.—*Railroad-Lamp.*—August 10, 1869; antedated April 6, 1869.

Claim.—1. The solid metallic part or ring *a*, of the lamp-supporting ring A, provided on the inside with several projections or lips, *b*, *b*, for the purpose of effecting a coupling with lugs *f f* of the lamp, in the manner substantially as herein set forth and described.

2. The solid metallic part or ring F, made on the lamp L, and provided with the sections of rings or lugs *f f*, arranged and operating, in connection with the lips *b b* of the ring *a*, in the manner substantially as set forth and described.

3. The combination of the ring *a*, provided with the projections *b*, stop *b′*, and catch or screw *c*, with the ring F, provided with the projections *f* and holes *o*, all constructed and arranged to operate substantially as described.

4. The link R, of any desirable shape, provided with two or three spurs, *r r′ r″*, and used to connect arms of the railroad-lamp brackets, in the manner substantially as set forth.

93,603.—Daniel Dorrity, Pont-Audemer, France, assignor to Farrell Dorrity, New York City, N. Y.—*Printers' Quoin.*—August 10, 1869.

Claim.—The combination, with the laterally adjustable face plate or plates, of the inwardly project-

ing fixed screws connected therewith, the hollow female-threaded screw-gears, arranged to gear with or operate the fixed screws, and having their axes parallel and the intermediate screw-wheel having its axis at right-angles to the screw-gears, and serving to drive the latter, substantially as specified.

93,604.—GEORGE D. EMERSON, Calumet, Mich.—*Friction-Clutch.*—August 10, 1869.

Claim.—The cam-rollers D, consisting of the cylindrical parts *h h*, on which one end of the links *i i* are mounted, the angular parts *o*, to which the levers *l* are secured, and the eccentric journals *f*, in combination with the friction-segment C C, the webs *b b*, and bearings *k k*, to which the other ends of the links *i i* are jointed, when the parts are constructed and operate together substantially as described.

93,605.—WILLIAM EMMONS and DAVID A. WELLS, Saudwich, Ill.—*Corn-Cultivator.*—August 10, 1869.

Claim.—1. The combination of the frame A, axle C, and pivoted bars D D, all substantially as set forth.

2. The lever L, in combination with the cams, or their equivalents, when used to elevate both beams at once, substantially as specified.

3. Securing the handles to the beams, by means of a thumb-screw, so that they can be regulated at will, substantially as set forth.

4. The levers L, M, and N, rod O, pawl P, and ratchet H, when arranged to operate substantially as set forth.

5. In combination with the above, the beam I, bars E, chains R, frame A, metal plates D, and shoes H, when all are combined, as set forth.

93,606.—PERRY FINLEY, Memphis, Tenn.—*Enameling Wood and other Solid Materials with Hard Rubber.*—August 10, 1869.

Claim.—Subjectiug India rubber or gutta-percha, in solution, and applied as an enamel or coatiug, and mixed with sulphur, whether with or without other ingredients, to the curing action of heat, for the purpose of affecting its qualities or properties, as described.

93,607.—RANDALL FISH, Washington, D. C.—*Deodorizing-Compound.*—August 10, 1869.

Claim.—The deodorizer, herein described, compounded in the manner and of the ingredients substantially as described.

93,608.—CHARLES H. FISKE, Lowell, Mass.—*Shuttle for Loom.*—August 10, 1869.

Claim.—1. The combination of the stationary clamp *b* and movable clamp *e*, when held in position by a positive locking-device, substantially as and for the purposes herein specified.

2. The locking-device, as described, consisting of the lateral latch *j*, lip *k*, bed-piece *h*, and spring *l*, in combination with the movable clamp *e*, as specified.

93,609.—DAVID A. FOOT and AVERY CHADWICK, Winona, Minn.—*Lightning-Rod.*—August 10, 1869.

Claim.—1. A hollow, star-shaped copper lightning-rod, provided at its lower end with a solid copper discharging-point, plated with silver, and its upper end with one or more receiving-points, the whole constructed and arranged substantially as herein described.

2. The combination of the former A, die D, and metallic rod *g*, constructed substantially as herein described, for the purpose of drawing star or similar shaped lightning-rods, as set forth.

93,610.—JOHN G. FOSTER and GEORGE W. TOWNSEND, Boston, Mass.—*Submarine Rock-Drilling Machine.*—August 10, 1869.

Claim.—1. The improved supporting-frame of our drilling-apparatus, the said frame being composed of double-platform plates, upper columnar supports, and oblique adjustable legs, arranged with each other, substantially in the manner herein represented and described.

2. The connection of the upper platform-plate *f g* of our improved drilling-apparatus with the lower platform-plate of said apparatus, by means of hinges and a clamp or clamps, or the equivalents thereof, substantially in the manner and for the purpose herein set forth.

3. Operating the drill by means of the forked and slotted clutch *m n*, substantially in the manner herein set forth.

4. The arrangement of the winding guide *r* with the lifting-clutch *m n*, substantially in the manner and for the purpose herein set forth.

5. Our peculiar mode of applying power to th lifting-clutch *m n*, from a rotating or reciprocating first mover, located in a suitable floating vessel, to wit, by means of the connection of the said first mover above, with the lifting-clutch below, by means of the readily adjustable line *z*, the direct-lifting chain or line *o*, and the pulley-block *u*, substantially in the manner herein set forth.

6. When a drill is operated by means of a lifting-clutch, substantially in the manner herein set forth, combining a ratchet-wheel with the drill-shaft, and a spring-detent for said wheel, with one of the platforms of the supporting-frame of the drilling-apparatus, or other suitable support, substantially in the manner and for the purpose herein represented and described.

93,611.—DANIEL D. FRANKLIN, Flora, Ill., assignor to himself and J. S. UNDERWOOD, same place.—*Cultivator.*—August 10, 1869.

Claim.—1. The combination and arrangement of the draught-bar A′, bent-rods C′, fastened to the lower ends of the standards E, so as to vibrate freely, and permit the driver on his seat to rock the machine and raise the cultivator-teeth, substantially as described.

2. Hinging the cultivator-beams H and N, and the pivots of the rods C′, in the standards E, so near the axles of the carrying-wheels that the machine can vibrate freely on the pivots of the carrying-wheels, while in motion, substantially as described.

3. In combination with the stock and removable share, the lip on the stock, for covering and holding the point of the share, substantially as described.

93,612.—HENRY S. GOLIGHTLY and CHARLES S TWITCHELL, New Haven, Conn., assignor to NEW HAVEN FOLDING-CHAIR COMPANY, same place.—*Bending-Machine.*—August 10, 1860.

Claim.—The apparatus herein described, consisting of the back A and ends B, with the strap C, constructed so as to be bound together, and operate in the process of bending, substantially as herein set forth.

93,613.—JAMES E. GRANNISS, New York, N. Y.—*Machine for Making Bullets.*—August 10, 1869.

Claim.—The arrangement of the rollers *e*, *f*, and *g*, and adjustable segmental grooved dies *h*, *k*, and *l*, in the manner specified, so as to reduce the slug by successive stages into a globular form, substantially as set forth.

93,614.—CHARLES HAMMOND, Philadelphia, Pa.—*Cleaver.*—August 10, 1869.

Claim.—The ferrule D, having a socket for receiving the handle A, to which the ferrule is secured, and wings *f f*, arranged to grip the blade of a cleaver or other like instrument, and riveted or otherwise secured to the latter, all substantially as and for the purpose herein set forth.

93,615.—ANNA HANCOCK, New York, N. Y.—*Sewing Machine.*—August 10, 1869.

Claim.—The combination, with the needle-bars *d* and *e*, of the disk D, operating as a crank through a wrist-pin, *c*, to the one needle-bar, *d*, and carrying or having formed on it an eccentric, F, to actuate the other needle-bar, *e*, from the same side of the main frame, and overhanging end of the driving-shaft, substantially as specified.

93,616.—HENRY HAYWARD, New York, N. Y.—*Hat.*—August 10, 1869.

Claim.—As a new article of manufacture, a head-covering, composed of a layer of open-worked hair-cloth, secured by felting to one, or between two layers of felting-material, substantially as described.

93,617.—Georges Felix Henry, Ivar Axel Ferdinand Bang, François Roch Charles Monestier, and Jean Pierre Albin Figuier, Paris, France.—*Material for Lubricating Wool and other Animal Fibers.*—August 10, 1869.

Claim.—Employing solutions of chloride of calcium, chloride of magnesium, chloride of zinc, or other suitable hygroscopic deliquescent salts, or combinations of them, with or without the addition of ammonia, or other suitable alkaline bodies, for the lubrication of sheep's or other wool, or other similar animal textile fibrous materials, when the said materials are to be submitted to combing, carding, spinning, or other similar operations.

93,618.—Philipp Herbert, St. Louis, Mo.—*Gang-Plow.*—August 10, 1869.

Claim.—1. The axle-bar *a*, tree-journal B, and sector and pawl devices for connecting the wheel A^2 with the axle A, substantially as set forth.

2. The front-board F′, pivot *g*, link *h*, and pole G, connected adjustably by the slot *f* and set-screws *f′*, substantially as set forth.

3. The standard I, lever L^1, bar L^2, fulcrum K, links *l*, and cross-bar *l′*, arranged in combination with the plow-beams M, substantially as set forth.

4. The lever O, crank O^1, link P, and roller P, supporting and operating the front end of the beams M, substantially as constructed and arranged.

5. The plows N, standards *n*, pins n^3, arms n^1, and pivot n^2, when operating substantially as set forth.

93,619.—L. Hillman, Newton, N. J.—*Measuring and Folding Cloth.*—August 10, 1869.

Claim.—The combination and arrangement, upon the frame B, of the standards D D, slides E E, clasps G G, disks P P, guides O O, rollers H K, indicator L, and wheels S, T, and U, all substantially as shown and described.

93,620.—Amos Hornor, Ross, Ind.—*Clothes Rack and Drier.*—August 10, 1869.

Claim.—The standards A and E, staples *c*, pins *n*, lugs *a* and *s*, windlass D, frame H, bars *u*, caps *y*, and cords *v* and *v′*, when constructed and arranged to operate as shown and described.

93,621.—C. C. Johnson, Springfield, Vt.—*Wagon.*—August 10, 1869.

Claim.—1. The wagon or cart, having a quadrangular body composed of side-boards, end-boards, and bottom-board, connected by means of the four pairs of grooves *k l*, top bars *h i*, and bolts *n*, substantially as described.

2. In combination with the body, the pole *g*, interlocked with the axle *e* by means of a notch in each, substantially as described.

93,622.—Frederick Kalteyer, San Antonio, Tex.—*Compound for Destroying Vermin in Cattle.*—August 10, 1869.

Claim.—A liniment, composed of the ingredients, in the proportions substantially as and for the purpose specified.

93,623.—Cyrus M. Kelsey, Mount Vernon, Ohio.—*Vulcanizing Rubber for Dental Plates and for other Purposes.*—August 10, 1869.

Claim.—1. As an improvement in the method of vulcanizing India rubber, the use of a sand-bath, combined with a flask, in the manner above substantially set forth.

2. In combination with a sand-bath and flask, for vulcanizing India rubber, the employment of a thermometer, substantially in the manner described.

3. In combination with a sand-bath and flask, for vulcanizing India rubber, the employment of a trypiece, substantially in the manner above set forth.

4. In combination with a sand-bath and flask, for vulcanizing India rubber, the employment of a trypiece and thermometer, substantially in the manner set forth.

93,624.—George Kennedy, Philadelphia, Pa., assignor to himself and F. R. Harbaugh, same place.—*Neck-Ties.*—August 10, 1869.

Claim.—1. A tie, or imitation tie, adapted for being secured in front of a collar by a button or stud, in combination with an adjustable clasp, applied so as to cover and conceal the button or stud, substantially as described.

2. The concealing clasp, and its button-hole, adapted for attachment to a collar or tie, substantially as set forth.

3. The clasp, slotted at one end, and having at the opposite end a button-hole, substantially as specified.

93,625.—Jerome Kidder, New York, N. Y.—*Electro-Magnetic Machine.*—August 10, 1869.

Claim.—1. An additional helix, introduced into the primary circuit of an electro-magnetic machine, operating substantially as and for the purpose herein set forth.

2. The arrangement of the relation of the vibrating hammer E with a fixed magnet, D, so that in its oscillations the hammer will not strike said magnet, substantially as and for the purpose set forth.

3. The additional point of fixture of the spring to be free or fixed, at option, as at H, constructed and operating substantially as and for the purpose herein set forth.

93,626.—William B. Kimball, Peterborough, N. H.—*Clothes Rack and Stand.*—August 10, 1869.

Claim.—The construction and arrangement of the stand *b*, with pivoted legs *c c*, the revolving head *d*, with holes *e e* therein, the arms *f f*, with links *g g* and staples *h h*, and the removable top *i*, substantially as and for the purposes herein specified.

93,627.—I. Lancaster, Baltimore, Md.—*Harvester.*—August 10, 1869.

Claim.—1. The draught-pole, combined and arranged with the driver's seat D, the slotted bearing *b*, and the clevis E, substantially as described.

2. The angle-bar K, arranged and operating substantially as herein explained.

3. The fulcrum-plate O, actuated by the lever R, and held in position by the spring F, in combination with the lever P, substantially as described.

4. The studs *u*, friction-rollers S, bolt *x*, nut *y*, partition-piece W, and washer, combined and arranged substantially as hereinbefore set forth.

93,628.—Michael Lehman, Cincinnati, Ohio.—*Cutter-Head.*—August 10, 1869.

Claim.—1. The cutter-head A, in combination with the bits B B, and caps C C, and steel plates E E, constructed and arranged with reference to each other, and for the purpose substantially as set forth.

2. The bits B B, in combination with the adjusting-screws *b b* and caps C C, when the same are constructed substantially as and for the purpose described.

3. The adjusting-screws *b b* and their plates *e e*, in combination with the notches *n n*, when all the parts are constructed substantially as described.

93,629.—William J. Lynd, Golden City, Colo. Ter.—*Process of Preparing Coke from Colorado and other Coals.*—August 10, 1869.

Claim.—The process, substantially as herein described, of making coke from coals, such as are herein referred to.

93,630.—William Maguire, Baltimore, Md., assignor to himself and Francis B. Loney, same place.—*Platform-Scale.*—August 10, 1869.

Claim.—1. The method of compensating for the wear of the knife-edges or steel points on the levers of platform or similar scales, by means of an adjustable wedge, K, and adjustable block, I, with their set-screws *g* and *n*, constructed and arranged to operate substantially as herein described.

2. The plate L, having rigidly attached to it a post, F, with a second lever, E, mounted therein, and loosely connected to a stationary pin, *l*, for the purpose of preserving the accuracy of the scales, while allowing the position of the point of connection of the rods H with the scale-beams to be varied or changed, substantially as herein described.

3. The plate L, second lever E, and adjustable block I, with their connections, in combination, when so arranged that the knife-edges of the levers, and the point about which the plate L moves, shall

all be in the same vertical plane, substantially as herein described, and for the purpose set forth.

93,631.—Gottlieb Maulick, Trenton, N. J., assignor to himself and Thomas P. Marshall, same place.—*Planing-Teeth for Saws.*—August 10, 1869; antedated August 6, 1869.

Claim.—The arrangement of the planers B upon a saw-blade, as herein described.

93,632.—Alexander McBride and William P. McBride, Lowell, Mich.—*Bed-Bottom.*—August 10, 1869.

Claim.—The arrangement of the frame A, cross-pieces D and F, rubber bands *e* and *o*, nuts *n*, and springs C and G, when all are combined to form a bed-bottom, substantially as set forth.

93,633.—Alexander McFarland and Charles W. Peck, Paterson, N. J.—*Spindle and Bobbin-Tubes for Spinning-Machine.*—August 10, 1869.

Claim.—1. An inner spindle-tube, C, with pulleys C′ and foot *c*′, in combination with an outer spindle-tube, D, pulley D′, and foot *d*′, spindle *a*, and oil-cup E, substantially as shown and described.

2. In combination with an inner spindle-tube, D, outer spindle-tube C, spindle *a*, and drum B, the cord *c*′ *c*′, arranged as shown and described.

93,634.—John C. Miller, Danville, Ky.—*Side-Saddle.*—August 10, 1869.

Claim.—As an article of manufacture, a side-saddle, constructed in the manner as herein shown and described.

93,635.—L. F. Muhlinghaus, Brooklyn, E. D., N. Y.—*Washing-Machine.*—August 10, 1869.

Claim.—The construction and arrangement of the tub A, having its bottom of a single piece of metal, with internal corrugated sides, and braced by the longitudinal strips *s*, to which the handles and gudgeons *a* are secured, in connection with rolls *g g g*, arranged in relation to the curved bottom, with a space between them, combined for the purpose described.

93,636.—Robert Newton, Jerseyville, Ill.—*Rolling-Cutter for Plows.*—August 10, 1869.

Claim.—In a revolving cutter, the wooden bushing D, substantially as described, and for the purpose set forth.

93,637.—Archibald Nimmo, Philadelphia, Pa., assignor to himself and Thomas Moran, same place.—*Mechanism for Operating Shuttle-Boxes of Looms.*—August 10, 1869.

Claim.—1. Two or more levers, M M′, in combination with a wheel, G, having as many sets of pegs or openings as there are levers, each set being devoted to one lever, when the levers are rendered operative and inoperative by the mechanism herein described, or any equivalent to the same, and when the lever which operates is caused to control the pattern-chain, all substantially as set forth.

2. In combination with the wheel G, the lever-controlling wheel K, operating substantially as specified.

93,638.—Charles H. Parker, Boston, Mass.—*Bridge.*—August 10, 1869.

Claim.—The combination of two distinct systems of bridging, composed of a cantilever or cantilevers, with a wholly or partially fixed anchorage, free to expand at its unsupported end or center of a span, where two meet, with a system of independent girder, supported at both ends, and covering the same clear span as the cantilever, and free to expand toward the abutments or points of support, the chord or chords of one system being distinct and separate from the chord or chords of the other, substantially as herein shown and set forth.

93,639.—Hugh Quinn, Charlestown, Mass.—*Elastic Trace-Connection.*—August 10, 1869.

Claim.—1. The arrangement of the box A, abutment *d*, pivot *e*, helical spring C, and the movable arm B, provided with the trace-button, as explained.

2. The combination and arrangement of the spring-guard D with the radial arm B, the helical spring C, the abutment *d*, and the box A, and the slot *c* thereof, the whole being substantially as and for the purpose specified.

93,640.—Julio H. Rae and Thomas T. Davis, Syracuse, N. Y.—*Mode of Desulphurizing Auriferous Pyrites and other Sulphuret-Ores.*—August 10, 1869.

Claim.—1. Desulphurizing auriferous pyrites, and other sulphuret-ores, by means of peat, or other equivalent fuel, in the mode substantially as above described.

2. Mixing the ores of metals combined with sulphur, arsenic, antimony, or other refractory matter, with wet or green peat, or equivalent fuel, and afterward drying and burning the mixture, substantially as and for the purpose described.

93,641.—Cleanthus A. Reed, Madison, and James M. Campbell, Beaver Dam, Wis.—*Harvester.*—August 10, 1869.

Claim.—1. The combination of the tread or bearing wheel B, loose wheel C, provided with the pins *e*, eluteh L, and crank-rod T, all constructed and arranged substantially as described.

2. The rake H, jointed to the pivoted rod J, supported on the guide-rod O, and guided in its movements by the stop *m*, and guide *g*, or their equivalents, substantially as herein set forth.

3. The arrangement of the wheel E, shaft N, with its arms *a* and F, and rod *b*, for operating the rake, as herein shown and described.

93,642.—Artemas Rogers, Panesville, Ill.—*Extension-Ladder.*—August 10, 1869.

Claim.—The hook M, with its shield N, in combination with the rope I, and rollers D, and the roller D′, with the circular slot H′, arranged and constructed substantially as herein described, and for the purpose set forth.

93,643.—James M. Rohrer and John H. Bassler, Pine Grove, Pa.—*Kiln for Roasting Ores.*—August 10, 1869.

Claim.—1. The water-boxes *c*, constructed and operating substantially as and for the purposes described.

2. The escape-pipes *d*, in combination with the water-boxes *c*, when arranged and operating as herein specified

3. The lifting-pans *u* and *s*, in combination with the boxes in which they sit, and the lifting and dumping apparatus therewith connected, when constructed and operating substantially as described.

4. The process herein shown and described for saturating ores with salt water, and coating them with clay, for the uses and purposes specified.

93,644.—John P. Schmucker, Lattasburgh, Ohio.—*Till-Lock.*—August 10, 1869; antedated August 4, 1869.

Claim.—1. The combination of the follower E, provided with projection *d*, spring *c* and *e*, shaft F, corrugated wheel G, rack D, and spring *b*, all substantially as and for the purposes herein set forth.

2. The arrangement of the knob H, shaft F, pin I, with its spiral spring and rod *i*, and plate C, all substantially as and for the purposes herein set forth.

3. A lock so constructed that, to open the same, it shall be necessary to press the knob and spindle of the lock downward and sideways before the latch or bolt can be reached and moved thereby, substantially as herein set forth.

93,645.—Thomas Sim, Baltimore, Md.—*Process and Apparatus for Extracting Oil from Vegetable and other Matters.*—August 10, 1869.

Claim.—1. The process and apparatus for separating oil from vegetable and other matter, substantially as herein set forth.

2. The filter or perforated diaphragm C, employed at the upper part of the vat A, to retain the solid matter and allow the overflow of oil and bisulphide, as described.

3. The inclined annular trough I, and the spring pins or holders D, each in combination with the filter C, for the purposes stated.

4. The gate, consisting of the vat-bottom R, and receiver-cover S, arranged to operate in combination, substantially as and for the purposes set forth.

5. The receiver or drying chamber T provided with the agitators W, arranged to operate in any manner substantially as set forth.

6. The combination of the slides S′, ways *s′*, cover S, vat-bottom R, and connecting-screw P, substantially as described.

93,646.—HAVILAH M. SMITH and WILLIAM C. SMITH, New York, N. Y.—*Floor for Buildings.*—August 10, 1869.

Claim.—1. The strips *d*, upon the beams *a*, combined with the fire-proof material, introduced at *f*, above the deafening *b* or *c*, substantially as and for the purposes set forth.

2. The double lathing *k n*, with the intervening plastering *l* and furring *m*, in combination with the plastering *o* of the ceiling, as and for the purposes specified.

3. The combination of the double lathing and plastering of the ceiling with the deafening and fire-proof material below the floor-boards, substantially as and for the purposes set forth.

93,647.—THEODORE STEINWAY, New York, N. Y.—*Piano-Forte Action.*—August 10, 1869.

Claim.—1. The arrangement of wedges F, under the standards D, of the metallic action-frame, substantially as shown and described.

2. The arrangement of a rounded foot on the bottom end of a "pilot," *c*, in combination with a concave socket in the bearing piece D, attached to each key, substantially as and for the purpose set forth.

3. The screws *h*, passing loosely through holes in the top bars of the metallic standards D, and being retained by transverse pins passing through grooves in their shanks, in combination with the key-rail I, substantially as described.

4. The arms *k*, on the metallic standards D, in combination with the hammer-rail J, provided with slots to admit the screws *l*, substantially as set forth.

93,648.—NATHAN B. TYLER, Warren, Ohio.—*Saw-Set.*—August 10, 1869.

Claim.—The combination of the two jaws, B and C, having their set-screws J, K, and I, adjusting-gauge D, and hammer-set F, when constructed and arranged together, to form a saw-set, substantially as described.

93,649.—EDWARD VAN WINKLE, Paterson, N. J.—*Friction-Brake for Cotton-Lapping Machine.*—August 10, 1869.

Claim.—The arrangement of the elbow-lever H and its adjustable weight I, in combination with the male and female cones F G, substantially as shown and described, for the purpose set forth.

93,650.—GEORGE J. WARDWELL, Rutland, Vt., assignor to the STEAM STONE-CUTTER COMPANY, New York City.—*Elastic Pitman for Stone-Channeling Machine.*—August 10, 1869.

Claim.—Jointed levers C C, provided with links *h h* on their longest arms, and with a spring arranged above their fulcrum, substantially as set forth, and for the purposes described.

93,651.—HIRAM J. WATTLES, Rockford, Ill.—*Cultivator.*—August 10, 1869.

Claim.—1. The frame C, when constructed substantially as described, for the purpose set forth.

2. The arms F F, when provided with the pulleys *f f*, and used in connection with the lifting-levers E E, as and for the purpose described.

3. The slotted wedge h^2, when used in combination with the bars *h*, as described, for the purpose set forth.

4. The evener K, having the clevises *k k*, when combined with the draught-bars k^1 k^1, in the manner and for the purpose described.

5. The cultivator described, consisting substantially of the frame C, lifting-devices E E, beams H, standards I, and draught-devices K *k*, when combined and used as and for the purpose described.

93,652.—DWIGHT M. WELCH, Middle Haddam, Conn.—*Attaching Bells to Straps.*—August 10, 1869.

Claim.—Attaching bells to straps by means of solder, in the manner and for the purpose substantially as above described.

93,653.—ROLLIN WHITE, Lowell, Mass.—*Revolving Fire-Arm.*—August 10, 1869.

Claim.—1. In combination with a revolving many-chambered cylinder, and a cartridge-ejector revolving therewith, and moved by a reciprocating non-rotating carrier, *w*, a swivel-joint, to allow the ejector to turn independently of the carrier, substantially as described.

2. The cartridge-ejector and many-chambered cylinder, in combination with a lever to operate the ejector, substantially as described.

3. In combination with the many-chambered cylinder and cartridge-ejector, a projecting flanch, *t*, around or partially around the end of each chamber, substantially as described, to prevent the cartridge-case from binding in the ejector, as set forth.

4. In combination with the revolving cylinder and ejector, the tube *i*, substantially as and for the purpose described.

93,654.—EDWARD WHITEHEAD, Cincinnati, Ohio.—*Removable Calks for Horseshoes.*—August 10, 1869.

Claim.—1. The shiftable and double-lipped clip B *b b′*, C, when used in connection with the detachable and screw-threaded calk D *d*, substantially as herein described, and for the purpose set forth.

2. In combination with the elements of the preceding clause, the extended lip *e* and set-screw *f*, substantially as set forth.

93,655.—A. B. WILCOX, Lowell, Mass.—*Suspenders.*—August 10, 1869.

Claim.—The arrangement of the elastic straps A A, leather piece B, lining E, looped buckle C, and straps D D, all substantially as set forth.

93,656.—OMAR WILSON, Sandusky City, Ohio.—*Device for Adjusting and Buttoning Neck-Ties.*—August 10, 1869.

Claim.—As an article of manufacture, a combined neck-tie fastener and buttoner, formed of one piece of wire, and operated substantially as set forth.

93,657.—ORIN F. WOODFORD, Chicago, Ill., assignor to JAMES E. MILLER, same place.—*Stop-Cock Box for Water and Gas Mains.*—August 10, 1869.

Claim.—The tube D, attached to the shell B of the stop-cock, or to the supply-pipe, in such a manner as to form a water-tight case extending up to the surface, and inclosing the stop-cock A, as and for the purpose herein set forth.

93,658.—MICHAEL ZWIEBEL, Pottsville, Pa.—*Hydrant.*—August 10, 1869.

Claim.—1. In combination with the post A, casing B, cap C, bottom plate D, and nipple E, the stop F, screwed into the nipple E, and provided with glass seat *d*, the elbow G, pipe H, and nozzle I, all constructed and arranged to operate substantially as and for the purposes set forth.

2. In combination with the subject-matter of the foregoing clause, the key L, wrench K, and rod J, having handle M and collar *i*, all substantially as and for the purposes herein set forth.

93,659.—ABRAHAM MCKEON, Rutherford Park, N. J.—*Composition Cement for Pavements.*—August 10, 1869.

Claim.—The combination of the said materials, pine tar and rosin, and the combination of these two materials with brimstone, when found necessary, as and for a cement, to be used and employed with sand, gravel, and other hard substances of small size, as above described, in the making of concrete pavements, flaggings, walks, roofs, and floors.

93,660.—T. C. THEAKER, Bridgeport, Ohio.—*Railway-Car Seat.*—August 10, 1869.

Claim.—1. In the described chair, the supporting-frame, composed of the side pieces A A′, rod *b*, and

brace *c*, substantially as and for the purposes shown and described.

2. The segment D, pinion D′, and hanger or supporting-frame C, all substantially as and for the purposes set forth and described.

3. The combination of the shaft F, screw or worm-pinion F′, wheel E′, pinion D′, and segment D, all substantially as and for the purposes set forth.

4. The regulating slide pieces *h*, substantially as set forth, in combination with the slide *g*, or its equivalent, substantially as and for the purposes set forth.

5. The combination of the arms *k*, slides *h*, and *g*, all substantially as shown and described.

6. The combination of the knob or crank *f*, shaft F, screw-pinion F′, pinion E, pinion D′, and cog-segment D, all substantially as set forth, and for the purpose of oscillating the chair-seat.

93,661.—JOSHUA E. AMBROSE, Lombard, Ill.—*Vapor-Burner.*—August 17, 1869.

Claim.—1. Combining with the deflector and packing-tube, the inner tube, provided with the notches, as and for the purposes set forth.

2. The combination of the tube, constructed as shown in Fig. 2, with a deflector, provided with a bottom, D, arranged as shown and specified, for the purposes set forth.

93,662.—ROBERT W. ARCHER, Rochester, N. Y.—*Head-Rest for Dentists and Barbers' Chairs.*—August 17, 1869.

Claim.—1. The arrangement, with the bearing B and slotted plate C, as described, of the packing-strips *i i* and screw D, provided with the cross-arm *g* and head *e*, the whole operating in the manner and for the purpose specified.

2. In combination with the above, the arrangement of the screw G, nut *l*, and connecting-arm *m*, for producing the vertical adjustment, substantially as described.

93,663.—EGBERT BABCOCK and THOMAS B. FARRELL, Laurens, N. Y.—*Tool-Holder for Holding Tools while being Ground.*—August 17, 1869.

Claim.—1. The bar A, provided at one end with the pin *a*, whereby the same may be fixed in a wall, at any desired point, thus allowing free movement of the broad slotted end in every direction, as set forth.

2. In combination with the bar A and pivoted plates *e*, the catch *f*, substantially as described, for the purpose specified.

93,664.—WILLIAM B. BENNETT, Providence, R. I.—*Mode of Mounting Ornamental Crosses.*—August 17, 1869.

Claim.—The improvement in the mounting of ornamental crosses, composed of jet, glass, shell, &c., which consists in the construction of the four cup-shaped tips, from or in a single piece of sheet-metal, solid at the back, or soldered, cut, bent, and applied substantially in the manner described, for the purposes specified.

93,665.—HERMAN BERNHEIMER and HENRY NEWMAN, New York, N. Y.—*Buckle.*—August 17, 1869.

Claim.—The combination of the tube C with the buckle herein described and shown, substantially in the manner and for the purpose set forth.

93,666.—CHARLES BLAIR, Collinsville, Conn., assignor to the COLLINS COMPANY, same place.—*Manufacture of Ax-Bit.*—August 17, 1869.

Claim.—The method herein described of elongating the lips of ax-bit blanks, for the purpose specified.

93,667.—JOHN BOWLES, Augusta, Ga.—*Fruit-Gatherer.*—August 17, 1869.

Claim.—1. The guards F, secured, at top, to the standards D, and adapted to yield at their lower parts, substantially as and for the purposes specified.

2. The annular knife A *a*, in combination with guards F, to prevent the contact of the fruit therewith, substantially as set forth.

3. The yoke B, hinged to the ring A, substantially as described, so that the latter may be presented to the fruit at any proper angle.

93,668.—DANIEL BRASILL and D. A. MULLANE, New Orleans, La.—*Bone-Black Equalizer.*—August 17, 1869.

Claim.—The cylinders A A′, when provided with the circumferential circles of saw-like teeth B B′, so adjusted as to create the zigzag opening *a* between the cylinders, and the machine as otherwise constructed and arranged, substantially as herein described, for the purpose set forth.

93,669.—JOSEPH BUCHTEL, Portland, Oreg.—*Photographic Plate-Holder.*—August 17, 1869.

Claim.—The two movable upright pieces E E′, with their dovetail-grooves N N′, the four springs J J J′ J′, and two springs I I′, the vials F F′, attached to springs G G′, these vials and springs made of India rubber, glass, or other material, incorruptible by nitrous silver, the ways D D′, the supporting-points L L′, H H′, with the adjusting-screws K K K′ K′, made as described, and for the purposes set forth.

93,670.—E. L. BUCKUP, Stapleton, N. Y.—*Reel for Winding Yarn.*—August 17, 1869.

Claim.—The combination of the guide-bar F, oscillating stops *f g*, slotted rod *d*, and wheel C, constructed as described, for the purpose specified.

93,671.—HEMAN D. BURGHARDT, Pittsfield, Mass., assignor to himself and GEORGE S. WILLIS, Jr., same place.—*Railway-Car Axle.*—August 17, 1869.

Claim.—The arrangement and combination of the duplex boxes *a a*, the independent axles B′ C′, their external boxes D D, the support-bars E E, and the truck-frame A, the whole being substantially as specified.

93,672.—M. E. BURLINGAME, Willett, N. Y.—*Clothes-Pin.*—August 17, 1869.

Claim.—The coiled-wire spring, in one piece, in form as shown, C B A P, guide-hook *b*, and catch or holder *d*, *a*, and *e*, as shown and described.

93,673.—ADAM CHAMBERS, Unionville, N. Y.—*Manger.*—August 17, 1869.

Claim.—The arrangement of the pivoted catch-wire *f*, weighted rod *i*, and cords *l l*, provided with pins *n n′*, when combined with the doors *b z*, and weighted cords *w w*, in the manner and for the purpose specified.

93,674.—LASSLO CHANDOR, St. Petersburg, Russia, assignor to CASSIUS M. CLAY.—*Vapor-Burner.*—August 17, 1869.

Claim.—1. In combination with the wick-tube A, having the enlargement *a*, and either with or without the tube H, the cap C, when constructed as shown, whereby it is adapted to be adjusted to regulate the discharge of gas between itself and the tube A to the flame at the top, substantially as specified.

2. The combination, with the flanged cap C, and tube A, of the perforated non-conducting tube E, when arranged substantially as specified.

93,675.—JOSEPH E. CHAPMAN, Cannon Falls, Minn.—*Hot-Air Furnace.*—August 17, 1869.

Claim.—1. Protecting the walls C of a hot-air furnace and the casing A by a coating of plaster of Paris, or its equivalent, substantially as and for the purposes described.

2. The combination, in a hot-air furnace, of the fire-box F, with its tubes I and the radiator G, with its tubes *m* and *n*, arranged substantially as described.

93,676.—LEWIS S. CHICHESTER, New York, N. Y.—*Coal-Elevator.*—August 17, 1869.

Claim.—An apparatus for transferring coal or similar material from one vessel to another, the same consisting in the frame *e*, supported by the float *e*, and carrying the chute *f*, in combination with the swinging-buckets *g*, suspended by the bail *h*, and operated by the rope or chain *i*, and drum *d*, substantially as set forth.

93,677.—Lewis S. Chichester, Brooklyn, N. Y.—*Apparatus for Elevating and Weighing Coal, &c.*—August 17, 1869; antedated August 5, 1869.

Claim.—The windlass or barrel *e*, mounted upon the scale-beam, in combination with the revolving wheel *k*, and bucket, to contain the material to be elevated, substantially as and for the purpose set forth.

93,678.—John Churchill, Bristol, Conn.—*Trunk and other Handles.*—August 17, 1869.

Claim.—The combination of the handle B and plates A A, when combined and arranged so as to form a connection by a quarter turn of the plates A A, as described.

93,679.—William T. Clement and Edward V. Foster, Northampton, Mass.—*Machine for Rolling Hoe-Blanks.*—August 17, 1869; antedated August 4, 1869.

Claim.—1. In combination with revolving rolls B C, the construction of the projecting dies B^1 C′, together with their arrangement on the projecting or overhanging portions of the revolving rolls, as described, said dies being adapted for spreading the blanks laterally in the manner described.

2. In combination with revolving rolls B C, the construction of the projecting dies B^2 *b*, together with their arrangement on the revolving rolls, as described, said dies being adapted for drawing the blank, and giving form to the central rib on the surface of the hoe, in the manner described.

3. The combination and arrangement of the dies B^1, C′, B^2, and *b*, on the continuously revolving rolls B C, to form a machine adapted to perform all the several operations required simultaneously or successively, substantially as herein set forth.

93,680.—Peter Conrath, Freeburgh, Ill.—*Gang-Plow.*—August 17, 1869.

Claim.—1. The taps and bolts *f*, beam F, and guide E, when constructed and operating substantially in the manner and for the purposes set forth.

2. A self-adjusting carriage gang-plow, with plows P, levers H, spring-catches *k* and chains G, sliding-rods N, and grooved boxes O, levers L and M, and taps and bolts *f*, beam F, and guides E, constructed and operating substantially in the manner and for the purposes set forth.

93,681.—Charles Crenshaw, Bartlett, Tenn.—*Vine-Cutter.*—August 17, 1869.

Claim.—The vine-cutter, constructed, as described, of the laterally adjustable parallel bars A, when beveled upon their lower inner edges, and provided at their rear ends, upon the beveled sides, with the inclined angular cutters C, and upon their upper sides with the laterally adjustable handles and braces D E, all arranged and operating as described, for the purpose specified.

93,682.—Conrad J. Crounse, Clarksville, N. Y.—*Wagon-Brake.*—August 17, 1869.

Claim.—1. The combination of the levers *m m*, draw-rods *f f*, with the fulcrum-bar *e*, when the said fulcrum is attached to the pole in the manner substantially as described, for the purpose set forth.

2. The sliding-socket C, working on the end of the pole B, and the backing-bar *g*, in combination with the levers *m*, draw-rods *f f*, and brake-bar *e*, substantially as and for the purpose set forth.

93,683.—G. W. Dalbey, Carrollton, Miss.—*Machine for Upsetting Tires.*—August 17, 1869.

Claim.—1. A tire and band shrinker, consisting of the bars B C, of which one is pivoted, of the levers D E F, links *b e*, and clamping-plates *f g*, all arranged and operating substantially as herein shown and described.

2. The levers E F, when pivoted together and to the bars B, as shown, whereby they are adapted to be swung up for the purpose of operating as clamps, in connection with the plates *f f*, as set forth.

3. The levers E F, when tapered in front of their pivots *e e*, and curved toward each other, substantially as herein shown and described, to be accommodated to small rings, as set forth.

4. The slotted plate G, when used as a guide, and in combination with the clamp *h*, as a retainer for the movable bar C, as set forth.

93,684.—Charlton H. Davis, San Francisco, Cal.—*Rock-Drill Point.*—August 17, 1869.

Claim.—Rock-drill points, provided with one or more notches or recesses, *b*, substantially as herein shown and described, and for the purpose set forth.

93,685.—F. W. Dean, Tremont, Ill.—*Door-Latch.*—August 17, 1869.

Claim.—1. The combination of plate C, weighted latch *b*, and levers *e* D, constructed and arranged in the manner shown and described.

2. The combination of cover or pull B with the several parts aforesaid, when arranged as described.

93,686.—John G. Dillaha, Waco, Tex., assignor to himself, Robert M. Boone, and Nathan D. Bailey, Chicago, Ill.—*Power-Apparatus for Vehicles.*—August 17, 1869.

Claim.—1. The two rims A A, having the inside flange and teeth, or the equivalent thereof, in combination with the crank-shaft, pinions, and the frame of the vehicle, substantially as herein set forth and described.

2. The combination of the two rims A, the truck, frame, crank-shaft, and pinions, with one or more guide-rollers, G, or the equivalents of said devices, substantially as set forth.

3. The last, in combination with the axle I and wheels M, substantially as set forth.

93,687.—Moses W. Dillingham, Amsterdam, N. Y.—*Pencil-Sharpener.*—August 17, 1869.

Claim.—1. The parts A and B, jointed together, and so formed that they may be converted into either a cone or a tube, substantially as and for the purposes described.

2. The combination of a pencil-sharpener with a pen-holder, substantially as described.

93,688.—William H. Downing, Pioneer, Pa.—*Pipe-Wrench.*—August 17, 1869.

Claim.—The pipe-wrench, consisting of the plate A, toothed disk B, lever C, swivel-pins *d e*, and connecting-screw D, all arranged and operating substantially as herein shown and described.

93,689.—A. E. Dupas, New Orleans, La.—*Electro-Magnetic Engine.*—August 17, 1869.

Claim.—1. The tri-pole magnet, having its central pole B formed with a curved top, while the side poles B B″ are provided with corresponding curved but more extended heads D D, in the manner and for the purpose as described.

2. The rotating hollow cylindrical armature C, provided with a central axis, F, or its equivalent, for the purposes herein described.

3. The combination of the tri-pole magnet B B′ B″ with the oscillating frame E E, and the rotating hollow cylindrical armature C, as herein stated, to operate as described.

4. The above combination, in combination with pitman H, crank J, fly-wheel G, double eccentric K, and commutators L and M, when these parts are constructed, arranged, and operate substantially as set forth.

5. The electro-magnetic machine, as herein described, as a whole, in combination with a sewing-machine, when the two are united in the manner and by the means substantially as herein described, and the motion of the needle is controlled by means of a friction arm or brake, W, operated by a treadle-lever, *x*, as set forth.

93,690.—Jeptha Dyson, Philadelphia, Pa.—*Hand Seed-Planter.*—August 17, 1869; antedated August 4, 1869.

Claim.—1. Covering-plates D^2, applied to the sheath D, beneath a flange or guard-plate D^1, said sheath being constructed with a perforated bottom plate, E, to receive through it the pistons or plungers *b* on the main body of the implement, substantially as described.

2. Sheath D, applied upon the lower end of a tubular stock, A, and constructed to operate substantially as described, in combination with a rod, C, a

spirally flanged drum, C′, and oscillating distributing-plate F, the latter being applied to the bottom of the hopper, substantially as described.

3. Fitting the oscillating plate F within a fixed ring, S, upon a perforated bottom plate, *g*, in combination with a holding-down bridge, *t*, applied within the hopper, substantially as described.

4. The combination of oscillating distributer F and spirally flanged drum C′, with a spring-bridge, *t*, which latter serves to hold said distributer down in place and also as a cut-off or striker, and pieces H H, applied within the hopper B, and operating substantially as described.

5. The barrel J, interposed between the bridges *t* and *k*, and containing a spring, *j*, applied so as to operate upon the rod C, substantially as described.

6. Beveled overhanging fillers *f′*, applied to distributer F, substantially as described.

7. Division-plates *a*, applied in a chamber at the base of the hopper B, in combination with distributing-plate F, substantially as described.

8. The perforated foot-plate E, ribbed on its upper side, and made with a downward flaring cavity in the center of its bottom side, substantially as described.

93,691.—James B. Eads, St. Louis, Mo.—*Gun-Carriage.*—August 17, 1869.

Claim.—1. The improved device above described, or its equivalent, for utilizing the recoil of heavy guns, consisting of the vibrating-frame B, shafts C, gears I I, springs K K, pinions *b b*, shaft J, ratchet *d*, and pawl *e*, all substantially as shown and set forth.

2. The above device, in combination with the spring-cushions H H, arranged on the frame D, as and for the purpose specified.

93,692.—Ezra Emmert, Franklin Grove, Ill.—*Cultivator and Harrow Combined.*—August 17, 1869.

Claim.—1. The combination of the vertically swinging tooth, its notched shank, and its locking-detent, all constructed as set forth, for joint operation.

2. The combination of the pivoted beams A A, pivoted cross-piece D, and brace *c*, with the pivoted link C, all constructed and operating as described, for the purpose specified.

3. The combiuation of the triangular frames, the pivoted brace *a*, connecting their rear ends, the front connectiug pivoted braces *c c*, the pivoted links C C, and the draught-beam B, all these parts being constructed for joint operation, substantially as set forth

93,693.—George M. Fenley, Medora, Ind.—*Fruit-Crate.*—August 17, 1869.

Claim.—The wedge-shaped slide H and spring-catches I and F, combined with the cover or cap E, and hinged parts A A′ and B and B of a fruit-box, all constructed and arranged to operate as set forth.

93,694.—Edward Fleming, Ann Arbor, Mich., assignor for one-half to G. A. Pease, same place.—*Rain-Water Cut-Off.*—August 17, 1869.

Claim.—The flexible adjustable elbow, consisting of the tubes C and D, with joint and slide, all substantially as described.

93,695.—Henry F. French, Boston, Mass.—*Teeth for Cultivators.*—August 17, 1869.

Claim.—The cultivator-tooth, formed from a square bar, and pointed, and curved at the point diagonally, as shown and described.

93,696.—L. P. Garner, Ashland, Pa.—*Steam-Pump.*—August 17, 1869.

Claim.—The engine A, pumps C and D, connecting-rods B F, wheels E, weighted forked lever L, link H, and tappet and valve-rod G, all arranged substantially as specified.

93,697.—L. P. Garner, Ashland, Pa.—*Steam-Engine Piston-Packing.*—August 17, 1869.

Claim.—1. The arrangement of the wedges C C and spring H, as specified.

2. The construction and arrangement of the piston, solid in the center, two adjustable followers, one at each end, and both open to admit the steam to pass through to the rings and jointed bars, as set forth.

93,698.—Thomas S. Gates and Alexander H. Fritchey, Columbus, Ohio.—*Vapor-Burner.*—August 17, 1869.

Claim.—In a vapor-burner, provided with an auxiliary vertical tube, open at both ends, and with an orifice, serving as an auxiliary jet for heating, the making of such orifice so as to communicate directly from the generating-chamber G to the vertical tube, as and for the purpose described.

93,699.—John Gearing, Pittsburgh, Pa.—*Conductor for Rolling-Mills.*—August 17, 1869.

Claim.—The improved conductor above described, consisting essentially of the several parts specified, all constructed and fitted together, as and for the purpose set forth.

93,700.—William Gee, New York, N. Y.—*Soda-Fountain.*—August 17, 1869.

Claim.—The tube A, having an exterior screw-thread on its outer, and a flange, C, on its inner end, the cap I, screw-nut H, bush D, and packing G, whereby the exterior and interior walls of the vessel are embraced, all constructed, arranged, and operating together, as and for the purpose specified.

93,701.—William Gerhard, Jr., Florence, Mass.—*Floor for Malt-Kilns.*—August 17, 1869.

Claim.—The malt-kiln floor, consisting of the wires B B, which are wound around the cross-bars A, to form a smooth upper surface, substantially as herein shown and described.

93,702.—Edwin Gillis, Battle Creek, Mich.—*Washing-Machine.*—August 17, 1869.

Claim.—As an improvement on tubes or other receptacles, to be secured at and from the periphery of an open washing-machine cylinder, the triangular troughs *c*, constructed substantially as herein described, and arranged and operated as and for the purpose set forth.

93,703.—J. W. Gilmer and W. H. De Valin, Sacramento, Cal.—*Carriage-Spring.*—August 17, 1869.

Claim.—1. The combination, with the double wooden C-springs, of a wooden spring-bar, for supporting the body of the carriage or other vehicle, extending between and connected with said springs by means of links, substantially as and for the purposes specified.

2. A wooden spring, constructed of two or more layers or strips, and covered with hide or its equivalent, substantially in the manner and for the purposes described.

3. The covering of the wooden C-springs and spring-bar, which support the vehicle, as specified, with hide or its equivalent, as aforesaid, substantially in the manner and for the purpose set forth.

93,704.—James Glober, Omaha City, Nebr.—*Machine for Double-Seaming Sheet-Metal.*—August 17, 1869.

Claim.—The combination of the levers *s*, *r*, and *t*, posts *u*, and long box *o*, with the main frame *a*, arranged, operating, and constructed as and for the purposes set forth.

93,705.—James Glober, Omaha City, Nebr.—*Machine for Turning the Edges of Sheet-Metal.*—August 17, 1869.

Claim.—The frame *a*, wheels *b c*, conical rollers *d d*, grooved rollers *e e*, handles *i*, rollers 1, 2, 3, 4, (the rollers 1 and 4 being adjustable by means of the movable boxes *m m*,) and thumb-screw *n n*, all constructed and arranged to operate as and for the purposes set forth.

93,706.—James Glober, Omaha City, Nebr.—*Machine for Pressing Down the Seams in Sheet-Metal.*—August 17, 1869.

Claim.—The rollers *c n*, table *l*, with guides *d d*, in combination with the grooved rollers *e e*, and roller *g*, constructed to operate as and for the purpose set forth.

93,707.—JOHN GRABACH, Clyde, Ohio.—*Carriage-Axle.*—August 17, 1869.

Claim.—The spindle A, provided with the oil-reservoir *c* behind its shoulder *b*, with the adjustable slide B in the reservoir, and with the spiral groove or grooves *g* in front of the shoulder, all arranged, combined, and operating substantially as herein shown and described.

93,708.—W. S. GRAVES, Kansas City, Mo., and A. S. CAPRON, Grass Lake, Mich.—*Clothes-Drier.*—August 17, 1869.

Claim.—A clothes-drier, consisting of a double bottom, E K, cylinder G, standards C, hoops D, flange B, and cylinder H, operated by shaft F and gearing N P, as set forth.

93,709.—HENRY P. GREGORY, Plattsburgh, N. Y.—*Registering-Apparatus for Spinning-Mules.*—August 17, 1869.

Claim.—1. The combination of the wheel E and pivoted lever F′, with the gear-wheel G, gearing H H′, and the drawing-rollers or drum-shaft, substantially as described, for the purpose specified.

2. The combination of the bar A, sliding catch-bar *c*, pivoted lever F′, weight L, and pin I, with the wheel E, for gearing and ungearing with the rollers, substantially as herein shown and described.

3. The combination, with the bar A, sliding catch-bar *c*, the wheel G, and the gearing H H′, of the weighted wheel E and lever F′, substantially as and for the purpose specified.

93,710.—GEORGE V. GRIFFITH, Fort Wayne, Ind.—*Machine for Forming Plow-Handles.*—August 17, 1869.

Claim.—The vertically reciprocating frame B, combined with the horizontally reciprocating frame C, and constructed and operating substantially in the manner and for the purpose set forth.

93,711.—JAMES MADISON HALE, Georgia Plains, Vt.—*Sash-Frame and Fastener.*—August 17, 1869; antedated August 5, 1869.

Claim.—The combination of the grooved sashes B B, and their notched plates, with the double guide-plates C C, bolts *d d*, lugs *e e*, and spring *g*, all constructed and operating substantially as and for the purposes herein set forth.

93,712.—ROBERT HAM, Troy, N. Y.—*Grate.*—August 17, 1869.

Claim.—1. Forming the central part of the fire-grate surface, with and by means of the detached pivot D, operating as set forth, and provided with arms *c c′* and *b b′*, substantially as described.

2. Arranging and supporting the fire-grate A A on a loose or detached center pivot, D, forming parts of its fire surface, and movable in horizontal directions with said fire-grate, but immovable when supporting said grate, so as to dump on a line with its shank F at any point of its range of vibratory movement, substantially as described.

93,713.—JAMES HENDERSON, New York, N. Y.—*Manufacture of Iron and Steel.*—August 17, 1869; antedated August 4, 1869.

Claim.—The process, substantially as herein described, of applying, for decarbonizing crude molten iron by means of boxes or like vessels, closed at top and opened at the bottom, to contain the decarbonizing substances, the said boxes, or equivalent, being introduced in the molten metal substantially as and for the purpose specified.

93,714.—J. M. HENRIE, Vandalia, Iowa.—*Rat-Trap.*—August 17, 1869.

Claim.—1. The combination of the hinged part F with the cover E, stop M, and spring O, substantially as specified.

2. The combination with the cover and weighted cord, of the locking-bar V and dog W, substantially as specified.

3. The improved trap, above described, all its parts being constructed and arranged, with reference to each other, as shown and set forth.

93,715.—JOHN HILL, Charlotte, Mich., assignor to himself and WILLIAM ADAMS.—*Bench-Shears.*—August 17, 1869.

Claim.—In the construction of bench-shears, the combination of a circular disk, inclosed by or attached to one of the shear-blades, and connected to the other blade by a stirrup or other equivalent device, pivoted eccentrically to said disk and mechanism, by means of which said disk may be rotated, the combination being and operating substantially as described.

93,716.—ISAAC HOLLIDAY, South Brooklyn, N. Y., assignor to himself and J. S. DEAN, same place.—*Guard for Circular Saws.*—August 17, 1869.

Claim.—The hood D, pivoted to the upright C, when said hood embraces the upper portion of the saw, and is adapted for adjustment with relation thereto, by means of the supporting bar E, all arranged as described, for the purpose specified.

93,717.—HENRY JACOBS, Fayetteville, Tenn.—*Remedy for Murrain in Cattle.*—August 17, 1869.

Claim.—The murrain-remedy herein described, composed of the ingredients set forth.

93,718.—THOMAS JORDAN, Brooklyn, N. Y.—*Carpet-Beater.*—August 17, 1869.

Claim.—The chains *s*, attached to bar B, in combination with cords and pulleys P′ P P″, adjustable gearing 1, 2, 3, rollers *r r*, and revolving brushes *n*, as herein described, for the purpose set forth.

93,719.—E. G. KELLEY, New York, N. Y.—*Lamp.*—August 17, 1869.

Claim.—The improved lamp above described as an article of manufacture, formed by the combination of the vessel A, having perforated and gauzed screw-cap *a* fitted therein, with the curved wick-tube B closed by the wire gauze *c* and burner C, all shaped and arranged, with reference to each other, as shown and set forth.

93,720.—ROBERT B. KEPNER, Philadelphia, Pa.—*Combining a Letter-Balance and a Pen-Holder.*—August 17, 1869; antedated August 12, 1869.

Claim.—1. A pen-holder, so constructed as to form a lever-balance, graduated, and provided with an adjustable counterbalance, and with a clip or other device for securing a letter to the holder, all substantially as and for the purpose described.

2. The tube or rod C, with its clevises *b b′*, the whole being adapted to the tube A, substantially as described.

3. The combination of the tube C, its clevises *b b′*, and openings *c c′*, and the sliding tube or rod E, and its fingers *i i*, all substantially as and for the purpose described.

4. The plate L, having knife-edges *n n′*, and bent and otherwise constructed as specified.

5. The projections *e e* on the clevis *b′*, for the purpose set forth.

93,721.—T. B. KIRKWOOD, Dublin, Ind.—*Fanning-Mill.*—August 17, 1869.

Claim.—1. The screens M, when arranged to slide at their forward ends on pins N, set in the casing or wall B, and attached at their opposite ends to the vertical reciprocating bars I, by means of hooks or catches L K, substantially as herein shown and described, for the purpose specified.

2. The combination of the bars H and springs G, with the armed wheels F of the shaft E, when arranged substantially as shown and described, for the purpose of agitating the screens M, as set forth.

3. The combination of the armed wheels F, springs G, bars H, vertical bars I, guide-pins J, hooks and pins K L, screens M, and guides or supports N, with each other, and with the fan-shaft E, casing B, and frame A of the mill, substantially as herein shown and described, and for the purpose set forth.

93,722.—J. M. W. KITCHEN, Brooklyn, N. Y.—*Side-Wall Register.*—August 17, 1869.

Claim.—The combination of a foot-rest with a side-wall register, whether said foot-rest be pivoted or sliding, or whether it be permanently or detachably connected with said register, substantially as

herein shown and described, and for the purpose set forth.

93,723.—John D. Kunkel, Cincinnati, Ohio, assignor to himself, Frederick Stockhone, and C. F. Hornberger.—*Flue-Brush.*—August 17, 1869.

Claim.—The construction and combination of rings A, heads B B′, bolts C, and Manila grass or jute, as shown and described.

93,724.—C. Leffingwell, Clarksburgh, Ohio.—*Head-Block for Saw-Mills.*—August 17, 1869.

Claim.—1. The device for preventing a casual retrograde movement of the knees K, to wit, the bent or right-angular levers N, with sockets *k* and the bars O, which pass through the sockets, all being arranged and applied substantially as shown and described.

2. The pawls L, one or more, in combination with the sliding or reciprocating racks J, the eccentric or crank-shafts *h*, fixed stops *b′*, and the adjustable stops *n*, the whole constructed, arranged, and operating substantially as and for the purpose specified.

93,725.—Alfred John Le Grand, Boonton, N. J.—*Boiler.*—August 17, 1869.

Claim.—The cylinder A, vertical tubes B, return-tubes C D E, and hot-water tubes F G, all combined and arranged substantially as specified.

93,726.—Henry Link, Little Falls, N. Y.—*Button.*—August 17, 1869.

Claim.—The flat notched plate *c*, and the flat curved spring *e*, constructed as described, and arranged to operate in connection with the flat-backed button and the arms *b* of the shank, in the manner herein described, for the purpose specified.

93,727.—Harvey Mann, Bellefonte, Pa.—*Grinding Axes.*—August 17, 1869.

Claim.—In combination with a lever seat whereon the grinder sits, and a stone whereby axes are ground on top, in the usual way, a rest, tongs, and holding-lever, at the end or front of the stone, for grinding axes also, so that the irregular wear of the top-grinding may be corrected by the end grinding, and the stone thus kept true, by which time and economy of stone are both availed of, the construction and operation being substantially as described.

93,728.—James H. McElroy, Warwick, N. Y.—*Self-Closing Telegraph-Key.*—August 17, 1869.

Claim.—The combination, with the key C′, and spring C of the cut-out *a*, arranged substantially as and for the purpose specified.

93,729.—A. W. McKay, Elkhart, Ind.—*Machine for Sowing Plaster, Grass-Seed, and Grain.*—August 17, 1869.

Claim.—1. The arrangement of the buttons or valves *v′* in relation to the openings *v*, for closing or enlarging the latter, as specified.

2. The bars *m*, and pins P, in combination with the cylinder A, openings *v*, and valves *v′*, as specified.

93,730.—Neal McKay, Columbia, Mo.—*Cultivator-Plow.*—August 17, 1869.

Claim.—The combination and arrangement of the rear plows D, fastened to the main frame, the inner and front plows C, adjustably secured upon the rock-shaft B, the hand-lever G, pivot *g*, and chains F F to the inner plows, and the hand-lever H, with its four-armed rock-shaft, and chains *h h h h* for lifting the four plows, secured by the catch *l*, with the adjustable seat K.

93,731.—Daniel Mills, New York, assignor to Charles Goodyear, Jr., New Rochelle, N. Y.—*Sewing-Machine.*—August 17, 1869; antedated February 17, 1869.

Claim.—1. The combination of an awl-stock and a needle-stock, mounted independently of each other, the one in stationary, the other in movable bearings, both being operated independently of each other by one or more cam-disks, mounted on one and the same shaft, substantially as herein shown and described.

2. The needle and awl stocks, having motions imparted to them in the manner and by the means herein described, that is to say, through the intermediary of segmented cog-gears on both said stocks, and upon levers actuated by cam-disks, as herein shown and set forth.

3. In combination with a lever, forming the bearing for the pivot of the needle-stock, and effecting its back-and-forth movement, the lever actuating the rotary movement of the needle-stock, when both needles oscillate upon one and the same axis, substantially as set forth.

4. In combination with the needle-stock, having a compound rotary movement, as described, the locking-lever, and its actuating cam-disk, so arranged, in relation to the lever forming the bearing of the needle-stock, as to hold the said needle-stock stationary while the stitch is being made, substantially as herein shown and set forth.

5. The combination of the thread carrier or looper, with mechanism, substantially as herein described, to impart to it the movement in relation to those of the needle, as herein shown and specified.

6. The thread carrier or looper, mounted upon a transversely sliding rod, which forms its pivot, in combination with cams, or their equivalents, for effecting the compound vibratory movement, substantially as herein shown and described.

7. The combination with the rotary needle and awl, of a guard or barb-coverer, when the same is mounted in and partakes of the movement of the awl-stock, to operate in connection with the needle, substantially as herein shown and described.

8. In combination with the rotary barbed needle, the loop-cheek or retractor, operating substantially as herein described.

9. The combination, with the sewing-mechanism, substantially as herein described, of two gauges, one to guide the work by the channel cut into it, the other to press against or hold the work to the former gauge, substantially as set forth.

10. The arrangement of two gauges, substantially as herein described, in such manner that, while the one is stationary or fixed, the other shall yield to the sinuosities of the work, as set forth.

11. The spring-gauge, mounted upon the axis of the awl, so that it shall yield concentrically with the awl, substantially as set forth.

12. The combination of a stop-mechanism with the driving-shaft and swinging-mechanism, under the arrangement, substantially as herein shown and described, so that the machine can be stopped only when the needle and awl are out of the work, and thus allow of the ready removal and introduction of the work.

13. The feed-dog, mounted upon an up-and-down vibratory lever, in combination with a laterally vibrating lever of the first order, and the means herein described, or the equivalent thereof, for adjusting the length of said lever, whereby an adjustable four-motion top-feed is obtained, substantially as and for the purposes set forth.

14. A last-holder, composed of a tilting-plate, combined with spring-latches and adjustable stops, in such manner that, by releasing said latches at proper intervals, the work is adjusted by the action of the feed-dog, and the last-holder becomes locked at the proper time for the turning of the work.

15. The arrangement of the stationary tube located in and passing through the lower part of the main supporting-frame, and exposed to the action of a flame, within the cavity in the interior of said frame or standard, for the purpose of heating the waxed thread as it passes to the sewing-mechanism, as set forth.

93,732.—H. Mithoff, Columbus, Ohio.—*Curry-Comb.*—August 17, 1869.

Claim.—An improved curry-comb, the body of which is formed by combining a number of single-flanged strips, B, with a single double-flanged strip, A, the several parts being secured together by bending the flanges *b′* of each strip B over the ends of the preceding strip, substantially as herein shown and described.

93,733.—Cyrus T. Moore, Gilmanton, N. H.—*Safety-Guard for Gun-Nipple.*—August 17, 1869.

Claim.—1. In combination with the safety-guard H and the hammer and tumbler of a fire-arm lock, the stud *e*, the slotted connecting-rod *c*, and the spring *f*, or their mechanical equivalents, the whole being substantially as described.

2. The arrangement and combination of the spring *f*, the slotted connecting-rod *c*, and the stud *e*, as applied to the lock-plate A, the guard H, and the tumbler E of the hammer B, such guard being pivoted to the lock-plate, so as to operate with the nipple and hammer, in manner substantially as explained.

93,734.—Bernard Morahan, Brooklyn, N. Y.—*Ice-Pitcher.*—August 17, 1869.

Claim.—An ice-pitcher, having a covering or guard covering a portion of the nose or spout of the same, the inner edge of which extends inwardly beyond the inner walls of the pitcher, when said covering or guard is an integral part of the pitcher, substantially as and for the purpose set forth.

93,735.—James Nardin, Locle, Switzerland, assignor to V. T. Magnin, Guédin & Co., New York, N. Y.—*Stem-Winding Watch.*—August 17, 1869.

Claim.—1. The arrangement of the slide B relatively to the bezel A, cover D, and the part K of the case, substantially as specified.

2. The arrangement of the slide B with the case and the bow E, having the collar F, substantially as specified.

3. The arrangement, with the part K of the case, the slide H, and the cover D, of the spring-pin I, substantially as specified.

93,736.—Andrew Nonnamaker, Circleville, Ohio.—*Scoop.*—August 17, 1869.

Claim.—A scoop, provided with a slide, for clearing it of its contents, substantially as described.

93,737.—George Oerllein, Utica, Minn.—*Horse-Power.*—August 17, 1869.

Claim.—1. The sweeps C, hinged loosely in the irons G, and resting in the open sockets F, substantially as described.

2. Rubbers I, in combination with bows D and draught-iron K, substantially as described.

3. Box H, arranged so as to slip on to the end of shaft N, substantially as described.

4. Shaft N, pinion O, shaft S, and sliding-pinions P and Q, constructed substantially as described.

5. Sliding-pinions Q and P, wheel R, and shaft S, constructed substantially as described.

6. Frame A, ratchet-wheel T, dog U, rope V, and shaft W, constructed and arranged substantially as described.

93,738.—George Oerllein, Utica, Minn.—*Horse-Power.*—August 17, 1869.

Claim.—1. A two-wheeled horse-power, with a square frame, constructed substantially as described.

2. Master-wheel B, with jointed sweeps C, and braces D, constructed and arranged substantially as described.

3. Master-wheel B, with trucks E and P, to keep it securely in position, substantially as described.

4. A horse-power, arranged with the large wheel in rear of the axle, so that the axle can run through the whole width of the power without obstruction, constructed substantially as described.

93,739.—C. Chauncey Parsons, New York, N. Y.—*Process for Purifying Paraffine.*—August 17, 1869.

Claim.—1. Melting the paraffine with naphtha, and cooling the same while continually agitating it, substantially as and for the purposes described.

2. Washing the paraffine by passing cold naphtha up through it, stirring or agitating the mixture at the same time, so as to expose, as nearly as possible, all the paraffine to the naphtha, substantially as herein set forth.

3. Separating paraffine of a lower melting-point from that of a higher melting-point, by varying the temperature of the naphtha with which the paraffine is treated, substantially as set forth.

4. The process for purifying paraffine, substantially as herein described.

93,740.—C. Chauncey Parsons, New York, N. Y.—*Treadle.*—August 17, 1869.

Claim.—1. The arrangement, in a sewing or other machine, of a pendulous or swinging treadle, whether to hold one foot or both feet, substantially in the manner described, so that its axis or center of motion shall coincide as nearly as may be desirable with the knee-joint of the person operating said treadle.

2. The combination, with a swinging treadle, whose center of motion is located as specified, of a foot-rest, capable of being adjusted to conform with the length of limb of the operator, substantially as described.

3. The combination, with the foot-rest, of the means for supporting the same at or near the instep, and for upholding the front end of the same, substantially in the manner and for the purposes described.

4. The employment, with the foot-rest, of one or more springs, substantially in the manner and for the purpose described.

5. The combination, with the swinging treadle-arms and crank-shaft, of the links for connecting said parts, the same being constructed substantially in the manner shown and set forth.

93,741.—S. W. Perkins, Geneseo, Ill.—*Thill-Coupling.*—August 17, 1869.

Claim.—The improved hinge-coupling above described, its several parts being constructed and fitted together in the manner shown and described.

93,742.—Jacob S. Platt, Philadelphia, Pa.—*Coal-Stove.*—August 17, 1869.

Claim.—1. The fire-clay cylinder B, having a bulge or projection, for partially supporting the burning fuel, substantially as and for the purposes described.

2. The clearing-door D, above the fire-grate, having its bottom on a line, or nearly on a line, with the top of said grate, substantially as described.

3. The receiving-draw F, with two sections, for receiving the cinders and ashes, respectively, substantially as described.

4. The combination of a stove or furnace cylinder, a throttled or contracted passage, a grate below said throttled passage, and an opening on a level or above the grate.

93,743.—William Preiss, New York, N. Y.—*Tuck-Creasing Attachment for Sewing-Machines.*—August 17, 1869.

Claim.—1. The combination and arrangement of the clamp-block *a*, rod *b*, rocking-lever *c*, with its jointed arm and screw, provided with a groove, and the projection on the bar *j*, constructed and operating substantially as described and specified.

2. The combination, with the parts above described, of the gauge *k*, for adjusting the apparatus upon the sewing-machine, substantially as described and specified.

93,744.—Perry Prettyman, Paradise Spring Farm, Oreg.—*Lamp-Burner.*—August 17, 1869.

Claim.—The arrangement, with relation to the wick-tube, of the conical imperforate tube B, perforated funnel C, and air-deflector D, provided with the wings E F, as herein set forth and shown, for the purpose specified.

93,745.—Jonathan Quipp and Robert Law, Buffalo, N. Y.—*Steam-Generator.*—August 17, 1869.

Claim.—1. The improved mode herein described, of generating steam by a system of primary and secondary boilers, arranged to concentrate the heat of the fire upon the primary boilers, and to discharge the steam generated therein into the heating-space of the secondary boilers, for generating steam therein for use, substantially as specified.

2. The arrangement of the pipes E and F, with relation to the primary and secondary boilers, as herein shown and described.

93,746.—Ellery P. Ralph and James Hannan, Gallipolis, Ohio.—*Tinsmiths' Shears.*—August 17, 1869.

Claim.—In combination with the shear B, the

stationary die *a*, having adjustable gauges *b* and *c*, and movable die *d*, constructed to operate substantially as and for the purposes set forth.

93,747.—NICHOLAS REED, Otisville, N. Y.—*Combination-Lock.*—August 17, 1869.

Claim.—The combination, with the dovetail projection Q and the grooved disks, of the slide N, substantially as specified.

93,748.—JOHN L. REMLINGER, Providence, R. I.—*Button.*—August 17, 1869; antedated August 12, 1869.

Claim.—The automatic button-fastening, consisting of the L-shaped plates B C, one being rigidly fastened to the button, and the other hinged to the side of the first, below the under surface of the button, and either provided with a slot, as herein shown and described, for the purpose specified.

93,749.—JOHN J. ROSE, Elmwood, Ill.—*Cultivator.*—August 17, 1869.

Claim.—1. The right-angle hinges L L, in combination with the beams E E, plows N N, shovels M M, and chains I I′, of a riding cultivator, all substantially as and for the purpose shown and described.

2. The spring U, chains I′, when combined with the cross-beam or axle-beam G of a cultivator, and the plow-beams E, all substantially as shown and described, and for the purpose set forth.

93,750.—JOHN W. ROE, Lewisburgh, Pa.—*Horse Hay-Fork.*—August 17, 1869.

Claim.—The arrangement of the double-tripod arms D E with their respective stems, in combination with the lever C, and fingers F, and ring-catch B, all operated and combined substantially in the manner and for the purpose specified.

93,751.—S. H. SAWHILL, Cambridge, Ohio.—*Velocipede.*—August 17, 1869.

Claim.—1. The steering-post C, constructed, as described, of the two parallel bars *a a*, hung upon the crank-axle B, and connected by the plates *b d*, between which the end of the reach D is pivoted, said post being provided at its upper end with the crank-shaft J, and near its lower end with the foot-rests I, as herein described, for the purpose specified.

2. The arrangement of the extension-plates G, carrying the handles *g*, and adjustable upon the wrist-pins of the crank-axle J, the connecting-rods *f*, steering-post C, and crank-axle B, as herein described, for the purpose specified.

3. The extension-plates G, carrying the handles *g*, when slotted and adjustable on the wrist-pins of the crank-shaft J, as herein described, for the purpose specified.

93,752.—TALIAFERRO P. SHAFFNER, Louisville, Ky.—*Explosive Compound for Use in Fire-Arms, Blasting, &c.*—August 17, 1869.

Claim.—The mixing of nitroleum or nitro-glycerine with plaster of Paris, or equivalent substances, in such manner as will make or produce an explosive compound or mixture, in the manner and substantially as herein described.

93,753.—TALIAFERRO P. SHAFFNER, Louisville, Ky.—*Explosive Compound.*—August 17, 1869.

Claim.—1. A compound, composed of a mixture of nitro-glycerine with sponge or other vegetable fiber, in the manner and substantially as hereinbefore described.

2. The mixture of plaster of Paris or any alkaline substance with the above named and described compound, substantially in the manner and for the purposes hereinbefore described.

93,754.—TALIAFERRO P. SHAFFNER, Louisville, Ky.—*Explosive Compound.*—August 17, 1869.

Claim.—1. A compound, composed of a mixture of nitro-glycerine, with metallic powder or atoms, however formed or produced, substantially in the manner and for the purposes hereinbefore described.

2. The mixture of plaster of Paris, or any alkaline substance, with the above-described compound, substantially in the manner and for the purposes herein before described.

93,755.—TALIAFERRO P. SHAFFNER, Louisville Ky.—*Blasting Fuse.*—August 17, 1869.

Claim.—The placing, upon a blasting or other fuse, gun-cotton, or other substance of more rapid combustion than gunpowder, for the purpose of spreading the fire throughout the charge of a blast, cannon, torpedo, bomb, or shell, substantially as hereinbefore described.

93,756.—TALIAFERRO P. SHAFFNER, Louisville, Ky.—*Manufacture of Nitro-Glycerine.*—August 17, 1869.

Claim.—1. The use of an outer tank, E, to cool the inner tank A, by means of ice or cold water contained therein, in combination as mentioned, substantially as and for the purposes described.

2. The agitator, being composed of a rod, having fixed upon its flanges, so bent and curved as, when revolved, will force the liquid from and to all points of the tank A, substantially as and for the purposes described.

93,757.—TALIAFERRO P. SHAFFNER, Louisville, Ky.—*Method of Blasting with Gunpowder and other Explosive Substances.*—August 17, 1869.

Claim.—The interposition of non or partial explosive materials between the fibers of gun-cotton, the grains of gunpowder, or other kinds of powder or nitrated or explosive materials, calculated to spread the action of the gases evolved by the explosion of gun-cotton, gunpowder, or other explosive substances, over a greater cubic space than would be realized by the said gun-cotton, gunpowder, or other explosive substances, when not mixed, in the manner and for the purposes substantially as hereinbefore described.

93,758.—CHARLES WILLIAM SIEMENS, Westminster, England.—*Making Cast Steel.*—August 17, 1869.

Claim.—1. The method, substantially as hereinbefore described, of producing cast steel from the ore, such consisting in causing iron ore, in small pieces or in powder, to pass through and be treated by one or more horizontal or slightly inclined revolving cylinders, (acting as hereinbefore explained,) and next causing such ore to fall or pass into a bath of pig-metal or carbon (previously prepared) on the open hearth of a furnace, and thereby be melted or otherwise treated, and changed more or less into malleable cast steel by the addition of one or more refining agents, substantially as hereinbefore described.

2. For the reduction of iron ore in manner as set forth, an apparatus, consisting of a revolving cylinder and drum, as described, provided with outer channels, arranged substantially as specified, through which, when in use, the gases resulting from the reduction of the ore within the drum may be caused to pass, and be consumed in connection with air introduced into and heated within certain of such channels, as described.

3. The combination and arrangement, as set forth, of one or more rotative cylinders or drums, as explained, with a furnace, as described, (or its equivalent,) for the production of cast steel direct from the ore, as set forth; the whole being substantially as described.

93,759.—W. B. SLUTTER, Warsaw, Ind.—*Device for Shifting Buggy-Tops.*—August 17, 1869.

Claim.—The combination of the rails G B, lug or rest *e*, spring-lever F, and claw-hooks D, arranged to operate in relation to each other, for the purpose of attaching the calash to the seat A, substantially in the manner as herein described.

93,760.—THOMAS E. SPARKS, Norwich, Conn.—*Toy-Top.*—August 17, 1869.

Claim.—1. The tubular top-stem B, or its equivalent, for holding the spindle, substantially as and for the purposes set forth.

2. The independent spindle C, having its lower end forked, and the upper end pointed, for the top-

stem to turn upon, or its equivalent, substantially as and for the purposes set forth.

3. The combination of the tubular stem B, or its equivalent, with the forked spindle C, or its equivalent, substantially as and for the purposes set forth.

93,761.—William A. Spring, Titusville, Pa.—*Adjustable Clutch for Lifting Well-Tubing.*—August 17, 1869.

Claim.—An adjustable tubing-clutch, with hinged jaws *a a*, hinge *b*, links *d d*, and central bolt *c*, all combined and arranged substantially as and for the purposes set forth.

93,762.—John Stark, Thomasville, Ga.—*Seeding-Machine.*—August 17, 1869.

Claim.—1. The adjustable seed-slides *l l*, constructed as described, operating upon the graduated scales *m*, in combination with the perforated plate *k*, as herein described, for the purpose specified.

2. The oscillating plate *n*, for closing the seed-apertures, when operated by means of the lever *o*, substantially as herein shown and described.

3. The application to a seed-planter of the rotating upright shaft F, on which the separating disk *i*, having the arms *j*, is mounted, for separating cotton-seed and for breaking up the lumps of fertilizing material, substantially as described.

4. The apparatus for operating the reciprocating slide *r*, consisting of the oscillating arbor *s*, having the cam *t* of the spring *u*, toothed disk *x*, and gear-wheels *w*, all made and operating substantially as described.

5. The combination, with the seed-slide *r* and supporting-wheel C, of the spring *u*, cam *t*, rock-shaft *s*, gear-wheels *w v*, and the cam *x*, operating substantially as described, for the purpose specified.

6. The combination, in a seed-planter, of the hopper G, plates *l l* and *n*, shaft F, disk *i*, having the arms *j*, with the hopper H and box I, all made and operating substantially as herein shown and described.

93,763.—Isaac H. Stoddard, Amenia, assignor to E. and H. T. Anthony & Co., New York, N. Y.—*Camera-Stand.*—August 17, 1869; antedated August 12, 1869.

Claim.—The double inclines *b b*, fitted so as to be moved endwise upon the bed *a*, in combination with the table or camera-rest *k*, attached to the bearings *e e*, so as to be tipped or inclined in either direction, substantially as set forth.

93,764.—Friedrick Sulter, St. Paul, Minn.—*Furnace for Steam-Generators.*—August 17, 1869.

Claim.—The crank-shafts G G, chains H H, and regulator J, when constructed, arranged, and operating in the smoke-chamber F, as herein described, and for the purpose set forth.

93,765.—Lorens Swenson, North Cape, Wis.—*Harvester.*—August 17, 1869.

Claim.—1. Axle C, wheel H, pinion I, jointed shaft K, pinions L and M, shaft O, pulley N, pulley *f*, band *g*, and reel T, arranged substantially as described.

2. Axle C, wheel H, pinion I, jointed shaft K, pinions L and M, shaft O, hollow shaft P, cam Q, crane *l*, plate *z*, lug *x*, rake S, clutch R, shoe *a*, and rod *b*, constructed and arranged substantially as described.

3. Lever *c*, pulley *d*, rope *e*, post *o*, rod *q*, swing-bar *p*, and rod *r*, in combination with platform U, arranged as shown and described.

93,766.—O. W. Swift, New Haven, Conn.—*Fastener for Whip-Sockets.*—August 17, 1869.

Claim.—The socket D, attached to the fastenings F *d*, constructed as described, to the piece C, in combination with the metal support B, all arranged, constructed, and operated as described.

93,767.—S. D. Taylor, Hazleton, Pa.—*Water-Wheel.*—August 17, 1869.

Claim.—The arrangement of the chutes A, with relation to each other and to the buckets B, said chutes forming funnels, leading to the buckets, whereby the water is directed to the outer ends only of the latter, in the manner described, for the purpose specified.

93,768.—C. W. Terpening, Geneseo, Ill.—*Curd-Grinder.*—August 17, 1869.

Claim.—The combination of the longitudinally adjustable disk C, oscillating disk E, hopper F, flange *h*, and spring *g*, with the frame A, all constructed, arranged, and operating substantially as herein shown and described.

93,769.—W. R. Thomas, Catasauqua, Pa.—*Car-Wheel.*—August 17, 1869.

Claim.—An improved car-wheel, with a hollow center, formed by the combination of the rim A, plate B, plate C, and arms E, and brackets D, either or both, and whether the brackets D are made hollow or solid, substantially as herein shown and described, and for the purposes set forth.

93,770.—James E. Tibbetts, Trenton, N. J.—*Truss for Connecting Booms to Masts.*—August 17, 1869.

Claim.—The improved device for connecting the mast-truss and boom-straps of a ship, formed by the combination of the shank of the bolt D, with an L-shaped head d^2, circular flange d^3, nut d^1, and spring-key, all constructed and co-operating together, as and for the purpose specified.

93,771.—Joel Tiffany, Albany, N. Y.—*Combined Water-Tank and Warming-Closet.*—August 17, 1869.

Claim.—1. A water-tank and warming-closet, with a jacket surrounding the former, in combination with the chamber between the tank and closet, constructed so as to be attached to or detached from the outside of a stove or furnace, substantially as described.

2. The water-tank A, the warming-closet B, space C, the flues *f a f*, when constructed as and for the purpose described.

93,772.—Christopher C. Tracy, New York, N. Y., assignor to himself and James E. Grannis, same place.—*Oiler for the Slides of Steam-Engines.*—August 17, 1869.

Claim.—The elastic absorbent "oil-holding" rollers, supported in yielding bearings, and applied in substantially the manner specified, to spread the lubricating-materials on the slides or journals of engines and other machines, for the purposes specified.

93,773.—Abigail W. Viles, Elkhorn, Wis.—*Chair, Table, and Stand Combined.*—August 17, 1869.

Claim.—The combination of the chair A, with the table D and stand C, substantially as specified.

93,774.—P. H. Wait, Sandy Hill, N. Y.—*Water-Wheel.*—August 17, 1869.

Claim.—1. A water-wheel bucket, provided with a lever upper and inclined lower edge, substantially as herein shown and described.

2. A water-wheel bucket, having the upper four-tenths of its face, or thereabout, made nearly straight, while the other parts are curved, substantially as herein shown and described.

3. A water-wheel bucket, whose upper and lower edges, when continued toward the shaft of the wheel, are in a vertical line on the axis of said shaft, while the outer end of the lower edge is forward of that of the upper edge, substantially as herein shown and described.

93,775.—J. Wesley Webber, New York, N. Y.—*Kindling-Wood.*—August 17, 1869.

Claim.—The accompanying or fastening one or more fire-lighters, A, to or with the bundle of the common article of manufacture known as bundle or kindling wood, the fire-lighter to be suitably molded or pressed, and to be made of a combustible material, such as rosin or tar, the ingredients of which I do not claim, my invention consisting wholly of accompanying or fastening a fire-lighter, A, to or with the bundle, or at the string B of the bundle, of the

common article of manufacture known as bundle or kindling wood.

93,776.—JOHN WEEMS and WILLIAM WEEMS, Johnstone, Great Britain.—*Manufacture of Floor Oil-Cloth.*—August 17, 1869.

Claim.—The manufacture and treatment of floor and other oil-cloths and coverings, with printed or plain surfaces, in the improved modes of treatment by currents of steam, or other heated air, and arrangement and apparatus for moving the cloths, and in apparatus for the production of the currents of steam-heated air, either separately or combined together, substantially as described.

93,777.—THOMAS J. WEST, Alfred Centre, N.Y.—*Horse-Rake.*—August 17, 1869.

Claim.—The draw-bars B, connected to the sulky, and the handles of the rake connected to the lever F, hinged to the axle, and arranged for manipulating the rake, and for engaging with the hook I, for supporting the rake for transportation, all substantially as specified.

93,778.—CHARLES P. WILLIAMSON, Louisville, Ky.—*Horseshoe-Machine.*—August 17, 1869.

Claim.—1. The curved detachable dies A, die-carriers B, die-block Q, and reciprocating former N, combined, constructed, and arranged substantially as specified.

2. The combination, with the dies A, of the former N and die-block Q, when arranged and operated substantially as specified.

3. The arrangement of the reciprocating former N and discharger X, substantially as specified.

4. The arrangement of the stock of the pressing-die S, cam T, and cam U, for operation in the order specified.

93,779.—JOHN A. WILSON, Altoona, Pa.—*Railway Stop-Chair.*—August 17, 1869.

Claim.—A railroad stop-chair, consisting of parts *c d e*, as herein set forth.

93,780.—CHARLES G. WILSON, Brooklyn, N. Y.—*Pen-Holder.*—August 17, 1869.

Claim.—1. An improved pen-holder, in which the pen-socket is connected with the ferrule or handle by a ball and socket joint, or equivalent connection, substantially as herein shown and described, and for the purpose set forth.

2. The combination of the handle A and slitted ferrule B, whether made in one piece or separately, the pen-socket C *c'*, and screw-band or nut D, with each other, substantially as herein shown and described, and for the purpose set forth.

93,781.—GEORGE A. WING, Albany, N. Y.—*Stove and Furnace Grate.*—August 17, 1869.

Claim.—The construction of a stove or furnace grate, consisting of a series of rotating grates, in combination with toothed wheels F and G, or their equivalents, whereby the series of grates C may be rotated simultaneously, substantially as herein set forth.

93,782.—GEORGE A. WING, Albany, N. Y.—*Base-Burning Stove.*—August 17, 1869.

Claim.—1. The construction of illuminating-chamber C, with covers P and Q, or their equivalents, whereby all light from the combustion-chamber, within fire-pot A, may be excluded at pleasure.

2. The combination of direct draught-flue L and reservoir B, with illuminating-chamber C, substantially as herein set forth.

3. The combination of reservoir B and fire-pot A, with illuminating-chamber C, substantially as and for the purpose herein set forth.

4. The combination of elevated oven M, with flues K K and L, reservoir B, and fire-pot A, as herein shown and described.

5. The combination of register *l*, with ascending-flue 2, in the manner herein shown.

93,783.—SAMUEL WING, Munson, Mass.—*Hat-Shaping Machine.*—August 17, 1869.

Claim.—An elastic and flexible hat-pressing bag, A, provided with metallic angle-rings, E, substantially as specified.

93,784.—GEORGE C. WINTERS, Winfield, Mich., assignor to himself and EDWIN MILLER, same place.—*Quilting-Frame.*—August 17, 1869.

Claim.—The adjustable end-pieces A B, provided with the set-screws *e*, in combination with the rollers C C', hooks or pins *d*, ratchet *c h*, and hinged legs D, substantially as and for the purposes specified.

93,785.—FERDINAND WOLF, South Boston, Mass., assignor to himself and HENRY HANF, same place.—*Pepper-Caster.*—August 17, 1869.

Claim.—The arrangement and construction of the perforated plate D, with its rod E, spring G, and knob H, in combination with perforated plate B and the caster, of such form as may be suitable for the purpose herein described.

93,786.—JOSEPH E. WOLL, Allegheny City, Pa.—*Carriage-Jack.*—August 17, 1899.

Claim.—The bent lever *d*, operating against the lower end of an upright, *b*, and having bearings which operate in toothed racks *c c*, in combination with a ratchet-rack, *i*, and catch *h*, arranged substantially as hereinbefore set forth.

93,787.—HOLLIS WOODWARD, Milwaukee, Wis.—*Sawing-Machine.*—August 17, 1869; antedated August 5, 1869.

Claim.—A sawing-machine, consisting of the wheel D, slide-grooves E, cross-head F, saw H, saw-frame I, hung by its inner end, and provided with the movable weight S, constructed and arranged to operate as described.

93,788.—LYNDON WORSTER, Syracuse, N. Y.—*Cock-Eye for Harness.*—August 17, 1869.

Claim.—A cock-eye, composed of frame B *b' c*, and spring-hook or eye D *d*, substantially as herein described.

93,789.—JOHN F. WORTH, Brooklyn, N. Y.—*Flexible Wainscot.*—August 17, 1869.

Claim.—The flexible wainscot, constructed, as described, of the boards A, hung upon the wires B, passed through them from edge to edge, whereby said boards are adapted to be moved together to compensate for shrinkage, as herein shown and described.

93,790.—PETER C. WORTMAN, Meadville, Pa.—*Feed-Water Heater.*—August 17, 1869.

Claim.—The combination of the pipes D and E with the dome B and the tank C, constructed as described and set forth.

93,791.—BENJAMIN F. ADAMS, Bangor, Me.—*Carriage.*—August 17, 1869.

Claim.—The frame C, as made with the reversed arch *c*, arranged as set forth, and with the bearing-plate *d*, combined therewith, in combination with the two springs B B, applied to such frame and the carriage-body A, and arranged therewith, in manner substantially as described.

93,792.—THEODORE BAILEY, Fairfax County, Va., and HOWARD H. YOUNG, Washington, D. C.—*Buckle.*—August 17, 1869.

Claim.—1. The dovetail recess D, in combination with the curved rear end of a snap-hook spring, F, substantially as and for the purpose herein set forth.

2. The dovetail recess D, in combination with the projection *b* and transverse slot *c*, when constructed and arranged substantially as set forth.

3. The dovetail recess D, in combination with the lugs *a a*, substantially in the manner and for the purpose herein set forth.

93,793.—WILLIAM D. BAKER, East Abington, Mass.—*Chain-Stopper.*—August 17, 1869.

Claim.—1. The shaft A, as made with the helix-groove *d* extending around it, and with the passage *c* leading from such groove through one end of the shaft, as specified.

2. The combination and arrangement of the guide-

block B, and its supporting-bar *t*, with the chain-stopper shaft A, made with the helix-groove, and the passage leading therefrom, as explained.

3. In combination with the movable chain-guide B, and chain-stopper shaft A, made with a helix-groove, *d*, and a passage, *c*, leading therefrom, in manner as set forth, a mechanism substantially as described, or its equivalent, for revolving the shaft, and maintaining it in position as explained, such mechanism being the ratchet, the lever, and pawls, applied as described.

93,794.—A. Balding, Memphis, Tenn.—*Pump.*—August 17, 1869.

Claim.—The pipe A, chamber B, piston C, and valve D, all combined and arranged substantially in the manner shown, to form a double-acting plunger, for the purposes set forth.

93,795.—J. F. Barker, Springfield, Mass., and C. N. Gilbert, New York, N. Y.—*Apparatus for Carbureting Air.*—August 17, 1869.

Claim.—1. The combination of the helical spring *a* with the ring *c* and shaft *h* or ring *n*, the whole constructed and operating substantially as and for the purpose herein described and specified.

2. A meter-wheel, having a shaft, *h*, in combination with the toothed drum B, wheel s^1, with its pawls s^3 and s^5, the rings *c c'* and *m' n*, and spring *a*, all constructed and operating substantially as and for the purposes herein specified and described.

93,796.—H. H. Beard, deceased, Friar's Point, Miss., (W. J. St. John, administrator.)—*Excavator.*—August 17, 1869.

Claim.—The frame-work E', made in sections articulated together, and provided with the apron E, in combination with the frame-work C', provided with the apron C, and with the plows D D placed with respect to each other, as described, all arranged and operating substantially as set forth.

93,797.—Moses Bernheim, New York, N. Y.—*Metallic Remedy for Rheumatism.*—August 17, 1869.

Claim.—The combination of copper, zinc, and woolen cloth, and applied in the manner, form, and place, as herein set forth, to attain the cure of rheumatism, nervous, and other kindred diseases.

93,798.—Erastus B. Bigelow, Boston, Mass.—*Friction-Clutch.*—August 17, 1869.

Claim.—The arrangement of the wedge-formed bar *g*, operating in a central hole in the driving-shaft, the friction-arms *d*, springs *i*, and arms *e*, substantially as and for the purpose described.

93,799.—Erastus B. Bigelow, Boston, Mass.—*Harness-Operating Mechanism for Looms.*—August 17, 1869.

Claim.—1. The combination of mechanism herein described, for governing the order in which the leaves of heddles are raised and depressed, to form the shed, consisting of a pattern-surface, having a continuous rotary movement, latch-levers, which engage interchangeably with lifting-bars, to form the shed, and balance-levers, which transmit the governing-action of the pattern-surface to the latch-levers by contact therewith, when their changes are effected, and are separated therefrom while the shed is formed, substantially as specified.

2. In combination with the latch-levers, latch-hooks, or their equivalents, for preventing an untimely escape of the latch-levers from the lifting-bars, substantially as specified.

3. The combination of mechanism herein described, for operating the lifting-bars, consisting of a double-faced cam, producing two reciprocating motions in opposite directions, oscillating lever-arms, and two connecting-rods, by which the two reciprocating motions of the cam are communicated to their respective lifting-bars, substantially as specified.

93,800.—Erastus B. Bigelow, Boston, Mass.—*Power-Loom for Weaving Piled Fabrics.*—August 17, 1869.

Claim.—1. The combination, with the withdrawing-hook, which draws the pile-wires from the cloth, of a supporting-bed or its equivalent, and a latch-guard, by which the pile-wire heads are prevented from escaping from the withdrawing-hook while the pile-wires are being drawn out, substantially as specified.

2. In combination with the withdrawing-mechanism herein described, an inserting-carrier, which receives the pile-wire heads from the withdrawing mechanism, and inserts the pile-wire in the shed, when said inserting carrier is operated by a vibrating-staff, having imparted to it a parallel motion, and maintained in a proper position while moving toward and from the cloth, substantially as specified.

93,801.—James Brodie, San Francisco, Cal.—*Steady-Rest for Lathes.*—August 17, 1869.

Claim.—The dogs C C and C' C', arranged and operated as described, in combination with the revolving-plate B, substantially as described.

93,802.—J. R. Brown, New Haven, Conn.—*Soda-Water Apparatus.*—August 17, 1869.

Claim.—1. The combination of the water-vessel A, gas-generating chamber B, tubes D and E, constructed, arranged, and operating substantially as set forth.

2. In combination with the above, the arrangement of the supply L, in the manner substantially as set forth.

93,803.—Christopher C. Burnham, East Hartford, Conn., assignor to himself and Lewis H. Rogers, same place.—*Machine for Cutting Leather into Round Bands.*—August 17, 1869.

Claim.—1. The combination of the springs *n n n n*, and the cutter *h*.

2. The combination of the springs *n n n n*, the cutter *h*, and the knife *i*, the whole being constructed and arranged as described, for the purpose set forth.

93,804.—Eben S. Burns, Portland, Me.—*Paint.*—August 17, 1869.

Claim.—The described composition of ingredients, when compounded in the manner, proportions, and for the purposes hereinbefore set forth.

93,805.—A. H. Caryl, Groton, Mass.—*Hay-Tedder.*—August 17, 1869.

Claim.—1. A tedder-machine, so organized that the tedder-teeth are positively held back under tension between their tips and the stocks to which they are affixed, while their stocks move forward, and are then released, thereby imparting a jerking movement to flirt the hay, substantially as described.

2. The combination of the slotted sliding-stocks *d*, spring-teeth *e*, springs *g*, and rods *h*, and rocker-shafts *i*, arranged and operating together, substantially as described.

3. In combination with the spring-teeth *e* and the mechanism for imparting their positive movements, the hooks *u* or equivalent devices, operating to first hold back and then release the tedder-springs, substantially as described.

4. The combination with the carriage-wheel of the incline and its spring, for actuating the hook-plate, and the arms *l* l^2, and pinions, for actuating the rocker-shafts, substantially as described.

93,806.—Jacob F. Chandler, Concord, N. H., assignor to himself and Abner F. Durgin, same place.—*Hay Raker and Loader.*—August 17, 1869.

Claim.—The combination and arrangement of the endless apron A, springs E, and inclines F F, to operate as and for the purpose set forth.

93,807.—William A. Clark, Woodbridge, Conn.—*Countersink and Bit.*—August 17, 1869.

Claim.—In combination with the counterbore, made adjustable in a bit, the plug-cutter L, formed in one and the same piece with the counterbore, and so as to be applied to the bit, substantially as set forth.

93,808.—William A. Clark, Woodbridge, Conn.—*Hollow Auger.*—August 17, 1869.

Claim.—In combination with the cutters D, the

clamp E, constructed so as to grasp the head of the auger and edge of the cutter, substantially in the manner and for the purpose herein set forth.

93,809.—H. H. DORBIN, New Britain, Conn.—*Paper Box.*—August 17, 1869.

Claim.—As a new article of manufacture, the paper box, with its sides *a a'* and ends *a a* made from one piece, and the bottom *c* and top *b* of another, and held by the upright or extra side *c'*, arranged and connected as shown and described.

93,810.—R. W. CROUSE, Westminster, Md.—*Pump.*—August 17, 1869.

Claim.—A pump-plunger, constructed of the guide T, valve I, ring R, disk M, yoke *n*, and standard *o o'*, combined and arranged as herein described, and for the purposes set forth.

93,811.—HORACE DANIELS, Pawtucket, R. I.—*Mechanism for Operating the Nippers of Combing Machines.*—August 17, 1869.

Claim.—In combination with a pair of nippers that move in the arc of a circle, for taking and carrying the material to be combed from the feeding-point to the carrying or working cylinder, the tappet, cam, and spring, all constructed and operating to open and close the hinged jaw of the pair, substantially in the manner herein described and represented.

93,812.—DAVID C. DELINGER, Decatur, Ohio.—*Washing-Machine.*—August 17, 1869.

Claim.—The arrangement and combination of the two vessels A V, frame I, standard H, lever C, rod F, piston R, rod B, movable washer T, and fixed washer I', each constructed as described and shown, with the bent pipe M extending under said vessels A V, from the bottom of one to that of the other, and provided at its lower angle with a stopper K, the several parts being constructed to operate in connection with each other, and combined with the wringer herein described, as and for the purposes specified.

93,813.—JOHN B. FASSETT, Irasburgh, Vt.—*Horse-Power.*—August 17, 1869.

Claim.—The combination of platform B, friction-wheel D, constructed and placed as set forth, gears K and K', driving or crank wheel E, with crank and arm, as shown, and friction-rollers *p p*, the whole arranged and operating as an improved horse-power, substantially as described.

93,814.—FRANK T. FERGUSON, Boston, Mass.—*Shoe.*—August 17, 1869.

Claim.—As a new article of manufacture, the described imitation of an English over-gaiter and shoe, made in the manner set forth.

93,815.—CHESTER D. FLYNT, Philadelphia, Pa.—*Spring-Cushion.*—August 17, 1869.

Claim.—A spring seat or support, of cushion form, composed of interwoven steel strips *d*, which are passed over the rounded rim, and fastened to the lower edge of the frame *a*, so as to leave a space between them and the upper rounded edge, with or without the auxiliary springs *f*, the whole being constructed and arranged as described.

93,816.—EUGENE FONTAINE, Fort Wayne, Ind.—*Electric Fire and Burglar Alarm.*—August 17, 1869.

Claim.—1. So weighting and arranging the bell-hammer G H, that it may drop away from the bell C after each stroke, by its own weight, substantially as herein shown and described, and for the purpose set forth.

2. The combination of the keys N, having cross-heads *n'*, formed upon the inner ends of their stems, metal bar O, non-conducting bar Q, and springs P, with the wires of the circuit, substantially as herein shown and described, and for the purpose set forth.

3. The combination of the thermometer-bulb and stem R S, platinum wires U and V, sliding-bar X, having a screw-thread and scale formed upon its lower end, and swiveled nut Y, with each other, and with the circuit of an electric alarm, substantially as herein shown and described, and for the purpose set forth.

93,817.—LEONARD D. GALE, Washington, D. C., and ISAAC M. GATTMAN, New York, N. Y.—*Manufacture of Sugar of Lead and Acetic Acid.*—August 17, 1869.

Claim.—1. The manufacture of sugar of lead, by the process of corroding the metal by vapors of vinegar mixed with atmospheric air, substantially as described.

2. Applying the surplus heat from the steam of vinegar, and the chemical action of the acid on the lead, for concentrating the solution of sugar of lead, and for other purposes.

3. Concentrating the vapors of malt or whisky-vinegar by means of common salt, substantially as described.

4. Bleaching the solutions of sugar of lead by means of sulphureted hydrogen, substantially in the manner herein set forth.

5. Acidifying the basic solution of sugar of lead, substantially in the manner herein described.

6. Draining and drying sugar of lead, by centrifugal action, substantially as described, as an improvement on the mode now used of drying on shelves.

7. The use of the double trumpet-blowing pipes or their equivalent, for mixing the vinegar-vapors with air, substantially as described.

8. Washing down the corroded lead by means of the rotary sprinklers, or their equivalents, as herein set forth.

9. Generating acetic acid, free from pyroligneous odor and color, by simple distillation of acetate of lime with sulphuric acid, substantially as herein described.

93,818.—W. L. GORDON, Dalton, Ga.—*Churn.*—August 17, 1869.

Claim.—The shaft B, provided with the balance-wheel *b*, and combined with the cross-head *c* and treadle *e*, substantially in the manner described.

93,819.—J. DURELL GREENE, Cambridge, Mass.—*Life-Preserving Mattress.*—August 17, 1869.

Claim.—A life-preserving mattress, having a construction substantially as described.

93,820.—CHARLES A. GREGORY, Stratford, Conn., assignor to himself and ALLEN GREGORY, same place.—*Fruit-Jar.*—August 17, 1869

Claim.—The combination of the auxiliary head E with the principal head or cover B, united together so as to be held in position, substantially in the manner herein set forth.

93,821.—LUTHER W. HARWOOD, Troy, N. Y.—*Base-Burning Stove.*—August 17, 1869.

Claim.—1. The construction of the hollow-base B of fuel-reservoir A with an upper side, G, connected to and projecting from the body or cylinder of the reservoir near its base, and with one or more air-pipe pockets and openings, D, substantially as before set forth, for the purpose described.

2. The employment of one or more distinct air-pipes, D, when attached to the aforesaid-constructed hollow base B of reservoir A of base-burning stoves, and conducting hot air therefrom, in a distinct current or currents, without contact with or surrounding the body of the fuel-reservoir A above its hollow base B, substantially as described.

3. The combination and arrangement of one or more distinct air-conducting pipes, D, with the aforesaid constructed hollow base B of fuel-reservoir A, combustion-chamber E, and fire-pot C, of base-burning stoves, arranged and operating separately from that part of the fuel-reservoir above its base B, substantially as and for the purpose described.

4. The enlargement of the top part of the air-conducting pipe or pipes D, or equivalent part K, in the top plate F, where connecting therewith, in combination with the perforated guard-plate J thereon, substantially as and for the purpose described.

93,822.—B. B HOTCHKISS, New York, N. Y.—*Breech-Loading Fire-Arm.*—August 17, 1869.

Claim.—1. The means herein described for cocking the piece C, in combination with the single compound movement of the piece B, as and for the purposes herein described.

2. The within-described arrangement of the recesses n n^1 n^2, and of the half-cock notch n^3, relatively to each other and to the bolt B, rear part C, and the internal projection c^2, as and for the purposes herein set forth.

93,823.—Samuel D. Hovey, Brooklyn, N. Y.—*Rubber-Eraser.*—August 17, 1869.

Claim.—A pocket-eraser, consisting of the case A, with the rubber R, arranged to slide therein, substantially as described, as a new article of manufacture.

93,824.—William Humphreys, Waterford, N. Y.—*Compound Tool for Water and Gas Pipes.*—August 17, 1869.

Claim.—A combined drill, reamer, and tap, of the form and construction herein set forth.

93,825.—Israel Kinney, Woodstock, Canada.—*Carriage-Seat.*—August 17. 1869.

Claim.—In the first place, making the sides and back of the seat of one piece of cast metal; second, making the curtain in the same manner and of the same materials as the sides and back, this curtain being in one piece with the seat, as desired.

93,826.—Thomas Lovelidge and John Grindrod, Philadelphia, Pa.—*Automatic Boiler-Feeding Apparatus.*—August 17, 1869.

Claim.—1. The float G, arranged in the vessel A, interposed between a steam-boiler and water-reservoir, and communicating with the steam and water spaces of the boiler, substantially as described.

2. The combination, substantially as herein described, of the float-rod i, lever h, connecting-rod k, and valve H.

3. The valve-casings D and D′, each having seats adapted for the reception of two valves, l and l', arranged substantially in the manner described.

4. The valves D D′, arranged within the reservoir A, and operated from a single rod, H, substantially as specified.

5. The arrangement, in respect to the reservoir A, and its valves D and D′, of the pipes B, C, and F, and the branch F′, substantially as set forth.

93,827.—Addison Moe, Plainfield, N. J.—*Churn.*—August 17, 1869.

Claim.—The splash-catcher n, and arms o, formed with slanting ends, and revolved with and by the spindle d, in combination with the cap l, and wings m, as and for the purposes set forth.

93,828.—Cyrus T. Moore, Gilmanton, N. H.—*Dumping-Wagon.*—August 17, 1869.

Claim.—1. The arrangement and combination of the chains h h, the grooved wheels g g, the arms M M, the shaft K, and the hand-lever L, applied to the wagon-body A, and its doors C D.

2. The arrangement and combination of the middle bar B with the wagon-body A, its doors C D, and the mechanism, as described, for raising the said doors.

3. The combination of the latching and locking mechanism, as specified, with the wagon-body, its doors, and the mechanism, as explained, for raising the said doors.

93,829.—Daniel B. Neal, Mount Gilead, Ohio.—*Horse Hay-Rake.*—August 17, 1869.

Claim.—1. The slides S S looped to the rake-head R, as described, and serving to raise and lower it, in the manner specified.

2. The combination and arrangement of the foot-board B, levers L, hung in stirrups A, with the slotted slides S, in the manner and for the purpose set forth.

3. The combination of the thills T, posts P, and mortised cap C, with the slides S, in the manner and for the purpose described.

4. The latching-lever l, with its bolts m n, in combination with caps C and slides S, all constructed, arranged, and operating as specified.

93,830.—Solomon Nill and Daniel Nill, Covington, Ohio.—*Tile-Machine.*—August 17, 1869.

Claim.—1. The rake q, operated by shaft r, and provided with cross-bar o, in combination with springs b b, all arranged for the purpose of cleaning the meshes of the screen h, substantially as described.

2. The arrangement described of cams e k, on shaft a, for operating follower P and plunger W, substantially in the manner herein set forth.

93,831.—Charles E. Palmer, Boston, Mass.—*Scissors-Sharpener.*—August 17, 1869.

Claim.—In combination with the rotary grinder-wheel, the inclined guide h, and its lip i, substantially as described.

93,832.—Alfred S. Patterson, Westfield, N. Y.—*Burial-Case.*—August 17, 1869; antedated August 7, 1869.

Claim.—1. A metallic burial-case, composed of a series of sections, a, connected together by lock-joints, formed of two tongues, b b, and a sleeve, c, the latter being either separate or detached, or formed by a proper curvature of one of the tongues, and used in connection with a suitable solder or cement, substantially as described.

2. The securing of the lining-fabric h g within the burial-case by means of the plates f f', fastened, by screws or otherwise, to the upper parts of the inner surfaces of the sections a, substantially as set forth.

3. The rebate k, in the upper parts of the inner surfaces of the sections a, in combination with the plates f f' and the pendent cleat l, to admit of the cover or top being fitted air-tight on the case.

93,833.—Adam Purvis, Louisville, Ky.—*Ice-Velocipede.*—August 17, 1869.

Claim.—I. The crank-shaft N, with its arm S, gum spring T, screw U, cranks O O, and hollow axles P P.

2. The levers V V, pitmen W W, handles z z, cranks Q, cranks O, with hollow axles P, crank-shaft N, with arm S, spring T, screw U, and nut, all arranged substantially as herein described, and operated by hand, in combination with each other, with the body of the sleigh, and with the drive-wheels, as set forth.

3. In combination with the parts named in the last claim, the clutches J and fastening-nuts, as set forth.

93,834.—William S. Reyburn and F. J. Martin, Philadelphia, Pa.—*Machine for Covering Lightning-Rods with Sheet-Metal.*—August 17, 1869.

Claim.—1. The die a, provided with the orifice a', and the slot a'', in combination with the tapering-channel a''', constructed and operating substantially as described.

2. The die c, provided with the bent horns c', c^5, and the subsidiary prong c''', arranged and operating substantially as described.

3. The die d, in combination with the subsidiary prong d'' and the spring d^4, as and for the purpose set forth.

4. The combination of the dies a, b, c, and d, arranged and operating as explained.

93,835.—Jean Elie Richard, Columbia, S. C.—*Apparatus for Printing Photographic Vignettes.*—August 17, 1869.

Claim.—1. The box C, for inclosing and protecting the within-described apparatus, provided with tubes B and D, for the transmission of light, and with slides B′ D′, as and for the purpose set forth.

2. The combination of an apparatus for printing photographs, with a clock, when the same mechanism operates both the clock and the printing-apparatus, substantially as described.

3. The combination of the slotted plate c'''' with the tongue c'', provided with the pivot c and wheel c''', all arranged and operating in the manner set forth.

4. The combination of the lever e, furnished with the slot e'', with the serrated lever e', provided with the sliding-stud e''', and spring-plate x, arranged and operating substantially as described.

5. The combination of the levers *e e'*, connecting-rods *h h'*, annular frame *a'*, all arranged and operating as explained.

6. The annular frame *a'*, provided with the soekets *a''* and button *a'''*, snbstantially as described.

7. The combination of the curtain A with the wings *b*, as and for the purpose speeified.

8. The combination of the seale-beam *k*, eounter-weight *i*, annular frame *a*, and connecting-rods *h h'*, all arranged and operating snbstantially as deseribed.

9. The spring-plate *m*, provided with the prongs *m m'*, in combination with the grooved standard *l'* and box C, as and for the purpose specified.

93,836.—John C. Richardson, Newark, N. J., assignor to himself and James H. Prentice, Brooklyn, N. Y.—*Machine for Pouncing Hats.*—August 17, 1869; antedated Angnst 5, 1869.

Claim.—The wheels M and N, revolved in opposite directions, and acting in positions opposite each other, as shown, in eombination with the feed-rolls C D, all arranged for joint operation as and for the pnrpose herein set forth.

93,837.—William O. Robbins, New York, N. Y., assignor to himself and Charles W. Stafford, same place.—*Wood-Pavement.*—August 17, 1869.

Claim.—The dovetailed flanged base, receiving the paving-bloeks, and forming a section that is snpported by the sills or sleepers *a*, and kept apart, the one section from the other, by the flanged base, as and for the purposes set forth.

93,838.—A. P. Routt, Liberty Mills, Va.—*Combined Seeder and Hay-Rake.*—August 17, 1869.

Claim.—A combined seeding-machine and horse hay-rake, substantially as described—that is to say, a machine having rake-teeth *b b*, attached by means of the strips *a a* and the metallic band *h*, a seeder, B, and the distributing-apparatus, consisting of the corrugated rim *c*, spring *d*, roller c^2, rod c^1, lever *e*, and catch *e''*, when said parts are so constructed and arranged that the teeth *b b* may be used to scratch in the grain sown by the seeder, or may be used independently of the seeder-apparatus, for the purpose of raking hay.

93,839.—Thomas Scanlan, Birmingham, Pa.—*Glass-House Pot.*—August 17, 1869.

Claim.—In a pot or crucible for making glass, having the body A made of fire-clay and provided with a eoncave roof, I, and mouth *e*, of usual form and construetion, the additional mouth *e'*, formed immediately under the mouth *e*, and above the middle line of the side-wall, substantially as described.

93,840.—John J. Schillinger, New York, N. Y.—*Cooling and Ventilating Apparatus.*—August 17, 1869.

Claim.—The apparatns for the purpose described, consisting of tnbes C C, projecting into chamber B, and eommnnicating with chamber D, in conneetion with a coil, J, for running-water, discharge-pipe E, and inelosing-chamber F, whereby the blast enters chamber B, passes through tnbes C C, in contact with water trickling through them, thenee throngh the water in chamber D, into the exit E, a large cooling-snrface being thereby gained, substantially as and for the purpose deseribed.

93,841.—Francis H. Smith, Baltimore, Md., assignor to Francis H. Smith, Jr., New York City.—*Process of Preserving Vegetables.*—August 17, 1869.

Claim.—1. The process of preparing vegetables, substantially as herein described, and for the purposes specified.

2. The artiele of prepared potato, when prepared by my improved proeess, as described herein.

3. The article of prepared sweet potato, when prepared by my improved process, as described herein.

4. The artiele of prepared onion, when prepared by my improved process, as described herein.

93,842.—Carlos Stebbins, Pike, N. Y.—*Treadle.*—August 17, 1869.

Claim.—A hanging and swinging treadle, arranged and operating snbstantially in the manner herein specified and set forth.

93,843.—Jacob Straus, St. Louis, Mo.—*Side-Saddle Tree.*—August 17, 1869.

Claim.—As an artiele of manufaetnre, a side-saddle tree, formed with a complete seat, the eontinuous rail B, C C', D, and the extension spring D', the whole covered with hide or other eqnivalent material, and shaped, arranged, and operating substantially as deseribed.

93,844.—Chester W. Sykes, Suffield, Conn.—*Carving-Dish.*—August 17, 1869; antedated August 13, 1869.

Claim.—The points or other projeeting snrfaees upon the inner surface of a carving-dish, to retain, in the desired position, meats and other artieles while being earved.

93,845.—James C. Wade, Boston, Mass.—*Shuttle for Sewing-Machine.*—Augnst 17, 1869.

Claim.—1. In a sewing-machine shuttle, adapted for having the tension of its thread adjusted through an opening in its upper side, the serew-threaded spindle A, having no endwise movement, the thread of whieh actnates and controls the pressnre of a spring thread-brake, substantially as described.

2. The combination, with a shuttle, of the grooved and threaded spindle A, and its detaining-screw F and spring B, arranged and applied snbstantially as shown and described, and so that the serew-stock shall neither advanee nor reeede dnring its revoln-tion.

3. The eombination, substantially as deseribed, of a swinging tension-spring, B, with a fulerum which is a screw-thread, so that the fulerumed end shall be positively eonfined between the threads of the serew, and be free to turn thereon, while the adjustment of the screw shall vary the pressure of the free end of the spring against the wall of the shuttle.

93,846.—George W. Walker, Lowell, Mass.—*Boot and Shoe.*—August 17, 1869.

Claim.—The employment of one or more thicknesses of textile fabric on the inner surface of a leather-board, or other similar inner sole of a sewed boot or shoe, in the manner and for the pnrpose set forth.

93,847.—Alonzo Whitcomb, Worcester, Mass.—*Machine for Planing Metal.*—August 17, 1869.

Claim.—The friction-clutch, consisting of the parts E E and the lever *l*, with the spring *h*, constructed and arranged to operate substantially as deseribed.

93,848.—Frederick Wittram, San Franeiseo, Cal.—*Screw-Propeller.*—August 17, 1869.

Claim.—The propeller A, when constructed in two or more sections, and so arranged, in connection with the bolt *e* or its equivalent, that the seetions can be secured toge:her npon the shaft *d*, forming a complete whole, or in a line with each other, substantially as described, for the purpose of decreasing the area of resistance to the water, as set forth.

93,849.—Elizur Wright, Medford, Mass.—*Computing-Apparatus.*—August 17, 1869.

Claim.—1. In combination with suitable pointing-meehanism, two cylinders or disks, on the same shaft, and operated by the same driver, one being driven by frictional contact with the other, and both having logarithmic divisions, marked upon coiled or helical lines drawn npon their surfaces, substantially as shown and deseribed.

2. In combination with cylinders, so arranged, lined, and divided, the stationary bar *g*, and the pointer-slides *n o*, substantially as shown and described.

3. In eombination with the cylinders, both operated from the same common driver, devices for effecting the rotation of both together, or of only one, at option, substantially as shown and described.

93,850.—Robert K. Andrews, South Valley, N. Y.—*Railway-Car Coupling.*—August 17, 1869.

Claim.—1. The draught-bolt B, constructed as deseribed, with a cut-out and beveled center, and pro

vided with guides *a a*, substantially as and for the purposes herein set forth.

2. The combination of the draught-bolt B, guides *a a*, bumper A, bale D, lever E, and spring C, all constructed as described, and arranged to operate substantially as and for the purposes herein set forth.

93,851.—Francis Armstrong, Pittsburgh, Pa.—*Device for Relieving Steam-Generators of Foreign Substances.*—August 17, 1869.

Claim.—1. The construction and arrangement of the tubes P and *c*, whereby to produce a vortex, substantially as herein set forth.

2. The arrangement of the said tubes with the stop-cock A, the mud-drum, and the boiler-flues, as described.

93,852.—G. W. Baird, Engineer Corps, United States Navy.—*Apparatus for Aerating and Cooling Distilled Water.*—August 17, 1869.

Claim.—1. The apparatus herein described, for mixing air with condensible vapors, consisting of the pipe A, in combination with the nozzle B, and the device to adjust the same, as substantially set forth, and for the purpose specified.

2. The fluted plug P or disk, in combination with the nozzle D and bell-mouthed pipe B, as described.

93,853.—Ephraim Ball, Jr., Canton, Ohio.—*Plow.*—August 17, 1869.

Claim.—1. So constructing a metal plow-beam as that it is made the basis of attachment for all the other parts of the plow, and that these parts, when so attached, are independent of each other, substantially as herein set forth.

2. The plow-beam A, constructed as described, and provided with flanges *a* and *b*, shoulder or offset *c*, raised surface or shoulder *f*, curved slot *m*, and projections *n n*, all substantially as and for the purposes herein set forth.

93,854.—John S. Brooks, Rochester, N. Y.—*Hot-Water Boiler for Stove.*—August 17, 1869.

Claim.—A boiler, provided with a perforated ear, lug, or hook-hinge, in such a manner that it can be attached to the back part of the top of a stove, for heating water, or can be easily detached and used on the front of the stove for a ham-boiler, or other culinary use, as shown, and for the purposes specified.

93,855.—William Brown, St. Louis, Mo.—*Machine for Making Barrels.*—August 17, 1869.

Claim.—1. The shaft C^4, arranged with a sliding gear-wheel, C^3, to rotate the ring C^1, when the latter is in yokes C, and arranged for a simultaneous movement upon tables B B, substantially as set forth.

2. The arrangement of the shaft H, operating the bar G, bearings F, and arbors E, the latter adapted to carry a cutter-disk, substantially as set forth.

93,856.—Arthur W. Browne, Brooklyn, E. D., N. Y., assignor to himself and Andrew Breasted, New York City.—*Safety-Attachment for Pockets.*—August 17, 1869.

Claim.—The plate *a* and spring *b*, united by the hinge *c*, in combination with the slide *d* and latch *e*, substantially as and for the purposes set forth; and, in combination with the foregoing, the dog *o*, applied in the manner and for the purposes set forth.

93,857.—James Abercrombie Burden, Troy, N. Y.—*Apparatus for the Manufacture of Pig-Blooms from Cast Iron.*—August 17, 1869.

Claim.—1. The combination of the spout for the molten metal, the traversing series of molds, and the apparatus for delivering the mixing material in regulated quantities, substantially as before set forth.

2. The combination of the spout for delivering the molten metal, the traversing series of molds, the apparatus for delivering the mixing material in regulated quantities, and a device for varying the relative speed of the said delivery apparatus, substantially as before set forth.

93,858.—William Campbell, Clinton, Iowa.—*Railway-Car Axle-Box.*—August 17, 1869.

Claim.—The cover, having the teat cast on it, in combination with the lug cast on the box, when all these parts are constructed, arranged, and operate as shown and described.

93,859.—Judd M. Cobb, Beloit, Wis.—*Manufacture of Ready-Prepared Roofing.*—August 17, 1869.

Claim.—1. The construction and arrangement of the machine, as herein described, by which cement and sand or gravel may be applied to a roofing-paper or material.

2. The combination and arrangement of the vat G, cylinders A B, pressure-rollers C D, and drum or roller F, with the sand or gravel box H, in the manner and for the purpose herein described.

3. The combination of the sand or gravel box H with the cam *a*, in the manner and for the purpose herein described.

4. As a new article of manufacture, "ready-made prepared roofing," when constructed in the manner and for the purpose herein described.

5. The combination of the machine for coating with cement and graveling or sanding dry or tarred paper or board, with a machine for tarring paper-board or roofing-material, so that the tarring, coating, and graveling or sanding process can be done and effected by one continuous operation, as herein described.

93,860.—James M. Crull, Noblesville, Ind.—*Fence.*—August 17, 1869.

Claim.—1. The metal cap B, constructed as described, for the purpose of securing the fence-panels A A, whether said cap is perforated or not, substantially as herein set forth.

2. The combination of the fence-panels A A and caps B B, constructed as described, and for the purposes specified.

93,861.—Theodore F. Deniston, George C. Prosser, and Johnson J. Deniston, Torrey, N. Y, —*Cider and Wine Mill.*—August 17, 1869.

Claim.—The cider and wine mill herein described, consisting of the frame *a b c d e*, hopper *x*, with its feeder *m*, and grinding-cylinder *k*, endless apron *q*, crushing-rollers 2 2, the upper one having a bearing adjustable by set-screw *i*, and pulley 1, adjusted by nut and screw *v w*, all constructed, arranged, and operated as and for the purposes herein set forth.

93,862.—Jacob J. Diehl, York, Pa.—*Kitchen-Utensil.*—August 17, 1869.

Claim.—1. The detachable cutter D, having a shank, *a*, which passes through the handle A, and is secured by a nut, said cutter being prevented from lateral movement by fitting into a space between the teeth of plate C, as herein described.

2. The kitchen-implement herein described, consisting of the vegetable-masher B, with handle A, the toothed metallic plate or pounder C, and the detachable cutter D, all constructed and arranged as set forth.

93,863.—Henry Disston and Jonathan Marsden, Philadelphia, Pa., assignors to Henry Disston.—*Casting Steel Ingots.*—August 17, 1869.

Claim.—1. The method of contracting steel ingots by means of a wedge or wedges, applied during the cooling of the ingot, between the latter and the mold, all substantially as set forth.

2. The within-described wedges, made flat on one side, and rounding to comparatively sharp edges on the opposite side, and tapering in width and thickness, when the said wedges are applied to a mold for casting steel ingots, all substantially as specified.

93,864.—J. J. Doepken, Lima, Ohio.—*Meat-Safe for Butchers and Others.*—August 17, 1869.

Claim.—The case A, with compartments C D, separated by double sheet-metal walls B B, and provided with ice-drawers G H, having double bottoms *a b*, and rollers I J, constructed and arranged as herein described.

93,865.—John Otto Donner, Jersey City, N. J.—*Mode of Treating Bone-Black for Filtering Sirups, &c.*—August 17, 1869.

Claim.—The treatment of bone-black for augmenting its decolorizing power or property by subjecting it to the action of, or saturating it with, chlorine-gas, or exposing it to water charged with said gas, substantially as specified.

93,866.—James Dugan, New York, N. Y.—*Bottle-Lock.*—August 17, 1869; antedated August 12, 1869.

Claim.—The cap B, opening vertically, and provided with lugs *b* and flange *c*, whereby it may be secured to the neck of a bottle by an independent lock, to inclose the stopper, and prevent access thereto, as shown and described.

93,867.—John East, Romeo, Mich.—*Machine for Dressing Millstones.*—August 17, 1869.

Claim.—1. The tilting-arms H, moving back and forth on the bar G, and provided with the curved arms E, in combination with the shifting-lever F, substantially as specified.

2. The rubber spring M, by means of which the strokes of the picks are lightened, or the picks raised clear of the stones, substantially as set forth.

3. The shaft C, provided with the disk V, cams D, and moving endwise in its bearings, substantially as described.

4. The movable bearings *e*, coiled spring *d*, and regulating thumb-screw *b*, when used substantially as specified.

5. The movable bearings R, placed in the sides B, when used to regulate the tilting-arms H, for either long or short picks, substantially as described.

6. The slide P, when used to regulate the cutting-edges of the picks, substantially as set forth.

7. The levers T and X, arm U, and spring W, when used to operate the toothed bar S, substantially as specified.

8. The stirrup Z, regulated by the thumb-screw *r*, when used to control the speed of the frame, substantially as described.

9. The toothed bar S, when used to operate the wheel Y, substantially as described.

10. The double-acting dog *k*, spring *l*, and wheel Y, when all are used to propel the frame forward or back, substantially as set forth.

11. The screw shaft *w*, provided with the ratchet *t* and support *y*, when used substantially as described.

93,868.—Primus Emerson, Carondelet, Mo.—*Marine Railway.*—Augnst 17, 1869.

Claim.—1. The chains D, disks E, shaft *e*, screw-wheel H, and worm I, operating substantially as and for the purposes set forth.

2. The bevel-wheel K and pinions L L′, operated, in combination with the power-shaft M, by a clutch-device, *m m′*, substantially as and for the purposes set forth.

3. The attachment of the draught-chains F to the main chains D, and their connection with the cradle, in such manner as to equalize the draught on the cradle, substantially as set forth.

4. The slides C, arranged on the cradles, substantially as and for the purpose set forth.

5. The cradles B, supported upon rollers *b*, and guided by rollers b^1, in combination with the draught-chains F and equalizing-sheaves G, substantially as and for the purpose set forth.

93,869.—John H. Foster, Charlottesville, Va.—*Cultivator-Hoe.*—August 17, 1869.

Claim.—A convertible hoe and fork, constructed with the independent tine-pieces T T^1, &c., the slotted head H′, the block B, and the wedges *w*, all combined to operate substantially in the manner and for the purposes set forth.

93,870.—George Frauenberger, Rochester, N. Y.—*Manufacture of Oyster-Kegs.*—August 17, 1869.

Claim.—A keg made from slabs, shaped, grooved, steamed, bent, and fitted with heads and hoops, substantially as herein shown and described, as a new article of manufacture.

93,871.—Joseph Funk, Tompkinsville, N. Y.—*Lamp.*—August 17, 1869.

Claim.—1. The arrangement within the separated oil-chamber B, of the tubular float C, suspended from rod *d*, which carries a valve, *f*, playing in a chamber, *g*, and operating relatively to chambers *h i*, the parts being combined substantially and for the purpose as described.

2. The arrangement of notches or grooves in the valve and its stem, in combination with the bridges *e*, float C, and channel *h*, substantially as set forth.

93,872.—Charles Gates, Burlington, Ind., assignor to George Burkhardt, Joseph Shiffer, and James W. Geeen.—*Dumping-Car.*—August 17, 1869.

Claim.—The dumping-car herein described, when the same is constructed, in its said several parts, as aforesaid, with the jointed platform B B, the levers G G′ and G″ G‴, the rack M M′, and the pinion N, and the bevel-wheels N′ and P, and used for the purpose and in the way substantially as herein set forth.

93,873.—Adolphe Gaudron, Detroit, Mich.—*Sawing-Machine.*—August 17, 1869.

Claim.—1. The apparatus by which the saws are raised when the cutting is done, constructed and operating as herein set forth.

2. The connecting-rod G, in combination with the saws H H′, their frames J J′, the different pieces on the plates P and L, connecting-rod T, the bell-crank U, the bars V, with their springs X, all constructed substantially as herein set forth.

3. The dog *a*, in combination with the pieces *c d* and *e f g h*, constructed in the manner herein shown and described.

93,874.—Edward Green, Wakefield, England. *Boiler-Tube Scraping Device.*—August 17, 1869; patented in England August 25, 1866.

Claim.—1. The clutch-box *c*, bevel pinions *d e*, bevel-wheel *f*, constructed and arranged to operate as described.

2. The worm-wheel *i*, mounted loosely on shaft of pulley *k*, in combination with said pulley, set-screws *m*, and slots *n*, substantially as described.

3. The arms *u*, in combination with the knock-over lever *w*, and clutch-box *c*, substantially as described.

4. The slot *v* and set-screw, in combination with the arms *u u*, substantially as described.

5. The combination of a reversing or reciprocating motion, of two or more pulleys, set-screws, and slots, and disconnecting-wheels, substantially as hereinbefore described, and represented in the accompanying drawings.

93,875.—John Gregory, Lisbon, Portugal.—*Railway Chair and Sleeper.*—August 17, 1869; patented in England October 28, 1868.

Claim.—1. The method of fastening or securing the rails to the sleepers or chairs, by driving wooden wedges of any suitable form beneath the rails, in such manner that they form an elastic support for the rail, and bind and hold together the rails, sleepers, and other parts, or rails, chairs, and other parts, forming the permanent way, as and for the purpose described.

2. The railway-sleeper, or sleeper and chair combined, constructed substantially as herein shown and described.

3. In combination with the sleeper or sleepers and chairs, as constructed, the double-hooked dogs *d*, operating substantially as set forth.

93,876.—Stephen G. Gregory, Albany, N. Y.—*Artificial Leg.*—August 17, 1869.

Claim.—1. The knee-joint *s*, in combination with the instep-bearing *m e*, toe-joint *g*, toe *k*, strap P, and pulley *a*, constructed and arranged substantially as and for the purpose set forth.

2. Also, the elastic strap P, in combination with the joint *s*, and instep-bearing *m e*, as and for the purpose herein described.

3. Also, the said elastic strap P, in combination with the joint *s*, cushions *e f*, and joint *m c*, as and for the purpose herein described.

4. Also, the elastic strap P, in combination with

the pulley *a* and the holding-points *b d*, substantially as described, for united action.

93,877.—D. F. Haàsz, Philadelphia, Pa.—*Fire-Ladder.*—August 17, 1869.

Claim.—1. A fire-ladder, consisting of sets of bars B C D, &c., crossed and connected together, substantially as described, arranged to be quickly elevated or depressed, and to be securely braced when elevated, and having a series of short ladders arranged in a line with each other, constructed substantially as specified, and reaching entirely to the top of the structure, with intermediate laudings or platforms *p*.

2. The braces R, in combination with the ratchets and pawls, substantially as and for the purpose described.

3. The platforms *p*, attached to the cross-rods *f*, and supported in a horizontal position by the ladders upon one side, and by bracing-straps *r r* upon the opposite side, all substantially as herein set forth.

93,878.—William Horatio Harfield, London, England.—*Windlass.*—August 17, 1869; patented in England, February 18, 1867.

Claim.—The combination and arrangement of the compressor, purchase-wheel B, nut *g*, and screw *h*, to form a windlass and brake, and by means of which the chain-wheel can be employed independently of the other, substantially as described.

93,879.—Samuel Harper, Lawrence, Kan.—*Churn.*—August 17, 1869.

Claim.—1. The vessels T and 6, or equivalent means described, in combination with the hollow shafts C and H, and connecting-pipe U, constructed and arranged as specified.

2. In combination with the above, the pipes E E, and beaters F F, arranged and operating as described.

93,880.—Orrin L. Hart, Millville, Wis.—*Washing-Machine.*—August 17, 1869.

Claim.—A washing-machine, having tub A, beaters B, wedges *a*, and bars *c*, adapted to the slotted sectional cover, arms *e*, shaft G, staples *n*, levers R, and treadles *s*, constructed, arranged, and operating substantially as specified.

93,881.—H. C. Heckendorn, Reading, Pa.—*Sewing-Machine.*—August 17, 1869.

Claim.—1. The shuttle driving arm C, constructed as described, having a serpentine slot, *c' c'*, and a feed-operating eccentric, E, in combination with the shuttle-driver G, pitman *b'*, needle-carrying arm D, having a serpentine slot, *d' d'*, face-cam B, on shaft *a'*, feeder L, and spring *g'*, all constructed, arranged, and operating substantially as specified.

2. The combination, with the needle-carrying-arm, of the adjustable centers V V, secured to the shaft S, substantially as specified.

93,882.—Horace L. Hervey, Philadelphia, Pa.—*Reflecting Lamp-Chimney.*—August 17, 1869.

Claim.—A reflecting lamp-chimney, composed of metal and glass, one whole side or less made of metal, which serves as the reflector, and secured to the glass by means of beading *d* and grooved catches *e*, or lugs *b*, or hooks *c*, substantially in the manner and for the purposes described.

93,883.—Coleman Hicks, Lancaster, Ky.—*Weather-Strip.*—August 17, 1869.

Claim.—1. The described weather-strip, operated by the spring I, and adjusted by means of the catch-spring *b*, with its pin *c*, all constructed, arranged, and in combination, substantially as and for the purpose described.

2. The described weather-strip, spring I, catch-spring *b*, pin *c*, in combination with carpet-sill composed of sections C and C', when all are constructed and arranged substantially as and for the purpose described.

93,884.—William Hodgson, Cincinnati, Ohio.—*Steam-Water-Gauge Indicator for Boilers.*—August 17, 1869.

Claim.—1. The combination of the air-chamber D and pipe J, substantially as described.

2. The combination of the cylinder B and air-chamber D, when connected by the pipe H, substantially as described.

3 The combination of the cylinder C and air-chamber D, when connected by the pipe E, substantially as described.

4. The combination of the cylinders A and B, when connected by the pipe F, substantially as described.

93,885.—Israel Hogeland, Indianapolis, Ind.—*Fruit-Drier.*—August 17, 1869.

Claim.—The combination and arrangement of the rings A and B, arms *c*, buttons *h*, cane strips *v*, and ears *y*, constructed to operate substantially as and for the purposes specified.

93,886.—John W. Hoit, Lebanon, Ill.—*Wash-Boiler.*—August 17, 1869.

Claim.—1. The arrangement of the vessel A, having a rounded diaphragm, B, with perforations *b* therein, and raised guards *b'* thereon, and combined with the tubes C, substantially as set forth.

2. The side-plates E, arranged to form the heating-chambers E' and combined with the tubes C, substantially as and for the purpose set forth.

93,887.—Charles D. House, Lake Village, N. H.—*Fork for Peach-Parers.*—August 17, 1869.

Claim.—The two forks A A, hinged to the spindle B, and pressed toward each other by a spring or springs, *e*, substantially as and for the purpose herein specified.

93,888.—David W. Hughes, Palmyra, Mo.—*Attaching Plow-Colters.*—August 17, 1869.

Claim.—1. Providing the hubs of the colter or wheel B with conical journals *c*, and bearings *b*, as and for the purpose described.

2. In combination with the conical journals *c*, the lock-plate *d*, constructed and operating substantially as described.

3. The hexagonal sleeve *e*, as and for the purpose set forth.

93,889.—William Johnson, Lambertville, N. J.—*Steam-Cylinder-Piston Packing.*—August 17, 1869.

Claim.—The packing-rings O O, having one edge beveled, in combination with the circular spring-plates R R, having corresponding beveled edges, when combined and arranged in the manner substantially as described and set forth.

93,890.—Norris Jones, Centreville, Ind.—*Brick Drain-Tile.*—August 17, 1869.

Claim.—A brick, having a semicircular groove in one side, and formed with concave and convex ends, substantially as described, and for the purposes set forth.

93,891.—Balthasar Kreischer, New York, N. Y.—*Burning-Kiln.*—August 17, 1869.

Claim.—1. The bottom flue B, with its branches *m m*, in combination with a burning-chamber A', of a kiln, and with the upright flue C, top flue E, and dampers *g d*, substantially in the manner shown and described.

2. The openings F F at the top of each burning-chamber, in combination with the top flue E and dampers *o g*, substantially as set forth.

3. The return-flue H, with opening G and dampers *p* in combination with flue M and damper *s*, and with a series of burning-chambers A' A'' A''', substantially as described.

4. The apertures *e* and *r*, in combination with flues C and B, and channels *m*, leading into the burning-chamber of a kiln, to provide for a circulation of cold air through the material in the kiln, substantially as set forth.

5. The arrangements of pipes or channels *h l*, extending through under the bottom of the burning-chamber, and into the ash-pit, to prevent radiation of heat into the ground, and to supply the fire with a current of heated air, substantially as described.

6. The supplementary arch *n* and air-channel *f*, in

combination with the main arch *q* of the fire-place of a kiln, substantially in the manner set forth.

93,892.—JACQUES LAURENT, New York, N. Y. —*Machine for Turning Watch-Cases.*—August 17, 1869.

Claim.—1. The combination of the swinging head-stock B, the mandrel-spring H, roll *f*, and revolving eccentric or cam I, essentially as herein set forth.

2. The combination of the adjustable wedge-shaped or tapering bearing N, the screw L, the worm K, the eccentric I, the screw J, and the roller *f*, with the swinging head-stock B, substantially as specified.

3. The cutters E E, arranged in sockets *i i*, hung or supported on vertical pivots, and made capable of adjustment by screws *r r*, to spread them more or less apart, essentially as described.

93,893.—JOHN LEMMAN, Cincinnati, Ohio.—*Machine for Molding Chair-Backs.*—August 17, 1869.

Claim.—1. The sliding and swiveling cutter-frame A′ B′, and cutter-spindle M N, constructed and operating substantially in the manner described, in combination with the "form" P, for the purpose specified.

2. The coiled spring U, in combination with the projection T of the cutter-frame, when constructed and arranged substantially in the manner and for the purpose explained.

3. The arrangement of the sliding frame R, form P, made adjustable by screws *m m* and slots *m′ m′*, cutter-frame A′ B′, spindle M N, spring U, and projection T, all being constructed and arranged to operate as described.

93,894.—ALEXANDER ÉMILE LETOREY, Rouen, France.—*Machine for Cutting and Reducing Loaf-Sugar.*—August 17, 1869.

Claim.—1. The combination of the horizontally-reciprocating saws J, the circular saw Q, and the reciprocating knife S, for successively reducing the loaf into slabs, sticks, and lumps, substantially as specified.

2. The combination, with the saws J, of the incline guides C and C′ C′, the latter of said guides C C having a sliding or feeding motion given them, to allow of the descent of the loaf to and through between the saws, essentially as described.

3. The combination, with the reciprocating knife S, of the vertical box R, partitioned off into chambers *t*, as specified, and arranged, in relation to the knife, substantially as herein set forth.

4. The combination of the screen M with the reciprocating saws J, the circular saw Q, and the reciprocating knife S, essentially as and for the purposes described.

93,895.—JAMES H. LOGAN, Allegheny, Pa.—*Single Microscope.*—August 17, 1869.

Claim.—A simple microscope, having the base A, standard B, mirror C, attached to the standard by the arm *d*, and capable of being turned by the head D, arm E, having the aperture *e*, nut N, screw-rod M, arm I, lens-holder G, bars *a a*, springs *s s*, and globule-lens *v*, when all said parts, except mirror C, springs *s s*, and lens *v*, are made of wood, and all are constructed, arranged, and combined in the manner substantially as described.

93,896.—SIDNEY S. MARQUES, Mason, Ill.—*Knife for Seeding Stone-Fruit.*—August 17, 1869.

Claim.—The blade C, curved in the middle, and sharpened on each edge, and attached to a handle, substantially as and for the purposes herein set forth.

93,897.—DAVID MATTESON, Pittsfield, Mich.—*Hay-Rack.*—August 17, 1869.

Claim.—The combination of the several parts A, S S, C, *b b*, and *d*, when each is constructed as described, and the whole are united and arranged as specified.

93,898.—RICHARD MORGAN, St. Louis, Mo., assignor to himself and HENRY TIRREL, same place.—*Stone-Sawing Machine.*—August 17, 1869.

Claim.—1. The screw-rods B B1, when they are supported by and work between stationary bearings *b b*^{1}, screw-blocks B^2 B^2, sliding bars C C, shafts E F, and their connecting pinions, when the same are combined and arranged so as to operate substantially as described.

2. The shaft F, when the same is provided with a toothed wheel G, and stationary pulley *f*^{1}, said wheel and pulley being so arranged that by a pawl, *g*, and endless belt M′, the shaft can be made to operate in either direction, the power that is transmitted through intermediate mechanism, from the driving-shaft, when applied to the wheel, lowering the saw-frame, and, when applied to the pulley, elevating the same, substantially as described.

3. The toothed wheel G, pawl *g*, and wheel G^1, when the latter has a slot, *x*, whereby the bearing of the pawl may be adjusted, substantially as described.

4. The saw-frame D, block L, socket-bearing L^1, screw *l*, and pitman K, when the same are so combined and arranged as to operate substantially as described, and for the purpose specified.

93,899.—ANDREW L. NOLF and FRANÇOIS L. A. PIOCHE, San Francisco, Cal.—*Process of Treating Ores with Copper Amalgam by means of Electric Currents.*—August 17, 1869.

Claim.—The simultaneous application of electricity and copper-amalgam, for the decomposition of silver-ores, substantially as and in the manner as herein specified.

93,900.—ALFRED PARAF, New York, N. Y.—*Material for Dyeing and Printing, obtained from Madder.*—August 17, 1869.

Claim.—The new article of manufacture hereinbefore described, and denominated tinctorine.

93,901.—JOHN W. PERRY, Perrysburgh, N. Y.—*Feather-Renovator.*—August 17, 1869.

Claim.—1. The combination, with the fire-place E, of the boilers G and H, arranged substantially as described, and for the purpose set forth.

2. The knees, or partitions *c*, when applied to a feather-renovator, constructed and arranged to operate substantially as described.

3. The feather-renovator herein set forth, having cylinder A, shaft D, blades *h*, fire-place E, boilers G and H, and funnel *v*, constructed and arranged substantially as specified.

93,902.—FREDERICK R. PIKE, New York, N. Y. —*Propelling-Apparatus.*—August 17, 1869.

Claim.—The vessel-propelling apparatus herein described, having connecting-rod A, lever W, cylinders D, plungers E, pistons H, rods F, and gudgeons C, when constructed and arranged to operate substantially as specified.

93,903.—FRANCIS A. PRATT, Hartford, Conn.—*Machine for Planing Metal.*—August 17, 1869.

Claim.—The arrangement of the swinging dog *d* upon the sliding block *g*, in combination with the bed *k′*, stops *e*, pin *f*, cam *a′*, upon the shaft *b*, gear-connection *b′*, and guide-arms *c*, to connect and disconnect the shipper from the bed *k′*, substantially as set forth.

93,904.—THOMAS L. RANKIN, Peru, Ill.—*Refrigerator.*—August 17, 1869.

Claim.—1. Attaching an ice-box to the door of a refrigerator, so as to have it over the top of the chamber, substantially as set forth.

2. In combination with the ice-box G, the trip-plate N, tube H, trough K, and tube L, when used to carry off the waste ice-water, substantially as shown.

3. The frame A, doors B and D, ice-box G, trip-sheet N, tubes H and L, trough K, and chamber C, when all are combined to form a refrigerator, substantially as set forth and described.

93,905.—V. REIFSNIDER, Chicago, Ill.—*Clothes-Pin Holder.*—August 17, 1869.

Claim.—The within-described holder for clothes-pins, consisting of the body A, provided with the slats *b b*, standard or handle C, provided with the slot *c*, lever D, and spring *x*, or its equivalent, all constructed and arranged substantially as and for the purpose specified.

93,906.—Ezra Ripley, Troy, N. Y., assignor to himself and George S. Prindle, Aurora, Ill.—*Tool-Holder.*—August 17, 1869.

Claim.—A tool-stock, to which the handle C is secured by means of the thimbles *a* and *b*, attached to the upper ends of the sections A and B, and fitting over the tapered ends of said handle, when all of the parts are constructed and arranged to operate substantially as herein shown and described.

93,907.—A. E. Roberts, Des Moines, Iowa.—*School-Desk.*—August 17, 1869.

Claim.—1. In combination with a school-desk frame, constructed as described, a pivoted book-case, which forms a desk on its upper surface, and folds inwardly from the pivots to the seat-back, substantially as and for the purposes herein set forth.

2. In combination with an extended frame, A, and a pivoted inwardly-folding book-case and desk, as described, the spring-catches *b b*, or their equivalents, substantially as set forth.

93,908.—Charles Robinson, Boston, Mass.—*Arrow-Gun.*—August 17, 1869.

Claim.—The combination and arrangement of the open-grooved stock A, arrow B, elastic cord C, and elastic band D, substantially as and for the purpose herein specified.

93,909.—John C. Rupp, Newark, Del.—*Railway-Rail Splice.*—August 17, 1869.

Claim.—The tapering side-supports C C, provided with the elongated slots *c c*, by means of which said supports can be driven up or tightened without removing the bolts D, in combination with the base-plate B, having angular flanges *a b* at the sides, all arranged, constructed, and operated in the manner and for the purpose set forth.

93,910.—Nathan C. Russell, Gloversville, N. Y.—*Process of Treating Leather so as to Render it Suitable for the Manufacture of Gloves, &c.*—August 17, 1869.

Claim.—The process, substantially as herein described, of treating bark-tanned lamb or sheep-skin, by means of a compound composed and applied essentially as specified.

93,911.—Charles Searle, Brooklyn, N. Y.—*Apparatus for Removing Axle-Boxes from Carriage-Hubs.*—August 17, 1869.

Claim.—1. The rod or shaft A, provided with the collar *b*, for the purposes herein set forth, and substantially as described.

2. The cross-bar G, provided with the mortise *a*, which serves the purpose of a wrench, to prevent the rod from turning, also as a guide while the screw is being operated, substantially as herein described, and for the purposes set forth.

3. The frame E, in combination with the rod or shaft A and screw-nut, substantially as herein described.

93,912.—D. P. Shaw and J. S. Clark, Elkhart, Ind.—*Washing-Machine.*—August 17, 1869.

Claim.—The buckets E, placed facing each other, in combination with the break-waters F placed between them, the cylinder C, and washing-box A, as set forth.

93,913.—Henry Shaw, Cincinnati, Ohio.—*Grinding-Mill.*—August 17, 1869.

Claim.—An iron grinding-mill, having the projections C and C′ between the grinding and back-plates, for the purpose described.

93,914.—William E. Sheffield, St. Joseph, Mo.—*Hay and Cotton Press.*—August 17, 1869.

Claim.—1. The combination and arrangement of the intermediate nuts M, the screw-shaft I, and the connecting-chains L, with the follower C, and auxiliary nuts P, substantially as before described.

2. The combination and arrangement of the gauging-slides Q, with the follower of a press, for the purpose of ascertaining and regulating the ascent and descent of the follower alike at both ends, substantially as before described.

3. The gauging-slides Q, arranged so as to form the sides of the opening N, in which the follower moves, while, at the same time, they are free to rise and fall with the follower, as before described.

4. The means herein described and represented for determining, automatically, in a press, the weight of the bale, according to its degree of compression, substantially as before described.

5. The gauging-boards Q, provided with scales, for determining both the degree of compression and the weight of the bale, according to any degree of compression, as herein described.

93,915.—Louis Th. Simon, New York, N. Y.—*Velocipede.*—August 17, 1869.

Claim.—1. The shoulder-rest G, arranged in combination with the adjustable foot-pieces *e*, upon rod *c*, so as to form a point of support to enable the rider to apply his full power in propelling the velocipede, as set forth.

2. The hand-lever *h* and cog-wheels *i j k f m n*, and clutch *g*, in combination with the driving-wheel B and crank-axle A, all constructed and operating substantially in the manner shown and described.

93,916.—Louis Th. Simon, New York, N. Y.—*Rocking-Chair Fan.*—August 17, 1869.

Claim.—The single clamp I, supporting the arms H, in combination with the suspended fan D, as applied to the back of the rocking-chair, substantially as and for the purpose described.

93,917.—C. Shaler Smith, Baltimore, Md., assignor to Smith, Latrobe & Co., same place.—*Chord for Bridges.*—August 17, 1869.

Claim.—A chord, for deck and other bridges, composed of a sectional tubular column divided longitudinally by an I-beam, or a beam composed of two or more I-beams united, with which the sections of said tubular column are combined, substantially as and for the purposes set forth.

93,918.—Henry F. Snyder and George S. Snyder, Williamsport, and Antes Snyder, Blairsville, Pa.—*Oil-Tank.*—August 17, 1869.

Claim.—1. The locking-means *m*, in combination with the cap L, attachments *l l′*, casting B, and valve G, and arranged to operate therewith, substantially as and for the purposes herein specified.

2. The tank A, valve G G*, rod E, screw-thread *e*, and stirrup or yoke D, combined and arranged substantially as and for the purposes herein set forth.

3. The hollow interior of the valve G, extended downward, and with it the bearing-point *g*, for the operating-rod E, below the bearing-surface or seat *g*, substantially in the manner and for the purposes herein set forth.

4. The within-described construction and arrangement of the yoke or stirrup D, and casting B, with their attachments, so that those parts may be inserted and removed together, as and for the purposes herein specified.

5. The enlarged head E′ on the rod E, inclosed in the casting H H¹, combined and arranged with the tank A, and valve G G*, to secure the contents still further against improper meddling, substantially in the manner and for the purposes herein set forth.

6. The top cap I, spring J, and loose connection K, constructed and arranged as represented, relatively to the casting H H¹, head E′, rod E, valve G G*, and tank A, for the purposes herein set forth.

93,919.—W. Horace Soper, Baltimore, Md.—*School Desk and Seat.*—August 17, 1869.

Claim.—1. The curved levers *m m*, of the seat D, with grooves divided into sections by the transverse bars *n n n*, to receive the ends of the slats *s s s s*, substantially as described, and for the purpose herein set forth.

2. The combination of the curved seat D with the standards A A, rod *x*, the back B, the top T, and the book-shelf E, as described.

93,920.—John B. Stoddard, Baltimore, Md.—*Ship-Building.*—August 17, 1869.

Claim.—1. The combination of the transverse and longitudinal metal bars C I, extending entirely around the vessel at about right angles to each other, with inner and outer ceiling D E, arranged

respeetively inside and outside thereof, and bolted togcther, substantially as set forth.

2. The combination of the inner and outer eeiling D E, breaking joints, and bolted together as described, with the planking G, secured to the outer ceiling E, without throngh-bolts, and with tarred eanvas or other suitable material impervions to water, F, interposed between the planking and eeiling, all substantially as and for the objects stated.

93,921.—Nesbitt B. Stoops, Philadelphia, Pa., and John J. Sibley, New York, N. Y.—*Sewing-Machine.*—August 17, 1869.

Claim.—1. The combination, with the needle, operated by the heart-shaped cam, of the shuttle, operated by the trammel-mechanism, all constructed substantially as and for the purpose described.

2. The combination, with the plate K, eonnected with the presser-rod, as described, of the needle-bar and thread-eontrolling disks, to relcase the thrcad as the eye of the needle reaches the cloth, as described.

3. The eombination of the shuttle and its trammel-device, the needle, operated by the heart-shaped earrier, and the thread-eontrolling disks, governed as to their time of operation by the presser-rod, when all act together, substantially as described.

93,922.—John A. Straight, Albion, N. Y.—*Boiler-Furnace.*—August 17, 1869.

Claim.—The opening E in the bridge-wall D, in conneetion with the passage G F, constructed and arranged, in relation to the furnace B, substantially as set forth.

93,923.—Victor Amédée Tagant, Mulhouse, France, and Peter Schüler, Bienne, Switzerland.—*"Salt-Stone" for Salting Cattle and other Animals.*—August 17, 1869.

Claim.—The herein-described alolith, composed of the ingredients, in the manner and for the purpose as above set forth.

93,924.—A. M. Todd and J. P. Todd, Des Moines, Iowa.—*Composition-Letter for Signs, &c.*—August 17, 1869.

Claim.—1. The within-deseribed mode of manufacturing letters from earthenware, concrete, or plastie material, substantially as speeified.

2. As a new article of manufacture, letters made of earthenware, conerete, or plastie material, substantially as set forth.

93,925.—Thomas Tompkinson, Philadelphia, Pa.—*Grate.*—August 17, 1869.

Claim.—The hook N, front section of the fixed grate A, and the front of the drop-grate B, made, arranged, and operating substantially in the manner described, and for the purpose speeified.

93,926.—James P. Tostevin, Racine, Wis., assignor to himself and John H. Tenspolde, same place.—*Grain-Separator.*—August 17, 1869.

Claim.—1. Constructing one of the boxes of the crank-shaft with a circular recess *b*, or its equivalent, when provided with a groove *b'*, to introduce a pin *p*, substantially as herein set forth, and for the purposes specified.

2. Also, constructing the eccentric on the fan-shaft of the two plates E and F, one having a shoulder, to receive the strap G, and the other being removable, as desired, in the manner and for the purposes specified.

3. Also, securing the pitman I to the flange H, upon the strap G, by means of a screw, *s*, substantially as shown and for the purposes set forth.

4. Also, constructing the shaking-elbow J L, with a vertical connecting-arm K, as and for the purposes described and specified.

5. Also, the combination of the rod M, the socket *n*, and spring *d*, with the sides of the shoe, in the manner and for the purposes described.

6. Also, the combination of the imperforated plate P with the screen Q, as and for the purposes specified and set forth.

93,927.—Hiram Tucker, Newton, Mass.—*Extension-Chandelier.*—August 17, 1869.

Claim.—In combination with an extension-chandelier, the supporting-springs *d d*, and the gripe or cheek-lever *k*, arranged to operate substantially as described.

93,928.—William Tuttle, Boston, Mass.—*Turn-Out for Street-Railways.*—August 17, 1869.

Claim.—The combination and arrangement of the wheel-tread-lifter G, made as described, with the turn-out and main rail-junction piece D, as explained.

93,929.—Nicholas S. Vedder, Troy, N. Y.—*Cooking-Stove.*—August 17, 1869; antedated July 13, 1869.

Claim.—The arrangement of the partition-plates J and j^2, within the rearward extension H, forming horizontal flues, and in relation to the water-reservoir I, directing the heated air over and under the said plates into the return-flue, substantially as and for the purpose set forth.

93,930.—Amos Westcott, Syracuse, N. Y.—*Shutter-Fastening.*—August 17, 1869.

Claim.—The combination of the lever E, having the projections F G H, when pivoted upon the projection G cast upon the plate A, and spring K, all constructed and arranged to operate substantially as and for the purpose specified.

93,931.—Amos Westcott, Syracuse, N. Y.—*Copy-Holder.*—August 17, 1869.

Claim.—The combination of the base A and the horseshoe-magnet B, arranged as and for the purposes above specified.

93,932.—William Wharton, Jr., Philadelphia, Pa.—*Mechanism for Operating Switches.*—August 17, 1869.

Claim.—1. The slotted lever D, arranged for operating switch-rails, and for being operated by the same, substantially in the manner and for the purpose described.

2. In combination with the said slotted operating-lever, the weighted arms C and C'.

3. The lever D and weighted arms C C', all hung to the pin *b*, and operating together and with the stop *x*, substantially as specified.

4. The fingers *m m*, arranged on the plate B, for the reception of the weighted arms C and C', as set forth.

93,933.—William Wharton, Jr., Philadelphia, Pa.—*Railroad-Switch.*—August 17, 1869.

Claim.—The combination of the switch-rails B and B', with the overlapping guard-rails D and D', when arranged in respect to each other, and to the permanent rails, substantially as and for the purpose set forth.

93,934.—Jacob W. Wheeler, North Urbana, N. Y.—*Shutter-Worker.*—August 17, 1869.

Claim.—The bar D, with an arm, *e*, when so held to the sill as to be capable of longitudinal, lateral, and rolling motion, for forcing open the shutters, and operating the blind-slats by means of the projections *f*, without raising the sash, in the manner substantially as described.

93,935.—George C. White, Jr., Brooklyn, N. Y.—*Metallic Base for Glass and other Vessels.*—August 17, 1869.

Claim.—1. A metallic base to glass and other fragile vessels, made in sections, the one of which is fitted on to or around the vessel, at or near its bottom, while the other section, that forms the base proper, is connected with the first or inner section with a screw-thread or threads, substantially as specified.

2. The combination of the soft packing D with the outer section C of the metallic base, and the inner section B, fitted to surround the lower portion of the vessel, and having a screw-thread, *a*, upon its exterior, to receive on or over it the outer section, all for operation in connection with the bottom of the vessel, and to more effectually protect the same, and to prevent jamming or injury of the screw-thread *a*, essentially as herein set forth.

93,936.—James A. Whitney, New York, N. Y. —*Dairy-Apparatus.*—August 17, 1869.

Claim.—The combination, with a milk-cooler, of an elevated reservoir for cooling-liquid, and an elevated milk-holder, suitably arranged and organized for the milk and the cooling-liquid to flow simultaneously through the cooler, substantially as herein described.

93,937.—Daniel A. Wilcox, Woodstock, Vt. —*Centering-Awl.*—August 17, 1869; antedated February 17, 1869.

Claim.—1. The beveled head of the tube B C, which incloses the puncturing-point of the shank D E, and is so arranged therewith as to serve the purpose of guidiug the said point through the centers of countersink-but apertures in the hanging of doors, &c., and thereby insuriug the starting of each screw in the center of each of said apertures, substantially as herein set forth.

2. The combination of the tubular and pointed metallic portions of the said improved carpenters' tool with a suitable wooden handle, substantially as herein set forth.

93,938.—William F. Williams, East Birmingham, Pa.—*Cooking-Stove.*—August 17, 1869.

Claim.—1. Constructing extension-plates in sueh a manner as they may be attached to and detached from the top plates of cookiug-stoves or rauges, substantially as described.

2. The extension-plates B, socket B^1, lug B^2, and flange B^3, in combination with the stove A, slots A^1, and flange A^2, when constructed and arranged substantially as herein described, and for the purpose set forth.

93,939.—Walter Samuel Withers, Atlanta, Ga.—*Fire-Place Grate.*—August 17, 1869.

Claim.—1. The combination of the standards A A, bottom B, and front C, constructed and arranged as described, and connected together, substantially in the manner and for the purposes herein set forth.

2. The combination of the standards A A, having grooved lugs *a a'*, and *b b'*, bottom B, front C, and adjustable back E, all constructed and arranged substantially as and for the purposes herein set forth.

93,940.—George W. Wright, Washington, D. C., assignor to Francis Wright, same place.—*Steam-Engine* —August 17, 1869.

Claim.—1. The combination and arrangement of the movable disks C and C', at each end of the cylinders, cylinders B, and boiler A, substantially as herein set forth.

2. The combination of the steam-cylinders, disks C and C', gear-wheels D and D', whereby to actuate the disks for the ingress, cutting off, and egress of steam, substantially upon the principle and in the manner as herein set forth.

93,941.—David Young, Kokomo, Ind.—*Composition for Plastering Walls.*—August 17, 1869.

Claim.—A plaster for plastering walls, &c., composed of the iugredients herein stated, and substantially in the proportions set forth.

93,942.—Friedrich Brinck, Chester, Ill. —*Washing-Machine.*—August 17, 1869.

Claim.—The combination and arrangement of drum A, provided with buckets *a*, having notches *b*, cog-wheels D E, crank F, and frame B, as described and shown.

93,943.—Frederick Oakley, Toronto, Canada.—*Lock-Nut.*—August 17, 1869.

Claim.—The combination of the bolt A, flattened on one side, with the washer B, with opening of correspondiug, shape, constructed substantially as described.

93,944.—Smith D. Arnold, Pittsfield, Mass.— *Manufacture of Bricks.*—August 24, 1869.

Claim.—Smoothing the faces of molded bricks by grinding, after the same have been burned, to produce smooth-molded, in imitation of pressed bricks, as new articles of manufacture, substantially as set forth.

93,945.—Josiah Ashenfelder, Philadelphia, Pa.—*Truck for Street-Cars.*—August 24, 1869.

Claim.—1. The peculiar combination of truss-band or piece C C F with draught pieces E E, and bolts I I, when constructed in the manner and for the purpose above set forth and described.

2. The combination of pieces E E, truss-band C C F, bolts I I, with bearing-piece H, and its permanent car-boxes D D, and springs B B, when the whole is combined, constructed, and operated in the manner and for the purpose above set forth and described.

3. The combination of bottom A of car with springs B B, truss-piece C, and bearing H, draught-pieces E E, and their bolts I I, car-boxes D D, &c., when the whole is constructed and arranged in the manner and for the purpose above set forth and described.

93,946.—Harris W. Axford, Richmond, Ind. —*Picker for Wool, &c.*—August 24, 1869.

Claim.—The improved upholsterers' picker, consisting of the frame A *a a*, toothed cylinder C, guard-plates J, feed-rollers D D, spring-attachment *e*, inclined bottom E, hood F, fly-wheel G, shafts H and B, and the driving-pulleys, all arranged and operating together, as herein shown and described.

93,947.—William F. Banks, Brookfield, Conn. —*Rock-Drilling Apparatus.*—August 24, 1869.

Claim.—1. The arrangement of the inclined arm O, inclined shaft S, block R, gearing T U, shaft N, disk Y, hammers A', sliding bar D, drill I, and hinged frame B, as herein described, for the purpose specified.

2. The combination of the lever M, lever-pawl L, trip-lever N, ratchet-wheel J, crank or hand-wheel K, shaft G, gear-wheels H, rack-bars I, sliding bar or cap D, eye-bolts F, and lever-clamps E with each other and with the slotted hinged frame B, substantially as herein shown and described, and for the purpose set forth.

3. The lever-cams E, in combination with the sliding frame D and hinged frame B, to hold the drill and its operating-mechanism at any desired height upon the frame B, as herein shown and described.

4. Rotating the drill P, by means of the collar Q, attached to said drill, and the angular block R, operated from the driving-shaft V by the gear-wheels U T and shaft S, to which said angular block is attached, substantially as herein shown and described.

5. The combination of the hammers A', arms *Z z'*, spring-stops B', and disk or wheel Y with the shaft V, supported from the sliding bar or cap D, substantially as herein shown and described, and for the purpose set forth.

93,948.—M. R. Barr and William T. Black, Erie, Pa.—*Base-Burning Stove.*—August 24, 1869.

Claim.—The combination, with a base-burning stove, of an oven-attachment arranged therewith, so that the counecting side of the oven forms a part of the shell of the stove, and having a flue, C, leading directly from the top of the fire, or one side thereof, to the bottom of the said oven; also having a hole, H, in the inner wall of the bottom, and a double-acting damper, G, all substantially as specified.

93,949.—John F. Bartlett, Winchester, Conn —*Scythe.*—August 24, 1869.

Claim.—1. The parts described, consisting substantially of the heel B, wedge D, and blade A, when combined and arranged substantially as described.

2. The scythe-blade A, constructed as described.

93,950.—Myron H. Beckworth, Camden, N. Y.—*Bustle.*—August 24, 1869.

Claim.—The ladies' bustle, formed of a fabric, into which the springs *c* are introduced, in combination with the tightener or cord *f*, passing through eyes at the ends of the springs, and through eyelets near the other ends of the springs, as set forth, and for the purposes specified.

93,951. — HENRY M. BEECHER, Plantsville, Conn., assignor to H. D. SMITH AND COMPANY.—*Die for Forming Carriage-Shaft Shackles.*—August 24, 1869.

Claim.—1. The combination and arrangement of the bending-guides *l l*, and the arm-dies *g g*, with the bed-plate A and the drop-die B.

2. The combination and arrangement of the upsetting-dies *i i*, with the drop-die B, and with the arm-dies *g g*, bending-guides *l l*, and die-plate A of the bed-block.

3. The combination of the head-dies *d d'*, with the die-plate A, the drop-die B, the arm-dies *g g*, the bending-guides *l l*, and the upsetting-dies *i i*.

4. The combination and arrangement of the shank-dies *n p*, the head-dies *d d'*, the arm-dies *g g*, the upsetting-dies *i i*, and the bending-guides *l l*, the whole being applied to the bed-block and the drop-die substantially in manner and so as to operate as and for the purpose or purposes hereinbefore specified.

93,952.—H. J. BERG, Butler, Pa.—*Apparatus for Removing Benzine from Hydrocarbons.*—August 24, 1869.

Claim.—1. The method herein described for removing the benzine and other volatile matters from crude petroleum, that is to say, by causing the crude oil to flow gradually in a thin stream over a heated plate, whereby the volatile principles will all be evaporated with great certainty and rapidity.

2. The improved machine above described for carrying out my process, consisting of vessel A, provided with inlet for the crude oil, and steam-chamber C, having steam-induction and eduction pipes, in combination with intermediate plate B, which subjects the crude oil to a temperature to evaporate the volatile parts, and conducts the refined oil into its proper receptacle, all as shown and described.

93,953.—NORBORNE BERKELEY, Aldie, Va.—*Device for Supporting Wagon-Beds.*—August 24, 1869.

Claim.—1. In combination with the sills *a*, standards *b*, and bed *c*, of a wagon, and springs *d*, applied around said standards *b*, the brackets *e*, attached to the bed *c*, and adapted to be held in sockets *f f*, at different points in the height of the bed, so as to rest on or be supported off of said springs, substantially as represented and described, for the purpose set forth.

2. In the described combination, the adjustable brackets *e e*, adapted to longitudinally and laterally support or secure the bed, substantially as described.

93,954.—GEORGE M. BOHLENDER, Peoria, Ill.—*Washing-Machine.*—August 24, 1869.

Claim.—The combination of the inclined half disks or lunettes *k k*, upright partitions *h*, and ledges *b b*, with the conical-shaped cylinder A, constructed as described.

93,955.—JOHN B. BOLINGER, Detroit, Mich.—*Treadle.*—August 24, 1869.

Claim.—1. The combination, with a treadle and belt, of a spring H, arranged on a different side of the loose pulley, and diametrically opposite to the treadle, so that the action and reaction of the foot-power and spring will be entirely utilized, in the manner set forth.

2. The combination of a fast pulley, recessed on one of its side-faces, and driven by a friction-lever, with the loose pulley D, having one concentric and one eccentric wall, whereby the said friction-lever is operated, as and for the purpose specified.

93,956.—SAMUEL BRADBURY, Dresden, Mo.—*Combined Harrow, Roller, and Drill.*—August 24, 1869.

Claim.—1. The harrow-teeth H and draught-bars I, in combination with the roller E F and frame A, substantially as herein shown and described, and for the purpose set forth.

2. The combination of the chains K, rollers L, levers M, and catches N, with the harrow H I and frame A, substantially as herein shown and described, and for the purpose set forth.

3. The combination of the harrow H I, rollers E F, and drilling-device O P V, with each other, and with the frame A, substantially as herein shown and described, and for the purposes set forth.

4. The adjustable roller D E F, constructed and operating substantially as herein shown and described, and for the purpose set forth.

5. The combination of the chains W, rollers X, crank Y, connecting-rod Z, lever A', and catch B', with the drilling-standards P, draught-bars V, and frame A, substantially in the manner herein shown and described, and for the purpose set forth.

93,957.—PETER H. BRADLEY, Portland, Me.—*Adze.*—August 24, 1869; antedated August 7, 1869.

Claim.—An adze, composed of the head or socket A, flange D, slot C, and key F, constructed to operate substantially as and for the purpose specified.

93,958.—EDMUND A. BRIMSON, New York, N Y.—*Cork-Cutting Machine.*—August 24, 1869.

Claim.—1. The improved arrangement of the sharpening-stones *a* and straightening-collar *c*, with reference to the "circular cutter" C, as and for the purpose specified.

2. The parts mentioned in first clause, in combination with the adjustable frame I and feed-frame V, having set-screws X X, the same being all arranged and operating together as set forth.

93,959.—THOMAS SANDS BROWN and THOMAS ARCHER BROWN, Brooklyn, Cal.—*Harrow.*—August 24, 1869.

Claim.—1. The bars C, having the arms D, said arms being provided with a head, *a*, substantially as and for the purpose above described.

2. In combination with the bars C above claimed, the bars C', provided with the loops E, substantially as and for the purposes set forth.

3. Connecting the two harrows A and B together by means of loops and arms, substantially as herein described.

93,960. — GEORGE F. BROWN, Winchendon, Mass.—*Window-Bead Fastening.*—August 24, 1869.

Claim.—The tube or socket A, provided with a spring-catch B, in combination with the pin C, having a series of notches, *e e e*, and a thumb-screw head, D, all constructed to be applied and operate substantially in the manner herein described, for the purposes set forth.

93,961.—WILLIS L. BROWN, Shelburne Falls, Mass., assignor to himself and SAMUEL W. BOWEN, same place.—*Heater for Kerosene-Lamps.*—August 24, 1869.

Claim.—As a new article of manufacture, the water-heater herein described, consisting of the holder A, with its conical depression, the tapering passage for the flame and products of combustion, with its water-jacket *d d*, and openings *c c*, adapted for use in connection with a kerosene-lamp, as set forth.

93,962.—JOSHUA H. BUTTERWORTH, Dover, N. J.—*Sewing-Machine.*—August 24, 1869.

Claim.—1. The described combination of devices for imparting reciprocating motion to the shuttle-carrier, the same consisting of the wrist-pin on the main shaft, pitman J, ball or knuckle-joint *i*, arm *f*, vertical rock-shaft I, and arm *j*, substantially as shown and described.

2. The described arrangement of the lever M, fulcrumed at *l*, and operated by the cam N on the main shaft, against the force of the spring *p*, sustained upon its supporting-rod.

3. The combination, with the take-up lever M, of the disk or arm *s*, on the main shaft of the cam N, slotted, as shown, and the pin *r*, all substantially as set forth.

4. The combination, within the shuttle, of the spring-guide rod *c*, free at one end, and tension-spring plate *w*, the latter being adjustable by means of a fastening-screw, substantially as shown and described.

93,963.—C. A. CALAWAY, Madison, Ohio.—*Washing-Machine.*—August 24, 1869.

Claim.—The combination of the case A, concave

bed B, rollers D, suspending-arms F, bearings E, oscillating shaft G, supports H, guides O and P, treadle K, and spring I, when all constructed and arranged substantially as specified.

93,964.—Horace Call, Concord, N. H., assignor to himself and J. B. Rand, same place.—*Apparatus for Transmitting Power by the Medium of Air.*—August 24, 1869.

Claim.—The combination and arrangement of a wheel, A, having curved or inclined buckets on its periphery, with an inclosing case, B, and an air-supplying tube E, descending to or entering near its lower part when in position, said wheel having suitable attachments for connecting it with other machinery it is to operate, all substantially as shown and described.

93,965.—William L. Carter, Marietta, Pa.—*Apparatus for Washing Ores.*—August 24, 1869.

Claim.—1. The arrangement and combination of the ring G with its radiating arms I, fixed in a central socket-collar, H, and provided with the discharge-shovels V, rake-teeth X, and central shovels W, together with the adjustable crushing-rollers M L, shovels U, supporting-rods R, and pivot-rods *r*, the whole mounted on rollers *a*, over a concave basin, B, with its flange *b*, substantially in the manner shown and for the purpose specified.

2. In combination with my revolving ring G and its appendages, the concave or conic basin B, with its central discharging-cylinder C surrounding the shaft E, the straining-chamber *b b*, discharge-pipe F, from the cylinder and spout Y, from upper portion of the concave, supported on frame-work A, in the manner and for the purpose set forth.

3. The cross-grooved plate Q, for the purpose of adjusting the shovels *o* by reversing their position, in the manner and for the purpose described.

93,966.—Andrew M. Cheeseman, Trenton, N. J.—*Machine for Making Pottery.*—August 24, 1869.

Claim.—1. The mold-carrying spindle K, its wheel J, and the disk-wheel I, of what is known as a Scotch jigger, in combination with the forming-tool *m*, and the bar M, cam N, rod P, or equivalent devices, whereby the said forming-tool is caused to co-operate with the wheel J, in producing the effect described.

2. Also, the combination of the internal cam, sliding bar M, which carries the forming-plate, and which has a rod, P, adapted to the wheel J of the mold-carrying spindle K, the whole being arranged and operating substantially as and for the purpose herein set forth.

93,967.—A. Combs, Helena, Montana Territory.—*Velocipede.*—August 24, 1869.

Claim.—1. The catch-treadle F, provided with a finger, *e*, and pivoted to the working-crank E, substantially as herein shown and described, to operate as set forth.

2. The crank E, carrying the catch-treadle F, when combined with the toothed wheel *b* and spring *d*, all combined and operating substantially as herein shown and described.

3. The combination of the rear axle G with the pin I, slotted tubular post J, frame A, and spring *g*, all arranged and operating substantially as herein shown and described.

93,968.—Howard Connick, Albert Lea, Minn.—*Horse-Collar and Hames.*—August 24, 1869.

Claim.—1. The combination of the parts A, B, and D, when arranged substantially as specified.

2. The mode of adjustably attaching the tug-links H by the under-cut brackets K and bolts L, arranged substantially as specified.

3. Securing the lower hames-strap buckles by means of the detachable clamps M, constructed and applied substantially in the manner described.

93,969.—Thomas M. Corbett, Milwaukee' Wis., assignor to himself and John I. Herrick, same place.—*Seeding-Machine.*—August 24, 1869.

Claim.—1. A feeding-apparatus, consisting of the shaft A, fixed part of clutch B, loose part of clutch C, and feeder or conveyor F, constructed substantially as described.

2. A, B, C, D, and F, arranged substantially as described.

93,970.—Darwin E. Crosby and Sarah E. Strickland, South Vineland, N. J.; said Sarah E. Strickland assigns her right to said Darwin E. Crosby.—*Clothes-Drier.*—August 24, 1869.

Claim.—1. The extension-arms E, whether sliding or hinged, in combination with the top cross-bar and side-bars of a clothes-frame, substantially as herein shown and described, and for the purpose set forth.

2. The pivoted or folding side-arms G, in combination with the extension-arms E, substantially as herein shown and described, and for the purpose set forth.

3. The combination of the extension-arms E, straps or keepers F, folding side-arms G, plates H, and pins or knobs J, with each other, and with the folding clothes-frame A B C D, substantially as herein shown and described, and for the purpose set forth.

93,971.—G. K. Dearborn, Smithfield, assignor to himself and O. A. Tanner, North Providence, R. I.—*Stopping-Mechanism for Looms.*—August 24, 1869.

Claim.—1. The bent lever B D, when provided with the hook B′, and working in combination with the protecting-finger A, substantially as described, and for the purpose set forth.

2. The hook B′ of the bent lever B D, in combination with the bunter E, substantially as described, and for the purpose set forth.

3. The compound spring S, acting in combination with the bunter E and bent lever B D, substantially as described, and for the purpose set forth.

93,972.—Silas R. Divine, New York, N. Y.—*Cooling Soap, and Forming the same into Bars.*—August 24, 1869; antedated August 7, 1869.

Claim.—1. Cooling soap, in the form of bars, in tubes of metal.

2. Cooling the soap by means of water surrounding the tubes.

3. Forcing the soap from the tubes by pneumatic, hydrostatic, or piston pressure, or by displacement with hot soap, introduced by pump or otherwise.

4. Switching from one tube to another, substantially as described.

93,973.—Jacob Dodder, Washington, Iowa.—*Wagon-Tire.*—August 24, 1869.

Claim.—A tire-band for wheels of carriages and other vehicles, having both the outer and inner surfaces concave, as and for the purposes set forth.

93,974.—Joseph W. Douglas, Middletown, Conn., assignor to W. B. Douglas, same place.—*Knapsack-Engine.*—August 24, 1869.

Claim.—The reservoir A, armed with foot-pieces D D and belts E E, in combination with the force-pump B and pipe C, arranged and operated substantially in the manner and for the purpose herein set forth.

93,975.—J. S. Du Bois, St. Louis, Mo.—*Railroad-Car Spittoon.*—August 24, 1869.

Claim.—1. A railroad-car spittoon, consisting of the shell B, perforated bottom E, and screen F, all arranged so that liquid matter can always escape, while solid articles are detained by the screen, substantially as herein shown and described.

2. The springs C, D, and *h*, and pins *d*, in combination with the hinged bottom E, pivoted screen F, and flanged shell B, all arranged and operating substantially as herein shown and described.

93,976.—Douglas W. Eaton, North Ridge, N. Y.—*Device for Tightening Wire Fence.*—August 24, 1869.

Claim.—The device for straining wire fences, herein described, consisting of the shank *a*, with conical point *d*, and cross-arm *c*, the whole arranged as described, and operating in the manner and for the purpose specified.

93,977.—Stephen Elliott, Richmond, Ind.—*Gate.*—August 24, 1869.

Claim.—1. The jointed rod E, in combination with the gate C, guide-arm F, and spring E′, substantially as shown and described.

2. The combination and arrangement of the gate C, the ropes or chains I^2, roller H, and lever G, substantially as and for the purpose specified.

3. The arrangement of the levers G G′, ropes I I^1, and latch D, substantially as and for the purpose specified.

93,978.—William Evans, Eureka, Wis.—*Spring.*—August 24, 1869.

Claim.—1. The combination, with the spring F, of the set-screw I, sliding bolt H, and lever E, when arranged substantially as specified.

2. The combination of the spring F, case A, set-screw I, sliding bolt H, brackets C, bolt D, and lever E, all arranged as specified.

93,979.—Alfred Everiss, New York, N. Y.—*Gathering-Attachment for Sewing-Machine.*—August 24, 1869.

Claim.—A gathering-attachment for sewing-machines, constructed, arranged, and operated automatically from the presser-foot, in the manner substantially as herein shown and described.

93,980.—Bernhardt Fincke, Brooklyn, N. Y., assignor to F. Gustavus Fincke, same place.—*Process of Preparing Homeopathic Medicines.*—August 24, 1869.

Claim.—1. Effecting potentation by the peculiar mode of dilution called fluxion, substantially as hereinbefore set forth.

2. The process of potentiating by carrying the vehicle to the bottom of the vial, by means of a tube or jet, substantially as herein described.

3. Producing infinitesimal gradual dilution in one vial, by continuous motion of the vehicle.

4. Measuring the potentiating-vehicle before it enters the vial, or other receptacle of the material to be potentiated, for the purpose of ascertaining the degree of potentiation, as set forth.

5. Measuring the potentiating-vehicle by measuring the liquid which flows away from the vial, or other receptacle of the material to be potentiated, to ascertain the degree of potentiation, as specified.

93,981.—O. P. Frantz and E. Broad, St. Anthony, Minn.—*Cant-Hook.*—August 24, 1869.

Claim.—The tapering socket A, provided with the projection B, with its ears *b*, the slot *b′*, and ring C, arranged and operating as described, for the purpose set forth.

93,982.—Francis Frisiani, New York, N. Y.—*Medical Compound for Treating the Organs of Voice.*—August 24, 1869.

Claim.—The medical preparation hereinbefore described, and which I call vocalina, the same consisting of an alcoholic solution of the resin called jatoba, with or without the addition of the other tinctures named, or either of them, said medicine being intended for use in affections of the throat and vocal organs, as set forth.

93,983.—Perry G. Gardiner, New York, N.Y.—*Railway-Car Spring.*—August 24, 1869.

Claim.—1. A frame or case, in which the parts are constructed, arranged, and combined together in the manner and for the purposes substantially as described, for carrying and securing the steel spirally-coiled springs, singly or in groups, so that the lower portions of the springs will be uninclosed, and accessible for cleaning and inspection without removing the case, and at the same time the coils are protected and secured against bending or being thrown out of line by the irregular pressure or surging of the car.

2. The form and construction of the central standard *e*, whether used in combination with the cap or base singly, or with both in the same frame, and in part surrounding and sliding upon the central tube *d*, operating substantially in the manner and for the purposes described.

93,984.—Perry G. Gardiner, New York, N.Y.—*Railway-Car Spring.*—August 24, 1869.

Claim.—The device of the central hollow stud or tube F, combined with the rubber cylinder-spring B, and the spirally-coiled steel springs C and A, arranged and operating in the manner and for the purpose described.

93,985.—N. F. Gilman, Rochester, Minn.—*Grain-Binder.*—August 24, 1869.

Claim.—1. The pitman L, connecting the crank K with the bar or lever P, carrying the rake-head, when arranged to play up and down within the vertical slot of the upright bar M, as herein described, for the purpose specified.

2. The combination of the rod S and cord T with the hinged rake-head R, lever P, and bar or lever Q, substantially as herein shown and described, and for the purpose set forth.

3. The adjustable hook C^1, bar or lever E′, and hook F′, constructed and operating in combination with the vertical pivoted bar M, m^1 m^2, and lever O, substantially as herein shown and described, and for the purpose set forth.

4. The arms U, shaft V, arm W, connecting-rod X, and springs Y and Z, in combination with the pitman L and rake R, substantially as herein shown and described, and for the purpose set forth.

5. Binding grain in a series of connected bundles, by a continuous looped cord, substantially as herein shown and described.

93,986.—William Grayson and C. D. Hyndman, Odell, Ill.—*Lamp-Extinguisher.*—August 24, 1869.

Claim.—1. In combination with a lamp-burner, the springs E E, with the tees J J, arranged and operating substantially as and for the purposes herein shown and described.

2. Extinguishing a lamp-wick, by pinching it between two movable metallic plates, substantially as described.

93,987.—William H. Gregg and William Bowe, Wilmington, Del.—*Adjustable Carriage-Seat.*—August 24, 1869.

Claim.—The arrangement, in a double-seated carriage, of four stops on the back and two on the front seat, with hooks G G in the forward part thereof, all as shown and described.

93,988.—John F. Griffen, New York, N. Y.—*Manufacture of Rosin and Spirits of Turpentine.*—August 24, 1869.

Claim.—1. As a new process for the manufacture of turpentine and rosin, subjecting a given charge of crude material to the action of heat from steam-heated surfaces, within a still, while constantly agitated within said still, substantially as hereinbefore set forth.

2. In an apparatus for carrying on the described process, first, the combination of a steam-heated still with a steam-heated agitator, as and for the purposes set forth; secondly, the combination, with the still, of perforated steam pipes *o*, or their equivalents, substantially as and for the purposes set forth; thirdly, the screw feeder *i*, in combination with the agitator; fourthly, the use of a series of lifters or buckets, *m*, in combination with the heating-agitator, substantially as and for the purpose set forth.

93,989.—John D. Harrison, Middletown, Ohio.—*Seeding-Machine.*—August 24, 1869.

Claim.—The combination of the gearing-sockets *o* with the bars F G and drag-bars E, constructed, arranged, and operated substantially as and for the purpose described.

93,990.—M. C. Hawkins, Edinborough, Pa.—*Pump.*—August 24, 1869.

Claim.—The portable pumping-apparatus herein described, consisting of the platform A, pump-stand B, valve-section C, and tubing D, with valve *h h*, the stone barrel E, pistou F, rod G, and brake-lever H, all constructed and arranged as herein shown and described.

93,991.—James H. Haynes, Union County, Ark.—*Velocipede.*—August 24, 1869.

Claim.—The pinion E, shaft F, and driving-wheel K, in combination with a disk, C′, when the several parts are constructed, arranged, and operated substantially as herein described, for the purpose set forth.

93,992.—Henry Hempstead, Greenport, N. Y.—*Oar-Lock.*—August 24, 1869.

Claim.—The yoke or oar-socket B, when provided with friction-rollers C C, and arranged so as to oscillate in the manner described, in combination with the stern A of a boat, substantially in the manner as and for the purpose herein set forth.

93,993.—George B. Hicks, Cleveland, Ohio.—*Electro-Magnetic Signal-Apparatus.*—August 24, 1869.

Claim.—1. The arrangement of the magnet E and spool, in combination with the bell F, and operated substantially as and for the purpose set forth.

2. The application of the magnet E and single spool, in connection with a battery, for giving signals upon a bell, as set forth.

93,994.—Leavitt Hunt, Weathersfield, Vt.—*Plow.*—August 24, 1869.

Claim.—1. The combination, substantially as herein described, with the hinged plow-beam and sulky-frame, of a stiff or rigid gauge-bar to regulate the depth of furrow, and to cause the plow-point to bite or enter the ground at the instant the machine is moved forward.

2. The combination, with the plow-beam, of arms hinged to the sulky-frame, and connected with the beam, and with the lever for elevating the same, as herein described, so that said arms shall serve both to stiffen or brace, and, in connection with the lever, to raise or depress the plow.

3. The combination, with the slotted plow-beam and whiffletree, held in a slot in the sulky-frame or pole, and connected with the beam by a draught-chain, or equivalent device, of the hinged bracing-arms, the lever for actuating the same, and the rigid or stiff gauge-bar, substantially as and for the purposes set forth.

4. The combination and arrangement, substantially as herein specified, of the plow-beam with the hand-lever for raising or lowering the same, and an auxiliary foot-lever, independent of, and having no connection with, the hand-lever, but connected with the beam, and adapted to act in conjunction with the hand-lever when required.

5. The combination, with the hand-lever and segmental rack, of the sliding catch-bar, and device for operating the same, said bar being held to the lever and forked so as to straddle the rack, as and for the purposes shown and set forth.

6. The combination, with the forward part of the beam of a plow of otherwise ordinary or suitable construction, of a pendent arm, carrying the roller, and pivoted or hinged to the plow-beam, and a curved and slotted branch-arm connected with both the plow-beam and the roller-arm, in the manner and for the purposes substantially as described.

93,995.—Samuel W. Huntington, Augusta, Me.—*Sash-Balance.*—August 24, 1869.

Claim.—The construction and arrangement of the grooved sash-jamb, the weighted balance-racks received in such jamb, and the metallic strips, for holding said racks in place, and forming ways, in which the projecting portions of the racks move and are guided, in combination with the window-sash, its racks, and intermediate pinion, as herein set forth.

93,996.—B. A. Jenkins, La Crosse, Wis.—*Metallic Window-Shutter.*—August 24, 1869.

Claim.—1. Constructing the uprights of a hollow metallic shutter-frame of plates A A, fastened at their edges to a stiffening and spacing-bar, G, substantially as and for the purposes described.

2. The construction of a hollow slat B, of a plate of metal, bent substantially as described, and having end-pieces b^1 b^1, for receiving rod b^2, formed on it, substantially as set forth.

3. The ears *b b*, formed on the hollow metallic slat B, substantially as described, and for the purpose set forth.

93,997.—Gregory Jennings, West Cairo, Ohio.—*Shovel-Plow.*—August 24, 1869.

Claim.—1. The bent or curved arm E, having guard-fingers G attached to its lower part and adjustably connected with the beam A, substantially as herein shown and described, whether used with or without the draught-rod H, as and for the purpose set forth.

2. The combination of the recessed shovel D with the curved arm E, both constructed and operating together as set forth.

93,998.—William Johnson, Lambertville, N. J.—*Bolt-Threading Machine.*—August 24, 1869.

Claim.—1. The main die-casting E, toothed rims G G, pinion-wheels W W W, screws S S S, die-blocks O O O, cutting-dies D D D, stops P T X, pressure-band F, and plate N, combined and arranged as described, and for the purpose specified.

2. The arrangement of the friction-bands L L, rock-shaft I, and lever H, or their equivalents, arranged and combined in the manner and for the purpose substantially as described and set forth.

93,999.—Luther N. Johnson and Benton Silloway, Montpelier, Vt.—*Clothes-Drier.*—August 24, 1869.

Claim.—1. The bolt *e*, in connection with the arms C and D D, for the purposes as explained.

2. The arm C, in combination with the arms D D and hinges *d d*, the slide B and hinge *d*, the pulley E and cord *g* and lines *f f*, as described.

3. The combination and arrangement of the rack or frame, consisting of the arms, hinges, lines, and bolt, as described, with the slide B, pulley E, cord *g*, case A, and slide-holder *e*, and grooves *b b*, substantially as and for the purpose herein described and set forth.

94,000.—Nathaniel Jones, Lockport, Ind.—*Quadrant-Hinge.*—August 24, 1869.

Claim.—The wing G, provided with curved arms C and lug E, in combination with the wing K, provided with lug D and recess *e*, as and for the purpose set forth.

94,001.—John W. Jones, Thomson, Ill., assignor to himself and S. H. Beckwith, same place.—*Reversible Plow.*—August 24, 1869.

Claim.—1. The mold-board, formed in two triangular parts, B C, and combined together, and with the posts E D, and turning and supporting-frame I, when all arranged substantially as specified.

2. The combination of the two parts B C of the mold-board and the locking-slides O, when arranged and operating substantially as specified.

94,002.—Louis A. Kettle, Philadelphia, Pa.—*Button-Hole and Buckle.*—August 24, 1869.

Claim.—1. Forming a spring-wire button-hole and prongs of one and the same continuous piece, having a frame, A, as in figs. 1, 2, and 3, or without said frame, as in fig. 4, substantially as described.

2. Forming a spring-wire button-hole, B, strap-loop D, and prongs of one and the same continuous piece, having a frame, A, (fig. 3,) substantially as described.

94,003.—Charles A. King, Springfield, Mass.—*Revolving Fire-Arm.*—August 24, 1869.

Claim.—1. The arrangement of the movable gear or pinion G, in the joint H, and the rack D, on the front end of the extractor, in such a manner that they engage with each other, and operate the extractor, by the throwing forward of the barrel, substantially as herein shown and set forth.

2. I do not claim connecting the ejector and plunger by a swivel-joint; but what I do claim is the combination of the rack D, pinion G, and extractor A, the parts being all arranged and connected, substantially as herein described.

3. The construction and arrangement of the pawl O in such a manner that when the hammer is at

half-cock the point of the pawl is thrown back out of a line with the face of the ratchet, substantially as and for the purpose set forth.

94,004.—JEROME B. KING, New York, N. Y.—*Washing-Machine.*—August 24, 1869.

Claim.—The washing-machine, constructed as described, of the segmental sections C, one of which forms a cover, held to the rotating cylinder B by means of the elastic bands E, and resting at their outer ends upon the end disks D, bearing the guards H, each segment C being provided with end segments F, which are adapted to fit between the ends of the cylinder B and the disks D, all arranged as described, for the purpose specified.

94,005.—ALEXANDER KING and GEORGE H. KING, Painesville, Ohio.—*Washing-Machine.*—August 24, 1869.

Claim.—1. The circular plate D E, attached to the end of a vertical shaft, C, passing out through the stuffing-box S T, and operated by the bevel-gearing G H, and shaft I, attached to the brackets F and J, in combination with the ribbed body or tub A, all constructed and arranged to operate as herein described and shown.

2. In combination with the devices of above clause, the crank O, cranks or crank-wheels M K, connecting-bar L, pin P, and slotted bar Q, when arranged substantially as herein shown and described, and for the purpose specified.

94,006.—JOHN W. KING, New York, N. Y.—*Curtain-Fixture.*—August 24, 1869.

Claim.—1. The combination, with a cord-pulley and disk, of the journal E and ears B, all fitted together, as and for the purpose specified.

2. The subject-matter of above clause, in combination with the roller A, the ears B, disk C, and pivot D, arranged on the other end of the roller, as shown and described.

94,007.—D. R. KNIGHT, Akron, Ohio.—*Driving Well-Tubes.*—August 24, 1869.

Claim.—1. The recesses or chambers C, oblique grooves D, and inclined tapering grooves *e*, combined and arranged, in relation to the tubes A and B, substantially as and for the purpose specified.

2. The spiral slot G, as arranged in relation to and in combination with the tubes A and B, in the manner as and for the purpose set forth.

94,008.—ADONIS LABAUVE, Convent, La.—*Apparatus for Clarifying Cane-Juice by Means of Sulphurous-Acid Gas.*—August 24, 1869.

Claim.—The arrangement, with relation to the pump A, containing the piston and valves, of the juice-passage a^1, gas-passage F a^2, and the compartment H, containing the perforated shelves I, as herein described, for the purpose specified.

94,009.—JACOB LAGOWITZ, Newark, N. J.—*Wooden Trunk.*—August 24, 1869.

Claim.—1. The herein-described method of making wooden trunks, by covering the boards separately with leather, or its equivalent, and ornamenting or creasing the same preparatory to putting the same together, substantially as specified.

2. Covering and ornamenting the boards for a curved trunk-cover, previous to the bending of the same, substantially as herein shown and described.

94,010.—GEORGE W. LAMB, Cobalt, Conn.—*Sleigh-Bell.*—August 24, 1869.

Claim.—The collar B, long and narrow shank D, screw E, and nut F, in combination with the body A of the bell, substantially as herein shown and described, for the purpose of securely connecting the said bell with the strap upon which it is strung.

94,011.—JOHN M. LEMON, Polk City, Iowa.—*Floor-Catch for Table-Legs.*—August 24, 1869.

Claim.—Securing the legs of tables, and other furniture, to the floor by means of catch-plates E, when fitted in recesses, so as to be flush with the upper surface of said floor, and adapted to engage with the headed rivets D, or the notches K of the housings of casters, substantially as and for the purpose specified.

94,012.—GEORGE W. ROSS, Lewin, Rochester, N. Y.—*Device for Folding Letters, &c.*—August 24, 1869; antedated August 7, 1869.

Claim.—The above-described instrument for folding, more rapidly, letters, bills, &c., to a uniform width, consisting of a single metallic plate or other substance folded upon itself, forming two leaves of unequal widths.

94,013.—T. S. LEWIS, Portland, Me.—*Machine for Removing Green Corn from the Cob.*—August 24, 1869.

Claim.—1. The sliding carriage B, composed of the parts *e f*, and carrying the follower *h* and plunger *g*, in connection with the cutters *n p*, as herein described.

2. The cutting-frame *x*, with its adjustable cutter *p*, in combination with the adjustable scraping-devices *t u*, constructed and arranged to operate as herein described, for the purpose specified.

3. The sliding carriage B *f e*, with the follower and plunger, in connection with the adjustable scrapers *t u*, as herein described.

4. The hopper *k*, in combination with the sliding carriage B *f e*, follower *h*, plunger *g*, knives *n p*, constructed and arranged as herein described, for the purpose specified.

94,014.—DIEUDONNÉ FRANÇOIS JOSEPH LONTIN and EARDLEY LOUIS CHARLES D'IVERNOIS, Paris, France.—*Magneto-Electric Machine.*—August 24, 1869; patented in France, December 14, 1868.

Claim.—A magneto-electric engine, consisting of the bibranched electro-magnetic armatures, radially disposed upon the rotating shaft, in combination with the stationary magnets, which are initially magnetized, when arranged in such a manner that the current generated in one series of rotating armatures is conveyed to the fixed magnets, and then, on the rotation of the shaft, excites a current in another series of rotating magnets, which can be utilized at will, in the manner and for the purpose as described.

94,015.—JAMES R. MAXWELL and EZRA COPE, Cincinnati, Ohio.—*Steam-Engine.*—August 24, 1869.

Claim.—1. The rock-shaft E, parallel to the cylinder, actuated by contact of oblique surfaces of the arms M M′ thereon, and the piston within the cylinder, constructed, combined, and arranged as herein set forth.

2. The rock-shaft E and the valve C, having a diagonal groove, O, in combination with their intervening gear, substantially as described.

3. The rock-shaft G and the finger N, in combination with the diagonal groove O, substantially as described.

4. The valve C, with the steam-supply openings I I′, exhaust-openings *h′ h″*, constructed and arranged, with reference to the chamber C′ C″ and the induction and eduction ports thereof, substantially as described.

5. The steam-cylinder A, in combination with the two separate throttle or regulating valves *b b*, arranged to control the flow and quantity of steam admitted through separate passages, respectively, to each end of the steam-cylinder, substantially as described.

94,016.—NOAH MAYO and EBEN S. MORSE, Bath, Me.—*Show-Case for Counters.*—August 24, 1869.

Claim.—A counter show-case, constructed substantially in the manner as herein described.

94,017.—THOMAS MCCREARY, Matteawan, N. Y., assignor to himself, GEORGE M. SULLIVAN, and JOHN MCCREARY, same place.—*Umbrella.*—August 24, 1869.

Claim.—The combination of the holding-rings *b*, provided with radially-projecting pins, the braces and ribs provided with eyes for connection to the said pins, and the guard-rings *c*, either permanently or detachably connected to the holding-rings, substantially as specified.

94,018. — William McKay, Newburyport, Mass.—*Sail-Hank.*—August 24, 1869.

Claim.—The arrangement, as described, of the metallic guard D and rivets *b b*, with the roller-spindle C and the wooden bow A, the same being productive of an improved manufacture of sail-hank, provided with a friction-roller, as set forth.

94,019.—Antoine R. McNair, New York, N. Y.—*Wood Pavement.*—August 24, 1869.

Claim.—The construction and arrangement of the stretchers C C, chamfer-shouldered bridge-pieces or supports E E, and recessed or chamfer-shouldered paving-blocks G G, secured to the said stretchers by vertical, and to the supports by horizontal tree-nails, substantially as herein specified.

94,020. — Joseph Moore, Tarentum, Pa.—*Spring-Bed-Bottom.*—August 24, 1869.

Claim. — The combination of the longitudinal spring-bars A, transverse bars B, spring-followers C, straps E, and friction-rollers F, substantially as specified.

94,021.—David G. Morris, Catasauqua, Pa.—*Machine for Heading Bolts.*—August 24, 1869.

Claim.—1. The construction and arrangement, with relation to each other, and the cam I on the shaft K, of the adjustable die-holders A and B, and the carrier E, sliding on tongues or ways formed on the bracket H, and provided with set-screws *a*, for adjusting the cutter S relative to the cutter N, as herein shown and described.

2. The arrangement of the eccentric T, arms U, and set-screws V, with relation to the squared portion X of the shaft L, as set forth and shown.

94,022.—Jonah Newton, New York, N. Y.—*Saw-Teeth.*—August 24, 1869.

Claim.—1. The combination of the segmental tooth A and holding-spring B or S with a circular recess of a saw-plate or disk, either with or without the bolsters I, all constructed and arranged substantially as herein shown and described.

2. The improved spring-retracting instrument, constructed and operating substantially as above described.

94,023.—George Oldham, Westfield, N. Y.—*Clothes-Drier.*—August 24, 1869.

Claim.—The clothes-frame, composed of the post A, supported on pivoted legs G, having cam-ends and shoulders *g'*, the pivoted arms B C, crossing each other and pivoted together, and connected by cords E, and the sliding hub D, supported on spring F, when said parts are all constructed and arranged as herein described and shown.

94,024.—S. H. Partridge, Peterborough, N. H.—*Sled.*—August 24, 1869.

Claim.—The seat *a*, runner *b*, platform *c*, and runners *d*, combined and arranged in the manner above described, and for the purposes herein set forth.

94,025.—Edward Perry, Hopkinton, Mass.—*Spring-Bed Bottom.*—August 24, 1869.

Claim.—The arrangement and combination of the two series of "V-shaped springs" with the slats D, the frame A, and the two series of serpentine springs C, arranged together as set forth.

94,026.—John S. Perry, Albany, N. Y.—*Portable Heating-Attachment for Stoves.*—August 24, 1869.

Claim. — 1. A portable warming-attachment for stoves, consisting of a chest, A, a reservoir, D, and inlet and outlet-passages, adapted to operate substantially as described.

2. A portable warming-attachment for stoves, combining the following elements, to wit, a chest, A, an outlet-flue, C^2, a warming-closet, G, and an inlet-orifice, C, substantially as described.

3. The direct flue C^3, provided with a damper, *g*, and arranged, in the relation described, to the inlet-orifice C, for the purpose described.

4. The descending flue $C^1 C^2$, passing through the reservoir D, and extending down nearly to the bottom of the portable chest A, within which such reservoir is arranged, substantially as and for the purpose described.

94,027.—Charles Powell, Birmingham, England.—*Pump.*—August 24, 1869.

Claim.—1. The combination of the tube J, rod K, having stopper *j* and lid *k* thereon, tube *l*, and hollow stock A, all being connected and constructed as set forth, to cause the escape of water within the pump before it can freeze, in the manner described.

2. The combination of the chair-shaped wooden stock A, with air-chamber B and piston F, as and for the purpose specified.

3. The improved pump, the same consisting of the devices named and described.

94,028.—George Price, Peoria County, Ill.—*Saw-Sharpener.*—August 24, 1869.

Claim.—1. The vertical shaft F, having an arm, *d*, provided with a blade, in combination with the slots of the semicircular guide *y y*, and the movable saw-bed D, substantially as and for the purpose set forth.

2. The combination of the adjustable block *k k* and set-screw with the vertical shaft F, substantially as and for the purpose described.

3. The treadle G, lever *a*, and vertical shaft F, with spring *h*, in combination with the movable saw-bed D, substantially as described.

4. Providing the movable saw-bed D with a feed-device, *m*, for feeding the teeth of the saw to the file *q*, substantially as described.

5. The levers *i*, *k*, *l*, *m*, *n*, and *o*, spring *f f*, vertical bar *b*, and vertical arm *b b*, so constructed and operating as to give the required feeding-movement to the feed-device or bar *m*, substantially as described.

6. The arm *e* and vertical bar *b*, in combination with the shaft F, semicircular guide *y y*, and lever *i*, substantially as described.

7. The movable saw-bed D, with slide D', and block *g g*, having the feed-device or bar *m* pivoted to a post thereon, in combination with the circular bed-plate H and shaft F, when constructed, and operating substantially as described.

8. The bed-plate K, trough C, with arms *x*, spur-wheel V, and pinion, balance-wheel, crank W, and arm *u*, connecting with file-frame, all constructed and arranged as herein described,

9. The combination of the set-screws *t t t* with the guide *h h*, so that the required pitch or inclination may be given to the forward end of file, substantially as described.

10. The adjustable file-clamps *m m* and bar S, working in pendent slots from the arms *x* of the trough C, in combination with the arm *u* constructed and operating substantially in the manner and for the purpose as set forth.

11. The combination of the gauges *e e e e*, as arranged on the rod, with the saw-clamps E E, substantially as described.

94,029.—Alvin D. Puffer, Somerville, Mass.—*Application of Carbonated Waters in Medicine and Surgery.*—August 24, 1869.

Claim.—The attachment of the flexible hose C to the faucet B, in combination with the nozzle or sprinkler D and the vessel A, substantially and in manner as before described and explained.

94,030.—James Restein, Philadelphia, Pa.—*Fabric for the Manufacture of Collars, Cuffs, &c.*—August 24, 1869; antedated August 9, 1869.

Claim.—The within-described fabric, composed of the parts A and B, with the part A coated with a white enamel, C, or not, as desired.

94,031. — John Rigby, Fort Howard, Wis.—*Lamp-Lighter.*—August 24, 1869.

Claim.—1. The combination with a clock-dial and hour-hand, of the spring-arm S, perforated disk R, arm Q, slide P, when all arranged substantially as specified.

2. The combination of lever-slide P, having trigger-catch O upon one end, with the rod N, weight M, flexible connection K, lever A, and retainer H,

all together constituting the device for holding and releasing the spring-disk B, as described.

3. The combination of the two devices mentioned in above clauses of claim, with the spring-disk B, match-holder C, and wick-holder D, all connected and operating together as and for the purpose specified.

94,032.—JOHN ROBERTS, Greenfield, Ind.—*Corn-Row Marker.*—August 24, 1869.

Claim.—The combined arrangement of the frame B C K N, axle-tree A, wheels E E, driver's seat F, shovels or markers H, rods or links I, bar J, treadle or lever L, and pivoted handles M, substantially as herein set forth, for the purpose specified.

94,033.—DAVENPORT ROGERS, Mount Gilead, Ohio.—*Butter-Machine.*—August 24, 1869.

Claim.—1. The combination, with a hollow cylinder, having teeth *g*, and a revolving shaft, D, having the beveled teeth *b* spirally arranged thereon, of the hopper and power-plunger, all arranged, with respect to each other, substantially as shown and described.

2. The improved hollow cylinder B, having removable top *a*, inlet-hopper *d*, and outlet-aperture *e*, all constructed and formed in one piece, as and for the purposes specified.

94,034.—W. R. SANTLEY, New London, Ohio.—*Wagon-Reach and Hound.*—August 24, 1869.

Claim.—Forming the reach and the hounds of a wagon or carriage from a single piece of wood, substantially as shown and described.

94,035.—F. SCHENCK, San Antonio, Texas.—*Hair-Trigger.*—August 24, 1869.

Claim.—The hair-trigger attachment to the guard E, consisting of the hair-trigger B, the hair-trigger catch C, the handle-catch D, and the spring F, all constructed and operating substantially as and for the purpose described.

94,036.—F. SCHENCK, San Antonio, Texas.—*Hair-Trigger.*—August 24, 1869.

Claim.—1. The application, to the main trigger A, of the spring *a*, for the purpose of obtaining a yielding point of contact for the action of the hair-trigger mechanism.

2. The joint, consisting of the hair-trigger B, and of the hair-trigger catch C, when arranged on the guard of a gun or pistol, as set forth.

3. The spring-case F, with the arc *g* and the handle *h*, constructed and operating substantially as and for the purpose described.

4. The combination, with the main trigger A, of the spring *a*, lever F, hair-trigger B, and catch C, all arranged and operating substantially as herein shown and described.

5. The spring *c*, when arranged on the hair-trigger and guard, substantially as and for the purpose herein shown and described.

94,037.—FRANKLIN SCOTT, Brooklyn, N. Y.—*Insulator.*—August 24, 1869.

Claim.—The combination of the insulator, provided with the slot F, jaws C C, and ribs I I, with the slotted collar B, in the manner and for the purpose as set forth.

94,038.—PETER SHULTS, Rockwood, N. Y.—*Cant-Hook.*—August 24, 1869.

Claim.—The cant-hook, consisting of the stock or lever A, having the plated point B beveled on its upper side, the hook C, attached thereto by the bolt D and screw-nut E, and provided with the arm F and upwardly-projecting point *a*, the angular spring G, secured to the stock by screw-bolts H and D, all constructed, arranged, and operated as herein shown and described, and for the purpose specified.

94,039.—XAVIER SIMON, Akron, Ohio.—*Velocipede.*—August 24, 1869.

Claim.—1. The combination and arrangement of the crank-axle-tree A′, jointed links E, jointed axle-tree C′, levers J, and actuating-rods F, in the manner substantially as described and for the purpose specified.

2. The stud N, stay O, movable blocks L, axle-tree A′, and box A, all combined and arranged to operate in the manner as and for the purpose set forth.

94,040.—SIMON F. STANTON Manchester, N. H., and ORVILLE RIPLEY, Charlestown, Mass.—*Steam-Cylinder Oiler.*—August 24, 1869.

Claim.—1. The arrangement of the reservoir A, the cylinder B, outlet-chamber P, and conducting-pipes R R, when constructed in the manner herein described.

2. The arrangement of the cylinders B, valve H, and cylinder-head W, when constructed as shown and described.

3. The tubular piston-rod when constructed as described, with a partition, D, to regulate the movements of the valve H and connecting-rod E.

94,041.—DAVID A. STUBBLEFIELD and WILLIAM H. LUSE, Yazoo County, Miss.—*Plow.*—August 24, 1869.

Claim.—The coupling-bars A, B, and C, standards D, beams E, and double-tree L, cuff-irons F, and bolts *g*, when the whole is combined, arranged, and operated substantially as and for the purposes set forth.

94,042.—STEPHEN G. STURGES AND WILLIAM E. STURGES, Newark, N. J.—*Clip for Attaching Buckles.*—August 24, 1869.

Claim.—The clip described, when constructed and combined with a strap, in the manner and for the purpose specified.

94,043.—CORNELIUS SWARTWOUT, Troy, N. Y., assignor to himself, JOSEPH FOXELL, THOMAS JONES, and EDWARD W. MILLARD, same place.—*Waffle-Iron.*—August 24, 1869.

Claim.—The handle M, with the connecting-rod N, or its equivalent, and the device P, or its equivalent, arranged so as to loop or hook over the lug S, or any equivalent thereto, and forming rivets through the ears K and L, substantially in the manner and for the purposes as described and set forth.

94,044.—FENTON Y. TAVENNER, JOHN W. GALBRAITH, and ALFRED SMITH, Sedalia, Mo.—*Harrow.*—August 24, 1869.

Claim.—The combination, with the teeth, the framing, and the metallic bars A, of the levers C, D, and E, substantially as specified.

94,045.—N. O. J. TISDALE, New Orleans, La.—*Machine for Charging Gas-Retorts.*—August 24, 1869.

Claim.—1. The guide-way B, when constructed substantially as herein described, for the purpose set forth.

2. The charger C, when provided with the reversible bottom or apron D, and constructed and operating substantially as and for the purpose set forth.

3. The combination of the guide-way B and the charger C, when these parts are constructed, arranged, and conjointly operate substantially as described, for the purpose set forth.

94,046.—SIDNEY S. TURNER, Westborough, Mass., assignor to himself and WILLARD CORNEY, same place.—*Sewing-Machine.*—August 24, 1869.

Claim.—1. The combination and arrangement of the needle E^3, and hook C^3, operating substantially as described, and for the purpose set forth.

2. The tension-spring F^2, in combination with the fixed cams F^3 F^4, working substantially as described, and for the purpose set forth.

94,047.—S. F. VAN CHOATE, Boston, Mass.—*Breech-Loading Fire-Arm.*—August 24, 1869.

Claim.—1. The combination of a firing-pin and a trigger of a fire-arm, whereby the latter actuates the former directly without the aid of other lock-mechanism, for the purpose of exploding the cartridge by direct pressure rather than by the ordinary system of percussion.

2. As a positive mechanical movement, the employment of the cam-grade of the rod *l*, in combina-

tion with the studs c' f', on the firing-pin e, for the purpose before explained.

3. The combination and arrangement of the cam-block k and the rod l, the latter being prevented from revolving within the former, and provided with means of varying the friction or hold between it and the breech-bolt, for the purpose substantially as herein explained.

4. An improved fire-arm, composed of a breech-bolt, provided with a fixed or unyielding cartridge-retractor, a receiver, furnished with the permanent or immovable stop a', and a recoil-cam-block, provided with a variable friction-device to regulate the degree of friction between the two, the whole being combined substantially in manner set forth.

94,048.—Henry C. Varnum, Hartford, Vt.—*Horse-Rake and Hay-Spreader Combined.*—August 24, 1869.

Claim.—1. The revolving spreader D, in combination with the jointed side-bars of the frame C, and with the drive-wheel A, whether used with or without the rake J K L, substantially as herein shown and described, and for the purpose set forth.

2. An improved hay-rake, formed by the combination of the rake J K L, rotating spreader D, jointed side-bars of the frame C, axle B, and drive-wheels A, with each other, substantially as herein shown and described, and for the purpose set forth.

3. Jointing the side-bars of the frame C, when used in connection with the small wheels N, to adapt the machine for use upon inclined or uneven ground, substantially as herein shown and described.

4. The combination of the detachable cross-bar S with the gear-wheel F of the spreader D, and with the drive-wheel A, substantially as herein shown and described, and for the purpose set forth.

5. The combination of the lever I, shaft H, lever or crank-arm G, connecting-rod T, and sliding bearings E, with the frame C and shaft d' of the spreader D, substantially as herein shown and described, and for the purpose set forth.

94,049.—Jacob Stilenger Wayne, Quincy, Ill.—*Buggy-Top.*—August 24, 1869.

Claim.—1. The combination of the rear bows A and braces B with the remaining parts of a buggy-top, as and for the purpose specified.

2. The construction and arrangement together, in the manner specified, of the rear bows A E and braces F, as set forth.

94,050.—Theophilus Weaver, Harrisburgh, Pa.—*Corn-Sheller.*—August 24, 1869.

Claim 1.—In a sheller-jaw of two blades, N^2 N^3, the shuttle V L and the crooked rear guide g, arranged substantially as and for the purpose herein set forth.

2. The combination and arrangement of the shuttle-wings V L with benches W^1 and rests T, substantially as and for the purpose herein set forth.

3. Constructing the base of cone a with spring-rests T, benches W^1 C, and cuts D, all arranged as herein set forth.

4. The sliding clamp A^2 P^2 V^2 S^1 n^2 n^3 and standard B^2 m^2 l', constructed and arranged to operate substantially as and for the purpose herein shown and described.

5. Constructing frame O^2 B^4 M g S^4, as and for the purpose specified.

6. Constructing ease-body R^2 F' K^1 K^2 H, as and for the purpose specified.

7. The eduction-cob-rack X^4 Y^4 X Y A^1 and trip-slide T' F h l, arranged to operate substantially as herein described.

8. The locking-swivel-connection of miter-gearing m, with ease-body, as and for the purpose specified.

9. The combination and arrangement of miter-gear m with feed-cone c, and with hand-miter-wheel n, substantially in the manner as and for the purpose herein set forth.

94,051.—M. V. B. White, Ballston, N. Y.—*Sash-Stop.*—August 24, 1869.

Claim.—1. The rack-bars D D', when provided with flange d, as and for the purpose described.

2. The rack-bars D D', constructed as described, when used in connection with the catches c c, and operated by any suitable lever-device, to work both sashes, as and for the purpose described.

3. The device described, consisting of the rack-bars D D', stops c, and key B, the whole being constructed and arranged as and for the purpose described.

94,052.—Darius Wilcox, Chariton, Iowa.—*Fanning-Mill and Grain-Separator.*—August 24, 1869.

Claim.—1. The fans, Nos. 1, 2, and 3, when arranged substantially as described, for the purpose set forth.

2. The mill described, consisting essentially of the hopper a, riddles b c, grain-boards k d, and fans 1, 2, 3, when combined and arranged as and for the purpose described.

94,053.—James Wilson, Jr., New York, assignor to himself and William Quail, Williamsburgh, N. Y.—*Printers' Galley.*—August 24, 1869.

Claim.—1. The combination of an adjustable arm with an ordinary printers' galley, for the purpose set forth.

2. The arm B b^1, constructed substantially as described, and provided with a thumb-screw, b^2, in combination with the flange a', of an ordinary printers' galley, as and for the purposes set forth.

3. The gauge C, constructed substantially as herein shown and described, and provided with a thumb-screw, c', in combination with the galley A and adjustable arm B, as and for the purpose set forth.

94,054.—J. F. Wilson, Athens, Ga.—*Hoe.*—August 24, 1869.

Claim.—1. Attaching the blade of a hoe to the bar C, or its equivalent, by means of a dovetail groove in the bar, and a dovetail on the back edge of the blade, substantially in the manner described.

2. Attaching the blade to the bar or eye of a hoe by means of a groove, in such a manner that no other fastening than the friction produced by the blade (or by any device-attached thereto) shall be sufficient to hold it in place, substantially as described, whether such groove be dovetailing or not.

3. In combination with a blade thus attached, the opening D, substantially as described.

94,055.—Arthur M. Allen, New York, N. Y.—*Velocipede.*—August 24, 1869.

Claim.—1. The "foot-ratchets" and ratchet-arms, in combination with the driving-wheel of a velocipede, substantially as described.

2. The cranks d and connecting-rods c, in combination with the "foot-ratchets," and with the driving-wheel of a velocipede, substantially as set forth.

3. The bell-crank-levers g h, rods i, and springs f, in combination with the ratchet-arms E and foot-lever F, substantially as described.

4. The notched blocks a, in combination with the ratchet-arms E and ratchet-cones D, substantially as set forth.

5. The bracket k and shaft l, in combination with the pivot j, standard H, and wheel I, thereby giving to the standard H a double motion, viz, a swivel motion and a laterally-swinging motion, substantially as and for the purpose set forth.

6. Steering or balancing a velocipede by the rest n, connected to the standard of the steering-wheel, substantially in the manner described.

7. The combination of the hand-lever s with the swinging-saddle K and reach E, substantially as described.

8. The brake-shoes v, arranged to bear on the sides of the driving-wheel, instead of on its circumference, as set forth.

9. A wheel, having its tire constructed of end-grain sections w, fastened to the felly of the wheel by square-shouldered screws x, as described.

94,056.—Arthur M. Allen, New York, N. Y.—*Velocipede.*—August 24, 1869.

Claim.—1. A velocipede, having its front and hind wheels connected together by means of cross-cords or chains, through the medium of pulleys d f, of different diameters, so that the wheels will turn in the same direction, but at different angles, so as to de-

scribe different circles, for the purpose of steering, as set forth.

2. The sleeve *b*, in combination with the pivot *a* of the front-wheel-standard C, and with the pulleys *d f* and hind-wheel-standard E, substantially as shown and described.

3. The sockets *k* and *l*, in combination with the sleeve *b*, pivot *a*, pulley *d*, and standards C E of a velocipede, substantially as set forth.

4. The guide-rollers *g*, in combination with the ropes or chains *e*, reach D, and pulleys *d f*, on the front and hind-wheel-standards of a velocipede, substantially as described.

5. The angular bow H, attached to the standard of the front wheel of a velocipede, so as to turn with the latter in its various directions, as and for the purpose described.

94,057.—ARTHUR M. ALLEN, New York, N. Y.—*Velocipede.*—August 24, 1869.

Claim.—The rigid reach C, pulleys or levers G H, cross-rods or cords *b*, the removable yoke I, the adjustable braces K, standard D, and wheels E A, arranged together to form an improved velocipede, substantially as described.

94,058.—A. M. ALLEN, New York, N. Y.—*Mechanical Velocipede.*—August 24, 1869.

Claim.—In a toy-velocipede, operated as described, the two-part reach *a b*, pivot *c*, nut *d*, and spring-washer, combined and adapted for the purpose described.

94,059.—MATTHEW ANDREW, Melbourne, Australia.—*Pipe-Coupling.*—August 24, 1869.

Claim.—1. A capsule-tap, consisting of the cap or cover *b*, the adjustable tube *c*, and outer tube or socket *d*, the said tubes being provided with cork or other suitable lining or packing, and with holes or apertures arranged to be opened and closed by the adjustment of the tube *c*, which is formed and arranged to leave no part projecting beyond the cover *b*, and is secured by a thin plate or sheet of metal, *e*, all substantially as and for the purposes set forth.

2. A can or vessel for containing oil or other liquid, provided with one of the capsule-taps, substantially as set forth.

94,060.—DINSMORE AUSTIN, Sheldon, Vt.—*Foot-Warmer.*—August 24, 1869; antedated August 17, 1869.

Claim.—The box A, with glass sides and end, and door B, lantern C, plates E and D, with hot-air chamber between them, perforated roof F, with V-shaped plates *b b*, all constructed and arranged substantially as and for the purposes set forth.

94,061.—WILLIAM W. BALLARD, Elmira, N. Y.—*Machine for Sawing Paving-Blocks.*—August 24, 1869.

Claim.—The feed-table M, when made adjustable, as herein described, for the purpose of cutting blocks for street-pavements at any desired angle.

94,062.—WILLIAM W. BALLARD, Elmira, N. Y., and BUREN B. WADDELL, Memphis, Tenn.; BUREN B. WADDELL assigns his right to WILLIAM W. BALLARD.—*Wood Pavement.*—August 24, 1869.

Claim.—1. As an article of manufacture, wedge-shaped blocks, having the grain running parallel to one and oblique to the other of their beveled sides, and produced substantially in the manner referred to.

2. A wooden street-pavement, constructed, substantially as hereinbefore described, of wedge-shaped blocks, with the grain running, and produced in the manner and for the purpose set forth.

94,063.—WILLIAM W. BALLARD, Elmira, N. Y., and BUREN B. WADDELL, Memphis, Tenn.; BUREN B. WADDELL assigns all his right to WILLIAM W. BALLARD.—*Mode of Cutting Blocks for Wood Pavement.*—August 24, 1869.

Claim.—The herein-described method of cutting blocks for wooden pavement, so as to form, by two cuts, or one cut and one splitting, two finished blocks, with the top and bottom level, or in parallel planes, and the sides beveled, one side being inclined with the fiber, and without waste of material, substantially as set forth.

94,064.—JOHN BARCLAY, Attleborough, Mass.—*Manufacture of Plated-Metal Bracelets.*—August 24, 1869.

Claim.—The improved manufacture of plated-metal bracelets, as made with the turned parts or beads E E, arranged, with respect to the plates C D and their platings *p p'*, in manner substantially as represented and described.

94,065.—LORENZO BARTLETT, Cardington, Ohio.—*Combined Seeding-Machine and Cultivator.*—August 24, 1869.

Claim.—The plows B', shaft *m*, chains E', supplementary bottom G', shield M, and valve *e*, all constructed, and arranged, and combined to operate as and for the purpose substantially as described.

94,066.—ALBERT BETTELEY, Boston, Mass.—*Wood Pavement.*—August 24, 1869.

Claim.—A pavement composed of blocks, the face of each one of which is rhombic, or rhomboidal, and the four sides of which incline to the bed of the road, each being held down at two adjacent sides by its adjoining blocks, substantially as shown and described.

94,067.—A. C. BRINSER, Middletown, Pa.—*Cultivator.*—August 24, 1869.

Claim.—1. The combination of the platform F and G and seat H, substantially as shown and described.

2. The axle A A' in combination with the curved arms C and E, when constructed substantially as shown and described.

94,068.—A. W. BROWNE, Brooklyn, N. Y., assignor to himself and the New York Toy-Manufacturing Company.—*Mechanical Movement.*—August 24, 1869.

Claim.—1. The mechanical movement, constructed substantially as herein described.

2. The combination of the tubular shaft G and the axle or shaft F, when arranged to clutch together for the purpose of winding up the spring, substantially as described.

94,069.—J. R. BROWN, New Haven, Conn.—*Pipe-Coupling.*—August 24, 1869.

Claim.—The combination of the socket B with the connection D, formed as described, with the flanged cylinder A, yoke F, and set-screw I, as and for the purpose specified.

94,070.—J. H. H. BUELL, Oriskany, New York.—*Trace-Buckle.*—August 24, 1869.

Claim.—1. The wedge C, having the two flanges formed on its top, as described, and provided with the two projections *a* and *g*, substantially as shown.

2. The frame A, provided with the loops B and inclined planes *o*, in combination with the wedge C, when used to form a trace-buckle, substantially as specified.

94,071.—FRANK BURNS, Upper Gilmanton, N. H.—*Knitting-Machine.*—August 24, 1869.

Claim.—The "needle-protector" E, formed and arranged upon a knitting-machine, substantially as and for the purpose herein specified.

94,072.—NELSON BURR, Batavia, Ill.—*Grinding-Mill.*—August 24, 1869.

Claim.—The combination of the two similar grinding-disks, here shown, each provided with the long ridges *a* and *d*, and the intervening shorter ridges *b* and *c*, all constructed and arranged as herein set forth.

94,073.—W. T. BUSH, Obion County, Tenn.—*Manufacture of Soap.*—August 24, 1869.

Claim.—The combination of the said ingredients, when the same are manufactured into soap, substantially as set forth.

94,074.—JOSIAH BUZBY, Crosswicks, N. J.—*Water-Wheel.*—August 24, 1869.

Claim.—1. The turbine water-wheel, having arranged around the periphery thereof a series of pivoted vibrating chutes E and stops *c*, whereby the said chutes are rendered adjustable and yielding to the passage of any unusual substance, without breakage or injury to any of the parts, and yet without possibility of coming in contact with the buckets, all as described.

2. The said chutes, with their discharge-ends drawn to a sharp edge, and arranged in close proximity to the buckets, while the plane of the chute-face is at right angles, or nearly so, to that of the bucket-face, thus causing the current of water to impinge with all its natural force, substantially as set forth.

3. The combination, with the described chutes E, of the swinging gates F F, with packing-strips, arranged as described, so as to regulate the ingress of water, or to shut it off entirely, in the manner specified.

94,075.—William H. Carpenter, New York, N. Y.—*Basket.*—August 24, 1869.

Claim.—The combination of the arched wicker bottom B, and the flat solid bottom B′, with each other, and with the sides of the basket, constructed substantially as and for the purpose herein described.

94,076.—A. J. Chambers and Thomas Jackson, New Washington, Ohio.—*Hog-Elevator.*—August 24, 1869.

Claim.—1. The beam A, pivoted on the sills B and supported by the collar D and braces C, and having the wheel E secured to its top, in the periphery of which are placed the hooks V, substantially as set forth.

2. The arm L, provided with a pulley at each end, in combination with the pulley-block G, when used substantially as set forth.

3. Wheel E, provided with the hooks V, arm L, pulley-block G, windlass P, provided with a pawl and ratchet, braces C, collar D, ground-sills B, rope H, and hook T, when all are combined to form an elevating-machine, substantially as set forth.

94,077.—J. Burchard Chapman, Morrison, Ill.—*Corn-Planter.*—August 24, 1869.

Claim.—1. The combination of the axle B with the shaft B′, being arranged, with reference to the frame and seed-boxes, so as to operate substantially as shown and described.

2. The combination, in a seed-box, of the seed-slide E with the dropper E′, substantially as and for the purpose set forth.

3. The combination of the rock-shaft F, having the levers F^1 and F^2, with the seed-slides E, and droppers E′, substantially as shown and described.

4. The combination of the rock-shaft F and lever F^3, having a counterweight, substantially as and for the purpose set forth.

5. The combination of the shoe G with the lever F^1, of the rock-shaft F, and the chain H, or its equivalent, arranged to operate substantially as shown and described.

6. The stake I, constructed substantially as shown and described.

94,078.—James Clayton, Brooklyn, N. Y.—*Valve for Pumps.*—August 24, 1869.

Claim.—The arrangement of the cap C and spring *b*, on the stem *c* of the valve B, in combination with the seat A, substantially as shown and described.

94,079.—Charles L. Coombs, Washington, D. C.—*Composition for Gumming Postage and Revenue Stamps.*—August 24, 1869.

Claim.—1. The method or process of forming mucilage for stamps, envelopes, and similar articles, by compounding tannin and gelatine, with or without albumen, in the manner substantially as herein described.

2. As a new manufacture for coating stamps, envelopes, and similar articles, a mucilage formed by compounding gelatine and tannin, with or without albumen, substantially in the manner herein described.

3. As a new article of manufacture, stamps, envelopes, and similar articles, coated with a mucilage formed by compounding tannin and gelatine, with or without albumen, substantially as herein described.

94,080.—Charles L. Coombs, Washington, D. C.—*Composition of Matter for Various Uses in the Arts.*—August 24, 1869.

Claim.—1. The soluble compound of tannin and gelatine, herein described.

2. The compound of tannin, gelatine, and albumen, herein described.

3. The use of tannin, or the mineral tanning-agents, such as alum, the salts of iron, zinc, lead, or their equivalents, for rendering articles, when treated with my composition, insoluble, as herein described.

4. The use of carbolic acid, creosote, or their equivalents, for hardening or rendering insoluble articles treated with my compound, as herein described.

94,081.—Edwin Cowles, Cleveland, Ohio.—*Railroad-Conductors' Ticket-Box and Fare-Detector.*—August 24, 1869.

Claim.—1. A portable cellular ticket case, A A′ B, provided with an arm-ring, C, and a handle, D E, constructed substantially as described.

2. The arrangement, within a case, A, having a slotted face, A′, and a hinged or movable back, B, of a number of ticket-cells, each one of which contains a ticket-extractor, J, and a stop, *c*, substantially as described.

3. A cellular ticket-case, constructed with a slotted face, A′, and with a space, N, between the rear ends of the cells and a ribbed back, B, substantially as described.

4. The combination of a cellular ticket-case with a punch and receptacle for the punchings, substantially as described.

5. A canceling-punch, H, applied to spring-head F, in combination with a receptacle, E, and a locking-device therefor, substantially as described.

6. A canceling-punch, H, and dating-types *n*, applied to a spring-head, F, and combined with a receptacle, E, and a locking-device, substantially as described.

7. The division-slide d^3, in combination with a punching-device and a receptacle for the punchings, substantially as described.

8. An extractor, J, constructed with tines upon its front end, substantially as and for the purposes described.

9. Notching the hooked ends of the extractors, substantially as and for the purposes described.

10. The stops E, upon the bottoms of the ticket-cells, in combination with extractors having tines formed on their front ends, substantially as described.

94,082.—Philipp Cramer, Barrington, R. I.—*Clothes-Wringer.*—August 24, 1869.

Claim.—The combination, in a clothes-wringer, of the upper operating-roller A with a central elastic roller, C, with its supporting-roller D and a lower roller, B, with an elastic adjustable bearing, spring-frame or carrier, with elastic spring and thumb-screw, arranged as shown and described.

94,083.—Jay M. Crosby, Marathon, N. Y., assignor to himself, William Ballard, and Frank Livingston. — *Railway-Car-Brake.* — August 24, 1869.

Claim.—1. A car-brake, the power to which is applied by means of the false bumper W *g g f*, by the pressure thereon occasioned by stopping the engine, or other means of locomotion attached to the car, in connection with the rods or chains *p p′*, *q q′*, *r r′*, springs *h*, coils *z*, and levers *i*, *k*, *l*, *m*, *n*, and *o*, substantially as herein described, and for the purpose set forth.

2. The united arm *j* and levers *i* and *k*, in connection with the chains *s* and *t*, and post or standard *x*, and the rods, bars, levers, chains, coils, and springs mentioned in the first claim, as herein described, and for the purpose set forth.

3. The self-adjusting blocks or brake-pads *d*, in connection with the parts above mentioned and claimed as herein described, and for the purpose set forth.

94,084.—William B. Davis, Brooklyn, N. Y.—*Composition for Covering Steam-Boilers, Pipes, and other Articles.*—August 24, 1869.

Claim.—The new composition, substantially as above described, and its use as a coating or covering for metallic articles.

94,085.—A. B. Davis, Philadelphia, Pa., assignor to himself and William C. Ewing, same place.—*Duplex Wrench.*—August 24, 1869.

Claim.—A duplex wrench, consisting of the screw-shank A, its permanent serrated jaw B, the slotted serrated jaw B′, its arms *f f′*, and yoke D, inclosing the nut F and the spring *i*, the whole being arranged and operating as herein described.

94,086.—Marinus De Graff, Chicago, Ill.—*Street-Car.*—August 24, 1869.

Claim.—The combination of the rack-shaft E and wheel *g* with the pinion *d*, spur-wheels *c* and *b*, ratchet-wheel *a*, and double-acting pawl *f*, substantially as and for the purposes specified.

94,087.—Solon Dike, New York, N. Y., assignor to himself and John A. Phillips, same place.—*Combined Supporter.*—August 24, 1869.

Claim.—1. The back-piece A, shoulder-pieces B B, and straps C C, when the latter are adjusted, by one buckle, in the center of the back-piece, to form an adjustable shoulder-brace, substantially as herein set forth.

2. A body-brace, when formed of the combination of a shoulder-brace, spinal brace, abdominal brace, rupture-brace, and removable uterine brace, all constructed and connected substantially in the manner and for the purposes herein set forth.

94,088.—Charles E. Doane, Brooklyn, E. D., N. Y.—*Label-Fastener.*—August 24, 1869.

Claim.—The within-described label-fastener, consisting of the plate A, having partially cut therefrom the diagonally-pointed strips *a* and *a*, so as to leave in the center thereof the opening B, substantially as and for the purpose shown.

94,089.—Benjamin Dobson and William Slater, Bolton, England.—*Lifting Flats in Self-Stripping Carding-Engines.*—August 24, 1869.

Claim.—1. The mechanical combination and arrangement of the parts marked G, H, and I, the slides X, and the springs X^3, for lifting and drawing down the top flats.

2. In combination with the above, the wheel Y and the catch Z, or their equivalents. to prevent the cross-driving-shaft being driven in the wrong direction.

94,090.—Alfred M. Dorman, Philadelphia, Pa.—*Hames-Fastener.*—August 24, 1869.

Claim.—1. Connecting the two parts, B and C, together, by means of a hinge-joint, having its tongue *b‴*, on the part B, and its jaws *e″ c″* and slot *c‴*, on the part C, and the width of the parts B and C thereat alike, substantially as described and shown, for the purpose specified.

2. The fixed projection *b′*, across the outer or under side of B, substantially as and for the purpose described.

3. The loop or slot *a″*, on the edge of bar A, substantially as and for the purpose described.

4. In combination with the bar B, the loose ring *b″*, applied so as to operate substantially in the manner described, for the purpose specified.

94,091.—C. Duclos, New Harmony, Ind.—*Steam-Engine Governor.*—August 24, 1869.

Claim.—The vertically-slotted tube B, slide G, and rod J, in combination with the balls D D and horizontal arms C, with springs E and nuts L, when said slide is connected to the balls by means of the arms F, which are hinged to the balls and to the slide, substantially as set forth.

94,092.—John H. Elward, Palo, Ill.—*Wash-Boiler.*—August 24, 1869.

Claim.—The combination of the partition D, spreader C, and tube B, substantially as herein shown and described.

94,093.—James G. Evans, Saint Louis, Mo.—*Oil-Can.*—August 24, 1869.

Claim.—An oil-can provided with an eduction-tube, A, on the inside of the can, in connection with a recess, C, below the general surface of the bottom of the can, and an air-tube, B, for admitting air through the bottom of the can, and conducting the same to the top of the can, substantially in the manner and for the purposes set forth.

94,094.—Michel G. Fagan, Troy, N. Y.—*Coal-Shovel.*—August 24, 1869.

Claim.—As a new article of manufacture, the within-described coal-shovel, consisting of the cast neck A, sheet-metal body B, and shank C, provided with the ribs E E, all constructed and arranged substantially as and for the purpose specified.

94,095.—D. J. Farmer, Wheeling, West Va.—*Machine for Making Horseshoe-Nails.*—August 24, 1869 ; antedated August 16, 1869.

Claim.—1. In combination with the four reciprocating wedge-shaped arms, constructed to operate as described, and the dies and the head-block E, the blocks H, and adjusting-screws K, for the purpose set forth.

2. The arrangement of the several parts of the main apparatus, as above described ; that is to say, the block D, the four long arms M N, each having the shoulder *m n*, the circular disk or head E, having the central aperture F, the four dies, the springs *s s* working in a recess in the side of the dies, the blocks H, the adjusting-screws K, the crank C, and the shaft B, all constructed, connected, and operating together, in the manner herein set forth.

94,096.—Maurice Fitzgibbons, New York, N. Y.—*Bureau-Drawer.*—August 24, 1869.

Claim.—A bureau-drawer, lined with Spanish cedar, of the construction mentioned, and having a cover *v*, lid *s*, and gummed strips, as described, arranged and operating substantially as and for the purposes specified.

94,097.—Joseph P. Frizell, Keokuk, Iowa.—*Stone-Drilling Machine.*—August 24, 1869.

Claim.—1. The arrangement and combination of the friction-jaws *j j*, with the valve-rod, its valves, and operative mechanism applied to it, and the cylinder and piston, as specified.

2. The combination and arrangement of the elastic retainer *r*, and cammed bar F, with the cylinder, and the ratchet of the piston, and drill-shaft, as set forth.

3. The arrangement and combination of the bent lever, pawl *l*, the spring l^2, and the stationary gear *i*, with the crank K, its shaft *h*, and the pinion *f*, and the rack *g*, for effecting the longitudinal movement of the steam-engine within the frame of the machine.

94,098.—George W. Fry, Uxbridge, Mass.—*Interfering-Pad.*—August 24, 1869.

Claim.—1. The elastic strap, or its equivalent, for the purposes described.

2. The metal strip and hook, when used as and for the purposes described.

3. The elastic strap, in combination with the metal strip and hook, or their equivalent, when applied substantially as specified, for the purposes described.

94,099.—Eugene G. Gaillic, Eastport, Me.—*Apparatus for Furling Sails.*—August 24, 1869.

Claim.—1. The combination and arrangement of the buntlines, rollers, ring, and track, herein described, when operated to haul a sail, substantially as specified.

2. The combination and arrangement of the top-sail halyards *h*, top-sail braces *a*, buntline *j*, earing-outhauls *i*, and rings and track, as described, when operated, as specified, to reef a sail, substantially as set forth.

3. The combination and arrangement of the bunting-gasket line *k*, buntline *j*, reef-tackle *d*, top-sail braces *a*, ring *q*, with its downhaul, top-sail sheet *c*, top-sail halyards *h*, and earing-outhauls *i*, when the

same are operated to set a sail, substantially as described.

4. The combination and arrangement of the top-sail halyards *h*, top-sail sheet *e*, clew-line *c*, buntline *j*, bunting-gasket line *k*, and ring *q*, when operated to furl a sail, substantially as specified.

5. The sheaves *o* and *n*, and the ring *p*, when combined and operating substantially as and for the purposes described.

6. In combination with the sail-furling and tautening-apparatus herein specified, the clews attached to the center of the yard, that hold the sail and roller to the track, and to which the middle of the sail is bent, substantially as and for the purposes specified.

94,100.—PERRY G. GARDINER, New York, N. Y. —*Car-Spring.*—August 24, 1869.

Claim.—1. The arrangement of a casing, A, constructed with a circular channel, B, either with parallel or tapering sides or walls, in combination with a number of India-rubber columns, C, placed therein side by side, and acted upon by a suitable cover or plunger, F, or its equivalent, the whole being arranged and combined in the manner and for the purpose described.

2. In combination with the above, a spiral metal spring, G, arranged inside of the circular channel in the casing, and operating substantially in the manner and for the purpose set forth.

94,101.—PERRY G. GARDINER, New York, N. Y. —*Railway-Car Spring.*—August 24, 1869.

Claim.—The arrangement of a cork cylinder surrounded by a spiral metallic spring, constructed and combined substantially in the manner and for the purpose described.

94,102.—CHARLES L. GARFIELD, Albany, N. Y. —*Snow-Plows for Railways.*—August 24, 1869.

Claim.—1. The combination of the incline plane *a a*, the horizontal plane *b*, the guide or director *d d*, and the wheel *c c c*, for united action, substantially as described.

2. The supporting-wheels *w w*, and connecting-axle *s s*, at the front of the incline plane *a a*, in combination with such incline plane, horizontal plane *b*, director *d d*, and wheel *c c c*, for united action.

3. The front wings *e e*, in combination with the incline plane *a a*, the horizontal plane *b*, director *d d*, and wheel *c c c*, substantially as described.

4. The case *o o o o*, in combination with the turbinated wheel *c c c*, and the truck, pulley, wheels *r r*, *p p'*, substantially as described.

5. The outer casing *k e*, in combination with the incline plane, the horizontal plane, the director, and the wheel *c c c*, for united action, as described.

6. The incline plane, the horizontal plane, and turbinated wheel, in combination.

94,103.—ROBERT GILL, New York, N. Y., assignor to ELLIOTT P. GLEASON, same place.—*Gas-Burner.*—August 24, 1869.

Claim.—The combination of the slot *a* and the conducting-grooves *s s* in the burner-tip, substantially as and for the purpose herein described.

94,104.—LEVI GRISWOLD, Portland, and GEORGE CAUL, York, Wis.—*Steam-Engine.*—August 24, 1869.

Claim.—1. The combination of the induction-valves of a steam-engine with a crank placed upon the shaft thereof, when so constructed and arranged that such valves may be used to carry the crank of the working or main cylinder past or away from the dead-centers or points, substantially as shown and described.

2. The arrangement of the valves or pistons upon rod F, with reference to cranks *k* and *k'*, upon the main shaft of an engine, it being such that the pressure applied to the ends of such pistons may be used to carry the cranks of the main or working-cylinders past or away from the dead-centers, in its revolution, substantially as shown and described.

94,105.—GEORGE HALL, Morgantown, West Va.—*Hand Seed-Sower.*—August 24, 1869.

Claim.—1. The distributing rod or bar K, provided with diamond-shaped recesses *b b*, and vertical grooves *e e*, substantially as and for the purposes herein set forth.

2. In combination with the distributing-rod or bar K, having the recesses *b b* and notches *e e*, the seed-box A, having perforated bottom B, and a suitable device for operating the rod, substantially as and for the purposes herein set forth.

94,106.—RICHARD HANEY and JAMES S. ESTES, Peoria, Ill.—*Cultivator.*—August 24, 1869.

Claim.—1. The axle *l*, with flanges *t'* and *z'*, substantially as shown and described.

2. In combination with a plow-beam, the plates *e e*, with flanges, bolt *d*, box *b b*, and journals *a a*, substantially as shown and for the purposes specified.

3. In combination with an axle *l*, and flange *z'*, the box *b b*, journals *a a*, plates *e e*, and bolt *d*, as shown, and for the purposes specified.

4. In combination with an axle *l*, having flange *t'*, and cap *p*, having flange *v'* encircling and covering the tapering ends of the hub, the wheel L, as shown and described.

5. In combination with the bars M M, and adjustable connecting-rods *m' m'*, the cross-beam A, standards B B B B, pole D, with branches E E and braces *c c c' c'*, substantially as shown, and for the purposes specified.

94,107.—MICHAEL HASTINGS, Brooklyn, N. Y.—*Pipe-Wrench.*—August 24, 1869.

Claim.—The combination, with the outer jaw or claw A, pivoted to the lever-handle B, of the inner jaw or tooth C, fitted to freely slide on the shank of the outer jaw, the freely-sliding supporting-collar or stop D, and the nut E, arranged to fit a screw-thread on the forward end of the lever-handle, substantially as specified.

94,108.—GEORGE HERRICK, Waverly, N. Y.—*Musical Instrument.*—August 24, 1869.

Claim.—The musical instrument herein described, having keys *d*, studs *s*, dogs *h*, pawls *k*, drums *a*, with teeth *b*, ratchet-wheel *t*, springs *x*, *y*, and *z*, and comb *c*.

94,109.—CHRISTIAN HESSE, Champaign, Ill.—*Safety-Door for Buildings.*—August 24, 1869.

Claim.—The cam-lever C, with handle *c* and bolts *c'*, when arranged on the edge of the casing of a safety-door, of the described construction, in such manner as to conceal all but the handle, substantially as and for the purpose described.

94,110.—PHILIP HIGDON, Lewisport, Ky.—*Baling-Press.*—August 24, 1869.

Claim.—1. In the described combination with a "press-box," A B C C, elevating-mechanism *g* I J, and a suitable tripping-device, the percussion-follower F G, constructed and arranged to operate as herein represented and described, for the purpose set forth.

2. The tripping-mechanism K L *f*, operating in combination with the follower F, pinion I, and rack *g*, substantially as described.

94,111.—OTIS J. HODGE, North Adams, Mass.—*Water-Wheel.*—August 24, 1869.

Claim.—1. The wheel D, furnished with buckets *i i*, arranged substantially as and for the purpose set forth.

2. The movable frames G G, constructed and operated substantially as and for the purpose set forth.

3. The chutes H, constructed as and for the purpose specified.

4. The sliding gates N N, constructed and operating substantially as set forth.

5. The combination of the chutes H H and the sliding gates N N, substantially as set forth.

6. The combination, substantially as herein set forth, of the wheel D, movable frames G G, chutes H H, and gates N N.

94,112.—GEORGE W. HOFFMAN, Hick's Mills, Ill.—*Sewing-Machine.*—August 24, 1869.

Claim.—1. The above-described arrangement for operating the shuttle and feed-devices, consisting

substantially of the connecting-bar b^2, adjustable bell-crank b^3, and rods C and C′, in combination with the needle-arm B^3, arranged and operated as and for the purpose set forth.

2. The feeding-dog D and reciprocating-rod C′, for operating it, in combination with the adjustable arm E, for varying its movement laterally, and, consequently, the feeding-motion, substantially as set forth.

94,113.—Thomas S. Hudson, East Cambridge, Mass.—*Manufacture of Inkstands.*—August 24, 1869.

Claim.—Forming the bottom of a glass ink or mucilage-stand by first shaping into flaps its extended side or sides, and then closing in these flaps, substantially as described.

94,114.—W. W. Hughes, Philadelphia, Pa.—*Malt-Kiln and Malt-House.*—August 24, 1869.

Claim 1.—The drying-chambers D D^1 D^2, &c., arranged one above another, and having perforated floors, on a level, or thereabout, with the floors of an adjacent malt-house, substantially as herein described.

2. The partitions *d* of the said chambers, inclined upward from the hot-air-flues *n*, substantially in the manner described.

3. The dampers *i*, so arranged between the furnaces, or in the flues of the same, that they can be used to direct the heated air into any or all of the drying-chambers, as may be required.

4. The slatted valves *k*, arranged at the back of each fire-place, for the purpose of regulating the direction of currents of cold air into the same, substantially in the manner described.

94,115.—Michael T. Hynes, Boston, Mass., assignor to himself and Patrick J. Whelton, same place.—*Ventilator.*—August 24, 1869.

Claim.—The casing B, with its apertures *d*, in combination with the pipe A, extending up within it to a level with the center of said apertures, when constructed and arranged substantially in the manner and for the purpose described.

94,116.—H. M. Irwin, Charlotte, N. C.—*Construction of Houses.*—August 24, 1869.

Claim.—1. A building hexagonal in form, when its entire interior area is divided by partitions D E into hexagonal and lozenge-shaped rooms, said rooms all communicating with each other through openings *e e*, substantially as described, and for the purpose specified.

2. The chimney-stack G, arranged at the junction of the partitions D D of the hexagonal rooms B B B, when the same is provided with flues communicating with the fire-places *g g g*, substantially as described, as and for the purpose specified.

94,117.—William H. Ivens and William E. Brooke, Trenton, N. J.—*Machine for Punching and Shearing Metal.*—August 24, 1869.

Claim.—1. The combination and arrangement of the eccentric elliptic gears *n n′* and *p p′*, and their cams *q q′*, with the elbow-levers *r r′*, or their equivalents, for operating the punching or shearing-heads B B′, substantially as set forth.

2. The combination of the rotating punch-holder *v′* and adjustable disk E, of the stripper D, with the adjustable die *w*, substantially as specified.

3. The combination of the cam *d′* and retaining-lever *c′* with the stripper D, provided with suitable adjustments *a″* and *a‴*, substantially as set forth.

4. The arrangement of the driving-gears *g h k l* and operating-gears *p p′ n n′*, and their cams *q q′*, above and between the cutting and punching-heads, substantially as shown and described, for the purpose set forth.

94,118.—Daniel Johnston, Sulphur Springs, Ohio.—*Hand-Rake.*—August 24, 1869.

Claim.—The combination of the head A and teeth B B with the clamp C and socket D, all constructed and arranged substantially as shown and described.

94,119.—John P. Kirk, Brooklyn, E. D., N. Y.—*Toy-Pistol.*—August 24, 1869; antedated August 14, 1869.

Claim.—1. The toy-pistol or gun, arranged and operated as described, as a new article of manufacture.

2. The use of a close-fitting piston arranged in front of a spring, for the purpose of compressing the air in the barrel of a pistol or gun, as set forth and described.

3. The arrangement for compressing a spring by means of a cord, pulley, and lever, or their equivalents, for the purpose of compressing the air in the barrel of a pistol or gun.

4. Closing air-tight the barrel of a pistol or gun, at or near its front end, and compressing the air behind it by means of releasing a compressed or stretched spring.

94,120.—George S. Knapp, Winona, Minn.—*Photographic-Camera Stand.*—August 24, 1869.

Claim.—1. The frame C, provided with the ball *i*, bearing in the socket *j* of post G, and having the hinged segments *e* and *f*, arranged as described.

2. The detachable and adjustable frame D, provided with the picture-holder *y*, having the clamps *f′* and *a′*, arranged as described.

3. The combination of the sliding bar *p*, with its clamp *k′*; cam-lever *t*, and spring *m*, all arranged to operate in connection with the points *i*, substantially as described.

4. The combination of the cupboard A, adjustable standard B, and frame C, when arranged as set forth.

5. The bar *y*, made adjustable both vertically and laterally on the frame D, and carrying the stationary head *f′* and adjustable head *a′*, all arranged to operate as described.

94,121.—Jacob R. Manny, Chicago, Ill., assignor to himself and Allen C. Selleck, same place.—*Diaphragm for Wash-Boilers.*—August 24, 1869.

Claim.—The diaphragm or false bottom C, when provided with the water-passages D and openings E, to furnish sufficient water for the tube, and leave a thin film of water between such passages, for rapid conversion into steam, substantially as specified.

94,122.—Merrick D. Marcy, Worcester, Mass.—*Machine for Making Bolt-Heads.*—August 24, 1869.

Claim.—1. In combination with the bed A, the bolt-holder H, the upsetter G, and the series of hammers I I, K K, provided with mechanism for operating them, as explained, a mechanism for gradually raising the bed while the bolt is being headed, such mechanism consisting of the wedge B, and the rack *k*, and pinion *i′*, or the equivalent thereof, for moving such wedge underneath the bed.

2. Also, in combination with the bed A, the bolt-holder H, the upsetter G, the hammers I I, K K, and the wedge, or mechanism for raising the bed, as and for the purpose described, a mechanism for causing the sudden depression of the bed, immediately after the heading of the bolt may have taken place, such mechanism being not only a weight, *v*, connected to the bed by a line, *t*, going over a pulley, *u*, but a clutch *w*, or means of engaging and disengaging the driving-pulley *g* of the pinion-shaft *h* with such shaft, as described.

94,123.—Solomon Metzger, Newberry, Pa.—*Vegetable-Cutter.*—August 24, 1869.

Claim.—The within-described vegetable-cutter, consisting of the frame A A, B and B, the hopper C, the cutter-head D, provided with the slot *d* and double cutter E, the crank-shaft F, the pitman G, the pinion H, and gear-wheel I, all constructed and arranged to operate substantially as and for the purpose specified.

94,124.—William A. Middleton, Harrisburgh, Pa.—*Fence-Post.*—August 24, 1869.

Claim.—A metallic socket, provided with the soil or skeleton-screw *b d e*, constructed as described, and used in combination with the wooden fence-post B, substantially as and for the purposes herein set forth.

94,125.—Henry Miller, Roadside, Va.—*Garden-Implement.*—August 24, 1869.

Claim.—The combination of the stock A with the implements herein described, in the manner substantially as set forth.

94,126.—James H. Moffett, Reading, Mich.—*Wagon-Reach.*—August 24, 1869.

Claim.—An extension-reach for wagons, having arms, A, reach B, bolts *s*, and springs *v*, constructed and arranged to operate substantially as specified.

94,127.—William R. Oatley, Rochester, N.Y., assignor to himself, E. H. Scranton, and L. G. Wetmore, same place.—*Card-Holder.*—August 24, 1869.

Claim.—As a new article of manufacture, a stationery-case, or rack, constructed of wire, substantially as described.

94,128.—Jairus Osgood, Blue Hill, Me.—*Machine for Making Sod Fence.*—August 24, 1869.

Claim.—1. The combination of the cutters G G H, with the incline B, the laterally-swinging platform I, and the delivering-part K, arranged and connected so as to adapt them to cut out the sod, and deposit it at the side of the track made by the machine, substantially as and for the purposes set forth.

2. In combination with the parts I K K′, constructed and operating as above set forth, the guide-sled L, as and for the purpose specified.

3. The combination of the adjustable rollers *s l* with the guide-sled L, as and for the purpose set forth.

4. The combination of the incline B or K, with the laterally-swinging platform I, the vertically-swinging connecting-piece B′ or K′, and the joints *b a*, or *k i*, substantially as and for the purposes herein set forth.

94,129.—Nathaniel Parks, Mohawk, N. Y.—*Wash-Boiler.*—August 24, 1869.

Claim.—The bridge or curved strips D D D, in combination with the diaphragm B and boiler A, and the device for fastening, C C, F F F, and E E E, as shown and described.

94,130.—Paul Pryibil, New York, N. Y.—*Machine for Turning Ovals.*—August 24, 1869.

Claim.—1. The balance-slide F, connected to the movable face-plate D of a lathe for turning ovals, by a lever, *f*, substantially in the manner shown and described.

2. The additional weights *a*, in combination with the balance-slide F, lever *f*, and face-plate D, substantially as set forth.

94,131.—John B. Read, Tuscaloosa, Ala.—*Manufacture of Paper.*—August 24, 1869; antedated August 17, 1869.

Claim.—The applicability of the stalks of the different species of the cotton-plant, (*Gossypium*,) including the fibrous, the ligneous portion, and the pith of the entire plant, to the manufacture of paper, *papier-mache*, and its compounds, the whole to be crushed, boiled, and beaten together, and made into paper or paper-pulp, substantially as herein described.

94,132.—Thomas D. Read and Lewis M. Ellis, Aberdeen, Ind.—*Water-Meter.*—August 24, 1869.

Claim.—1. The discharge-pipe B, connected with the inlet-pipe A and main pipe C, and having a valve-seat, *a*, in each end, substantially as shown and described.

2. In combination with the discharge-pipe B, and its valve-seats *a*, *a*, the double valve-head D, with its rod or plunger E, constructed as described and for the purposes set forth.

3. The arrangement of the discharge-pipe B, valve D, plunger E, collar F, and coiled spring G, all substantially as and for the purposes herein set forth.

4. The springs H H, when provided with hooks or shoulders *b b*, and used substantially in the manner and for the purposes herein set forth.

5. The arrangement of the wheel M, with projections *e e*, crank Y, hinged bar I, and spring K, all substantially as and for the purposes herein set forth.

6. The arrangement of the elbow P, pipe N, wheel O, valve R, and suitable gearing to operate an indicator, substantially as shown and described.

94,133.—Freeman F. Reynolds, Bethany, Ga.—*Gang-Plow.*—August 24, 1869.

Claim.—The combination of the movable beams I J, with the pivoted cross-bars K L, the fixed beam A, the curved plate M, and the adjusting-bolt *m*, adapted to be set in different holes in the curved plate, when the several parts referred to are constructed to operate together substantially in the manner and for the purposes described.

94,134.—Everett P. Richardson, Lawrence, Mass.—*Boot and Shoe Sewing-Machine.*—August 24, 1869.

Claim.—1. The hook J, passing around the edge of the sole, and employed, in connection with a clamp or bearing on the outside, to gripe the sole transversely, or in the direction of its thickness.

2. In combination with means, substantially as described, for sewing, the hook J, passing around the edge of the sole, and employed, in connection with a clamp or bearing on the outside, to gripe the sole transversely, or in the direction of its thickness.

3. The combination of the foot H and the griping-devices I J, substantially as set forth.

4. The throat-plate P, adapted to assume a position regulated by the thickness of the work, and afford an unyielding support against the thrust of the needle or piercing-instrument.

5. The combination of a spring, U, and a movable throat plate, P, when the former is made to act on the latter, through the medium of an inclined or wedge-shaped connection, so as to support it at any position which it may automatically assume.

6. The detachable connecting-rod, or any substantially equivalent device, for stopping the needle while it is out of the work, when used in combination with the griping-mechanism, the continued movement of which will automatically release the work, so that the same may be removed or inserted, as set forth.

7. The adjustable connecting-rod G and set-screw *v*, constructed and arranged to operate substantially as and for the purpose set forth.

8. The last *c*, with a groove or cavity, c^1, in its edge or margin, when used in combination with the hook *J*, substantially as and for the purpose set forth.

9. The last *c*, provided with a groove, c^2, for the purpose of removing the hook J, as described.

94,135.—Sylvester H. Roper, Boston, Mass.—*Knitting-Machine.*—August 24, 1869.

Claim.—1. The combination of a system of separately-moving latch-needles with a system of separately-moving sinkers co-operating therewith, in the manner and for the purpose described.

2. The combination, with such systems of latch-needles and sinkers, of mechanism for adjusting simultaneously the depth of descent of all the sinkers.

3. An automatically-rotating and traveling wing or arm, operating to bring the needles into action for widening, substantially as set forth.

4. The means, substantially as described, for arresting the forward movement of the needles, whilst the loop is on the latch, to insure the keeping open of the hook to receive yarn for the next stitch, and then advancing them to the full extent of their forward movement.

5. The combination, with stationary stops on the frame, of the sliding carriage of the thread-carrier, the sinker-cam carriage, and the double-acting pinion and racks, or their equivalents, the whole operating substantially as shown and set forth.

6. The combination, with the main and auxiliary tension-springs 19 and 20, of a friction-pad on the former, so arranged and located that a slight strain upon the yarn shall cause the eyes of the springs to coincide in line with the straightened thread, and relieve the same from the pad.

7. The combination, with the tension-springs, of the lever 14 and its adjustable spring 16.

94,136.—D. R. SATTERLEE, New Haven, Conn.—*Machine for Making Slate-Pencils.*—August 24, 1869.

Claim.—1. A series of cutters, constructed as described, so that the largest quantity of material is first cut, and diminished at each successive cut, substantially in the manner and for the purpose set forth.

2. The adjusting-bar *a*, arranged in the cutter-holder, for the adjustment of a whole series of cutters, substantially in the manner described.

3. The combination of the holder I with the series of cutters arranged thereon, when the said holder is constructed so as to remove all the cutters from the machine without detaching them from the holder, substantially as and for the purpose specified.

4. In combination with a carriage of several holders D or D′ the dust-carrying paus L, in the manner substantially as set forth.

94,137.—NICHOLAS SEUBERT, Syracuse, N. Y.—*Alarm-Lock.*—August 24, 1869.

Claim.—1. The hollow slotted barrel I, provided with the arm *i*, in combination with the angular arm F, substantially as and for the purpose specified.

2. In combination with the above-described devices, the triangular cam E and stud D, the latter secured to, and operated with the latch B, substantially as and for the purpose specified.

94,138.—LEWIS W. SHAEFFER, Union Township, Ohio.—*Smoke-House.*—August 24, 1869.

Claim.—1. The combination and arrangement of the drawer or furnace K, the suspended fire-box *m*, and the perforated metallic plate N, substantially as described.

2. The arrangement of the ventilators H and I, and cap M, in relation to the two compartments formed by the plate N, substantially as herein set forth.

94,139.—S. SHERWOOD, Independence, Iowa.—*Water-Wheel.*—August 24, 1869.

Claim.—1. The gate F, provided with the arms H, in combination with the lever I, when used in the manner and for the purpose set forth.

2. The wheel C, in combination with the box B, gate F, lever I, and shaft D, when all are constructed and operated substantially in the manner described.

94,140.—WILLIAM H. SIBLE, Harrisburgh, Pa.—*Mortising and Tenoning Machine.*—August 24, 1869.

Claim.—The tenon and mortising machine herein described, having adjustable sliding block K, with its set-screws *v* and *z*, the adjustable guide *y*, channel *n*, gate B, chisel D, clamping-bars *h* and *i*, rod G, braces R, and treadle T, when constructed and arranged substantially as specified.

94,141.—WILLIAM H. H. SISUM, Cherry Valley, N. Y.—*Harvester.*—August 24, 1869.

Claim.—1. In combination with the endless chain M *m*, casing E, inclosing the same and allowing the cutters to protrude, the frame-work D, gear-wheels H and B′, and the hinged joint C *c*, so arranged that the chain of cutters and their connections may be turned upon the axis C *c*, and thus raised out of contact with the ground, for convenient traveling, substantially as and for the purposes herein set forth.

2. Constructing the endless chain of harvesting-cutters M *m*, with the cutters *m* mounted centrally in the thickness of the chain M, and beveled in opposite directions on the opposite cutting-edges, so that the chain may be reversed in position and both edges made available, substantially in the manner and for the purposes herein set forth.

94,142.—SIMON SLACK, Dowagiac, Mich., assignor to himself and E. G. SALISBURY.—*Horse Hay-Fork.*—August 24, 1869.

Claim.—The circular arms E E, latch *x*, spring H, and keeper L, in combination with the cross-head B, and forks A A, when constructed and arranged as set forth.

94,143.—GEORGE T. SNYDER, Wilmington, Del., assignor to himself and GEORGE W. AIREY, Baltimore, Md.—*Rotary Steam-Vessel.*—August 24, 1869.

Claim.—1. The pilot-house F, when supported upon and by means of the cross-beam L, posts K K, and central shaft E, as set forth.

2. The central hollow shaft E, in combination with the tube or smoke-stack C, as herein described.

3. The combination of the segmental car D with the central suspending-shaft E and a revolving vessel, A, as and for the purpose specified.

4. The combination of the internal gear-wheels *b′ b′* and pinions *e e*, when said pinions are suspended by the car D, as specified.

94,144.—WILLIAM SPENCER, Winslow, Ind.—*Grain-Separator.*—August 24, 1869.

Claim.—1. The frame A, having two or more boxes formed in its bottom, when said frame is made adjustable by means of the lever K and its strap, substantially as shown and described.

2. The arrangement of the adjustable frame A, having two or more boxes formed in its bottom, the revolving cylinder or drum B, hopper D, spout H, and lever K, all substantially as shown and described.

94,145.—WELCOME SPRAGUE, Farnham, N. Y.—*Combined Straw-Cutter, Corn-Sheller, and Grinding-Mill.*—August 24, 1869.

Claim.—1. The wheel C, formed with the depressed face *b* and cutters *c*, and acting as a driving-wheel, substantially as and for the purpose described.

2. The arrangement with the above of the grinder G *g*, and the sheller F *f*, the disk *f* of which forms the balance-wheel of the machine, the whole receiving motion by one action, as set forth.

94,146.—MELVIN STEPHENS, Brooklyn, N. Y., assignor to himself and NATHAN STEPHENS, same place.—*Joint for Cement Pipes.*—August 24, 1869.

Claim.—1. A ring, applied within and between the ends of cement or other pipes, to sustain the cement or other material introduced to make a joint between such pipes, substantially as set forth.

2. The rings *l* and *z*, constructed and applied in the manner and for the purpose specified.

3. The concave ring *e*, fitted so as to be opened, and provided with means for drawing the ends together and securing the same, so as to confine and consolidate the cement and hold the ends of the pipes, as set forth.

94,147.—B. K. TAYLOR, Harrisburgh, Pa.—*Tuyere.*—August 24, 1869.

Claim.—The plug D, provided with the flat or concave surfaces *d* and ribs *d′*, in combination with the plate B, when constructed and operating as herein shown and described.

94,148.—MICHAEL TROMLY, Cincinnati, Ohio, assignor to himself and W. L. HASBROUCK, same place.—*Clock-Escapement.*—August 24, 1869.

Claim.—The combination of the two jaws, constructed, pivoted, and operating as herein described, with the rods R S, or their mechanical equivalents, whereby the rods are connected to each other and to the pendulum, substantially as described.

94,149.—CHARLES TRUESDALE, Cincinnati, Ohio, assignor to himself and WILLIAM RESOR AND COMPANY, same place.—*Top Plate of Cooking-Stoves.*—August 24, 1869.

Claim.—The provision, in a divided stove-top, of the spring or yielding joint, substantially as set forth.

94,150.—JOHN J. UNSWORTH, Washington, D. C.—*Support for Elliptic Spring.*—August 24, 1869.

Claim.—The longitudinal spring C, provided with clutch *d* and *d′*, for grasping the elliptic spring A, and the metallic standard S, provided with an aperture, and rubber located therein, the whole being constructed, applied, and arranged to operate in conjunction with elliptic springs, substantially as specified.

94,151.—JOHN C. VANPELT, Cincinnati, Ohio.—*Refrigerator.*—August 24, 1869.

Claim.—1. The upper chamber E, communicating with the interior room or closet *b*, and having a thermometer, F, and double window G G′, as and for the purpose set forth.

2. The refrigerator herein represented and described, having the walls of its preserving-room *b* composed of metallic shells A B, forming a refrigerating-jacket, *a*, having funnels C for the introduction of the cooling-medium thereto, and a discharge-pipe, D, and provided with an upper chamber, E, communicating with the room or closet *b*, and inclosing a thermometer, F, as set forth, for the purposes shown.

94,152.—ELIJAH WARE, Southford, Conn.—*Injector for Steam-Generator.*—August 24, 1869.

Claim.—The combination and arrangement of the valvular regulating-cone F, formed with a longitudinal central aperture, *f*, and side openings *e*, for passage of water through, as well as around or outside of it, the outer cone E, around which steam is admitted, and the conical portion G of the shell A, substantially as specified.

94,153.—ELI G. WARNER, Union Township, Ohio.—*Harrow.*—August 24, 1869.

Claim.—The construction of a harrow, with curved teeth passing through a perforated board, B, said teeth to be raised singly, by means of a lever, C, and collectively, by means of a lifting-bar, G, which, by raising or depressing, will also regulate the depth of the teeth in the ground.

94,154.—WILLIAM WATSON, Danville, Ill.—*Scraper.*—August 24, 1869.

Claim.—The combination of the scraper A, beam B, and handles J J, platform H, on the axle G, chains I I, and small platform L, all substantially as shown and described.

94,155.—CHARLES WEBER, West Meriden, Conn.—*Whistling-Toy.*—August 24, 1869.

Claim.—The air-supply pipe A and air-discharge pipe B, in combination with a whistle and with a revolving or jumping toy, substantially as shown and described.

94,156.—JACOB WEIMER, Mount Vernon, N. Y.—*Permutation-Lock.*—August 24, 1869.

Claim.—The arrangement of the cam-tumblers F and G, the gate-tumblers H I J, and lever-catch L, all constructed and operating substantially as set forth.

94,157.—CHARLES G. WHEELER, Chicago, Ill.—*Generating Gas for Motive-Power, for Extinguishing Fires, and for other Purposes.*—August 24, 1869.

Claim.—1. The reservoir A, when provided with the chamber B, having a check-valve, D, and stop-cock G, substantially as specified.

2. The composition herein described, consisting of niter, charcoal, and bicarbonate of soda, substantially as and for the purpose specified.

94,158.—SIDNEY S. WHEELER, Danbury, Conn., assignor to EDWARD A. NICHOLS, Yonkers, N. Y.—*Hat-Pouncing Machine.*—August 24, 1869.

Claim.—1. The employment of the horizontal double-hinged and swiveled arm or frame, which carries the rotating pouncing cylinder or cone, in combination with a horizontal rotating hat-block and the pouncing cylinder or cone, substantially as described.

2. In combination with the hinged arm and pouncing-cylinder, a counterbalancing weight, or its equivalent, substantially as described.

94,159.—JOHN P. WHIPPLE, Woonsocket, R. I.—*Turning-Tool.*—August 24, 1869.

Claim.—The combination, with the stock A, of the pivoted clamp B, arranged within a slot made through the stock, and controlled by a set-screw, D, to effect its hold on or release of the cutter C, substantially as specified.

94,160.—GEORGE A. WHITCOMB, Morrison, Ill.—*Milk-Cooler.*—August 24, 1869.

Claim.—The arrangement of the detachable funnel-shaped strainer E, the jacket *d*, and circumferential flange *a*, reservoirs A C, cooler B, and pipes D F, all constructed and operating as set forth.

94,161.—WILLIAM A. WILSON, Savannah, Mo.—*Wrench.*—August 24, 1869.

Claim.—The head-block *b*, combined with the wrench herein described, substantially as and for the purpose set forth.

94,162.—ABRAHAM N. WOLF, Mill Creek Township, and JOEL HAAG, Bernville, Pa.—*Water-Wheel.*—August 24, 1869.

Claim.—1. The valves C C, in combination with gates B B, operating together, substantially as and for the purpose described.

2. The combination, substantially as set forth, of guards D D, valves C C, and gates B B.

3. The slides *h h*, in combination with valves C C, when said valves are pivoted to the gates B B, substantially as set forth.

4. In combination with valves C C, the slides *h h*, rods *g g*, and grooved wheel E, all arranged to operate substantially as described.

5. The wheel F, in combination with gates B B, guards D D, and valves C C, all combined as and for the purpose set forth.

94,163.—J. V. WOOLSEY, Sandusky, Ohio.—*Machine for Polishing Spokes.*—August 24, 1869.

Claim.—1. The combination of the cam M, which is adjusted upon the driving-arbor that revolves the spoke D′, the pivoted adjustable stay K, and frame vibrating upon rock-shaft H, and treadle B′, with the revolving endless polishing-apron E, all constructed to operate in the manner and for the purpose substantially as described.

2. The adjustable yielding center N, in combination with the pivoted stay K, constructed to operate substantially as described.

3. The adjustable central supporting-roller C, when arranged with relation to rollers B and C, endless apron E, and spoke D′, for the purpose substantially as described.

94,164.—J. V. WOOLSEY, Sandusky, Ohio.—*Spoke-Tenoning Machine.*—August 24, 1869.

Claim.—1. The combination of the cutter-heads D E, having adjustable cutter G H, and arranged upon revolving shaft B, with the cutter-heads D′ E′, having cutter G′ H′, and arranged upon a revolving shaft in the adjustable frame J, in the manner and for the purpose substantially as described.

2. The combination of the adjustable center T, adjustable inclined bearings S S, and binder A′, with the sliding frame R, for the purpose substantially as described.

94,165.—ELIAS M. WRIGHT, Castile, N. Y.; assigns one-half to GARDNER HERRICK, Albion, Mich.—*Wash-Boiler.*—August 24, 1869.

Claim.—The construction and arrangement of the middle steam-chamber A, the end-chambers with concave bottoms B B, the circulating-holes E F G, and the two covers with the outside chamber D, all substantially as and for the purpose herein specified.

94,166.—ANDRE AVERY, Worcester, Mass.—*Cloth Tentering and Drying Machine.*—August 24, 1869.

Claim.—1. The combination, with the disks L, and perforated cylinder which carries the same, of the screws O O and spiders N N, substantially as and for the purposes set forth.

2. The rotating perforated cylinder K, the adjustable disks L, and central supporting-wheel M, arranged, relatively to each other, substantially as and for the purposes set forth.

3. The relative arrangement, with frames for supporting the cloth, of the heaters, and devices for forcing the air through the cloth, substantially as set forth.

4. The adjustable feed-cylinder or device D D′, composed of the two overlapping sections, constructed with cam-shaped ends, substantially as and for the purposes set forth.

5. The combination, with the feed-cylinder or device D D′, of the slotted feed-bar C and guide-levers *a*, substantially as and for the purposes set forth.

6. The combination of the tentering or stretching

blocks *f* with the feed-cylinder D D′, constructed substantially as shown and described.

7. The combination, with the feed-rolls E, of the stop-plates G and tentering-blocks *f*, substantially as and for the purposes set forth.

8. The combination of the feed-cylinder D D′, tentering-blocks *f*, intermediate feed-roll E′, with points arranged radially, and cloth-disks L, substantially as shown and described.

9. The combination, with the feed-rolls E E′, feed-cylinder D D′, and stretcher-blocks *f*, of the guides *d d*, all constructed substantially as and for the purposes set forth.

10. A drying and tentering machine, the parts of which are all constructed and combined together for joint operation, substantially in the manner shown and described.

94,167.—Alzirus Brown, Worcester, Mass.—*Harvester.*—August 24, 1869.

Claim.—1. A connecting-rod for mowing and reaping machines, having a projection *e*, substantially as and for the purpose set forth.

2. The combination, with the connecting-rod, heel-end of the cutter-bar, and the shoe which supports the heel of the finger-beam, of a projection *e* and flange *d*, substantially as and for the purpose set forth.

3. The combination, with the connecting-rod H, cutter-bar F, flange *d*, and projection *e*, of the supporting or guard rod I, substantially as and for the purposes set forth.

94,168.—D. D. Foley, Washington, D. C.—*Vehicle for Carrying Mail.*—August 24, 1869.

Claim.—A horse-carriage, for the purpose of collecting mail-matter from street letter-boxes, consisting of entrance A, tilting doors D D, as shown and described, and projecting roof F, with receptacle B, or its equivalent device, substantially as shown and described.

94,169.—Clark Jillson, Worcester, Mass.—*Propagating-Box for Plants.*—August 24, 1869.

Claim.—1. The combination, with the plant-box, of a solar-heat-retaining box, partially filled with stones, or the equivalent thereof, substantially as and for the purposes set forth.

2. The arrangement of the perforated solar-heat-retaining box, perforated plant-box, and slatted earth-supporting frame, substantially as set forth, whereby a constant circulation of heated air is kept up, as and for the purposes described.

3. The combination, with the plant-box, constructed as described, of the double-bailed slatted earth-frame C, substantially as and for the purposes described.

4. A plant-propagating box, composed of the plant-box A, solar-heat-retaining box B, slatted earth-frame C, supporting-legs I, and water-box E, said parts being constructed and arranged in relation to each other, substantially as and for the purposes set forth.

94,170.—George Abel and John Peddler, Temperanceville, Pa.—*Ingot-Mold.*—August 31, 1869.

Claim.—A two-part ingot-mold, having a tongued and grooved joint, and exterior corrugations *c c*, substantially as described.

94,171.—Solomon A. Alexander and Edward Dunn, Sunbury, Pa. — *Rest for Locomotive Cross-Heads.*—August 31, 1869.

Claim. — 1. The rest itself, with either T or L ends, perforated for an adjustable pin, or a series of stationary pins, as shown in accompanying drawings, and described in accompanying specification, or with notches or teeth placed at intervals, to supply the place of said pin or pins on the rest.

2. In combination with the rest the adjustable bridle, for the purpose of attaching the rest to the engine, (on which the machine is to be used,) substantially as described.

3. The bar, as herein described, for the purpose of moving cross-heads, or any portion of the rest, as described.

94,172.—James H. Allen and John Schwab, Louisville, Ky.—*Combined Latch and Lock.*—August 31, 1869.

Claim.—1. The bolt C, in combination with the cross-bar B, springs E I, and a casing, having key holes J J, when constructed and arranged to serve both as a lock-bolt and as a knob-bolt, and operated substantially as herein described.

2. The cross-bar B and the steel spring E, with the catches F F and the key-holes J J, in combination with the key D, the bolt C, tumbler G, and the knob H, and the steel spring I, when arranged, constructed, operated, and used in the manner set forth.

94,173.—James W. Bagby, Northcutt's Store, Ky.—*Animal-Trap.*—August 31, 1869.

Claim.—1. The arrangement of plate A, stem B *b*, spring-coil D, catches E F, hooks G, and triggers H, substantially as set forth.

2. In combination with the described elements of the preceding clause, the set-screw I, for the purpose herein explained.

94,174. — William D. Ballard, Davisburg, Mich.—*Horse Hay-Fork.*—August 31, 1869.

Claim. — 1. In horse hay-forks the unloading-device herein described, consisting of the rotating forked bolt C, pulley D, forked guide E, provided with eye *e*, the levers H, clevis I, and trippling-line J, arranged and operating substantially as described.

2. The combination of the forks F, pivoted to each other as described, the links B, and the clevis A, when constructed, arranged, and operating as and for the purpose set forth.

94,175.—Menzo M. Benster, Detroit, Mich.—*Guide for Sewing-Machine.*—August 31, 1869.

Claim.—The parts B D, constructed as described, arranged on the presser, and adjustable to either side of the needle-hole.

94,176.—George Berkstresser, Bedford, Pa.—*Churn.*—August 31, 1869.

Claim.—The dasher A, when constructed with spiral beaters *c*, as shown and described, in combination with the opposite spirally-curved stationary beaters D and churn-body, all arranged as described.

94,177.—A. G. Bill, Cuyahoga Falls, Ohio.—*Flax-Brake.*—August 31, 1869.

Claim.—1. The rollers B C and D E, when arranged in relation to each other, and operating conjointly, in the manner as and for the purpose set forth.

2. The pivoted hangers F and springs I, in combination with the rollers B C and D E, when constructed and arranged to operate in relation to each other, substantially as and for the purpose set forth.

3. The pinions L and wheels M, in combination with the rollers B C and D E, in the manner substantially as described, and for the purpose specified.

94,178.—John Blackie, New York, N. Y.—*Printing-Telegraph.*—August 31, 1869.

Claim.—1. The segmental-formed detent S, upon the arm *a*, operating in the manner and for the purpose as set forth.

2. The stop-arm *a‴*, upon the arbor of the fly *f′*, in combination with the segmental hook or detent S, as and for the purposes set forth.

3. The combination of the segmental-formed detent S, arm *a*, detaining-stop C, and fly *f*, operating substantially as set forth.

4. The combination of the arms *a′* and *a⁗*, pivoted at the point n^1, and operating as and for the purposes described.

5. In combination with the printing-surface, the striking-apparatus, consisting of the lever St, arm A′, and hammer *b*.

6. In combination with the striking-apparatus, the cam *m*, or its equivalent, and the spring Sp⁗, operating as and for the purposes set forth.

7. The stop-arm *a″*, pivoted at *n*, so as to act in the manner and for the purposes named.

94,179.—J. Dean Bonney, Pembroke, Mass.—*Spring-Seat for Chairs, Cars, Carriages, &c.*—August 31, 1869.

Claim.—The improved spring-seat or bed-bottom

before described, consisting of the two frames A A′ united by the springs *a a*, &c., and provided with the cushion C and band D, as explained, and with the stays *d d*, &c., as accessories to the band, the whole being arranged and operating essentially in manner hereinbefore set forth.

94,180.—M. V. BRIGHAM, Mannsville, N. Y.—*Reel and Swift.*—August 31, 1869.

Claim.—The within-described device, consisting of the bed-piece A, the screw C, the standard D, provided with the journal *d*, the nut E, the standard F, the horizontal shaft G, provided with the screw *g*, the grooved wheel H, the spindle I, provided with the grooved pulley K, the arms L and L, provided with the studs M, the arm N, the worm-wheel O, provided with the stud *o* and the spring *n*, all constructed and arranged to operate substantially as and for the purpose specified.

94,181.—JACOB BUMP, Hartford, N. Y.—*Vegetable-Washer.*—August 31, 1869.

Claim.—A vegetable-washer, consisting of the rotating case A, provided with the internally-projecting pins B, said pins being of such a length, and so arranged, as to cause the contents of the case to pass between them as it is revolved, substantially as described.

94,182.—FREDERICK R. BUTLER, Rocky Hill, Conn., assignor to himself and LEONARD R. WELLES.—*Clothes-Drier.*—August 31, 1869.

Claim.—The hollow hub *a′*, clips *c c′*, rivets *b′*, with the rods *d* and cord *e*, substantially as and for the purpose described.

94,183.—JOHN B. CARTER, Hartsville, Ind.—*Button or Stud.*—August 31, 1869.

Claim.—As a new article of manufacture, the cuff or collar-button, constructed with an elongated neck N, plates F S, one or both convex or conical, head H, and projecting shoulders *i′*, in the manner and for the purposes specified.

94,184.—S. P. CASTLE, Urbana, Ohio, assignor to O. H. CASTLE, same place.—*Skate.*—August 31, 1869; antedated August 14, 1869.

Claim.—1. The constructing the body A of a skate, substantially as described, and for the purposes set forth.

2. The attaching runner B to body A, substantially as described, and for the purposes set forth.

3. Shoe-upper O, in combination with guard or border C, substantially as described, and for the purposes set forth.

4. Clasp G, substantially as described, and for the purposes set forth.

94,185.—OLIVER H. CATEY, Williamsburgh, Ind.—*Marker for Corn-Ground.*—August 31, 1869.

Claim.—The adjustable wings I^1 I^2, &c., in combination with the runners A B, &c., when the different parts are constructed and operated substantially as herein shown and described.

94,186.—DAVID COLLOM, Tallmadge, Ohio.—*Bee-Hive.*—August 31, 1869.

Claim.—In the construction of a hive, with the four hiving-boxes as described, in combination with the cap A, the cleats *s s*, for the purpose set forth.

94,187.—JOB A. DAVIS, Watertown, N. Y.—*Sewing-Machine.*—August 31, 1869.

Claim.—1. The combination, with the vertical stationary race of a rotating shuttle, of a swell or take-up, N, constructed and located on the race, substantially as shown, and operating upon the shuttle-thread as shown and described.

2. The combination, with the revolving shuttle-carrier, of the arched swell or rib H, located upon and extending diametrically across the carrier, and having a fixed central hook thereon, and operating upon the shuttle-thread, as shown and described.

3. The combination of the arched rib or swell H on the carrier with the swell N on the race, the two conjointly operating upon the shuttle-thread, substantially as set forth.

4. The combination, with the rib H and swell N, of the hook centrally located upon the shuttle-driver, and operating conjointly upon the shuttle-thread, substantially as set forth.

5. The combination, with the lever X, of the presser-bar and the top-feeding lever, arranged and operated substantially as described, so that one of the latter shall always be lifted from the cloth while the other bears upon it, substantially as shown and set forth.

6. The combination of the slotted lever T, constructed and operating substantially as described, with the needle-bar, feed-bar, and presser-bar.

7. The combination, with the groove or projection on the needle-bar, of the spring-thread clamp 10 and its pin 13, and the tension-device, attached to and moving with the needle-bar, substantially as set forth.

94,188.—EDWARD C. DEAN, HENRY HAMILTON, GEORGE P. TENNEY, and ALBERT T. PUTNAM, Detroit, Mich.—*Kilns for Drying Bricks.*—August 31, 1869.

Claim.—1. The building or oven A, provided with non-conducting floors *e* and H, flues *g*, and valve *h*, when constructed and arranged to operate as above set forth.

2. In connection with the above, the combination of the carrier, or endless belt C, the drums B, the wheels *d*, and the tracks D and E, when constructed and arranged to operate as above described.

3. In connection with said building, or oven A, constructed and provided as aforesaid, with the parts *e*, H, *g*, and *h*, the combination of the steam-pipes F and the perforated hot-air-pipe I, constructed and operating as and for the purposes aforesaid.

94,189.—FRANÇOIS DE BOWENS, Philadelphia, Pa.—*Machinery for Cutting Match-Sticks.*—August 31, 1869.

Claim.—1. The arrangement of the splint-blocks C upon the table A, in combination with the cutting-knife D, operated substantially as herein shown and described.

2. The arrangement of the knives D D′ in duplicate, one close behind the other, so that each following knife cuts out the ridge left by the preceding knife, substantially as shown, fig. 5, and described herein.

3. Depositing the match-sticks in the frames S as they leave the knives D, in the manner herein shown and described.

94,190.—ALEXANDER DIXON, Aurora, Ill., assignor to himself and JAMES JOHNSON HALL.—*Pump.*—August 31, 1869.

Claim.—The peculiar arrangement of the two cylinders A, bed-plate B, stuffing-boxes *a*, side-pipes *b*, valve-chambers C, suction-pipe D, discharge-pipe E, air-chamber F, piston-rod *c*, bearings *d*, rack *e*, segmental-cogged wheel *f*, sockets G, and hub *g*, or their equivalents, when constructed, combined, and operating, substantially as and for the purposes herein described.

94,191.—JACOB EDSON, Boston, Mass.—*Sea-Drag.*—August 31, 1869.

Claim.—A ship's drag, with four wings, in combination with the levers *l* and *n*, the hook, with its cones and apertures, combined with hinges at the lower end and bolts and staples at the upper end, as fully set forth and described.

94,192.—ISAAC N. ELWELL, Flint, Mich.—*Gas-Stove.*—August 31, 1869.

Claim.—The combination and arrangement of the parts A, B, C C′, D, E, F, G, H, I, J, K, L, *a*, *b b′*, *e*, *j j′*, and *l l′*, when constructed and operating substantially as and for the purposes herein set forth, shown, and described.

94,193.—MICHEL G. FAGAN, Troy, N. Y.—*Cooking-Stove.*—August 31, 1869.

Claim.—A diving-flue cooking-stove, having a straight top, A, with chamber H in back part, underneath said top, and above the oven, in combination with the exit-pipe G and damper M, for the purposes described and set forth.

94,194.—David J. Farmer, Wheeling, West Va.—*Machine for Making Cut Nails.*—August 31, 1869.

Claim.—1. The improved machine herein described, constructed and arranged to operate substantially in the manner and for the purposes set forth.

2. The knives or cutters K L, K′ L′, &c., arranged alternately oblique and straight, and the successive pairs thereof brought further front, as represented and described, for the purpose set forth.

3. The griping-jaws or dies N N′, &c., arranged and operating substantially as described, in combination with the cutters K *k* L, &c., and the headers P, for the purpose specified.

4. The headers P, constructed with the double faces *p p*, and so arranged and operated as to form the heads on two nails or tacks at one revolution of the machine, substantially as described.

5. The combination, with the feeding-rollers B B′ of the crank-wheel R^2, connecting-rod S, rock-shaft T T^1 T^2, rod U *u*, lever V V′, pawl *v v′* and ratchet-wheel *b b′*, all arranged to operate substantially in the manner described, for the purpose set forth.

6. In the described combination with the feeding-devices, the oscillating arm T^2, constructed with a hinge-joint, *t*, as described, for the purpose set forth.

7. The combination, with the cutters K *k* L, K′ *k′* L′, &c., and the longitudinal feeding-rollers B B′, of the gauges or stops E, and presser-bar F, arranged to operate substantially as described, for the purpose specified.

94,195.—Daniel Fisher, Fair Haven, Ohio.—*Fence-Post.*—August 31, 1869.

Claim.—The wedge-shaped metal socket, provided with the side flanges, as set forth.

94,196.—Louis A. Gignac, Troy. N. Y.—*Machine for Boarding and Graining Leather.*—August 31, 1869.

Claim.—1. The combination of the suspension-arm M, controlling-arm P, rocking-arm R, slotted-arm S, links T, and rubber-board G, with each other, and the actuating-rod N, or its equivalent, substantially as described, and for the purpose set forth.

2. The combination of the rubber-board G, the reciprocating moving rubber-table E, and the bolster-table F, substantially as described, and for the purpose set forth.

3. The arrangement of the reciprocating moving rubber-table E between the rubber-board G and the bolster-table F, substantially as shown and set forth.

4. The combination of the rails *k k* and wheels *e*, with the movable rubber-table E, the bolster-table F, the actuating-rod J, and its eccentric wheel or crank K, in manner substantially as shown and for the purpose specified.

5. The combination of the cross-pieces I I, longitudinal pieces H H, adjusting and supporting screws and nuts *g*, springs and guide-rods *h* and *f*, with the bolster-table F, wheels *c*, rails *k k*, and the moving rubber-table E, substantially as shown and for the purpose set forth.

94,197.—Louis A. Gignac, Troy, N. Y., assignor to himself and P. Pollock, same place.—*Curriers' Knife.*—August 31, 1869.

Claim.—An improved currying-knife, having at one end of its removable jaw B a tongue, F, to fit into a hook-like socket, E, at one end of the permanent jaw A, while the other end G fits into a socket, *a*, in the cross-shank I I of said jaw A, and having the cross-handle C secured thereto, by means of said cross-shank and rivets *b b*, combined with blades J J and tightening-screws *c*, in manner substantially as described, for the purposes set forth.

94,198.—Webster Gillett, Ypsilanti, Mich.—*Electro-Magnetic Alarm for Railroad-Cars.*—August 31, 1869.

Claim.—1. The transverse actuating-levers G, stem J, and spring *a*, as arranged in combination with the circuit-breakers L, in the manner substantially as and for the purpose set forth.

2. The transverse actuating-levers G, circuit-breakers L, as arranged in relation to and in combination with the battery C and signaling-apparatus O, in manner substantially as described, and for the purpose specified.

94,199.—James Godfrey, Allegheny City, Pa.—*Fence.*—August 31, 1869.

Claim.—1. Providing each panel of a fence with a post, *b*, which is triangular in form, when viewed in cross-section, and pivoting the rails *f f′* to the posts *a* and *b*, the whole being constructed, arranged, and operating substantially as herein described, and for the purpose set forth.

2. In connection with the above, the brace *h* and bolt *d*, constructed, arranged, and operating as herein described, and for the purpose set forth.

94,200.—Andrew Goodyear, Albion, Mich.—*Lathe for Turning Hubs.*—August 31, 1869.

Claim.—1. The lever-guide U, with or without a friction-roller, in connection with the fulcrum T, for steadying the hub while being turned, arranged and operating substantially as and for the purposes set forth.

2. In a hub-turning machine, of substantially the described construction, the curved, inclined, and beveled-edged knives, in combination with the guide U, and fulcrum T, as described, for the purpose set forth.

94,201.—Andrew Goodyear, Albion, Mich.—*Machine for Shaping Hubs.*—August 31, 1869.

Claim.—The machine described, consisting essentially of the wheel D, with arms E G, and knives F H, the carriage L, and mandrel M, with spur V, support Y, gearing N O, and stop Z, the whole being combined, arranged, and operated in the manner and for the purpose set forth.

94,202.—Gustaf Gustafson, Oakland, Cal.—*Shrub and Flower Box.*—August 31, 1869.

Claim.—1. A flower, shrub, or tree box, formed of the sides B, hinged upon the bottom A, and secured together at the top by bent hooks D, or other equivalent device, substantially as described.

2. In combination with the hinged sides B, the loose or false bottom E, substantially as and for the purposes set forth.

94,203.—George Hayes, New York, N. Y.—*Ventilator.*—August 31, 1869.

Claim.—The metallic flange F, the frame G, the grating J, the slide K, and the cap L, constructed and arranged substantially as shown and described, for the purposes set forth.

94,204.—Theodore William Heinemann, New York, N. Y.—*Method of Seasoning and Preserving Wood.*—August 31, 1869; antedated August 17, 1869.

Claim.—1. Generating steam by heating alcohol, or other volatile liquids, solely, or in combination with water, substantially in the manner described, and for the purpose mentioned.

2. Impregnating wood, or other porous materials, by infusing in the pores thereof impregnating-substances, by means of the pressure of steam generated from volatile liquids, solely, or in combination with water, substantially in the manner described, and for the purpose mentioned.

3. Saturating wood, or other porous materials, with impregnating-substances, by means of steam-pressure attained at a temperature lower than 290° Fahrenheit.

94,205.—Robert Heneage and Albert Storer, Buffalo, N. Y.—*Machine for Rounding the Corners of Slate-Frames.*—August 31, 1869.

Claim.—The slotted bars C D, with their pivots *b c f*, table B, hand-lever F, and connecting-arm G, when the parts are constructed, arranged, and operated substantially as described, and for the purpose specified.

94,206.—Peter Henry Hink and Herrmann Kaack, Moline, Ill.—*Mangle.*—August 31, 1869.

Claim.—The combination of the standards A B with the stationary roller C, and the adjustable rollers D and E, weight G, hinged table K, and hinged

leg *a*, all constructed and arranged to operate as herein shown and described.

94,207.—C. Hogeboom, M. Hogeboom, and L. Van Vleck, Winslow, Ill.—*Spring-Bed Bottom.*—August 31, 1869.

Claim.—1. The flnked bolt A, when used for the purpose of fastening bed-springs as described herein.

2. The double right-handed and double left-handed springs, when combined and arranged as herein set forth.

3. The slotted bar H, in combination with the spring-bed bottom herein described.

94,208.—C. Hopkins, Philadelphia, Pa.—*Apparatus for Rejeweling Watches.*—August 31, 1869; antedated August 19, 1869.

Claim.—1. The combination of the adjustable spring center and the centering-needle I, with the reaming and cutting-pieces M, all constructed, arranged, and operated together, substantially in the manner described.

2. The burnisher herein described, constructed with two prongs beveled inward at their ends, substantially as specified.

3. The improved rejeweling-apparatus herein described, its constituent parts operating together as set forth.

94,209.—George M. Hopkins and John A. Straight, Albion, N. Y.—*Water-Indicator.*—August 31, 1869; antedated August 17, 1869.

Claim.—1. The combination and arrangement of pipe D, valve G, fusible plug L, rod F, stop-cock C, and pipe B, substantially as above set forth.

2. The combination and arrangement of the fusible-metal nut L, valve G, and lead packing H, as shown and described.

3. The gauge-cock P, in combination with the above devices, as set forth.

4. The combination and arrangement of the wrench Q, stop-cock C, and accompanying devices, as shown and described.

94,210.—B. B. Hotchkiss, New York, N. Y.—*Metallic Cartridge.*—August 31, 1869.

Claim.—The internally re-enforced reeapping-cartridge herein described, drawn or struck from sheet-metal, with the solid rim B^1, the rounded corner B^5, the hole e', in the center of the back, and the cavity *e*, for the fulminate, all combined and arranged as and for the purposes herein set forth.

94,211.—George R. Houghton, Flint, Mich.—*Apparatus for Fluting and Quilling.*—August 31, 1869.

Claim.—The combination of the table or bed A, slide B, screws *a*, bridges C, rods *h*, thumb-nut and screws *c*, and blocks D, when arranged and operating substantially as and for the purpose described.

94,212.—Edmund Howard, Flushing, and W. H. Jackson, Brooklyn, N. Y.—*Sewing-Machine for Working Button-Holes.*—August 31, 1869.

Claim.—1. The lever C, arranged to carry the shuttle-thread and draw the loops of the needle-thread to the edge of the cloth, and lock them there, substantially as described.

2. The vibrating hook F, in combination with the elbow-levers D and E, constructed and arranged to operate as described, whereby the hook is made to carry the shuttle-thread up over the edge of the fabric to engage with the needle-thread, and then move out of the way of the needle, as set forth.

3. In combination with the lever C and the hook F, with its operating-levers, the plate A, provided with its cams *a*, *b*, *b'*, and *k*, for operating the levers C, D, and E, with hook F, substantially as herein described.

4. The pivoted wedge-shaped piece T, in combination with the rocking-arm I, for varying the extent of the feed-motion, substantially as herein described.

94,213.—Jarvis Howe, Milford, Mass.—*Crimping-Brake.*—August 31, 1869; antedated August 21, 1869.

Claim.—1. The outer jaw, constructed and operating substantially as and for the purpose specified.

2. The outer jaws, when connected together by a screw-bolt, substantially as and for the purpose specified.

3. The piece K, constructed and operating substantially as and for the purpose specified.

4. The combination of the outer and inner jaws, by means of suitable mechanism, substantially such as is herein described.

5. The combination of the slides D D', piece K, nut L', and inclines *a a'*, and *c c'*, substantially as described.

94,214.—Otto Jacobi, Philadelphia, Pa.—*Manufacture of Carbonate of Lead, Acetate of Copper, and Acetate of Iron.*—August 31, 1869.

Claim.—1. The apparatus for making carbonate of lead, acetate of copper, and acetate of oxide of iron, consisting of tub A, provided with two false perforated bottoms B and D, air-pipe *h*, T-shaped distributing-pipe C, air-holes *o o o o o o* and *n n n n*, and layers of charcoal, *e f g*, or their equivalents, all arranged and operating as specified.

2. The process of making carbonate of lead, acetate of copper, and acetate of oxide of iron by means of said apparatus, substantially as described.

3. The use of a solution of carbonate of soda or potash, inside and outside of said apparatus, for the purpose of completing the conversion of the acetate of lead into carbonate of lead.

4. The mode of producing vapors of acetic acid and bringing them in contact with metallic lead, copper, or iron, substantially and for the purpose as set forth.

94,215.—S. H. Jennings, Deep River, Conn.—*Velocipede.*—August 31, 1869.

Claim.—1. The devices herein described for guiding the vehicle, when arranged and operated as set forth, consisting of the clevis N, with its handle Q, the clevis R, with its slotted arm T, and the foot-guide V, attached to the elbow-arm S.

2. The foot-lever E, with the foot-rests G pivoted thereto, in combination with the connecting-rod D, and crank C, when arranged and operated substantially as described.

3. The arrangement of the hand-levers K, connecting-rods M, foot-levers E, connecting-rod D, and crank C, when operated as herein substantially described.

4. The balance-wheels W, with their axle X, combined and arranged with the axle A, connected together by gearing, substantially as herein described.

94,216.—John Jones, Chesnut House, Stratford, and Samuel Parker Bidder, Jr., Hillfield, Mitcham, England.—*Coal-Breaking Machine.*—August 31, 1869; patented in England, November 17, 1868.

Claim.—1. The construction and employment of apparatus for breaking down coal, slate, stone, and other minerals, wherein two or more wedges are caused to be driven consecutively, by hydraulic or screw power, between the surfaces of the material to be broken down, in such manner that the pressure exerted at one and the same point can thereby be increased at will, substantially as hereinbefore set forth.

2. Constructing apparatus for breaking down coal, slate, stone, and other minerals, consisting of two tension-bars A, detachable from the hydraulic press D, and acting in combination with the pressing-blocks F and wedge or wedges G, with or without the clearance-box E, substantially as and for the purposes set forth.

94,217.—John A. Kaussler and Horace B. Cook, White Pigeon, Mich.—*Stump-Extractor.*—August 31, 1869.

Claim.—1. The clamp L, when constructed and operating substantially as and for the purposes described.

2. The rock-shaft E, cams *e*, compound lever F, and pins *f*, or their equivalents, in connection with the frame A, standards C, and wheels D, when arranged and operating substantially as and for the purposes herein specified.

3. The arrangement of the parts A, B, C, D, E, F,

G, H, I, J, K, L, *a*, *b*, *c*, *d*, *e*, *f*, *g*, *h*, *i*, *j*, *k*, *l*, *m*, *n*, and *o*, or their known equivalents, when combined, constructed, and operating substantially as and for the purposes herein set forth and shown.

94,218.—JOHN KENNEDY, Claverack, N. Y.—*Stopping-Mechanism for Knitting-Machine.*—August 31, 1869.

Claim.—The combination of the slotted tripping-lever F, spring C, beveled gear-wheels D D′, ratchet B, drop-hook *b*, spring *c*, spur *a*, and forked lever *g*, when all are constructed and arranged and operated as, or substantially as and for the purpose herein described.

94,219.—JOSHUA KIDD, New York, N. Y.—*Apparatus and Process for Obtaining Light from Gas and Oil.*—August 31, 1869.

Claim.—Uniting the flames from a kerosene or other oil or spirit lamp with a gas flame, substantially as described and set forth.

94,220.—CAMILLE KREJCI, Scranton, Pa.—*Printers' Ink.*—August 31, 1869.

Claim.—1. An ink for printing purposes, produced by combining coal-tar with wood charcoal and nitric acid, or their equivalents, in the manner substantially as herein described, as a new article of manufacture.

2. Combining coal-tar with wood charcoal and nitric acid, or their equivalents, as herein described, and for the purpose set forth.

94,221.—DANIEL LEIBERT, Washington, D. C.—*Lotion for the Destruction of Insects.*—August 31, 1869.

Claim.—The compound, composed of the ingredients, and in the quantities herein specified, for the destruction of vermin upon trees, vines, shrubs, &c.

94,222.—JOHN C. LEISTNER, Cincinnati, Ohio.—*Alarm-Attachment for Stills.*—August 31, 1869.

Claim.—The provision of the alarm-whistle J to the tail-pipe of a still-worm, for the purposes designated.

94,223.—MOSES W. LESTER, Chicago, Ill.—*Base-Burning Stove.*—August 31, 1869.

Claim.—1. The inclined air-pipes L and tubes M in connection with the annular plate D, arranged and operating substantially as and for the purposes herein set forth.

2. The annular plate D, provided with flange *d* and studs *d′*, arranged and operating substantially as described.

3. In anthracite-furnaces, the combustion-ring E, provided with wings *e*, in combination with the annular plate D, when arranged and operating for the purpose set forth.

94,224.—MOSES W. LESTER, Chicago, Ill.—*Hot-Air Furnace.*—August 31, 1869.

Claim.—1. In air-heating furnaces, the combination of the combustion-chamber O with the annular air-chambers M and N, the pipes P, and the tubes Q, when constructed, arranged, and operating as and for the purpose set forth.

2. The gas-ring D, provided with studs *d* and wings *d′*, and the combustion-ring E, arranged and operating substantially as and for the purposes herein set forth.

3. The rock-shaft T, provided with arm *c* and the grate S, when pivoted to said arm and supported by the bolt *g*, the whole arranged and operating substantially in the manner and for the purposes herein specified and shown.

94,225.—WILLIAM W. LEWIS, Cincinnati, Ohio.—*Machine for Making Horseshoes.*—August 31, 1869.

Claim.—1. In combination with a fixed former, two revolving bending-arms, adjustable as to the extent of their projection from their axis of revolution, arranged to operate conjointly on the heated blank, in the manner substantially as described.

2. The combination of the adjustable revolving arms with the movable former and blank-holder, and with the stationary former, substantially as described.

3. The reciprocating device K, constructed substantially as described, and operating, in relation to the blank, in the threefold capacity of supporter, carrier, and former, in combination with the stationary former.

4. The combination, substantially as described, of the sliding yoke L, vibrating arm O, formers K and X, and the blank-holder.

5. The lever E, with the gauges or supporters A, on one end, and the cams I on the other, or the equivalent thereof, in combination with revolving rollers F, or their equivalent, for operation in conjunction with the cams, substantially in the manner and for the purpose described.

6. The combination of the cam N, arm O, and reciprocating device K, substantially as described.

94,226.—HERMAN W. LÜDERS, Philadelphia, Pa.—*Steam-Generator.*—August 31, 1869.

Claim.—1. The inclined generating-tubes B, the vertical pillar-tubes H, the transverse tubes *m* and *n*, and the drums K K and L, combined and arranged substantially as herein shown and described.

2. The arrangement of the steam-generating tubes, whereby any one may be removed, exchanged for another, turned over, or changed end for end, substantially as described.

3. In combination with a tubular boiler, the end-tubes *m*, with inclined upper surfaces, and the sectional end-tubes *n*, connected by ball-and-socket joints, substantially as described.

94,227.—HARRIET S. MALTBY, Cincinnati, Ohio.—*Pastry-Roller.*—August 31, 1869.

Claim.—The combination of the reversible apron A with the guide G, the rollers R, the frame F, and the jaw J, all arranged as and for the purpose specified.

94,228.—GEORGE E. MARSHALL, Laurel, Ind.—*Process of Preparing Wood-Fiber for Paper-Stock.*—August 31, 1869.

Claim.—The herein-described process of treating wood for preparing paper-stock; that is to say, first subjecting it to the action of steam, in a closed vessel, then rinsing it with water to remove the dissolved gum and acids, and then cooking it in an alkaline solution, all without removing it from the boiler, substantially as herein set forth.

94,229.—JOHN H. MARTIN, Columbus, Ohio.—*Trace-Buckle.*—August 31, 1869.

Claim.—A slide, E, applied to the buckle-frame D, and constructed with a tongue, *g*, in combination with a cross-bar, J, substantially as described.

94,230.—J. T. MCDIVIT, Fayetteville, Ohio.—*Hames-Fastener.*—August 31, 1869.

Claim.—The threaded hook B″ and screw-nut C″, in combination with a chain D″ attached to the ends of hames, substantially as shown and described, and for the purposes set forth.

94,231.—JOSEPH D. MOON and JOHN T. FOSTER, Jersey City, N. J.—*Steam-Engine Valve.*—August 31, 1869.

Claim.—The packing *d*, or its equivalent, in combination with the hinge-joint, constructed and operating substantially as herein set forth.

94,232.—HENRY D. MORRIS, Baldwinsville, N. Y.—*Machinery for Making Axes.*—August 31, 1869.

Claim.—1. Jointly, the method of and mechanism for forging and shaping axes, substantially as herein described.

2. The arrangement, in one machine, of the several sets of dies and the shearing-device hereinbefore described.

3. The construction and arrangement of the dies B B and C C, substantially as described.

94,233.—MARY ANN S. MULLIN, Osgood, Ind.—*Rack for Sugar, Cream, Salt, &c.*—August 31, 1869.

Claim.—The semicircular rack A, provided with receptacles *d d d*, and ring C, in which is attached the alarm-bell D, all constructed to operate substantially as specified.

94,234.—George L. Newhall and John F. Cummings, Chelmsford, Mass.—*Flying-Horse Machine.*—August 31, 1869.

Claim.—The combination and arrangement of the spindle *a*, the shell-shaft *d*, the annular-grooved shell, and balls *c*, the drivers *m* and *n*, and crank-shafts *p*, the arms *f*, braces *h*, truss-rods *g*, suspension-rods C, and the horses, all arranged and operating in the manner and for the purpose specified.

94,235.—Charles Nida, Greenville, N. J.—*Liquid-Meter.*—August 31, 1869.

Claim.—1. The perforated cylinders surrounding the chambers G G′, and the expanding chambers G G′, provided with hoops *e* and elastic bands *f*, all arranged substantially as and for the purpose specified.

2. The combination and arrangement of the chambers G G′, beam J, arm M, with plates *p p*, shaft K, four-armed lever *j k l l*, with slot *n*, and friction-rollers *s s*, on shaft L, springs *o o*, all inclosed in a casing, A, and the valve E, in chamber D, communicating with the chambers G G′, and provided with induction and eduction pipes, all constructed to operate substantially as described.

94,236.—Thomas G. Otterson, Camden, N. J.—*Preserve-Jar.*—August 31, 1869.

Claim.—1. The cover C, having a recess, *r*, in its outer lower edge, for the purpose specified, and a shoulder, *n*, for contact with rubber gasket, as herein set forth.

2. A spring, (for securing and holding the covers of fruit-jars,) constructed as shown in Fig. 3, and arranged to operate substantially as described.

94,237.—William H. Pierce, Bangor, Me.—*Mincing-Machine.*—August 31, 1869.

Claim.—1. Combining with the dish B, an oval rotary cutter, C, substantially in manner as and for the purposes specified.

2. The combination of the revolving dish B, oval cutter C, adjustable bracket *h*, adjustable spring *e*, or its equivalent, and platform A, substantially as and for the purposes specified.

94,238.—Salmon M. Prentice, Aurora, Ill.—*Fence.*—August 31, 1869.

Claim.—1. The panels B A, when supported and secured to the earth by the braces *u l* and the wedge *y*, or their equivalents, and connected, by the middle rail *x* and the wire staples, with hooked ends *j*, linked or connected with the hooked ends *s* of the wires *f*, constructed and arranged as herein shown and described.

2. The mode of connecting fence-panels by wire staples with hooked ends *j*, crossed and linked or connected with the wires *f* at their hooked ends *s*, as herein substantially specified.

3. The braces *u l* with hooked ends *t*, used in connection with the wedge *y*, or their equivalents, when used as a means of supporting and securing fences to the earth, as herein substantially specified.

94,239.—John Rich, Painesville, Ohio.—*Lathe-Chuck.*—August 31, 1869.

Claim.—1. Constructing a lathe-chuck, with the collar A, the shaft E′, with its convex center E, the screw-plug C, with concave center F, the shaft E′ secured in the tube or collar A by shellac cement, for the purpose as described.

2. The combination of the tube or collar A, shaft E′, screw-plug C, head B, and vise-jaws D, the whole combined as described.

94,240.—Horace T. Robbins, Boston, Mass., assignor to Ellis, Knapp & Co., New York City.—*Umbrella.*—August 31, 1869.

Claim.—1. The additional locking-spring *g*, in combination with the runner *a*, chamber *b*, sliding tube *c*, and key *o*, substantially in the manner and for the purpose specified.

2. The knob *h*, in combination with the locking-spring *g*, the runner *a*, chamber *b*, sliding tube *c*, and key *o*, substantially as and for the purpose specified.

94,241.—Andrews Robes, Somerville, and John C. Chapman, Cambridgeport, Mass.—*Pipe-Wrench and Pipe-Cutter.*—August 31, 1869.

Claim.—1. The tool *k*, within the hollow screw *d* and block *b*, rendered adjustable, with reference to said screw and block, by means of the sleeve-nut *g*, nut *n*, and plug *l*, substantially as shown and set forth.

2. The within-described combined wrench and pipe-cutter, consisting of the frame A, adjustable jaw or block *b*, hollow screw *d*, handle *h*, jamb-nut *m*, rod and cutter *c*, sleeve-nut *g*, nut *n*, and plug *l*, all constructed and arranged substantially as specified.

94,242.—William D. Robinson, Buffalo, N. Y.—*Ships' Fenders.*—August 31, 1869.

Claim.—The fender within described, consisting of side pieces A A′ and end blocks *a a′*, with the longitudinal space *b* between the sides, the whole arranged and operating as herein set forth.

94,243.—Otis E. Sanford, La Porte, Ind.—*Extension-Table Slide.*—August 31, 1869.

Claim.—The extension sections A A A, the metallic main slides B B, stop-slides C C, secured by and playing in the double-grooved dovetails *b b b b*, operating in the manner and for the purpose herein shown and described, substantially as set forth.

94,244.—John Georg Schwarz, Indianapolis, Ind., assignor to himself and John George Brand.—*Grout-Cutter.*—August 31, 1869.

Claim.—1. The sliding gate E F G H, when constructed with the knives I I and the nuts K K, substantially as set forth.

2. The combination and arrangement of gearing P, shaft O, crank M, cross-head *m′*, slide L, and knife-gate E F G H, substantially as described.

3. The whole device, considered as a whole, when constructed and operated substantially as set forth.

94,245.—W. T. Sears and William Edson, Boston, Mass., assignor to W. T. Sears.—*Ventilator.*—August 31, 1869.

Claim.—The air-box A B, in combination with the window W and the heating-surface D D′ D″, substantially as described, and for the purpose set forth.

94,246.—Charles A. Seely, New York, N. Y.—*Process for Extracting Oils, &c.*—August 31, 1869.

Claim.—1. The process of extracting oils, fats, and resins, herein described.

2. The use of volatile hydrocarbon solvents, in the manner and for the purpose as described.

94,247.—Robert H. Seymour, New York, N. Y., assignor to Henry Seymour and Company, same place.—*Shear.*—August 31, 1869.

Claim.—The shears consisting of the blade A, with pintle *a*, cast with or forming part thereof, and the blade B, all constructed as herein described.

94,248.—Henry E. Shaffer, Rochester, N. Y.—*Fruit-Jar.*—August 31, 1869.

Claim.—The combination of the spring-bar E and guide-pins *d d*, with the clamp C and screw D, the whole arranged substantially as described, and operating in the manner and for the purpose specified.

94,249.—Adam W. Shidler, South Bend, Ind.—*Evaporator.*—August 31, 1869.

Claim.—1. The cellular trough D, tubes E, provided with the plugs F and cock G, substantially as described, and operating for the purpose specified.

2. In combination with the above, the tank C, pan B, and arch A, when constructed, arranged, and operating substantially as and for the purposes herein set forth.

94,250.—Daniel Smallwood, Middletown, Ohio.—*Washing-Machine.*—August 31, 1869.

Claim.—The gate H, pivoted to swing with the corrugated roller I, in combination with heaters G and other devices in a washing-machine, as constructed and shown.

94,251.—James S. Smith and John Codd,

Swanton, Ohio. — *Harvester-Cutter.* — August 31, 1869.

Claim.—1. The metallic shoe C, with the uprights or guides, extended arms *c*, and the anti-friction balls or roller-bearings 6, when constructed and operating substantially as herein described.

2. The combination and arrangement of the double cutters or knives A, finger-bar B, metallic shoes C, with uprights or guides, extended arms *c*, and the anti-friction ball or roller-bearings 6, when constructed and operating substantially as herein set forth.

94,252.—JOHN P. SMUCKER, Ashland, assignor to himself and RUSSEL S. OWEN, Bryan, Ohio.—*Husk Mat.*—August 31, 1869.

Claim.—As a new article of manufacture, husk mats, constructed, substantially as herein described, with a metallic or wooden base, A, as set forth.

94,253.—JOHN BLAKE TARR, Fairhaven, Mass.—*Press for Casting Metal.*—August 31, 1869; antedated August 25, 1869.

Claim.—1. The follower A, attached to a screw, G, which works through a pivoted nut, H, in combination with a mold, substantially as and for the purpose described.

2. The combination, in a press, of a follower A, and its screw G, and guide-rods J J, with a laterally-adjustable nut H, substantially as described.

94,254.—HUGH THOMAS, New York, N. Y.—*Lubricator for Ventilator.*—August 31, 1869; antedated August 18, 1869.

Claim.—The cups *c c'*, and *b*, in combination with the hollow spindle *a*, arranged for lubricating the upper and lower bearings of said spindle, substantially as shown and described.

94,255.—CHARLES R. TOMPKINS, Rochester, N. Y.—*Hanging Circular Saws.*—August 31, 1869.

Claim.—1. The shaft *c*, when secured at either end to square blocks *p*, for the purpose of preventing it from turning, while at the same time admitting of the adjustment of said shaft in the manner and for the purpose before described.

2. The swinging-frame *i*, the fixed shaft *c*, the loose pulleys *f g h*, and the square-flanged locking-blocks *p*, of a cut-off saw, constructed, arranged, and operating in the manner and for the purpose before described.

94,256.—FREDERICK TOWNSEND, Albany, N. Y.—*Stone-Channeling Machine.*—August 31, 1869

Claim.—1. One or more chisels, applied to a rotary shaft, and operated upon by springs, or other blow-giving power, substantially as described.

2. One or more cams, or the equivalents thereof, adapted for retracting chisels which are applied to a rotary shaft, and which are acted upon by springs, substantially as described.

3. Providing for adjustment one or more chisel-retracting cams, so as to cause rotating chisels to strike at different angles of inclination, substantially as described.

4. Radially-reciprocating chisels, which are acted upon by springs, and which are applied to a wheel, composed of circular plates and guides, substantially as described.

94,257.—ISAAC H. TRABUE, Livingston County, Ky.—*Press.*—August 31, 1869.

Claim.—The combination and arrangement, in the press herein shown, of the fixed pulleys G, rope K, movable pulleys I, plunger H, and rope L, substantially as shown and described.

94,258.—W. A. VAN BRUNT, Horicon, Wis.—*Seeding-Machine.*—August 31, 1869.

Claim.—1. The plate H, with lug *h* and set-screw *h'*, when used in combination with drag-bar and tooth, as described.

2. The boxes M M, when constructed of the two parts *m m'*, inclosing between them the disk, as described, each of said parts *m m'* being cast in a single piece, substantially as set forth.

94,259.—HENRY VAN DE WATER, Attica, N. Y.—*Water-Wheel.*—August 31, 1869.

Claim.—1. The relative arrangement of the rectangular valve-gates G, stepped upon the valve-seat W, revolving upon a central pivot, *h*, and operated by the gate-rods L, with the guide-plates R and stay-plates K, substantially as described.

2. A water-wheel of that class known as the Jouval turbine, formed by the combination and arrangement of the valve-gates G, the valve-seat W, the gate-rods L, the guide-plates R, the stay-plates K, and the buckets B, substantially as described.

94,260.—CHARLES WARD, Detroit, Mich.—*Device for Filling Steam-Generators.*—August 31, 1869.

Claim.—The arrangement of the pipe C, the check-valve D, and cock B, with the boiler A, substantially as described.

94,261.—WALTER WARD, Mount Holly, N. J.—*Wrench.*—August 31, 1869.

Claim.—The handle A, with its tooth *b*, engaging in the ratchet on bar D, of jaw C, and operating substantially as described.

94,262.—THOMAS WESTERMAN, Clinton Township, Pa.—*Fence.*—August 31, 1869.

Claim.—Providing the rails 1 with notches 3, one notch being in the upper edge and the other notch in the lower edge of the rails, and used, in combination with the braces C and D, for bracing the panels A and B, as herein described.

94,263.—AMOS P. WILLARD, Battle Creek, Mich.—*Means for Putting Up and Using Powders.*—August 31, 1869.

Claim.—As a new article of manufacture the cup A and handle B, when both are worked from one piece of timber, and provided with the muslin cover C to the cup, substantially as and for the purposes set forth.

94,264.—HENDERSON WILLARD, Grand Rapids, Mich., assignor to himself and JOSEPH WALKER, same place.—*Mode of Removing Stumps.*—August 31, 1869.

Claim.—The holes A and B made in a stump, substantially as herein described, and for the purposes fully set forth.

94,265.—CHAUNCEY D. WOODRUFF, Toledo, Ohio, assignor to himself and WILLIAM KRAUSS, same place.—*Grain-Bin.*—August 31, 1869.

Claim.—The grain-bin A, in combination with the tubes B within said bin, and extending from the bottom thereof, when constructed, arranged, and operating as and for the purpose aforesaid.

94,266.—DANIEL WRIGHT, Jr., Waltham, Mass.—*Clamp-Screw for Calipers, &c.*—August 31, 1869.

Claim.—1. A handle or nut, made in two parts, connected with a spring, and tapped for the reception of a screw, for the purpose set forth.

2. The conical end D'' of the divided nut D, in combination with the hollow conical washer E, or the conically-shaped recess in the part operated upon, substantially as shown and described.

94,267.—T. H. ANDRESS, Sparta, N. J., assignor to himself and JOHN DECKER, same place.—*Thill-Coupling.*—August 31, 1869.

Claim.—The combination of the slotted plate D, flanged at one end, with the coupling C, bar B, and axle A, substantially as herein shown and described, and for the purpose set forth.

94,268.—DANIEL APPLEGATE, Noblesville, Ind.—*Clod-Fender.*—August 31, 1869.

Claim.—The arrangement, upon the side of a plow or cultivator beam, A, of the slotted plate B and curved rods C C, all constructed substantially as specified.

94,269.—WILLIAM AURICH, Chicago, Ill.—*Vapor-Burner.*—August 31, 1869.

Claim.—As a new article of manufacture, a vapor-burner, consisting of the solidly-capped tube A, pro-

vided with holes *g* and apertures *a*, the swinging doors *f*, rigidly connected by the rod *h* and the plug C, all constructed and arranged for operating, as herein shown and described.

94,270.—SAMUEL AYRES, Danville, Ky.—*Fastening for Breastpins.*—August 31, 1869.

Claim.—1. The combination of the pivoted lever *b* and spring *d* and hook B *a*, the said parts being each constructed and arranged, with reference to one another, as shown and described.

2. The combination of the said lever, spring, and hook with the stay *f* and eye *e*, on the breastpin, as and for the purpose specified.

94,271.—SAMUEL AYRES, Danville, Ky.—*Rain-Water Strainer and Cut-Off.*—August 31, 1869.

Claim.—1. The combination of the movable trough B, bail *d*, and pipe A, as and for the purpose specified.

2. The construction and arrangement, with reference to each other, of the bail *d*, pipe A, and flange *f*, for the purpose set forth.

94,272.—CALVIN BAKER, St. Joseph, Mo.—*Bridge.*—August 31, 1869.

Claim.—In combination with the inclined thrusting-beams *a a*, connected at a point, *f*, above the floor, and extending below the floor, the sockets S S, resting on suitable bearings directly against the banks of the stream, and employed to receive and support the lower ends of the beams, substantially as described.

94,273.—JOSEPH BANIGAN, Woonsocket, R. I., assignor to the WOONSOCKET RUBBER COMPANY.—*Apparatus for Pressing and Vulcanizing India Rubber.*—August 31, 1869.

Claim.—1. Using two or more molds or plates in a steam-tight heater, operated from the outside thereof, substantially as described.

2. The combination of the yokes C C′, bolts D D, and screwed spindle E, for the purpose of relieving the heater from pressure, as set forth.

3. The swinging crane F, and swivel *f′*, and roller on the top of crane, for facilitating the securing and removal of the door, as and for the purpose set forth.

4. The combination of the collars e^1 and e^2, clip *e*, and lever E^2, arranged and operating as and for the purposes set forth.

94,274.—TRACY BEADLE and WILLIAM P. YATES, Elmira, N. Y.—*Permutation-Padlock.*—August 31, 1869.

Claim.—1. The combination of the revolving notched disks I with the swinging plate F, carrying spring-latch C, when arranged to operate together, and respectively constructed, substantially as described.

2. The spring-lever T, in combination with the notched disks I, graduated disk M, and notched lug V, to change the combination, substantially as herein shown and described.

3. The numbered ring X, attached to the lock in the manner described, for the purpose of numbering the same, as herein set forth and shown.

94,275.—JACOB I. BEAR, Decatur, Ill.—*Spring-Wagon Seat.*—August 31, 1869.

Claim.—1. The staples D D, passing through and securing together the spring-slats C C, &c., in combination with said slats, substantially as and for the purpose shown.

2. The lever-supports E E, when made adjustable by means of the screws and slots, substantially as herein shown and described.

94,276.—GEORGE C. BELL, Buffalo, N. Y.—*Method of Making Square-Necked Bolts.*—August 31, 1869.

Claim.—The method herein described of forming square necks on bolts from rods having one diameter less than the other, without upsetting, by first reducing the same, by means of rollers, to form the body, and then squaring the neck by compressing it between swaging-dies.

94,277.—E. W. BROWN, Cambridge, Ill.—*Furling and Reefing Sails.*—August 31, 1869.

Claim.—1. The arrangement of the roller A, with reference to the mast and spars, as herein set forth and shown.

2. The combination of the cords B, the sails, rollers, guide-pulleys C, and binding-shafts, all substantially as specified.

3. The combination, with the cords B, sails and spars, of the guide-pulleys M N, when arranged as specified.

4. The combination, with the rollers A, grooved in the upper end, as described, of the guide I and guide-pulleys thereon, substantially as specified.

94,278.—WILLIAM H. BROTHERS, Winooski, Vt., assignor to himself and ELISHA ALLEN, same place.—*Jack for Spinning.*—August 31, 1869.

Claim.—1. The slide-plate o^1, carrying the intermediate gearing for the forward-moving scroll *y* as set forth, when combined with the slide P, as described, so that it will be elevated out of gear when the forward motion of the carriage is completed.

2. The slide-bar P, operated by a lug, s^1, of the carriage, to throw the forward-moving scroll out of gear, as set forth.

3. The hook Z, for holding the slide-plate o^1 elevated, when arranged so that it will automatically drop into a notch of the slide-plate when the same is elevated, while it will be thrown out of the notch by a stop on the carriage, to lower the plate o^1, substantially as herein shown and described.

4. The slide-bar T, connected with the bell-crank S, so as to be operated by the arm *q* and roller *r* of the carriage, substantially as herein shown and described.

5. The slide-bar T, when provided with the shoulders d^2, e^2, and f^2, and with the spring g^2, as described, so as to actuate the rocking-shippers U and V, substantially as herein shown and described.

6. The shipper-lever W, when connected both with the rock-shaft V and with the slide-bar X, to operate the loose wheel b^1, substantially as herein shown and described.

7. The slide-plate B′, when connected, by a bell-crank C′, with the sliding shipper-bar X, so as to operate the belt g^1, the loose wheel b^1, and the toothed clutch-wheel Y, by its motion, substantially as herein shown and described.

8. The hollow cone y^1, arranged on the shaft N, in combination with the loose toothed clutch-wheel Y and intermediate gearing, substantially as described, to operate the shaft N from the shaft O, for the purpose of imparting a slower motion to the carriage.

9. The rock-shaft U, carrying the arms c^2, i^2, and j^2, substantially as described, so as to receive motion from the slide-bar T, and to impart it to the wheel V and bar X, substantially as herein shown and described.

10. The faller D, when counterbalanced by the weight *h*, and connected by the strap *j* with the loose pulley K on the shaft E, to regulate the building of the cop, substantially as herein shown and described.

11. The carriage C, when provided with the stops or projections *q r* s^1 y^2, and v^2 w^2, substantially as described, so that it will automatically set the various parts of the driving-machinery to regulate its own motion, as specified.

94,279.—CHARLES BUNGE, Geneva, N. Y.—*Revolving Spring-Toy Gun.*—August 31, 1869.

Claim.—1. The combination of the perforated revolving feed-plate E with the stationary reservoir-plate, which has the chambers *h* and the bore *g*, in line with the barrel, all arranged and operating substantially as herein shown and described.

2. The separated breech-end H of the barrel, when forced by a spring, *i*, against the reservoir-plate F, substantially as and for the purpose herein shown and described.

94,280.—S. N. CHAPIN, New Britain, Conn.—*Ferrule.*—August 31, 1869.

Claim.—As a new article of manufacture, a ferrule, *a*, when provided with one or more points *c*, bent inward, so as to enter the end of the handle A, substantially as and for the purpose set forth.

94,281.—JOSHUA E. CHAPMAN, West Reading,

Conn.—*Turbine Water-Wheel.* — August 31, 1869; antedated August 19, 1869.

Claim.—The spiral form and arrangement of the buckets D, shaft C, curb B, and conductor or forebay A, all as shown and described, for the purposes set forth.

94,282.—JONATHAN L. CHESTON, South Easton, Pa.—*Fire and Burglar Alarm.*—August 31, 1869.

Claim.—The arrangement, within the box A, of the grooved and notched drum C, provided with hammers B B, and operated by means of the cord G and weight H, with the bell D, lever K, spring L, weight M, with its dovetail resting in the slotted end of the spring P, cord N, and pulley O, all substantially as shown and described.

94,283.—J. N. COLLINS, Menasha, Wis.—*Bag-Holder.*—August 31, 1869.

Claim.—The combination of the arms G G, cross-pieces F F, bars E E, with ratchet-teeth on one end, stop-plate L, cleat K, block C, thumb-screw *d*, and pillar A, constructed, arranged, and operating substantially as shown and described, and for the purposes set forth.

94,284.—CHARLES CROZAT CONVERSE, Brooklyn, N. Y., assignor to SAMUEL S. GREELEY.—*Wooden Pavement.*—August 31, 1869.

Claim.—A pavement, constructed of rows of blocks, of rectangular form, arranged in rows, with the grain vertical, and having between the rows strips of wood of a width equal to the length of the blocks, and arranged longitudinally with the grain, the longitudinal strips forming an even surface with the surface of the blocks.

94,285.—JOHN COYNE, Allegheny City, Pa.—*Machine for Cutting Nails.*—August 31, 1869.

Claim.—1. The combination of the slotted lever-head A and adjustable rubber B, arranged, with reference to the other parts of the machine, as shown and described.

2. The combination of the above device with the cams *a* and *b*, arranged as set forth, and co-acting to govern and regulate the relative movements of the nipper-rod and griper-lever, as specified.

94,286.—JOHN COYNE, Allegheny City, Pa.—*Apparatus for the Manufacture of Pig-Bloom.*—August 31, 1869.

Claim—1. The molds, hinged at the outer ends to the bolts H, connected to the spring-supports I, and all combined with the table A, and arranged as specified.

2. The arrangement of the beveled projections M, on the molds, and the spring-supports, substantially as specified.

3. The flange D and hoop E, combined with the table A and stand C, substantially as specified.

4. The combination, with the molds G, of the T-shaped guards, substantially as specified.

94,287.—HERRMANN CARMER, Sonora, Cal.—*Washing-Machine.*—August 31, 1869.

Claim.—The heater G, and the grooved hollow and slotted cylinder A, arranged in the tub B, and provided with the operating-wheels C D, and hand-lever E, all substantially as specified.

94,288.—JAMES M. CROSE, Lebanon, Ind.—*Tank-Regulator.*—August 31, 1869.

Claim.—The combination of the tank A, escape-pipes and valve D, tilting lever and buckets thereon, having escape-valves, air-passage valves I, weight G, rods P' Q, levers and float C, when arranged for operation by the water for opening and closing said air-passage, substantially as specified.

94,289.—JAMES A. CURRIE, Xenia, Ohio.—*Combined Planter and Cultivator.*—August 31, 1869.

Claim.—1. The combination of the plow-beams E, arranged in pairs, the front plow-standards F, whether placed between or at the side of the pair of plow-beams E, rear plow-standards H, whether one or both are used, and seed-hoppers J, with each other, and with the frame C and axle B, substantially as herein shown and described, and for the purpose set forth.

2. The combination of the pivoted perforated dropping-plate K, perforated supporting-plate L, jointed connecting-bars S, and foot-lever M, with each other, and with the perforated bottoms of the seed-hoppers J, substantially as herein shown and described, and for the purpose set forth.

3. The combination of the jointed connecting-bars P, shaft O, lever Q, and adjusting-post R, with each other, and with the pairs of plow-beams E and frame C, substantially as herein shown and described, and for the purposes set forth.

94,290.—F. DAVISON, Richmond, Va.—*Nail-Machine.*—August 31, 1869.

Claim.—1. The arrangement of the inclined vibrating feed-box A, of the inclined shelf H, and anti-friction rollers C, substantially as specified.

2. The arrangement of the curved block M, swiveled straps, and vibrating bar B, substantially as specified, for the purpose set forth.

3. The arrangement of the bifurcated bent carrier N, recessed die P, spring-nipper Q, and guides Q', substantially as specified.

94,291.—J. HARVEY DAY, Walla-Walla, Washington Territory.—*Rock-Crushing Mill.*—August 31, 1869.

Claim.—1. A crusher for ores, consisting of weight H, having a continuous grinding-shoe at its periphery, and moving about a universal joint at the lower side, substantially as herein described.

2. The disks, either consisting of the central cone E and the rim F, or made in any other shape, and all united together, as described, either for crushing or amalgamating, and having discharge-openings, substantially as herein described.

3. A crusher, or a crusher and amalgamator, consisting of a series of disks, one above another, in combination with the weight H, the whole united by universal joints, and operating substantially as herein described.

94,292.—JOHN DECKER, Sparta, assignor to himself and E. DE CAMP, Boonton, N. J.—*Combined Weighing and Measuring Scale.*—August 31, 1869.

Claim.—The beam A, weight B, balance C, fulcrum E, and hook F, arranged and combined substantially as described, for the purpose set forth.

94,293.—CLARENCE DELAFIELD, Castleton, and FRANK G. JOHNSON, Northfield, N.Y.—*Railway-Car Wheel.*—August 31, 1869.

Claim.—The disks A B, when provided with the projections E, in combination with the wood strips F, as herein described for the purpose specified.

94,294.—JULES MARIE DE LA RUE, Nogent sur Marne, near Paris, France.—*Floating Velocipede.*—August 31, 1869; patented in France, December 14, 1868.

Claim.—The herein-described nautical velocipede, consisting of the floats A A', united by the cross-bars *g*, the paddle-wheel H, inclosed in box O, spring-supports M M', for the saddle N, the forks O O', balance-rudder K, and tiller-ropes L L', all combined, arranged, and constructed as shown.

94,295.—JAMES M. A. DEW, Chicago, Ill., assignor to himself and OSWELL A. BOGUE, same place.—*Lamp.*—August 31, 1869.

Claim.—1. A kerosene-oil lamp, consisting of the body E, chamber F, and burner B, with tube C attached, all constructed and arranged as herein shown and described.

2. The chamber F, in combination with the body of a lamp, when constructed and arranged substantially as and for the purpose set forth.

3. Tinning the interior surface of the body or chamber of brass lamps, substantially as and for the purpose set forth.

94,296.—THOMAS DOW, Yorktown, Ill.—*Plow-Clevis.*—August 31, 1869.

Claim.—The concave plate A, provided with holes X, and lugs C and D, in combination with the two-part roller G G, clevis J J, provided with shank L

P, flange N, and spring-bolt T, constructed and arranged to operate as and for the purpose set forth.

94,297.—Cleaveland F. Dunderdale, New York, N. Y.—*Manufacture of Illuminating-Gas.*—August 31, 1869.

Claim.—The vessels A B and H I, the flexible pipe F, coiled tube G, pipe *m*, and boiler L, all combined and arranged as herein described, for the purpose specified.

94,298.—William Bancroft Espent, Spanish Town, Jamaica.—*Apparatus for Purifying Saccharine Liquids, and for Curing, Drying, and Treating Sugar and other Materials.*—August 31, 1869.

Claim.—1. The extraction of fluids from substances containing them, by placing the substance to be operated on upon a surface of wire-gauze or other open material, forming the bottom of a chamber, which, when the substance has been introduced, is closed air-tight by a cover. Beneath this chamber there is a space in which vacuum being formed by any means, the air above the substance being expanded, forces its way down through the substance into the vacuum-space, and in so doing carries with it the moisture from the substance.

2. The filtering of raw and fermentable juices and fluids by causing the juice or fluid to be driven rapidly through filtering-substances by the force of the atmosphere in its endeavor to restore equilibrium in the vacuum-space within, or in the inner side of the filtering-substance.

94,299.—John O. Fairbairn, Milwaukee, Wis.—*Ruffling-Attachment for Sewing-Machines.*—August 31, 1869.

Claim.—A ruffler for sewing-machines, consisting of the plates B, C, and D, with the guide E connected to the plate B, and serving to guide the material by bearing against the seam, all arranged as herein described.

94,300.—Amos P. Foster and Daniel B. H. Bartlett, Lowell, Mass., assignors to themselves and Charles F. Howe, same place.—*Pocket-Lamp.*—August 31, 1869.

Claim.—1. The arrangement and construction of the lamp *a*, with or without the chimney *g*, case *h*, match-tube *i*, with cap *k*, when operating as described and specified.

2. In combination with the lamp *a*, the match *j*, with case *h*, when arranged as described.

94,301.—John G. B. Gill, Chesnut Grove, S. C.—*Cotton-Seed and Corn Planter.*—August 31, 1869.

Claim.—The combination of the planting or drill wheel, provided with grooves and iron spikes upon its periphery, with the slide, to regulate the supply of seed, as and for the purpose specified.

94,302.—Kingston Goddard, Richmond, N. Y.—*Peat-Mold.*—August 31, 1869.

Claim.—The combination of the grooved frames B C, beveled posts D, with the metal plates A, arranged substantially as described, so that said frames can be drawn together, so as to press closely the said plates.

94,303.—David Gore, Carlinville, Ill.—*Ditch-Gauge Scoop.*—August 31, 1869.

Claim.—1. The gauge A *a'* B C D, constructed and operating substantially as herein shown and described, and for the purpose set forth.

2. The combination of the bars and sights I J, with the beam A of the gauge A *a'* B C D, substantially as herein shown and described, and for the purpose set forth.

3. The scoop E F G, constructed and operating in connection with the gauge A *a'* B C D, substantially as herein shown and described, and for the purpose set forth.

94,304.—George W. Grader, Memphis, Tenn., assignor to himself and William B. Wiggs, same place.—*Machine for Linting and Relinting Cotton-Seeds and Motes.*—August 31, 1869.

Claim.—1. The combination and arrangement of two ginning-cylinders B B' and their accessories, the first for removing the long lint or fiber, and the second to complete the cleaning of the seed and motes, substantially as herein described.

2. In combination with the two sets of devices for successively treating the seed and motes for the removal of the lint or fiber, as described, the separate lint or fiber discharges, arranged and employed substantially as and for the purpose set forth.

3. The breast E', constructed with the rasp-face, composed of zigzag teeth or projections, *e'*, as described, for the purpose explained.

4. In combination with the breast E', the shaft K, mounted in vertically-sliding boxes, as described, the crank-disk O, connecting-rod N, links Q, slotted projection R, and stud S, arranged and adapted to operate substantially as described.

5. In combination with the ginning-cylinder B', the shield or fender G', constructed and arranged, relatively to said cylinder B', and its vibrating breast E', substantially as represented and described, for the purpose set forth.

6. In the described combination with the ginning-cylinders B B', the rollers C C', for throwing back the seed when the lint or fiber is separated, when mounted in sliding boxes F, so as to be capable of adjustment relatively to said ginning-cylinders, as and for the purposes set forth.

7. The boxes F of the rollers C C', adapted to slide transversely on their supports, and constructed with down-turned ends or lugs, traversed by adjustable set-screws *f f*, bearing against the ends or sides of their supports, as shown and described, to adjust them on said supports, as set forth.

8. The brush-cylinders D D', having their heads constructed for the reception of the strips or brushes, with radial shoulders or supports on their peripheries, and on their inner sides with radially-slotted lugs or flanges *d*, and the strips or brushes secured by transverse bolts *d'* passing through the slots in the lugs or flanges *d*, as shown and described, for the purposes set forth.

94,305.—A. D. Granger, Talbotton, Ga.—*Self-Watering Scrubber.*—August 31, 1869.

Claim.—1. In combination with the water-box of a scrubbing-brush, a bottom, composed of two or more perforated strips, B, and projecting rubber pieces C, arranged alternately in the manner shown and described, and for the purpose specified.

2. In combination with the above, the perforated cover a^2, conical sides, clamps *a* a^1 D, and handle F, constructed as herein described, for the purpose specified.

94,306.—William Griffith, Jr., Pottsville, Pa., assignor to himself, Joseph S. Patterson, and Thomas C. Zulick, same place.—*Furnace for Producing Iron Direct from the Ore.*—August 31, 1869.

Claim.—1. The deoxidizing-chamber B, containing the retorts D D, when arranged above or in connection with a welding-furnace, substantially as described, so that the retorts will be heated by the gases escaping from the welding-furnace, as described.

2. The retorts D D, when made substantially as described, of conical form, and molded, as specified.

3. The steam-generator F, when arranged within the deoxidizing-chamber, to supply steam to the fire-box, as set forth.

4. The funnel H, when arranged in combination with the furnace A, having the cap or valve I, and with the retorts D, having the movable bottoms E, all arranged, combined, and operating substantially as herein shown and described.

94,307.—J. C. Gross, Goshen Hill, S. C.—*Combined Turn and Subsoil Plow.*—August 31, 1869.

Claim.—The combination of the curved or semi-circular bar D, staples F, and screw-nuts G, with the standards E J and beam A of the plow, as herein shown and described, for the purpose specified.

94,308.—Remig Grotz, Chicago, Ill.—*Grain-Drier.*—August 31, 1869.

Claim.—1. The revolving screw C, having a pipe, B, arranged to convey heated air or steam through its center, substantially as described.

2. The rods I I, provided with beaters *i i*, arranged and operating as set forth.

3. The driving of the cold blast through a mass of heated malt, grain, &c., into the fire of the furnace, substantially as and in the manner set forth, or in other equivalent manner.

4. The application of steam-pipes B′, *m m*, and *n n* to the herein-described drying-apparatus, in the manner substantially as herein set forth and specified, or in any other equivalent manner.

94,309.—Stinson Hagaman, Weissport, Pa.—*Slate-Polishing Machine.*—August 31, 1869.

Claim.—1. So constructing a machine for grinding and polishing school-slates that the slates are revolved around the axis of the shafts on which they are held, and around the axis of a central shaft, B, substantially as herein shown and described.

2. The annular track E, springs F, and friction-rollers *b*, when arranged in combination with the revolving disks C and shafts D, substantially as and for the purposes herein shown and described.

3. The stationary segment H, when provided with internal gear, in combination with the pinions *c*, on the shafts D, and with the central shaft B and disks C, substantially as and for the purpose herein shown and described.

4. The nuts *g*, and sleeves *e*, when arranged on the shafts D, in combination with the springs F, disks C, and grinding-wheels J, all made and operating substantially as herein shown and described.

94,310.—Stinson Hagaman, Weissport, Pa.—*Slate-Polishing Machine.*—August 31, 1869.

Claim.—1. In a slate-polishing machine, the combination of the horizontal grinding-wheel C with the mortised disks F, shafts E, either stationary or revolving, gauges *b*, and levers G, whereby the said disks F are elevated or depressed, all constructed and operating substantially as herein shown and described.

2. The construction and arrangement in the frame A, upon each side of the center shaft B, of horizontal mortised disks F upon the vertical shafts E, either revolving or stationary, provided with the adjustable gauges *b*, and elevated or depressed by means of the levers G, substantially as herein shown and described.

3. The construction and arrangement of the vertical shaft B, supporting the horizontally-revolving wheel C, the mortised disks F, upon the shafts E, pressing the slate to be ground against the under surface of the grinding-wheel C, as herein shown and described.

4. The construction and arrangement of the levers G, pivoted in the frame A, and supporting upon their inner ends the vertical shafts E, substantially as herein set forth for the purpose specified.

94,311.—J. A. Ham and W. Carpenter, Jr., Barry, Mo.—*Churn.*—August 31, 1869.

Claim.—1. The combination of the wheels H L M K E, and the shafts on which they rotate, with the top N of the churn, the three first mentioned of said wheels being arranged above, and the remaining two below the said top, in the manner shown and described.

2. The subject-matter of the above clause, in combination with the double dasher, as and for the purpose specified.

94,312.—Jacob A. Hanger, Staunton, Va.—*Churn.*—August 31, 1869.

Claim.—1. The cross-bar M, provided with arms *n*, when vertically movable upon the rotary dasher-shaft J, within the rotating tub E, in combination with the arms *c*, fixed to the bottom of the churn, substantially as and for the purpose described.

2. The cover G, turned in a solid piece, and provided with the cross-piece H, the ends of which project and rest in recesses in the churn body, substantially as and for the purposes set forth.

94,313.—William Hawkins, Oregon, Mo.—*Ice-Cream Freezer.*—August 31, 1869.

Claim.—The cream-holder A, provided with the exterior longitudinal ribs C, and the irregularly-formed dashers N, as herein described, for the purpose specified.

94,314.—Jacob Hepperly, Peoria, Ill.—*Water-Wheel.*—August 31, 1869.

Claim.—The arrangement of the screen or grating *h*, sliding hatch W, adjustable circle O, with box embracing shaft *f*, induction-pipe U, and opening V, substantially in the manner and for the purposes as herein described.

94,315.—Britain Holmes, Buffalo, N. Y.—*Dumping-Wagon.*—August 31, 1869.

Claim.—1. In combination with the forward bolster and axle, the socket B and pivot-post C.

2. The rubber spring *e*, and bearing-block *e′*, in combination with the said socket and pivot-post, substantially as set forth.

3. The ribbed and tubular cast-iron axles, when constructed substantially as described.

4. The oil-reservoir *h*, aperture *j*, and groove *i*, constructed, arranged, and operating substantially as and for the purpose set forth.

5. The two pivoted sections R R of the bottom arranged so as to dump the load at the center, substantially as set forth.

6. The arm *u* of the bolster D, combined and arranged with the brace V and axle-rod *r*, as shown and described.

94,316.—Charles L. Inslee, New York, N. Y., and William H. Inslee, Newark, N. J.—*Steam-Engine Valve-Gear.*—August 31, 1869.

Claim.—1. The arrangement of valves F G and valve-seats *a b*, with reference to chambers B C and ports D E, as and for the purpose set forth.

2. The construction and arrangement, with respect to each other, of the rod O, slide P, screw Q, and yoke L, for the purpose of adjusting the throw of the valves F G, as set forth.

94,317.—Luther A. Johnson, H. W. Collender, and James E. Boyle, New York, N. Y., assignors to Michael Phelan, H. W. Collender, and James E. Boyle, same place.—*Cue-Leather Trimmer.*—August 31, 1869.

Claim.—1. A cue-leather trimmer, composed of a hand-tube or holder and a cutting-blade or blades, adapted to both shave off the periphery of and round over or chamfer off the leather, substantially as described.

2. Making the holder A with a slot or slit, so that its parts may be sprung together, to bring the cue up to the stationary cutting-mechanism, substantially as described.

94,318.—Alden H. Jumper, Sunman, Ind.—*Ax.*—August 31, 1869.

Claim.—An ax, formed with a split or open poll, substantially as herein shown and described, and for the purpose set forth.

94,319.—Nathan W. Kingsley, Swansea, Mass.—*Horse Hay-Fork.*—August 31, 1869.

Claim.—1. In combination with the lifting-arm F, handle A, and pawl I, the holding-tine G, operated by the link-connection H, substantially as shown and described, for the purposes specified.

2. The improved horse hay-fork herein described, consisting of the handle A, shank B, lifting-tines E, holding-tine G, link-connection H, lifting-arm F, and pawl I, provided with any suitable tripping-device, and arranged to operate substantially as shown and described, for the purposes specified.

94,320.—Philip Klotz, Baltimore, Md., assignor to Bentley C. Bibb, same place.—*Base-Burning Fire-Place Heater.*—August 31, 1869.

Claim.—1. A double-legged fuel-feed, substantially as described.

2. The chamber F^2, at the upper termini of the two feed-legs F^1 F^1, substantially as described.

3. The fuel-feeders F^1, inclined backward and laterally, and supported wholly or in part at points above the fire-brick lining, substantially as described.

4. The horizontal flue-section C, in a fire-place heater, which is organized substantially as described.

94,321.—JOHN LAIRD, Canton, Ohio.—*Bridge.*—August 31, 1869.

Claim.—1. The use of the cast sections A A, constructed as described, and forming a continuous arch, from shoe to shoe, substantially as herein set forth.

2. The cast section A, constructed as described, the end-pieces projecting above and below, so as to secure the upper and lower bars of the arch, substantially as herein set forth.

3. Connecting the arch of a bridge with the shoes by means of the blocks B B, substantially as herein set forth.

4. The combination of the shoes C C, blocks B B, cast sections A A, and bars *a* and *b*, all constructed as described, and connected substantially in the manner and for the purposes herein set forth.

94,322.—JOHN LAIRD and G. F. LAIRD, Canton, Ohio.—*Bridge.*—August 31, 1869.

Claim.—1. The combination of the channeled beams *b b*, plate-iron *d*, outside-supporting blocks *c c*, inside-supporting blocks *f f*, and bolts *e e*, all constructed and arranged substantially as shown and described.

2. The arrangement of the beams *b b*, iron *d*, blocks *c c* and *f f*, shoes B B, spans C C, and bars *a a*, all as herein shown and described.

94,323.—SAMUEL LAWRENCE, Lowell, Mass., assignor to himself and AMBROSE LAWRENCE, same place.—*Flask for Casting Dental Plate.*—August 31, 1869.

Claim.—The flask, constructed as described, with the parts combined and arranged in the manner and for the purpose specified.

94,324.—SAMUEL LAWRENCE, Lowell, Mass., assignor to himself and AMBROSE LAWRENCE, same place.—*Composition for Molds and Models in Casting Dental Plates and other Articles.*—August 31, 1869; antedated August 24, 1869.

Claim.—The composition of the herein-described ingredients, in the portions specified, for the purpose and in the manner described.

94,325.—OBED LOOK, Bridgeport, Conn.—*Carriage-Wheel.*—August 31, 1869.

Claim.—1. The continuous rods, or spokes *j j*, connected from the opposite sides of rim *h h*, in combination with disks *a* and rim *h*, for the purpose specified and set forth.

2. The disk-hub *a*, nut *b*, ears *f*, screw C, rods *j j*, rim *h*, arranged as specified.

94,326.—ISAAC LOW, East Fairfield, Ohio.—*Harrow.*—August 31, 1869.

Claim.—1. The within-described harrow, consisting of the frame C, D D, F, and F, braces G G, &c., rod H, sections I I, levers K K and L, *l* and *l'*, rods M, cross-bars O and R, and rubber band or chain P, all constructed and arranged to operate substantially as and for the purpose shown.

2. The means employed for raising and lowering the harrow-sections, consisting of the levers K K and L, *l* and *l'*, and rods M, substantially as and for the purpose shown.

3. The employment of the rubber chain or bands P P, for increasing the pressure upon the harrow-sections, substantially as herein shown, and for the purpose specified.

94,327.—CHARLES MCCLAIN, Carlyle, Ill.—*Cooking-Stove.*—August 31, 1869.

Claim.—The plate B, cast with a rim or flange b^1, and with a flue or long pipe-collar b^2, in combination with the top plate A of a cooking-stove, said top plate being made without a pipe-collar, substantially as herein shown and described, and for the purpose set forth.

94,328.—JAMES F. MCMILLEN, Mansfield, Ohio.—*Syringe.*—August 31, 1869.

Claim.—In combination with a plunger-syringe, the reservoir A, the tubular plunger-rod B, and rod D, with the valve *g*, and spring *h*, arranged and operating substantially as described, for the purposes set forth.

94,329.—CHARLES T. MOORE, White Sulphur Springs, West Va.—*Printing-Telegraph.*—August 31, 1869.

Claim.—1. The combination, with a set of keys or other instruments, arranged substantially as described, for closing the circuit of a breaking toothed cylinder and a printing-cylinder, arranged to be operated simultaneously with, and relatively to the breaking-cylinder, by means substantially as specified.

2. The combination, with a set of keys, arranged to open the circuit, as described, of a toothed breaking-cylinder, and a set of weighted actuating-gears d^2, substantially as specified.

3. The combination, with a set of keys, arranged to open the circuit, as described, of a toothed breaking-cylinder, and a spring or weight-actuated indicating-apparatus, arranged for operation simultaneously with, and relatively to the said breaking-cylinder, substantially as specified.

4. The combination, with the bars *c* and c^1, for opening and breaking the circuit, of the keys *b*, catch-levers c^3, pawl d^4, vibrating bar d^7, and breaking-cylinder *d*, all substantially as specified.

5. The combination, with the type-cylinder *e*, arranged for rotation, as described, of the pressing-levers f^1, toothed cylinder f^5, and armature, when arranged substantially as specified.

3. The cut-out *i*, arranged for engaging with the wheel f^4, to prevent the movement of the type-cylinder, substantially as specified.

94,330.—WILLIAM A. MORGAN, Brooklyn, and THOMPSON B. MOSHER, New York, N. Y.—*Hot-Corn Holder.*—August 31, 1869.

Claim.—A spring holder for corn-ears, made of one continuous wire, substantially as herein shown and described.

94,331.—STEPHEN, EARL OF MOUNT CASHELL, Moore Park, Ireland.—*Double Window.*—August 31, 1869.

Claim.—1. The combination of the outside sashes B and C, the inside or winter-sashes *h*, and the screen-sashes L, with the frame A, substantially as shown and described.

2. In combination with the ordinary window, the inner or winter-window, when the sashes are made in three or more parts, with their rails tongued and grooved together, substantially as described.

94,332.—J. W. MYERS, Lyons, Iowa.—*Washing-Machine.*—August 31, 1869.

Claim.—1. The combination of rubbers B C, agitators M M, tub A, shaft F, and driving-gears I K, as shown and described.

2. The combination, with a rotating rubber, of one or more agitators M, as and for the purpose specified.

94,333.—J. WELLINGTON NESMITH, Black Hawk, Colorado Territory.—*Machine for Punching Metal Screens.*—August 31, 1869.

Claim.—1. The combination of the punching-roller, grooved roller, eccentric bearings K, and operating-levers M, when arranged substantially as specified.

2. The combination of the punching-roller, grooved roller, eccentric bearings, levers, and eccentric stops, when arranged substantially as specified.

3. The combination, with the shaft A, having a fixed collar and clamping-nut, of the radially-slotted rings B, and punches D, when all arranged substantially as specified.

4. The combination of the punching roller, grooved roller, and laterally and vertically adjustable bearings G, when all arranged as specified.

94,334.—S. W. ODELL, Ouachita Parish, assignor to himself and JOHN NIXON, New Orleans, La.—*Cotton-Check.*—August 31, 1869.

Claim.—The metallic spring-check A, when constructed and stamped with numbers alone, or with numbers and letters, substantially as herein described, for the purpose set forth.

94,335.—HARRISON OGBORN, Richmond, Ind., assignor to AARON CHANDLER, Davenport, Iowa.—*Seat for Schools, Halls, Churches, &c.*—August 31, 1869.

Claim.—The standard K and arm A, when provided with the lugs C C′, G G′, and spring L, and connected together by a rivet or bolt, M, constructed and arranged to operate as herein described, for the purpose specified.

94,336.—P. A. PEER, Kalamazoo, Mich.—*Skate-Runner.*—August 31, 1869.

Claim.—The construction of a skate-runner, having a round point at both toe and heel, said round points to be hollowed or bored out, as shown, and operating substantially as and for the purposes specified.

94,337.—JULIUS FREDERICK MOORE POLLOCK, Manchester, England.—*Brick-Machine.*—August 31, 1869.

Claim.—1. The arrangement of the driving-shaft B, cams Y, cross-head X, valve-stem W, steam-chest V, steam-cylinder U, piston-rod T, cross-head S, rods Q, cross-head or bar P, dies O Z, and bed or die-plate R, substantially as herein described, for the purpose specified.

2. The described arrangement, with relation to the cam gear-wheels D, the dies O Z, and bed-plate R, of the crank K, pitman M, and feeder N, the shaft F, gear-wheels E G H, and endless carrier J, for the purpose specified.

94,338.—ALBERT N. PUTNAM, Antrim, N. H.—*Pump.*—August 31, 1869.

Claim.—The combination and arrangement of the arm *o*, shaft *k*, with packing *l*, and brake *n*, when used in connection with the pump-body *a*, as herein described and set forth.

94,339.—WILLIAM RECK, Mendota, Ill.—*Plow-Coupling.*—August 31, 1869.

Claim.—A plow-coupling, consisting of the two rods A B, and of the clamp C, which has two screws *d e*, substantially as herein shown and described, to operate as set forth.

94,340.—GEORGE RICHARDS, Richland Centre, Wis.—*Wagon-Standard.*—August 31, 1869.

Claim.—1. Pivoting the stake of a wagon-bolster to a bolt which is itself pivoted in a cap on the end of said bolster, allowing the stake to be lowered in any direction desired, substantially as herein set forth.

2. Securing the stake F in an upright position to the cap B on the end of the bolster A, by means of the bolt G, having projections *b b*, and operated by the spring *a*, all substantially as shown and described.

3. The arrangement of the cap B, having the slot *c* and recesses *e e*, with the bolt C, ear E, stake F, bolt G, spring *a*, and projections *d d*, all substantially as and for the purposes herein set forth.

94,341.—JOHN JAMES RIDGE, St. Johns, Southwark, England.—*Process and Apparatus for Treating Flour, Meal, and other Farinaceous Substances.*—August 31, 1869.

Claim.—1. The herein-described improved process for the treatment and preparation of farinaceous substances, substantially as specified.

2. The combination of the vessel A, having a perforated top, the vessel B, provided with the pipes E and F, and arranged for treating either by fire, gas, or steam, and the plates G, substantially as specified.

94,342.—J. B. ROBINSON, Duncansville, Pa.—*Puddling Furnace.*—August 31, 1869.

Claim.—1. In combination with a puddling or boiling furnace, the bottom A, constructed and arranged substantially as shown and described.

2. In combination with a puddling or boiling furnace, the flue B and bridge-wall F, arranged substantially as described.

94,343.—THOMAS SCANTLIN and JAMES M. SCANTLIN, Evansville, Ind.—*Evaporator for Sugar and other Liquids.*—August 31, 1869.

Claim.—1. The open boxes C C, arranged on the outside of the pan, to connect with the compartments of the same, substantially as herein shown and described.

2. The gates *i*, arranged in the boxes C, on the outside of the evaporating-pan, substantially as herein shown and described.

3. The ash-pit, in combination with a portable furnace, for the purpose of regulating the heat, as set forth.

4. The flanges *j j*, formed on the upper edges of the furnace, to produce open air-passages *k k*, for cooling the upper part of the furnace, substantially as herein shown and described.

94,344.—GEORGE SHATSWELL, Waukegan, assignor to himself, PARNELL MUNSON, and CHARLES L. SAMPSON, Chicago, Ill.—*Window.*—August 31, 1869.

Claim.—In combination with the tongued stop G′, the sash C, arranged to swing and slide, as and for the purpose set forth.

94,345.—NOAH SHAW, West Eau Claire, Wis., assignor to himself, JAMES F. MOORE, WILLIAM W. LEE, and ALVIN B. ALDEN.—*Hollow Grate-Bar.*—August 31, 1869.

Claim.—The pump C, pipe G, hollow bars D D, with their continuations H K, and check-valve L, when arranged with reference to boiler B, substantially as specified.

94,346.—ELIAS SHOPBELL, Ashland, Ohio.—*Machine for Upsetting Tire.*—August 31, 1869.

Claim.—1. The combination of the serrated sliding frame A, stationary serrated frame B, serrated blocks *b b′*, and serrated eccentrics *a a*, substantially as described.

2. In combination with the above, eccentric lever *d*, substantially as described.

94,347.—JOHN SIMPSON, Chester, S. C.—*Hay and Cotton Press.*—August 31, 1869.

Claim.—1. The cords K, when so arranged as to be wound automatically upon the shaft H as the followers are moved apart, as herein shown and described, for the purpose set forth.

2. The arrangement of the followers A and B, racks D, pinions E, spur-wheels F, shaft H, and its pinions G, ratchets L, and pawls M, all arranged to operate together substantially as herein shown and described.

94,348.—ZACHARIAH B. SIMS, Bonham, Texas.—*Clevis.*—August 31, 1869.

Claim.—The clevis D, and screw eye-bolt B, combined to operate together as described.

94,349.—ZACHARIAH B. SIMS, Bonham, Texas.—*Cotton-Plow and Planter.*—August 31, 1869.

Claim.—1. The frame, consisting of the plow-beam A and radial pieces B, bolted together, and the cross-bar C, and provided with a series of openings, Q, substantially as and for the purpose described.

2. The handles D, supported on the cross-bar C, and made adjustable by means of screw-rods E, in connection with the series of jam-nuts *a a*, substantially as and for the purpose described.

3. The marker, consisting of a weight and cord or chain, in connection with the adjustable hooks *b*.

4. The removable valve-plates J, substantially as and for the purpose described.

5. The valve K, secured to the spring-strip L, and operating as and for the purpose described.

6. The mode of securing the plows to the standards, by means of the loops *k* and the notch *n*, as described.

7. The plow-standards, having a plate, P, welded or riveted thereto, and made adjustable, as described.

94,350.—ZACHARIAH B. SIMS, Bonham, Texas.—*Cotton-Plow.*—August 31, 1869.

Claim.—1. The curved flanges *a a*, in combination with the plows F F, all constructed and operated as described.

2. The flanged protector *d*, in combination with the curved flanges *a a*, as and for the purpose set forth.

3. The plows F F, in combination with the curved flanges *a a* and protector *d*, as and for the purpose set forth.

4. The plow-tooth I, in combination with the plows F F, all constructed, arranged, and operated in the manner and for the purpose set forth.

94,351.—ZACHARIAH B. SIMS, Bonham, Texas.—*Cotton-Plow.*—August 31, 1869.

Claim.—The reversible plows *b b'*, in combination with the plows *c d*, for breaking up the soil and laying off seed-furrows, as and for the purpose set forth.

94,352.—ZACHARIAH B. SIMS, Bonham, Texas.—*Cotton-Picker and Cleaner.*—August 31, 1869.

Claim.—1. The rotary breakers or teeth *g g*, in combination with the fixed breakers *d d*, and inclined way *b*, substantially as described.

2. The breakers *g g*, *d d*, and inclined way *b*, in combination with the inclined cylinder *m*, spirally-arranged teeth *l l*, wire grating *n*, and cloth, substantially as described.

94,353.—ZACHARIAH B. SIMS, Bonham, Texas.—*Cotton-Hoe.*—August 31, 1869.

Claim.—1. The back A, provided at its lower part with the arches *o o' o''*, in combination with the cutters *a c*, and removable cutter *b*, substantially as described.

2. The handle H, consisting of the straight portions *e l*, and the angular part *s''*, substantially as described.

3. The handle H, constructed as described, in combination with the curved projections *k*, substantially as described.

94,354.—ZACHARIAH B. SIMS, Bonham, Texas.—*Stalk and Cane Puller.*—August 31, 1869.

Claim.—The combination, with the handle A and prongs B, of the fulcrum C, made adjustable vertically and longitudinally, in the manner and for the purpose set forth.

94,355.—ZACHARIAH B. SIMS, Bonham, Texas.—*Three-Horse Equalizer.*—August 31, 1869.

Claim.—The single-trees B B, jointed eccentrically to the double-tree A, the latter being provided with the stretcher-loops C C, arranged eccentrically thereon, substantially as and for the purpose described.

94,356.—H. M. SMITH, Long Branch, N. J.—*Potato-Digger.*—August 31, 1869.

Claim.—1. The revolving cylindrical screen K, formed by the combination of the tubular side bars k^1, bands or rims k^2 k^3, and shaft J, when used in connection with the frame and gearing of a potato-digger, substantially as herein shown and described, and for the purpose set forth.

2. The combination of the buckets k^5 with the interior surface of the flanged band or rim k^3, at the rear end of the revolving screen K, substantially as herein shown and described, and for the purpose set forth.

3. The combination of the spout or chute L with the buckets k^5, rear end of the revolving screen K, and frame A, substantially as herein shown and described, and for the purpose set forth.

4. The tubular screen, back-head, and loose front head, constructed and arranged together as described, to allow the latter to be slipped back from the revolving cylinder or screen.

5. The arrangement, in relation to the other parts, of the inside elevator, for the purpose of raising the potatoes in the manner set forth.

6. The arrangement of the adjustable hinge at the back end of the plow, for the purpose of raising or lowering it, to suit the mouth of the revolving screen.

7. The adjustable scraper T, constructed and operating substantially as herein shown and described, in combination with the plow-plate N and frame A, as and for the purpose set forth.

8. The combination of the curved toothed plate X, and key or stop Y, with each other and with the tongue V and frame A, substantially as herein shown and described, and for the purpose set forth.

94,357.—JOSEPH R. SMITH, Chicago, Ill.—*Moth-Proof Lining.*—August 31, 1869.

Claim.—A new article of manufacture, made by uniting a veneer of red-cedar, camphor, or similar wood, with paper or cloth, as herein described, for the purpose of lining boxes, trunks, drawers, &c., as set forth.

94,358.—JOSEPH SPOONER and EBENEZER SPOONER, New York, N. Y.—*Tubular Paper-Box Cutter.*—August 31, 1869.

Claim.—1. The combination, with a set of paper-cutters, arranged, at suitable intervals, on a revolving shaft, of a roller, L, swinging around on a pivot at one end, to receive the paper tube, and rotating in its bearing, so as to bring the said tube into contact with the cutters, all as shown and described.

2. Swiveling one end of the roller, upon which the paper roll is placed to be cut, to its supporting-standard, in such a way that its other end may be swung outward, as and for the purpose set forth.

3. An improved machine for cutting paper boxes, formed by the combination of the adjustable plates B and C, adjustable knife-plate E, adjustable knife-standards G, adjusting-blocks J, circular revolving knives F, and swiveled roller L, with each other, and with the bed-plate A and standards O, substantially as herein shown and described, for the purpose set forth.

94,359.—T. CHALKLEY TAYLOR, Philadelphia, Pa.—*Mode of Bleaching Granulated Sugar.*—August 31, 1869; antedated August 20, 1869.

Claim.—The method herein described of bleaching granulated sugar.

94,360.—OAKES TIRRILL, Boston, Mass.—*Apparatus for Carburetting Air and Gas.*—August 31, 1869.

Claim.—1. The method of increasing the pressure of the gas, or the quantity of such gas supplied to the burner, in proportion to the decrease in the volume of the hydrocarbon-vapor with respect to that of air or coal or other gas with which it is mingled, substantially as and for the purposes set forth.

2. The employment of a tapering spool or its equivalent, connected with the air or gas pumping devices, substantially as described, so as to steadily increase the pressure of gas in the machine while the same is in operation, for the purpose specified.

3. The use of the tapering spool, hereinbefore described, with machines for carburetting coal and other gases, substantially in the manner and for the purposes described.

94,361.—JAMES S. TOTTEN, Lebanon, Ohio.—*Shaft and Pole-Holder.*—August 31, 1869.

Claim.—The combinations, with the spring-bar C of a carriage and the shaft-bar B, of holding-traps D, looped or buckled around the one, and adapted for buttoning to the other, substantially as specified.

94,362.—V. B. TOWNSEND, Worcester, Mass.—*Floating Velocipede.*—August 31, 1869.

Claim.—In combination with a boat or deck, supported upon long, hollow, water-tight cylinders, the paddle-wheel extending across the boat or through the deck, from cylinder to cylinder, or approximately thereto, such paddle-wheel being connected to and driven by a cranked shaft, placed forward of the wheel-house, and having pedal-cranks actuated as described, and the rudder being connected to a tiller placed forward of the cranked axle, and so that its handles are in position to be grasped by the person who drives the axle-cranks with his feet, the combination and arrangement of the mechanism being substantially as shown and described.

2. In combination with the foregoing, the paddle-wheel shaft, made adjustable, as to height, substantially as described.

94,363.—BENJAMIN D. WASHBURN, Boston, Mass.—*Shutter-Fastening.*—August 31, 1869.

Claim.—1. In window-blind fastenings, the projections *x x*, upon either or both ends of the shell or case, when such tips or projections contain the

slots *d d*, in the manner and for the purpose herein described.

2. The combination of the hook A, shell B, tips *x x*, and slots *d d*, in the manner and for the purpose herein described.

94,364.—WILLIAM WASSAL, Wellsville, Ohio.—*Apparatus for Turning Heavy Clay Pipes.*—August 31, 1869.

Claim. — A concave pipe-holder, provided with rockers, or other equivalent means, for turning pipes, substantially as specified.

94,365.—NICHOLAS WHITEHALL, Newtown, Ind.—*Planter and Cultivator.*—August 31, 1869.

Claim.—1. The arrangement of truck-connecting bars F, plow-stocks A, tongue I, and latch M, substantially as specified.

2. The arrangement of the connecting-bars F, side-supports G, and short axles for reversing their positions, and the positions of the wheels, substantially as specified.

3. The detachable seed-box and slide-support E, plow-stocks A, blocks Q, and valve-slide, all combined and arranged substantially as specified.

4. The vibrating plows A′, yoke C′, treadles H, rods F′, and vibrating levers, all arranged substantially as specified.

5. The combination, with the narrow wheels G, of the broad wheels N, when arranged and applied substantially as specified.

94,366.—EDWARD WIARD, Louisville, Ky., assignor to B. F. AVERY, same place.—*Plow.*—August 31, 1869.

Claim.—1. The adjustable exchangeable seats D, constructed and arranged substantially as herein shown and described, in combination with the standard C and with the plow-plates E, F, G, H, or either of them, as and for the purpose set forth.

2. The combination of the circular adjustable cutter I, with the skeleton standard-frame C, when used in connection with the seats D and plow-plates E, F, G, H, or either of them, substantially as herein shown and described, and for the purpose set forth.

94,367.—EDWARD WIARD, Louisville, Ky., assignor to B. F. AVERY, same place.—*Plow.*—August 31, 1869.

Claim.—1. The cast standard-skeleton D, constructed substantially in the manner herein shown and described, and for the purposes set forth.

2. The point F and arm *f*′, constructed and attached to the skeleton D, substantially in the manner herein shown and described.

3. The brace-bar G, constructed with lugs g^1 g^2, and secured to the mold-board E and land-side of the skeleton D, substantially in the manner herein shown and described, and for the purpose set forth.

94,368.—JAMES M. WILLBUR, Cleveland, Ohio.—*Embossing-Press.*—August 31, 1869.

Claim.—1. The employment, in an embossing-press, in connection with the hinged arm C, carrying the die, of the toggles *f g*, link *h*, and cam-lever *l*, all constructed and arranged substantially as herein described, whereby an increasing and continuing pressure is applied to the arm C, thus making a perfect impression.

2. In combination with the hinged arm C, carrying the die of an embossing-press, the pin P and spring *k*, the toggles *f g*, link *h*, and cam-lever *l*, and the regulating-screw E, all constructed, arranged, and operating substantially as and for the several purposes herein specified.

3. The described arrangement in an embossing-press of the hinged arm C, carrying the die, the rocking platen D *b*, pin P, and spring K, the toggles *f g*, link *h*, and cam-lever *l*, and the regulating-screw E, all mounted in a frame, A B, and constructed to operate substantially as herein set forth.

94,369.—ARCHIBALD WILLISCROFT, Wilmington, Del.—*Hose-Pipe Nozzle.*—August 31, 1869.

Claim.—1. The combination of the sliding plate C, having two or more different-sized holes formed through it, and the ring-plate B, with each other and the nozzle-pipe A, substantially as herein shown and described, and for the purpose set forth.

2. The pin D, provided with the spring E and thumb-piece F, when constructed and arranged, with reference to the inclined projection G, and sliding plate C, as herein shown and described, for the purpose specified.

94,370.—GEORGE W. WILSON, Tolono, Ill., assignor to himself and HORACE FRANCISCO, same place.—*Millstone-Balance.*—August 31, 1869.

Claim.—The weights D, provided with horizontal grooves, whereby they are adapted to be adjusted both vertically and horizontally upon the open ring B, as herein shown and described, for the purpose specified.

94,371.—RICHARD WITTY, Chicago, Ill.—*Steam-Engine Piston.*—August 31, 1869.

Claim.—The construction and arrangement of the valve-seats *a a′*, spindles *b b*, valves *d d*, nuts *e e*, and springs *i i*, with reference to the piston A and follower B, all substantially as shown and described.

94,372.—A. S. WOODWARD, Pepperell, Mass., assignor to himself and H. A. PARKER, same place.—*Carriage-Hub.*—August 31, 1869.

Claim.—The metallic hub A, cast in one piece, with the chamber B extending from end to end thereof, and communicating with the openings for the spokes through the outer shell, as herein described, for the purpose specified.

94,373.—JOHN AGATE, Pittsford, N. Y.—*Apparatus for Cooling and Refrigerating.*—August 31, 1869.

Claim.—The cold-water tub B, in combination with the refrigerating-chamber A, provided with a worm, C, or its equivalent, when the parts are arranged to operate substantially as described.

94,374.—HENRY AITKEN, Falkirk, Scotland.—*Roasting and Treating Iron-Ores.*—August 31, 1869.

Claim.—1. The treating of iron-ores or iron-stones by cooling down, in any of the modes herein set forth, after they are coked, that is, as soon as the whole or nearly the whole of the volatile matters are driven off, so as to prevent, as much as possible, the destruction or waste of the fixed carbon.

2. The direct employment, in blast or other reducing furnaces, of the coked iron-ores or iron-stones, in the heated state, as soon as the whole or nearly the whole of the volatile matters are driven off.

94,375.—ERASTUS W. AYER and MELVILLE C. AYER, South Waterford, Me.—*Article of Food from Pumpkin and Squash.*—August 31, 1869.

Claim.—1. The process herein described for preparing pumpkin and squash, as new articles of food, substantially as specified.

2. Pumpkin, prepared as herein specified, as a new article of food, substantially as described.

94,376.—W. F. BACON, Skowhegan, Me.—*Chuck.*—August 31, 1869.

Claim.—The adjustable bed-piece A, rib B, bolt C, with nut F and washer G, the screw E, sliding jaw D, substantially as shown and described.

94,377.—A. C. BAKER, Westfield, Mass.—*Steam-Heater.*—August 31, 1869.

Claim.—The steam-heater herein shown, consisting of the upright castings A A, &c., constructed and arranged together as shown, each casting being formed with steam and water space within, and half flues at each side, substantially as herein set forth and described.

94,378.—OREN BALDWIN, Keokuk, Iowa.—*Wash-Boiler.*—August 31, 1869.

Claim.—1. The box B, constructed with an upwardly-tapered oblong spout, C, having a discharge-opening, *e*, and an overhanging deflecting-lip, *c*, substantially as described.

2. The corrugated strip *a*, forming arched water-passages leading to the passages *g*, in combination with the spout C and box B, substantially as and for the purposes described.

94,379.—James M. Barrett, Plymouth, N. C.—*Liniment.*—August 31, 1869.

Claim.—The liniment or medical compound herein described, compounded of the ingredients and in the proportions herein specified.

94,380.—Orson Bartlit and George D. Edson, Rockford, Ill.—*Glove.*—August 31, 1869.

Claim.—A mitten, constructed of the four parts A, B, C, D, shaped as shown, and so united that no seam is formed at the folding-point between the thumb and hand-portion or straining-point of the article, substantially as described, and for the purpose set forth.

94,381.—N. S. Barton, Mannsville, N. Y.—*Churn.*—August 31, 1869.

Claim.—1. The driving-wheels F F, gear-wheels G G, pinion-wheels B B, and shaft C, when the same are so combined and arranged that a double reverse motion is obtained by the revolution of the wheels F F, so that dashers that are attached to the shaft are caused to travel in opposite directions, substantially as described.

2. The dashers D and E, when the former is permanently connected to the shaft C, and the latter to the tube-neck *b*, and both in such manner that, through the wheels B, F, G, they are caused to travel and work in opposite circuits, substantially as described.

94,382.—George Beatty, Cleveland, Ohio.—*Toe-Plate for Boots and Shoes.*—August 31, 1869.

Claim.—The metallic tip, or guard-plate A, when the same is provided with a series of sharp projecting pins, or spikes, *a a*, substantially as described, as and for the purpose specified.

94,383.—James C. Bell, Lebanon, Ind.—*Plow.*—August 31, 1869.

Claim.—The combination and arrangement of clod-fender E, bar *h*, clip *m*, beam A, and fulcrum-rod *f*, substantially as and for the purpose specified.

94,384.—Joseph B. Blanchard, Boston, Mass.—*Needle for Sewing-Machine.*—August 31, 1869.

Claim.—A sewing-machine needle, provided with a lateral opening, *c*, into the eye thereof, constructed with burr-like points *d d*, looking inward, or so as to admit the ready passage of the thread to the eye, but preventing the escape of the thread therefrom, and with the corners *b b* of said lateral opening *c* rounded, so as to prevent injury to the material in the passage of the needle.

94,385.—Charles A. Blessing, Philadelphia, Pa.—*Bath-Tub.*—August 31, 1869; antedated August 27, 1869.

Claim.—The tub A, having a female-screw flange, *a*, screw connecting-pipe C, when the same is provided with screw-threads *c c'* and opening C', and the pipe B, with its curved or elbow-ends b^1 b^2, when the same are so combined and arranged as to operate substantially as herein described, as and for the purpose specified.

94,386.—Ernst A. Bohne, Brookhaven, Miss.—*Railway-Car Coupling.*—August 31, 1869.

Claim.—The coupler herein described, having buffer-head A, slotted block B, spring p^1, with block P, chain *c'*, hook H, pin C, with stud *n*, and helical spring *w*, constructed and arranged substantially as specified.

94,387.—Joshua Briggs, Peterborough, N. H.—*Piano-Forte Stool.*—August 31, 1869.

Claim.—1. The removable socket-piece *f*, having a tongue, *g*, cast integral therewith, substantially as and for the purpose set forth.

2. The removable back, whose posts are fitted in metal sockets *f*, of tongues *g*, the latter being adapted to enter and be held by metal loops *h*, secured to the bottom of the seat, as shown.

94,388.—Joshua Briggs, Peterborough, N. H.—*Ottoman Piano-Stool.*—August 31, 1869.

Claim.—In an ottoman-stool for piano-fortes, whose seat is adjustable in height, setting the hinges upon the inclined top edge of the frame *b*, concealing them by drawing under them the top-covering cloth, and sinking the seat beneath the surface of the frame, substantially as set forth.

94,389.—John H. Brown, Watertown, Mass., assignor to Moses K. Moody, New York City.—*Sewing-Machine for Sewing Boots and Shoes.*—August 31, 1869.

Claim.—1. The combination of the stationary rack and revolving gears, for operating the looper, substantially as described.

2. In combination with the traversing and rocking head, and a needle-feed, a releasing and holding mechanism, constructed and operating as described, to hold the shoe whilst the needle is traversed.

3. The gauge or holder *m*, hung on an eccentric, in combination with an operating lever and catch for adjusting said gauge in relation to the sewing-line, substantially as described.

94,390.—Otto Brück, New York, N. Y.—*Fan.*—August 31, 1869.

Claim.—The combination of springs *c c*, with the tubes *b d* and fan A, and with a catch capable of retaining the fan when drawn in, substantially as set forth.

94,391.—Edwin L. Brundage, Middletown, N. Y.—*Machine for Making Horseshoe-Nails.*—August 31, 1869.

Claim.—1. The arrangement of the moving cylinder G, steam-chest H, steam-ports *b b*, exhaust-port *e*, steam-passages *c* and *d*, through the stationary piston-rod J and valve I, the whole being constructed and operating as described.

2. The combination of the steam-hammer G with the anvil D, the graduated dies, the point-cutters, and the revolving and progressive grippers, to manufacture horseshoe-nails, the whole constructed and operating in the manner and for the purpose substantially the same as described.

3. The arrangement of the cams N and O, lever M, and valve-rod L, all constructed and operating together, as and for the purpose substantially the same as described.

4. The arrangement of the cam-slot Q in the hammer, the lever R, and pawls *p* and *t*, all operating to give motion and stop to the carriage F, as and for the purpose described.

5. The combination of the series of cams *d' d' d'*, cutter-holder U, rock-shaft V, and the adjustable spring *f'*, all constructed and operating as and for the purpose substantially the same as described.

6. The arrangement of the hammer-point cutter *b''*, spring *g''*, guide *c''*, and anvil-cutter *y'*, the same being constructed and operating in the manner and for the purpose substantially the same as described.

7. The combination of the gripper *k k*, fulcrum-pin *t''*, ring *o'*, spring *p''*, and opener Y, constructed, arranged, and operating in the manner and for the purpose set forth.

8. The arrangement of spring *w''*, follower *q''*, the spring *p''*, or an equivalent bearing, and the grippers *k k*, as and for the purpose set forth.

9. The combination of the stationary cam Z, opener Y, pinion-socket *l*, and spring-grippers *k k*, with the gripper-carriage F and rack *m*, in the manner and for the purpose described.

10. The combination of the dies *m' n'* and cutters *a' c'*, all arranged and operating to nick the rod and sever the blank, in the manner and for the purpose substantially the same as described.

94,392.—George Anthony, Buchanan, Telford Station, Pa.—*Shaft-Coupling.*—August 31, 1869.

Claim.—The section *b* of a carriage-shaft or pole A, jointed to the axle, and having at its end a recess, in combination with a tongue, *c*, adapted to the recess in the section *b*, and with a spring, *h*, provided with a key, *f*, adapted to openings in the section *b* and tongue *c*, as set forth.

94,393.—J. S. Burch and J. O. Burch, Buffalo, N. Y.—*Window-Curtain Holder.*—August 31, 1869.

Claim.—The combination of the elastic rollers C C with tape or cord B and curtain-roller A, when con-

structed and operated as and for the use and purpose set forth.

94,394.—HENRY BURT, Newark, N. J., assignor to himself and LOVIAS D. TOWSLEY, same place.——*Globe-Valve.*—August 31, 1869.

Claim.—1. The double or split hand-wheel 5, combined with the compound stems 4 and 6, as specified and shown.

2. The spring E, in combination with the split or double wheel 5, and the compound stem 4 and 6, for the object set forth.

94,395.—HENRY BURT, Newark, N. J., assignor to himself and LOVIAS D. TOWSLEY, same place.—*Boiler-Feeder.*—August 31, 1869.

Claim.—The construction and arrangement of the cylinder *a*, pipes *h* and *m*, chests *i* and *c*, pipe *n*, chamber *y*, the valves *l*, *p*, and *e*, and cocks *r* and *s*, substantially as hereinbefore described.

94,396.—CHARLES W. CAHOON, Portland, Me.—*Locomotive-Engine.*—August 31, 1869.

Claim.—1. The adjustable friction driving-wheels connected to the locomotive, as set forth, and capable of an intermittent or continuous operation, as herein described.

2. The cylinder *c*, bell-crank *a*, and connecting-rods with crank-shaft C, driving-wheels D, and supplementary adjustable driving-wheels E E, when constructed and arranged as described.

94,397.—B. N. CARPENTER, Mount Jackson, Virginia.—*Vehicle.*—August 31, 1869.

Claim.—1. The adjustable friction-rollers a'', combined with the coupling-bar A, in the manner and for the purpose described.

2. The flexible band a', combined with the link *c* and hooked lever *b*, as and for the purpose specified.

3. The combination of the slide-bar f^2, bent lever h^2, hook n^2, and latch-bar c^2, for throwing on the shipper-lever, substantially as described.

94,402.—SAMUEL CURTIS, Lynn, Mass.—*Sea-Drag.*—August 31, 1869.

Claim.—A sea-drag, composed of the wooden base and raised portion *f*, constructed and united together by a system of metallic straps, radiating from the center of the drag, as described, in combination with the central eye-bolt, *c*, for receiving the end of the cable, said bolt being connected with the other parts of the drag, and stiffened in the manner shown and specified.

94,403.—CORNELIUS H. DE LAMATER, New York, N. Y.—*Steam-Engine Condensing-Apparatus.*—August 31, 1869.

Claim.—The construction and arrangement of the valves 1 and 2, in relation to the piston K, condenser M, hot-well O, and chamber N, as herein set forth.

94,404.—GEORGE W. DICKINSON, Charleston, Ill.—*Corn-Planter and Grain-Drill.*—August 31, 1869.

Claim.—The combination and arrangement of the corrugated wheel B, pivoted lever *a*, cross-head *c*, sliding bar D, lever *d*, strap *s*, roller *t*, cam *y*, and ratchet *v*, substantially as and for the purposes specified.

94,405.—GEORGE W. DOTY, Wooster, Ohio.—*Compound to be Applied to Fruit-Jars for Receiving Written Labels.*—August 31, 1869.

Claim.—The preparation of a wash to be applied to the surface of glass or metallic surfaces, the said wash being compounded substantially as described, and for the purpose set forth.

94,406.—SAMUEL M. FIREY, Clear Spring, Md.—*Seeder and Fertilizer Combined.*—August 31, 1869.

Claim.—1. In combination with short axles D D, the diagonal beams A^2, of the frame A, arranged above the axles, substantially as before described.

2. The combination of the short axles D D, the diagonal beams A^2, and the frame A, with the horizontal brace-rod E, arranged beneath and connected with the axles D, substantially as before described.

3. The elastic or yielding seeding-cylinder, substantially as before described.

4. An elastic and inelastic seeding-cylinder, constructed substantially as before described.

5. An elastic seeding-cylinder, having a fixed axis, and constructed with encircling iron bands and ribs, substantially as before described.

6. The addition, to the gum tube, of a flaring hopper-shaped mouth, also of gum, thus forming a pliable and yielding hopper, and facilitating the transmission of grain to the tube, substantially as before described.

7. The funnel or flaring mouth of the conducting-tube, secured to the case of the seeding-cylinder by means of a clasp, so that the tube may be removed at pleasure, substantially as before described.

8. The combination of a conducting-tube and funnel with the case of the seeding-cylinder and the hinged securing-clasp, constructed and arranged substantially as before described.

9. The double drag-bars, hinged, separately and directly, to the drilling-tube, and to the frame, thereby doubling the strength of the drag-bars, while two of them also serve as the tripping-levers of the drill-tube, substantially as described.

10. The adjustable notched carriage i^3, of the inner drag-bar I^1, in combination with the adjustable seat i^2, of the spring *h*, secured thereon, as described.

11. The stirrup *i*, capable of adjustment horizontally on the outer drag-bar I^2, to which it is also locked vertically, in combination with the adjustable carriage i^3, and the adjustable seat i^2, substantially as described.

12. The rock-shaft of the fertilizing-hopper, secured in oscillating seats or boxes, so as to allow it to be removed, with its arms, at pleasure, substantially as described.

13. The vibrating feeding-arms *m*, divided, so that each arm will form a pair, m^5, and vibrated, so that

94,398.—JESSE T. CLYMER, Galion, Ohio.—*Stove-Pipe Drum.*—August 31, 1869; antedated August 25, 1869.

Claim.—1. The foraminated valve G, when the same has its seat in the inverted cone F, and is operated by means of the rods H and K, levers I and J, and thumb-screw L, substantially as described.

2. The foraminated valve G, when the same is operated as shown, and is used in combination with a series of cones, E E^1 E^2, and axial rod D, when the whole is so united, combined, and arranged, as to operate substantially as described, as and for the purpose specified.

3. The conical sections A and A', foraminated valve G, rod D, cones E E^1 E^2, and ventilators N O, having valves *n o*, when the whole is so combined and arranged as to form a drum, substantially as described, as and for the purpose specified.

94,399.—PHILIP S. P. CONNER, Philadelphia, Pa.—*Pressure-Adhesive Gum for Envelopes, &c.*—August 31, 1869.

Claim.—An adhesive composition, consisting of the ingredients described, for the purpose specified.

94,400.—CHARLES H. CRANDALL, Stonington, Conn.—*Sail for Vessels.*—August 31, 1869.

Claim.—Constructing sails so that the seams shall radiate from the clews, substantially as and for the purpose specified.

94,401.—GEORGE CROMPTON, Worcester, Mass.—*Loom.*—August 31, 1869.

Claim.—1. In combination with the harness-frames, horizontal harness-levers, hooked jacks, inclined cording and pattern-mechanism, arranged substantially as described, the angular lifter, depressor, and eveners, when each evener (actuated by a connecting-rod from the crank-shaft, and pivoted at or near the cloth-making line) is connected to and actuates its lifter or depressor, (which are not so pivoted,) having guides thereon, by means of parallel links or pairs of links, (or when the lifter and depressor are so pivoted and are connected to sliding unpivoted eveners,) substantially as described.

2. In combination with the shipper-lever, the long slide-bar f^2 and incline k^2, for knocking off the shipper-lever, substantially as described.

each arm of the pair will only pass over one-half of the opening, to feed the fertilizer, substantially as described.

14. The combination of the removable rock-shaft m^2 and its oscillating boxes m^3 with the feeding-arms m, constructed and arranged substantially as described.

15. The fertilizing-arms m, operated by means of the elliptical groove or cam q^2, in connection with the radial arm q and the segment-pinions o and p, as herein described.

16. The slides of the fertilizing-hopper, operated, so as to increase or diminish the feed of the fertilizer, by means of the eccentrically-grooved pivoted plate, as herein described.

17. The expansible and contractible pulley constructed and operating substantially as described.

18. The expansible and contractible pulley, constructed in sections, in combination with the arms, to which they are hinged, substantially as described.

19. The sectional pulley, expanded and contracted, automatically, by means of a pendulous weight, or its equivalent, substantially as described.

20. In combination with a sectional pulley and its automatically-operating weight, the cam and the pivoted arms, arranged and operating substantially as before described.

21. The pendulous weight, made adjustable, in the manner and for the purpose herein described.

22. The expanding and contracting pulley M, in combination with the toothed wheels O and P, operating substantially as before described.

23. The combination of a hopper, for feeding continuously, with receiving-chambers, for discharging the corn at intervals, according to horizontal distance, substantially as before described.

24. The intermittently-feeding corn-chambers, suspended by means of a horizontal hinged bar, substantially as before described.

25. The combination of the intermittently-feeding wings of the corn-chambers with the toothed wheels O P and the sectional pulley, substantially as before described.

26. The sides of the intermittently-feeding chambers, hinged, so as to form a yielding side thereto, for the purpose of preventing the choking of the chambers, substantially as herein described.

27. The combination of an expansible and contractible pulley with a fixed case or guiding-plates and flexible supporting-arms, substantially as described.

28. The combination of the pendulous weight T, cam z, expansible and contractible pulley M, with the foot-lever 19, for the purpose described.

94,407.—GEORGE B. FITTZ, Louisville, Ky.—*Sorghum-Pan Skimmer.*—August 31, 1869.

Claim.—1. The combination of skimmers M, adjustable arms L L, and shaft I, adapted to be moved back and forth over the pan, substantially as described, all constructed and arranged to operate as set forth.

2. In combination with a pan, A, shaft I, arms L, and skimmers M, the slides C, shaft E, cranks G J, and connecting-rods H H, all constructed, arranged, and operated substantially in the manner described.

3. The pivoted arms N N, arranged and operating substantially as described, in combination with the reciprocating skimmers M, having slotted lugs S V, by which they are hung to the arms L, substantially as and for the purpose set forth.

94,408.—GREGORY GERDOM, Albany, N. Y.—*Fastening Metal Tubes to Glass Cups or Vessels.*—August 31, 1869.

Claim.—A fastening for metal tubes to glass vessels, consisting of the cup-shaped socket b secured to the tube B, and capable of receiving the neck a of the glass vessel, the end of the tube B being made to project through said neck, and turned out over its edge or shoulder, all as shown and described.

94,409.—HENRY GROGAN, Flatbush, N. Y.—*Still.*—August 31, 1869.

Claim.—1. The hot-water condenser G, in combination with the suspended drum C, pipe E, and the goose-neck of the still, whereby the water in said condenser is heated by means of the steam discharged from the drum, substantially as and for the purpose described.

2. The distillate-separator L, combined, substantially as described, with a siphon for discharging the liquids therefrom, and also combined with a vapor-discharge pipe, R, operating in conjunction with a steam-jet, T, substantially as above set forth and described.

3. The combination, with a condenser, of an overflow-pipe, V, for carrying off the surplus water from the tank of the condenser, and a vapor-discharge pipe, Y, whose discharge-end is inserted in the mouth of the overflow-pipe V, substantially as and for the purposes above described.

94,410.—FRIEDRIG GÜBSER, Newport, Ky.—*Railway-Frog.*—August 31, 1869.

Claim.—The switching-frog, constructed with the rails or tracks A and B, the former provided with the depression a and the elevated channel C, arranged and adapted to operate as and for the purposes set forth.

94,411.—JOHN T. HARRIS, Tyngsborough, Mass.—*Mode of Obtaining Fiber and other Products from the Maize-Plant.*—August 31, 1869.

Claim.—1. The cutting-frame, fixed or revolving or other frames or arms, either of plain or grooved faces, and whether a portion of a circle or a whole circle, either horizontal, vertical, or at any angle, as and for the purposes herein described.

2. The blades or cutting-arms, revolving as shown or fixed, and other arms or frames, revolving in contact with them, either horizontal, vertical, or at any angle, as and for the purposes herein described.

3. The relieving-screw, in combination with the shaft at one or both ends, as and for the purposes herein described.

4. The combination of the whole machine, substantially as herein described, for the purposes hereinbefore stated.

5. The apparatus, as shown in Figs. 1, 2, and 3, plate 3, to operate as herein described, and for the purposes set forth.

6. The apparatus, as shown in Figs. 3 and 4, plate 4, to operate as herein described, and for the purposes set forth.

7. The arrangement of the central pipe a', as in Figs. 1 and 2, plate 4, with its steam-jet and cone, to operate substantially as and for the purposes herein set forth.

8. The apparatus in the form shown in Figs. 3 and 4, plate 4, with its central tube, steam-jet and cone, and with or without the air-cone, and with its collectors, scum-ring, &c., substantially as and for the purposes herein described.

9. The collectors e'' h'', Figs. 3 and 4, plate 4, substantially as and for the purposes herein described.

10. The arrangement of the scum-ring, i'', Figs. 3 and 4, plate 4, substantially as and for the purposes herein described.

11. The cover with its escape-pipe u, and water-lute or joint v, as shown in Figs. 2 and 3, plate 3, and Fig. 4, plate 4, combined, arranged, and to operate as herein set forth.

12. The creating of a forced upward current or circulation in the liquid, by means of the steam-jet and cone, in one central, or any convenient number of tubes, either within or without the boiler or vessel, substantially as and for the purposes herein described.

13. Creating a forced downward current, by means of the steam-jet and cone, as herein shown in Figs. 2, 3, and 4, plate 4, and either with or without the air-cone, in one central, or any number of tubes, substantially as and for the purposes herein described.

14. Treating the maize or Indian-corn plant so as to extract, first, the glutinous and saccharine matter, and then the silica, substantially as and for the purposes herein described.

15. Treating the fibers from the said plant with alkali, after the said fiber has been separated from the gluten and saccharine matter, substantially as herein set forth.

94,412.—IRA HART, Clarksburg, West Va.—*Post-Hole Auger.*—August 31, 1869.

Claim.—The bowl B, provided with detachable cutters C, as shown and described, for the purpose specified.

94,413.—JAMES T. HARVEY, Murrysville, Pa.—*Vegetable-Cutter and Feed-Grinding Machine.*—August 31, 1869.

Claim.—The feed-preparing machine herein described, having cylinder C, knives K, band F, guides D, plate A, burr-stone I, and plate H, constructed and arranged substantially as specified.

94,414.—FRANK HUDNER, New York, N. Y.—*Car-Wheel and Axle.*—August 31, 1869.

Claim.—1. The jam-nut G, arranged as described, in combination with the screw-collar and wheel C, with threaded hub-extension E, for the purpose set forth.

2. The sleeve D, when made separate from the axle, substantially as herein described, in combination with the axle A, wheel C, and screw-collar F.

3. The washers *i i*, interposed between the wheel C and sleeve D, for the purpose set forth.

94,415.—D. W. JAMESON, Warren, Ohio.—*Machine for Grinding the Cutters of Mowing-Machines.*—August 31, 1869.

Claim.—The rod A, fastened to the top of the standards C C, and the manner of attaching the frame G, by means of slots in the arms B B, and operating conjointly, as and for the purpose substantially as set forth.

94,416.—MELVIN JINCKS, Wallace, N. Y.—*Plug Cutter.*—August 31, 1869.

Claim.—The combination of the bit-stock A, bit *b*, adjustable guide B, and cutter D, all constructed and arranged substantially as shown and described.

94,417.—JAMES A. JOHNSON, Pendleton, Ind.—*Corn-Planter.*—August 31, 1869.

Claim.—1. The combination and arrangement of the supporting-frame A, and hinged frame F, carrying the seed-boxes and bevel-wheels, for dropping the corn, substantially as shown and described.

2. The combination of the hinged frame F with the seed-boxes F′ and seed-wheels G, substantially as described.

3. The combination of the hinged frame F with the flexible tubes *g′* and drill-teeth K, substantially as shown and described.

94,418.—JOHN HENRY KELLER, Boalsburgh, Pa.—*Reel for Reaping-Machine.*—August 31, 1869.

Claim.—The reel for reaping-machines, herein described, suspended from the swinging frame C, and having band-wheels *a*, *d*, and *c*, bands *n* and *s*, ratchet-bar *u*, lever *y*, with its flanch *v*, and constructed and arranged substantially as specified.

94,419.—HENRY F. KING, New York, N. Y.—*Self-Closing Faucet.*—August 31, 1869.

Claim.—A faucet having a hollow rod, A, carrying a valve, bearing upward against its seat, in connection with the elastic packing *e*, which closes the valve with the assistance of the water, said rod acting as a handle, and forming a chamber for entrance of water when the supply is cut off, as herein described, for the purpose set forth.

94,420.—BENJAMIN S. LAWSON, New York, assignor to AUGUSTUS M. MILLER, Brooklyn, N. Y., and ALFRED GILL, Orange, N. J.—*Sash-Holder.*—August 31, 1869.

Claim.—The window-sash adjuster herein described, having elastic wedge *a* and roller *c* arranged in a slot, as described, substantially as specified.

94,421.—JOHN C. LOVE, Philadelphia, Pa., assignor to HOLMES, BOOTH, and HAYDENS, Waterbury, Conn.—*Lamp-Burner.*—August 31, 1869.

Claim.—The deflector F, with a flame-slot extending to the vertical portion of said deflector, or nearly so, in combination with the plates or dome J, to direct the air upon the sides of the flame, the deflector F setting closely around the dome J, substantially as and for the purposes set forth.

94,422.—WILLIAM E. LUDLOW, Cincinnati, Ohio, assignor to HENRY C. METCALFE, same place.—*Basket-Rest for Ladders.*—August 31, 1869.

Claim.—The removable rest or platform A B B′.

94,423.—WILLIAM E. LUDLOW, Cincinnati, Ohio, assignor to HENRY C. METCALFE, same place.—*Step and Extension Ladder.*—August 31, 1869.

Claim.—The parts C *c* D, composing a sliding joint for a step and extension ladder, as set forth.

94,424.—JOHN MATTHEWS, Jr., New York, N. Y.—*Tumbler-Washer.*—August 31, 1869.

Claim.—1. A tumbler-washing apparatus, constructed to operate as a pump on elevating and depressing the support which carries the tumbler, substantially as specified.

2. The combination of the stationary hollow ram G, the vertically-reciprocating barrel H, with their valves F I, the perforated distributing cap K, and the tumbler-guide and rest J J, essentially as described.

3. The tumbler-guide and rest J J, constructed to operate as an outside washer, in combination with the distributing-cap K, forming an inside washer to the tumbler, the pumping-barrel H, and the stationary hollow ram G, with their valves I and F, essentially as specified.

4. The combination, with the pumping-barrel H, and hollow ram G, of the column D, constructed and arranged for operation in connection with the tumbler-rest and inside and outside sprinklers or washers, essentially as described, and whereby the water to be used in washing and as fouled by washing is passed within and through or under cover of said operating column, substantially as herein set forth.

5. The combination of the spring M with the reciprocating barrel H, and stationary hollow ram G, essentially as specified.

94,425.—WILLIAM MATTHEWS, Vinton, Ohio.—*Horse Hay-Rake.*—August 31, 1869.

Claim.—1. The post *c*, with foot-piece c^2, when constructed as described, and arranged to operate in connection with the rake, in the manner set forth.

2. The frame B, rockers *a*, and foot-piece c^3, when combined and arranged in the manner and for the purpose set forth.

94,426.—GEORGE MCFEELY, Steubenville, Ohio.—*Steam-Pump.*—August 31, 1869.

Claim.—1. The tapering steam-pipe B, in combination with the curved pipes A A, joined at their upper and lower ends, for connecting with the suction-pipe and discharge-pipe, when arranged as shown and described.

2. The bush C, constructed and arranged substantially as shown and described.

94,427.—WILLIAM MCLUCAS, Wood Grove, Ohio.—*Sad-Iron Heater-Oven.*—August 31, 1869.

Claim.—1. The uprights or standards A A, when they are provided with a series of staples, *b′ b′*, plate B, and reflector C, when the latter is provided with a hinged back, C′, with or without the openings or slots D D and doors D′ D′, substantially as described.

2. The uprights or standards A A, having staples *b′ b′*, plate B, stationary reflector C, and movable reflector E, when the same are so combined and arranged as to operate substantially as described.

94,428.—ANSON C. MCMAHAN, Lincoln, Ill.—*Compound for Curing Cholera in Hogs and Chickens.*—August 31, 1869.

Claim.—The medical compound herein described, compounded in the proportions and in the manner substantially as specified.

94,429.—J. VAUGHAN MERRICK and W. H. MERRICK, Philadelphia, Pa.—*Hoisting-Apparatus.*—August 31, 1869.

Claim.—Duplex hoisting-apparatus, inclined or vertical, in which one car or hoisting-cage is caused, by the mechanism herein described, or any equivalent to the same, to arrest the other car or cage,

should the hoisting-rope of the latter break, all substantially as herein set forth.

94,430.—James A. Metcalf, Lawrence, Mass.—*Oiler.*—August 31, 1869.

Claim.—An attachment to oil-can tubes, or similar tubes of other vessels, consisting of a metallic plug, with a vent-hole, such plug forming, or inserted in the wide lower end of such tubes, substantially as and for the purpose set forth.

94,431.—J. A. Morgan, Bloomfield, Iowa.—*Parlor-Bedstead.*—August 31, 1869.

Claim.—The bedstead herein described, having case A, bedstead B, rods *c*, pins *s* and *a*, cranks *y*, and braces *v*, constructed and arranged substantially as specified.

94,432.—Robert Neale, Brooklyn, E. D., N. Y.—*Transfer Engraving.*—August 31, 1869.

Claim.—The method, herein specified, of engraving, by transfer, names and other lines of characters, by means of separate types mounted in a roller, fitted to clamp and hold the same, substantially as set forth.

94,433.—John H. Noakes, New York, N. Y.—*Skate.*—August 31, 1869.

Claim.—The central support *d*, provided with the key hole slot *m n*, in combination with the clamps *b b*, moving in dovetail grooves, and right and left screw *s*, with a groove *g*, at its center, all arranged, constructed, and operated in the manner and for the purpose set forth.

94,434.—Washington F. Pagett and Silas H. Gard, Springfield, Ohio. — *Garden-Plow.*—August 31, 1869.

Claim.—1. The foundation-plate C, constructed substantially as and for the purpose specified.

2. The arrangement and combination of the foundation C with beam A, plow P, scraper D, arm E, chafer F, and wheels W R, substantially as and for the purpose specified.

3. The arraugement of the cross-bar I and nibs H H, in connection with the standard or beam A′ when used in connection with a plow, substantially as and for the purpose described.

4. The combination of parts *i*, i^1, i^2, i^3, *t s*, *c*, R, constructed as described, and as specifically shown in Fig. 3, and for the purpose set forth.

94,435.—George N. Palmer, Greene, N. Y.—*Churn.*—August 31, 1869.

Claim.—1. The scraper *g*, substantially in the manner and for the purpose described.

2. The perforated tubes M M, substantially in the manner and for the purpose described.

3. The lid D, provided with tube E, and perforated tubes M M, in combination with the churn, substantially in the manuer and for the purpose described.

4. A churn, consisting of inuer and outer cases A B, lid D, tubes M M aud E, and dasher F, all combined, arranged, and operating substantially as set forth.

94,436.—L. F. Parker, Davenport, Iowa.—*Grain-Binder.*—August 31, 1869.

Claim.—1. The irregular spur-wheel B, constructed and operating substantially as and for the purposes described.

2. Spur-wheel S, constructed substantially as described, in combination with spur-wheel B, for purposes set forth.

3. Hollow rolliug-shaft X, of spur-wheel S, when used for passage of vibrating shaft of grain-holding concave E.

4. The shaft C, provided with arms *a* and *b*, operating substantially as and for the purposes described.

5. The vibrating concaves E and F, substantially as and for the purposes described.

6. Support T, for vibrating concave E, operating substantially as and for the purpose set forth.

7. Shaft C, arm *b*, rod *y*, crank *e*, pitman *h*, cranks *s*, *f*, and *q*, ou shaft *g*, pitman *i*, crank *f*, and spring Q, or their equivalents, arranged substantially as aud for the purposes described,

8. Arm K, revolving around coucave E, substantially as aud for the purposes described.

9. Spring P and strap I, wheu attached permauently to revolving arm K, or their equivalent, when used for clamping grain for binding, substantially as described.

10. Stop N and spring *s*, or their equivaleut, when used to sustain arm on binder, substantially as described.

11. Guard 12, or its equivaleut, over knot-tyer, to protect it from the coucave F, and grain.

12. The twine-holding nipple I, spool 10, and tension-spring 11, against its end, when arranged substantially as shown and described.

13. The looper 2, constructed substantially as and for the purposes described.

14. The spring 16, on face of hook on looper 2, or its equivalent, to hold ends of twine while loop is being drawn over them into kuot, substantially as described.

15. The circle 1, with outward and forward projecting points 7, to receive and conduct twine-slot 8, for looper 2, shaft 4, vertical groove on its periphery, and slot through projecting points 7, in which to receive cutter 14, and to assist in cutting off twine, substantially as described.

16. The looper 2 rolling shaft 4, and circle 1, rolling-shaft 3, arranged and operating substantially as described.

17. Stationary cutter 14, when operating in groove of circle 1, substantially as described.

18. The sliding rack P, when used to actuate knot-tying apparatus by cogs meshing into top and bottom of pinions 5 and 6, and the rod *d*, rock-lever C, and rock-lever O, used to slide rack P forward and back, when combined substantially as described.

94,437.—Ziba Parkhurst, Milford, Mass.—*Machine for Burring and Cleaning Wool.*—August 31, 1869.

Claim.—1. The arrangement of the rotary transferrer C with the burr-box *c*, the feed-rollers *b b*, and the receiving-cylinder B.

2. The arrangement of the beater D, the receiving-cylinder B, the feed-rollers *b b*, the burr-box *c*, and the transferrer C.

3. The combination and arrangement of a series of oblique ribs, (as shown at *h* or *h*′, and as above described,) with the receiving-cylinder B and the tumbler F, or with the card-cylinder H aud doffer K, the whole beiug substantially as and to operate as specified.

4. The combiuation and arrangement, as described, of either or both the rotary drums L M, with the card-cylinders F I H, and the two series of oblique ribs, the feed-rollers, burr-box *c*, and receiving-eard cylinder B, substantially as specified.

94,438.—Cyrus Phelon, East Granville, Mass.—*Ox-Yoke.*—August 31, 1869.

Claim.—The combination of the blocks D aud D′, with ledges *a* and *a*′, and the levers or cross-arms H and H′, and links I, the parts all being arranged and constructed as herein set forth, and for the purpose shown.

94,439.—David R. Quick, New York, N. Y.—*Journal.*—August 31, 1869.

Claim.—The arrangement of the journal-box and shaft herein described, consisting of the sections *a* and *c*, openings *s* and *v*, rings *y*, washer *h*, and nut *n*, with referenee to the shaft, substantially as specified.

94,440.—George H. Reister, Washington, Iowa.—*Rake for Harvesters.*—August 31, 1869.

Claim.—The combination and arrangement of the raker-bar *c*, spring *e*, cord *h*, and lever *g*, as and for the purposes herein recited.

94,441.—Henry Reynolds, Aurora, N. Y.—*Apparatus for Welding Chain-Links.*—August 31, 1869.

Claim.—The combination of the hammer J and its dies *a*, with the anvil P and its dies *c*, when op-

erating together, substantially as herein described, for welding and finishing welded links, as set forth.

94,442.—Alexander K. Rider, Elizabeth, N. J., assignor to C. H. De Lamater, New York City.—*Molding Screw-Propellers.*—August 31, 1869.

Claim.—1. Forming the parts E and G in sections or steps, adjustable one upon the other, so as to vary the length and pitch of the screw within wide limits, in the manner herein set forth.

2. In such adjustable frames E and G, making each lowermost step broader than those above it, so as to make the frame self-supporting, as set forth.

3. The self-supporting frames E, with their broad bases, as specified, formed separately, and applied together, to complete the mold, in combination with the supporting-ring *a* and hub *a'*, adapted to support the section, both vertically and radially, as and for the purposes herein set forth.

4. In combination with the provisions for molding screw-blades on frames E and G, as specified, the small striker C^2, serving, in combination with the main striker C, to produce the surfaces for molding the hub with spiral joints, as and for the purposes herein set forth.

94,443.—Thomas Robjohn, New York, N. Y.—*Pavers' Rammer.*—August 31, 1869.

Claim.—1. The adjustable or sliding frame G, in combination with the frame A, the lifting-arms D, and the rammers C, substantially as and for the purpose herein set forth.

2. The combination, with the frame A, of the platform *f*, having a hinged leaf, *f'*, substantially as and for the purpose herein specified.

3. The combination, with the frame A and the rammers C, of the pivoted support I and the studs *d*, substantially as and for the purpose herein set forth.

4. The supporting-tumblers *p p*, pivoted locking-hooks *q q*, and tripping-rods *r r*, combined for operation in connection with the notches *o o* and projections *d d* of the rammers, substantially as and for the purpose herein specified.

94,444.—Samuel P. Ross, Pittsburgh, and Niklaus Haller, Allegheny City, Pa.—*Corn-Sheller.*—August 31, 1869.

Claim.—1. The "curved spring" C C.

2. The slot C^1 in the stems *g* and *g'*, through which the pin C^4 passes.

3. The serrating of the oblique flanges in the "cob-jaws," that is, serrating one or more of the flanges with one or more teeth.

4. We do not claim the interlocking of the shelling-fingers, but we do claim terminating them in a pointed hooked form.

94,445.—Clinton H. Sage, Fulton, N. Y.—*Dumping-Car.*—August 31, 1869.

Claim.—1. The combined construction and arrangement of the revolving balanced frame B, covering and shielding the curved track A, on the car-truck, and the two counterbalancing car-boxes F F, substantially as herein specified.

2. The inclined journals on the axles D D, arranged, in relation to the conical friction-wheels C C and level track A, substantially as and for the purpose specified.

3. The fixed supporting-standards H H, arranged in combination with the car-boxes F F and brace-irons K K, on which the tail-boards M M are mounted, so as to raise said tail-boards as the car-boxes are tilted, and *vice versa*, substantially as set forth.

4. The employment of the pivot-shaft I, around which the car-frame B turns, for the additional purpose of a brake-rod or shaft, as specified.

94,446.—J. W. Sharrard, Samuel Bryan, and Howard Hunt, Janesville, Wis.—*Corn-Harvester.*—August 31, 1869.

Claim.—1. The arrangement of the guard F, attached, at its front end, to the thills, in the manner shown and described.

2. The knife-holders *o*, provided with a series of slots, for adjusting the knives at different heights, substantially as described.

3. The spring-guards G, having their free arm provided with a knife-edge, and arranged at a reverse angle to the knives E, as set forth.

4. In combination with the frame A of a corn-stalk harvester, the crane J, when arranged substantially as shown and described.

5. The combination of the adjustable knives E, spring-guards G, stationary guards F, and inclined reels H, all constructed and arranged to operate substantially as described.

94,447.—Joseph Sherman, Burlington, N. J.—*Extension-Table.*—August 31, 1869.

Claim.—1. An extension-table, in which adjustable leaves are hinged together, and are arranged to slide over guides, and assume either a horizontal or a vertical position, substantially as described.

2. The leaves *k*, hinged together and to opposite sides of the central portion B, and independent of the adjustable ends, substantially as specified.

3. The rounded surfaces *p* of the frame of the table, arranged, with respect to the extension-leaves *k*, substantially as specified.

4. The leaves *i i*, with their notches *x*, arranged with respect to the extension-leaves and to the guiding-surfaces *p*, substantially as herein set forth.

94,448.—Sigmund Simonson, Bridgeport, Conn.—*Pocket for Railway-Car Seats.*—August 31, 1869.

Claim.—1. The combination, with the back of a railway-car seat, of a pocket, which may be inverted when the back of the seat is reversed, substantially as herein described.

2. The combination, with the frame C, and with the back of the seat, of hinges *g g* and spring-latches *f f*, whereby provision is made for the inversion of the pocket when the back has been reversed, substantially as herein described.

3. The combination, with the pocket, of a spring-clamp or clamps D, for holding the traveling-ticket, substantially as specified.

94,449.—Samuel Strong, Washington, D. C.—*Letter-Box.*—August 31, 1869.

Claim.—The shaft C, with the blades E and F, cover G and handle D, all attached to said shaft, in combination with the aperture H, and a weight or weights to turn the said blades and cover back to their places automatically, as described, all being constructed, arranged, and operating substantially as set forth.

94,450.—A. H. Tait, New York, N. Y.—*Mode of Cooling and Freezing Liquids and other Substances.*—August 31, 1869; antedated August 24, 1869.

Claim.—The within-described process of cooling by the action of sulphurous acid, which is successively compressed into a liquid state, cooled, and then allowed to expand into a gaseous state, substantially in the manner set forth.

94,451.—Alvin Taplin and H. D. Bradley, Forestville, assignors to "The Bristol Brass and Clock Company," Bristol, Conn.—*Lamp-Burner.*—August 31, 1869.

Claim.—1. The wick-tubes A and B, constructed and arranged to overlap each other, at their edges, on opposite sides of the burner, for a portion of their length from the bottom of the latter, and shaped or bent above to form an annular wick-course, substantially as specified.

2. The combination, with the wick-tubes A and B, constructed substantially as described, and arranged to overlap each other on opposite sides of the burner, with an opening, *f*, in between them, of the single lifter E, set obliquely, as specified, in relation to said wick-tubes, and provided with feeders *g g* and *h*, for direct hold on the wicks at or near their edges, and for steadying grip or hold on the same in between such portions, essentially as herein set forth.

94,452.—William S. Thompson, Rochester, N. Y.—*Fruit-Jar.*—August 31, 1869.

Claim.—The combination, with the flanged glass top B C, of the threaded metal lining D, applied to the internal face of the flange C, and adapted to operate substantially as and for the purpose described.

94,453.—William T. Tibbals and Lyman B.

TIBBALS, Cobalt, Conn.—*Manufacture of Cow-Bell.*—August 31, 1869.

Claim.—The process of uniting or soldering the joints, while in the act of coating or galvanizing the bell, substantially as and for the purpose described.

94,454.—E. B. TYLER, Baltimore, Md.—*Marine Safe.*—August 31, 1869.

Claim.—The safe A, constructed as described, and provided at its upper end with the pins or projections H H, in combination with the buoy F and chain G, substantially as described.

94,455.—AMBROSE I. UPSON, New York, N. Y., assignor to WATERBURY BRASS COMPANY, Waterbury, Conn.—*Tin-Coated Eyelet.*—August 31, 1869.

Claim.—As an improved article of manufacture, tinned non-corrosive eyelets, substantially as herein specified.

94,456.—ELISHA WALKER and JOSIAH J. PIATT, La Porte, Ind.—*Cultivator.*—August 31, 1869.

Claim.—1. The mode of elevating and lowering the plows by the self-acting double eccentric M, substantially as set forth.

2. The mode of turning the shovels e^4 in or out by the double adjusters N N and single adjusters O O, substantially as set forth.

3. The combination of the tongue D, posts L L, braces *a a*, knuckle-joints J J, hinges E E, bars *b b*, self-acting double eccentric M, double adjusters N N, and single adjusters O O, respectively, constructed and arranged substantially as set forth.

94,457.—EDEMON WARD, Urbana, Ohio.—*Fruit-Picker.*—August 31, 1869.

Claim.—In a fruit-picker, constructed substantially as shown and described, the combination of the frames A B, spring *c*, stop C′, and socket D, all arranged to operate as set forth.

94,458.—W. G. WARD, New York, N. Y.—*Breech-Loading Fire-Arm.*—August 31, 1869.

Claim.—1. The stops *b b′* on the breech-pin, when constructed and operated substantially as and for the purpose shown and described.

2. The combination of the recoil-block and fluted trigger-bolt, substantially as shown and described.

94,459.—WILLIAM H. WELCH, Bloomington, Ill.—*Rotary Washing-Machine.*—August 31, 1869.

Claim.—1. A cylinder for washing-machines, constructed, as herein described, of the heads *a a*, troughs *d d*, and perforated tubes *e e* and *f f*, all substantially as and for the purposes herein set forth.

2. In combination with a wash-boiler, a revolving cylinder, when constructed substantially in the manner described, and for the purposes set forth.

94,460.—DENNISON WILLARD, Jr., Pittsford, N. Y.—*Mode of Cleaning Musty Beer and other Casks.*—August 31, 1869.

Claim.—As an improvement in the process of cleansing musty beer and other casks, the employment of the material herein set forth.

94,461.—JOSEPH PAGE WOODBURY, Boston, Mass.—*Railway Freight-Car.*—August 31, 1869.

Claim.—1. The cab N, when used in connection with the car A B and dray C D for the transportation of freight, substantially as set forth.

2. The flanged wheels K K, &c., in connection with the car-platform, substantially as described and for the purpose set forth.

3. The flanged wheels K K, &c., in connection with the dray-platform, substantially as described, and for the purpose set forth.

4. The combination of the windlass P and its rope with the sheave R, for the purpose of drawing the cab on to the dray, substantially as set forth.

5. The combination of the windlass P with the sheave R^2, for the purpose of drawing the cab from the dray to the car, substantially as set forth.

6. The combination of the dogs M M M, &c., or their mechanical equivalents, with the platform of the dray or car, substantially as described and for the purpose set forth.

7. The combination of the hooks L L′, or their mechanical equivalents, with the platform, substantially as described and for the purpose set forth.

94,462.—WILLIAM H. COWL, Brooklyn, N. Y.—*Ventilator for Windows.*—August 31, 1869.

Claim.—1. An improved ventilator for windows, formed by the combination of the metallic frame B, constructed as described, the glass panes C, stationary perforated plate D, and sliding perforated plate E, with each other, said parts being constructed and connected with the window-sash, substantially as herein shown and described, and for the purpose set forth.

2. Projecting one end of a glass window-pane outward or inward from the plane of the sash, for the purpose of obtaining an upward draught, substantially as herein shown and described.

94,463.—ADOLPHE AUBERT, Nogent-Le-Rotrou, France.—*Propeller for Vessels.*—September 7, 1869.

Claim.—The combination and arrangement, with relation to each other, of the propeller-shaft, the helix or blade arranged thereon, and constructed in the manner specified, and the cylinder, with a diameter equal to its length, fixed to and incasing the blade, as and for the purposes shown and set forth.

94,464.—FRANKLIN P. BAKER, Boston, Mass., assignor to himself and JAMES R. LOWE, same place.—*Animal-Trap.*—September 7, 1869; antedated September 4, 1869.

Claim.—An animal-trap, formed by the combination of boards A and D, constructed as shown, opening B, spits *a a a*, frame *m*, spring E, and bait and trip hook *g*, substantially as set forth and described.

94,465.—JAMES BAKER, Ijamsville, Md.—*Composition for Whitewashing.*—September 7, 1869.

Claim.—The combination of the within-named ingredients for the purpose specified.

94,466.—MOSES BECKER, Philadelphia, Pa.—*Stomach-Bitters.*—September 7, 1869.

Claim.—The within-described, my stomach-bitters, compounded of the ingredients, and in about the proportions, as described.

94,467.—N. P. BRADISH, Jerseyville, Ill.—*Sewing-Machine.*—September 7, 1869.

Claim.—1. The pitman D, with stud *d*, in combination with the slotted bar *f′* of the bar F, substantially as described.

2. The sewing-machine described, consisting of the table A, standard A′, arm B, needle-bar C, pitman D, shaft E, bar F, needle-bar I, adjustable fork J, and slotted arm K, when connected and combined as described, and operated in the manner and for the purpose set forth.

94,468.—FREDERICK H. BRINKKOTTER, Callahan's Ranch, Cal.—*Spoke-Tenoning Machine.*—September 7, 1869.

Claim.—1. The arrangement, between the sides A, of the blocks B B′ and *d*, provided with spaces to receive the spokes, and with set-screws *e′* and bolts *a*, to operate them, substantially as described.

2. In combination with the above-claimed device, the bar D, operated by the screws *g*, substantially as and for the purpose specified.

3. The combination and arrangement of the ring E, block F, wedges *h*, and screws *i*, substantially as and for the purpose set forth.

4. The arrangement of the block K, provided with axles *p*, bearing in the screw-plates *s*, and traversing in the slot *z*, substantially as and for the purpose set forth.

5. The combination and arrangement of the sliding block L, clamps *u*, and spring *w*, substantially as and for the purposes described.

6. The cap P, attached to the end of the spoke to guide the auger, substantially as described.

94,469.—HENRY L. BROWN, Adrian, Mich.—*Hand-Car for Railroads.*—September 7, 1869.

Claim.—The arrangement of the double clutch W, pinions U and V, crank-shaft R, and pinions S and T, substantially as and for the purpose set forth.

94,470.—ELISHA S. BURLINGAME, Uxbridge, Mass.—*Mechanism for Holding Bolsters in Spinning-Machines.*—September 7, 1869.

Claim.—The combination, with the bolster-rail, of the grooved bolster A and spring-collar B, when both are constructed and applied substantially as and for the purpose herein described.

94,471.—JOHN BURT, Detroit, Mich.—*Manufacture of Pig-Iron.*—September 7, 1869.

Claim.—1. The method of lining or spreading over the pig-bed or mold with oxidizing or carbonizing-agents, or a mixture of both, substantially as and for the purposes set forth.

2. The employment, with a series of non-communicating pig-molds, of a trough, whether movable or not, arranged to communicate with and conduct the molten metal to each mold separately, substantially as and for the purposes set forth.

3. The arrangement of the pig-molds in a vertical or inclined position, the same being filled by means of the trough, which is located above, and communicates with them, substantially as and for the purposes set forth.

4. The mixture, with the molten metal, of cast or wrought iron scrap, borings, or turnings, placed in or spread over the bottom of the mold, substantially as and for the purposes described.

5. The mode of cooling the iron and preventing the molds from burning, by passing water or other suitable liquid through one or more pipes inserted in or extending through the pig-bed or molds, from end to end, or by surrounding the molds wholly or partly with water, substantially as herein set forth.

94,472.—HENRY W. CAREW, Norwich, Conn.—*Weather-Strip.*—September 7, 1869.

Claim.—The elevator *d*, and the groove *g*, in combination with the plate *c*, the molding *e*, with its recess *e'*, and the door *a*, all constructed, arranged, and operated substantially as and for the purpose specified.

94,473.—AARON CHANDLER, Davenport, Iowa.—*School-Desk and Seat.*—September 7, 1869.

Claim.—1. The standards S S, provided with the slotted or wedge-shaped lugs C, in combination with the arms B of the seat H, constructed as herein described, for the purposes specified.

2. The automatic locking-device N, when used in combination with the book-box A and slotted standard S, constructed and arranged to operate as herein described, for the purposes specified.

94,474.—E. C. CHAPMAN, Lacon, Ill.—*Stove-Pipe Thimble.*—September 7, 1869.

Claim.—1. The cylinder A, provided with springs *c c* to receive the stove-pipe in place, substantially in the manner described.

2. A stove-pipe thimble, consisting of cylinder A, springs *c c*, caps D D', and levers *e*, all combined, arranged, and operating substantially in the manner and for the purpose described.

94,475.—CHARLES H. COLLINS and W. B. MCCLURE, Alexandria, Va.—*Apparatus for Emptying Sugar-Kettles.*—September 7, 1869.

Claim.—A dipping-kettle, provided with a valve, operated by a lever, when used in connection with a boiling-kettle, substantially as and for the purpose described.

94,476.—JOSEPH W. CREMIN, New York, N. Y.—*Gas-Burner.*—September 7, 1869.

Claim.—As a new article of manufacture, the burner A, provided with horizontal slots *a b c d*, as and for the purpose described.

94,477.—LUTHER C. CROWELL, West Dennis, Mass.—*Stove-Polishing Brush.*—September 7, 1869; antedated August 25, 1869.

Claim.—As an article of manufacture, a stove-polishing brush, composed of one or more body-pieces 1 2, in combination with polishing-surface P P or its equivalent, covering A, and sleeve B, substantially as described, for the purposes specified.

94,478.—N. C. DAWSON, Steele's Post-Office, Ind.—*Seeding-Machine.*—September 7, 1869.

Claim.—The hinged beams C C, furnished with standards G, in combination with seed-boxes H, bar F, slides *m*, lever *j*, rod *k*, and springs *s*, the whole constructed, arranged, and operated substantially as described.

94,479.—FRANK W. DE SPESSBOURG, Province of Normandy, France.—*Process of Preparing Grain for Mashing.*—September 7, 1869.

Claim.—The use of chlorine-gas, or any of its equivalents, the hypochlorites (commercially called chlorides) of lime, soda, potash, and magnesia, in whatever way produced, for the purpose of preparing (disintegrating) corn (maize) meal, or the meal of any other grain, by soaking it in an aqueous solution of any one of the above-said substances, preparatory to boiling it in the mash-tub; or, without previously soaking it, by treating the grain with any one of the said substances at a higher temperature in the mash-tub, while heating and boiling it, as above specified.

94,480.—NORMAN EATON, Woburn, Mass.—*Hay-Spreaders.*—September 7, 1869; antedated April 14, 1869.

Claim.—1. The combination, in a hay-tedder, of the following parts, viz: a stripper, revolving on a fixed center, the forks, when projected and retracted through said stripper, and springs so arranged as to allow the forks to yield when they come in contact with obstacles, operating substantially as described, and for the purpose set forth.

2. The fork-bar *f*, when arranged to turn in bearings near its ends, and held in position by a spring, connected to it in such a manner as to allow the bar to turn to its bearings, but tending to bring it back to its working position, substantially as described, and for the purpose set forth.

3. The combination, in a hay-tedder, of a revolving head or arms, to carry the fork-bars, the fork-bars *f*, for supporting the forks *i i*, and a spring, so arranged as to hold the bar in proper working-position, allowing it to yield or turn, to prevent the forks from breaking when they come in contact with rigid obstacles, and returning the arm from any angle to which it would be bent by the obstacle to its proper working position, substantially as described, and for the purpose set forth.

4. The bars *f f*, when arranged to approach and recede from the circumference of the head D, in combination with the forks *i i*, and springs, arranged to allow the teeth to yield, substantially as and for the purpose set forth.

5. The forks *i i*, so arranged as to yield when they come in contact with rigid obstacles, in combination with the revolving stripper-bars E, through which the forks operate, the fork-bars *f*, arranged to play in slots *u u*, the connecting-arms *k k*, and the eccentric-shaft *e*, operating substantially as described, and for the purpose set forth.

6. The combination, in a hay-tedder, of the forks *i' i'* with a coil-spring at or near their base, the coil and forks being constructed of separate pieces of wire, so that the forks may be readily removed, substantially as described.

7. The coil-springs on the bars *f*, so arranged that a single spring may hold several forks in position, substantially as described, and for the purpose set forth.

94,481.—EMILE ENETE, Catahoula Parish, La.—*Cotton-Cultivator.*—September 7, 1869.

Claim.—The combination of the barring-off plows F F', and the cutter or knife K, with the covering-plows Y Y', when these parts are constructed, arranged, and operate substantially as described, for the purpose set forth.

94,482.—WILLIAM A. ESTES, South China, Me.—*Revolving Cultivator.*—September 7, 1869.

Claim.—The larger cultivator herein described, in combination with the smaller cultivators, placed entirely within the larger one, all arranged substantially as described.

94,483.—JACOB S. EVANS, Berkeley, Mass.—*Dumping-Tub.*—September 7, 1869.

Claim.—1. The combination and arrangement of

the bolt S with its tail R, rod C, and link T, constructed and arranged to operate substantially as described, for the purpose set forth.

2. The unlocking or releasing the dumping-pan or tub, by means of the rope or guy used to steady the pan or tub out or in, substantially as described.

94,484.—James A. Fleming, Shamberg, Pa.—*Wrenches for Elevating Pump-Tubes.*—September 7, 1869.

Claim.—A swinging-wrench head, having a slotted aperture for the reception of a coupling-rod or tube, in combination with a lug, *e*, for closing such aperture and holding the rod in place while being raised or unjointed, substantially as above set forth.

94,485.—David S. Gardner, Bristol, Md.—*Dumping-Wagon.*—September 7, 1869.

Claim.—1. The construction of the rails G, of wood, for dumping-wagons, with sides partially covered with sheet-metal, as described above, for the purpose of affording channels for friction-rollers, as above set forth.

2. The arrangement of the friction-rollers P, as constructed, and operating in channels in the rails G, and in the slots O, for the purpose above mentioned.

3. The arrangement of the friction-rollers R, as constructed, upon shaft Q, and operating in channels at the rear end of the rails G, for the purpose aforesaid.

4. The arrangement of the hooks E, as constructed, and for the purpose before named.

5. The arrangement of the shaft L, the lever M, and tripping-lugs N, as for the purpose aforesaid.

6. The arrangement of the metallic straps I, constructed and operating as above described.

7. The arrangement of the upper rails A, the guides C, and the ears F, as and for the purpose aforesaid.

8. The combination of the upper frame A B, provided with the guides C, hooks E, and ears F, with the lower frame G H, provided with the friction-rollers P and R, shaft Q, metallic straps I, shaft L, lever M, and tripping-lugs N, in combination with suitable running-gear of a wagon, and operating as before mentioned.

94,486.—S. J. Genung, Waterloo, N. Y.—*Extension-Table Slide.*—September 7, 1869.

Claim.—1. The construction of the slides B B′, with the central tongues *f*, or equivalent, for separating the bars, and the dovetailed or wedging lugs *g*, for attaching the slides to the wood, substantially as described.

2. In combination with the outside slides B B′ the central connection *a b*, substantially as described.

94,487.—Edward H. Graves, Chicago, Ill.—*Folding Baggage-Check.*—September 7, 1869.

Claim.—The folding check-case A A, arranged to swing open parallel with its flat sides, on the pivot F, and provided with grooves for the opposite edges of the slides to shut into, with a chamber inside for receiving a check, and openings for showing the letters marked on the check, and with an opening through which a strap, fastened by the pivot F, is put to hold the check in the case, as set forth.

94,488.—Benjamin D. Gullett, Amite City, La.—*Cotton-Gin.*—September 7, 1869.

Claim.—1. Combining, with a cotton-gin, a drawer hinged and secured as shown, for the purposes herein fully set forth.

2. In combination with the shaft supporting the same, the boxes, sliding plates, provided with the wedges, set-screws, and plates of metal, constructed and operating substantially as and for the purposes set forth.

94,489.—Lewis Guthrie, Waterloo, Ind.—*Corn-Plow.*—September 7, 1869.

Claim.—The curved supports C C, provided with slots G G, in combination with the handles B B, the beam A, the sheath D, and the brace J, when the said sheath D is so constructed as to carry and operate plows or moles of different forms of construction, substantially in the manner and for the purposes herein set forth.

94,490.—Lewis Guthrie, Waterloo, Ind.—*Double Corn-Plow.*—September 7, 1869.

Claim.—1. The head-block H, as and for the purposes set forth.

2. The combination of the head-block H, the sub-beams D D, and the posts C C, with the sheaths I I, the reversible plows E E, and guards G G, in the manner and for the purposes herein specified.

3. The combination of the posts C C, sub-beams D D, and handles B B, substantially as set forth.

94,491.—Frank A. Hill, Marysville, Cal.—*Gang-Plow.*—September 7, 1869.

Claim.—1. In combination with the extended arms D of the crank, and connecting-bars I, the bent shaft G, turning in boxes F F, said shaft being rotated by a sweep, K, substantially as and for the purpose above described.

2. The wrought-iron vertical standard *b*, dovetailed into the landside of the plow, substantially as and for the purpose above described.

3. Securing the timbers E and pole P to the cross-bar C, by means of the iron bar *g* and bolts *i*, so that they may be adjustable, substantially as set forth.

94,492.—George James Hinde, Wolverhampton, England.—*Coating Iron or Steel with Copper or Brass, or other Alloys of Copper.*—September 7, 1869; patented in England, February 26, 1869.

Claim.—1. The improvements hereinbefore described in coating iron or steel with copper or brass or other alloys of copper, that is to say, coating iron or steel with copper or brass, by giving to the said iron or steel a coating of an alloy of copper and zinc, the proportion of zinc in the said alloy being so great that the said alloy differs but little in fusibility and other physical characteristics from zinc, and afterward volatilizing, by heat, the zinc of the said alloy, either wholly or in part, and thereby leaving upon the said iron or steel a coating of copper or brass, substantially as described.

2. The modifications described with reference to the coating of iron or steel, previously coated with tin or terne metal, and the modifications described, when it is wished that the final coating shall contain, in addition to copper or copper and zinc, tin or terne metal.

3. The use of a film of powdered calcined flint or other finely-divided substance, for protecting the alloy-coated iron or steel from injury and oxidation during the volatilization of the zinc or other volatile metal contained in the coating.

94,493.—Benjamin Hinkley, Troy, N. Y.—*Roofing-Material.*—September 7, 1869.

Claim.—The improved roofing-material, made and applied as herein described.

94,494.—Robert Hitchcock, Springfield, Mass.—*Car-Ventilator.*—September 7, 1869.

Claim.—1. The ventilator-case A, formed with opening D, communicating with the car, center-piece F, and eduction-openings E and E, and with or without the curved piece G, the parts being constructed and arranged together substantially as herein set forth, and for the purpose described.

2. A car-ventilator for the sides of a car or raised roof, in which the only eduction-ports are placed at the bottom of the case, substantially as shown.

94,495.—George Edward Hopkins, Harwich, Mass.—*Plastic Cement.*—September 7, 1869.

Claim.—The cement or compound formed by the combination of the several ingredients herein specified, substantially in the manner and for the purpose herein described.

94,496.—John Hughson, Buffalo, N. Y.—*Animal-Trap.*—September 7, 1869.

Claim.—The combination of the perpendicularly-suspended trap-door or doors A A, horizontal trap-doors B B, and letting-out and killing arrangement D, the same to be constructed and to operate as and for purpose set forth.

94,497.—John Lueth.—Kankakee, Ill.—*Cultivator.*—September 7, 1869.

Claim.—1. The wedge-shaped plate I, provided

with grooves *h h*, in combination with the grooved back-plate *n*, shovel H, bolt *m*, and standard G′, as set forth.

2. The reversible stirrups F, provided with pivots *b b′*, placed at one side of their center, in combination with the beams G, standards G′, shovels H, depending standards B, and vertical parts B′ of the elevated axle, as and for the purpose set forth.

94,498.—ADIN T. MANLY, Buffalo, N. Y.—*Steamer for Agricultural and other Purposes.*—September 7, 1869.

Claim.—The construction and combination of the corrugated fire-box H with the filling-tube E and conducting-pipe D, arranged substantially as herein described.

94,499.—MOSES S. MARSHALL, Somerville, assignor to JOHN T. and JOHN S. FOLSOM, Boston, Mass.—*Washing-Machine.*—September 7, 1869.

Claim 1.—The construction of the hollow journal, with its aperture *x*, and cap or valve N, in combination with the angular pipe I, and the operating-cylinder A, as shown, and for the purpose specified.

2. The combination of the pipe I, box K, collar M, and nut N, with the heads H and O, as shown and for the purpose set forth.

3. The general construction and arrangement of the hereinbefore-described device, consisting of the cylinder A, provided with the opening B, the slide C, the heads D and H, the journals E, the boxes F and K, the pipe I, the false and perforated heads L and O, the collar M, the valve N, the corrugated ribs P, and the crank R, substantially as and for the purpose specified.

94,500.—DANIEL MOORE and EDWIN MOORE, Brooklyn, E. D., N. Y.—*Saw-Frame.*—September 7, 1869.

Claim.—The stretcher *f*, formed as an arch, and united to the inverted arched stretcher *g*, in combination with the frames *a b*, and tightener *d*, as and for the purposes set forth.

94,501.—BERNARD MORAHAN, Brooklyn, N.Y.—*Wash-Tub.*—September 7, 1869.

Claim.—The ceramic wash-tub herein described, having the front side inclined and ridged, and adapted to serve as a wash-board, as set forth.

94,502.—DANIEL NEWTON.—Southington, Conn.—*Animal-Tedder.*—September 7, 1869.

Claim.—The combination of the cylinder A, arm B, box D, and grooved collar E, all constructed and arranged to operate in the manner shown, and for the purpose set forth.

94,503.—WILLIAM T. NICHOLSON, Providence, R. I., assignor to the NICHOLSON FILE COMPANY, same place.—*Rasp.*—September 7, 1869.

Claim.—The improvement in rasps, which consists in making the cutting-edges of the several teeth thereof in the form and of the character substantially as herein described, for the purpose of enabling each of such teeth to exert a shearing-cut, when applied to use as set forth.

94,504.—ARTHUR F. NOYES and N. D. BEECROFT, Bangor, Me.—*Hand-Weeder.*—September 7, 1869.

Claim.—The hand-weeder, when constructed and arranged to operate substantially as described and shown.

94,505.—HENRY C. OVERMAN, Chicago, Ill., assignor to himself and JOHN Q. A. CROSSBY, same place.—*Sleigh-Shoe.*—September 7, 1869.

Claim.—A sleigh-shoe, constructed with the recess A, for the purpose of fastening the same to the sleigh-runner, substantially as specified and shown.

94,506.—ROBERT D. OZBURN, Lena, Ill.—*Churn.*—September 7, 1869.

Claim.—1. The arrangement, as set forth, of the concentric dasher-shafts, the casing, the driving-pinions, and the interposed driving-wheel mounted on an arm projecting from the casing.

2. The arrangement of the concentric dasher-shafts, their pinions, and the open-sided pinion-boxes, all constructed as set forth, for joint operation.

3. The combination of the concentric dasher-shafts rotating in opposite directions, the casing and the pinion E, from which both shafts are suspended, all these parts being constructed as set forth for joint operation.

94,507.—JOEL PATRICK, Pitt County, N. C.—*Pump.*—September 7, 1869.

Claim.—The square piston C, (having a tapering seat for valve *g*,) when made adjustable expansively by means of pieces *i*, their slots and set-screws, as shown and described, and for the purpose set forth.

94,508.—JOSIAH S. PHILLIPS, San Francisco, Cal.—*Apparatus for Assaying and Testing Ores and Metals.*—September 7, 1869.

Claim.—1. The stand, consisting of the pedestal A, hollow connecting-vessel D, box C, and plate E, substantially as above described.

2. The boxes B B, secured in the pedestal A, for the purpose of containing the various fluxes required during the assay, substantially as herein described.

3. The diagonal pipe I, with its valve J, in combination with the tube K, for introducing air into the water in the chamber D, substantially as and for the purpose above described.

4. The flat spring L′, in combination with the pointed ridge L, for compressing the tube, and preventing the return of the air or water, substantially as herein set forth.

5. The conical cup X, with its inverted siphon X′, when placed in the chamber D, substantially as and for the purpose herein set forth.

6. The column or cylinder F, when used either with the bottom G, with its upward-lifting valve H, as a receiver of the water when it is forced upward by the air introduced in the chamber, and the small hole *a′*, for permitting it to flow back more equally to produce a pressure, or when used in combination with the sieve *m*, for mixing and sizing the pulverized ore, substantially as herein set forth.

7. The metal plate N, with its three or more upward-projecting wick-holders *a a a*, said plate being movable by means of a lever, O, by which the wicks are shifted so as to produce a reducing or oxidizing-flame at pleasure, substantially as herein described.

8. The three or more tuyeres or nozzles P P P, communicating with the interior of the chamber D, and through which the air is forced against the flames for the purpose of propelling them against and upon the assay, substantially as described.

9. The assaying-cup Q, with its long stem Q′, the lower end of said stem being formed into a screw, substantially as and for the purpose herein described.

10. The upper and lower sets of universal joints, consisting of the arms R, circular plate S, gimbals T, or other equivalent joint-rings U, and elevating and depressing springs V, the whole constructed and arranged substantially as and for the purpose herein described.

11. The fingers *b b*, attached to the end of the band Z, for suspending a piece or pieces of charcoal or other required material, above the assay, substantially as and for the purpose herein described.

12. Suspending a piece or pieces of charcoal, *d*, above the assay, for the purpose of intensifying and equalizing the heat on the assay, substantially as described.

13. The weighing-device, consisting of the long scoop-shaped lever *f*, balanced by means of weights, upon sharp bearings, for the purpose of weighing the ore, and the button after the assay, substantially as set forth.

14. In combination with the beam *f* of a weighing-device, a scale or series of scales, each scale corresponding with weights *h*, whereby the number of dollars per ton the ore from which the button was taken will yield, can be read from the scale by merely balancing the button on the beam, substantially as herein described.

15. In combination with the apparatus hereinbefore claimed, for producing a blast, the bellows *i*, operated either by the foot or hand, substantially as and for the purpose herein described.

16. The expelling-tube *n*, with its recessed rims, said tube being filled with bone-ash concaved at both ends, substantially as and for the purpose described.

17. The metal plate *p*, having the graduated holes *r*, each hole being marked to represent the ounces or money-value, per ton, the ore will yield, said value being found by passing the button through the hole, substantially as described.

18. The diverging strips of metal *v*, placed on a bed-plate, *y*, and graduated to the dollar or ounce value per ton, or other coin-value, substantially as herein described.

19. A portable automatic assaying-apparatus, constructed and arranged to fold within the space herein specified.

94,509.—JOHN PICKLES, Wigan, England.—*Process of Concentrating and Granulating Saccharine Liquids.*—September 7, 1869.

Claim.—The process of placing saccharine liquids in the proper position, and then allowing them to fall through a strainer, &c., through the proper height, wherein the atmosphere has been previously properly heated, substantially as and for the purposes set forth.

94,510.—DAVID PIERCE, Woodstock, Vt.—*Construction of Ships.*—September 7, 1869.

Claim.—The construction of an air-tight apartment, one or more, next above the water, in place of what is commonly called the hold in ships, to be so made as to admit or exclude water and air, either or both, and control them by means of divisions in the air-tight apartment, so constructed as to admit of being wholly or partially filled with air, by a forcing-air-pump, through stop-cocks inserted through the deck.

94,511.—J. P. PULTZ, Plantsville, Conn.—*Paper-Bag Machine.*—September 7, 1869; antedated September 1, 1869.

Claim.—1. The combination of the former A, guides *a a*, paste-dish *b*, former B, inclined plane C, guides *c c*, float D, guides *h*, weight E, feed-rollers F F, float G, shear-blades K^1 K^2, fingers *v v v*, conveyor *w*, table V, pasting-trough O, plate U, recess W, and folder A′, substantially as described, and for the purposes set forth.

2. The combination of the former A, guides *a a*, paste-dish *b*, former B, guides *e e*, inclined plane C, float D, guides *h*, weight E, feed-rollers F F, float G, and shear-blades K^1 K^2, substantially as described and for the purposes set forth.

3. The combination of the conveyor *w*, table V, pasting-trough O, plate U, recess W, and folder A′, substantially as and for the purpose described.

4. The combination of the float G and a cutting-off device, substantially as described, and for the purposes set forth.

5. The combination of the pasting-trough O, plate U, table V, and recess W, all arranged and operating substantially as and for the purposes described.

94,512.—GEORGE W. RAWSON, Cambridgeport, assignor to himself and MICHAEL HITTINGER, Somerville, Mass.—*Device for Aiding Combustion in Steam-Generators.*—September 7, 1869.

Claim.—The air-blast wheel and its case, *d*, as arranged outside of and separate from the furnace, and connected therewith by means of a conduit, *f*, opening into the ash-chamber *g*, and also by a conduit, *c*, opening out of the chimney or discharge-flue of the furnace, as set forth.

94,513.—JAMES V. B. REMSEN, New York, N. Y.—*Brick-Kiln.*—September 7, 1869; antedated August 27, 1869.

Claim.—The arrangement, herein described, of a series of chambers around a central fire, so that the operation of charging, burning, and removing the bricks or other articles can be performed successively, substantially as specified.

94,514.—WILLIAM RICHARD, Clyde, Ohio.—*Pruning-Shears.*—September 7, 1869.

Claim.—The slotted blade A, pivoted to the blade B, and provided with hook E, in combination with lever D and handles P and F, substantially in the manner and for the purpose described.

94,515.—M. A. RICHARDSON, Sherman, N. Y.—*Washing-Machine.*—September 7, 1869.

Claim.—The combination of the frame B, standards B^1 B^2, rollers C and E, springs D D^1, facing b^4, knob *d*, journal *c*, slots b^1 b^2, staple b^3, and cleats F G, substantially as and for the purpose set forth.

94,516.—BENJAMIN ROBINSON, Boston, Mass.—*Railway-Rail Splice.*—September 7, 1869; antedated August 21, 1869.

Claim.—1. The railroad-rail, formed at the end with a lateral bevel, as shown *x y y′ x′*, with mortises and tenons on the beveled side, when arranged to keep the inclined planes *y y′* in contact with each other, by means of compensating inclined planes *g h*, substantially as described.

2. The railroad-rail, formed at the end with a lateral bevel, when a mortise or tenon, or both, are arranged upon the beveled side, to lock with a corresponding mortise or tenon, or both, in the abutting rail, substantially as described.

94,517.—LYMAN M. SEVERANCE, Dixon, Ill.—*Platform-Scale.*—September 7, 1869.

Claim.—The combination of the connecting-pieces C, levers A and B, and rod E, when constructed and arranged substantially as and for the purposes described and set forth.

94,518.—JASPER HAMET SINGER, New York, N. Y.—*Treadles for Machinery.*—September 7, 1869.

Claim.—The combination of the stand, rotating cranked treadle-shaft, and belt-pulley, the whole constructed to operate substantially as before set forth.

94,519.—JOEL E. SLEGEL and ELI SLEGEL, Reading, assignors to themselves and JOHN K. HERTS, Lancaster County, Pa.—*Stay and Guide-Bar for Elliptic Springs for Vehicles.*—September 7, 1869.

Claim.—A stay and guide-bar, G, disconnected from the head-block E, and provided with open foot-clamps *g* of one piece, substantially in the manner and for the purpose shown and set forth.

94,520.—CHARLES E. SMITH, Columbus, Ohio.—*Brad-Setter.*—September 7, 1869.

Claim.—1. A case for carrying a stock of glaziers' "brads" or "points," constructed so as to be attachable and removable from the brad-driving apparatus, substantially as and for the purpose set forth.

2. The combination of the removable case P, the tube M and its pressing-devices, and the locking-piece R, substantially as shown and set forth.

94,521.—TIMOTHY R. SMITH, San Francisco, Cal.—*Carriage-Wheel.*—September 7, 1869.

Claim.—1. The construction and arrangement of the parts forming the hub, namely, the flanged side B, cap D, segments *g′*, and the flanged segments *g*, provided with recesses to form openings for the spokes, all secured together by the bolts K, substantially as described.

2. In combination with the above-claimed hub, the packing-rings *i* and *i′*, arranged substantially as described.

3. The elastic washer formed of the ring G, having projections *n*, the elastic ring *i″*, and the cap I, arranged and applied substantially as described.

94,522.—HENRY SPILLMANN, New Orleans, La.—*Truss.*—September 7, 1869.

Claim.—The metallic frame A, when provided with the notched levers C C′, and otherwise fitted and constructed as herein described, in combination with an elastic body-band or belt, to which the plates D D′ are secured, when these plates are provided with the pins *b b′* and the elongated apertures *c c′* substantially as herein described, for the purpose set forth.

94,523.—PETER A. STEWART, Lucesco, Pa.—*Governing-Device for Steam-Engines.*—September 7, 1869.

Claim.—The steam-chamber B and piston C, in

combination with the steam-chest A, for operating a governor-valve in the steam-supply pipe, as herein described.

94,524.—W. H. SULLENBERGER, Harrisburgh, Pa.—*Combined Knob-Latch and Lock.*—September 7, 1869; antedated August 25, 1869.

Claim.—1. The escutcheon lever C H E E′, when pivoted at D and made to vibrate between the projections *a a′*, substantially as and for the purpose herein set forth.

2. The latch V, provided with recesses 3 4, notches 1 2, and tooth *p*, in combination with lug F, pin *m*, and guard *o*, all arranged to operate substantially as and for the purpose set forth.

3. The escutcheon E E′ *n* of the lever C H, in combination with key-bit L, arranged to operate substantially as and for the purpose set forth.

94,525.—JOHN W. SWALES, San Francisco, Cal.—*Railway-Car Brake.*—September 7, 1869.

Claim.—1. The sliding frame D, operated by the lever E, and spring *g*, and carrying the pulley *a* and pinion *d* upon the shaft *b*, substantially as and for the purpose above described.

2. In combination with the sliding frame D, carrying the pulley *a* and pinion *d*, the arrangement of the endless chain *f*, upon the pulleys *a* and *e*, whereby said chain is tightened at the same time that the pinion *d* is thrown into gear, substantially as described.

94,526.—ZARA TOUSEY SWEET, Davisville, Cal.—*Mail-Bag.*—September 7, 1869.

Claim.—The combination and arrangement of the cover B, encircling-wire *a*, and lock D, substantially as and for the purpose set forth and described.

94,527.—ALBERT L. TAYLOR, Springfield, Vt.—*Clothes-Drier.*—September 7, 1869.

Claim.—A clothes-horse or frame, with the movable sides or wings A A, uprights B B, and end-braces *f f*, when arranged to operate as and in the manner described.

94,528.—A. B. THOMPSON, Owego, N. Y.—*Railway-Rail Chair.*—September 7, 1869.

Claim.—The combination of the hook-key A and the pin D, arranged, in relation to the chair and rails, in the manner and for the purpose herein specified.

94,529.—WILLIAM P. TROWBRIDGE, Newtown, N. Y.—*Bridge.*—September 7, 1869.

Claim.—The construction of bridges substantially in the manner and for the purposes herein shown and specified.

94,530.—INGLIS WALKER, Lynn, Mass., assignor to himself and WILLIAM R. BARNARD, same place.—*Railway-Car Brake.*—September 7, 1869.

Claim.—1. The bar D, in combination with shaft R, having drum H, toothed gears *g* and *o*, and wheel *h*, and spring E, as means of setting the brakes of a car, operating substantially as set forth.

2. The combination of the above devices with cord S, pulley *t*, and the brakes of a car, substantially as described.

94,531.—ADDISON G. WATERHOUSE, San Francisco, Cal.—*Overshoe.*—September 7, 1869.

Claim.—The elastic opening in the heel of the overshoe, and the flange, made for the purpose of clasping tightly around the heel of the boot or shoe upon which the overshoe is worn, for the purposes and in the manner substantially as above set forth.

94,532.—JAMES WEBSTER, Birmingham, Great Britain.—*Metallic Alloy for Filtering Oils, and for the Manufacture of Paints, Cements, &c.*—September 7, 1869.

Claim.—1. The mode of producing the improved metallic alloy.

2. Its application, in a solid or pulverized form, as a filtering-medium, for refining oils and spirits.

3. Its use and application as a cement or coating, for preserving wood, stone, and other materials.

4. Its application for preventing the oxidation of iron surfaces, when ground and mixed with oleaginous matter, as herein described.

94,533.—JOHN HUBBARD WEEDEN, Waterbury, Conn., assignor to SCOVILLE MANUFACTURING COMPANY.—*Lamp-Burner.*—September 7, 1869.

Claim.—1. The employment, in a lamp-burner of otherwise ordinary or suitable construction, of a series of chimney-holding hooks, with a stiffening-ring united with and connecting said hooks, substantially as and for the purposes described.

2. The combination, with the deflector, and the air-distributor supporting said deflector, and fitting upon the base of the burner, of a series of chimney-holding spring hooks, attached to and hanging from said deflector, and a ring encircling the burner and united with said hooks, substantially as shown and described.

94,534.—ALEXANDER WEIDE, Chicago, Ill.—*Bridge-Gate.*—September 7, 1869.

Claim.—1. The combination of the grooved angular bar E with a vertically-reciprocating gate C D, arranged and operating substantially as and for the purposes herein set forth.

2. In combination with said gate C D and angular grooved bar E, the shaft J, pinions *m m*, and racks *n n*, arranged to operate substantially in the manner and for the purposes set forth and shown.

3. In combination with the gate C D, the lever I, with its latch *i*, the spring H, and a suitable socket, *x*, for the purpose of securing the gate in position when elevated until the bridge closes, substantially in the manner and for the purposes specified.

4. Providing the ends of the bridge with removable pins or projections *d*, to operate the gate, as and for the purposes set forth.

94,535.—WILLIAM WESTLAKE, Chicago, Ill.—*Lantern.*—September 7, 1869.

Claim.—The loose band E, provided with the supporting-ledge or shoulder *c*, in combination with the band D, substantially as and for the purposes specified.

94,536.—WILLIAM WESTLAKE, Chicago, Ill.—*Lantern.*—September 7, 1869.

Claim.—1. The air-chamber formed by the plates or disks D and D′, and located between the dome and base of the lantern, in relation to the globe, substantially as and for the purposes specified.

2. The combination of the band F and disk D, with the band P and disk D′, when constructed and operating substantially as described.

3. The deflector D′, forming the lower disk of the air-chamber D′, in combination with the open base A′, when so arranged as to concentrate the light directly beneath the base of the lantern, substantially as specified.

4. The permanent wick-ratchet support *d*, when attached to the oil-pot, and so located as to cover or stop the opening in the band A, substantially as specified.

5. The combination and arrangement of the bands F and P, disks D and D′, with the tubes C and base A, substantially as described.

94,537.—D. N. ALLARD, Chester Hill, Ohio.—*Attachment for Cooking-Stoves.*—September 7, 1869.

Claim.—Uniting cooking-vessels or other implements to cooking-stoves, by means of a headed pin, and an elongated dovetail or guiding slot or recess, so that said vessel may be moved backward or forward from or over the pot-hole, or be swung around the pin as a center, substantially as described.

94,538.—BOYD ALLEN, Boston, Mass., assignor to himself and S. C. PRATT, same place.—*Gas-Heater.*—September 7, 1869.

Claim.—A gas-heater tube or burner, having the air-chamber *e*, chimney *h*, and orifices *f*, all arranged, relatively to the jet-tube, substantially as shown and described.

94,539.—JAMES S. ANDERSON and JAMES B. COOLEY, Clark's Hill, Ind.—*Ditching-Machine.*—September 7, 1869.

Claim.—1. An improved ditching-machine, formed

by the combination of the beams or sills A, adjustably connected by the screw-rods and nuts B, lifter or plow C, adjustable cutters E, guard-plates F, mold-board G, guard H, and apron I, whether provided with the guard-runner J or not, with each other, substantially as herein shown and described, and for the purpose set forth.

2. The combination of the axle K, wheels L, bars or rods M, and cross-head lever N n', with the rear parts of the sills or beams A, substantially as herein shown and described, and for the purposes set forth.

94,540.—Charles S. Bailey, New York, N. Y.—*Hulling-Mill.*—September 7, 1869.

Claim.—The end plates A, slotted radially in continuation of the slots in the concave E, whereby the knives are enabled to be removed singly through the end plates, said knives being held in place by the removable annular plates J, all arranged as shown and described, and for the purpose specified.

94,541.—Hugh Baines, Manchester, England.—*Railway-Crossing for Cone-Wheels.*—September 7, 1869.

Claim.—A railway-crossing, adapted to the use of cone-wheels, for tracks of different gauges, arranged and operating substantially as and for the purpose set forth.

94,542.—Job McNamee Baker, Fayetteville, Texas.—*Cultivator.*—September 7, 1869.

Claim.—1. The blades or plows E, F, and G, arranged and operated substantially as and for the purposes herein shown and described.

2. A combined cultivating, ridging, planting, and rolling machine, arranged and operating substantially as described.

3. In combination with a cultivator, the stalk-cutter S, substantially as described.

4. The method of adjusting the beams H, with the blades, substantially as described.

5. The method of operating the slide of the planter, in combination with the rollers R, substantially as described.

94,543.—J. W. Barron, Hillsborough, Ill.—*Tuyere.*—September 7, 1869.

Claim.—The combination of the poker with the weighted valve I, each serving as a guide for the other, and co-acting to relieve the fire and air chamber of refuse-matter, in the manner set forth.

94,544.—John W. Bartlett and David P. Bosworth, Harmar, Ohio.—*Machine for Making Railroad-Spikes.*—September 7, 1869.

Claim.—1. The combination of the swaging-dies D D^1, and reciprocating pawl E^2, with the discharging-wheel E, respectively constructed and arranged in relation to each other substantially as set forth.

2. The combination of mechanism for operating the movable swage D, constructed and operating substantially as described, so as to operate the movable die, first by percussion, and then by compression.

3. The combination of the dies D D^1, with the reciprocating header F^1, and gauge F^3, substantially as and for the purpose set forth.

4. The combination of the reciprocating plunger C^5, elbow-lever F, and heading-roll F^1, constructed and arranged, in relation to the dies, substantially as described, with mechanism which shall cause such heading-roll, F^1, in its reciprocations, to bear upon and traverse twice along the head of the spike, substantially as and for the purpose set forth.

5. The combination of the roller F^1, oscillating arm F, eccentric-rod C^2, and reciprocating track C^1, so arranged in relation to each other as to operate substantially as and for the purpose set forth.

6. The combination, substantially as described, of the following elements, viz, dies to form the shank of the spike, a header reciprocating in a line perpendicular to the axis of the spike, and a discharging-wheel, all operated by eccentrics or cams, substantially as set forth.

7. The combination of the lever H, rod C, and eccentric B^3, arranged to operate substantially as and for the purpose set forth.

94,545.—William W. Batchelder, Boston, Mass.—*Apparatus for Lighting Gas by Electricity*—September 7, 1869.

Claim.—1. The combination of the friction electrical generator, current-devices M O, and insulators E N, substantially as described, with the lever I, the gas-burner H, gas-cock X, and conduit K, as set forth.

2. The combination of a flexible gas-conduit, or hose, L, with the gas-burner H, gas-cock friction electrical machine, or generator, and broken circuit, as explained.

3. The combination of the gas-cock, gas-burner H, and conduit L, and broken electrical circuit, with the electrical exciter or bell C, so as to be movable with it from and to the vulcanite frustum A, or its equivalent, when the latter is stationary in position.

94,546.—Henry Baughman, Columbus, Ohio.—*Corn-Planter.*—September 7, 1869.

Claim.—The construction and arrangement of the handles A A, beam B, wheel C, cross-bars D E, drag-bars F F, scrapers F′ F′, standards G G, and springs H H, in connection with a seed-box, I, slide n, and plow R, substantially as shown and described.

94,547.—R. W. Baylor, Norfolk, Va.—*Railway-Car Coupling.*—September 7, 1869.

Claim.—1. The draw-head A, when the same is provided with a hinged bottom, A′, plate D, and rod E, when the whole is so combined and arranged as to operate substantially as described.

2. The bottom A′, having a recess, B, and pivoted catch or pin C, when the same are so formed, combined, and arranged that they will operate substantially as described, as and for the purpose specified.

3. The rod E, ratchet E′, having pins $f f'$, spring-pawl e, and beveled plate e', when the same are so combined and arranged that they can be operated by a key, F, substantially as described.

4. The compound link G, when the same is constructed substantially as described.

94,548.—A. Belchambers, Ripley, Ohio.—*Table Leaf Support.*—September 7, 1869.

Claim.—In combination with a table, the bracket D and spring J, constructed, arranged, and operating substantially as and for the purposes shown and described.

94,549.—G. W. S. Bell, Tallula, Ill., assignor to himself and H. C. Bell, same place.—*Corn-Harvester.*—September 7, 1869.

Claim.—1. The armed belts or chains Q R, connected with and driven from the drive-wheels A, by suitable gearing, in combination with the cutting-device and tilting platform, substantially as herein shown and described, and for the purpose set forth.

2. The rotating knives I, connected with and driven from the drive-wheels A, by suitable gearing, in combination with the pointed or inclined guides K, armed belts or chains Q R, and tilting platform S T, substantially as herein shown and described, and for the purpose set forth.

3. The pivoted armed shafts S T, in combination with the cutting-device I J K and endless armed belts or chains Q R, substantially as herein shown and described, for the purpose of holding the cut corn-stalks and dropping them in bundles upon the ground.

4. The combination of the cranks V, slotted bar Z, connecting-bar W, bent lever X, connecting-bar A′, and lever B′, with each other and with the armed shafts S T, substantially as herein shown and described, for the purpose of holding and revolving the armed shafts S T, to hold and drop the bundles of stalks upon the ground.

5. The combination of the pivoted posts G′, wheels H′, cross-heads I′, and connecting-bar J′, with each other and with the frames E′ Y, substantially as herein shown and described, and for the purpose set forth.

94,550.—William Bellamy, Newark, N. J.—*Ice-Pitcher.*—September 7, 1869.

Claim.—In combination with an ice-pitcher, a suspended porous receptacle, of felt or other fibrous material, through which fluids will percolate, for the purpose herein specified.

94,551.—William Bellus and C. Bowers, Fredonia, Ohio.—*Wash-Board.*—September 7, 1869.

Claim.—The wash-board, constructed with a wood base, A, and a sheet-metal plate, B, riveted by tacks C, having large round or oval heads, and arranged as specified.

94,552.—H. H. Bigelow, Worcester, Mass.—*Blank Boot-Heels.*—September 7, 1869.

Claim.—1. A compressed blank heel for boots and shoes, composed of pieces of leather laid up in layers, and then subjected to compression on all sides, substantially as and for the purposes described.

2. A compressed blank heel, the nail-holes of which are punched while the blank heel is subjected to pressure upon all sides, substantially as and for the purpose set forth.

3. A compressed blank heel, in which the nail-holes are punched and the nails partially inserted while the heel is subjected to pressure upon all sides, substantially as and for the purposes set forth.

94,553.—Osmore A. Bingham, Gardner, Mass.—*Chair-Seat.*—September 7, 1869.

Claim.—The combination of the two cushion coverings, *a b*, the grooved frame A, and the strip or frame C, substantially in manner as above specified.

94,554.—Abram Boles, Kinder, Ind.—*Plow.*—September 7, 1869.

Claim.—1. Hinging the beveled forward ends of the plow-beams A to each other by means of the eye or hinge-plates B, and clevis C D, substantially as herein shown and described, and for the purpose set forth.

2. Adjustably connecting the rear parts of the plow-beams A to each other by the adjustable overlapping hinged bars G, uprights H, and overlapping adjustable hinged bars I, substantially as herein shown and described, and for the purpose set forth.

3. The combination of the springs K and projections L, with the plow-beams A and adjustable overlapping hinged bars G, substantially as herein shown and described, and for the purpose set forth.

94,555.—Nicholas H. Borgfeldt, New York, N. Y.—*Machine for Breaking the Leaves and Stems of Tobacco.*—September 7, 1869.

Claim.—The hinged frame F, in combination with the rollers C D, when the bearing-points of the frame are at a greater distance than the bearings of the rollers, substantially as described.

94,556.—W. Clay Bowers, Wheatland, Iowa.—*Self-Closing Telegraph-Keys.*—September 7, 1869.

Claim.—1. Revolving knob D, with pin *d* and lug *e*, in combination with connecting-rod F, spiral spring G, and auxiliary lever E, with platinum nipple *p*, to operate substantially as described and for the purposes set forth.

2. Platinum nipple *n'* on the side of anvil, substantially as and for the purposes set forth.

3. Sliding button I, to operate substantially as described and for the purpose set forth.

94,557.—M. V. Brigham, Mannsville, N. Y.—*Clamp.*—September 7, 1869.

Claim.—The within-described clamp, consisting of the piece A, provided with the pointed screws B, and used either with or without the piece F, the lever C, the pawl D, and the rack E, all constructed and arranged to operate substantially as and for the purpose specified.

94,558.—Morgan W. Brown, New York, N. Y.—*Mode of Closing Paper Bags.*—September 7, 1869.

Claim.—A paper bag, having its top softened, and leaving the body in its original state, substantially as described, as a new article of manufacture.

94,559.—Lewis D. Bunn, Morristown, N. J.—*Floating Velocipede.*—September 7, 1869.

Claim.—The floating velocipede, consisting of the floats A A, platform B, railing *a*, paddle-wheel D, the rudders H H, connected by the bar *c*, the steering-ropes *d d*, steering-lever I, and the seats F G, said parts being combined, constructed, and arranged as and for the purpose shown and described.

94,560.—Sanford S. Burr, Dedham, and Levi Pierce, Charlestown, Mass.—*Wardrobe-Bedstead.*—September 7, 1869.

Claim.—1. The combination, with the bed-bottom and the case, of the springs *g*, and rod or rods upon which the same are mounted, arranged, substantially as described, so as to constitute the hinge around which the bed-bottom moves.

2. The combination and arrangement of the legs *l l'* and the turn-buttons *o o'*, with respect to each other, and to the foot-board *f*, essentially, and in manner, and for the purpose as herein shown and described.

3. As an improvement in secretary-bedsteads, opening from the rear, a case or structure containing the bed-bottom, and provided with apertures or openings at front, for purposes of ventilation and convenience, as described, such apertures being furnished with doors hinged to the structure at their inner edges, whether such doors be provided or not with mirrors, the whole being as before set forth.

94,561.—David Byard, Sharon, Pa.—*Grate-Bar for Boilers.*—September 7, 1869.

Claim.—1. The construction and arrangement of the grate as herein set forth, whereby motion may be given thereto, for the purpose of cleaning and allowing the heated parts of the grate to cool at intervals.

2. The construction and arrangement of the ring or section, Fig. 2, with its lugs *d d d*, opening *n*, and notches *g g g*, substantially as represented.

3. The construction and arrangement of the center-pieces, Fig. 5, with their bearings *k k k*, with reference to the bearing-bars, Fig. 4, and shaft, Fig. 6, and its depressions at *c'*, whereby to be able to remove the sections when broken, substantially as herein set forth.

94,562.—Edward Carter, Rensselaer, N. Y.—*Clothes-Drier.*—September 7, 1869.

Claim.—1. The endless chain E and the sheave-wheel J, as arranged and constructed, for elevating and lowering the inner or non-revolving hub B, as shown and described.

2. The catch-bars M M, secured to the hub B, for operating the lower reel B B, as shown and described.

94,563.—John C. Chapman, Cambridgeport, Mass.—*Stop-Cock.*—September 7, 1869.

Claim.—The tapering plug B, applied to and sliding within the shell A, in combination with the Babbitt or soft metal seats or packing *f*, at the inlet and outlet openings *d e*, substantially as described.

94,564.—Charles Chinnock, Brooklyn, N. Y., assignor to I. Little Hyde, New York City.—*Oil-Can.*—September 7, 1869; antedated August 27, 1869.

Claim.—1. The chamber A, arranged in combination with the tubes B B' nozzle *a*, and reservoir E, of an oil-can, substantially as herein shown and described.

2. The combination of the valve *e* with the reservoir E, tube B B', and chamber A, substantially as and for the purpose specified.

94,565.—William B. Clark, Whitefield, Me.—*Velocipede.*—September 7, 1869.

Claim.—1. The combination of the seat and the foot-brace with the hand-cart, as described, that is, as composed of the frame A, and the two separate axles and their wheels, arranged together and having cranks to the axles, as set forth.

2. The combination and arrangement of the third wheel and its supporters with the seat, the foot-brace, the hand-frame A, and its cranked axles and their wheels, arranged together substantially in manner and so as to operate as set forth.

94,566.—Daniel Collins, Girard, Ala.—*Balanced Valves.*—September 7, 1869.

Claim.—The arrangement, with the lift-valves B C, having longitudinal passages M, of the steam-ways E D, admitting the steam to surround them, and the chambers I, all substantially as specified.

94,567.—T. C. Collins, Little Hocking, Ohio.—*Clothes-Drier.*—September 7, 1869.

Claim.—1. A clothes-drier, formed by connecting with a stand one or more series or sets of adjustable frames G, (with or without the support F,) arranged and operating substantially as and for the purposes set forth.

2. In combination with the stands B B and cap-piece C, the bars C′, (more or less in number,) arranged and operating substantially as and for the purposes described.

3. The combination of the bars C′ and the frames G with the base A A, stands B B, and cap C, substantially as and for the purposes specified.

94,568.—Thomas Cope and George Cope, Liverpool, England.—*Machine for Pressing Tobacco.*—September 7, 1869.

Claim.—1. The employment, in combination, of the reciprocating sliding presser *h*, with the rotating-mold-table *r*, and fixed table *q*, substantially in the manner and for the purpose set forth.

2. The separate discharge-piece *j*, in combination with the rotating mold-table *r*, presser *h*, and fixed table *q*, substantially in the manner and for the purpose set forth.

3. The tooth *k* and trundle-wheel *l*, in combination with the reciprocating presser *h* and mold-table *r*, substantially as set forth.

94,569.—J. J. Craig, Knoxville, Tenn.—*Fly-Trap.*—September 7, 1869.

Claim.—The fly-trap above described, composed of the rods B and D, the brace C, the rings F, and the bag G, in connection with a partially-opened window, when constructed, arranged, and operating as and for the purpose aforesaid.

94,570.—Joseph W. Cremen, New York, N. Y.—*Reflector for Street-Lamps.*—September 7, 1869.

Claim.—The reflector, as herein described and shown, having the form of the inverted frustum of a pyramid, with the draughts at the sides, and the aperture through the center.

94,571.—George Crompton, Worcester, Mass.—*Loom.*—September 7, 1869.

Claim.—1. Lifter, depressor, and evener levers, which are pivoted to reciprocating bars, attached to the slide-rods, and which are brought into alternately angular and horizontal positions, by their connection together and with a working-beam actuated by the crank-shaft, all substantially as described.

2. In combination with the system of lifter, depressor, and evener levers, arranged and operated as above set forth, devices for adjustment of the links connecting the working-beam with said levers, substantially as described.

3. In combination with the shipper-fork, the treadle or treadle-frame, arranged and connected with the shipper-fork, substantially as described, to effect the shifting of the belt in either direction, substantially as described.

4. In combination with the shipper rod, the crank operated so as to shift the fork and retain it in position on or off the fast pulley, substantially as described.

5. The combination of the shipper-rod, crank-wheel, pawl-wheel, and pawl, pawl-lever, and treadle, or their equivalents, connected, combined, and operated together, substantially as described.

94,572.—D. E. Crosby, South Vineland, N. J.—*Ironing-Board.*—September 7, 1869.

Claim.—1. In combination with a table, the board B, attached by the hook D, and adjustable slide E, substantially as shown and described, for the purpose set forth.

2. The combination of the boards B and K, substantially as and for the purpose described.

94,573.—James S. Cunningham, New York, N. Y., assignor to himself and George Le Cronier, same place.—*Propelling-Apparatus.*—September 7, 1869.

Claim.—The combination of the chains A, yokes B C, buckets D, and connecting-rods G, when arranged substantially as specified.

94,574.—Henry Cutler, Ashland, Mass., assignor to S. N. Cutler & Co., same place.—*Meal and Flour Drier.*—September 7, 1869.

Claim.—1. A steam-drier, composed of cylinder A, within which are arranged pipes, *c c c*, between hollow heads E and E′, peripheric floats F, and false heads *a a*, revolving as a cylinder upon hollow journals D D′, substantially as set forth.

2. The hollow head E, constructed with compartments, substantially as set forth.

3. The combination of all the above-named parts in a steam-drier, substantially as specified.

94,575.—Anthony G. Davis and Charles W. Blakeslee, Watertown, and Ebenezer B. Beecher, New Haven, Conn.—*Knitted Stocking.*—September 7, 1869.

Claim.—1. A stocking having a heel knitted in the manner described.

2. A machine-made seamless stocking, fashioned complete for wear, upon the machine, from a continuous yarn, and with a heel made in the manner shown and described.

3. The process herein described of forming the heel of a stocking.

4. The process herein described of knitting a stocking upon a machine employing two straight rows of needles.

94,576.—Daniel R. Day, Rindge, N. H., and John G. Folsom, Winchendon, Mass.—*Jack-Spool.*—September 7, 1869.

Claim.—As an article of manufacture, a jack-spool, constructed as herein described.

94,577.—Faustino Valdes Diaz, New York, N. Y.—*Breech-Loading Fire-Arm.*—September 7, 1869.

Claim.—1. The spring-lever H, carrying the movable recoil-shield and the firing-pin, in combination with the trigger, all constructed and operating substantially as shown and described.

2. The spring-catch *h*, in combination with the lever H and the arm *i*, substantially as described.

3. The detachable magazine I, as arranged with the plunger, the trigger, and the lever H, all constructed and operating substantially as shown and described.

4. The bolt *k*, in combination with the catch *h*, lever H, and arm *i*, substantially as set forth.

5. The combination and arrangement of supplementary magazine J, main magazine I, the plunger, the trigger, and the lever H, all constructed and operating substantially as set forth.

94,578.—Loyal M. Doddridge, New Mount Pleasant, Ind.—*Weed-Gatherer for Plows.*—September 7, 1869.

Claim.—In combination with a plow, a device for turning down and burying weeds, &c., consisting of the hinged frame A, sliding-bar B, and clevis C, substantially as shown and described.

94,579.—Thomas B. Dora, Mattoon, Ill.—*Railway-Car Coupling.*—September 7, 1869.

Claim.—1. The combination of the levers *h h′*, caps *a a′*, tumbling-blocks *d d′*, constructed and operated in the manner and for the purpose herein set forth.

2. The quadrangular or other formed clasp-ring *f*, constructed in the manner and for the purpose as described.

94,580.—Helmuth Dueberg, Baltimore, Md.—*Progressive Kiln.*—September 7, 1869.

Claim.—1. In an open-top progressive kiln, the arrangement of bridges B, provided with feed-holes *a*, substantially as described.

2. The tubular furnaces C, in combination with the burning-chambers A, substantially as set forth.

3. The tubular furnaces C, in combination with the bridges B, extending across the open-top kiln, substantially as described.

94,581.—F. S. Dumont, New York, N. Y.—

Compound to be Used as a Mordant in Dyeing and Printing.—September 7, 1869.

Claim.—1. The method herein described of producing mordant from blood, as set forth.

2. The composition herein specified, consisting of the ingredients set forth, and to be used for the purposes described.

94,582.—D. A. DUNHAM, Pilatka, Fla.—*Water-Elevator.*—September 7, 1869.

Claim.—The improved "water-elevator" herein described, consisting of a single pipe or tube, A, provided on its under side with a transverse incision, to allow the shell of the same to be bent inward at that point to form a steam-passage, D, and also a water-passage, C, as and for the purpose specified.

94,583.—HOMER M. DUNHAM and BISHOP ADDINGTON, Centreville, Ind.—*Bee-Hive.*—September 7, 1869.

Claim.—1. The truncated box D, when constructed and arranged as and for the purpose set forth.

2. The combination of the upper chamber B, cover C′, main chamber C, and truncated box D, all arranged as and for the purpose set forth.

3. In combination with a bee-hive constructed substantially as shown and described, the frame A, when constructed substantially as set forth.

94,584.—CHARLES K. DUTTON, New Berne, N. C.—*Still.*—September 7, 1869.

Claim.—1, Passing steam, or its equivalent, through one or more series of perpendicular pipes inside of a still, substantially as and for the purposes herein set forth.

2. Providing a still with hollow drums connected by perpendicular pipes, for the purpose of applying the heat internally, substantially as herein set forth.

3. The combination of the hollow drum C, perpendicular pipes *a a* and *b b*, and drums D and E, all substantially as and for the purposes herein set forth.

4. In combination with the outer casing A, the drum C D E, perpendicular pipes *a a* and *b b*, inlet-pipe *c*, and exhaust-pipe *d*, all constructed and arranged to operate substantially as and for the purposes herein set forth.

94,585.—W. P. EWING and ISAAC S. DE FORD, Elkton, Md.—*Lock-Nut.*—September 7, 1869.

Claim.—The spanner G, with jaws *e* and *g*, having beveled edges, in combination with screw-nuts E and F, having similar edges, substantially as described.

94,586.—MILES FISK, Adrian, Mich.—*Churn-Dasher.*—September 7, 1869.

Claim.—The improved dasher above described, its radial wings being shaped and arranged with respect to each other in the manner specified.

94,587.—JOHN FOGARTY, Brooklyn, N. Y.—*Safety-Attachment for Street-Railway Cars.*—September 7, 1869.

Claim.—1. The guards F, hinged to the shoes or bar of an ordinary brake, and resting, when in working-position, against the lower parts of the brake-shoes, substantially as herein shown and described, and for the purpose set forth.

2. The combination of the cross-bar G, connecting-bar H, bent lever I, connecting-bar J, bent lever K, rod L, and stop or catch M with each other and with the guards F, hinged to the brake D E, substantially as herein shown and described, and for the purpose set forth.

3. The combination of the hooked rod N with the cross-bar G and guards F, substantially as herein shown and described, and for the purpose set forth.

94,588.—WILLIAM FRANKEL, Springfield, Ohio.—*Floating Velocipede.*—September 7, 1869.

Claim.—1. The propelling-wheel W, with treadle-pins, or projections *n n*, in combination with the oscillating-seat movement, as shown and described.

2. The arrangement of the seat-pieces *b b* and *b′ b′*, with pivots *e e*, in the oscillating-seat movement, in combination with the propelling-wheel W, and treadle-pins, or projections *n n*, as shown and described.

94,589.—W. H. H. FRYE, North Fryeburg, Me.—*Sulky-Harrow.*—September 7, 1869.

Claim.—The sulky-harrow herein described, having sulky A, harrow B, wheel D, lever N, pitman *h*, chain *c*, and *c′*, and *r*, block P, brace S, staple *e*, spring V, keeper Z, and adjustable seat K, arranged to operate substantially as set forth and described.

94,590.—JOHN GAGE, Henniker, N. H.—*Cutter-Head.*—September 7, 1869.

Claim.—The cutter-head, as made with the series of annular projections arranged on its face, and with reference to the cutting-edges of its knives, in manner substantially as specified.

94,591.—JOHN GAGE, Henniker, N. H.—*Machine for Forming Shells for Dry Measures.*—September 7, 1869.

Claim.—1. The combination and arrangement of the clamp I and the wedge D with the body-parts A B, constructed, arranged, and hinged together, substantially as described.

2. The combination of the guard E and its screws *r u*, arranged at each end of the machine, with the body-parts A B, the clamp I, and wedge D, applied and arranged together, substantially in the manner and so as to operate as and for the purpose explained.

3. The combination of the clamp-adjusting screws *k l* with such clamp, the body-parts A B, and the wedge D, arranged together, as set forth.

4. The combination and arrangement of the springs *p* with the wedge, the clamp, and the body-parts A B, arranged and applied together, substantially in manner and so as to operate as set forth.

5. The arrangement of the shoulder *o* with the clamp I and the periphery of the machine or parts A thereof.

94,592.—PETER GEISER, Waynesborough, Pa.—*Sawing-Machine.*—September 7, 1869.

Claim.—1. The combination of the hinged leaf A′, rack-bar E, pinions E^1, shaft E^4, notched plate E^2, and spring-lever E^3, arranged to operate substantially as set forth.

2. In combination with the top A, frame C, and crank D, for elevating one end of the top, the hinged leaf A′, and the mechanism for adjusting it, substantially as set forth.

3. The frame F, for supporting the gauge, when constructed in the form of a triangle, and used in combination with a hinged leaf, substantially as set forth.

4. The combination of the oscillating arm G, brace G^1, extension-arm G^3, and hinged stops *g*, with the slotted frame F, substantially as set forth.

5. The frame F, constructed with concentric segmental slots H, in combination with elastic spring prick-points H^1, arranged to operate substantially as set forth.

6. In combination with the oscillating arm G, the arched guide I, constructed and arranged substantially as set forth.

7. In combination with the frame K, the oscillating slotted arm L and slotted brace L^1, arranged substantially as and for the purpose set forth.

8. The last above-recited parts K, L, and L^1, in combination with the adjustable extension-arm L^2 and stop L^3, substantially as set forth.

94,593.—JOHN H. GOODFELLOW, Troy, N. Y.—*Parlor-Stove.*—September 7, 1869.

Claim.—1. The fire-pot, having a grate in its bottom, through which air is admitted to support the combustion in the lower part of the fire-pot, and with lateral openings through the fire-pot, just above the grate, and in communication with the smoke or draught pipe, (for burning and discharging the gases at the lower part of the fire-pot,) in combination with the chamber arranged above the fire-pot, supplied with air, and in communication with the smoke or draught pipe for burning and discharging the otherwise accumulating gases from the top of the fire-pot, all substantially as shown.

2. In combination with the above, the damper, for regulating and controlling the supply of air to the

chamber or ash-pit under the grate in the bottom of the fire-box.

3. In combination with the subject of the first claim, the damper in the passage leading from the combustion-chamber, over the fire-pot, into the draught-pipe, which receives the products of combustion that escape through the lower part of the fire-pot.

4. In combination with the subject of the first claim, that damper in the smoke-pipe which regulates and controls the escape of the gases of combustion from the lower part of the fire-pot, without altering or controlling the discharge of the gases from the combustion-chamber above the fire-pot.

5. The upper and lower hollow rings and intermediate perforated standards, which together form the lower part of the fire-pot, and which have communication with the air outside of the stove, and with the lower part of interior of the fire-pot, or the passages through which the burning gases escape laterally from the lower part of the fire-pot.

6. The dampered aperture, by which the admission of air to the hollow rings and perforated standards of the lower part of the fire-pot is controlled and regulated, in combination with the grate in the bottom of the fire-pot, and the air-chamber under the grate, to which the admission of air is regulated and controlled by a separate dampered aperture, all substantially as shown.

7. In combination with the perforated door or illuminating-casing, the fire-chamber over the fire-pot, having passages for the gases to burn along or opposite to the perforations in the casing.

8. The plate *e*, provided with the notches *h*, as and for the purpose specified.

94,594.—EDWIN H. GRANT, Washington, D. C.—*Compressed Air Engine.*—September 7, 1869.

Claim.—1. An engine, combining in its construction the following elements, namely, a cylinder in which compressed air is used as a motive-agent, a reservoir for such air, and a galvanic or electric battery or batteries for producing a current of electricity to be conducted to said cylinder, substantially in the manner set forth.

2. The combination of the cylinder B, air-pump A′, reservoir C′, connecting-pipes B^1 B^2, batteries D^1, and conducting-wires or connections, substantially as set forth and shown.

3. The combination of an air-receiver, a working-cylinder, and a galvanic or electric battery, substantially as shown and described.

94,595.—ANDREW HARBISON, Newcastle, Pa., assignor to himself and ESLI N. HOUK, same place.—*Clothes-Drier.*—September 7, 1869.

Claim.—1. The extending and contracting lengthwise, by means of metallic clasps *a*, or their equivalent, on each separate slat A or B, so constructed as to make a sliding or extension-joint, when the slats are in two or more sections each.

2. The opening sidewise, from either end, by means of double-acting pivot-hinges E, so constructed that the pivots *e e* turn when the rack is opened for common use, and then by removing the pin at either end and hooking in hasp F into a staple at the opposite end, the rack opens sidewise and turns on hinges E and hasps F, which form complete hinges for the purposes specified.

3. The attachment of the wings No. 3 and No. 4, by means of plates *c′ d′*, loosely articulated at each end, the lever working on the pivots in combination with the foot-rests *o o o*, which admit of the wings being raised or lowered, or adjusted to any desired angle.

94,596.—GEORGE W. HARRIS, Elizabeth, N. J., and HENRY HOLDREDGE, New York, N. Y.—*Manufacture of Illuminating-Gas.*—September 7, 1869.

Claim.—1. The use and application of a clay retort for decomposing superheated steam, for the purposes set forth, in combination with a steam-receiving and distributing tile D, substantially as described.

2. The steam-receiving and distributing tile D, constructed with steam-passages between its top and bottom surfaces, and having its upper surface perforated, substantially as and for the purposes set forth.

3. The combination of a clay decomposing-retort A, fitted with a steam-receiving and distributing tile or bottom, with one or more bituminous-coal retorts, for the purposes set forth.

4. The combination of the decomposing-retort A, fitted with a suitable steam-receiving and distributing tile or bottom, and steam-superheater E, and steam-drier F, substantially as and for the purposes set forth.

5. Connecting the decomposing-retort with the several bituminous-coal retorts by means of separate pipes *h h*, fitted with valves or cocks 3 3, substantially as and for the purposes set forth.

6. The combination and arrangement, for the purpose of producing illuminating-gas, or gas for heating-purposes, of the mechanism or apparatus described, its several parts combined and operating substantially as set forth.

7. The mode or process of making illuminating-gas, by first depriving steam of its superabundant moisture by means of a drier, and then highly superheating such dried steam, and afterward decomposing such steam by means of incandescent authracite coal or other suitable material; the steam being distributed in fine jets or currents through such decomposing-material, and then mixing or uniting the gases produced from such decomposition of the superheated steam with the gases or vapors eliminated in separate retorts from bituminous coal or other suitable gas-yielding substance.

94,597.—WILLIAM B. HAYDEN, Columbus, Ohio.—*Breast-Loop for Hames.*—September 7, 1869.

Claim.—A quadrangular breast-loop for hames, constructed and applied to an eye, D, as herein set forth.

94,598.—V. M. HEATH, Morristown, Vt.—*Clothes-Rack.*—September 7, 1869.

Claim.—The combination of the slotted supports A, bars C and H, arms D, G, and K, and braces *a*, when arranged to operate as herein described, and for the purposes specified.

94,599.—STEPHEN HEBRON, Buffalo, N. Y.—*Window-Blind.*—September 7, 1869.

Claim.—1. Outside blinds, having the slats journaled therein, as herein described, for the purpose specified.

2. The combination, with window-blinds, constructed as herein specified, of mosquito-bars, detachably connected thereto, as described.

94,600.—R. HEMENWAY, New Cassel, Wis.—*Vegetable-Cutter.*—September 7, 1869.

Claim.—The combination, with the bench A and hopper C, of the sliding cutters D E, fixed cutters F, and stops G, all substantially as specified.

94,601.—C. L. HEYWOOD, Boston, Mass.—*Railway Spike.*—September 7, 1869.

Claim.—1. A screw-spike, having a lip or flange cut away on one side, and having an inclined-under or bearing surface, when such lip or flange gradually increases in width, substantially as shown and described.

2. A screw-spike, having all the features specified in the preceding claim, and having, also, a wrench-applying head, substantially as shown and described.

94,602.—J. J. HINES, Evergreen, Ala.—*Cotton and Hay Press.*—September 7, 1869.

Claim.—1. In a toggle-joint lever-press, the employment of the levers bent at *e*, in connection with the friction-rollers *r r*, the concave track *a a a a*, and the curved track *m m*, for the journals *i i*, substantially as described, and for the purpose specified.

2. The arrangement of the shaft G so as to come opposite the joints *c c*, when the levers are drawn together, in connection with the cords F F, bent arms *e′ e′*, rollers *r r*, guide *m m*, stop *u u*, and concave track *a a a*, substantially as described, and for the purposes specified.

94,603.—GEORGE HOPSON and JOSEPH H. MASON, Bridgeport, Conn.—*Spring.*—September 7, 1869.

Claim.—The within-described improvements in leaf-springs, having the beads on the distended side,

and the depressions on the compressed side of each eaf, all as and for the purposes herein set forth.

94,604.—James J. Jackson, Curwinsville, Pa.—*Burglar-Alarm.*—September 7, 1869.

Claim.—The bolt A, having notch *p*, in combination with the bar B, having step *h*, working on pin *z*, and pivoted to pawl E, controlling, through ratchet-wheel *m*, the elock-work of the alarm G.

94,605.—Jacob Jameson, Philadelphia, Pa.—*Composition-Flux for Manufacture of Iron and Steel.*—September 7, 1869.

Claim.—The herein-described composition, as a flux for the manufacture of iron and steel.

94,606.—William Johnston, Cincinnati, Ohio.—*Hinge.*—September 7, 1869.

Claim.—1. A hinge, one plate of which is extended beyond the joint, and in the plane thereof, as shown at 1 3, and so as to lap upon the other plate, and adapted to be clamped thereto, substantially as shown and described.

2. In eombination with a hinge, having sueh an extension, a spring-bolt, as shown in Figs. 3 and 4, or equivalent locking-device.

3. The combination, with the spring-bolt and its thumb-piece, of the handle F, these parts being arranged and operating, in connection with a hinge, substantially as shown and described.

4. The combination of the plate D, having ears for securing the bolt, with the bolt C, shouldered as deseribed, when used for loeking a hinge.

94,607.—William Johnston, Havclock, Pa.—*Railway-Rail Joint.*—September 7, 1869.

Claim.—The steel cap B, in eombination with the rails A A′, when constructed and arranged as herein shown and deseribed.

94,608.—J. Herva Jones and Miles S. Prentice, Roekford, Ill.—*Harvester-Guard:*—September 7, 1869.

Claim.—1. The guards, secured to the finger-beam by bending the shanks of the guards downward, at an angle of about ten degrees, and driving them into holes bored into the finger-beam, at an angle of corresponding inclination, as set forth.

2. The sway-bar, eonstructed with a split head and an expansible plug, as set forth, to seeure an accurate fit of the sway-bar head in the loop of the cntter-bar, as described.

94,609.—A. C. Judson, Grand Rapids, Ohio, assignor to himself and E. O. Judson, same place.—*Plow.*—September 7, 1869.

Claim.—The arrangement of the beam in two parts D, stock E, bolt F, block G, wheel H, draw-plates K, clevis L, and bearing-plates I, all substantially as specified.

94,610.—Peter M. Kafer, Trenton, N. J.—*Force-Pump having Concentric Pistons.* — September 7, 1869.

Claim.—1. Two or more concentric pistons, when operated throughout the length of the cylinder, as herein described.

2. The arrangement and eombination of the valve-chambers *i i*, with relation to the supply and exhanst, substantially as speeified and set forth.

94,611.—Gottlob Kaiser, New York, N. Y.—*Apparatus for Distilling and Rectifying Spirits.*—September 7, 1869.

Claim.—1. The washing-eells or compartments B C D, &c., arranged in series side by side, one series above another, in any desired number, substantially as and for the purpose herein specified.

2. The perforations *z* in the wash-partitions a^2 a^4 a^6, &c., substantially in the manner and for the purpose herein set forth.

3. The construction of a dephlegmator of straight tubes, all as and for the purpose as herein set forth.

4. The peculiar construction and arrangement of back-fall tubes *l m n*, substantially as and for the purpose specified.

94,612. — Isaiah Kingman, Waltham, Me.—*Joint Standard-Sled.*—September 7, 1869.

Claim.—The sled herein deseribed, having runners A and B, knees *a*, rods *c*, arms *e* and *n*, braces *i*, staples *h*, and blocks *o*, eonstructed and arranged substantially as speeified.

94,613.—W. F. Kistler, Cincinnati, Ohio, assignor to himself and Joseph L. Hall, same plaee.—*Permutation-Lock.*—September 7, 1869.

Claim.—1. Mounting the tumblers I on the stationary annular disks or washers J, constructed substantially as herein deseribed, and then arranging them on the spindle K, as and for the purpose set forth.

2. The anchor M, consisting of the arms 1, 2, 3, and 4, construeted and arranged to operate substantially as herein described, and for the purposes set forth.

3. The arm F, with its point *c* and its pin *b*, in combination with the anchor M, consisting of arms 1, 2, 3, and 4, when constructed and arranged to operate substantially as herein deseribed, and for the purposes set forth.

4. The pendent cheek-bar U, in combination with the anchor M, when eonstructed and arranged to operate substantially as and for the purpose set forth.

5. The arm F, anchor M, tumblers I, arm P, lever S, block *t*, and lock-bolt T, when constructed and arranged to operate substantially as and for the purpose speeified.

94,614.—P. H. Lamey and A. J. Beachell, Port Treverton, Pa.; P. H. Lamey assigns to George Kuhn and P. K. Knights.—*Turbine Water-Wheel.*—September 7, 1869.

Claim.—1. The hinged part *a′*, in combination with the rigid part *a* of the bueket, substantially as described.

2. The horizontal triangular surfaec *b*, in combination with the part *a′*, substantially as deseribed.

94,615.—Frederick William Lange, Chicago, Ill.—*Extension-Chair.*—September 7, 1869.

Claim.—The sliding frame D, jointed at its sides, with the hinged foot-rest E, provided with the hinged supports *f*, all constructed and arranged to operate in connection with the sliding bottom and back, as set forth.

94,616.—David Langell, Apple Creek, Ohio.—*Medical Compound.*—September 7, 1869.

Claim.—The herein-named article, or its equivalent, in combination with the two ingredients as herein specified.

94,617.—Charles Ph. Lenz, Poughkeepsie, N. Y.—*Extension-Table.*—September 7, 1869.

Claim.—The combination of rails A A, metallic grooves B B, and tongue, with sliding extension-frame, hinged detachable leaves, and the receptaele for said leaves, all of said parts being arranged, with respect to eaeh other, in the manner speeified.

94,618.—E. J. Leyburn, Lexington, Va.—*Apparatus for Propelling Machinery.* — September 7, 1869.

Claim.—1. A table for supporting the machine to be operated, and an operator's seat or support, both mounted upon a vibrating frame, B, or its eqnivalent, and provided with such means as will transmit motion from said frame to said machine, snbstantially as described.

2. The adjustable seat F, on roeking frame B, substantially as described.

3. Spring or springs applied between the frames A B, substantially as described.

4. The foot-stand *c′*, applied to the frame B, substantially as described.

5. The toe-rest *c*, applied to frame A, substantially as deseribed.

94,619.—A. Lloyd, Millersburgh, Ill.—*Churn.*—September 7, 1869.

Claim.—The adjustable plate J, interloeking the plate S, in combination with pinion D, drive-wheel C, box A B, and dasher F H, the latter being held

in the box by means of the thumb-screw *b*, as and for the purpose set forth.

94,620.—H. D. Lockwood, Charlestown, Mass.—*Syringe.*—September 7, 1869.

Claim.—In combination with an elastic syringe-bulb, having an orifice at each end, pieces *c* and *b*, provided each with screw and nut-threads adapted to receive the coupling-pieces *d* and *e*, the plug *i*, and the pipe *j*, substantially as described.

2. The combination, with the valves and valve-boxes of a syringe, of the wires *o*, applied within the screw-thread, substantially as and for the purpose specified.

94,621.—Augustus Lodeman and Meyer Desenberg, Kalamazoo, Mich.—*Fire-Kindler.*—September 7, 1869.

Claim.—1. The frame A B C L Z, in combination with the ring D, provided with two flaps E F, for the purpose of receiving the cranked axle G, one extremity of which is bent into a right angle, to serve as a lever at which the hour-hand of a clock may work, while a connecting-rod, I, connects the crank with the thread K, for the purpose above explained.

2. The curved rod O N Q, with a weight S, and the friction-plate P, attached to the part A of the frame, all for the purpose set forth in the above description.

94,622.—John Ludeke, Griffin's Corners, N. Y., assignor to himself and Jacob Biehler, same place.—*Wagon-Brake.*—September 7, 1869.

Claim.—The combination of the worm-shaft *a*, sector-rack *b*, and pitman *f*, all arranged in the same vertical plane, on the side of the wagon, with the vibrating shaft B, and rubbers C C, arranged and operating as shown and described.

94,623.—Edward P. Lynch and Henry R. Raff, Davenport, Iowa.—*Walking-Cultivator.*—September 7, 1869.

Claim.—1. The curved frame A and the adjustable axles B, constructed and arranged as herein described.

2. The curved cast-iron frame A, with the forked or V-shaped tongue H secured thereto, by means of the flanges or lugs thereon, substantially as described.

3. The pieces C, formed with the grooves in their sides, and the series of holes for receiving, holding, and permitting the adjustment of the beams D, substantially as described.

4. The combination of the piece C, boxes *a* and *c*, and clip-bolt *b*, with the axle B, all arranged as described.

5. The shoulder-piece or block I, secured to the axle B, substantially as described.

6. The shovels F, provided with the grooves and recessed block *h*, and secured to the beam by the T-headed bolts *u* and strap *v*, as set forth.

7. The piece *n*, in combination with the grooved block *h*, for the purpose of adjusting the inclination of the shovels, substantially as described.

8. The piece C, cast with its arms *w* at the front, said arms having holes therein to receive and hold the journals of the boxes *a* and *c*, as herein described.

94,624.—Ambrose I. Maxwell, Morrison, Ill.—*Wind-Wheel.*—September 7, 1869.

Claim.—The disk D, provided with radial slots *d d*, lever D′, cranks c^2 c^2, and doors or chutes C C, in combination with the wind-wheel B, when the doors or chutes are pivoted at their inner edges, and when the parts are constructed and arranged substantially as and for the purpose set forth.

94,625.—Horatio D. McGeorge, Rochester, N. Y.—*Coal-Stove.*—September 7, 1869.

Claim.—1. In combination with the hot-air chamber C and flue F, the damper P, arranged and operating substantially as and for the purposes shown and described.

2. The compound annular rotary grate G, constructed and operating substantially in the manner and for the purposes shown and described.

94,626.—Antoine R. McNair, New York, N. Y.—*Preserving Wood from Decay and Mildew.*—September 7, 1869.

Claim.—Conducting the process in two or more cylinders or vessels, so constructed and arranged that the antiseptic and preservative materials are transferred from the containing to the treating cylinder or vessel, and the surplus returned to the containing-cylinder or vessel, without exposure to the atmosphere, substantially as herein specified.

2. A containing-vessel or vessels, in which the antiseptic material, to be applied in the form of vapor, is kept separate from the preservative material, to be applied in the liquid form, and from the steam employed, as herein set forth.

3. Applying the antiseptic vapors free, as far as practicable, from steam, and the vapor of naphtha, and of other substances which vaporize at a much lower temperature than the antiseptic used for the purpose herein set forth.

4. The process herein described, as a whole, for treating wood and timber, to preserve the same from mold and decay, when conducted in transferring-vessels, without exposure to the atmosphere, and in the order as specified, namely, first, coagulating the vegetable albumen of the wood, and extracting the deleterious substances therefrom by steam, and the subsequent condensation of the steam to produce a vacuum, and the removal of the extracted and condensed substances from the vessel; second, impregnating the wood with the simple antiseptic vapors of creosote or carbolic acid, and the subsequent lowering of the temperature of the same, to produce a partial condensation thereof in the wood; third, sealing the pores of the wood by a resinous preservative substance while in a liquid state, and while retained at a high temperature, substantially as set forth.

94,627.—John Moran, Washington, D. C.—*Stove-Grate.*—September 7, 1869.

Claim.—The jacket b^3, arranged upon the shaft B, and surrounding the rack-bar a^2, in the manner and for the purpose described.

94,628.—Aaron Morehouse and Alfred R. Heath, Danbury, Conn.—*Plaiting-Attachment for Sewing-Machines.*—September 7, 1869.

Claim.—1. The spring *c′*, having the arms c^3 and ears *c″* thereon, constructed and operating substantially as and for the purposes specified.

2. An elevator, constructed substantially as described, and arranged with the cloth-plate of a sewing-machine, so as to be always in a horizontal position, and adjustable to any desirable height from said cloth-plate, substantially as herein described and set forth.

3. The combination of the bar *m*, having the sharp edge *o* thereon, with the spring-presser *d g*, operating substantially as herein described and specified.

4. The combination of the elevator *n*, with the spring *c′* and bent arm *a*, having the guide or shoulder *i* thereon, all operating substantially as herein described and set forth.

5. The combination of the adjustable horizontal elevator *n* and bent arm *a*, all constructed and operating substantially as and for the purposes herein specified and described.

94,629.—O. William Morley, Tarrytown, N. Y.—*Edging-Tool for Harness-Makers.*—September 7, 1869.

Claim.—1. In combination with an edging-tool for harness-makers, and for "edging" leather generally, making the cutting-knife removable, substantially as and for the purposes described.

2. The adjustable guides *i* and C, for gauging the width and depth of the cut of the knife, when arranged and operating substantially as described, and for the purposes set forth.

3. In combination with an edging-tool, one or two adjustable guides or gauges, for governing either the depth or width of the cut of the knife, substantially as described.

94,630.—F. B. Morse, Plantsville, Conn.—*Die*

for Forging French Clips for Carriages.—September 7, 1869.

Claim.—The die for forging "French carriage-clips," constructed substantially as described, so as to forge the clip without bending.

94,631.—STEPHEN MOULTON, Bradford-on-Avon, England.—*Printers' Inking-Roller from Rubber Sponge.*—September 7, 1869; patented in England May 9, 1868.

Claim.—1. Treating vulcanized or cured India rubber substantially in the manner hereinbefore described, in order to obtain a substance of a mossy nature suitable for the purposes aforesaid.

2. The application of India rubber, in a mossy or spongy form, to the manufacture of printers' inking-rollers, as set forth.

3. An inking-roller, the body of which is composed of India rubber in the form of a mossy or spongy substance, and the external surface of a coating or skin of solid rubber, either vulcanized or not, substantially as set forth.

4. Also, the combination of India rubber of a spongy or mossy nature, with a surface or filament of ordinary sheet-rubber, either vulcanized or not, or of fibrous or textile material alone, or combined with rubber, substantially as set forth.

94,632.—ALBERT A. MURFEY, Montville, assignor to himself and NATHAN D. MORGAN, Norwich, Conn.—*Picture-Frame.*—September 7, 1869.

Claim.—1. The combination of the star with thread wound on its points, so as to form a polygonal opening, with a polygonal and star-pointed border encompassing such opening, as set forth, the said opening being for the reception of a picture.

2. The combination of a pane of glass, or the same and a picture-mat, with the star and thread wound and arranged thereon, substantially as described.

3. The combination of the thread-guides or bridges *b b* with the opening or mouth *a* of the star A, or with it and thread wound on such star, and against the said guides, in manner and for the purpose of making a border on the star, as set forth.

4. The combination of the edge-coverings *s* with the star and the thread wound thereon, as set forth.

94,633.—O. R. NITSCH, New York, N. Y.—*Fan.*—September 7, 1869.

Claim.—As a new article of manufacture, a fan, whose leaves are attached to one another, and pivoted at their inner ends, the outer leaves being rigidly attached to the said pivot, and operated to spread the fan by means of a pulley and cord, substantially as described.

94,634.—HENRY NOLTE, Lincoln, Ill.—*Plow.*—September 7, 1869.

Claim.—The arrangement, with reference to the beam A and mold-boards C, of the pivoted rods F, and screw-rod E, provided with the crank G, all combined and operating as and for the purpose set forth.

94,635.—JAMES NORMAN, New Orleans, La.—*Grain-Mill.*—September 7, 1869.

Claim.—1. Attaching inclined planes, or supporting arms with inclined bearing-faces to the upper or non-revolving stone of grain-grinding mills, or to the casing thereof, substantially as herein described, for the purpose set forth.

2. Mounting the upper stones of grain-grinding mills on friction-rollers *a a'*, that are sustained in adjustable journal-boxes *b b'*, which are secured to inclined standards H, when the same is done by means of supporting-arms I I', that have reversed inclinations to the inclinations of said standards, substantially as herein described, for the purpose set forth.

3. Attaching the enveloping casing of the lower or revolving stone to the upper stone or its casing, so as to give the same an undulatory motion, substantially as herein described, for the purpose set forth.

94,636.—O. OSBORN, Trumansburg, N. Y.—*Plow.*—September 7, 1869.

Claim.—1. The rack-bar G, in combination with the slotted guide B and cam H, when used to raise and lower the plow, substantially as set forth and described.

2. The spring M, when used to hold the bar G down, substantially as shown.

3. The plow D, rack-bar G, guide B, cam H, handle K, stop L, and spring M, when used and combined substantially as set forth.

94,637.—WASHINGTON F. PAGETT, Springfield, Ohio.—*Plow.*—September 7, 1869.

Claim.—1. The manner of attaching the mold-board to the beam, by means of the plate D, substantially as shown and described.

2. The combined bolt, key, washer, and tap or nut, in all applications of the device, substantially the same as the present, not only as a means of bringing and holding the parts together firmly, but as a provision against lateral strains, the head of the bolt on one side, and the washer on the other, overlapping the joint or point of contact of the parts, substantially as described.

3. The scroll or internal spiral recess washer, in any or all different combinations, and in all cases where it may be used individually.

94,638.—FRANCIS PARKER, Cato, N. Y.—*Circular-Saw Mill.*—September 7, 1869.

Claim.—The belt K, pulley L, shaft M, pinion N, rack O, and slide Q, constructed and arranged to operate substantially as described, and for the purpose specified.

94,639.—N. PETRÉ, New York, N. Y.—*Door-Lock.*—September 7, 1869.

Claim.—In combination with a lock-bolt, the eccentric and hub therein, for operating in connection with a pin-key and spring-pin, substantially as and for the purpose described.

94,640.—JEAN JOSEPH JULES PIERRARD, Reims, France.—*Spindle and Flier.*—September 7, 1869.

Claim.—Spindles and fliers constructed and operating substantially as shown and described.

94,641.—WILLIAM M. PIPER, Blue Earth City, Minn.—*Wind-Wheel.*—September 7, 1869.

Claim.—The blades A^2 A^2, gates B B, plates C C, rods *b' b'*, segmental rack *c*, and pinion-wheel c^1, when the same are so connected with the governor by a system of leverage as to be rendered self-adjusting, and thus be enabled, through its own operating mechanism, to regulate the amount of wind that is to be admitted to the wheel, the whole being so combined and arranged as to operate substantially as described, as and for the purpose specified.

94,642.—CLARK POLLEY, Shelbyville, Tenn.—*Animal-Trap.*—September 7, 1869.

Claim.—The animal-trap above described, consisting of the standard A, curved arm B, spur C, lever N, shoulders *m n*, and spring *e*, all constructed, arranged, and combined to operate together, substantially as and for the purposes set forth.

94,643.—CLARISSA PRESTON, Wheeling, W. Va.—*Oven.*—September 7, 1869.

Claim.—The grate D, having its side edges bent to hook over the flanges F, and furnish bearings for the same to move on the rollers G, all arranged substantially as herein shown and described.

94,644.—EMANUEL RABER, Roanoke, Ind.—*Horse Hay-Fork.*—September 7, 1869.

Claim.—Pivoting the tines to the head A, to which the lock-lever is also pivoted, the tines and lever being operated by cords, substantially as described.

94,645.—JOHN L. RESSLER, Ramsburgh, Pa.—*Churn.*—September 7, 1869.

Claim.—The combination of the box A, cover B, tube C, cleats D D, reels E E', crank F, slide G, perforated fans H H, and fingers I I, all constructed, arranged, and combined to operate substantially in the manner and for the purposes herein set forth.

94,646.—EDWARD REYNOLDS, Omro, Wis.—*Churn.*—September 7, 1869.

Claim.—1. The scraper D, arranged to operate in connection with a churn, substantially as described.

2. The combination of the scraper D and ring G, attached to the lid by an arm, *i*, constructed and arranged substantially as and for the purpose set forth.

3. The scraper E, when constructed and arranged to operate in connection with a churn, substantially as herein described.

94,647.—JOHN D. RICHARDS, Muscatine, Iowa.—*Projectile.*—September 7, 1869.

Claim.—A projectile, having cylinder A, cap B, rod C, and cap H, constructed and arranged substantially as specified.

94,648.—EVERETT P. RICHARDSON, Lawrence, Mass.—*Manufacture of Boots and Shoes.*—September 7, 1869.

Claim.—1. The notched, grooved, or channeled welt B, employed in the manner and for the purpose substantially as herein set forth.

2. The combination of the welt B, applied to the front portion of the sole A, with the channel *a* in the rear portion thereof, substantially as described.

94,649.—WILLIAM I. RISEDORPH, Albany, N. Y.—*Clutch.*—September 7, 1869.

Claim.—A clutch, consisting of a disk A, provided with locking-bolts *e*, working in the chambers *a*, in combination with the ratchet-wheel D, substantially as and for the purpose set forth.

94,650.—D. B. RITTER, Glasgow, Ky.—*Millstone-Driver.*—September 7, 1869.

Claim.—The combination, with the rigid drivers A and the spindle, of the pivoted arms D and sliding block C, substantially as set forth.

94,651.—DANIEL T. ROBINSON, Boston, Mass.—*Ash-Sifter.*—September 7, 1869.

Claim.—An ash-sifter, composed of the disk *a*, with its apertures *b* and *c*, hopper *d*, in combination with the sieve *e*, the shaft *i*, and its wipers *j j*, the levers *k k*, and projections *m m* and *n n*, or their equivalents, the whole being and operating as described.

94,652.—ALEXANDER F. B. ROCKE and WILLIAM H. MCLEOD, Jersey City, N. J.—*Railway-Signal.*—September 7, 1869.

Claim.—The semi-elliptical springs D E, levers G R, rods I L, arms K R, and stop S, all arranged and operating substantially as and for the purposes described and set forth.

94,653.—JOSEPH F. SARGENT, Melrose, assignor to ELMER TOWNSEND, Boston, Mass.—*Machine for Nailing the Soles to the Uppers of Boots and Shoes.*—September 7, 1869; patented in England, November 5, 1868.

Claim.—1. In combination with the vertically-moving shoe-supporting horn or arm, and the shoe-feeding and wire-cutting, and nail-carrying and nail-driving mechanism herein described, the mechanism by which the vertical movements of the horn (produced by the varying thickness of the shoe-sole) operate to change the extent of rotative movement of the wire-feed ratchet-wheel, so as to cause each nail to be automatically cut to a length corresponding to the thickness of that part of the sole held between the nail-tube foot and the top of the work-supporting arm.

2. So combining the work-supporting horn or arm with the mechanism for ganging the length of the wire, that the depression of the arm, to enable the shoe to be placed upon the arm or removed therefrom, can be in excess of the movement of the mechanism which connects the arm with the wire-feed mechanism, substantially as described.

3. In combination with the wire-feeding wheels, cutters which sever the nail previously to its transfer to the nail-driving point, when these cutters are so formed as to cut the point of each nail to a V-shape, and the head of each nail flat, substantially as described.

4 In combination with feed-wheels, a movable cutter and a stationary cutter, arranged to cut the wire prior to its transfer, to be driven substantially as described.

5. In combination with the cutters *y z*, the reciprocating sliding carrier d^3, operating to transfer the nail received from the cutters, substantially as described.

6. The combination of the awl, the laterally-moving feed and nail-tube foot, and the vertically-moving detainer-foot, by which, after each nail is driven, the feed-foot first moves forward with the shoe; the detainer then descends, and moves the shoe away from the feed-foot, the awl then descending at the side of the feed-foot, piercing the hole for the reception of the nail, and rising from the shoe; the feed-foot next moves back over the sole, bringing the nail-driver tube over the hole pierced by the awl, and the driver then descends and drives the nail, simultaneous to which movement of the driver, or just previous thereto, the detainer rises to let the sole up against the nail-tube foot.

94,654.—JOSEPH F. SARGENT, Melrose, assignor to ELMER TOWNSEND, Boston, Mass.—*Machine for Nailing and Pegging Boots and Shoes.*—September 7, 1869; patented in England, November 5, 1868.

Claim.—1. In combination with the wire-feeding and nail-driving mechanism, a cutter having a rotative movement to sever the nail, substantially as described, when the cutter is a separate instrument from the wire-feeding and nail-driving mechanism, and acts to sever the nail before it is driven.

2. In combination with such cutter, an independent vibrating or reciprocating carrier, which receives the end of the wire and transfers it, when cut, from its inclined position to vertical position over the peg-driver tube, substantially as described.

3. In combination with the wire-feed mechanism, a mechanism for enabling the extent of feed of the wire to be varied by the foot of the operator, substantially as described, such mechanism being independent of the shoe-supporting mechanism.

4. In combination with the feed-ratchet, the mechanism for limiting and adjusting the extent of feed-movement of the ratchet, substantially as described.

5. In combination with the shoe-feed foot, having up and down, forward, and back movements, as described, the stationary driver-tube or detainer-foot, substantially as described.

6. The construction and arrangement of the jack-supporting mechanism, by which the shoe may not only be tipped freely by the operator in all directions necessary for its proper presentation, but is held by the stress of the lever-weight toward its proper position, substantially as described.

94,655.—FRITZ SCHALLER, Mattoon, Ill.—*Milk-House.*—September 7, 1869.

Claim.—The arrangement of the double-walled sides B, ends E, frame D, weights and cords, and posts H, all substantially as specified.

94,656.—ADAM SCHWAAB, New York, N. Y.—*Sofa-Bedstead.*—September 7, 1869.

Claim.—1. The sofa-back A, fitted to the frame B, and jointed upon arms D, arranged for folding it into the said frame or down in front of the seat, and relatively thereto, substantially as specified.

2. The arrangement, with the arms D, of the shaft E and back-rail L, substantially as specified.

3. The arrangement, with the back A, of the hinged legs G and the arms D, when the said arms rest on the rail O, to support the inner part of the bottom, all substantially as specified.

94,657.—ROBERT SCOTT, La Porte, Ind.—*Garden-Plow.*—September 7, 1869.

Claim.—1. The arrangement, herein described, of the handles A A, the head-block C, or the substitution therefor of the bent handles above described, the post F with its braces K K, and the regulating slot H, or the substitution therefor of the holes N N N, or the slot indicated by the dotted line in Fig. 3.

2. The wheel D, with a single shovel following after it, and the general wheelbarrow-like arrangement, whereby the plow is made easy to handle and push in a straight line, and whereby it may be raised or lowered by the handles so as to plow deep or light as occasion requires.

94,658.—JACOB H. SHEAR, Albany, N. Y.—*Cooking-Stove.*—September 7, 1869.

Claim.—In a cooking-stove, of the general construction and arrangement described, the chambered door, grate, flues, dampers *e* and *f*, and exit-pipe, under the combination substantially as represented.

94,659.—JOHN W. SMITH and HEINRICH GRIESA, North Cohocton, N. Y.—*Grain-Measurer.*—September 7, 1869.

Claim.—1. The strike H, with sides *f f* and buttons or stops *g g*, in combination with the box or measure, constructed substantially as described.

2. The box A, with opening B, and hooks *b*, to hold the bag, slide G, and lever *d*, sockets *c c c*, with legs F F F, constructed and arranged substantially as described.

94,660.—ROBERT R. SPEDDEN and E. CLIFFORD SPEDDEN, Astoria, Oregon.—*Device for Pumping by the Motion of the Oars.*—September 7, 1869.

Claim.—1. A sliding row-lock, connected with a pumping-apparatus, so that it may, during the operation of rowing, serve to operate the pumping-apparatus, substantially as herein shown and described.

2. The row-lock C, when fastened to a sliding plate, D, which is, by a pin *a*, connected with the piston-rod of a pump, substantially as herein shown and described, to operate as set forth.

3. The spring *e*, when connected with the sliding row-lock, for the purpose of partly counteracting the forward motion of the row-lock, and for returning the pump-piston, substantially as herein shown and described.

4. The hinged plate *f*, or its equivalent, when arranged to lock the sliding row-lock, substantially as herein shown and described, for the purpose of arresting the pumping operation, as specified.

94,661.—JAMES L. SPRAGUE, Hermon, N. Y.—*Cheese-Hoop.*—September 7, 1869.

Claim.—As a new article of manufacture, a cast-iron cheese-hoop, enameled upon the inner surface, as herein described, for the purpose specified.

94,662.—LUCAS STADLER, Bowensburgh, Ill.—*Corn-Harvester.*—September 7, 1869.

Claim.—1. The combination and arrangement of the wheel *o*, shafts *s* and *v*, pinions *m*, *t*, and *u*, hook *r*, arm *k*, knives *w*, rollers *g* and *l*, and belts *n*, constructed and operating substantially as and for the purposes specified.

2. A corn-stalk cutter, having wheel *o*, shafts *s* and *v*, pinions *m*, *t*, and *u*, hook *r*, rollers *g* and *l*, and belts *n*, in combination with the derrick E, and cord and hook therewith connected, all constructed, arranged, and operating substantially as specified.

94,663.—JAMES STEPHENS, Agency City, Iowa.—*Plow.*—September 7, 1869.

Claim.—In combination with the frame, constructed as described, two shovels, arranged as specified, the right-hand one being removable, and so twisted as to throw all the dirt to the right or left, as may be desired.

94,664.—E. C. STONE, Galesburgh, Ill.—*Mode of Fastening Artificial Teeth.*—September 7, 1869.

Claim.—The staples B for attaching the teeth D to the metal plate A, when said staples are constructed as described, by passing the wire through the plate from the inner side, and bending its ends over in opposite directions, to form eyes upon the outer side of said plate, as herein set forth and shown.

94,665.—JOHN STORER, New York, N. Y.—*Direct-Acting Engine.*—September 7, 1869.

Claim.—1. The slide *f* and lever *b*, in combination with the tappet-rod *c*, and with the slide-valve of an auxiliary cylinder J, controlling the valve-motion of a direct-acting engine, substantially as shown and described.

2. The friction-disks *h j*, in combination with the slide *f*, lever *b*, tappet-rod *c*, and slide-valve K, substantially in the manner set forth.

3. The arrangement of a double exhaust in the auxiliary cylinder J, controlling the valve-motion of a direct-acting engine, substantially as described.

4. The arrangement of the air-cushion cylinder N, with reference to the valves F, rod H, and valve K, substantially as described.

5. The gauge, in combination with the cylinder-head and piston, substantially as described.

94,666.—JAMES STUART, San Francisco, Cal.—*Steam-Generator.*—September 7, 1869.

Claim.—The fire-spaces A, arranged centrally, and extending the whole length of the boiler, the lateral tubes B, the spaces C, and return-tubes D, leading into the space E, all arranged substantially as specified.

94,667.—MOSES TESSIER, Cairo, Ill.—*Plow.*—September 7, 1869.

Claim.—1. Securing the frame A to the beam B by means of the lugs a^1 a^2, bolts C D, clevis and bar E F, and slotted wedge G, substantially as herein shown and described, and for the purpose set forth.

2. The double and double-pointed mold-board I, constructed substantially as herein shown and described, and secured in place by means of the pointed forward end of the frame A and arm K, to which it is bolted, as and for the purpose set forth.

94,668.—HIRAM THOMPSON, Worcester, Mass., assignor to RICHARD BALL and E. P. HALSTED, same place.—*Sawing-Machine.*—September 7, 1869.

Claim.—1. The combination, with the feed-rolls C C C C and roll-shafts L, of the gear-shafts K and pins *n*, passing through both said shafts, substantially as shown in the drawings, and herein described.

2. The combination, with the upper ends of the feed-rolls C C, of the roll-supporting adjustable frame H, forked so as to hold each pair of rolls, substantially as and for the purposes set forth.

3. The combination of the slotted forked frame H with the flanged standard E, provided with the projection 1, substantially as and for the purposes set forth.

4. The combination, with the adjustable roll-supporting frame H, of a scale and index, substantially as and for the purposes set forth.

5. The combination, with the slotted forked frame H and flanged standard E, of the adjusting-screw *g*, substantially as shown and described.

6. The combination, with the sliding frame-plates D D, of the rack-bars W X, cog-wheel V, and shaft T, the parts being constructed and arranged in relation to each other, substantially as shown and described.

7. The combination, with the rack W and slide-plate D, of the screw 4, substantially as and for the purposes set forth.

8. The combination, with the adjustable carriage B, of the sliding frame-plates D D, connected with and held upon said carriage, substantially as shown and described.

9. The combination, with the adjustable carriage B, of the clamping-screws *c c* and adjusting-screw *b*, substantially as and for the purposes set forth.

10. The combination, with the sliding frame-plate D, of a swinging top device, A^1, *v*, as shown and described.

11. The combination, with the saw D′, of the divided shield M′ and dust-pipe N′, when constructed substantially as and for the purposes set forth.

12. The combination, with the main frame A and laterally-moving frame G′, pivoted and adjusted as described, of the grooved bearing O^2, bearing O^1, and elevated ways F′, said bearings being capable of longitudinal adjustment, as shown and described.

13. A machine for resawing lumber, the parts of which are constructed, arranged, and combined together, substantially as shown and described.

94,669.—DENISON TISDALE, Des Moines, Iowa.—*Gold-Digging Apparatus.*—September 7, 1869.

Claim.—The arrangement, with the cylindrical frame A, of the valves E, and two or more reservoirs, as described, riffles H, cutters D C, and curb B, all operated by the shaft F, with its collar N, and rings O, substantially as specified.

94,670.—E. W. TUCKER, Lowell, Mich.—*Spring for Upholstery, Chair, Car, and other Seats.*—September 7, 1869.

Claim.—The arrangement, under the fabric B, of the spring D, with end-loops *a a*, coiled around the circular bars C C, and the intervening loops *b*, all as herein set forth.

94,671.—W. F. TUNNARD, East Baton Rouge Parish, La., assignor to FRED. D. TUNNARD, same place.—*Cotton-Seed Planter.*—September 7, 1869.

Claim.—1. The connecting-rods D D′, when both are secured to the crank *d*, the double-slotted standard E, pins *i i* in the connecting-rods D D′, in combination with the discharging-wheel B and stirrer 3, when all are connected and arranged as specified.

2. In combination with the elements of the foregoing claim, the fluke G, as set forth.

94,672.—A. E. TURNBULL, Upper Sandusky, Ohio.—*Camera-Stand.*—September 7, 1869.

Claim.—The slides C C, F F, and R, the sliding brace G G and its connections, the screws V V V, and extension-leg H, connected as described, or the whole of the devices explained, to operate separately or in connection with each other, for producing the results, in the manner and for the purpose herein described, the whole to operate substantially in the manner and for the purpose set forth.

94,673.—B. W. TUTHILL, Oregon City, Oregon.—*Hand-Truck.*—September 7, 1869.

Claim.—Constructing the framing of hand-trucks of metallic tubes, A B, substantially as herein described.

94,674.—D. C. VAN BRUNT, G. W. VAN BRUNT, and HIRAM BARBER, Horicon, Wis.—*Seeding-Machine.*—September 7, 1869.

Claim.—1. In a seeding-machine, the construction and arrangement of the tongue M and brace-beams N N, in connection with the two parallel cross-beams A A′, substantially as and for the purposes set forth.

2. In connection with the described arrangement of tongue, cross-beams, and braces N N, in a seeding-machine, the arrangement of the standards O O, which support the lifting-chains and lever, upon the rear end of the braces, substantially as and for the purposes specified.

3. The means herein described for fastening the teeth G, viz, the wedge *w*, operating between the front edge of the forward shank of the tooth and the front end of the slot in the drag-bar, substantially as and for the purposes indicated.

94,675.—NICHOLAS S. VEDDER, Troy, N. Y.—*Cooking-Stove.*—September 7, 1869.

Claim.—1. The heating-chamber or chambers against the front side of the reservoir, above the top-plate of the stove, in combination with a heating-chamber or chambers, between the front side of the reservoir, below the top-plate of the stove and the back-plate of the stove, substantially as and for the purpose hereinbefore set forth.

2. The heating-chamber or chambers against the front side of the upper portion of the reservoir, in communication with the descending oven-heating flue or flues, in combination with the chamber or chambers along the front side of the lower portion of the reservoir, and in communication with rear ascending or exit flue.

3. In combination with the above, the dampers, arranged and operating as and for the purpose hereinbefore set forth.

94,676.—NATHAN S. WARNER, Bridgeport, Conn.—*Toy-Velocipede.*—September 7, 1869.

Claim.—The universal joint *a b*, constructed as shown, when forming a part of a toy-velocipede.

94,677.—ALBIN WARTH, Stapleton, N. Y., assignor to himself and EBERHARD FABER, New York City.—*Sewing-Machine.*—September 7, 1869.

Claim.—1. The raised eye *f* on the shuttle S, in combination with the raised rim *g*, so as to bring the shuttle-thread in the proper position for the cast-off hooks *r r*, substantially as shown and described.

2. The shoulders *o*, on the shuttle, being situated on a level with the middle line of the height of the spool, secured in the shuttle substantially as described.

3. The projecting rims *g* and *i*, on the back of the shuttle, in combination with a circular groove in the vertical shuttle-race, and, with the noses of the shuttle-driver, serving to support the weight of the shuttle, so as to allow the needle-thread to pass freely through between the shuttle and the noses of the shuttle-driver, substantially as set forth.

4. A sewing-mechanism, composed of an eye-pointed needle, receiving its motion from a smooth eccentric, and a shuttle traveling in a circular race, when constructed substantially as described, to operate together in the manner set forth.

5. The shoulders *l l* on the circular rim in the shuttle-race R, in combination with a shuttle traveling in a circular race, and provided with depressions *k* in its rim, substantially as set forth.

6. The annular depression *j*, in the shuttle-race R, in combination with hooks *p p* of the shuttle-driver, as described.

7. The cast-off hooks *r r*, in the shuttle-race, in combination with the noses *p p* of the shuttle-driver, substantially as set forth.

8. The radial depression *t*, in the circular shuttle-race R, substantially as described.

9. The double cam *x x* on the shuttle-driver, in combination with the feed-mechanism, substantially as set forth.

10. The self-adjusting cams o^1 and a^1, in combination with the reciprocating needle *n*, the lever *z*, rising and falling throat-plate *y*, and with the double-pointed shuttle, moving in a circular race in either direction, substantially as set forth.

11. The slotted hub of the cam u^1, which actuates the take-up, in combination with the stop t^1, on the slotted hub o^1, of the eccentric l^1, and with the stop q^1, substantially as described.

12. The brake y^1, in combination with the slotted hub of the cam u^1, and with the spring w^1, substantially as set forth.

13. The combination of a cam-wheel, L, with the presser-foot and cloth-plate e^3, substantially as set forth.

14. The swivel-plate z^2, under the presser-foot y^2, in combination with the guide-rod c^3, substantially as set forth.

15. The combination of the additional throat-plate e^3 with the presser-foot and cam-wheel L, substantially as described.

16. The flange f^3, on the throat-plate e^3, in combination with the feed-dog e^1, substantially as set forth.

17. The double edge-gauge r^3, on the throat-plate o^3, in combination with the oscillating presser-foot y^2 z^2, substantially as described.

18. The guiding-screw q^3, secured in the presser-foot, in combination with the lip r^3 of the throat-plate o^3, substantially as set forth.

19. The arrangement of the hinged spring lever t^2, provided with a set-screw, and with a projection, which acts on the cam-wheel L, in combination with the rod u^2, and presser-foot E, substantially as described.

20. The center-point m^3, in combination with the additional throat-plate e^3 and oscillating presser-foot y^2 z^2, substantially as set forth.

21. The embroidery-attachment, consisting of a cam-wheel, K, operated by a pawl from the needle-bar or needle-lever, and actuating the rods h^2, having oblique thread-guides k^2, all constructed substantially as set forth.

22. The adjustable edge-gauge n^3, in combination with the additional plate e^3 and movable presser-foot y^2 z^2 substantially as described.

94,678.—R. M. WASHBURN, Burlington, Iowa.—*Scroll-Sawing Machine.*—September 7, 1869.

Claim.—The arrangement of the hinged top B, shaft H, wheel I, crank *c*, pitman *d*, bar *e*, and saw *f*, all being constructed to operate substantially as and for the purposes herein set forth.

94,679.—William B. Watkins, Jersey City, N. J.—*Boiler or Stew-Pan.*—September 7, 1869.

Claim.—The combination of the hangers D with a boiler-cover of less area than the area of the boiler, for the purpose of suspending the cover loosely within the boiler, that the overflowing water through the vent-holes E may readily find its way back to the body of water in the boiler, and thus prevent the water running over the edges of the boiler.

94,680.—Reuben Wells, Jeffersonville, Ind.—*Railway Car-Body Elevator.*—September 7, 1869.

Claim.—1. The combination, with a railroad-track, of vertically-moving elevators, levers, and hydraulic elevator, when arranged for elevating car-bodies from the trucks, for the removal of the latter and substitution of others, and lowering the bodies again, substantially as specified.

2. The elevators B, combined with the track, and provided with jacks, adjustable, substantially as specified.

3. The arrangement of the tracks, centrally, between the elevators B, substantially as specified.

94,681.—M. F. Wickersham, Springfield, Ill., assignor to himself, Thomas Eckardt, H. F. Eldred, J. G. Law, T. Hutchinson, C. B. Hurd, C. Dresser, and D. Sherman.—*Dumping-Cart.*—September 7, 1869.

Claim.—A dumping-cart, having its body hung upon the axle, as described, and adapted to be dumped forward by the gravity of the load, substantially as herein set forth, for the purpose specified.

94,682.—Charles G. Wilson, Brooklyn, N. Y.—*Furniture-Caster.*—September 7, 1869.

Claim.—The improved furniture-caster, above described, formed by the combination of a solid sphere, rolling freely in its socket, a caster-body, provided with a hemispherical concavity and suitable cap, and a series of frictional balls arranged around the surface of the said sphere, and freely moving over the entire upper surface of the caster-ball, when brought in frictional contact with the same, all substantially as shown and described.

94,683.—R. F. Wolcott, Claremont, N. H.—*Muley-Saw Mill.*—September 7, 1869.

Claim.—1. The arrangement of the guides A A, as herein shown and described, for the purpose specified.

2. The sliding bar C, provided with the rack E and the cross-head F, supporting the adjustable bars G, carrying the adjustable guides H, all arranged to operate as and for the purpose specified.

3. The concave rag-wheel I, friction-wheels M M′, springing-shaft K, and shifting-lever P, all arranged substantially as specified.

94,684.—John F. Woolley, Pleasant Ridge, Ohio.—*Rotary Clod-Fender.*—September 7, 1869.

Claim.—1. The combination and arrangement, in a rotary clod-fender for plows, of two or more annular plates L, arranged in the same plane, and straight radial arms K *k*, substantially as described.

2. The adjustable frame B C D E F *f* G, substantially as and for the purpose stated.

94,685.—John P. Zeller, South Bend, Ind.—*Hub for Vehicles.*—September 7, 1869.

Claim.—The combination of hub A, provided with an annular recess on each side, with the circumferentially-flanged thimbles C C which are fitted into said recesses, and secured by the bolts *i i*, as shown and described.

94,686.—John P. Zeller, South Bend, Ind.—*Forced Feed-Gearing in Seed-Drills.*—September 7, 1869.

Claim.—1. The seed-box O, constructed as described, with its bottom made in sections, each alternate section containing a shoe and seed-agitator, substantially as herein set forth.

2. The arrangement of the seed-box O, constructed as described, with the movable perforated board N, through which the flexible conducting-tubes pass, and the holes or drills R R, all substantially as and for the purposes herein set forth.

3. The arrangement of the seed-box O, perforated board N, hoes R R, and bar T, when all are constructed as described, and placed on an adjustable carriage, substantially as and for the purposes herein set forth.

94,687.—John P. Zeller, South Bend, Ind.—*Device for Marking and Planting Corn.*—September 7, 1869.

Claim.—1. The arrangement of the bar A, blocks B B, and movable buttons C C, substantially as and for the purposes herein set forth.

2. The arrangement of the bar *a*, ears *b b*, connecting-bar F, marking-plow G, and plow-beam H, all substantially as shown and described.

3. The combination and arrangement of the bars D D, roller E, connecting-bar F, marking-plow G, and plow-beam H, all constructed as described, and connected to the bar A, substantially in the manner and for the purpose herein set forth.

4. The arrangement, upon the movable frame I, of the grain-boxes J J, agitators *e e*, tubes K K, slides L L, springs *f f*, and shafts *c* and *h*, said shafts being provided with suitable gearing for operating the agitators and slides, substantially as and for the purposes herein set forth.

5. The arrangement of the cogged wheels *g* and *i*, shaft *h*, three-armed levers *m m*, projections *n n*, slides L L, and springs *p p*, all substantially as and for the purposes herein set forth.

6. The combination of the bars D D, roller E, marking-plow G, grain-boxes J J, tubes K K, and slides L L, all constructed and arranged as described, on an adjustable carriage, substantially as and for the purposes herein set forth.

94,688.—Edward Gray, Oldtown, Me.—*Implement for Carpenters' Use.*—September 7, 1869.

Claim.—1. The implement constructed as herein represented and described, and made capable of being used either as an adze or a plane.

2. The double-branched opening or socket C, formed in the head B of the cutting-blade A, for the reception of handles D E, inclining in opposite directions, to adapt the tool to use either as an adze or a plane, substantially as before described.

94,689.—Robert K. Kille, Mount Holly, N. J.—*Slate-Roofing.*—September 7, 1869.

Claim.—The arrangement of the metal strips and projections with a water-proof cement covering, substantially in the manner and for the purpose set forth.

94,690.—Oscar I. Harrington and Elijah Weaver, Wood's Run, Pa.—*Leather Cord or Rope.*—September 7, 1869.

Claim.—1. Leather or skin cording, the strands of which are provided with cotton or hemp filling, as herein described, and for the purpose set forth.

2. Leather or skin cording, the strands of which are provided with cotton or hemp filling, and interwoven with wire, in the manner herein described and for the purpose set forth.

94,691.—Thomas H. Bradley, Saint Louis, Mo.—*Shutter-Worker.*—September 7, 1869.

Claim.—1. The grooved disk, furnished with a flange or base for fastening it at a right angle to the plane of the shutter, and independent of the hinges, as and for the purpose described.

2. In combination with the above, the operating-lever, furnished with the spring-catch, that fastens in the holes in the interior plate, all as and for the purpose described.

94,692.—Jules Roch, Rochester, N. Y.—*Brace for Covers of Trunks, Pianos, &c.*—September 7, 1869.

Claim.—The arrangement of the shield and guiding-case B, having a stop-lip, the segmental-notched supporting-plate A, having a stop-pin, *h*, the horizontal sliding-bolt *a*, with its spring *e* and guides *b*, so that the several parts will be located and concealed within the trunk, and thus protected from being broken off, or otherwise rendered inoperative, as described.

94,693.—G. W. Adams and John R. Hopper.

Rochester, N. Y.—*Potato-Digger.*— September 14, 1869.

Claim.—1. The laterally-tilting bottom *i*, of the box I, whereby the potatoes may be delivered upon either side of the machine, as set forth.

2. The adjustable dividing-plows J, in combination with the shovel E and frame D.

3. The adjustable gauge-wheels K, in combination with the auxiliary frame D and shovel E, for the purposes specified.

4. The obliquely bent sides *d* of the shovel E, as and for the purpose set forth.

5. The riddle G, provided with the discharge-spout I, and having a parallel lateral shake, for the purposes set forth.

6. In combination with the revolving endless apron *b*, the vibrating cutter *p*, for the purposes set forth.

94,694.—Xavier Amoun, Sidney, Ohio.—*Rain-Water Cut-Offs for Cisterns.*—September 14, 1869.

Claim.—The combination of the spout B, float G, rod F, valve E, and spout D, when arranged and applied in connection with a cistern or other water-receptacle, substantially as specified.

94,695.—François Aroud, Lyons, France.—*Sweetmeat.*—September 14, 1869.

Claim.—The incorporation of extract of meat in a sweetmeat, substantially as herein set forth.

94,696.—Caleb Bartholomew, Ætna, N. Y.—*Ditching-Machine.*—September 14, 1869.

Claim.—1. The peculiar arrangement of the five teeth, when formed as described, that is, the three forward teeth of the one form, and the two rear teeth of the other, for the purpose of cutting the sides of the ditch and breaking up the earth within it.

2. The pivoted handles *f*, pivoted standard *i*, adjustable bearing-wheels *d*, in combination with the frame A and teeth *c*, when arranged as and for the purpose described.

94,697.—Christian Bates, Conestoga, Pa.—*Leather-Holder.*—September 14, 1869.

Claim.—The combination and arrangement of a leather-holder, when constructed with a horizontal-sliding block, E D, and vertically-sliding piece F, provided with a set-screw, K, guides *g*, and the hinged holder C *c*, together with the grooved support B, all operating substantially in the manner and for the purpose specified.

94,698.—Joseph Bearden, Bath, Ill.—*Corn-Marker.*—September 14, 1869.

Claim.—The arrangement of the central wheel E, pivoted upon the frame D, and adjustable vertically by means of the standard *f*, the lever F, and the chain *d*, and secured in an elevated position by the hook *a*, in combination with the arrangement of the wheels B, the axle A, the hounds C, and the driver's seat, when constructed and operating as aforesaid.

94,699.—William N. Berkeley, Cedar Rapids, Iowa.—*Sled-Runner.*—September 14, 1869.

Claim.—1. The brace-rod E, when passing through a hole in the runner, substantially as described, and fastened at each end to the sled-beam, so as to be tightened or loosened, and brace the sled-runner and beam, substantially as specified and shown.

2. The combination of the cast-iron runner and post, in combination with the braces F and H, when arranged and operating substantially as specified.

3. The combination of the roller I, ferrule J, screw L, washer V, and runners, when arranged and operating substantially as and for the purposes herein set forth.

94,700.—Bentley C. Bibb, Baltimore, Md.—*Base-Burning Fire-Place Heater.*— September 14, 1869.

Claim.—1. The double-inclined fuel-magazine G, applied to a fire-place heater, substantially as described.

2. The discharge-opening *g'*, entering the fire-chamber C, through the wall inclosing this chamber, in combination with an inclined fuel-magazine, substantially as described.

3. The dust-valve *h*, applied to the wall which incloses the ash-pit *a*, substantially as described.

4. The vertical passage P, formed as described, in combination with air-inlets and outlets *o*, substantially as described.

94,701.—Henri E. Bissell, Hartford, Conn.—*Spring-Bed Bottom.*—September 14, 1869.

Claim.—The webbing-bottom, made in sections, laced together as described, in combination with the strainers *k k k*, the movable head-piece *b*, with its sockets, springs, and bars, and the cam *i*, the whole arranged and constructed as described, for the purpose set forth.

94,702.—B. Blackstone, Warren, Ill.—*Saw-Clamp.*— September 14, 1869.

Claim.—The combination of the fixed standards A, jaws I J, elbow-arms C F G, and cross-trees E H, said arms being pivoted to the inside of the standards, all constructed and arranged and operating as described.

94,703.—Joseph M. Blake, Buffalo, N. Y.—*Clothes-Drier.*—September 14, 1869.

Claim.—1. The detachable or independent brackets B B′, in combination with bars A A, axis D, and adjusting stay-pin *c*, arranged and operating in the manner herein set forth.

2. Adjustable stay-pin *c*, operating against the lower or upper bar, in combination with the hole or holes *d d* in the brackets B B′, arranged and operating as and for the purpose herein set forth.

3. The bars A A, when provided with the slots or holes *a a* and pins *b b b*, arranged and operated in the manner and for the purpose specified.

4. A clothes-drier, consisting of the brackets B B′, bars A A, with pins *b b b*, slots *a a*, and axis D, when combined and operating as herein specified.

94,704.—Virgil W. Blanchard, Bridport, Vt.—*Mode of Preserving Wood.*—September 14, 1869.

Claim.—1. The perforations of the wood, for the purpose set forth.

2. The incorporation of coal-tar and pulverized stone, or any suitable granular or mineral substance, into and beneath the surface of the wood, substantially as and for the purpose set forth.

3. The arrangement of the series of holes punctured in the surface of the wood, substantially as and for the purpose set forth.

94,705.—Henry Bonholtzer and Jacob S. Shopp, Cumberland County, Pa.—*Harvester-Cutter.*—September 14, 1869.

Claim.—The construction and mode of applying the cutters A, with beveled narrower ends *a*, notch *j*, and holes *i*, in combination with the recess *b* and spring-plate D, and cells formed in the cutter-bar B, in the manner and for the purpose shown and specified.

94,706.—James Boyce, Wooster, Ohio.—*Flax-Brake.*—September 14, 1869.

Claim. — The combination with the breaking-rollers, having an intermittent forward and back movement, of a feeding-table, inclining downward toward them, and feeding-rollers at the higher end of the said table, substantially as specified.

94,707. — Edward D. Boyd, Helena, Ark.—*Lamp-Wick.*—September 14, 1869.

Claim.—A perpetual wick or burner, consisting essentially of the tube A, having a strainer, B, and an opening or openings, *a a*, and partially or wholly filled with ground or pulverized mineral substance, G, substantially as and for the purposes herein set forth.

94,708. — Julius Branch, Mooers, N. Y.—*Animal-Trap.*—September 14, 1869.

Claim.—A trap, consisting of the box A, with the spout or passage-way B, having the drop C, trigger *g*, rock-shaft *k*, with its arm *d*, and gate D, with its arm *e*, all constructed and arranged to operate substantially as described.

94,709.—David Campbell, Joseph Campbell

and SEYMOUR RAYMOND, Middletown, Pa.—*Hot-Blast Oven.*—September 14, 1869.

Claim.—1. In connection with the pipes A A′ and conductors B, arranged as shown, the arrangement and combination of the longitudinal partitions *b* and transverse partitions *e*, when constructed and employed as and for the purposes herein set forth.

2. The pipes A A, formed of two parallel branches, connected at one end and open at the other, and having a cross-section in the form of the numeral 8, substantially as and for the purposes set forth.

94,710.—LUKE CHAPMAN, Collinsville, Conn., assignor to the COLLINS COMPANY, same place.—*Wrench.*—September 14, 1869.

Claim.—The movable jaw *e*, provided with the parts *e′ e′*, in combination with the bar *b* and nut *g*, when constructed as described, for the purpose set forth.

94,711.—GEORGE H. CHINNOCK, New York, N. Y.—*Toilet-Mirror.*—September 14, 1869.

Claim.—A toilet-mirror, adjustable by means of the projecting arm *a* of the cap A, having a swivel-motion on the post of the stand, in combination with projections *d d* of plate C and spring E, substantially as described.

94,712.—GEORGE H. CHINNOCK, New York, N. Y.—*Toilet-Mirror.*—September 14, 1869.

Claim.—The toilet-mirror, adjustable by means of springs C C, in combination with the projecting arm of the cap A, having a swivel-motion on the post of the stand, substantially as described.

94,713.—J. R. CLUXTON, Russellville, assignor to himself and THOMAS W. GORDON, Georgetown, Ohio.—*Melodeon.*—September 14, 1869.

Claim.—1. The key K, provided with the elongation K′, in combination with the key W, provided with the recess *w*, as and for the purpose described.

2. The combination of keys K W with levers L L, and valves J J, when the parts are constructed to operate in the manner and for the purpose set forth.

3. The stop H, when operating in connection with the valve F that admits the air to the reeds, substantially in the manner and for the purpose set forth.

4. The combination and arrangement of the valve F, guides *c e*, spring *s*, stop H, and actuating-rod G, when operating in the manner and for the purpose described.

94,714.—JOHN COCHRANE, New York, N. Y.—*Composite Gas-Retort.*—September 14, 1869.

Claim.—1. A retort, for the production of coal-gas, or other purpose, having its interior portion of iron, and its exterior portion of fire-clay or fire-brick, or other refractory substance of analogous character, in which the iron lining and fire-clay covering are combined with each other, in the manner and by the means substantially as described.

2. The hemispherical bosses, or their equivalents, in combination with the anchors or clamps and the interior casting, constructed in the manner and for the purpose substantially as described.

94,715.—M. R. COLVIN, Worcester, Mass.—*Globe-Valve.*—September 14, 1869.

Claim.—The construction and arrangement, in the bridge or separating-piece *d*, of the notched auxiliary metal valve-seat E, substantially as herein described.

94,716.—ISAAC COOK, Saint Louis, Mo., assignor to himself and HENRY S. HALL, same place.—*Vapor-Burner.*—September 14, 1869.

Claim.—1. The stem E and adjustable nipple *f′*, when combined with the plates *f* and *g*, substantially as set forth.

2. The cover-plate *g*, when perforated at *g′*, substantially as set forth.

94,717.—ALFRED B. COUCH, Worcester, Mass.—*Clutch for Hydraulic Wheel-Presses.*—September 14, 1869.

Claim.—1. The combination, with the projecting end of the top rod E, of the wheels G and F, substantially as and for the purposes stated.

2. The combination, with pulley or wheel G, of the clutch-wheel F and tubular bearing-part *f*, substantially as and for the purposes set forth.

94,718.—GILES CRAMTON, Marshall, Mich.—*Three-Horse Equalizer.*—September 14, 1869.

Claim.—1. A draught-chain sheave, A, made in the form of a seroll, with an equalizing-groove for the chains, extending from the point of greatest radius, in one unbroken diminishing curve, around the eye of the scroll, whereby the whole of a much-increased extent of chain-bearing is utilized, giving much larger vibrations, and allowing the team free play to come and go without "fetching up" or shirking duty, substantially as herein described.

2. In combination with the scroll-sheave A, constructed substantially as described, the clevis D, with guards *a b*, to keep the chains in place, substantially as set forth.

3. The equalizer herein described, composed essentially of the seroll-sheave A, draught-chains C C′, and clevis D, with guards *a b*, all constructed and arranged substantially as set forth.

94,719.—JOHN E. CRYER, Green Point, N. Y.—*Blind-Fastening.*—September 14, 1869.

Claim.—1. A fastening-latch, passed through from the rear of the hinge, and secured thereto by a head, to form a joint.

2. In combination with a latch, arranged as described, the offset or shoulder c^2, to resist any backward motion of the latch.

3. In combination with the above, the notch c^1 in the latch, to hold the blind in a partially closed position.

94,720.—GEORGE DAYSPRING and EDWARD FITZKI, Washington, D. C.—*Cloth-Sponging Machine.*—September 14, 1869.

Claim.—In cloth-sponging machines, the combination and arrangement of the supporting-stand A, perforated cylinder *e*, boiler C, and connecting steam-pipe *p*, as and for the purpose set forth.

94,721.—E. MORTIMER DEEY, New York, N. Y.—*Mode of Transporting Ships over Land.*—September 14, 1869.

Claim.—1. Supporting the ship or vessel in the tank K, by the sustaining ropes or chains S S, attached to stretchers T T, or their equivalent, and acting together with the elastic braces P P, in connection with the water in the tank, or in its stead, in case of its leakage or evaporation therefrom, substantially as herein specified.

2. The spring-seats O O, on which the keel of the ship or vessel rests in the tank, for the purpose specified.

94,722.—JOSEPH R. DE MAHY, New Orleans, La.—*Vapor-Burner.*—September 14, 1869.

Claim.—A gas-burner, in which the sections A and B are made in a single piece, by one casting, and which is provided with an aperture, *a*, for the admission of atmospheric air, and a regulating key, C, in combination with a removable tip, D, when each part is constructed as herein described, for the purpose set forth.

94,723.—LYMAN R. DEXTER, Lancaster, N. H.—*Sled-Clamp.*—September 14, 1869.

Claim.—The clamping together of the runners and frames of sleds, by means of the braces B, uprights *j j*, in combination with the sole-plate *a* and cap or plate *k*, all as and for the purpose hereinbefore described.

94,724.—J. J. DOEPKEN, Lima, Ohio.—*Refrigerator.*—September 14, 1869.

Claim.—The case A B, provided with provision-chamber C, ice-boxes D, compartment E, having inclined frames G and water-drawer H, when constructed and arranged as herein described, for the purpose specified.

94,725.—WILLIAM A. DRYDEN and J. M. TURNBULL, Monmouth, Ill.—*Cultivator.*—September 14, 1869.

Claim.—1. The combination and arrangement of

the shovel B, plate C, and cutter E, substantially as described, and for the purpose set forth.

2. The combination of the shovel B, and the cutter E, in its rear, as and for the purpose described.

94,726.—A. K. Eaton, Piermont, N. Y.—*Manufacture of Crucibles.*—September 14, 1869.

Claim.—Manufacturing crucibles, chemical porcelain ware, bricks, tiles, and other refractory articles which are to be subjected to a high heat in melting, smelting, or reducing ores or metals, or for other purposes, in whole or in part of pure alumina, substantially as described.

94,727.—Jacob Edson, Boston, Mass.—*Tubular Well.*—September 14, 1869.

Claim.—1. A strainer, when made by winding wire around a channeled or corrugated supporting-core, said wire being nicked, as herein described and shown.

2. The core N of the strainer, when the core has a central chamber, and is provided with alternating pyramidal recesses, communicating with said chamber, in the manner arranged and described.

3. The point K′, projecting upward from the lower box, when said point acts, in conjunction with the countersink K, for adjusting and forcing the lower box into place, as herein described and shown.

4. Constructing the upper box of two parts, G and H, when said parts are arranged in the manner herein described, and for the purpose set forth.

94,728.—D. Elliot, New York, N. Y., assignor to himself, E. Seely, and John A. Holmes, same place.—*Broom and Scraper.*—September 14, 1869.

Claim.—The combined broom and scraper, formed with the scraper attached to the head of the broom, combined with the handle inserted into the head, as set forth.

94,729.—Michel G. Fagan, Troy, N. Y.—*Lunch-Box.*—September 14, 1869; antedated September 4, 1869.

Claim.—The perforated cases I and H, in connection with the openings *s s* and *d d d* and partition-openings P, or their equivalent, for the purposes set forth in this specification.

94,730.—Loyal C. Field, Galesburgh, Ill.—*Mashing-Machine.*—September 14, 1869.

Claim.—The tub A, shaft C, arms D D″, jets J J″, pulley H, pipe F, and chamber P, combined and arranged as described, and for the purpose set forth.

94,731.—Luther W. Field, Camden, Ill., assignor to himself and David H. Dinsmore, Potter, N. Y.—*Chair-Seat.*—September 14, 1869.

Claim.—The construction of a chair-seat, herein described, with slats D, transverse wires E, loop F, and washers *a*, in connection with the rounds A and B, and legs C, of a chair, arranged and operating substantially as and for the purpose herein set forth.

94,732.—Henry Flad, Saint Louis, Mo.—*Hydraulic Elevator.*—September 14, 1869.

Claim.—The force-pump D, when arranged to receive water under pressure and be actuated thereby, and by any auxiliary power, and re-enforcing the pressure in the cylinder A, substantially as set forth.

94,733.—Ludwig Ottmar Franke, Baltimore, Md.—*Spinning-Top.*—September 14, 1869.

Claim.—1. The sliding spindle B, in combination with the interior disks or wheels S, as and for the purpose described.

2. The arrangement of spindle B, disks and wheels S, cup-shaped top A, and spinning-device E F D, substantially as and for the purpose described.

94,734.—Henry L. Franklin and Eugene Clark, Nashua, N. H.—*Broom or Mop-Holder.*—September 14, 1869.

Claim.—The combination of arms B B, constructed substantially as shown, and bracket A A′, slotted at *d e*, the whole forming a universal broom or mop-holder, substantially as herein set forth.

94,735.—Owen Gallagher, Boston, Mass., assignor to himself and Andrew Bell, same place.—*Door-Bolt for Safes, &c.*—September 14, 1869.

Claim.—1. The combination of the arm K^2, slide H, flanges or washers C^2 C^3, with the bolts C C^1, and bar M, substantially as herein shown and described.

2. The combination of the segment spur-wheel K with the spur-gear L′, bar M, wheels M^1M^2, and bolts C C^1, substantially as described, and for the purpose set forth.

94,736.—Henry A. Garvey, Memphis, Tenn.—*Artificial Marble or Plastic Material.*—September 14, 1869.

Claim.—The within-described method of making artificial marble, hardening and causing it to be delivered from the molds with polished surface, for the objects described, and for the purposes specified.

94,737.—John T. Gathright and John C. Freeman, Louisville, Ky., assignors to John T. Gathright.—*Side-Saddle.*—September 14, 1869.

Claim.—The combination, with the side-bars A, of a seat, B C D F G, pressed into the form shown and described.

94,738.—Daniel Haldeman, Mahanoy City, Pa.—*Railway-Switch.*—September 14, 1869.

Claim.—The combination and arrangement of the plate P, standards S and S′, segmental gear S G, pinion N, rod D, provided with a rack, strap T, spring G, and lever A, so as to operate substantially in the manner and for the purpose specified.

94,739.—Edward S. Hardy, Buffalo, N. Y., assignor to himself and John L. Lay, same place.—*Material for Covering Steam-Boilers, Pipes, &c.*—September 14, 1869.

Claim.—The manufacture or preparation of a compound of the ingredients, in the proportions and for the purposes substantially as set forth.

94,740.—Luke Heery, Hinsdale, Mass.—*Sewing-Machine.*—September 14, 1869.

Claim.—1. One or more supplementary bars *a′ a″*, in combination with the primary bar *a*, supports *c c′*, and hooks *t t′*, substantially as specified.

2. The supports *c c′*, and connections *m m′*, *n n′*, arranged and combined with the bars *a′ a″* and hooks *t t′*, substantially as specified.

3. In combination with driver 15 and shaft 21, the parts 22, 23, 24, 25, and 26, constructed, arranged, and operating substantially as specified.

4. The spring 31, in combination with one or more parts *n n′*, connections *m m′*, bars *a′ a″*, and hooks *t t′*, substantially as specified.

5. The disk 27, provided with one or more series of cams *u u′*, &c., in combination with one or more bars *a′ a″*, hooks *t t′*, and with parts 26, 28, 29, 30, 34, and 41, all arranged and operating substantially as specified.

94,741.—John Heuermann, Davenport, Iowa.—*Tumbling-Rod Cover.*—September 14, 1869.

Claim.—The arrangement and combination of tumbling-rod cover, as shown on drawings, and described in specifications.

94,742.—Henry F. Hildebrand, Baltimore, Md.—*Air-Escape Funnel.*—September 14, 1869.

Claim.—The attachment B, with external supports C C C C, and internal wires or ridges D, all substantially as shown and described.

94,743.—A. C. Hobbs, Bridgeport, Conn.—*Percussion-Cap.*—September 14, 1869.

Claim.—A percussion-cap for guns, having its fulminate inclosed between varnished surfaces, substantially as described.

94,744.—A. C. Hobbs, Bridgeport, Conn.—*Machine for Forming External Recesses in the Heads of Cartridge-Shells.*—September 14, 1869.

Claim.—The sliding plate C, arranged to move with the bunter, in combination with the stop-pins D, or their equivalents, substantially as described.

94,745.—A. C. Hobbs and Thomas V. Boyden,

Bridgeport, Conn., assignors to the UNION METALLIC-CARTRIDGE COMPANY, same place.—*Machine for Forming Cartridge-Shells.*—September 14, 1869.

Claim.—1. The spring-arms B, or their equivalents, for holding the shells securely in an upright position, substantially as described, and for the purpose set forth.

2. The spring-washer C, when arranged in combination with rotating disk A, for the purpose of regulating the friction or pressure thereon, substantially as described.

94,746.—BIRDSILL HOLLY, Lockport, N. Y.—*System of Water-Supplies for Cities.*—September 14, 1869.

Claim.—1. The described system, which, while it will supply a city with water, distributed for ordinary purposes, without the use of a reservoir or stand-pipe, or enlarged container of any kind, will, by the concentration of its currents, serve as an apparatus for extinguishing fires, substantially in the manner herein described.

2. In the above-described apparatus, the combination of the force-pumps A A′ and connecting-pipe D^2, with engines applied so as to operate either one or both of said pumps, at pleasure, substantially as described.

94,747.—BIRDSILL HOLLY, Lockport, N. Y.—*Safety-Valve for Water-Pipes.*—September 14, 1869.

Claim.—A water-chamber B, having a piston, G, working therein, combined with a safety-valve, so as to operate substantially as and for the purpose described.

94,748.—BIRDSILL HOLLY, Lockport, N. Y.—*Automatic Regulating-Valve.*—September 14, 1869.

Claim.—1. The shell or case A, constructed with a diaphragm, P, and provided with a spring-box, B, in combination with the flexible diaphragm J, a valve, G, and a connecting stem *g*, substantially as described.

2. The diaphragm J and valve G, connected together by a stem *g*, and joint *i*, substantially as and for the purposes described.

3. The adjusting-screw *c*, spring C, diaphragm J, partition P, and valve G, constructed and combined substantially as described.

94,749.—BIRDSILL HOLLY, Lockport, N. Y.—*Hydrant.*—September 14, 1869.

Claim.—1. The lining *t*, to the seat of the main valve, adapted to serve the double purpose of a seat, and also a packing at the joint between the pipe E and the foot D, in combination with the external casing A, substantially as described.

2. The arrangement of the leather ring *t*, between the valve *g* and the lower end of the valve-box G, in combination with the pipe E and external casing A, substantially as described.

3. The combination of the parts A B D E, substantially as set forth.

4. The cap C, applied on top of the hydrant, and supported upon posts *c*, in combination with key-rod F and central orifice *l*, substantially as and for the purpose described.

94,750.—JOSEPH W. HOPKINS, Brooklyn, E. D., N. Y., assignor to himself and WILLIAM H. M. PYE, same place.—*Valve for Steam-Engines.*—September 14, 1869.

Claim.—The secondary valve *i*, actuated by the rock-shaft *l*, in combination with the cylinder *p*, piston *o*, rod *q*, and arm *r*, for operating the valve of the main engine in the manner specified.

94,751.—WILLIAM HUNTER and DANIEL M. HUNTER, Meadville, Pa.—*Soil-Tiller.*—September 14, 1869.

Claim.—The construction of the head-piece C, with the beveled edge at *s*, in combination with the tines or teeth, constructed as described, for the purposes set forth.

94,752.—OLIVER P. HUSSEY, Nashua, N. H.—*Drawing-Frame.*—September 14, 1869.

Claim.—1. In combination with the yarn-guides, the draught-rollers, and the weight or device for pressing down the upper of such rollers at its middle, mechanism, substantially such as described, for moving the yarn-guides with equal velocities and simultaneously, first toward, and next away from each other, and the center of the upper or top roller of the draught-rollers, the whole being substantially in manner and for the purpose as set forth.

2. For effecting the movements of the yarn-guides, the combination of the slides H I, the two sets of studs *a b*, the lever U, the arms K N, the slide-rod L, the studs *k l*, and the eccentric or cam P, the whole being arranged and applied to the guides F G and the frame of the rollers, substantially in manner and so as to operate as explained.

94,753.—WILLIAM C. KEMP, Palmyra, Mo.—*Churn.*—September 14, 1869.

Claim.—1. The wings *a′*, hung upon pivots at the sides of the dasher, so as to whirl to and fro, substantially as and for the purpose described.

2. The block E, combined with the windlass D, in the manner and for the purpose set forth.

94,754.—WILEY KENYON, Crawfordsville, Ind.—*Photographic Head-Rest.*—September 14, 1869.

Claim.—The rod-guide represented in Fig. 1 by E′, and the parts as represented in Fig. 2 by A, and also the slide represented in Fig. 3 by E and D, arranged and operating substantially as and for the purpose specified, not limiting myself to any definite size of same.

94,755.—RODNEY G. KIMBALL, Albany, N. Y.—*Bent-Lever Balance.*—September 14, 1869.

Claim.—The levers D and F, in combination with the shaft C, quadrants A A and H, and hook R′, substantially as and for the purpose set forth.

94,756.—JEFFERSON KINDLEBERGER and WILLIAM AUGUSTUS ARNOLD, San Francisco, assignors to "THE INVENTORS' ASSOCIATION OF SAN FRANCISCO, CAL."—*Reversible But.*—September 14, 1869.

Claim.—1. The elliptic washer D, with its semi-circular projection *f*, and supplemental pintle *e*, substantially as and for the purpose herein described.

2. Reversing a door-but or hinge so that it will open from either side, by means of a stationary and a movable pintle entering two holes in an elliptical lug on the reversing-leaf, substantially as above specified.

94,757.—CHESTER KING and S. P. JOHNSON, Cleveland, Ohio; said JOHNSON assigns his right to said KING.—*Flat Chain.*—September 14, 1869.

Claim.—The herein-described chain, the links of which are provided with lugs *a*, and form the hooks for connecting the links together, in the manner substantially as described, and for the purpose set forth.

94,758.—JOHN H. KINGSLAND, New York, N. Y., assignor to JAMES O. KINGSLAND and JOHN W. KELSEY, same place.—*Automatic Boat-Detaching Apparatus.*—September 14, 1869.

Claim.—1. The combination of the curved metallic hooks *a a*, loosely pivoted to the post A, at the point *b*, with the balanced weight-rod *c*, working in a slot of said post, in the manner described.

2. The combination, with a post, and the hooks thereto pivoted, of the sliding sleeve D, serving to lock the link and hooks together, as and for the purpose specified.

94,759.—ALFRED S. LINEBACK, Stockton, Utah Territory.—*Water-Power.*—September 14, 1869.

Claim.—1. The combination of the buckets J M, oscillating frame H I, apron L, and a regulator-valve, *i*, all operating substantially as and for the purpose herein set forth.

2. In combination with the above, the lever P, piece O, and link *j*, substantially as and for the purpose described.

94,760.—OLIVER D. LOMBARD, Lowell, Mass.—*Picking-Mechanism for Looms.*—September 14, 1869.

Claim.—The combination, with the picking-lever and staff, of the cord *k*, cap *p*, slide *l*, toothed cap *m*, and eye-bolt *j*, all constructed, arranged, and operating as described.

94,761.—William McFarland, Brooklyn, E. D., N. Y.—*Burglar-Proof Safe.*—September 14, 1869.

Claim.—1. The hardened-steel triangular bars or ribs *a a a*, in combination with the outer shell or case A and the inner shell B, as herein described.

2. The serrated rings or flanges D D, so arranged and secured within the outer and inner plates or cases to overlap other ribs and the joints of safes, as herein set forth.

94,762.—Robert McMurray, Washington, D. C.—*Bolt for Trunk-Trays.*—September 14, 1869.

Claim.—1. The box C, with bands D D, formed from one piece of sheet-metal for inclosing spiral spring *d*, and for fastening bolt B to plate A, substantially as described.

2. The plate A, with button or headed pin F, and bolt, with fastener E and lip *a*, formed at the upper end of slot, in combination with box C, constructed substantially as described.

94,763.—George F. Morse Portland, Me.—*Steam Safety-Valve.*—September 14 1869.

Claim.—The annular safety-valve *d* with annular opening *b*, for steam escape, constructed as herein described.

94,764.—Gershom Mott, Joshua Morris, Jr., and David Lupton, Big Run, Ohio.—*Gate.*—September 14, 1869.

Claim.—The gates B D, plates *b b*, and rods *d d*, all constructed, arranged, and operating substantially as and for the purpose herein described.

94,765.—Moses Nelson, Taunton, Mass.—*Warp-Dressing Machine.*—September 14, 1869.

Claim.—1. The improved arrangement, substantially as hereinbefore described, and as represented in the drawings, of the delivery and receiving rollers and their sets or guides, the sizing-mechanism, and the drying-apparatus, the whole being so that the delivery and receiving rollers, and their guides, may be in close proximity, with the passage O between them, and with the drying-apparatus disposed so as not to come between the said receiving and delivery rollers and their sets of guides, so as to prevent access to either by a person when standing between them.

2. The arrangement and combination of the two steam-pipe-supporting bridges P P, with the two frames A I, the series of guides *a b*, the passage C, and the sizing and drying mechanism, and the series of guide, delivery, and receiving rollers arranged on such frames, substantially as described.

94,766.—William Patton and B. C. English, Springfield, Mass.—*Combined Watch-Key and Key-Ring.*—September 14, 1869.

Claim.—As a new article of manufacture, a combined watch-key and key-ring, formed of one piece of metal, substantially as shown and described.

94,767.—Leonard Phleger, Philadelphia, Pa.—*Steam-Generator.*—September 14, 1869.

Claim.—1. The arrangement of the curved tubes A, in combination with horizontal and inclined tubes B B B B, substantially as and for the purpose specified.

2. The construction and arrangement of the caps or water-ways C, C^1, C^2, and C^3, placed over the ends of the tubes A, and secured to the tube-sheets S, S^1, and S^2; also, the arrangement of the plates *p* and *p'* for the purpose of allowing the cap C^3 and tube-sheet S^2 to slide in and out, as and for the purpose specified.

3. The construction and arrangement of the return-bend R P, stand-pipes S P and S P', tube-sheet S^1, with openings O and O^1, steam-drum D, with shelves L and L', and necks P and P', so as to operate substantially as and for the purpose specified.

94,768.—William H. Pilgrim, Allegheny City, Pa.—*Sash-Balance.*—September 14, 1869.

Claim.—Suspending window-sash, through the media of cords D, pulleys *e*, and cams *g*, inserted in the frame, all constructed, arranged, and operating so that the cords are hidden in the frame, substantially as herein described, and for the purpose set forth.

94,769.—William Potter and Leonard J. Labounty, Lowell, Mass.—*Let-Off Mechanism for Looms.*—September 14, 1869.

Claim.—1. The combination of the racks *l'* and *p'*, pinions *n'* and *o'*, and cones *c'* and *d'*, when arranged substantially as herein described, and for the purpose set forth.

2. The combination of the clutches *i* and *k*, and gears *g* and *g'*, with the stop-motion rod *j'*, when used in connection with the cones *c'* and *d'*, for the purposes herein described and specified.

94,770.—Canceled.

94,771.—Joseph W. V. Rawlins and Samuel Stephens, Houghton, Mich.—*Ore-Grinder.*—September 14, 1869.

Claim.—1. The combination, with the mortar A, having the detachable bottom B, of the revolving crushers H I, suspended adjustably from the revolving shaft E, when arranged substantially as specified.

2. The arrangement of the hopper P, spouts S and S', feeding-arms Q, and mortar A, all substantially as specified.

3. The combination, with the mortar and crushers, of the weights M, detachably connected to the plate F, all substantially as specified.

94,772.—John Hermann Rudolph Reffelt, Hoboken, N. J.—*Calculating-Machine.*—September 14, 1869.

Claim.—The turning disk A, arranged between the stationary plates B C, attached to the frame D by means of the cross-bars E, when the same is provided with the dotted outer part, the two adding and subtracting circles on one side, and the multiplying and dividing circles on the other side, as herein shown and described, for the purpose set forth.

94,773.—William S. Reyburn and J. F. Martin, Philadelphia, Pa.—*Lightning-Rod.*—September 14, 1869.

Claim.—As an article of manufacture, a section of lightning-rod, made of one piece of sheet-metal doubled upon itself in ribs, substantially in the manner and for the purpose described.

94,774.—J. Reynolds, Crystal Springs, Miss.—*Combined Plow and Scraper.*—September 14, 1869.

Claim.—1. The concave mold-board scraper D, constructed as described, that is to say, with its landside end projecting substantially as specified, when used in combination with the plow C c^1, for the purpose set forth.

2. The adjustable brace-rod E, in combination with the beam A, standard C c^1, and mold-board scraper D, substantially as herein shown and described, and for the purposes set forth.

94,775.—Hiram Richmond, West Meriden, assignor to Charles Parker, Meriden, Conn.—*Match-Safe.*—September 14, 1869.

Claim.—A match-box, formed of the cast-metal back A, front D, and weighted door K, when all constructed and arranged substantially as specified.

94,776.—William F. Rippon and George A. Johnson, Providence, R. I.—*Lamp-Burner.*—September 14, 1869.

Claim.—The combination, in a wick-tube of a kerosene or other oil lamp, of a spring, A, and friction-roller D, acting in conjunction with the ratchet and the wick-tube below, when the said spring and the part of the tube with which it acts are corrugated, and all constructed and arranged substantially as specified.

94,777.—Reuben R. Royer, Ephrata, Pa.—*Water-Wheel.*—September 14, 1869.

Claim.—The arrangement and construction of the slotted plates E E' on the periphery of a movable ring, C, with intermediate side openings, in combination with the stationary or inner ring or case A, rack and pinion F R, operating in the manner and for the purpose specified.

Bridgeport, Conn., assignors to the UNION METALLIC-CARTRIDGE COMPANY, same place.—*Machine for Forming Cartridge-Shells.*—September 14, 1869.

Claim.—1. The spring-arms B, or their equivalents, for holding the shells securely in an upright position, substantially as described, and for the purpose set forth.

2. The spring-washer C, when arranged in combination with rotating disk A, for the purpose of regulating the friction or pressure thereon, substantially as described.

94,746.—BIRDSILL HOLLY, Lockport, N. Y.—*System of Water-Supplies for Cities.*—September 14, 1869.

Claim.—1. The described system, which, while it will supply a city with water, distributed for ordinary purposes, without the use of a reservoir or stand-pipe, or enlarged container of any kind, will, by the concentration of its currents, serve as an apparatus for extinguishing fires, substantially in the manner herein described.

2. In the above-described apparatus, the combination of the force-pumps A A′ and connecting-pipe D^2, with engines applied so as to operate either one or both of said pumps, at pleasure, substantially as described.

94,747.—BIRDSILL HOLLY, Lockport, N. Y.—*Safety-Valve for Water-Pipes.*—September 14, 1869.

Claim.—A water-chamber B, having a piston, G, working therein, combined with a safety-valve, so as to operate substantially as and for the purpose described.

94,748.—BIRDSILL HOLLY, Lockport, N. Y.—*Automatic Regulating-Valve.*—September 14, 1869.

Claim.—1. The shell or case A, constructed with a diaphragm, P, and provided with a spring-box, B, in combination with the flexible diaphragm J, a valve, G, and a connecting stem *g*, substantially as described.

2. The diaphragm J and valve G, connected together by a stem *g*, and joint *i*, substantially as and for the purposes described.

3. The adjusting-screw *c*, spring C, diaphragm J, partition P, and valve G, constructed and combined substantially as described.

94,749.—BIRDSILL HOLLY, Lockport, N. Y.—*Hydrant.*—September 14, 1869.

Claim.—1. The lining *t*, to the seat of the main valve, adapted to serve the double purpose of a seat, and also a packing at the joint between the pipe E and the foot D, in combination with the external casing A, substantially as described.

2. The arrangement of the leather ring *t*, between the valve *g* and the lower end of the valve-box G, in combination with the pipe E and external casing A, substantially as described.

3. The combination of the parts A B D E, substantially as set forth.

4. The cap C, applied on top of the hydrant, and supported upon posts *c*, in combination with key-rod F and central orifice *l*, substantially as and for the purpose described.

94,750.—JOSEPH W. HOPKINS, Brooklyn, E. D., N. Y., assignor to himself and WILLIAM H. M. PYE, same place.—*Valve for Steam-Engines.*—September 14, 1869.

Claim.—The secondary valve *i*, actuated by the rock-shaft *l*, in combination with the cylinder *p*, piston *o*, rod *q*, and arm *r*, for operating the valve of the main engine in the manner specified.

94,751.—WILLIAM HUNTER and DANIEL M. HUNTER, Meadville, Pa.—*Soil-Tiller.*—September 14, 1869.

Claim.—The construction of the head-piece C, with the beveled edge at *s*, in combination with the tines or teeth, constructed as described, for the purposes set forth.

94,752.—OLIVER P. HUSSEY, Nashua, N. H.—*Drawing-Frame.*—September 14, 1869.

Claim.—1. In combination with the yarn-guides, the draught-rollers, and the weight or device for pressing down the upper of such rollers at its middle, mechanism, substantially such as described, for moving the yarn-guides with equal velocities and simultaneously, first toward, and next away from each other, and the center of the upper or top roller of the draught-rollers, the whole being substantially in manner and for the purpose as set forth.

2. For effecting the movements of the yarn-guides, the combination of the slides H I, the two sets of studs *a b*, the lever U, the arms K N, the slide-rod L, the studs *k l*, and the eccentric or cam P, the whole being arranged and applied to the guides F G and the frame of the rollers, substantially in manner and so as to operate as explained.

94,753.—WILLIAM C. KEMP, Palmyra, Mo.—*Churn.*—September 14, 1869.

Claim.—1. The wings *a′*, hung upon pivots at the sides of the dasher, so as to whirl to and fro, substantially as and for the purpose described.

2. The block E, combined with the windlass D, in the manner and for the purpose set forth.

94,754.—WILEY KENYON, Crawfordsville, Ind.—*Photographic Head-Rest.*—September 14, 1869.

Claim.—The rod-guide represented in Fig. 1 by E′, and the parts as represented in Fig. 2 by A, and also the slide represented in Fig. 3 by E and D, arranged and operating substantially as and for the purpose specified, not limiting myself to any definite size of same.

94,755.—RODNEY G. KIMBALL, Albany, N. Y.—*Bent-Lever Balance.*—September 14, 1869.

Claim.—The levers D and F, in combination with the shaft C, quadrants A A and H, and hook R′, substantially as and for the purpose set forth.

94,756.—JEFFERSON KINDLEBERGER and WILLIAM AUGUSTUS ARNOLD, San Francisco, assignors to "THE INVENTORS' ASSOCIATION OF SAN FRANCISCO, CAL."—*Reversible But.*—September 14, 1869.

Claim.—1. The elliptic washer D, with its semicircular projection *f*, and supplemental pintle *e*, substantially as and for the purpose herein described.

2. Reversing a door-but or hinge so that it will open from either side, by means of a stationary and a movable pintle entering two holes in an elliptical lug on the reversing-leaf, substantially as above specified.

94,757.—CHESTER KING and S. P. JOHNSON, Cleveland, Ohio; said JOHNSON assigns his right to said KING.—*Flat Chain.*—September 14, 1869.

Claim.—The herein-described chain, the links of which are provided with lugs *a*, and form the hooks for connecting the links together, in the manner substantially as described, and for the purpose set forth.

94,758.—JOHN H. KINGSLAND, New York, N. Y., assignor to JAMES O. KINGSLAND and JOHN W. KELSEY, same place.—*Automatic Boat-Detaching Apparatus.*—September 14, 1869.

Claim.—1. The combination of the curved metallic hooks *a a*, loosely pivoted to the post A, at the point *b*, with the balanced weight-rod *c*, working in a slot of said post, in the manner described.

2. The combination, with a post, and the hooks thereto pivoted, of the sliding sleeve D, serving to lock the link and hooks together, as and for the purpose specified.

94,759.—ALFRED S. LINEBACK, Stockton, Utah Territory.—*Water-Power.*—September 14, 1869.

Claim.—1. The combination of the buckets J M, oscillating frame H I, apron L, and a regulator-valve, *i*, all operating substantially as and for the purpose herein set forth.

2. In combination with the above, the lever P, piece O, and link *j*, substantially as and for the purpose described.

94,760.—OLIVER D. LOMBARD, Lowell, Mass.—*Picking-Mechanism for Looms.*—September 14, 1869.

Claim.—The combination, with the picking-lever and staff, of the cord *k*, cap *p*, slide *l*, toothed cap *m*, and eye-bolt *j*, all constructed, arranged, and operating as described.

94,761.—William McFarland, Brooklyn, E. D., N. Y.—*Burglar-Proof Safe.*—September 14, 1869.

Claim.—1. The hardened-steel triangular bars or ribs *a a a*, in combination with the outer shell or case A and the inner shell B, as herein described.

2. The serrated rings or flanges D D, so arranged and secured within the outer and inner plates or cases to overlap other ribs and the joints of safes, as herein set forth.

94,762.—Robert McMurray, Washington, D. C.—*Bolt for Trunk-Trays.*—September 14, 1869.

Claim.—1. The box C, with bands D D, formed from one piece of sheet-metal for inclosing spiral spring *d*, and for fastening bolt B to plate A, substantially as described.

2. The plate A, with button or headed pin F, and bolt, with fastener E and lip *a*, formed at the upper end of slot, in combination with box C, constructed substantially as described.

94,763.—George F. Morse Portland, Me.—*Steam Safety-Valve.*—September 14 1869.

Claim.—The annular safety-valve *a* with annular opening *b*, for steam escape, constructed as herein described.

94,764.—Gershom Mott, Joshua Morris, Jr., and David Lupton, Big Run, Ohio.—*Gate.*—September 14, 1869.

Claim.—The gates B D, plates *b b*, and rods *d d*, all constructed, arranged, and operating substantially as and for the purpose herein described.

94,765.—Moses Nelson, Taunton, Mass.—*Warp-Dressing Machine.*—September 14, 1869.

Claim.—1. The improved arrangement, substantially as hereinbefore described, and as represented in the drawings, of the delivery and receiving rollers and their sets or guides, the sizing-mechanism, and the drying-apparatus, the whole being so that the delivery and receiving rollers, and their guides, may be in close proximity, with the passage O between them, and with the drying-apparatus disposed so as not to come between the said receiving and delivery rollers and their sets of guides, so as to prevent access to either by a person when standing between them.

2. The arrangement and combination of the two steam-pipe-supporting bridges P P, with the two frames A I, the series of guides *a b*, the passage C, and the sizing and drying mechanism, and the series of guide, delivery, and receiving rollers arranged on such frames, substantially as described.

94,766.—William Patton and B. C. English, Springfield, Mass.—*Combined Watch-Key and Key-Ring.*—September 14, 1869.

Claim.—As a new article of manufacture, a combined watch-key and key-ring, formed of one piece of metal, substantially as shown and described.

94,767.—Leonard Phleger, Philadelphia, Pa.—*Steam-Generator.*—September 14, 1869.

Claim.—1. The arrangement of the curved tubes A, in combination with horizontal and inclined tubes B B B B, substantially as and for the purpose specified.

2. The construction and arrangement of the caps or water-ways C, C^1, C^2, and C^3, placed over the ends of the tubes A, and secured to the tube-sheets S, S^1, and S^2; also, the arrangement of the plates *p* and *p'* for the purpose of allowing the cap C^3 and tube-sheet S^2 to slide in and out, as and for the purpose specified.

3. The construction and arrangement of the return-bend R P, stand-pipes S P and S P', tube-sheet S^1, with openings O and O^1, steam-drum D, with shelves L and L', and necks P and P', so as to operate substantially as and for the purpose specified.

94,768.—William H. Pilgrim, Allegheny City, Pa.—*Sash-Balance.*—September 14, 1869.

Claim.—Suspending window-sash, through the media of cords D, pulleys *e*, and cams *g*, inserted in the frame, all constructed, arranged, and operating so that the cords are hidden in the frame, substantially as herein described, and for the purpose set forth.

94,769.—William Potter and Leonard J. Labounty, Lowell, Mass.—*Let-Off Mechanism for Looms.*—September 14, 1869.

Claim.—1. The combination of the racks *l'* and *p'*, pinions *n'* and *o'*, and cones *c'* and *d'*, when arranged substantially as herein described, and for the purpose set forth.

2. The combination of the clutches *i* and *k*, and gears *g* and *g'*, with the stop-motion rod *j'*, when used in connection with the cones *c'* and *d'*, for the purposes herein described and specified.

94,770.—Canceled.

94,771.—Joseph W. V. Rawlins and Samuel Stephens, Houghton, Mich.—*Ore-Grinder.*—September 14, 1869.

Claim.—1. The combination, with the mortar A, having the detachable bottom B, of the revolving crushers H I, suspended adjustably from the revolving shaft E, when arranged substantially as specified.

2. The arrangement of the hopper P, spouts S and S', feeding-arms Q, and mortar A, all substantially as specified.

3. The combination, with the mortar and crushers, of the weights M, detachably connected to the plate F, all substantially as specified.

94,772.—John Hermann Rudolph Reffelt, Hoboken, N. J.—*Calculating-Machine.*—September 14, 1869.

Claim.—The turning disk A, arranged between the stationary plates B C, attached to the frame D by means of the cross-bars E, when the same is provided with the dotted outer part, the two adding and subtracting circles on one side, and the multiplying and dividing circles on the other side, as herein shown and described, for the purpose set forth.

94,773.—William S. Reyburn and J. F. Martin, Philadelphia, Pa.—*Lightning-Rod.*—September 14, 1869.

Claim.—As an article of manufacture, a section of lightning-rod, made of one piece of sheet-metal doubled upon itself in ribs, substantially in the manner and for the purpose described.

94,774.—J. Reynolds, Crystal Springs, Miss.—*Combined Plow and Scraper.*—September 14, 1869.

Claim.—1. The concave mold-board scraper D, constructed as described, that is to say, with its landside end projecting substantially as specified, when used in combination with the plow C c^1, for the purpose set forth.

2. The adjustable brace-rod E, in combination with the beam A, standard C c^1, and mold-board scraper D, substantially as herein shown and described, and for the purposes set forth.

94,775.—Hiram Richmond, West Meriden, assignor to Charles Parker, Meriden, Conn.—*Match-Safe.*—September 14, 1869.

Claim.—A match-box, formed of the cast-metal back A, front D, and weighted door K, when all constructed and arranged substantially as specified.

94,776.—William F. Rippon and George A. Johnson, Providence, R. I.—*Lamp-Burner.*—September 14, 1869.

Claim.—The combination, in a wick-tube of a kerosene or other oil lamp, of a spring, A, and friction-roller D, acting in conjunction with the ratchet and the wick-tube below, when the said spring and the part of the tube with which it acts are corrugated, and all constructed and arranged substantially as specified.

94,777.—Reuben R. Royer, Ephrata, Pa.—*Water-Wheel.*—September 14, 1869.

Claim.—The arrangement and construction of the slotted plates E E' on the periphery of a movable ring, C, with intermediate side openings, in combination with the stationary or inner ring or case A, rack and pinion P R, operating in the manner and for the purpose specified.

permits the said fly-wheel to continue its motion independent of and unretarded by said accelerator, substantially as and for the purposes set forth.

94,810.—ADOLF COHN, Louisville, Ky.—*Coffee-Roaster.*—September 14, 1869.

Claim.—A coffee or malt roaster, consisting of the furnace E, fixed cylinder D, sliding frame C, shaft B, roasting-cylinder A, and doors F, all arranged and operating substantially as herein shown and described, so that the frame C can, with the roasting-cylinder, be drawn out of the cylinder D, when the doors are opened, as set forth.

94,811.—JAMES R. COLE, Demopolis, Ala.—*Lamp-Burner.*—September 14, 1869.

Claim.—A lamp-burner, constructed with the divided wick-tube A A′, the plates B C, the latter being air-tight, the two tubes I J, of different lengths, the foraminated ring G, the cap F, the ratchet-wheel E, the posts D D, the hinge *c*, and the catch *c′*, all arranged and operating in the manner and for the purposes described.

94,812.—FRANCISCO B. CONTESSA, New York, N. Y.—*Presser-Foot for Sewing-Machines.*—September 14, 1869.

Claim.—The combination with the presser-foot of the plate *e*, having the flanged wrist *f* thereon, and the soft revolving band *c*, all arranged and fitted together, as shown and described.

94,813.—JAMES DICKEY, Venango City, Pa.—*Torpedo for Oil-Wells.*—September 14, 1869.

Claim.—A torpedo, having the space between its inner and outer cases charged with compressed oxygen, substantially as described, for the purpose specified.

94,814.—JOEL FALES, Cambridge, Mass.—*Floor-Gauge.*—September 14, 1869.

Claim.—1. A floor-gauge, composed of pieces *d d*, having shoulders or clasps B B, rod A, and try-gauges *c c*, or substitute shown in Fig. 3, and set-screws *a a*, all constructed, arranged, and operating substantially as described and set forth.

2. The combination of rods A′ A′, pieces *d d*, having shoulders or clasps B, supports B′ B′, set-screws *a a*, and try-gauges *c c*, or substitute shown in Fig. 3, the whole making a floor-gauge, constructed, arranged, and operating substantially as shown and described, as and for the purposes set forth.

94,815.—CHARLES H. FRANKLIN, Jersey City, N. J.—*Wrought-Iron Mold for Vulcanizing Rubber Car-Springs.*—September 14, 1869.

Claim.—As a new article of manufacture, the wrought-iron cylinder or tube A, for the purpose herein set forth and described.

94,816.—PHINEAS FROST, Medfield, Mass.—*Grinding-Plate for Paper-Pulp Engines.*—September 14, 1869.

Claim.—1. A "bed-plate," so called, for paper-pulp engines, composed of two series of upright bars and their movable knives or blades, when the latter are placed entirely above the confining-bolts of the device, and when the foundation of such knives is a concave surface transversely, essentially in manner and for the purpose as explained.

2. The body or foundation of a "bed-plate" for paper-pulp engines, composed of two series of bars, when the upper edges of such bars, in aggregate, compose concave surfaces transversely of their length, substantially in manner and for the purpose hereinbefore described and shown.

94,817.—EBENEZER G. GREEN, East Gloucester, Mass.—*Hoisting-Apparatus.*—September 14, 1869.

Claim.—The employment of a movable shoe, or of several shoes, arranged to support the foot of the boom, substantially as and for the purpose set forth.

94,818.—G. HABERLAND, Pontiac, Ill.—*Floating Velocipede.*—September 14, 1869.

Claim.—The described construction and arrangement of the double crank-shaft *c c′*, standards *s s*, steering-wheel *w*, supported by a sleeve, inclosing the shaft *c c′*, ropes *r r′*, and rudder T, when combined in the manner and for the purposes herein set forth.

94,819.—JOHN L. S. HALL, Wheeling, West Va.—*Compound for Curing Corns, Bunions, &c.*—September 14, 1869.

Claim.—The application of nitric acid, in combination with the herein-described compound, in the manner and for the purposes herein set forth.

94,820.—GEORGE A. HARLEY, New York, N. Y.—*Hair-Cutter.*—September 14, 1869.

Claim.—A hair-cutter, formed of a comb in one piece, and a knife inserted in a longitudinal aperture made therein for the purpose.

94,821.—JOSEPH HATHAWAY, Woodstock, Vt.—*Water-Wheel.*—September 14, 1869.

Claim.—1. The chutes E and cam-posts *h*, constructed, arranged, and operating substantially as and for the purposes shown and described.

2. The levers I, and the plate K, with the rolls *m*, combined, arranged, and operating substantially as described, for the purposes set forth.

3. In combination with the chutes E, arranged and operating as described, the lips S, on the buckets R, substantially as and for the purposes set forth.

94,822.—MARTIN R. HELIKER, Norwalk, Ohio, assignor to RICHARD G. ELLIOTT.—*Clothes-Drier.*—September 14, 1869.

Claim.—The combination of the hubs B C, arms *b*, braces *c*, jointed post A, blocks E E′, and cords *h* b^3, all constructed and arranged to operate as set forth.

94,823.—JAMES B. HENDRICKS, Clayton, Ill.—*Axle-Box.*—September 14, 1869.

Claim.—The combination with the spindle, which has the double screw-thread, of the bearings C C′, which have grooved flanges *d*, to receive the ends of the axle-box, substantially as herein shown and described.

94,824.—H. N. HILL, Pontiac, Mich.—*Picket-Fence.*—September 14, 1869.

Claim.—The improved fence, formed of sections, consisting of rails B, and the pickets A, having prismatic central portions, and cylindrical ends, said sections being connected by the coupling-rails C C, fitted on three of the pickets of one section and one of the other, or on two pickets of each, as herein shown and described, for the purposes specified.

94,825.—VITALIS HIMMER, Brooklyn, N. Y.—*Stem-Winding and Setting Attachment to Watches.*—September 14, 1869.

Claim.—1. The jointed plate G I, acted upon by the pin *m* of the mainspring-drum, for throwing the winding-attachment out of gear, substantially as herein shown and described.

2. The plate G, when slotted and fitted around the swiveled plate *p*, which rests on a cross-bar, *r*, of the plate G, so that the latter can be turned horizontally and vertically, substantially as herein shown and described.

94,826.—Canceled.

94,827.—LEVI S. IVES, Pittsburgh, Pa.—*Steam-Generator.*—September 14, 1869.

Claim.—1. The combination, with a steam-boiler, of the pan C, constructed as described, and arranged to receive the feed-water, substantially as specified.

2. The combination, with the boiler and the said pan, of either or both sets of blow-off pipes, D E F or H J, substantially as specified.

94,828.—CHARLES E. JOHNSON, San Francisco, Cal.—*Portable Fence.*—September 14, 1869.

Claim.—1. The arrangement of the key C, constructed as described, with reference to the fence-panels, whereby the same are firmly held by said key when brought into line, substantially as specified.

2. The brace, consisting of the pieces of timber E and F, blocks *f* and *g*, and opening *e*, constructed

and arranged substantially as and for the purpose herein described.

3. The brace D and coupling C, in combination with the panels of a fence, the whole constructed and arranged substantially as and for the purpose herein described.

94,829.—JACOB G. JONES, Baltimore, Md.—*Sash-Balance.*—September 14, 1869.

Claim.—The sash-balance herein described, consisting essentially of the adjustable shaft *f*, gear-wheel *g*, spring *k*, shaft *d*, pinion *e*, and pulleys *b*, all constructed, arranged, and operating in the manner and for the purpose specified.

94,830.—JAMES KING, Suckasunny, N. J.—*Churn.*—September 14, 1869.

Claim.—1. The square or rectangular churn, composed of the flanged bottom A, sides B, flanged top rim or plate C, cover H, and dasher D, made in two equal parts, and provided with the crank E and socket F, all constructed and arranged as herein shown and described, whereby the parts may be readily joined together or detached from each other, and packed for transportation or otherwise, as set forth.

2. Forming the dasher D, formed in two parts, detachably connected to each other at right angles by means of transverse notches in the centers of their adjacent edges, substantially as herein shown and described, and for the purpose set forth.

3. In combination with the dasher, constructed as described, the semi-cylindrical block or socket F, adapted to be inserted in the recess in the end of the dasher, to receive the square or angular end of the crank-shaft E, all as herein shown and described.

94,831.—EDOUARD LARSSEN, Stavanger, Norway.—*Tobacco-Pipe Stem.*—September 14, 1869.

Claim.—1. In combination with the cylinder B, adapted to contain water, the interior bent tubes *c d*, plugs *f*, and caps or short tubes C D, substantially as herein shown and described, for the purpose specified.

2. In combination with the cylinder B, and caps or short tubes C D, the elastic packing-rings *b* or *s*, substantially as herein shown and described, for the purpose specified.

3. In combination with the cylinder B, interior bent tubes *c d*, and short tube D, the valve *m*, substantially as herein shown and described, for the purpose specified.

94,832.—R. O. LOWREY, Salem, N. Y.—*Compound of Hard Rubber and Fibrous Material.*—September 14, 1869.

Claim.—1. Mixing, uniting, or incorporating the fibers or any fibrous material with hard-rubber compound, and then submitting the mixture to the process of vulcanization, in the manner substantially as herein described, and for the purposes set forth.

2. The products resulting from the process herein described, in whatever form or shape they may be produced, as new articles of manufacture.

94,833.—WILLIAM A. MADARA, Spang's Mills, Pa.—*Smelting-Furnace.*—September 14, 1869.

Claim.—The double-cone regulator A, constructed as described, in combination with the suspension-chain or bar B, cross-bar C, guide-bar D, and lower cross-bar E, substantially as herein shown and described, and for the purposes set forth.

94,834.—MODEST MERK, Rochester, N. Y.—*Carriage-Axle Gauge.*—September 14, 1869.

Claim.—1. The bevel-gauge A, composed of tongue *a*, arm *a'*, and pivoted blade B, substantially as and for the purposes set forth.

2. The axle-gauge C, when used in combination with the bevel-gauge A, for the purposes set forth.

3. The fixed projection *i* on the face of the bar C', in combination with the spurs *x* on the templets, for the purpose specified.

94,835.—A. J. MISENHIMER, Oskaloosa, Ill.—*Planter and Cultivator.*—September 14, 1869.

Claim.—1. The combination of the seed-boxes G, axle A, crotched braces I, and hooks L, when constructed and arranged substantially as specified.

2. The combination of the seed-boxes G, connecting-rods N, cranked axle O, wheels N', connecting-rod Q, oscillating-rod K, and valves S, all arranged substantially as specified.

3. The described arrangement of the vibrating fulcrum V, oscillating seat-support or lever W, yoke U, cross-bar T, rods N, and wheel N', with reference to each other, as set forth and shown.

94,836.—Canceled.

94,837.—CHARLES H. NYE, Vineland, N. J.—*Boat-Detaching Apparatus.*—September 14, 1869.

Claim.—The arrangement of the rods *d*, recessed levers *b*, shoulder-bolts *a*, lever *f*, lugs *j*, stanchions *e*, and bifurcated braces *k*, with reference to each other, whereby levers *b* are moved simultaneously in the same direction, to lock or unlock the bolts *a*, as herein described, for the purpose specified.

94,838.—A. J. OCKINGTON, Stratford Hollow, N. H.—*Machinery for Making Clothes-Pins.*—September 14, 1869.

Claim.—1. The combination of the inclined hopper B, recessed blank-holder and transferrer C, and guide E, arranged as described, so that the first will feed the blanks by gravity to the second, which shall transfer and hold them to the saw, as set forth.

2. The carrier-wheel N, provided with the hooked fingers O and sliding spring-fingers P, combined with the carrier I, and arranged to present the blanks to a saw, W, all substantially as specified.

3. The combination of rotating-wheel N, provided with spring-holding fingers P, as shown, with the perforated gear S, spring R, and spiral guide T, all arranged and operating together, as described.

94,839.—JOHN A. REED, New Market, N. J.—*Carriage-Wheel.*—September 14, 1869.

Claim.—A wheel, formed with metal spokes that extend in radial lines, or nearly so, and are bent into a trough-shape near their outer portions, where they curve around, and are attached upon the inside of the tire or felly, as and for the purposes set forth.

94,840.—PIERRE RIUYPEYROU, San Francisco, Cal.—*Tooth-Wash.*—September 14, 1869.

Claim.—A tooth-wash, compounded of the above-named ingredients, prepared in the manner substantially as above described.

94,841.—NATHANIEL ROBINSON, Patchogue, N. Y.—*Plow.*—September 14, 1869.

Claim.—1. The arrangement of the double beam G G' and colter I, substantially as and for the purposes specified.

2. In connection with the double beam G G', cross-bar E, and plow A B C, the vertical screw-standard H, and adjusting-nuts *m m'*, constructed to operate substantially as and for the purposes specified.

94,842.—M. L. ROOD, Denver, Colorado Territory.—*Velocipede.*—September 14, 1869.

Claim.—1. The frame A B, made of two parts, the front part having its rear end supported on the segmental plate *c*, of the rear part, while the front upright arm *a* of the rear piece connects the two parts, substantially as herein shown and described.

2. The arrangement of the jointed frame and steering-device, with respect to the driving-mechanism, in the manner and for the purpose specified.

3. The brake, consisting of the Gothic-shaped frame L, operated by a lever, *t*, and arranged substantially as herein shown and described.

4. The combination of the rods H, stirrups *h i*, cranks *g*, and shaft C, with the handles J, levers *m*, and rods *n*, all connected to form the propelling-mechanism, substantially as herein shown and described.

94,843.—PELEG ROSE, Norwich, Conn.—*Paper-Pulp Engine.*—September 14, 1869.

Claim.—1. Constructing the back-fall of a paper-engine with a top curving back from the cylinder, as seen at *g*, and with a curved back slope, as seen at *h*, substantially as described.

2. Constructing the corners of the tub and midfellow of a paper-engine curved instead of angular, substantially as and for the purposes described.

94,844.—T. SALISBURY, Albion, Pa.—*Arrangement of Gearing for Driving Agricultural Machinery.*—September 14, 1869.

Claim.—The combination, with sleeves J J, rotating loosely upon the same continuous axle B, of a spur-driving gear, C, fastened fixedly thereon, the intermediate parts being substantially as shown and described.

94,845.—ROBERT SCORER, Troy, N. Y.—*Cooking-Stove.*—September 14, 1869.

Claim.—1. In a three-flued and water-reservoir cooking stove, the arrangement of the expanded and contracted parts F and E, forming the rising flue thereof, together as shown, and in the rear of the descending flues H and H′, so as to overlap the same, substantially as described.

2. In a three-flued and water-reservoir cooking-stove, the combination of the expanded lower part F, and the contracted upper part E of the rising flue thereof, with each other and with the diving-flues H and H′, arranged substantially as described.

3. In a three-flued cooking-stove, the aforesaid enlarged and contracted rising flue thereof, arranged in the rear, and overlapping the diving-flues H and H′, substantially as described.

4. The extension G of the oven of a three-flued cooking-stove to the rear plate A of the same, between the diving-flues H and H′ thereof, substantially as described.

5. The construction of the water-tank or reservoir D of a cooking-stove, at its front side, where adjoining the rear end of the stove, with a recessed contracted flue, E, therein, substantially as and for the purpose described.

6. The combination, with each other, of the water-reservoir D, its recessed contracted rising flue-part E, the expanded rising flue-part F, the diving-flues H and H′, and the damper *a*, all constructed and relatively arranged, substantially as and for the purpose described.

94,846.—J. G. SEHORN, Iowa City, Iowa.—*Hay-Loader.*—September 14, 1869.

Claim.—The adjustable chain-brace I, swiveled band or sleeve E G, and rotating bar F, in combination with each other and with the bar H, post A, cross-bar B, adjusting stop-pin K, and rope L, substantially as herein shown and described, and for the purpose set forth.

94,847.—TALIAFERRO P. SHAFFNER, Louisville, Ky.—*Cartridge for Artillery and Blasting.*—September 14, 1869.

Claim.—The application of intestine, membranaceous, or cutaneous matter, for sacks or bags, to be used as artillery or blasting-cartridges, substantially in the manner and for the purposes hereinbefore described.

94,848.—ORIN SKEEL, Winslow, Ill.—*Washing and Wringing Machine.*—September 14, 1869.

Claim.—The combination of the tub, the spring-supported frame E, rollers D, hinged frame F, and the rollers N, when arranged with the shaft of the driving-gear for the rollers N, and the table P, of the wringer-roller R and the roller S supported in adjustable spring-bearings T, all substantially as specified, with the windlass, as shown.

94,849.—THOMAS J. SLOAN, New York, N. Y.—*Porcelain-Knob Machine.*—September 14, 1869.

Claim.—1. The employment, in combination with a feeder or hopper, A^2, for supplying the material, a perforated rotary disk, U, for receiving the charges, and a stationary bottom-plate, W, and packing-plunger *z*, of suitable dies G and S *a d*, for compressing the material into shape within the perforated disk, the whole constructed to operate substantially as hereinbefore set forth.

2. The employment, in combination with a die and perforated holder, or disk, of another compound die, adapted to form the shank-cavity and back side of the knob, substantially as herein set forth.

3. The combination, with the feeder A^2, molding-disk U, and dies G and S *a d*, and packing-plate W, and plunger *z*, of an ejector, *i*, and receiving-apron, the whole arranged to operate as specified, for the purpose set forth.

4. The employment, in combination with the face of a die, of a cleaning and lubricating brush, or its equivalent, which is arranged to revolve against the face of the die in the manner described.

5. Hanging either of the dies, or die-frames, on a yielding fulcrum, substantially as described, so that in the event of an overcharge from "claming," or other obstruction to the movements of the die, any breakage or overstraining of the machine or its parts will be avoided, as set forth.

94,850.—WILLIAM H. STEARRETT, Wilmington, Del.—*Dumping-Wagon.*—September 14, 1869.

Claim.—1. The combination of the springs E and the turning axle C, to which they are secured, with the horizontal supporting and locking plates F, for the wagon-body, constructed and arranged substantially as described.

2. The horizontal plates F, having supporting-rollers *a* at each end, and slots *b b′*, by which the body is both supported upon and connected with the plates, by the locking-pins *c*, in the manner described.

3. The curved connecting rods H, secured to the front truck-frame, and hinged to a rear turning axle, C, in the manner described.

94,851.—WILLIAM A. TARBUTTON, Harrisburgh, Pa. — *Machine for Forming Sheet-Metal Pans.*—September 14, 1869.

Claim.—1. The bed and bending-plates A B, provided with the elongated slots *b b b b*, in combination with the "corner-formers" D D and adjustable "clamp pivot-blocks" *a a*, substantially as set forth.

2. The corner-formers D′ D′, in combination with angular blocks *d d*, adjustable in elongated slots, substantially as set forth.

94,852.—HORACE THOMPSON, Concord, N. H.—*Beefsteak-Crusher.*—September 14, 1869.

Claim.—In a beefsteak-crusher, the combination of a hinged and recessed compressor, B, provided with a series of chambers for the reception of the detachable cutter-stocks C, all as shown and described.

94,853.—THOMAS C. WALTER, San Francisco, Cal.—*Thill-Coupling.*—September 14, 1869.

Claim.—The arrangement of the several parts of the above-described device, when the movable part of the eye D is hinged directly to the other part C, while the prolongation E of the former is secured in the recess at *a* by the band or slide F, held by the spring *b*, substantially as described.

94,854.—JOHN M. WHARTNABY, Philadelphia, Pa., assignor to himself and SAMUEL P. FAUNCE, same place, assignors to said WHARTNABY and FRANCIS SCHNECHTER.—*Rock-Drill.*—September 14, 1869.

Claim.—A rock-drill, having an inclined end, and an inclined or vertical cutting-edge, substantially as and for the purpose described.

94,855.—JAMES H. WILLIAMS, Tontzville, Kansas.—*Harrow.*—September 14, 1869.

Claim.—The combination of the angular head-piece B, section C, pivot-bolts, links D, and stay-bar E, when all arranged substantially as specified.

94,856.—CHARLES G. WILSON, Brooklyn, N. Y. —*Railway.*—September 14, 1869.

Claim.—1. The combination of the two wooden rails B, the two flanged iron plates C, and the central steel rail D with each other and with the longitudinal sleepers or timbers A, substantially as herein shown and described, and for the purpose set forth.

2. The combination of the tie-bars E, gradnated washers F, and spring or wedge keys G, with the compound rails B C D C B of the track, substantially as herein shown and described, and for the purpose set forth.

94,857. — JOSEPH ALLONAS, Mansfield, Ohio, assignor to C. AULTMAN and H. H. TAYLOR, same place.—*Machine for Punching Metal.*—September 14, 1869.

Caim. — 1. In combination with a machine for punching metals, the adjustable guide-bar D, pro-

vided with a perforated extension and the sliding gauge E, operating substantially as set forth.

2. In combination with a machine for punching metals, the adjustable guide-bar D, provided with a perforated extension, the sliding gauge E, and the tongue E′.

3. The combination of the bed-plate A, lugs F′, levers F, cammed lever G *g*, lugs G′, and guide-bar D.

94,858.—LAURITZ ANDERSON, Chicago, Ill.—*Hobby-Horse.*—September 14, 1869.

Claim.—The improvements in a rocking-horse herein described, consisting of the plate B, frame C, pulley *c*, spring D, and elastic cord H, constructed and arranged to operate substantially as specified.

94,859.—CHARLES H. BAGLEY and CHARLES E. MASON, Elgin, Ill.—*Stove-Pipe Shelf.*—September 14, 1869.

Claim.—1. The shelf A, when provided with a heating-chamber beneath it, constructed substantially as and for the purposes specified.

2. The device *m*, for holding drying-bars, in combination with a hollow warming shelf, constructed substantially as described.

3. The deflector C, when provided with the curved wings *d*, in combination with the register *n*, plates A B, and side D, of a warming-shelf, substantially as and for the purpose specified.

4. The warming-shelf herein described, when provided with the damper or register *n*, placed in the deflector C, and the circular damper *r*, inclosing the damper *n*, substantially as and for the purposes specified.

94,860.—R. A. BELDEN and E. H. CUTLER, New Haven, Conn.—*Machine for Planing Metals.*—September 14, 1869.

Claim.—1. The longitudinal bar E, combined with the transverse bar L and pinion I, so that the movement of the planer-table B will force the transverse bar out and in to ship the belt, substantially in the manner described.

2. In combination with the above, the arrangement of the pinion R, to operate the cross-head P, to work the feeding-device of a planing-machine, substantially as set forth.

94,861.—ADOLPH BERND, GUSTAV BERND, and ABNER WHITE, Macon, Ga., assignors to ADOLPH BERND and GUSTAV BERND.—*Harness-Fastening.*—September 14, 1869.

Claim.—In a harness the combination of the metal plate B, having slots *b* in its raised portion, with the hook C, provided with a transverse flange *c*, substantially as and for the purpose set forth.

94,862.—DAVID P. BIRD, Richwood, Ohio.—*Key-Hole Guard.*—September 14, 1869.

Claim.—The key-hole slide or protector, in combination with guides and spring, arranged as described, so that the slide may be released without any manipulation of the spring, as set forth.

94,863.—JOHN BIRD, Philadelphia Pa.—*Press for Molding Glassware.*—September 14, 1869.

Claim.—1. Extending the lower portion of each of the bearings *b′ b′* downward through and beyond the spring-plate E, substantially in the manner described and set forth, for the purpose specified.

2. The eccentric projections 4 4, and the flanges 3 3, on the inner ends of the bearings *b′ b″*, in combination with the corresponding concentric seats around in the holes in the ends of the cross-head, as and for the purpose described, the said bearings and cross-head being adjustably secured together by means of screw-bolts or otherwise.

94,864.—THOMAS BOYD, Cambridge, Mass.—*Chimney-Top.*—September 14, 1869.

Claim.—1. The combination and arrangement of the pipe or funnel C, casing B, and cap E, substantially as and for the purpose set forth.

2. The combination of the funnel C, casing B, and coiled pipe F, substantially as and for the purpose set forth.

3. The combination of the chimney-top, consisting of the funnel C, casing B, and cap E, with the flue or chimney A, substantially as and for the purpose set forth.

94,865.—C. J. BRACKENBUSH and C. E. MERRIFIELD, Indianapolis, Ind.—*Harvester.*—September 14, 1869.

Claim.—1. In a harvester, the combination of the platform A, toothed endless belts C, false platform E, and grain-box F, when arranged to operate substantially as and for the purpose set forth.

2. The mechanism herein described for simultaneously operating the bottom of the grain-box and the false platform, substantially as and for the purpose set forth.

94,866.—JABEZ BURNS, New York, N. Y.—*Window-Shade Fixture.*—September 14, 1869.

Claim.—The triangular wedge-shaped cams *e*, contained in the recesses *k*, of the cam-case *l*, and acting against the flat surfaces of the pin *c*, which forms the journal for one end of the roller A, all combined and arranged as herein shown and described.

94,867.—H. N. BURR, Mount Gilead, Ohio.—*Combination-Square.*—September 14, 1869.

Claim.—1. The combination of the frame A, arbor C, head B, and blade D, in the manner and for the purposes described.

2. The combination of the frame A and feet E E, in the manner and for the purpose set forth.

3. The spacing-arm K, arranged for conjoint operation with the blade D, in the manner and for the purpose specified.

4. The angle-arm L, in combination with the instrument constructed as described, for the purpose stated.

94,868.—JOHN CHASE, Paterson, N. J.—*Turbine Water-Wheel.*—September 14, 1869.

Claim.—1. The combination, with a horizontal water-wheel, of a gate to control the discharge from or through its buckets, arranged to rotate in common with said wheel, substantially as specified.

2. The independent throttle-valves E E to the discharging-mouths of the buckets, made to operate as additional buckets and revolving with the wheel, also being collectively adjustable to stop or start or regulate the speed of the wheel, essentially as described.

3. The adjustment of the gate which controls the discharge-openings from the wheel, and rotates with the latter, from or through the center of the wheel, essentially as specified.

94,869.—E. W. CLARK, Hartford, Conn.—*Solution for the Treatment of Wood.*—September 14, 1869.

Claim.—The solution for the preservation of wood, composed of the ingredients specified, in or about in the proportions set forth.

94,870.—WILLIAM A. CLARK, Woodbridge, Conn.—*Washer-Cutter.*—September 14, 1869.

Claim.—The combination, with the annular spring-borne center C and its stock A, of the cutter-arm B, constructed as described, of a main branch, *m*, and clamping-plate *n*, formed with dovetailed inner edges, to hold the adjustable cutters R R in between them, as shown and described.

94,871.—JAMES M. CONNEL, Newark, Ohio.—*Harvester.*—September 14, 1869.

Claim.—1. An endless chain, with cutters attached, so constructed and arranged that it may be made to move to the right or left, at the option of the driver, substantially as shown and described.

2. The links of the endless chain, when formed with depressions on the upper sides for the reception of the cutters, and depressions on the lower sides for engagement with the pulleys, substantially as shown and described.

3. The chain-cutters, formed in sections, with two knives to each section, and with the angular shoulders, substantially as shown and described.

4. The finger-bar U, with the rectangular depression *u**, the groove *u*, and the beveled front edge, when made as shown and described, for the purpose specified.

5. The lever Z, in combination with the horizontal shaft C, pinion D, and bevel-wheels *c c'*, for starting, stopping, and changing the motion of the chain-cutters, when arranged and operating as herein shown and described.

6. The vertical shaft F and bevel-wheel *f*, in combination with the bevel-wheels *c c'*, when arranged and operating as herein shown and described.

7. The divider T, with its rounded projection *t*, and the vertical guard-plate R', in combination with the chain-cutters, when made and operating as shown and described.

94,872.—William G. Creamer, Brooklyn, N. Y.—*Hot-Air Register.*—September 14, 1869.

Claim.—The construction of a register for the discharge of hot air, in such a way that the valves may be adjusted and fixed at any desired point, substantially as described, and for the purposes mentioned.

94,873.—George Crompton, Worcester, Mass.—*Loom.*—September 14, 1869.

Claim.—1. Lifter, depressor, and evener-bars, connected by the slide-rods and links, and actuated from the crank-shaft, by means of levers *p* and connectors *r s*, combined, arranged, and operating substantially as described.

2. The combination, with the connectors *r s*, of the levers *p*, provided with the slots *t u*, by which the relative movements of the opposite ends of the bars, pointed to the lever by these connectors, may be adjusted, substantially as described.

94,874.—Lancelot Davidson, Brantford, Canada.—*Changeable-Gauge Railway-Car Truck.*—September 14, 1869.

Claim.—1. The combination of cases F, boxes E, axles C, and forks G, when arranged substantially in the manner herein shown and described, and for the purpose set forth.

2. The packing *a* on the outer ends of the axles C, when arranged to slide in the boxes D, together with the axles C, substantially as herein shown and described.

3. The forks G G, adapted to lock the wheels B and their axles C in suitable positions to fit the car or truck to a suitable gauge, as specified.

4. The non-flanged broad wheels I, when arranged in combination with the shifting wheels B of a changeable-gauge railroad-track, substantially as and for the purpose herein shown and described.

94,875.—Loyal M. Doddridge, New Mount Pleasant, Ind.—*Rotary Clod-Fender.*—September 14, 1869.

Claim.—1. In combination with a plow or cultivator, a reversible revolving concave clod-fender.

2. The combination of the clip C, when constructed and attached to plow-beam, as shown, and having the stop C', with the crank-shaft B B', and dished frame A, substantially as and for the purpose set forth.

3. In the above combination, the dished dirt-pan A', substantially as and for the purpose set forth.

4. The construction of the frame A, substantially as described.

94,876.—Francis B. Dunn, New York, N. Y.—*Steam-Generator.*—September 14, 1869.

Claim.—1. The arrangement of the feed-pump B, steam-generating tubes C, and steam-drum G, provided with connecting-pipe I, substantially as set forth.

2. The arrangement of the collars F within the feed-head E opposite or in line with the tubes C, and each provided with a small orifice, *m*, for the equal distribution of water or other fluid to said tubes, substantially as specified.

94,877.—Levi S. Enos, Almond, N. Y.—*Sheet-Metal for Roofing and for other Purposes.*—September 14, 1869.

Claim.—1. As an article of manufacture, a metallic roofing, composed of block-tin, lead, and bismuth, or lead and bismuth alone, substantially as herein set forth.

2. The process above described, for manufacturing metallic roofing, substantially as herein set forth.

94,878.—David Evans, Eureka, Cal.—*Circular-Saw Mill.*—September 14, 1869.

Claim.—The saws A, A^1, A^2, and C, when arranged to operate substantially as and for the purpose described.

94,879.—Elihu Evans, Denver City, Colorado Territory.—*Section-Roller and Marker Combined.*—September 14, 1869.

Claim.—The section-roller and marker for irrigating purposes, substantially as above described, having the frame A, draught-pole B, short independent rolls R R, and interposed markers M M, rotating independently of each other and of the rolls, when constructed in the manner herein set forth, and for the purposes specified.

94,880.—Joseph Firmenich, Buffalo, N. Y.—*Manufacture of Beer, Ale, and other Fermented Liquors.*—September 14, 1869.

Claim.—1. The manufacture of ale, beer, porter, and other similar fermented liquors direct from grain, by the starch and saccharine process, either alone or combined with malt, substantially as herein described.

2. The combination of the several processes herein described, for crushing the grain, separating the husk and non-starchy material, the saccharification of the starch, and conversion of the same into ale, beer, porter, or other similar fermented liquors, all substantially as herein described.

94,881.—Thomas Jefferson Flagg, New York, N. Y., assignor to Fisk, Clark and Flagg, same place.—*Suspender-Ends.*—September 14, 1869.

Claim.—The composite felt suspender-end, herein-before described, composed of felt, combined with a strengthening-material, the same being a new article of manufacture.

94,882.—William A. French, Philadelphia, Pa.—*Compound for Coating the Surfaces of Steam-Boilers, &c.*—September 14, 1869.

Claim.—A non-conducting coating or cement, composed of the ingredients herein described.

94,883.—William A. French, Philadelphia, Pa.—*Compound for Coating the Surfaces of Steam-Boilers, &c.*—September 14, 1869.

Claim.—A plastic non-conducting-coating, composed of the ingredients substantially as described.

94,884.—Henry Grogan, Flatbush, N. Y.—*Vacuum-Still.*—September 14, 1869.

Claim.—1. The conical steam-jacket D, in the interior of the still, and over the mouth of the discharge-pipe, substantially as set forth.

2. The arrangement and combination of the still A, jacket D, discharge-pipe E, and condenser G, substantially as set forth.

3. The arrangement and combination of the still A, jacket D, discharge-pipe E, residuum-tank L, pipes *l l*, and condenser G, all as substantially shown and described.

94,885.—Manasseh Grover, Clyde, Ohio.—*Nut-Fastener.*—September 14, 1869.

Claim.—1. The nut-fastener A, arranged and operating substantially for the purpose hereinbefore set forth.

2. The nut T, or its equivalent, arranged and operating substantially for the purpose hereinbefore set forth.

94,886.—C. L. Hammond, Java, N. Y.—*Medical Compound.*—September 14, 1869.

Claim.—The above-described medical compound, made substantially in the manner and for the purposes herein set forth.

94,887.—A. B. Hitchcock, Juneau, Wis.—*Combined Rake and Reel for Harvesters.*—September 14, 1869.

Claim.—1. The arm *m* of the rake, when constructed as described, in combination with the cylinder F.

2. The collar *g*, in combination with the collars *v* and *f*, when constructed and operating substantially as and for the purposes specified.

3. The lever *l*, in combination with the sliding collar *g* and stationary collars *v* and *f*, substantially as described.

4. The arm *o*, in combination with the cams *a* and *w*, for operating and turning the rake, substantially as specified.

5. The cam *b*, in combination with the spring *d*, for locking and unlocking the rake, substantially as described.

6. The post-collar *v*, when provided with teeth *t* and projection *u*, substantially as and for the purposes specified.

7. Connecting the separate arms H of the reel-bars D to the shaft by mortise and set-screw, or bolt I, so that the diameter of the reel can be regulated, and the reel laterally adjusted, substantially as specified.

94,888.—C. HOËLLER, Cincinnati, Ohio.—*Ice-Creeper.*—September 14, 1869.

Claim.—The frame A, the bridge A′, provided with a series of knife-edges, the bosses *b*, armed with steel points, the cushion *a*, and eccentric knife-edges B, or their equivalent, when the same are constructed and arranged substantially as and for the purpose specified.

94,889.—JESSE HUDSON, Charleston, Ill.—*Horse-Rake.*—September 14, 1869.

Claim.—1. The arms C C, so arranged as to operate the prongs of the hay-rake over obstructions, substantially as set forth.

2. The combination of the elongated axle A with the projecting tines, and the pivoted arms C C, all substantially as set forth.

94,890.—THOMAS M. HUSTIN, Orange, Ind.—*Machine for Filing Saws.*—September 14, 1869.

Claim.—1. The block Y, provided with a burr, so that the file can be lowered or raised, and working on the screw-rod W, in combination with the file-bar *f*, screw *g*, and set-screw *i*, constructed to operate as and for the purposes set forth.

2. The slide L, moving back and forth in the frame K, and provided with the clamps M, brace P, and spring, and so constructed that it can be moved by means of the screw-rod N, so as to adjust the saw without loosening the clamps, substantially as shown.

3. Providing the heel of the file with grooves, so that it can move up and down, for the purpose of giving elasticity to the file, substantially as set forth.

4. The set-screw *i*, bearing upon the arm C, so as to raise the file upward in its backward motion, in combination with the screw *g*, having a spiral spring wound its surface, arranged to operate for the purpose described.

5. The cylinder *o*, in which the ends of the file are secured, in combination with the segment *n*, when used substantially as specified.

6. The segment *n*, having openings in its top, so that it can be secured at any desired point for giving a suitable pitch to the file, substantially as described.

7. Levers H and S, spring V, and cam-wheel F, when used to move the slide forward, in combination with the screw U and slide L, when constructed as described, and operated by the screw-rod N, substantially as shown.

8. The file-holder, when composed of the file-bar *f*, grooved wheel *d*, block *k*, segment *n*, and cylinders *o*, when combined substantially as described.

94,891.—THOMAS L. JONES, Natchez, Miss.—*Combined High and Low Pressure Engines.*—September 14, 1869.

Claim.—1. The combination of pipe O, valve-chest M, valve *n*, and pipe Q, when the latter is arranged at the side of the valve-chest, with an air-chamber above it, substantially as set forth.

2. The cross-head T, in combination with the valve-stem n^1, fixed to it by a set-screw, the valve-stem m^1 sliding loosely through it, and the stop *v*, to regulate the distance which the rod m^1 slides through the cross-head, substantially as and for the purposes set forth.

3. The combination and arrangement of the valve-chests M N, valves *m* m^1 *n* n^1, passage P, pipes Q R, cross-head T, and springs m^2 n^2, substantially as described.

94,892.—EDMUND KEITH, Buffalo, N. Y., assignor to himself, BELA H. COLEGROVE, and CHAUNCEY B. HUTCHINS, same place.—*Water-Meter Adapted for Rotary Pumps.*—September 14, 1869.

Claim.—1. The arrangement, with the case A and paddles C, of the inclosing piston-head B, with the flange *i*, inclosing the operating-parts, consisting of the cam-ways *f* *f*′ and cross-arms *m* *m*′, the whole operating in the manner and for the purpose specified.

2. The combination, with the case A and paddles C, of the flat extended butment *d*, on one side of the case, and serving the double purpose of a stop to the water and a guide to the paddles, as described.

94,893.—FRANCIS KEMLO, Boston, Mass.—*Fish-Hook.*—September 14, 1869.

Claim.—The combination of the stem A, sliding hook B, and lock C′, arranged to operate substantially as and for the purpose set forth.

94,894.—FRANCIS KEMLO, Boston, Mass.—*Fish-Hook.*—September 14, 1869.

Claim.—A fish-hook, constructed with a long barb-end, and provided with a spring-lock, for retaining a fish after it has been hooked, substantially as shown and described.

94,895.—FRANCIS KEMLO, Boston, Mass.—*Fish-Hook.*—September 14, 1869.

Claim.—The combination of the stem A, plate B, springs *b* b^1 b^2, grappling-hooks C, plate D, and bait-hooks E, all arranged to operate substantially in the manner set forth.

94,896.—JAMES T. KETCHLEDGE, Burns, Mich.—*Elevator.*—September 14, 1869.

Claim.—1. The center-pole A, provided with the slide C and sleeve H, in combination with the braces D and leg B, when used to form an elevating-apparatus, substantially as described.

2. The pivot E and lever F, provided with three pulleys, in combination with the cord G and sleeve H, substantially as described.

3. The platform I, attached to the elevating-apparatus and provided with a device for holding a vessel of water, substantially as set forth.

4. The trestle O, when constructed in the manner, and used substantially as described.

5. The platform I, slide C, cord G, pivot E, braces D, and legs B, when all are used to form an elevating-apparatus, as specified.

94,897.—JUDSON N. KNAPP, Syracuse, N. Y.—*Blacking for Harness-Leather, &c.*—September 14, 1869.

Claim.—A blacking-compound, composed of the within ingredients, in about the proportions mentioned, substantially as set forth.

94,898.—JULES FRANÇOIS LAFROGNE, Paris, France.—*Apparatus for Carburetting Air.*—September 14, 1869.

Claim.—1. The novel application to the carbonizing-apparatus of a motor actuated by a calorific supply obtained from the gas produced, the which motor may be worked by air, gas, or steam; and I claim particularly the use of Laubereau's motor, before mentioned, in conjunction with my invention.

2. The reheating of the hydrocarbon essential oils or liquids by the use of a jacket attached to the motor, in which said jacket water is caused to circulate.

3. The employment of a series of bellows with continuous action worked by the motor, and serving for drawing in and expelling air, and of a reservoir for accumulating the air and regulating its flow.

4. The reheating of the air before its admission into the carbonizer.

5. The employment of the mass of wool and shavings, moistened by capillary attraction, and also by an injection of liquid by the motor.

94,899.—NORBERT LANDRY, San Francisco, Cal.—*Velocipede.*—September 14, 1869.

Claim.—A velocipede, constructed substantially as described, consisting of four wheels, one fast and one loose, upon the double crank-axle I, the treadles H, supporting-braces E J J, spring F, and guiding-rod M M, with upright arms or handles N N, as and for the purpose set forth.

94,900.—WILLIAM LEONARD, Orleans, Ind.—*Gate.*—September 14, 1869.

Claim.—The shaft *b*, arm *c*, spring *d*, and hook *e*, in combination with gate C and post A, arranged as herein described.

94,901.—NATHANIEL B. LEWIS, Hopewell, N. Y.—*Ditching-Machine.*—September 14, 1869.

Claim.—The scoop D, rollers H and K, traveling-platform R, apron T, adjustable handles U, and driving-wheel and pinion, as described, when constructed and arranged to operate substantially as and for the purposes specified.

94,902.—WALTER A. LOVELACE, Richmond, Mass.—*Interfering-Pad.*—September 14, 1869.

Claim.—1. An interfering-pad, provided with wire or elastic metal clamps, constructed substantially as shown and described.

2. In combination with the elastic metal clamps, the pad, or pad-frame, constructed of elastic wire, in a convolute form, substantially as specified.

94,903.—EDWARD P. LYNCH, Davenport, Iowa.—*Cultivator.*—September 14, 1869.

Claim.—1. A walking cultivator, having the central or fifth shovel applied thereto, substantially as described.

2. The combination of the bars C and the beam D, the latter being curved, as shown, and secured to the former by the bolt *o* and pin *e*, as set forth.

3. Securing the beam D to the bar B, by means of the bolt *o* and clip *a*, with the pin *e*, as described.

4. Constructing the beams of cultivators of wrought-iron bars, made thicker on their lower edges, as herein shown and described.

94,904.—J. MCCUNE, Auburn, Ind.—*Knitting-Machine.*—September 14, 1869.

Claim.—1. A rotary knitting-machine, having a tapering needle-cylinder, grooved at both ends, so that the needles can be used at either end for the purpose of knitting different sizes of fabrics on the same machine, the parts being constructed and arranged substantially as and for the purpose set forth.

2. The combination of the tapering and reversible needle-cylinder B with the tapering and reversible shell C, having the cam-grooves C^1 and C^2 all constructed and operating as described, so that a fabric may be knit at both ends of the needle-cylinder, substantially as and for the purpose set forth.

94,905.—JOHN MCNEVEN, New York, N. Y.—*Fresh-Air Apparatus.*—September 14, 1869.

Claim.—The cap A, provided with one or more air-tubes, B, having inlet and outlet-valves, with a suitable fastening to hold it in position when applied to the face, substantially in the manner and for the purposes herein shown and described, combined with the elastic packing, as set forth.

94,906.—LEWIS H. MITCHELL and LEVI STONE, Mount Vernon, Ohio.—*Rotary Steam-Engine.*—September 14, 1869.

Claim.—1. The construction and arrangement of the revolving arm F, with reference to passages *e* and *d*, substantially as described.

2. The construction and arrangement of the valves C, *f*, and *n*, with reference to the openings *e* and *d*, substantially as specified.

94,907.—JAMES O. MORSE, Englewood, N. J., and GARDNER D. HISCOX, Brooklyn, N. Y.—*Kettle for Boiling by Steam.*—September 14, 1869.

Claim.—1. The combination, for the purpose of forming a kettle for boiling by steam, of a hollow cast bottom, fitted to receive and contain steam, with a body or sides of sheet-metal, or other thin metal, formed separately, and fitted and put together, substantially as herein described.

2. The combination, for a like purpose, of such a hollow cast bottom, having its upper surface tinned, or otherwise protected against corrosion by the chemical action of the contents of the vessel, with a body or sides formed of sheet-metal, or other material, of a kind not liable to be so corroded.

94,908.—E. R. NORNY, McDonough, Del., assignor to himself and AMOS CARLISLE, Philadelphia, Pa.—*Preserving Animal and Vegetable Substances in Transit.*—September 14, 1869.

Claim.—1. The combination and arrangement of the valve I with the compartment A, substantially as and for the purpose set forth.

2. The arrangement of the vessel F, bracket E, elevated open bottom B, gate G, and valve I, in relation to each other, and the compartment A, substantially as and for the purpose specified.

94,909.—J. A. PARK, Lansing, Mich., assignor to himself and WILLIAM WOODHOUSE, same place.—*Hay-Fork.*—September 14, 1869.

Claim 1.—Providing the fork with a shield, C, secured to one side of it, when constructed and made to operate substantially as and for the purpose set forth.

2. The combination and arrangement of the shield C, prongs B and B′, lever L, and the ear or socket E, when all constructed substantially as and for the purpose set forth.

94,910.—W. S. PELHAM, Kirkville, Iowa.—*Hand Corn-Planter.*—September 14, 1869.

Claim.—The combination and arrangement of seed-slide C, scatterer E, and flexible partition F, substantially as and for the purpose set forth.

94,911.—WILLIAM QUANN, Philadelphia, Pa., assignor to himself, CHARLES C. LATHROPE, and A. R. WITMER.—*Furnace for Reducing Gold, Silver, Copper, and other Refractory Ores.*—September 14, 1869.

Claim.—1. A furnace, A, having a roof *d*, and bed *a*, inclined toward each other, substantially as described, in combination with a cupola, C, of the form or approximating to the form described and illustrated.

2. The charging-holes *j* and *j′*, arranged, with respect to the cupola C and furnace A, substantially in the manner described.

3. The combination, with the furnace A and cupola C, of an oven, F, substantially as herein set forth.

4. The combination and arrangement of the furnace A, cupola C, oven F, passages *k* and *k′*, tank G, and chimney H, when the whole are arranged for joint operation, substantially in the manner described.

5. The chamber g^1 and guard g^2, arranged, with respect to the fire-place B and door *g* of a furnace, substantially as herein set forth.

94,912.—BARNET R. RAPP, Philadelphia, Pa., assignor to himself, E. LANE, and J. GORDON MAXWELL, same place.—*Thill-Coupling.*—September 14, 1869.

Claim.—1. The shaft, hung at its end N to a stationary pin, C, the block of rubber H, adapted to the rounded end of the shaft, and adjustable to and from the same, and the cam-lever F, bearing with its inner end against a plate, I, beneath the block H, the whole being arranged substantially as described.

2. The arrangement, on the cam-lever F, of the arms *f f*, all substantially as and for the purpose set forth.

94,913.—JONAS RAUCH, Selin's Grove, Pa., assignor to himself and FREDERICK APP, same place.—*Seaffold for Painters.*—September 14, 1869.

Claim.—1. The post A, with hinged brace-frame D, foundation-frame C, platform E, carriage B, with lifting-apparatus, and spring and lever *l*, substantially as shown and described.

2. In combination with the frame F of the described scaffold, the roller U, arranged as specified.

94,914.—JOHN ROBBINS, Centralia, Ill.—*Clothes-Line Holder.*—September 14, 1869.

Claim.—The device herein described, having jaws

A and B, loops H and I, and rivets or pins *c c*, constructed, arranged, and operated substantially as specified.

94,915.—DANIEL G. ROLLIN, New York, N. Y.—*Bustle.*—September 14, 1869.

Claim.—1. A bustle, composed of hoop-skirt wires, united together in the manner and for the purpose substantially as described and represented.

2. The bustle, in combination with a hoop-skirt, when provided with the means of raising or lowering the forward ends of the bustle, to give greater or less prominence to the latter, substantially as described.

94,916.—TITUS H. RUSSELL, Northfield, Vt.—*Water-Wheel.*—September 14, 1869.

Claim.—1. The threaded shaft D and check-nuts d^1 d^2, in combination with the shaft B^1, bearing *d*, step *c*, and stationary shaft C, the whole constructed and operating substantially as and for the purpose described.

2. The pivoted collars F F′, in combination with the tubular shaft B, stationary shaft C, and tubular bearing E′, substantially as set forth.

3. The rings *h* h^1, gates H, and movable chutes H^2, in combination with the case E and stationary chutes H^1, constructed and operating substantially as described.

4. A friction-roller or gear-wheel, within the bearing of the countershaft G, and pressed up to the latter by a spring for the purpose of supplying oil to the bearings, substantially as described.

94,917.—A. C. SAWYER, Canton, N. Y.—*Butter-Tub.*—September 14, 1869.

Claim.—The mode of securing the covers to butter-tubs by the use of two short levers meeting in the center and secured by the use of the concave or inverted U-shaped button, with its flange or flanges S, operating for the purpose and in the manner substantially as set forth.

94,918.—HENRY F. SHAW, West Roxbury, assignor to JAMES A. WOODBURY, Boston, Mass.—*Harvester-Cutter.*—September 14, 1869.

Claim.—1. Combining with the divided cutter-bar of a mowing-machine, the clearing-hook K K′, or its equivalent, operating for the purpose set forth.

2. The finger P P′ P″, made substantially as described, in combination with the clearing-hook K K′, as and for the purpose set forth.

94,919.—GEORGE H. SHEARER, Bay City, Mich.—*Saw-Mill.*—September 14, 1869.

Claim.—1. The construction of the jambs or ways, or both, of a saw-mill, in such manner that access may be had to the bearing-ends of the nodal-pin or cross-head without removing or loosening said nodal, or either side of the ways in which it moves.

2. The jambs or ways of a saw-mill, provided with mortises or perforations, for the purpose set forth.

3. The removable back D, in combination with the sides C C, operating as set forth.

4. The cap B, in combination with the jamb A.

94,920.—NOAH C. SMITH, Berlin, assignor to the ROYS & WILCOX COMPANY, East Berlin, Conn.—*Die for Manufacturing Spring-Calipers.*—September 14, 1869.

Claim.—The dies A A′, constructed and operating to form spring-caliper and divider-blanks, substantially as specified.

94,921.—JAMES G. STEPHENSON, Bucyrus, Ohio.—*Horse-Power.*—September 14, 1869.

Claim.—1. The trip F and pivoted bar D, or their equivalents, for throwing the parts in and out of gear, substantially as shown and described.

2. The brake G and lever I, when arranged and operated as shown and described.

94,922.—ROBERT N. STEWART, Philadelphia, Pa.—*Attachment for Gas-Burners.*—September 14, 1869.

Claim.—The heater B, the same being constructed substantially as and for the purpose hereinbefore set forth.

94,923.—JOHN P. SUMMERS, Tiffin, Ohio.—*Rock-Drill.*—September 14, 1869.

Claim.—1. The miter-wheel C, provided with the hinged doors G G, all constructed and used substantially as and for the purposes specified.

2. The auger Y, when provided with the movable bottom *d*, and valves *c*, and adjustable bits or drills *m*, when used in the manner and for the purpose set forth.

3. The arrangement of the tilting-frame T T, disks N N, rock-shaft W, and arm X, with the drill *l*, all connected and operated substantially as and for the purposes set forth.

4. The arm H, in combination with the auger Y, when used in the manner and for the purpose specified.

5. The combination of the lever P and shaft with wheels L and M and the wheel K, all operating substantially as and for the purposes set forth.

6. The arrangement of the wheels L, M, I, K, C, E, and disks N N, all substantially as and for the purposes set forth.

7. The arrangement of the wheels O, S, and *r*, reel *g*, tilting-frame T, and derrick X, when combined for the purpose set forth.

94,924.—HANNAH G. SUPLEE, San Francisco, Cal.—*Sewing-Machine Needle.*—September 14, 1869.

Claim.—The within-described needle for sewing-machines, having a slot or opening, A, from the eye, with points *c d* and projection *b*, substantially as and for the purpose set forth.

94,925.—WILLIAM F. SWEET, Jackson, Pa.—*Indicating-Attachment to Weighing-Scales.*—September 14, 1869.

Claim.—1. The application, to the sway-beam of a scale, of a hook, substantially as described, in such a manner that the weight, when the scales are balanced, shall indicate the cost of the article weighed at a specified price per pound.

2. The removable frame N, applied to the sway-beam of a scale, for supporting the table or book *h*, substantially as herein described and shown.

3. The combination of the removable frames N and *p*, for supporting a book, *h*, and retaining it in an open position, substantially as described.

4. The removable balance-beam D, constructed substantially as described, and capable of application to any scale of the kind specified, for balancing the scales with a vessel thereon, which vessel is to contain the article purchased, before weighing the latter.

94,926.—JAMES H. TRACY, Mayville, Mich.—*Hook.*—September 14, 1869.

Claim.—The combination, substantially as described, of hook B with shield A, constructed and operating as set forth.

94,927.—CHARLES M. TYLER, Indianapolis, Ind.—*Velocipede.*—September 14, 1869.

Claim.—1. The cover or awning herein described, arranged for operation by the cords *v* and *y* and the hook *h*, substantially as specified.

2. The head-rest H and spindles *x* and *z*, when arranged, with reference to a velocipede, substantially as specified.

94,928.—WILLIAM P. UHLINGER, Philadelphia, Pa.—*Rustic Settee.*—September 14, 1869.

Claim.—1. The eccentric lock *l*, when arranged to operate with reference to the slanting pins *e*, substantially as and for the purposes specified.

2. The eccentric lock *l*, when arranged to operate with reference to the lugs *f* and screws *g*, substantially as and for the purposes described.

3. The brace-lock *c*, when arranged to operate with the slanting pin *e*, substantially as and for the purposes specified.

4. The brace-lock *c*, when arranged to operate with the lugs *f* and screws *g*, substantially as and for the purposes set forth.

5. In combination with the rustic settee herein described, the slanting pin *e*, and the modifications *f* and *g*, constructed and arranged substantially as specified.

94,929.—JOHN N. WELLS, Brooklyn, N. Y., assignor to himself, JOHN S. HULL, and JEROME B. BRYANT, Cincinnati, Ohio.—*Burglar-Alarm.*—September 14, 1869.

Claim.—1. The adjustable spring-seat L, for the armature E, substantially as herein specified.

2. The arrangement of the adjusting-support I, arm H, screw *l*, and of the key G, in connection therewith, as set forth.

3. The coiled wire *n*, to connect the key with the hammer and armature-lever, for the purpose specified.

4. Making the peripheral band *u* of the base A, part of the circuit, as herein specified.

5. The construction and arrangement of the indicating-knobs M M, with notched shafts or equivalent thereof, the springs *s s*, and spring-clamp connections N N, together constituting the indicating-device, substantially as herein specified.

6. Placing the indicator upon, or attaching it to the same base A that supports the magnets and bell.

94,930.—PHILIPP WENZEL, Mayence-on-the-Rhine, Germany, assignor to IGNATIUS HAHN, Philadelphia, Pa.—*Rest for Lathes for Turning Spheres.*—September 14, 1869.

Claim.—The arrangement, herein described, of the carriage B, its pillars *c e*, and plate D; the conical stem F, its worm-wheel G, and arm H; the worm *e*, rest J, stem *r*, tool M, and screw *k*, all constructed as set forth.

94,931.—LEVI H. WHITNEY, Washington, D. C.—*Clothes-Boiler.*—September 14, 1869.

Claim.—The combination of the body or shell A of the boiler, the false bottom E, and heating-pipes F, or their equivalents, substantially as and for the purpose set forth.

94,932.—JOSEPH B. WILSON, Philadelphia, Pa., assignor to ELEANOR WILSON, same place, and HENRY M. RILE, Wilmington, Del.—*Carriage-Axle.*—September 14, 1869.

Claim.—A hollow axle, cast, annealed, and hardened, substantially as and for the purpose herein set forth.

94,933.—WILLIAM W. T. GREENWAY, Baltimore, Md.—*Thill for Carriages.*—September 14, 1869.

Claim.—1. The use, in connection with vehicles, of the shafts or thills 2, separately hinged and braced thereto, so that each may move vertically, independent of the other, and be rigidly braced laterally, substantially as described.

2. In combination with the said brace and shaft, a suitable trace-fastening, substantially as set forth.

94,934.—ANSON ATWOOD, New York, N. Y.—*Revenue-Stamps for Cigars.*—September 21, 1869; antedated September 13, 1869.

Claim.—The several parts of the device, for the purposes set forth and described, and the combination of the same, for the purposes and in the manner herein described.

94,935.—JOHN S. BARDEN, Providence, R. I.—*Alloy for Tubing.*—September 21, 1869.

Claim.—Tubing made from metal composed of the elements and possessing the characteristics substantially as described.

94,936.—JOHN S. BARDEN, Providence, R. I.—*Alloy for Making Water-Meters.*—September 21, 1869.

Claim.—A water-meter, made from metal composed of the elements and possessing the characteristics substantially as described.

94,937.—JOHN S. BARDEN, Providence, R. I.—*Boiler-Feed-Water Regulator.*—September 21, 1869.

Claim.—1. The combination of the chamber B, tube D, link H, bell-crank lever K, rod L, and piston N, the whole constructed and arranged substantially as described.

2. The combination of the weight R, bell-crank lever K′, rod L, and piston N, the whole constructed and arranged substantially as described.

3. The combination of the cylinder O, piston N, in connection with the parts M and M′ and tube P, the whole constructed and arranged substantially as described.

94,938.—GEORGE W. BENTON, East Pike, N. Y.—*Washing-Machine.*—September 21, 1869.

Claim.—The arrangement, with the concave D, ribbed cylinder C, frame E, and tub A, of the adjusting-screw *o*, rod *l*, spiral springs *s g*, and guide-pins *r f*, as herein set forth.

94,939.—JOB W. BLACKHAM, Brooklyn, N. Y., assignor to himself and JAMES H. PRENTICE, same place.—*Felting-Machine.*—September 21, 1869.

Claim.—1. In combination with one or more rolls D D, the stop or stops T, and reciprocating-presser I, combined and arranged for joint operation, relatively to each other and to the means for wetting, heating, &c., in a felting-machine, substantially as and for the purposes herein set forth.

2. The lever M, the arms M′, the slides O, and wheels P, in combination with the reciprocating-presser I of a hat-felting machine, and arranged to operate therewith in the manner and for the purposes herein set forth.

94,940.—CHARLES BOECKH, Buffalo, N. Y.—*Brush.*—September 21, 1869.

Claim.—The combination, with the brush-head A and handle C, of the metallic plug D, entered reversely from the bottom, thereby expanding the handle in its socket, and provided with a head, *a*, thereby securing the bristles in place, the whole arranged as described, and operating in manner and for the purpose specified.

94,941.—SAMUEL BRILLINGER, Clarence Center, N. Y.—*Brush.*—September 21, 1869.

Claim.—1. The combination and arrangement of the conical screw B, and expanding-nut *a a*, as herein described, the said screw screwing directly into the sectional nut, without the interposition or agency of other parts, as specified.

2. In combination with the sectional nut *a a*, the defenders *c e*, arranged as described, and operating in the manner and for the purpose specified.

94,942.—M. S. BRINGIER, Ascension Parish, La.—*Apparatus for Evaporating Cane-Juice.*—September 21, 1869.

Claim.—The mode of evaporation herein described, when the same is effected by the means and in the manner substantially as described, for the purpose set forth.

94,943.—JOHN BRISTOW, Detroit, Mich.—*Axle-Box Lid.*—September 21, 1869; antedated September 6, 1869.

Claim.—A removable car-axle oil-box cap, having a central opening, closed by a tapering slide, with gap, stop, and projection underneath, the slide retained in any desired position by side spring or springs, substantially as set forth, and for the purpose described.

94,944.—ERASTUS CASWELL and HERMAN LACHMANN, Chicago, Ill.—*Signs for Street-Lamps.*—September 21, 1869.

Claim.—Suspending or hanging the letters designating the names of streets on street-lamps by the hinged bar *a*, for the purpose and in the manner substantially as described.

94,945.—CHARLES B. CLARK, Buffalo, N. Y.—*Sash-Pulley.*—September 21, 1869.

Claim.—The overlapping ears A A of the cap, combined and operating with the corresponding portions B B of the base-portion, substantially as set forth.

94,946.—CHARLES E. CLUM, Troy, N. Y., assignor to himself and MOSES C. HASKELL, same place.—*Scrubber.*—September 21, 1869.

Claim.—1. The manner of securing the scrubbing-strips by means of the clamps E E, as herein shown and described.

2. In combination with the toggle-jointed clamps, the pins G G, and openings B B, as and for the purpose specified.

3. Holding the sponge I on the same side with and between the scrubbing-strips, and the manner of securing the same, as herein set forth.

94,947.—E. T. COVELL, Brooklyn, N. Y.—*Machine for Closing the Seams of Metallic Vessels.*—September 21, 1869; antedated September 10, 1869.

Claim.—1. One or more movable or stationary, notched or grooved "anvil" or bed plates, in combination with one or more opposite and correspondingly-notched or grooved "drop-plates," and with intermediate fixed or movable "supporting-plates" or mandrel, when said compressing "anvil" and "drop" plates are arranged in pairs to meet, embrace, and close upon opposite points on the sides, or upon the edges or angles of a metallic vessel sustained by said intermediate supporting-plates or mandrel, so as to compress and close the seams of the vessel, all substantially as herein described.

2. In combination with compressing "anvil" and "drop" plates, arranged and operating to close the joints at the ends of a metallic vessel, an elastically-yielding, grooved, or notched central supporting-plate, M, substantially as herein described.

3. In combination with compressing "anvil" and "drop" plates, operating substantially as herein described, to close the end joints of metallic vessels, elastically-yielding sustaining or supporting plates L L′, arranged at right angles thereto, to receive and support the projecting edges of the joints at the ends of the vessel, and to be removed therefrom at pleasure, substantially in the manner herein set forth.

4. In combination with "anvil" and "drop" plates operating to close the side seams or seam of a metallic vessel, substantially as herein described, a central, inner-supporting block or mandrel, pivoted and supported at right angles thereto, upon elastically-yielding supports to receive and sustain the metallic vessel under the operation of said plates, substantially as herein set forth.

94,948.—WILLIAM P. DAVIS and SAMUEL ELWELL, Jr., Gloucester, Mass.—*Protector for Stems of Boats.*—September 21, 1869.

Claim.—The combination and arrangement of the elastic head B, as described, with the bow or cutwater of a boat, A, the said elastic head being for the purposes or objects as set forth.

94,949.—FREDERICK DODGE, Syracuse, N. Y.—*Door-Spring.*—September 21, 1869.

Claim.—In a door-spring, constructed substantially as described, attaching the spring-plate, or its equivalent, to the door, by means of the extended socket and the pivoted crank-shaft, as and for the purpose described.

94,950.—JOHN J. EMERY, Owl's Head, Me.—*Surge-Reliever for Cables.*—September 21, 1869.

Claim.—The combination and arrangement of the chain-cable pawl A, the bridge B, the spring or springs S S, and their supporting-rods *a a*, or mechanism, the whole to operate substantially as set forth.

94,951.—FRANKLIN FIELD, Troy, N. Y.—*Necktie.*—September 21, 1869.

Claim.—As a new article of manufacture, a neck-tie, consisting of two parts, A and A′, joined together, as above described, and adapted to be attached to one end of a collar, substantially as hereinbefore specified and set forth.

94,952.—MORRISON FOSTER, Cleveland, Ohio.—*Grinding-Mill.*—September 21, 1869.

Claim.—The reducing-disks, which are arranged and constructed to work together, with their axes oblique to each other, in combination with a central feed-passage, C, substantially as herein described.

94,953.—NEWTON J. GLOVER, Waveland, Ind.—*Portable Fence.*—September 21, 1869; antedated August 31, 1869.

Claim.—In combination with the brace A, provided with cleats *c*, the notched blocks *o*, constructed and arranged as described.

94,954.—J. T. GREENWOOD, Beloit, Wis.—*Washing-Machine.*—September 21, 1869.

Claim.—The arrangement of the levers C C, in combination with the covered rollers B and D D, guide-rollers E E, and springs *d d*, when constructed and connected as shown and described.

94,955.—N. B. HADLEY and R. J. COSTAIN, Northampton, Mass.—*Compound for Emery-Wheels and Oil-Stones.*—September 21, 1869.

Claim.—The compound for emery-wheels and oil-stones, substantially as herein set forth and described.

94,956.—JOHN B. HARRIS, Ottawa, Ill.—*Machine for Dressing Millstones.*—September 21, 1869.

Claim.—1. The arm E, in combination with eccentric or cam-shaft Q, and guide-bar C, so that the arm may be moved from side to side, without disturbing its vibrations, substantially as set forth.

2. The bar J, in combination with the grooved shaft K, for moving the frame B upon the base-frame, substantially as specified.

3. The shaft or roller K, when provided with the spiral groove *b* and the longitudinal groove *c*, substantially as and for the purposes described.

4. The adjustable stop or rest *f*, in combination with the lever M, pawl N, and ratchet-wheel L, for adjusting the movement of the frame B, substantially as specified.

5. The adjustable stop G, provided with the set-screw *i*, in combination with the pick I, provided with the set-screw *j* and the arm E F, for adjusting the exact distance for the pick to enter the stone, substantially as specified.

6. The combination and arrangement of the frames A and B, arms E F, shaft Q, guide C, arm or rod J, and roller K, with the ratchet-wheel L and driving-mechanism, substantially as set forth.

94,957.—WILLIAM A. HASTINGS, Thorndike, Mass.—*Mounting Lease-Rods for Looms, &c.*—September 21, 1869.

Claim.—An elastic warp-index, consisting of one or more rods *a*, to each end of which is attached the spring *b*, secured to a convenient place upon the loom, all constructed and operating substantially as and for the purposes herein described and set forth.

94,958.—SIMEON HAWKINS, Carmel, Ind.—*Tile-Machine.*—September 21, 1869.

Claim.—The reciprocating plungers B B, connected by bars X, and operated by crank J and toggle-bars H, turning upon semicircular bearings I, in combination with double cut-off K K and cam L, when said parts are constructed and arranged to operate, with relation to each other, as and for the purpose herein set forth.

94,959.—L. S. HEREFORD, West Baton Rouge Parish, La.—*Apparatus for Evaporating Cane-Juice.*—September 21, 1869.

Claim.—The two elongated semi-cylindrical or elliptical boilers A, when provided with flues B B′ B″ B‴, and the dampers E, in combination with the troughs G and the recipient H, when the latter is provided with the pipes 5, 6, and 7, in which are placed stop-cocks, and all the parts are constructed, arranged, and operate substantially as described, for the purpose set forth.

94,960.—AMOS A. HOTCHKISS, Hannibal, Mo., assignor to himself and WILLIAM J. QUALEY, same place.—*Brake-Shoe.*—September 21, 1869.

Claim.—1. The spring-catch *b*, working in a socket in the brake-shoe, for the purpose of holding the sole in place, constructed and operating substantially as herein described and shown.

2. The sole B, with its lugs, shoe A, spring *o*, and catch *b*, all arranged, constructed, and operating substantially as and for the purpose shown and specified.

94,961.—ANDREW B. HOWLAND, Titusville, Pa.—*Argand Lamp.*—September 21, 1869.

Claim.—As a new article of manufacture, a glass lamp, with a central glass tube, concentric with the burner, opening at the top, substantially as and for the purposes set forth.

94,962.—THOMAS F. KIFF, Havana, N. Y., assignor to ELIJAH A. SIMMONS, Chatsworth, Ill.—*Holdback for Carriages.*—September 21, 1869.

Claim.—The combination of the bracket A, lever B, spring D, and rivet C, substantially as herein shown and described, and for the purpose set forth.

94,963.—EDWIN KING, Dunkirk, N. Y.—*Field-Fence.*—September 21, 1869.

Claim.—The posts A B, clips E, in combination with the fence-bars *b*, secured by means of bolts, or their equivalent, as and for the purpose substantially as set forth.

94,964.—JOHN KINHART, Athens, Ill.—*Adjustable Harrow.*—September 21, 1869.

Claim.—1. An adjustable harrow, consisting of two parts A A′, united by a hinge and connected by a rod, E, when constructed and arranged substantially as and for the purpose shown and specified.

2. A double adjustable harrow, composed of the devices above specified, and the parts B B′, with the guiding-yoke D, all relatively arranged and constructed and operated substantially as and for the purpose shown and specified.

94,965.—JEREMIAH R. LITTLE, Jamaica Plains, Mass.—*Metallic Button-Hole or Clasp.*—September 21, 1869.

Claim.—1. The button-clasp, as made of elastic wire, or its equivalent, bent or curved so as to form an expansive eye or button-hole, *c*, to operate substantially as set forth.

2. A button-clasp, as made of elastic wire, or its equivalent, bent or curved so as to form an expansive eye or button-hole, *c*, to operate substantially as set forth, and a loop or eye, *a*, for connecting the article to a strap.

94,966.—CHARLES E. MASON, Elgin, Ill.—*Harvester.*—September 21, 1869.

Claim.—1. The combination and arrangement of the two cross-heads D, shafts *a*, and pitmen *b*, with the double sickle *c* and *d*, substantially as specified.

2. The lever *j*, provided with the heel *m* and projection *k*, in combination with the axle B, substantially as and for the purposes specified.

3. The projection or hub *k*, provided with the set-screw *l* and plug *o*, when constructed and operating substantially as set forth.

94,967.—OSCAR F. MAYHEW, Indianapolis, Ind.—*Drier.*—September 21, 1869.

Claim.—1. The heating-apparatus, composed of the chambers C, E, and F, and pipe D, case J K, and perforated floor M, all constructed and arranged substantially as and for the purpose set forth.

2. The drying-chamber, constructed with the double ends and top, constituting the vertiduct O, arranged for downward ventilation, when said vertiduct is connected by pipe I, with the heated chamber formed by surrounding the smoke-pipe G with a jacket, H, and combined with the heating-device specified in the first claim, all arranged and operating substantially as set forth.

94,968.—GEORGE W. MOORE, Worcester, Mass.—*Gauge for Turning Bevels.*—September 21, 1869.

Claim.—1. A blank bevel-gauging device, composed of the beam A, the projecting bolts or standards B, secured to and adjustable upon said beam, and the gauge-blades C, adjustable upon and secured to said bolts or standards, and having their outer ends either obliquely cut, for the purpose stated, or not, as preferred, the parts being arranged substantially as described, so that the gauging-blades can be applied to the center of the blank bevel, without necessitating the removal of the latter from the arbor on which it is mounted, as herein set forth.

2. The combination, with the slotted supporting beam A, of the slotted gauging-blades C C, bushings B′ B′, and bolts B B, together with means, substantially such as herein described, for tightening said bolts and holding said gauging-blades in the desired position, substantially as and for the purposes set forth.

94,969.—GEORGE M. MOWBRAY, Titusville, Pa.—*Method of Purifying Nitric Acid.*—September 21, 1869.

Claim.—The process of separating nitrous-acid gas from nitric acid or other acids that may be mixed therewith, substantially as described.

94,970.—JAMES PATTERSON, Hornellsville, N. Y.—*Railway-Frog.*—September 21, 1869.

Claim.—1. The part C^2, extending from the broad end of the frog-point, and matching to the adjacent rail-ends, so as to aid in supporting the same laterally and vertically, and to form an attachment for the holding-down lug C^4, as herein shown.

2. The webs C^3 C^3, extending along the base of the frog-point and beyond the end of the working portion thereof, and serving the double function, first, of aiding to support the wings, both vertically and laterally, and, second, of forming a junction for the lug C^5, as and for the purposes herein shown and described.

94,971.—WILLIAM H. PLUMB, New York, N. Y.—*Archimedean Screw Water-Elevator.*—September 21, 1869; antedated September 8, 1869.

Claim.—1. The tub *a*, attached to the lower end of the inclined screw-cylinder *k*, and revolving with the same, in combination with the spout *b* for discharging the water into said tub *a*, so as to keep the step or journal *m* free from water and gritty substances, as specified.

2. The wing *a′*, in combination with the tub *a* and screw-cylinder *k*, as and for the purposes specified.

3. The discharge-box *l*, formed with the rim *i*, and inclosing the upper end of the inclined screw-cylinder *k*, in combination with the flange *g* and pendent rim *h*, as and for the purposes specified.

4. The conical support 3, surrounding the screw-cylinder *k*, in combination with the conical support 2, upon the shaft of the pulley *f*, so as to steady and sustain the inclined screw-cylinder while being revolved, substantially as set forth.

94,972.—PETER PORTOIS, San Francisco, Cal.—*Chimney.*—September 21, 1869.

Claim.—The chimney, consisting of the galvanized iron or copper, or other metallic tubes or flues, surrounded by the concretion C, composed of clay and broken bricks, or their equivalents, the whole inclosed in the wooden box or frame-work B, all substantially in the manner and for the purposes set forth.

94,973.—ELTING POST, Boston, Mass.—*Steam-Engine Valve.*—September 21, 1869.

Claim.—The combination and arrangement of the auxiliary exhaust-passages *p p′ q q′*, and the main exhaust-passages *n n′* with the passages *m m′* and with the valve D, as constructed, with the chambers *b c* and the passages *d f*, and *f′*, and passages *e c′*, substantially as specified.

94,974.—DAVID H. PRIEST, Watertown, and JOHN R. HOWARD, Charlestown, Mass.—*Weighing-Scoop.*—September 21, 1869.

Claim.—The combination and arrangement of the handle B, the spring *c*, the rod *e*, and the platform *f*, with the scoop A, said handle B being rigidly fastened to the scoop, and the whole being constructed substantially as and for the purpose set forth.

94,975.—WILLIAM N. REED, Washington, D. C.—*Animal-Trap.*—September 21, 1869.

Claim.—The toothed spring-post lock, in combination with the mainspring, to prevent the premature opening of the trap, as herein described.

94,976.—T. S. REEVE, C. D. SMITH, and H. L. SWARTWOUT, Chicago, Ill.; said SMITH and REEVE assign their right to said SWARTWOUT.—*Sewing-Machine.*—September 21, 1869.

Claim.—1. The twisted needle G, constructed and arranged to operate substantially as and for the purpose set forth.

2. The combination of the needle G, needle-bar A, thread-bar C, and guide-loop F, as and for the purpose set forth.

94,977.—PETER C. RENIERS, Pittsburgh, Pa.—*Basket for Grinding Tile.*—September 21, 1869.

Claim.—1. A tile-grinding basket, consisting of a frame, *a*, two or more pressure-blocks, *d*, and to each a nut, *c'*, on a screw, *c*, and with or without an interposed spring, *e*, the parts specified being so arranged as to hold the tile or slabs vertically while their edges are being ground, substantially as described.

2. The inclined rests *m*, adjustable as described, in combination with the frame *a*, bars *m*, and adjusting and holding devices, for the purposes set forth.

94,978.—S. T. RUSSELL, Springfield, Ohio.—*Steam-Generator.*—September 21, 1869.

Claim.—The pump C, in combination with a single continuous coiled tube or pipe, steam-generator A, and the receiver B, constructed substantially as described and set forth.

94,979.—SAMUEL S. SIMMONS, Watsonville, Cal.—*Spring-Seat for Vehicles.*—September 21, 1869.

Claim.—Making grooves, for the reception of elastic disks, in the two parts A and B of the seat-supports, with longer and shorter flanges, *a* and *b*, on the opposite sides of the grooves, and so arranged that the long flanges of the supports of the two ends of the seat shall together limit or restrain its motion, either way, in the direction of its length, without other guides, substantially as shown and described.

94,980.—CORELLI W. SIMPSON, Bangor, Me.—*Needle-Threader.*—September 21, 1869.

Claim.—1. Combining, with a needle-threader, receptacles for retaining and holding ready the wax, in manner substantially as described and shown.

2. Combining, with a needle-threader, a needle-sharpener, substantially in manner as described and shown.

3. Combining, with a needle-threader, a cutting-blade, substantially in manner as and for the purposes specified.

4. Combining, with a needle-threader, a cleansing-point, *i*, substantially as and for the purposes set forth.

5. Combining a needle-threader, needle-sharpener, eye-cleaner, and thread-cutter, and thread-waxer, substantially as described and shown.

94,981.—ALFRED E. SMITH, Bronxville, N. Y.—*Carriage-Spring.*—September 21, 1869; antedated September 15, 1869.

Claim.—1. The combination of the bolt D, having a T or similar-shaped longitudinal slot in it, with the ribs of a skeleton, or leaves of a flat elliptic spring, as a means of locking their ends together, substantially as hereinbefore described.

2. The combination of upper and lower parallel rows of independent and opposing ribs or strips of metal A, with the clip B, and washers E, arranged and operating substantially as hereinbefore set forth.

94,982.—ANDREW R. SPANG and DANIEL F. SCHEAF, Dayton, Ohio.—*Gas-Machine.*—September 21, 1869.

Claim.—1. So arranging the heating-coil of a gas-machine that it will receive its requisite supply of fuel from the heavier part of the gasoline, substantially as herein set forth.

2. The arrangement of the pipe A and branch-pipe and burner B, substantially as and for the purposes herein set forth.

94,983.—ORRIN J. STICKLES, Canton, N. Y.—*Clothes-Pounder.*—September 21, 1869.

Claim.—The metallic ring D, in combination with the projections B, pounder A, and handle E, as shown and described.

94,984.—JAMES C. STRONG and LUTHER C. MCNEAL, Buffalo, N. Y.; said LUTHER C. MCNEAL assigns his right to said JAMES C. STRONG.—*Fire-Place.*—September 21, 1869.

Claim.—1. The fire-place A, with its sloping perforated back, in combination with the inclined corrugated top, constructed and arranged substantially as described.

2. In combination with the subject-matter of the foregoing claim, the air-inlet passages D and F and chamber E.

94,985.—C. W. STROUT and AMOS WILDER, Hallowell, Me.—*Machine for Painting Floor Oil-Cloths.*—September 21, 1869.

Claim.—The combination of the frame A and adjustable frame B, by means of sliding-bar K and pin L, or their equivalents, whereby a rocking motion is produced, in order to bring the frame B to any desired angle, that its relation to rack W may be changed at pleasure.

94,986.—ISAAC VAN HAGEN, Chicago, Ill.—*Stove-Pipe Damper.*—September 21, 1869.

Claim.—The sheet-metal disk H, provided with a recess inside of the holes I, to receive the knob G, in combination with the spur F, handle D, damper B, and damper-rod C, the latter being provided with a knob, E, to hold it in the pipe A, and the whole being constructed and arranged as and for the purpose set forth.

94,987.—JOHN H. WEEDEN, Waterbury, Conn., assignor for one-half to GEORGE C. THOMAS, same place.—*Bag and Shoe-String Fastener.*—September 21, 1869.

Claim.—1. The combination of the sleeve *s* and sliding wedge *w*, substantially as and for the purpose described.

2. The combination of the sleeve *s* and sliding wedge *w* with the hook *h* and shank *k*, substantially as and for the purpose described.

3. The combination of the sleeve *s* and sliding wedge *w* with the hook *h*, shank *k*, and string *n*, substantially as and for the purpose described.

94,988.—F. HANCOCK WILLIAMS, Washington, D. C.—*Dumping-Cart.*—September 21, 1869.

Claim.—1. The cam or wiper F, arm F″, and chain or cord *g*, when combined with the body of a cart, and arranged and operated substantially as and for the purpose set forth.

2. The cam F, arm F″, chains or cords *f e*, and rock-bar and lever H I, in combination with the tail-board of a dumping-cart, substantially as described and for the purpose set forth.

3. The hinged partition K, secured by the rod *i* and nut *k*, or their equivalent, when combined with the body of a dumping-cart, as specified.

94,989.—GEORGE ALEXANDER, Romney, Ind.—*Wagon-Tongue Support.*—September 21, 1869.

Claim.—The curved bars D, hinged or pivoted rod E, adjustable cross-head G, rubber-spring H, and collar I, whether rigid or adjustable, in combination with each other, and with the axle A, hounds B, and tongue C, substantially as herein shown and described, and for the purpose set forth.

94,990.—A. ARMANDO, New York, N. Y.—*Rocking-Carriage.*—September 21, 1869.

Claim.—1. The bolts *d* on the wheels C of a rocking-carriage, when provided to lock said wheels to the axle, substantially as herein shown and described.

2. The frame A, constructed as herein shown and described, crank-axle B, and wheels C, with the pivoted carriage-body I, springs F, steering-wheel D, and tiller G, all arranged and operating substantially as herein shown and described.

94,991.—JOHN M. BAKER, Marshfield, Ohio.—*Curry-Comb.*—September 21, 1869.

Claim.—1. A curry-comb, so constructed that the handle and comb-plate may be reversed in position relatively to each other, substantially as shown and described.

2. The combination of the comb-plate A, the two holes equally distant from the rivet D, the handle B having its front end beveled, and the set-screw E and hooked rivet D, all constructed, arranged, and operating as and for the purpose set forth.

94,992.—ROBERT J. BARR, Philadelphia, Pa.—*Velocipede.*—September 21, 1869.

Claim.—1. The arrangement of the revolving axle A, chain-wheel W, supports S and S′, shafts T and T¹, chain-wheels W¹ and W², cranks N, N¹, N², and N³, endless chains C and C′, bearings B and B′, and brace F, substantially as and for the purpose set forth.

2. The arrangement of the reach R, seat I, plate P, rim M, bolt E, shaft T^2, cranks G and G′, rods H and H′, straps J and J′, axle A′, lever L, clutch U, and rack D, as and for the purpose set forth.

94,993.—CHARLES J. BEASLEY, Petersburgh, Va., assignor to himself and TAPPEY, LUMSDEN & Co., same place.—*Cotton-Press.*—September 21, 1869.

Claim.—1. The combination, with reciprocating rods B and a follower, K, of a shaft, which turns in its bearings above the frame, to allow ingress to the cotton, in the manner described.

2. The combination of a lever, having a fixed fulcrum, with an arm, H, and movable grasper D, to pull the reciprocating rods B downward, in the manner described.

3. The combination, with the depressing-device mentioned in second clause, of a stationary guide and frictional detainer E, arranged as set forth.

94,994.—HENRY BESSEMER, London, England. —*Manufacture of Iron and Steel.*—September 21, 1869; patented in England, December 31, 1867.

Claim.—1. The treating molten crude or cast iron with nitrate of soda or other solid oxygen-yielding substance in a vessel mounted on trunnions, such vessel being provided at one end with a chamber or case, to contain the nitrate or other substance, and at the other end with a mouth, serving to receive and deliver the iron, and also as an exit for the gases passing away during the conversion, the arrangement being also such that the vessel may have the metal poured into it at the mouth without coming in contact with the nitrate or other substance, and may then be tipped so as to carry the nitrate or substance below the molten metal, and finally, when the conversion is complete, may be again tipped to pour out the metal at the mouth.

2. In treating molten crude or cast iron, the pouring the nitrate of soda or other fusible oxygen-yielding substance, in a melted state, into the case or chamber, in which it is used, allowing it to become solid in the said case or chamber, and form a mass, the surface only of which can be attacked by the molten iron.

3. In treating molten crude or cast iron, the closing the top of the case or chamber in which the nitrate or other substance is contained beneath the molten iron, with a perforated fire-tile, or a slab of refractory stone.

4. The treating molten crude or cast iron with nitrate of soda or other fusible oxygen-yielding substance, by forcing the liquid nitrate or substance in jets into and amongst the molten metal.

5. The forcing heated air or steam through the same tuyeres or orifices by which the liquid nitrate or other substance is forced into the metal, so as, before the nitrate is supplied, to heat the said tuyeres or orifices, and to exclude the metal from them both before and after the application of the liquid nitrate or substance.

6. In the treatment of molten crude or cast iron, and in the manufacture of malleable iron and steel, the use of apparatus, arranged as is represented in Figs. 2 and 3 of the drawings.

7. The treating molten crude or cast iron by carrying nitrate of soda or other oxygen-yielding substance, in a powdered state, into and amongst the said metal, by means of a jet or jets of carbonic-acid gas, or other gas incapable of yielding oxygen to the molten metal.

94,995.—HENRY BESSEMER, London, England. —*Manufacture of Iron and Steel.*—September 21, 1869; patented in England, March 21, 1868.

Claim.—The forcing or injecting downward into molten crude iron, or remelted pig or other carburet of iron, streams or jets of fused or liquid nitrate of soda, or nitrate of potash, or other fused or liquid substances which contain or are capable of evolving oxygen, when brought in contact with liquid iron.

94,996.—HENRY BESSEMER, London, England. —*Manufacture of Iron and Steel.*—September 21, 1869; patented in England, March 21, 1868.

Claim.—1. The treatment and purification of molten pig or other carburet of iron in a converting-vessel, by means of currents of air and steam, used separately or combined, and applied in such manner that the metal shall thereby be rendered semi-fluid, pasty, or granular, and become mechanically mixed with the slags or cinder formed in the process, and subsequently the admixture therewith, in the same vessel, of a further portion of molten pig or other carburet of iron, and the effecting the complete fusion of such metallic mixture into fluid malleable iron or steel, by forcing air in sufficient quantities upward through it.

2. The employment of nitrates of soda or nitrates of potash, to act on and purify molten pig or other carburet of iron in a converting-vessel, and the subsequent admixture, in the same vessel, of the iron so treated with another portion of pig or other carburet of iron, and the conversion of such mixture into fluid steel or malleable iron, by means of currents of air forced upward through the metal.

3. The construction and employment, in the manufacture of malleable iron and steel, of converting-vessels having two hearths or cavities, and separate tuyere-boxes, as herein described.

4. In the construction of furnaces suitable for fusing malleable iron or steel, on the hearths thereof, the use of hollow fire-bricks, arranged to form flues or passages, through which currents of air may be caused to pass, as described.

5. The fusion of malleable iron or steel, or other partially-decarbonized puddled or purified iron, on the sole or hearth of a gas or other reverberatory furnace, by adding to the materials to be fused a portion of pig-iron or carburet of iron, and forcing air into it, so as to cause heat to be generated, which heat, acting in conjunction with the heat of the furnace, and by joint action therewith, fuses the solid portions of the metal, and, blending the mixtures, converts the whole into fluid malleable iron or steel.

94,997.—HENRY BESSEMER, London, England. —*Manufacture of Iron and Steel.*—September 21, 1869; patented in England, March 31, 1868.

Claim.—1. The fusion of solid pieces of malleable iron or steel, or of iron which has been more or less decarbonized or rendered partially malleable, mixed with pig or other carburet of iron, in a molten or solid state, by means of a jet or jets of flame and heated products arising from the combustion of coke, coal, or other solid fuel, when such jet or jets of flame and products of combustion are made to enter among the said metal up through such portion of the metal as is molten or becomes molten during the operation.

2. The fusion of solid pieces of malleable iron or steel, or of iron which has been more or less decarbonized or rendered partially malleable, mixed with pig or other carburet of iron, in a molten or solid state, by means of a compound or combining jet or jets of gaseous or fluid fuel and air, or a jet or jets of flame and heated products arising from the combustion of gaseous or fluid fuel, when such jet or jets are made to enter among the said metal up through such portion of the metal as is molten or becomes molten during the operation.

3. The manufacture of cast steel or cast malleable iron, by fusing malleable iron or steel, or iron which has been more or less decarbonized, or rendered partially malleable, mixed with pig or other carburet of iron, by means of a jet or jets of flame, or of gaseous or fluid fuel and air, when such jets are made to enter among the metal up through such portion of the metal as is molten or becomes molten during the operation.

4. The treating and raising the temperature of molten iron or steel, by means of a jet or jets of flame, or of a compound or combining jet or jets of gaseous or fluid fuel and air, when such jet or jets are forced into the iron or steel at the bottom of the containing-vessel, and rise up through the molten metal.

5. The fusion of solid pieces of malleable iron or steel, or of iron which has been more or less decarbonized or rendered partially malleable, mixed with pig or other carburet of iron, by the use, in the same vessel, of a jet or jets of flame, or of a compound or combining jet or jets of gaseous or fluid fuel and air, and a jet or jets of air alone, or without fuel, such jet or jets of air alone, or without fuel, being applied

either before or after the flame or compound or combining jet or jets, or simultaneously therewith, and the several jets being made to enter among the metal up through such portion of the metal as is molten or becomes molten during the operation.

6. The melting of pig or other cast iron, by means of a jet or jets of flames and heated products of combustion, from solid fuel or gaseous fuel and atmospheric air, or by means of compound or combining jets of fluid or gaseous fuel and air, when such jets are forced up among the pig or other cast iron, so as to rise up through the molten portions thereof as the fusion progresses. Such gaseous matters so injected may have an oxidizing, carbonizing, or neutral flame, as desired.

7. The employment of a jet or jets of flame and heated products of combustion, arising from solid, fluid, or gaseous fuel and atmospheric air, or of compound or combining jets of fluid or gaseous fuel and air, when such jets are forced upward through fluid iron or steel, contained in a gas or other reverberatory furnace.

8. The employment of melting or converting vessels, mounted on axes, and having a fire or fuel-chamber attached thereto, for the purposes hereinbefore described.

9. The employment of melting or converting vessels, having a combustion-chamber or tuyere-box, arranged for the combustion or conveyance into the metal of liquid or gaseous combustible matters and atmospheric air, as hereinbefore described.

10. The fusion of pig-iron or other carburet of iron, or of malleable iron or steel, or iron in a more or less decarbonized or malleable state, in furnaces or apparatus in which flame and products of combustion are passed beneath an inverted fire-bridge or partition, and thence upward among the pieces of metal to be fused, or upward and among the particles of any fluid metal arising from the fusion of such pieces of metal, or of any molten pig-iron that may be employed in addition thereto.

94,998.—A. Brinckmann, New York, N. Y.—*Self-Closing Faucet.*—September 21, 1869.

Claim.—The faucet, constructed as described, with the spring *a*, shoulder *b*, adjustable screw-cap C, notched plate *c*, provided with a screw-thread upon its edge, the set-screw *e*, and weighted handle E, all arranged substantially as described, for the purpose specified.

94,999.—James Cate, Rumsey, Ky.—*Wool-Picking Machine.*—September 21, 1869.

Claim.—The bed or concave of a wool-picker, made in two or more sections, which are constructed and arranged substantially as described, so that they are susceptible of a longitudinal motion for cleaning the bars.

95,000.—R. W. Churchill, Bridgeport, Conn.—*Lamp-Shade.*—September 21, 1869.

Claim.—The improved expanding lamp-shade, above described, formed by the combination of hexagonal wire support A, hinged adjustable shade-sections B, tongue C, and semi-elliptical springs D, all being arranged with respect to each other, and fitted together, substantially as shown and described.

95,001.—George Conrou, New York, N. Y.—*Water-Closet.*—September 21, 1869; antedated September 8, 1869.

Claim.—1. The arrangement of the bowl, reservoir, and valve-chamber, substantially as shown, and for the purposes specified.

2. The arrangement of the pipe D, branch D′, globe-valve I, plunger G, arm *f′*, pivot *f*, float F, bowl A, and reservoir B, substantially as and for the purposes specified.

3. The arrangement of the waste-pipes K, L, and O, substantially as and for the purpose described.

95,002.—William A. Coventry, Paterson, N. J.—*Self-Winding Line-Machine.*—September 21, 1869.

Claim.—The combination and arrangement of the back case C with the socket-neck D, pivot base A, spring E, gear-wheels F and T, pinions I and K, and pulley G, constructed and operating substantially as shown and described, and for the purposes set forth.

95,003.—Joseph P. Curry, Vincennes, Ind., assignor to S. S. Burnet, same place.—*Extension-Table.*—September 21, 1869.

Claim.—The combination of the slide G H with the cords C C and D, and shaft A, substantially as and for the purpose specified.

95,004.—Charles H. Davis, Syracuse, N. Y.—*Box-Loop for Carriage-Tops.*—September 21, 1869.

Claim.—The box-loop A, when formed as described, with the lugs or spurs H upon its edges, and applied to a carriage-top, by passing said lugs through the same, and through the metal plate C, and then bending them down upon the surface of said plate, substantially as described, for the purpose specified.

95,005.—William J. Dawson, Brookfield, Mo.—*Revolving Plow.*—September 21, 1869.

Claim.—1. An improved revolving plow, formed by the combination of the plow or shovel-plates K, arms J, shaft I, pivoted adjustable frame F, horizontal frame C, axle B, gear-wheels L M, and wheels A, with each other, and arranged to operate as herein shown and described, and for the purpose set forth.

2. The combination of the long bolts G and pivoted lever H with the adjustable frame F and stationary frame C, substantially as herein shown and described, and for the purpose set forth.

95,006.—John Dennis, Oswego, N. Y.—*Hay and Grain Elevator.*—September 21, 1869.

Claim.—1. A machine, whose mode of operation is substantially as shown and described.

2. The combination of the bars E, ropes or chains F, shaft or drum G, gear-wheel J, gear-wheel K, pulley N, band O, and pulley P, substantially as herein shown and described, and for the purpose set forth.

3. The combination of the sliding frame or plate M, brake Q, and lever R, with the gear-wheel J, substantially as herein shown and described, and for the purpose set forth.

95,007.—M. L. Drake, Rockford, Ill.—*Hames-Fastener.*—September 21, 1869.

Claim.—The device described, consisting of the parts A B, lever-hook C, and button a^2, the whole being constructed as and for the purpose set forth.

95,008.—Charles L. Drury, Rockingham, Vt.—*Horse-Power.*—September 21, 1869.

Claim.—1. The inclined shaft B, carrying the wheel C, in combination with the steps *a* and sliding-guide D, substantially as herein shown and described.

2. The swinging bars *e*, carrying the wheels *d*, and arranged in combination with the shaft E and rollers *c*, substantially as and for the purpose herein shown and described.

3. The frame A, having the bars *h h*, the gate *j*, and the whiffletree *i*, or its equivalent, hung to it, in combination with the inclined shaft B and wheel C, substantially as specified.

95,009.—Lewis C. England, Philadelphia, Pa.—*Method of Heating Tan-Bark Leaches by Steam.*—September 21, 1869.

Claim.—1. Large tube or hollow log, *a*, placed over or near the top of the leach-vats.

2. Discharge-pipes *b b*, with stop-cocks *c c*, through which the condensed or partially condensed steam is admitted into the desired leach, or their equivalents.

3. Conveying the condensed or partially condensed steam through the large tube *a*, and discharge-pipes *b b*, as herein set forth.

95,010.—William P. Ewing, Fancy Hill, Va.—*Horse Hay-Rake.*—September 21, 1869.

Claim.—1. The handles G, rod I, supports H, stop-bars L, rod N, springs Q, and stops M, and rake-head, all combined and arranged substantially as specified.

2. The combination, with the handles, of the treadle K, when all are arranged as specified.

3. The combination, with the arms, of the supports H and hook S, substantially as specified.

4. The arrangement of the arms G, supports H, treadle, spring-stops R, and rake-head, substantially as specified.

95,011.—T. W. Fay, Camden, N. J.—*Stump-Extractor.*—September 21, 1869.

Claim.—1. A machine, whose mode of operation is substantially as shown and described.

2. The combination, with grappling-device and holder F, of a vertically-reciprocating and non-rotating screw D, and actuating, revolving nut E, all co-operating to lift the stump in a perpendicular line, and without rotation of the carrying-screw.

3. The combination of revolving nut E and recessed plate B of the friction-balls *d d*, freely moving around with said plate, for the purpose of producing rolling instead of sliding friction, thereby greatly lessening the resistance to be overcome by the power applied.

4. The combination, with the legs A, shoes *c*, and plate B, of double eye-bolts affixed thereto, for the purpose of forming an expanding frame, which will accommodate itself to any unevenness of ground, in the manner set forth.

95,012.—E. J. Fenn, Medina, Ohio.—*Horse Hay-Fork.*—September 21, 1869.

Claim.—1. The lever F, in combination with the connecting-plates I and slotted plate H, arranged and operating substantially as and for the purposes described.

2. The combination of the lever F, the bar B, slotted plate H, the connecting-plates I, and the tines C D, with the shaft A, constructed, arranged, and operating substantially as and for the purposes described.

95,013.—David Flanery, New Orleans, La.—*Telegraph-Apparatus.*—September 21, 1869.

Claim.—The combination, in a portable box or case, C D, of a local battery, relay, magnet, key, and sounder, when arranged for inclosing the same, and to form a writing-case when open, substantially as specified.

95,014.—Joseph J. B. Frey, New York, N. Y.—*Self-Closing Telegraph-Key.*—September 21, 1869.

Claim.—The key A, constructed as described, with the convolute spring B, in combination with the platina point *b*, and insulated point *a*, all arranged and operating as described, for the purpose specified.

95,015.—James Galloway, Chetopah, Kansas.—*Coffee-Roaster.*—September 21, 1869.

Claim.—The browning and obtaining the extract of coffee by subjecting the raw coffee-berry to heat when immersed in water, substantially in the manner described.

95,016.—F. A. Geisler, Bristol, R. I.—*Thrashing-Machine.*—September 21, 1869.

Claim.—1. The vibrating-bar O, and the method of shaking the sieves, and screen, and the straw-apron, substantially as herein shown and described, for the purposes set forth.

2. The bars S S, in combination with a thrashing-machine, substantially as and for the purposes described.

3. Giving motion to the sieves of a thrashing-machine by means of a crank on the driving-shaft, substantially as set forth.

95,017.—John D. Grey, Pittsburgh, Pa., assignor to himself and John Lippincott, same place.—*Manufacture of Galvanized Iron.*—September 21, 1869.

Claim.—1. The improved process herein described, of preparing iron for galvanizing, substantially in the manner and for the purpose specified.

2. As an improved article of manufacture, galvanized iron, when prepared in the manner herein specified.

95,018.—Charles C. Harris, La Fayette, Ill.—*Windmill*—September 21, 1869.

Claim.—1. The buckets D, journaled in the sides A B, as described, and provided with the studs F G, for limiting their axial motion, substantially as specified.

2. The axial projections H of the buckets, shaped as described, and combined with the weighted and pivoted arms I, having the segmental arms M, all substantially as specified.

3. The combination of the shaft Q, the inclines R, shaft C, and roller S, all arranged substantially as specified.

95,019.—M. C. Hawkins, Edinborough, Pa.—*Sewing-Machine.*—September 21, 1869.

Claim.—1. In combination with the needle-bar F and take-up bar G, the shaft C, crank-pin K, pitman E, crank *g*, crank-wheels *e* and *i*, and arm *b*, all arranged and operating together, as set forth and shown.

2. The combination of the needle-bar F, having the inclined slot *n*, with the take-up bar G, which has the angular slot *n*, as described, and with the crank-pin K, on the shaft C, all arranged and operating substantially as herein shown and described.

95,020.—William E. Hill, Renovo, Pa.—*Water-Wheel.*—September 21, 1869.

Claim.—1. The buckets, composed of the fixed and movable parts, and the latter provided with springs, all substantially as specified.

2. The gates *f g*, arranged and combined with the wheel, having buckets arranged substantially as herein specified.

3. In combination with the wheel and scroll, the V-grooves lined with India rubber, and arranged with the V-projections of the wheel, as specified.

95,021.—Thomas Holmes, Williamsburgh, N. Y.—*Revolving Dough-Mixer.*—September 21, 1869.

Claim.—1. The loose diagonal bar or knife I, in combination with the revolving cylindrical vessel B, substantially as herein shown and described, and for the purpose set forth.

2. The combination of the buttons G (one or more) and catches or open keepers H with the frame A and revolving cylindrical vessel B, provided with the adjustable partition J and bar I, all constructed and arranged as herein shown and described, and for the purpose set forth.

95,022.—G. H. Kamnacher, Columbus, Ohio.—*Hoisting-Apparatus.*—September 21, 1869.

Claim.—The combination, with a chain-wheel, or chain and carriages, all arranged as described, of the ropes H H, attached to the bottom of the said carriages, and operated alternately in the manner set forth.

95,023.—William Kegg, Lasellsville, N. Y.—*Operating Churn-Dasher.*—September 21, 1869.

Claim.—The stand D, with the circle K, in combination with the vibrating fulcrum G and the lever C, constructed, arranged, and operating substantially as and for the purposes set forth.

95,024.—Jeremiah J. King, New York, N. Y.—*Door-Knob.*—September 21, 1869.

Claim.—The knob formed with a central cavity, E, and inclined channels F F, into which the prongs D D of the socket A are made to enter by pressure on the socket, without the aid of separate wedges, as herein shown and described, for the purpose specified.

95,025.—J. M. W. Kitchen, Brooklyn, N. Y.—*Fruit-Jar.*—September 21, 1869.

Claim.—The recessed cover B, having the parallel rings b^3 b^4 between its inclined upper and its straight lower portions, in combination with the inclined mouth a^1, vertical necks a^2, continuous lugs a^3, rubber packing C, and spring-fastening, all arranged as herein shown and described, for the purpose specified.

95,026.—Josiah E. Kline, Wheeling, West Va.—*Railroad-Car Heater.*—September 21, 1869.

Claim.—1. The pivoted grate D, suspended within the furnace of a car-heater, to remain in a perpendicular position during the motion of the car, substantially as herein shown and described.

2. The semi-oval grate D, when arranged in the furnace of a railroad-car heater, substantially as herein shown and described, to better retain the fuel by its turned-up sides.

3. The safe B, arranged under a car-floor, to surround the furnace C, substantially as herein shown and described, and to form an air-chamber, *b*, as specified.

4. The door F, of the fire-safe, when provided with a funnel, G, which has doors at both ends, as set forth.

5. The feed-apparatus, consisting of the tube H, sliding plate *o*, box I, and cover *p*, all combined and operating substantially as herein shown and described.

6. The apertures *l l*, formed in the sides of the fire-safe B, substantially as and for the purpose herein shown and described.

7. The combination of chamber B, having a single shut-off valve, with the tube J, provided with numerous valves, all as shown and described.

8. The water-reservoir M, when arranged above a car-heater, substantially as and for the purpose herein shown and described.

9. The chamber K, formed above the furnace, to conduct the products of combustion from the furnace into the chimney, substantially as herein shown and described.

95,027. — HENRY LONG, Kittanning, Pa. — *Lamp.*—September 21, 1869.

Claim.—The oil-reservoir A, water-reservoir D, passage E, elevated dividing-wall G, and nozzle F, all combined and arranged substantially as specified.

95,028.—JOHN LONGMAID, New York, N. Y.—*Process for Preserving Eggs.*—September 21, 1869.

Claim.—The above-described process for preserving eggs, substantially as set forth.

95,029.—SAMUEL D. LUCAS, Winterpock, Va.—*Churn.*—September 21, 1869.

Claim.—The construction and arrangement of the churns P, bench A, bed B, posts C and J, bar K, guide L, connecting-rod H, fly-wheel G, small gear-wheel F, large gear-wheel D, crank E, the lever I, sockets M, and dasher-rods R, as herein shown and described.

95,030. — R. D. MCDONALD, Jersey City, N. J.—*Fire-Place.*—September 21, 1869.

Claim.—The combination and arrangement of the flues B D E, and openings A C, in a fire-place heater, made of cast or sheet-metal, substantially as herein shown and described, and for the purpose set forth.

95,031.—JOHN MCLEISH, Chicago, Ill.—*Corn-Harvester.*—September 21, 1869.

Claim.—1. The stalk-grasping device H, constructed and operating in connection with the lifters F, slotted platform *a'*, cutters G, and endless apron I, substantially as herein shown and described, and for the purpose set forth.

2. The combination of the endless apron I with the grasping-device H, rollers J K, frame A, and rollers S T, substantially as herein shown and described, and for the purpose set forth.

3. The combination of the guides Q or equivalent with the endless apron I, frame A, and grasping-device H, substantially as herein shown and described, and for the purpose set forth.

4. The combination of the rollers S T with the frame A, endless apron I, and hopper or spout X, substantially as herein shown and described, and for the purpose set forth.

5. The spout or hopper X, operated from the carrier by means of a crank and pitman, in combination with the rollers S T, frame A, and carrier Y Z A', substantially as herein shown and described, and for the purpose set forth.

95,032.—C. C. MERRIMAN, Brighton, N. Y.—*Traction-Engine.*—September 21, 1869.

Claim.—1. The feet, as described, when arranged in any manner to operate in combination with one or more driving-wheels, for the purpose of producing traction.

2. The feet C, when combined with the wheel A, and actuated by any kind of a spring or elastic material, substantially as specified.

3. The method of increasing or diminishing the traction by altering the line of draught, substantially as described.

4. The arrangement of the draught-chain L, relatively to the rear end of the engine, for increasing the pressure on the driving-wheels, substantially as specified.

95,033.—HENRY MILLARD, New York, N. Y.—*Machine for Grinding Mower and Reaper Knives.*—September 21, 1869.

Claim.—The slotted branched adjustable arm J, roller-bar and arms L M, and holder-frame N O, arranged in relation to each other, and to the grind-stone C and frame A, substantially as herein shown and described.

95,034.—FRANKLIN H. MORRILL, Philadelphia, Pa.—*Machine for Winding Bobbins.*—September 21, 1869.

Claim. — The arrangement of the heart-shaped gear H G, arm A, and pinions N and N^1, for the purpose of giving a variable rotary motion to the bobbins B, substantially in the manner and for the purpose specified.

95,035.—ISAAC J. MORROW, Everton, Ind.—*Cultivator.*—September 21, 1869.

Claim.—1. The adjustable standard G, so constructed that the plow H may always work at a higher level than the plow C of the rear standard B, in combination with the beam A and rear standard B, substantially as herein shown and described, and for the purpose set forth.

2. The adjustable pivoted lever K and fender J, in combination with the adjustable standard G, beam A, and rear standard B, substantially as herein shown and described, and for the purpose set forth.

95,036. — JEAN MARIE MUTERSE and HENRI GUIBERT DE VALORY, Guérande, France. — *Composition for Use in Fire-Extinguishers.*—September 21, 1869.

Claim.— 1. The within-described fire-extinguishing compound, in the form of a dry powder, adapted for ready diffusion and quick solution in water, composed of the combination of ingredients and in about the proportions herein set forth.

2. The cartridge, herein described, composed of the within-described antiphlogistic powder, or its equivalent.

95,037.—HENRY H. NICHOLS, Keeseville, N. Y., assignor to P. S. WHITCOMB, same place.—*Machine for Binding Wood.*—September 21, 1869.

Claim.—1. The combination of the bent piece d^2, spring d^1, rope E, and treadle *e*, as and for the purpose described.

2. The combination of the parts described, consisting of the beams A A^1, carriage B^1, screw-shaft B, pulleys *b* b^1 b^2, platform C, arms C^2, strip D', form C^1, and cross-head H, arranged and operated substantially as described.

95,038.—AUGUST NITTINGER, Jr., Philadelphia, Pa.—*Meat-Cutting Machine.*—September 21, 1869.

Claim.—The arrangement of the upright U, triangular-shaped guides G, G^1, G^2, and G^3, spring-catches K, K^1, and K^2, and plate L, substantially in the manner and for the purpose specified.

95,039.—ALFRED PARAF, New York, N. Y., assignor to EDWARD SABINE RENWICK, trustee.—*Extract of Madder for Dyeing and Printing.*—September 21, 1869.

Claim.—The before-described compound extract of madder, being a composition of the coloring-matter of madder and the compound of the alkaline base and volatile acid, substantially as before described, the same being a new article of manufacture.

95,040.—ALFRED PARAF, New York, N. Y., assignor to EDWARD SABINE RENWICK, trustee.—*Process for Printing Colors on Textile Materials.*—September 21, 1869.

Claim.—The process, hereinbefore described, of

printing colors upon a textile material, by printing it with the coloring-material, applying a compound of an alkali and volatile acid to it, and steaming it, substantially as before described.

95,041.—D. C. PIERCE, Washington, D. C.—*Railway Rail-Chair.*—September 21, 1869; antedated September 8, 1869.

Claim.—1. A railway-chair, having inner convex surfaces, and chocks with corresponding concavities, all constructed and operating together substantially as described, and for the purposes set forth.

2. In combination with such chair, a bearing-plate, applied and operating substantially as described, and for the purposes set forth.

3. In like combination, elastic packing applied and operating substantially as described, and for the purposes set forth.

95,042.—J. H. PRESTON, Jefferson City, Mo.—*Machine for Bending Wood.*—September 21, 1869.

Claim.—The combination, with the foundation A, of the block B, form H, adjustable angle-irons I, bending-lever C, flanged roller G, adjusting-straps E, band N, rod P, lever O, rack-bar R, key M, and clamp L, when constructed and arranged substantially as herein shown and described, for the purpose specified.

95,043.—PERRY PRETTYMAN, Paradise Spring Farm, Oregon.—*Railway-Car Truck.*—September 21, 1869.

Claim.—1. The arrangement of the wheels D upon axles attached to each side of the car-truck, in the position and for the purpose specified.

2. The arrangement of the guard-rollers G upon the truck, at the points specified, for the purpose of limiting the lateral movement of the car.

3. The combination, with the auxiliary wheels D, of the chute H, substantially as and for the purpose described.

95,044.—JOHN J. RAY and JAMES R. YOUNG, New Orleans, La.—*Cultivating-Hoe.*—September 21, 1869.

Claim.—The blades A, connected and supported by posts, braces, and transverse beams, in the angular arrangement described, and provided with weed-cutters and wheels, all substantially as specified.

95,045.—CHARLES A. H. RICE and A. J. VAN DEREN, Central City, Colorado Territory.—*Guide for Stamp-Mills.*—September 21, 1869.

Claim.—An adjustable guide for stamp-mills, consisting of the sectional support A, boxes B, screws D, gibs E, and wooden guides F, the screws having the shoulders *c* and the concave lower ends, when all these parts are arranged together as herein shown and described, for operation as set forth.

95,046.—A. C. RODGERS, Fort Washington, Pa., assignor to himself and LEWIS SHAFFER, same place.—*Railroad-Station Indicator.*—September 21, 1869.

Claim.—The wheels C, having two sets of teeth *a b* on its two faces, and notches *c* in its edge, in combination with the levers F H H′, bars I I′ and J J′, levers E E′, and rod D, all arranged and operating as described, for the purpose specified.

95,047.—JOHN H. RYLAND, Baltimore, Md.—*Straw-Cutter.*—September 21, 1869.

Claim.—The combination and arrangement of the gear-wheel C, the knife-wheel D, the curved knives K, the arm I, and the roller R, when constructed as and for the purpose set forth.

95,048.—WILLIAM H. SCHWALBE, New York, N. Y.—*Sofa and Bedstead.*—September 21, 1869.

Claim.—1. The frame K, made in two parts, hinged to each other, and to the parts C of the sofa and bed, in combination with the hinged parts A C of the said sofa and bed, substantially as herein shown and described, and for the purposes set forth.

2. The hinged frame E, in combination with hinged and folding parts C A, and with the vertical back H, whether said back be made solid with or separate from the partition or wall of the room, substantially as herein shown and described, and for the purpose set forth.

3. The hinges F and G, constructed as described, in combination with the hinged frame E and grooved back H, substantially as and for the purpose set forth.

95,049.—LEWIS SCOTT, Sinking Spring, Ohio.—*Pan and Furnace for Evaporating.*—September 21, 1869; antedated September 10, 1869.

Claim.—The furnace A, constructed as shown and described, with the pans B, C, and J′, in combination therewith, when the same are constructed and arranged as herein set forth, for the purposes specified.

95,050.—JOSHUA SEIP and HENRY J. SCHMEYER, Macungie, Pa.—*Combined Threshing-Machine and Separator.*—September 21, 1869.

Claim.—1. In combination with a threshing-machine, the separating-floor D, formed of the aprons F and G, with the strips H, constructed, arranged, and operating substantially as herein shown and described, for the purposes set forth.

2. The arrangement of the slide *o* beneath the cylinder of the cleaner, to regulate the outflow of air and diminish the blast, in the manner specified.

95,051.—GEORGE V. SHEFFIELD and JAMES F. COBURN, Hopkinton, Mass.—*Railway.*—September 21, 1869.

Claim.—1. The angle-rail B, supplementary rail C, and the wheel D, in combination, substantially as and for the purposes described.

2. The combination of the angle-rail B and the tie A, arranged as described, and for the purposes set forth.

95,052.—JOSEPH H. SMITH and ELIJAH G. PECKHAM, Toledo, Ohio.—*Saw.*—September 21, 1869.

Claim.—The saw-blade, which combines in its construction pairs of teeth, separated below their cutting or sharpening-bevel, and an intermediate single clearing-tooth, which has an angle, *i*, on each of its sides, substantially as described.

95,053.—LUTHER L. SMITH, Brooklyn, N. Y.—*Nickel-Faced Type.*—September 21, 1869.

Claim.—1. The electro-plating of metallic type and of electrotype or stereotype-plates made from movable type with nickel, and thus producing an improved type or plate.

2. A metallic type, electro-plated with nickel, or a stereotype-plate made from movable type and electro-plated with nickel, as a new article of manufacture.

95,054.—W. SMITH, San Francisco, Cal.—*Slow-Closing Valve for Water-Closets.*—September 21, 1869.

Claim.—1. A valve for water-closets, having its suspending-chambers partitioned off from, and having no communication with the water-passages, substantially as shown and described and for the purposes specified.

2. In combination with the plunger H, the chamber N, gland *r*, and tube D, the spindles C and G, valve *f*, packing or valve-face *q*, and packing *e*, arranged substantially as shown and described, for the purposes set forth.

95,055.—LOUIS TRIPLETT, Columbia, Ky.—*Side-Saddle Tree.*—September 21, 1869.

Claim.—1. The improved sheet-metal blanks A B, constructed, shaped, and adapted as herein described, for employment in the construction of side-saddle trees, substantially as specified.

2. Side-saddle trees, composed of the sheet-metal parts A B and pads N, when shaped, connected, and arranged substantially as specified.

95,056.—HERMANN VON HOLTEN, Hoboken, N. J.—*Coffee-Pot.*—September 21, 1869.

Claim.—An improved coffee-pot formed by the combination of the partition B, tube C, rod F, vessel D, shield H, filter I, and skeleton-plate J, whether the flannel filter be used or not, with each other and with the vessel A, substantially as herein shown and described, and for the purposes set forth.

95,057.—ADDISON G. WATERHOUSE, San Francisco, Cal.—*Rotary Mechanical Power.*—September 21, 1869.

Claim.—1. In combination with the inner circulating cog-wheel, actuated by an eccentric or crank, as described, and the outer revolviug cog-wheel, a sliding ring or cross-arm, having independent sliding bearings on opposite sides, and sliding bearings at right angles therewith, for the circulating wheel or plate, substantially as herein described.

2. In combinatiou with the circulating eog-wheel, the circulating plate, with an adjustable clutch to attach and detach said plato to and from the circulating wheel, substantially as and for the purpose set forth.

3. In combination with the circulating and revolving cog-wheels and sliding riug or cross-arm, the revolving shaft B, the hollow stationary shaft C, and the stationary disk H, with sliding bearings thereon for the ring or cross-arm, substantially as described.

95,058.—JOSEPH P. WHITE, Savannah, Ga.—*Combination-Loek.*—September 21, 1869.

Claim.—1. The tumblers D, auxiliary tumblers E, spring-dogs D^2, and bolt A, arranged substantially as specified.

2. The combination of the tumblers D, auxiliary tumblers E, and eccentric disks F, substantially as specified.

95,059.—JOSEPH P. WHITE, Savannah, Ga.—*Safe.*—September 21, 1869.

Claim.—A safe made with strong interior shell B, and thin exterior shell A, arranged with a space between them, filled with explosive powder, and a rough substance, which, by frictional contact with a burglar's tool, will ignite the powder, substantially as described.

95,060.—JACOB WINKELHOUSE, New York, N. Y.—*Bit-Holder.*—September 21, 1869.

Claim.—The socket A and bit-shank F, each provided with a corresponding recess, as shown and described, with a notched bolt B, and spring D, all arranged and operating as a bit-holding device, in the manner set forth.

95,061.—HIRAM WOLF, Saint Louis, Mo., assignor to himself and ABRAM D. WOLF, same place.—*Mining-Pump.*—September 21, 1869.

Claim.—1. The arrangement, above each other, of any desired number of sections, as herein described, each section containing one reservoir and two pumps, the discharge-orifices of which pumps are level with or above the top part of the reservoir, substantially as and for the purpose set forth.

2. The pumps I, when pivoted in such a manner that they may be brought from a vertical to a horizontal position, substantially as and for the purposes set forth.

3. The combination of the pumps I, flanges O P, nut R, and screws S *s*, substantially as and for the purposes set forth.

4. The combination of the pumps I, reservoirs J, and pipes K and L, substantially as and for the purposes set forth.

95,062.—A. H. WOOTTON, Bartow, Ga.—*Combined Corn and Cotton Planter.*—September 21, 1869.

Claim.—1. Forming a recess in the thickened side of the hopper B, to receive the upper part of the drive-wheel C, substantially as herein shown and described, and for the purpose set forth.

2. The combination and arrangement of the axle D, drive-wheel C, and dropping-wheel F *f'*, or H, with the slotted beam A and hopper B *b'*, substantially as herein shown and described, and for the purpose set forth.

3. The combination and arrangement of the slotted beam A, hopper B *b'*, axle D, drive-wheel C, dropping-wheel F *f'*, or H, furrowing-plow I J K, scraper R, covering-plow L M N, and handles O P Q, with each other, substantially as herein shown and described, and for the purpose set forth.

95,063.—WESLEY A. WRIGHT, Liberty, Va., assignor to himself and WILLIAM C. TROWBRIDGE, same place.—*Compound for Restoring Damaged Tobaceo.*—September 21, 1869.

Claim.—The herein-described composition for restoring damaged tobacco, consisting of the ingredients substantially as specified.

95,064.—JOHN ALEXANDER, Green Point, N. Y.—*Coating Iron for the Fronts of Buildings, and for other Purposes.*—September 21, 1869.

Claim.—The within-described imitation brownstone, having a foundation of iron and a coating of stony particles bedded iu a layer of semi-fluid material, and permanently affixed to the iron by baking, all substantially as and for the purposes herein set forth.

95,065.—DAVID L. ALLEN, Williamsport, Pa.—*Expanding-Mandrel.*—September 21, 1869.

Claim.—The screw-nut C, cono B, and chucks A, constructed and combined as herein described, in combination with the solid mandrel, recessed at each end, and with screw-thread extremities E, substantially as set forth.

95,066.—EDWIN ALLEN, Norwich, Conn.—*Hearse.*—September 21, 1869.

Claim.—1. The rollers F, in combination with the floor of a hearse or other vehicle, to operate in the manner substantially as and for the purpose herein described.

2. The arrangement of the rollers F, axles C C, and wedge-formed slide *d*, substantially as and for the purpose herein set forth.

95,067.—GEORGE ARMSTRONG, Elmira, Ill.—*Marker for Seeding-Machines.*—September 21, 1869.

Claim.—1. A marker-pole, A, which is provided on one end with a compound pivot-joint, and on the opposite or free end with a marking-runner, substantially as described.

2. The rod C, applied to the reversible marking-runner B, and provided with a draught-ring, D, substantially as described.

3. The reversible or curved marking-runner B, so constructed and applied, as herein set forth, as to admit of its being drawn by either one of its ends.

95,068.—JAMES ARMSTRONG, Jr., Elmira, Ill.—*Corn-Planter.*—September 21, 1869.

Claim.—1. The wings *o o*, upon the oscillating valve *i*, substantially as described.

2. The valve *i*, with or without wings *o*, when provided with a notch or recess, *e*, substantially as described.

3. A double-channeled or twin seed-distributing tube, G, open at its back, and in combination with a winged valve, J, or the equivalent thereof, substantially as described.

4. The laterally-adjustable dropper's seat F', substantially as described.

95,069.—JAMES B. AYER, Elizabeth, N. J.—*Motive-Power for Sewing and other Machines.*—September 21, 1869; antedatod September 10, 1869.

Claim.—1. The noiseless power for driving sewing-machines, consisting of the combination, with the spring E, of a series of large and small friction-wheels with straight peripheries, arranged above and below each other on shafts C O P, to operate substantially as and for the purpose set forth.

2. In a sewing-machine, for the purpose of transmitting and accelerating motion, one or more series of large and small friction-wheels *h* H *i* I, with straight peripheries, which are covered with India-rubber, or its equivalent, and arranged to operate substantially as herein described.

3. The vertically-oblong bearings *a a'*, of the shaft C, in the pieces A A', substantially as and for the purposes set forth.

95,070.—J. L. BARTLETT and J. B. L. BARTLETT, North Jay, Me.—*Horse-Rake Teeth.*—September 21, 1869.

Claim.—The rake-tooth herein described, having coil A, bent portions B and C, lateral brace E, and hooks D, constructed and arranged as specified.

95,071.—GIACINTO BARTOLOMEI, Chicago, Ill.—*Composition for Roofing and Paving.*—September 21, 1869.

Claim.—The manufacture or preparation of a compound, herein described, of the ingredients, in the proportions and for the purposes set forth.

95,072.—CHARLES BETTINGER, South Dansville, N. Y.—*Device for Preventing Cattle from Jumping.*—September 21, 1869.

Claim.—1. The device for the purpose described, consisting of the suspended frame A, springs E F, inwardly-projecting pins H, outwardly-projecting pins G, and blinds J, arranged together for the purpose described.

2. The spring E, spring F, pins H H, and frame A, constructed and operated substantially as described.

3. The combination, with the suspended frame A, of the spring E at its upper end, and the spring F at its lower end, operating in relation to each other, substantially as described.

4. The blinds J, as applied to the suspended frame, for the purpose as described and set forth.

95,073.—HIRAM BLUNT and ROBERT C. BLUNT, Bath, Ill., by HIRAM BLUNT, for himself, and HIRAM BLUNT and MARY JANE BLUNT, executors of ROBERT C. BLUNT, deceased.—*Wheat-Drill.*—September 21, 1869.

Claim.—1. The seed-box A and feed-boxes E E′, when arranged with slides *e* and the feed-screws *f*, substantially as set forth.

2. The hinged support given to the driver upon the roller-frame, and the foot-rest connected with the seed-box frame when combined to be operated substantially as set forth.

95,074.—THOMAS W. BRACHER, New York, N. Y.—*Hat-Ventilator.*—September 21, 1869.

Claim.—A hat-ventilator, consisting of the metal pieces *c b*, arranged vertically, one above the other, and braided together, to form a fabricated connection between them, through which the stitches pass, to connect the same to the hat, substantially as described.

95,075.—S. R. BRADLEY, New York, N. Y.—*Manufacture of White-Lead.*—September 21, 1869.

Claim.—The process, substantially as described, of treating the pulp with oil, to effect the separation of the water by the act of combining the oil with the pigment, set forth.

95,076.—JAMES L. BRANDER, Boston, Mass.—*Table and Bedstead.*—September 21, 1869.

Claim.—1. A combined table and bedstead, in which the upright head and foot boards serve as the top and leaves of the table, substantially as described.

2. The combination, with the center-piece *a b*, of the hinged box-frames *c d*, and the pieces *i m*, as shown and described.

95,077.—JOHN BROUGHTON, New York, N. Y.—*Faucet.*—September 21, 1869.

Claim.—The valve D, formed with a lower disk, *e*, in combination with the enlarged chamber *f*, in or to the body of the faucet, and the shaft E, with its eccentric lifting-bar *g*, flanges *h*, and packing-rings *i*, essentially as shown and described.

95,078.—A. L. BROUSE and URIAS WEIDMAN, Lake, Ohio.—*Sausage-Stuffer.*—September 21, 1869.

Claim.—1. The stuffer-box B, provided with the extended side C, having the slots O and P cut therein, substantially as and for the purpose specified.

2. The plunger D F, provided with the arm E, with cross-pin *a*, when used in combination with the stuffer-box B, provided with the extended side C, having the slots O and P cut therein, substantially as and for the purpose specified.

3. The combination of the platform A, stuffer-box B, with extended side C, having slots O and P cut therein; plunger D F with arm E and cross-pin *a*, pressure-lever H, connecting-link I, and standard K, the several parts being arranged substantially as and for the purpose specified.

4. The discharge-tube N, provided with the groove *e* and collar *g*, when used in combination with the clamp M and platform A, substantially as and for the purpose specified.

5. The flexible valve G on the plunger F, provided with hole *s*, opening downward, as shown, substantially as and for the purpose specified.

95,079.—DAVID F. BROWN, Champaign, Ill., and ELIJAH C. BROWN, Crawfordsville, Ind.—*Shield for Corn-Plows.*—September 21, 1869.

Claim.—1. The bar A, with rod E and teeth B B, when constructed as described, and used substantially in the manner and for the purposes set forth.

2. The arrangement of the bar C, screw-rod D, and taps or nuts *a b*, substantially as and for the purposes herein set forth.

3. The combination of the bar A, teeth B B, bar C, screw-rod D, taps *a b*, and rod E, all substantially as and for the purposes herein set forth.

95,080.—S. B. BUSHFIELD, Jr., Parkersburgh, West Va.—*Folding-Umbrella.*—September 21, 1869.

Claim.—The combination and arrangement of the handle A, bisected ribs B B, braces G G, cylinder D, springs H K, and metal cap M, with its annular recess or opening N, all substantially as and for the purposes herein set forth.

95,081.—Canceled.

95,082.—ROBERT CARSON, Meredosia, Ill.—*Gang-Plow.*—September 21, 1869.

Claim.—The plows A, connected by the bent adjustable bars *b*, in combination with the intermediate plows C, when arranged as herein described.

95,083.—ISAAC A. CLARK, Marion, N. Y.—*Gate.*—September 21, 1869.

Claim.—The combination of the hinged bar or brace *d* with the rollers *b b*, in the manner described, and for the purpose specified.

95,084.—W. A. CLARK, Boston, Mass.—*Billiard and Bagatelle Table.*—September 21, 1869.

Claim.—1. A table-top, constructed in sections, in combination with a suitable frame-work or under-support, when the connection between the two is such that they can be relatively adjusted, by sliding the one upon the other, substantially as described, for the purpose specified.

2. A table-top, made in sections, and each section so constructed as, when opened, to leave a raised bearing around its interior surface, substantially as described, for the purpose set forth.

3. A table-top, constructed in sections, with one hinged to the under supporting-frame, when the latter is arranged for adjustment under the former, or table-top, substantially as and for the purpose described.

4. A table-top, constructed in sections, with their interior surface provided with sockets for the reception of plugs, substantially as and for the purpose described.

5. The plugs R, for the sockets of the table, when so constructed as to be susceptible of adjustment in length, substantially as described, and for the purpose specified.

6. The plugs R, when made smooth at one end and concave at the other, substantially as and for the purpose described.

7. The two-part plug, secured together for adjustment in length, substantially as and for the purpose set forth.

95,085.—JAMES S. COEN, Attica, Ind.—*Corn-Planter.*—September 21, 1869.

Claim.—1. In combination with the shaft I and boxes H H, the cut-off *h*, of rubber or other pliable material, substantially as set forth.

2. The arrangement of the bar D, runners E E, and connecting-bar F, substantially as shown and described.

3. The spring-rod *f*, constructed as described, and for the purposes set forth.

4. The arrangement, with the bar D and axle A, of the bars M M and platform N, substantially as and for the purposes herein set forth.

5. The rod O, with hook *m*, and slide P and hook *n*, constructed as described, and for the purposes set forth.

95,086.—William W. Colley and William H. Deitrick, Philadelphia, Pa. — *Signal-Holder for Railway-Cars.*—September 21, 1869.

Claim.—1. The slotted bars C and E, jointed at G, and containing the claws I I, and the expanding and contracting band L L, whether made expansible or not, as arranged and combined, in the manner and for the purposes substantially as herein described and set forth.

2. The claw I, and spiral or other spring J, and set-screw K, arranged and combined and moving in the slot H, and on the surface of the bar C, in the manner and for the purposes substantially as herein described and set forth.

3. The expanding and contracting band L L, in combination with the jointed bar or rod M and joint *a*, each being constructed, arranged, and operated in the manner and for the purposes substantially as herein described and set forth.

95,087.—Henry Cordtz, Chicago, Ill.—*Heel for Boots and Shoes.*—September 21, 1869.

Claim.—The metallic heel D, provided with the projections *b*, for securing the leather lifts C, when constructed and arranged substantially as herein shown and described.

95,088.—Charles A. Cowell, Newark, N. J. —*Pump.*—September 21, 1869; antedated September 13, 1869.

Claim.—The arrangement of the hollow shaft *a* and its valve *b*, interior working-rod *c*, and its valve *d*, with the cylinder *f*, stock A, with exhaust *g*, and lever, with pitman on each side of the fulcrum *e*, for alternately operating the rods *a c*, all substantially as herein set forth.

95,089.—L. H. Cowley, Silver Creek, N. Y.— *Device for Collecting Petroleum from the Surface of Water-Courses.*—September 21, 1869.

Claim.—The sunken reservoir D D′, divided by partition and dam B, and arranged in the bed of a creek, so as to operate substantially as set forth.

95,090.—Waldo P. Craig, Milton, Ky.—*Levee.* —September 21, 1869.

Claim.—1. The combined arrangement of guide-piles A A, walings B B, and sheet-piling C, substantially as herein described, the sheet-piling being flanked on either side by the guide-piles and walings, and all constructed and applied substantially in the manner and for the purposes set forth.

2. The piles H, attached to the lower side of hinged or jointed sections G, so as to be driven in the act of lowering said sections, as and for the purpose specified.

3. The combination, with the subject of the last preceding clause, of the sheet-piling C′, and concrete or rubble-filling J, as and for the purpose set forth.

95,091.—Luther O. Crocker, Braintree, Mass. —*Ticket-Cutter.*—September 21, 1869.

Claim.—1. The combination of the stripper *k* with the die-jaws, substantially in manner and so as to operate therewith, and with the dies, as specified, the stripper under such a combination having its inner end jointed to the lower jaw, and its other end supported against one or more springs, and provided with stops, as set forth.

2. The wire *f*, as made, with the finger-bend or recess *g*.

3. The arrangement and combination of the wire *f*, and the finger-recess thereof, with the spring *h*, and the two jaw-levers provided with cutting-dies, or the same, and a stripper, as explained.

4. In combination with the stripper-plate *k*, the inclination of the cutting-face of the die *i*, longitudinally or laterally, or in both directions, relatively to the lower face of the said stripper-plate, so that the stripper-plate, when in the act of clearing a card from the die, may effect the same in a gradual manner from end to end or side to side, or in both ways, of the cut made by the die.

95,092.—George Crompton, Worcester, Mass. —*Loom.*—September 21, 1869.

Claim.—1. In combination with a box-indicating pattern-mechanism at one end of the loom, and with two tappet-wheels and their ratchets at the same end of the loom, and loose upon the tappet-shaft, the two other ratchet-wheels on the same end of the shaft, and the two tappet-wheels at the opposite end of the shaft, one of said last ratchet-wheels and its tappet being fast to the shaft, and the other of said ratchet-wheels being loose upon the shaft, and imparting movement to its tappet-wheel through the auxiliary shaft geared to said last-named ratchet-wheel and tappet-wheel, substantially as shown and described.

2. In combination with the shipper-lever f^2 and rocker-shaft i^2, the arm l^2, depending from such lever, and operated by the finger n^2, on the end of the lever o^2, substantially as described.

95,093.—Phineas D. Crosby, Danbury, Conn. —*Thill-Coupling.* — September 21, 1869; antedated September 11, 1869.

Claim.—A carriage-shackle, in which the bolt D is constructed with a groove or notch, *a*, in combination with the packing *d* and screw E, the whole constructed, arranged, and operating substantially in the manner specified.

95,094.—Ernest Dams, Newark, N. J.—*Fulling-Mill.*—September 21, 1869; antedated September 17, 1869.

Claim.—1. The arrangement, within the trough B, of removable frames E, for carrying the rollers *a*, substantially as and for the purpose herein set forth.

2. The steam-chamber *m*, covered by a perforated plate, *n*, arranged with relation to and in combination with the rolls *a*, substantially as shown and described.

95,095.—Constantine De Bodisco, Saint Petersburg, Russia, and Pedro Diez De Rivera, Madrid, Spain.—*Artificial Sliding-Hill.*—September 21, 1869.

Claim.—1. The structure A, consisting of a tower, B, an inclined plane at the side of the latter, a platform at the top and a staircase leading from the ground to the said platform, the whole being constructed and arranged substantially as and for the purposes described.

2. The combination, with the structure above described, of an elevating-apparatus, for the purposes set forth, together with the endless belt or strap F, having the hooks *e*, arranged and operating in the tower B, as specified.

95,096.—Avery Denison, Woodville, Ohio, assignor to himself and William Keil, same place.— *Apparatus for Making Butter.*—September 21, 1869.

Claim.—1. The arrangement of the two parts of the cylinder B, projections *a a a*, governors or clamps *b b b*, upper orifice *c*′, lower orifice *c*′, opening *d*, the grooves or furrows in its inner surface, plane surface around the opening *d*, when constructed and operating substantially as herein set forth.

2. The arrangement of the cylindrical wheel C, plane surface of the same, *c*′, around the opening or core made to receive the shaft *g*, with the arrangement of the grooves or furrows, as shown in the drawings, when constructed and operating substantially as herein described.

3. The geared wheel D, gudgeon *e*, pin *e*′, handle *f*, pinion-wheel E, shaft *g*, box H, when constructed, arranged, and operating substantially as herein specified.

4. The combination and use of the table A, cylinder B, cylindrical wheel C, geared wheel D, pinion-wheel E, box H, with their attachments, as herein specified, when constructed, arranged, and operating substantially as and for the purposes mentioned.

95,097.—Charles W. Dwelle, Saint Louis, Mo.—*Manufacture of White-Lead.*— September 21, 1869.

Claim.—1. The arrangement of a fan, or other suction and forcing device, in connection with the separating-reels and hoppers, or similar devices, and the combination therewith of bag receivers or cisterns, substantially as set forth.

2. The cistern G, its pan G′, and ring *g*, when ar-

ranged and operating substantially as and for the purposes set forth.

3. The hopper B^1, its trough and conveyer, combined with the spout H, rollers I, spout K, and second separator-device L M M′, when acting substantially as and for the purposes set forth.

95,098.—W. P. Elam, Petersburgh, Ill.—*Carriage-Wheel.*—September 21, 1869.

Claim.—A box for wagon-hubs, consisting of the case C, having the flanges *c* and the plate I, both having an annular groove, *e*, on their inner face, with the journaled rollers *a* mounted therein, all constructed and arranged as set forth.

95,099.—David Eynon, Richmond, Va.—*Pile for Railroad-Chairs.*—September 21, 1869.

Claim.—A pile composed of rails arranged with their most prominent parts in contact, as set forth.

95,100.—H. H. Flick, Lavansville, Pa.—*Bee-Hive.*—September 21, 1869; antedated September 8, 1869.

Claim.—1. The double honey-frame F, when constructed and arranged as herein shown and described.

2. The combination of the moth-trap E with the base B, having the door B′, when arranged in the manner and for the purpose herein shown and described.

95,101.—William T. Freligh, Jersey City, N. J.—*Hinge for Blinds.*—September 21, 1869.

Claim.—The hinged hook *k*, sustained by the pin *o* upon the eye *g*, but allowed to drop and take the catch *l*, when the notch *s* comes below said pin *o*, as set forth.

95,102.—Alonzo French, Philadelphia, Pa.—*Instrument for Tightening and Loosening Screw-Caps of Fruit-Jars.*—September 21, 1869.

Claim.—The within-described instrument, consisting of two handled jaws, hinged together, and having in their inner sides a screw-thread, adapted to that of a screw-ring for fruit-jars, all substantially as set forth.

95,103.—Russel Frisbie, Cromwell, Conn., assignor to J. and E. Stephens and Company, same place.—*Hinge for Boxes.*—September 21, 1869.

Claim.—The sheet-metal cars C C, united in or by the process of casting, as described, with the one section or portion of the box, for attachment of the two sections or portions, consisting of a body, A, and lid, B, by bending said ears so as to receive, through holes *b b* formed in them, hinge-pins or studs *a a* provided on the other section or portion, substantially as specified.

95,104.—Charles E. Goodhue, Malden, Mass.—*Urn-Stand.*—September 21, 1869.

Claim.—A stand for coffee-pots and similar vessels, consisting of the frame A and the tilting bottom D, provided with the ledge *d*, pivoted eccentrically, and arranged to rest on the bar or stop C, substantially as shown and described.

95,105.—George C. Grut, Milwaukee, Wis.—*Spring-Bed Bottom.*—September 21, 1869.

Claim.—The arrangement and combination of the slotted braces C, rubber springs D, spiral springs supporting the bed, and the bed-pieces A and B, substantially as and for the purposes set forth.

95,106.—I. A. Hammer, Newton, Iowa.—*Bake-Oven.*—September 21, 1869.

Claim.—1. The dampers L, placed in the bottom of the ovens, so that the heat can always be readily controlled, and so as to cause a current of heated air upward, substantially as set forth.

2. The dampers L, in combination with the flue-dampers O, when so arranged that the heat from the oven can be turned up the flue, and *vice versa*, substantially as shown.

3. The pulleys K, V, and W, endless rope or chain X, shaft Z, and chain H, when used to lower and raise the shelves, substantially as specified.

4. The adjustable slide S, provided with a hook, T, or its equivalent, when used substantially as set forth.

5. The depression or recess M, forced in the back of the furnace, for the purpose of receiving an ash-pan, substantially as described.

6. The chambers C, shelves G, dampers L and O, furnace D, chains H and X, pulleys K, W, and V, slide S, hook T, and flue N, when all are combined to form an oven, substantially as specified.

95,107.—John Hazeltine, Melrose, and Charles L. Wheeler, Cambridge, Mass.; said Hazeltine assigns his half to said Wheeler.—*Elastic Cushion for Horses' Feet.*—September 21, 1869.

Claim.—1. The combination, with an elastic or flexible rubber cushion, constructed substantially in the form as shown and described, of a metal spring, E, when the said spring is applied to the cushion in the manner, by the means, and for the purpose specified.

2. The combination, with an elastic or flexible rubber cushion, formed, constructed, and provided with a spring, as described, of catches *g*, when said catches are applied to the cushion in the manner, by the means, and for the purpose specified.

95,108.—C. V. Hemenway, New London, Ohio, assignor to himself and A. A. Powers, same place.—*Brick-Machine.*—September 21, 1869.

Claim.—1. The adjustable side E′ and spring G′, as arranged in combination with the press-box E, in the manner as and for the purpose set forth.

2. The rock-shaft P, arms O Q, and spring D′, when constructed and arranged to operate by means of the sweep N, in the manner as described, and for the purpose specified.

95,109.—Alexander W. Hendrick, Batavia, Ill.—*Coffin.*—September 21, 1869.

Claim.—The within-described coffin-lid, composed of two transverse sections, and secured in place by means of the spring-catches and dowel-pins, substantially as and for the purpose specified.

95,110.—Coleman Hicks, Lancaster, Ky.—*Sash-Holder.*—September 21, 1869.

Claim.—1. The clutch-nut E, with its toothed flange and square shaft, constructed substantially as described, in combination with the pinion *d* and spring *k*, as a device for locking and unlocking a window-sash, all constructed and arranged substantially as and for the purpose described.

2. The flanged cylinder D, the pinion *d*, the rack *e*, spring *k*, clutch-nut E, all constructed and arranged substantially as described, when in combination, as parts of a sash-lock, as above set forth.

95,111.—Louis Hillebrand, Philadelphia, Pa.—*Trunk-Hasp.*—September 21, 1869.

Claim.—A hasp constructed of spring-metal, substantially as described.

95,112.—William J. Horstmann, Philadelphia, Pa.—*Let-Off and Tension-Device for Spools of Braiding-Machines.*—September 21, 1869.

Claim.—The arrangement of the pawl G on the ratchet-bobbin spindle B, in respect to the guide E, having a slot, *e*, opening *y*, and weight F, as described.

95,113.—Thomas Houghton, Philadelphia, Pa.—*Machine for Forming Screw-Threads on Sheet-Metal Caps.*—September 21, 1869.

Claim.—1. The mode of swaging threads on sheet-metal ware, from the inside thereof, substantially as described.

2. The rollers D, chuck C, and sectional die E D″, combined and operating substantially as described.

3. The blank-holder F, in combination with the die, substantially as described.

4. The hollow mandrel B, with screw-threads *b′* and groove *b*, and the wheel B′, operating together substantially as described.

5. The tripping-mechanism for the lever M, consisting of the collar K′, pin L′, lever H′, and spring H″, or equivalent, substantially as described.

6. The forked lever K, in combination with the collar K′ and lever M, substantially as and for the purpose described.

7. The means for throwing the pulleys R R′ in and out of gear, consisting of the conical pulley or clutch Q, the hollow shaft O, and the sliding rod N′, substantially as described.

8. The eccentric bushings for the rods bearing the swaging-rollers D, substantially as and for the purpose described.

9. The sectional die, consisting of the stationary part D′, and the hinged part E′, in combination with the advancing and receding chuck C, substantially as described.

10. The combination of the various parts, substantially as described, for the purposes specified.

95,114. — BERNARD HUGHES and DANIEL HUGHES, Rochester, N. Y.—*Dredging-Apparatus.*—September 21, 1869.

Claim.—1. In combination with a dredging-apparatus, a detachable lighter, F, constructed and arranged substantially as described.

2. Providing the lighter F with one or more turn-tables, for the purposes set forth.

3. Providing the outer turn-table I′ with a suitable elevating-device, as and for the purposes specified.

4. The elevating-tramway *n*, arranged substantially as described, in combination with the lighter F, for the purpose set forth.

95,115.—ROBERT HUTTON, Williamsburgh, N. Y., assignor to himself and JOSEPH T. G. MIDDLETON, same place.—*Attachment for Lamp-Burners.*—September 21, 1869.

Claim.—A lamp-burner attachment composed of the part B, with arms *b b*, all made in one piece, as a new article of manufacture, when it forms no part of the burner proper, but is separately applicable, as and for the purpose herein described.

95,116.—JOHN C. JEWETT and JOHN VOGT, Buffalo, N. Y.; said VOGT assigns his right to said JEWETT.—*Bird-Cage.*—September 21, 1869.

Claim.—1. The sliding guard *e*, arranged and operating with the hook *b*, provided with stem *b′*, substantially as hereinbefore set forth.

2. In combination therewith, the ledge and notch *i* and *i′*, arranged and operating as set forth.

95,117.—CLARK JILLSON, Worcester, Mass.—*Machine for Turning Tapers.*—September 21, 1869.

Claim.—1. The combination, with the tool-operating screw and pendent arm *h*, of a guide-screw, substantially as and for the purposes set forth.

2. The combination, with the pendent arm, of two adjustable guide-screws *m m*, arranged relatively, to each other, as shown in the drawings, and for the purposes set forth.

95,118.—EDWARD M. JUDD, Wolcottville, Conn.—*Twine-Holder.*—September 21, 1869.

Claim.—The twine-holder, formed of two half shells, to the bottom one of which the downward-projecting stud *e* is connected, in combination with the socket *f*, substantially as and for the purposes set forth.

95,119.—HENRY LIGHTY, Attica, Ind.—*Washing-Machine.*—September 21, 1869.

Claim.—The combination of the tub A, movable bottom B, beater D, rollers G G, arms H H, rods L L, cross-shaft N, and standards M M, all substantially as and for the purposes specified.

95,120.—MARTIN H. LINEBACK, Greenfield, Ind.—*Clothes-Line Fastener.*—September 21, 1869.

Claim.—The table or flange A, 1, 2, 3, 4, and the dog B, 5, 6, 7, 8, constructed as shown and described, adapted for attachment to a post or other support, by means of screws C C D, and to operate in combination, substantially as and for the purpose set forth.

95,121.—H. C. LOCKE, Somerville, Tenn.—*Seed-Planter.*—September 21, 1869.

Claim.—1. The standard D, constructed as shown, in combination with the separate shovel or plow C, as described.

2. The combination and arrangement of the colter E, curved backward, as described, the shovel C, and standard D.

3. The wedge L, constructed as described, in combination with the standard D and shovel C, as and for the purpose described.

4. The combination and arrangement, in a seed-planter, of the seed-hopper F, with its dropping-device, the standard D, shovel C, and colter E.

95,122.—NATHAN C. LOMBARD, Cambridge, as signor to JAMES A. WOODBURY, Winchester, Mass.—*Railway-Car and Driving-Wheel.*—September 21, 1869.

Claim.—1. The combination of a double-beveled tire with a bevel-faced wheel and binding ring, substantially as described.

2. The combination of a double-beveled tire with a wheel-body and a binding-ring, which are recessed, as and for the purpose described.

3. The combination of an inner double-beveled flanged tire with a bevel-faced fastening or binding-ring, and with the body of the wheel, when the tread portion of said tire is over or around said binding-ring, and the flanged portion over or around the solid portion of the body of the wheel, substantially as described, and for the purpose set forth.

95,123.—CLARK LOSEE, Perrysburgh, N. Y.—*Fence-Post.*—September 21, 1869.

Claim.—An iron fence-post, consisting of the uprights A A, braces *c c*, and connecting base-rod *b*, bent from a single rod and secured in the ground, substantially as shown and described.

95,124. — PATRICK J. MANNING, Troy, Ill.—*Churn.*—September 21, 1869.

Claim.—The rod D, having spiral grooves, combined with the rollers c^1 c^2, the socket D^1, dasher-rod E, and dashers *e*, and actuated by the lever F, substantially as and for the purposes set forth.

95,125.—JAMES MARTIN, Chesterfield, Ohio.—*Sled.*—September 21, 1869.

Claim.—The socket-joint *c*, in combination with the bar A and brace B, when constructed and operating substantially as and for the purposes specified.

95,126.—G. MCDONALD, Athens, Ga.—*Dentists Impression-Cup.*—September 21, 1869.

Claim.—1. In an impression-cup, the employment of a movable flap, for the purpose described.

2. In an impression-cup, the employment of movable sides, for the purpose described.

3. The flap C, having the spring-bar or ratchet *c*, when combined with the base A, as and for the purpose described.

4. The cup described, consisting substantially of the base A, sides B, and flap C, the whole being combined and arranged as and for the purpose described.

95,127.—GEORGE E. MORE, Royalton, Wis.—*Shingle-Binder.*—September 21, 1869.

Claim.—A shingle-binding machine, consisting of the frame A, with the end-pieces L and H, the stakes K, and levers B C, provided with the cross-pieces *a b*, and operated by the rock-shaft G, and curved hooks *e f*, all constructed and arranged to operate substantially as described.

95,128. — CHARLES S. MOSELEY, Elgin, Ill.—*Watch.*—September 21, 1869.

Claim.—1. The combination of the bridge C, provided with the lip *c* and the strips *a*, when arranged substantially as described.

2. Providing the plates A B with grooves *b b′*, substantially as and for the purposes specified.

3. The metallic strips *a a*, in combination with the plates A B, having the grooves *b b′*, substantially as and for the purposes specified.

95,129.—ARTHUR O. NEAL, Hyde Park, Mass.—*Mortising-Machine.*—September 21, 1869.

Claim.—The double-lip screw-auger *a*, in combination with cutters *d d′* and circular saws *e e′*, when constructed in the manner and for the purpose substantially as described.

95,130.—CHARLES HORACE NOYES, Brooklyn, N. Y.—*Childs' Round Comb.*—September 21, 1869.

Claim.—The combination of the head-band, side

comb, and detachable fastening, substantially as before set forth.

95,131.—CHARLES PARKER, Meriden, Conn.—*Cracker and Grinding Mill.*—September 21, 1869.

Claim.—In a box-mill, in which the runners F and I are set the one above the other, forming the stud *a* upon one and projections *d d* upon the other, so that while the lower is driven by the turning of the upper, the upper forms the bearing for and holds the lower in its central position, substantially as set forth.

95,132.—R. F. PATTON, Quincy, Ohio.—*Corn-Drill.*—September 21, 1869.

Claim.—1. The slide N, provided with an opening, *n*, made adjustable by means of a block, *n'*, and screw O, in combination with the box M and hopper L, substantially as described, and for the purpose set forth.

2. The means employed for securing to the frame, and rendering adjustable laterally, the outside hoppers and dropping-devices, consisting of the lugs *m'*, *m'*, and *m''*, secured to and projecting downward from the box M, and the spring *f* secured to the lug *m''*, and provided with a pin, *f'*, which engages with a series of holes in the lower side of the strip F, substantially as shown and specified.

3. The means employed for securing to the frame, and rendering adjustable thereon laterally, the drill R and spout P, consisting of the bolt *r*, provided with the ring-shaped head, and working through the slot *e'*, in the bar E, substantially as and for the purpose specified.

4. The means employed for connecting the drills and dropping-devices with the main frame, and rendering them adjustable vertically, consisting of the guides D, secured to the rear ends of the bars C and C', the sleeves or thimbles *e*, attached to the strip E, the shaft I, journaled within the standards H, and provided with the arms *i* and connected to the adjustable frame by means of the links *g*, the lever K, the notched bar *k*, and the spring *k'*, substantially as herein shown and described.

5. The means employed for operating the dropping-devices, consisting of the shaft S, provided with the arms T, *s*, and *s'*, the pin *s''*, the rods U, the bar V, the band *b*, provided with the studs *b'*, the clutch *c*, and the curved spring *c'*, all constructed and arranged substantially as and for the purpose specified.

6. The marker Y, operated by means of the lever Z and cam-arm *z*, substantially as shown, and for the purpose set forth.

95,133.—CHARLES PEILLARD, France.—*Horse-shoe.*—September 21, 1869.

Claim.—The horseshoe herein described, consisting of the two parts *a b* of equal length, the one having a circular projection, *a'*, fitting a corresponding recess in the other, thereby forming a joint at the toe, as and for the purpose set forth.

95,134.—G. W. PERRY, Wilmington, Del.—*Car-Window.*—September 21, 1869.

Claim.—1. The adjustable sash F, sliding in guides between the outer and inner sashes of a car-window, substantially as and for the purpose described.

2. The bent strips *b*, arranged between the outer and inner sashes of a car-window, and guiding an intermediate sash F, substantially as specified.

95,135.—HENRY PETRIE, Chicago, Ill.—*Coffee and Spice Mill.*—September 21, 1869.

Claim.—1. The hoppers A A A, cast in one piece, substantially as herein described.

2. In combination with the hoppers A A A, when cast in one piece, the bed-plate B and grinding-cylinders C, substantially as herein described.

3. The box E and drawers F, in combination with the bed-plate B and grinding-cylinders C, substantially as herein described.

95,136.—JOEL F. PLUM, near Greencastle, Pa.—*Grain-Separator.*—September 21, 1869.

Claim.—The combination of the stacker C, apron D, pulleys *a*, *a*, *b*, *d*, *c*, *f*, and *h*, and their connecting-cords, with the separator F, all substantially as and for the purposes set forth.

95,137.—ABIATHER F. POTTER, San Francisco, Cal.—*Projectile.*—September 21, 1869.

Claim.—1. A projectile, provided with wings B B and an elastic cushion, E, between the head and the explosive charge, substantially as described.

2. The sectional elastic packing E, arranged between the wings in front of the explosive charge, and behind the head of the projectile, substantially as described.

95,138.—J. C. PRICE, New Philadelphia, Ohio.—*Sash-Rope Pulley.*—September 21, 1869.

Claim.—The bisected sash-box B, provided with the alternate projections *b* and *e*, on the upper and lower surfaces, and supporting the pulley A, all substantially as and for the purposes set forth.

95,139.—WILSON S. PURDEY, Butler, Ind.—*Corn-Planter.*—September 21, 1869.

Claim.—The shaft D, combined with the levers *c e e*, and slides *a' a'*, substantially as and for the purpose set forth.

95,140.—EZRA RHODES, Erie, Pa.—*Machine for Sawing Pellies.*—September 21, 1869.

Claim.—1. The saws D E, in combination with the adjustable mandrel and oscillating carriage, substantially as described, for the purpose specified.

2. The recessed collars F, G, and H, constructed as described, and applied to the saws D E, in the manner set forth for the purpose specified.

3. The arrangement of the carriage K L, adjustable carriage-support M N, shaft P, and worm-gears Q R, all operated substantially as specified.

95,141.—HENRY R. ROBBINS, Baltimore, Md.—*Fly-Brush.*—September 21, 1869.

Claim.—1. The combination, with the main drum *a*, of the coiled spring *a'*, and the cord and weight *b b'*, arranged and operating as set forth.

2. The winding-mechanism, consisting of the slotted pawl *e*, ratchet *a''*, and spiral spring *h*, all arranged to operate in the manner explained.

95,142.—JAMES H. ROBINSON, Selma, Ala.—*Corn and Cotton Cultivator.*—September 21, 1869.

Claim.—1. Attaching draught-pole by means of two pivots, substantially for the purposes described.

2. The construction and combination of draught-pole K, rock-shaft B, and hand-operating lever J, so as to form a joint, through which universal leverage may be conducted, by means of a single hand-operating lever, for the purposes substantially as described.

3. Mode of arranging the plows in front and rear of rods D and *c*, and having plates of different length, and projecting to the front and rear, the rods passing through them for the purposes described.

4. Rock-shaft B, arms C, rods D and *c*, arranged to counteract each other under pressure, and to move the plows up and down at a uniform angle, for the purposes described.

5. The treadles H, and their application to rod *c*, for the purposes described.

6. The combination of the rock-shaft B, arms C, rod D, plates E E', standards F F', rod *c*, treadle H, and hand-lever J, substantially as and for the purpose described.

7. So arranging the plows as that they will operate in the ground parallel with or nearly opposite to the axis of the draught-pole and hand-operating lever, for the purpose described.

8. Mode of securing standards by means of hooks and cross-chains, for the purposes described.

95,143.—JOHN B. ROSE and JEROM B. BROWN, New London, Wis.—*Upset, Punch, and Shears.*—September 21, 1869.

Claim.—The improved machine herein described, consisting of beams A A', cross-brace B, projections *a c g*, adjustable plate *d*, keys *b h e*, levers T and H', and shears N, all arranged and operating substantially in the manner and for the purpose described.

95,144.—JOHN B. ROSE and JEROM B. BROWN, New London, Wis.—*Upset, Punch, and Shears.*—September 21, 1869.

Claim.—The movable upset G, conneeted, by the plate H, to the lever B, and traveling with the same, substantially as herein set forth.

95,145.—GEORGE ROTH, New York, N. Y., assignor to HEINEMANN AND SILBERMANN, same plaee.—*Loom for Making Fringe.*—September 21, 1869.

Claim.—1. The hook *i*, mounted upon the lay *b* and slide *m*, in eombination with the meehanism, substantially as speeified, for revolving said hook, and stopping the same in position for the bullion to be unhooked, substantially as set forth.

2. The finger *r*, mounted upon the bent lever 29, and aetuated by the movement of the lay, substantially as set forth.

95,146.—D. C. SAGE, Middletown, Conn.—*Shutter-Hook.*—September 21, 1869.

Claim.—1. The eonstruetion of the hook-bearing B of the inside shutter-fastening herein deseribed with a serew-threaded stem b^2, and with a eentral orifice for the reeeption of the pivot of the hook, substantially as herein described and shown.

2. The eombination of the hook A with the shutter-hook bearing B, which has a serew-threaded stem, by means of a pivot which forms a part of the hook, and enters through the faee of the plate *b*, and is riveted, substantially in the manner shown and deseribed.

3. The inside shutter-fastening herein deseribed, consisting, first, of the bearing B, with serew-threaded stem b^2 and plate *b*; second, of the hook A with the rivet-pivot b^1; and, third, the button C, with serew-threaded stem c^2, nut-bearings c^3, neek c^1, and head *c*, all for use together, substantially in the manner and for the purpose deseribed.

95,147.—CHARLES W. SANBORN, Morrill, Me.—*Horse-Rake.*—September 21, 1869.

Claim.—1. The rollers or pulleys around whieh the teeth are wound, substantially as deseribed.

2. The rollers N, teeth-bars A, and lifting-lever C, the whole arranged and operating as deseribed.

95,148.—JOHN G. SCHILLER, New Middletown, Ohio.—*Sawing-Machine.*—September 21, 1869.

Claim.—The hereinbefore-deseribed deviee, when eonstructed and operated substantially as and for the purpose speeified.

95,149.—ANDREAS SCHOPP, Belleville, Ill.—*Seed-Feeding Device for Grain-Drills, &c.*—September 21, 1869.

Claim.—The distributing-wheel C, arranged with continuous groove, and combined with the regulating-slide D, substantially as set forth.

95,150.—CHRISTIAN SHARPS, Philadelphia, Pa.—*Propeller.*—September 21, 1869.

Claim.—1. In combination with an inclined propeller-shaft, A, a roller, *k*, for resisting the strain imparted to the said shaft, as set forth.

2. A blade, D, composed of three plates, connected together, and secured to a flange on the hub, as set forth.

3. The hollow hub B, with its hollow projeetions *b*.

95,151.—ERASMUS N. SHEDD, Three Oaks, Mieh.—*Bee-Hive.*—September 21, 1869.

Claim.—The sliding-cap D, provided with the eentral eompartment *g*, having a grated opening *j*, arranged and operating substantially as and for the purposes speeified.

95,152.—JAMES SHEEDY, New York, N. Y.—*Atomizer for Administering Medicines.*—September 21, 1869.

Claim.—In an atomizer or spray-apparatus of the character described, the combination of the eock K, constructed substantially as specified, with the outlet D, from the generator to the jet-pipe, and with the lateral eseape-passage or pipe M, from the seat L of said eock, essentially as and for the purposes herein set forth.

95,153.—JOHN P. SHERWOOD, Fort Edward, N. Y.—*Cylinder Paper-Machine.*—September 21, 1869; antedated September 10, 1869.

Claim.—1. The arms *b'*, beveled off upon their lower edges, in combination with the induetion-openings through the partition B, substantially as herein shown and deseribed, and for the purpose set forth.

2. The eombination of the sliding or vibrating frame F, and eurved rods or bars H, whether round or flattened, with the eylinder D, substantially as herein shown and deseribed, and for the purpose set forth.

3. Operating the sliding or vibrating frame F by means of the tongues G adjustably attached to the said frame F, and the notehes or teeth formed in or upon the ends of the eylinder D, substantially as herein shown and deseribed.

4. The series of eurved spouts K, in eombination with the eylinder I, slotted partition J, and sliding or vibrating frame F, substantially as herein shown and deseribed, and for the purpose set forth.

95,154.—TOM SHREWSBURY, New York, N. Y.—*Screw-Cutting Die-Plate.*—September 21, 1869.

Claim.—1. The arrangement of the pinion *e*, annular eam D, shoulders *c c'*, and reciprocating serew C, in the manner and for the purpose speeified.

2. The eombination, in the same serew-cutting die-plate, of the deviee above deseribed, for opening and closing the threaders, and the swiveled serew C, pinions *f*, raek *g*, and set-serew *h*, for adjusting the throw of the eutters to bolts of different size, all eonstructed and arranged together in the manner deseribed.

95,155.—GERARD SICKLES, Boston, Mass.—*Valve for Steam and other Enginery.*—September 21, 1869.

Claim.—1. The balanee-valve E, eonstructed substantially as herein deseribed.

2. The valve E, in combination with sliding bloek D and valve-chest A, substantially as deseribed.

3. The valve E, block D, chest A, in combination with lever L and valve-stem G, substantially as above speeified.

95,156.—JOHN SMITH, East Liverpool, Ohio.—*Butter-Jar.*—September 21, 1869; antedated May 26, 1869.

Claim.—A butter-jar, consisting of the earthenware body, and its internal-flanged rim *a*, which is arranged below the top of the body, the earthenware eover *b*, leaving a spaee *c*, in eombination with the sealing-substanee, as set forth, and the auxiliary paper eovering *e*, when all parts are constructed and adapted to operate together as deseribed.

95,157.—LOUIS P. SMITH, Middletown, Pa.—*Lifting-Jack.*—September 21, 1869.

Claim.—1. The lever E, eonstructed with eogs *d* and ratchet-teeth *e*, in combination with the lifting-bar B, having raek-teeth *b*, and with the detent E, substantially as and for the purpose herein specified.

2. The construction and arrangement of the standard A, with the working-parts of the lever D, and detent E ineased therein, and the lifting-bar B with its long side-wings sliding in grooves thereof, substantially as set forth.

95,158.—OTIS SNOW, Burlington, Vt.—*Butter-Worker.*—September 21, 1869.

Claim.—The box A, perforated, to admit the pivot of the standard C, roller F, ears E E, handle D, hinged, at *a*, to the standard C, and said standard pivoted through the bottom of box A, when all the parts are eonstructed and arranged, substantially as hereiu set forth.

95,159.—PALMER SPALDING, Chieago, Ill., assignor to himself, WILLIAM SPALDING, and TRUMAN D. SPALDING.—*Pinch-Bar.*—September 21, 1869.

Claim.—A pinch-bar, having its short arm with a fixed convex face, and its heel or fulerum formed with teeth, as and for the purposes hereinbefore set forth.

95,169.—JOHN STEVENS, Mount Vernon, N. Y.—*Playing-Cards.*—September 21, 1869.

Claim.—The combination of the several cards, above described, to form a pack, substantially as set forth.

95,161.—JOSEPH J. STOUT, SANFORD J. RUSSELL, and NOAH MENDENHALL, Greensburgh, Ind.—*Combined Oven and Drum.*—September 21, 1869.

Claim.—The construction and arrangement of the drum A, formed, as described, of two cylinders *c d*, one or more tubes D, doors B, window C, grating G, and hook H, all substantially as shown and described.

95,162.—MOSHER A. SUTHERLAND, New York, N. Y.—*Rubber Compound.*—September 21, 1869.

Claim.—A compound, composed of the ingredients, in the proportions and prepared in substantially the manner herein set forth.

95,163.—ABEL TEAGUE, Madisonville, Ky.—*Plow.*—September 21, 1869; antedated September 10, 1869.

Claim.—1. The metallic standard F, constructed substantially as and for the purpose described.

2. The bar, or sole D, constructed substantially as and for the purpose described.

3. The bar, or sole-brace E, when used in combination with the bar, or sole D, constructed substantially as described.

4. The metallic frame-work of a plow, composed of the standard F, and the bar, or sole D, when cast in one single piece, constructed substantially as described.

95,164.—PARKER A. THAYER, Theresa, N. Y.—*Horse-Rake.*—September 21, 1869.

Claim.—1. The combination of the frame A, rake B, and handles C with the springs H, pitman D, and extension-rods G, when the same are all constructed and arranged to be adjustable, and operate in the manner substantially as described, and for the purpose set forth.

2. Providing the rods G with the nuts *j* and *k*, to adjust the length of the rods, and to regulate their longitudinal movement, substantially as herein described, and for the purpose set forth.

3. The adjustable slotted iron *h*, when constructed and arranged as described, and for the purpose set forth.

95,165.—HUGH THOMAS and ROBERT WALLACE, New York, N. Y.—*Mechanical Movement.*—September 21, 1869.

Claim.—The combination, with the wheel A, of the case B, having a radial extension, B′, provided with grooves *f* f^1 f^2, the rod or lever C, fitting to the said socket, and having a beveled inner end, and a feather, *e*, to fit the grooves in the socket, and the spring D, the whole arranged substantially as herein described.

95,166.—C. W. TSCHUMY, Fremont, Ohio.—*Gauge for Saws.*—September 21, 1869.

Claim.—The arrangement, upon the grooved gauge A, of the slide B with its pivoted marker E, plate C, and thumb-screw D.

95,167.—STEPHEN S. ULREY, North Manchester, Ind.—*Churn.*—September 21, 1869.

Claim.—The combination of the adjustable support G, standard C, lever A, dashers B L′, and barrel K J, constructed and arranged to operate as described.

95,168.—JAMES S. UPTON, Battle Creek, Mich.—*Horse-Power.*—September 21, 1869.

Claim.—The combination of the bed A, swinging frames C C, levers D D, and braces E E, all constructed, arranged, and combined substantially in the manner and for the purposes herein set forth.

95,169.—FRANK R. VAN DAKE, Jackson, Miss.—*Fruit-Crate.*—September 21, 1869.

Claim.—The top A and bottom A′, each having cleats *a a*, side pieces B B′, and end pieces E E, when the same are so connected together, by loops formed in the brace-bands, that hinged joints are provided, whereby the box can be compactly folded in three layers, the sides falling in between the cleats of the top and bottom, and the end pieces folding over, and meeting on either the top or bottom, substantially as described.

95,170.—NICHOLAS S. VEDDER, Troy, N. Y.—*Cooking-Stove.*—September 21, 1869.

Claim.—1. The flues *b c b*, above the top-plate of the stove, and in line with the oven-heating and draught-flues B C B, against the upper part of the front side of the reservoir H, in combination with the heating-flues *m n m*, substantially as and for the purpose set forth.

2. The ascending and descending flues *m m*, in combination with the ascending and descending oven-heating flues B C B, in the manner and for the purpose set forth.

3. The water-reservoir, having its back and ends naked or uncovered, and its front covered by the flues *m n m*, when the said flues are in connection with the oven-heating flues, as hereinbefore described, for the purpose set forth.

4. In combination with the stove and reservoir, when constructed and arranged as described, the dampers F and G, operating substantially in the manner and for the purpose set forth.

95,171.—C. A. VOSBURGH, Memphis, Tenn., assignor to himself and MERRIAM, BOYD AND COMPANY, same place.—*Ruffling-Attachment for Sewing-Machines.*—September 21, 1869.

Claim.—A ruffling and gathering attachment for sewing-machines, composed of the plates A and B, with arms *n* and H, and the slotted guide-plate D, with its clasping-arm *o*, all arranged for joint operation, and constructed substantially as and for the purpose shown and specified.

95,172.—MICHAEL WALPOLE, Milford, Mass.—*Shoemakers' Tool.*—September 21, 1869.

Claim.—The adjustable fulcrum D, arranged in combination with pincers A, in the manner and for the purpose set forth.

95,173.—JOHN WARD, Evansville, Ind.—*Medical Compound.*—September 21, 1869; antedated September 13, 1869.

Claim.—A preparation, compounded substantially in the manner and for the purposes described.

95,174.—JAMES C. WELLS, Warren, Pa.—*Eccentric.*—September 21, 1869.

Claim.—1. The combination of the eccentric wheel A, eccentric ring B, strap C C^1, and bolts D, all arranged and operating substantially as set forth.

2. The combination of the eccentric wheel A, eccentric ring B, strap C C^1, bolts D, and set-screw *a*, operating substantially as set forth.

95,175.—JAMES WHEELER, Dowagiac, Mich.—*Potato-Digger.*—September 21, 1869.

Claim.—1. The construction of the bow or hoop A, with its shares D D in one piece, as and for the purposes set forth.

2. In combination with the hoop A and shares D D, the screen, composed of the rods 1 2 3 4 5 6 7 8 9 10, (or any suitable number,) the shaft E, cam-wheels *a a*, handles B B, braces H H, and bail C, when constructed, arranged, and combined as set forth.

95,176.—M. F. WICKERSHAM, Springfield, Ill., assignor to himself, THOMAS ECKARDT, H. F. ELDRED, J. G. LAW, T. HUTCHINSON, C. B. HURD, C. DRESSER, and D. SHERMAN.—*Dumping-Cart.*—September 21, 1869.

Claim.—The body of a dumping-cart, hung upon the axle in such a manner as to be dumped at either end, and arranged substantially as herein shown and described, for the purpose specified.

95,177.—M. F. WICKERSHAM, Springfield, Ill., assignor to himself, THOMAS ECKARDT, H. F. ELDRED, J. G. LAW, T. HUTCHINSON, C. B. HURD, C. DRESSER, and D. SHERMAN.—*Street-Sweeping Machine.*—September 21, 1869.

Claim.—1. The adjustable brush F, arranged as described, to discharge the dirt, in the process of sweeping, beneath the front platform H, directly

into a separate dumping-cart without the employment of an endless chain of buckets, substantially as herein shown and described, for the purpose specified.

2. In combination with the brush F, the lever-bail *d*, arranged as described, whereby the brush is brought in contact with the ground or raised above the same, substantially as herein shown and described, for the purpose specified.

3. The arrangement of the pivoted lever L and clutch K, with relation to the shaft of the brush, the racks *j* and the loose gear-wheel J, as herein described, for the purpose specified.

4. The loose pivoted curved apron M, in combination with the frame A, drum E, and brush B, arranged to operate in connection with a detachable cart, substantially as herein shown and described, for the purpose specified.

5. The frame A, constructed as described, with the front platform H and central transverse drum E, and mounted upon the axle B and swiveled truck D, as herein set forth, for the purpose specified.

95,178.—M. K. BUTTERFIELD, Eddyville, N. Y.—*Fence-Post.*—September 21, 1869.

Claim.—The fence-post herein described, in combination with the pins *c* and wedges *d*, when the same are constructed and arranged substantially as and for the purposes specified.

95,179.—REUBEN A. ADAMS, Cambridge, Mass.—*Preserving Fish.*—September 28, 1869.

Claim.—The use of saltpeter and alum in the process of curing fish, in the manner and for the purposes substantially as described.

95,180.—ORSON ARMSTRONG, Oshkosh, Wis.—*Sash-Balance.*—September 28, 1869.

Claim.—The ratchet *d* and pawl E, when attached to the side of the sash, and used, in combination with the sash A A and cord *k*, as and for the purposes set forth.

95,181.—THEOPHILUS A. AUBERLIN, Detroit, Mich.—*Permutation-Lock.*—September 28, 1869.

Claim.—1. The bolt C, provided with tumbler *d*, stump *c*, key-stump *d'*, and stud *c'*, on which is sleeved the dog D, arranged and operating in the manner and for the purposes set forth.

2. In combination with said bolt, the slide E, provided with studs *e*, substantially as and for the purpose specified.

3. The annular tumblers F', each provided with a slot, *g*, notch *i*, and stud *j*, the tumbler-carriers F and clamps *f*, arranged and operating in the manner and for the purpose set forth.

95,182.—RODMAN BACKUS, Albany, N. Y.—*Base-Burning Stove.*—September 28, 1869.

Claim.—1. The combination of the fuel-magazine, a fire-pot whose fire-brick lining is arranged within a skeleton frame, and a perforated casing located beneath illuminating-windows, substantially as described.

2. A prismatic or many-sided fire-pot, capped by a removable guard-ring, D, and arranged beneath a fuel-magazine, substantially as described.

3. Removable fire-bricks *d*, movable ring D', and doors *h*, hinged substantially as described.

95,183.—BURROUGHS BEACH, Meriden, Conn., assignor to JOHN R. PEASE, same place.—*Baby-Jumper and Rocker.*—September 28, 1869.

Claim—1. The combination of the lever C, provided with a suitable seat for the child, with the two rockers A and a spring between the two, substantially as herein set forth.

2. In combination with the above, the adjusting-arm B, with the set-screw *a*, as and for the purpose specified.

95,184.—NICOLAS LOUIS BEAUFILS and JACQUES REXROTH, Paris, France.—*Miners' Safety-Lanterns.*—September 28, 1869.

Claim.—1. The combination of leather washer *k*, spring-blades *l*, and notched washer *m*, with the disk B, arranged as described, to form an air-tight rest for the cylinder F.

2. The combination of tube G M and gratings H N O with the circumjacent cylinder F, all constructed and arranged substantially as described.

3. The combination of the sliding cap I with a lamp and chimney, substantially as and for the purpose specified.

4. In combination with the rod L and tube E', the spring-pin *d* and bayonet-lock *b j*, all arranged as described, to connect or disconnect the lamp and safety-apparatus.

5. In combination with the thumb-screw K J, its threaded nut, and the supports E, the cap I, all operating together in the manner set forth.

95,185.—L. W. BEECHER, Westville, Conn.—*Basket.*—September 28, 1869.

Claim.—In the construction of baskets, the splints diagonally scored and folded at the lower ends, so as to be secured to the bottom, substantially as and for the purpose specified.

95,186.—HERMANN BERGER, Marthalen, Switzerland. — *Embroidering-Machine.*— September 28, 1869.

Claim.—1. A multiple embroidering-machine, substantially such as described, provided with one or more pairs of hooks and needles working from above and below the cloth, in order to apply the same design in reverse order to two or more pieces of fabric, substantially as herein shown and described.

2. The combination with each other of the two embroidering-hooks H H' attached to the rod I, so as to move simultaneously below and above sheets of fabric, as set forth.

95,187.—JAMES BIRCH, Corry, Pa.—*Harvester-Guards.*—September 28, 1869.

Claim.—1. A skeleton-guard, provided with the central stud or post, or equivalent device, forming a support for the heel-end of the stationary cutter, substantially as described.

2. A guard or finger, provided with the stud or post A' and angular shoulder *c* of wings C, for securing the stationary cutters D in place, substantially as described.

95,188.—OLPHA BONNEY, Jr., San Francisco, Cal.—*Harvester.*—September 28, 1869.

Claim.—The knee *c*, interposed between the beam *b* and the spring *i*, in combination with the bar *d* and spring *i*, as and for the purposes set forth.

95,189.—JOHN A. BRADSHAW and WILLIAM H. BROWN, Lowell, Mass., assignors to themselves and DARIUS WHITHEAD, same place.—*Liquid-Meter.*—September 28, 1869.

Claim.—The arrangement and construction of the case *a*, cover *c*, plates *e* and *f*, strainer *h*, conductor *i*, with one or more spouts *j j*, regulating-valve *v*, and wheel *l*, with buckets *k k*, all when combined and operating as described and specified.

95,190.—REUBEN BRADY, New York, N. Y.—*Machine for Fastening Bottoms to Cans.*—September 28, 1869.

Claim.—1. The combination of a yielding beveled can-support, B, with slides C C and actuating-ring E, all arranged and operating as set forth.

2. The arrangement, on the bed A, of the actuating-ring E and the levers *d*, swinging on movable fulera, and impelling the slotted slides C, in the manner described.

95,191.—THOMAS S. BROWN, Poughkeepsie, N. Y.—*Harvester-Rake.*—September 28, 1869.

Claim.—1. The sliding or drop bolts or latches, attached to the rake-arms for operating the cam-switch or gate, substantially as described.

2. The ratchet-wheels or counters, in combination with the slide or bolt on the rake-arms, for regulating the frequency of discharge of the gavels, substantially as described.

3. The inclined track *m*, in combination with the slide or drop bolts, for carrying the latter past the switch-lever without operating the switch, as set forth.

4. The rotating-disk, in combination with ratchet-

wheels or counters, or their equivalent, for the purpose set forth.

5. The spring-pin or bolt, or an equivalent device for holding the disk K and counters L at the desired point of adjustment, as set forth.

6. The shield M, in combination with the disk and counters, for protecting them from the falling grain, as set forth.

7. The combination of disk K, counters L, slide-bolt O, inclined way *m*, and switch-lever H, for operating the rake and reel-arms, as described.

95,192. — DAVID M. BYE, Roanoke, Ind., assignor to himself and H. BASH, same place.—*Bed-Bottom.*—September 28, 1869.

Claim.—The combination of the cross-bars F G, cleats H I, and adjusting-screws J J, all constructed as described, with the ordinary hooked slats D and ropes E, to form a bed-bottom, as described.

95,193.—W. E. CAMERON and A. A. DETTLAFF, Green Island, N. Y.; said CAMERON assignor to said DETTLAFF.—*Machine for Mitering Printers' Rules.*—September 28, 1869.

Claim. — 1. The arrangement, in the machine herein described, of the guide G, rotating and reciprocating sleeve H, and knives L L, substantially as and for the purpose herein shown and specified.

2. The combination of the parts above specified, all constructed and operating substantially as set forth, with the rotating disk B and thumb-screw P, substantially as herein described and set forth.

3. The arrangement of the reciprocating rest-plates R R in grooves in the face of the sill of the frame, substantially as and for the purpose described.

95,194. — EDWIN A. CHUBB, Ionia, Mich.—*Plow-Wheel.*—September 28, 1869.

Claim. — 1. The slotted shank E, provided with slot *n* and hood *m*, substantially as described, for the purposes specified.

2. The cap C, in connection with the channel or recess *a* in the hub B, for the purposes set forth.

3. The arrangement of the wheel A, hub B, cap C, bolt D, shank E, sleeve *o*, recess *d*, and hood *m*, when constructed and operating substantially as herein described.

95,195.—CHARLES A. COLE, Saint Louis, Mich., assignor to himself and JOHN L. EVANS.—*Vise.*—September 28, 1869.

Claim.—The improved construction and arrangement of the several parts of the vise, as herein shown and described.

95,196.—J. B. COLLIN, Altoona, Pa.—*Railway-Car-Journal Box.*—September 28, 1869.

Claim.—The spring-plate C, pivoted to the lid B of a journal-box, and provided with corrugated ends to lock under the hooks *c d*, substantially as and for the purpose herein shown and described.

95,197.—DAVID M. COLLINS, Lowell, Mass.—*Let-Off Mechanism for Looms.*—September 28, 1869.

Claim.—1. The tension-bar A, in combination with the adjustable arm B, and spring *k*, all constructed, arranged, and operating in the manner and for the purpose specified.

2. In combination with the tension-bar A, arm B, spring *k*, and the beam-gear M, as described, the cam-lever F, pawl C, ratchet-wheel D, gears I and K, worm L, cam R, and the friction-device, all arranged and operating in the manner and for the purpose set forth.

3. The method, substantially as described, of controlling or regulating the action of the pawl C on the ratchet-wheel D, to operate the "let-off," for the uniform delivery of warp from the yarn-beam, by means of the adjustable arm B and the tension-bar A, constructed and arranged as shown and described, and acted on by the unwinding warp, which gradually draws the portion E downward, and as gradually carries the end *e* of the arm away from the pivoted head of the pawl, or widens the distance between the two last-named parts, and increases the action of the latter proportionate to the amount of warp on the beam.

95,198. — ALFRED B. COREY, Providence, R. I.—*Loom-Harness.*—September 28, 1869.

Claim. — The improved loom-harness, as made with either twine wound with one coil and a half a coil about the loop of the other at the lower part of the warp-thread eye, the whole being substantially as described.

95,199.—W. E. C. COX, Reading, Pa.—*Method of Constructing Piles for Railroad-Rails.*—September 28, 1869.

Claim. — Constructing the upper portion of the pile of broad and narrow steel bars, arranged alternately on edge, and side by side, and combining them with iron bars, substantially as and for the purpose herein set forth.

95,200. — JOHN CRANDELL, Chicopee Falls, Mass. — *Yarn-Tension Device for Knitting-Machines.*—September 28, 1869.

Claim.—1. In combination with the tension-spring T of a take-up, a fixed loop or guide, L, having an angle, *l*, formed therein, substantially as described.

2. The frame *a b e*, constructed and arranged as described, and supporting the angular loop L and the cylinder A, in combination with the adjusting-screw S, mandrel B, and the tension-spring T, applied thereto, substantially as specified.

95,201.—JAMES CUDDY, Pittsburgh, Pa.—*Manufacture of White-Lead.*—September 28, 1869.

Claim. — 1. The apparatus above described, for showering vinegar over the sheets of lead, as and for the purposes described.

2. The apparatus above described, or its equivalent, for showering vinegar over the sheets of lead, in combination with round casks or chambers, substantially as and for the purpose described.

3. The improved form of slat for the shelves, by which nearly all the under surfaces of the sheets of lead are exposed to the action of the gases within the cask or round chamber, for the purpose described.

4. The application of carbonic-acid gas, at a temperature ranging from 85° to 100° (eighty-five to one hundred degrees) of Fahrenheit's thermometer, as and for the purpose described.

95,202. — J. A. DANDRIDGE, Buffalo, N. Y. — *Burial-Case.*—September 28, 1869.

Claim.—As an article of manufacture, a burial-case of wood, electroplated and ornamented, as set forth in specification.

95,203. — FRANCIS E. DAY, New York, N. Y., assignor to himself and LYMAN H. DAY, same place, assignors to JASON B. LOOMIS for one-half their right.— *Hoop-Skirt Fastening.*—September 28, 1869.

Claim.—The combination, with the hoop or wire and the tape of a hoop-skirt, when said tape is provided with a pocket or loop of lesser width than such tape, of a metallic clasp or fastening, of such length that when its lips are clasped around said hoop or wire, it will not be practically visible when looking at the face or outside of the tape, the whole arranged and operating substantially as and for the purposes herein specified.

95,204.—JOHN DEWE, Toronto, Canada.—*Seal Lock for Bags.*—September 28, 1869.

Claim.—A lock, consisting of the part E, having the tube *e'*, plate *e*, and snaps *m m*, in combination with the rivet I, having a stem, head, fragile neck, and side notches H H, and strap B, substantially as and for the purposes herein specified.

95,205. — EUGENE F. DEWEY, San Francisco, Cal.—*Can-Opener.*—September 28, 1869.

Claim.—1. Securing the knife or cutter C to the pointed bar A, by means of the slots *h h* and spring E, substantially as and for the purpose herein described.

2. The angularly-pointed bar A, provided with the supplementary knife F, substantially as described.

95,206.—Richard S. Dillon, Detroit, Mich.—*Coal-Stove.*—September 28, 1869.

Claim.—1. The arrangement of the annular air-chamber C, provided with registers *c*, the conical deflector-flange D, air-tubes G, and gas-ring H, with or without the perforated diaphragm E, substantially as herein specified, and for the purpose mentioned.

2. The flue F, provided at its top with the outward-projecting flange *f* and the reverberatory chamber I, provided with an internal flange, *i*, arranged within a radiator, J, substantially as and for the purpose herein set forth.

3. The arrangement of the foregoing-named parts with the body A of a stove or furnace, having a contracted neck A′, when constructed, combined, and operating substantially as and for the purposes herein described.

95,207.—Jacob Dobbins, Litchfield, Mich.—*Lath-Machine.*—September 28, 1869.

Claim.—The rotating rest S, and in combination therewith the vibrating lever T, constructed and operating as and for the purpose aforesaid.

95,208.—A. A. Dow, Glenham, N. Y.—*Feeding-Mechanism for Carding-Engines.*—September 28, 1869.

Claim.—1. The combination, with the short-toothed belt A of the diagonal feeding-mechanism herein described, of the geared pulleys B E, intermediate wheel H, and slotted support G, all arranged substantially as specified.

2. The arrangement, with the laying-traveler, of the toothed rollers K, toothed rack M, and guard-plate O, all substantially as specified.

95,209.—Henry S. Draper, Rochester, N. Y.—*Medical Extract.*—September 28, 1869; antedated September 13, 1869.

Claim.—The within-described extract, as a new and useful medicine for the purposes set forth.

95,210.—Charles S. Dunbrack, Swampscott, Mass.—*Boot and Shoe.*—September 28, 1869.

Claim.—1. An outer sole, as made with the upper-receiving groove or channel *e*, arranged in that face or side of the sole which is to abut against the upper leather to be joined to the sole.

2. An outer sole, as made with the sewing or stitch-groove *d* in its outer face, and with the upper-receiving groove *e*, in its inner or upper face, such grooves being arranged relatively or opposite to each other in manner as represented.

95,211.—Charles S. Dunbrack, Swampscott, Mass.—*Manufacture of Shoes.*—September 28, 1869.

Claim.—1. The last, as made with the recess *a*, to receive and support the false inner sole *b*.

2. The false inner sole *b*, made with sole-puncturing and holding spurs or pointed projections, so arranged as to hold the upper and receive and hold the outer sole when forced upon them by blows of a hammer, all constructed substantially as set forth.

3. The arrangement of the false inner sole *b*, setting wholly or partially within a recess, *a*, made in the bottom of the last, such arrangement being that the sole shall be supported against the periphery or edges of such recess *a*, in a manner to be kept in place in the last thereby, whether widthwise or lengthwise, or both widthwise and lengthwise of the last.

4. The mode of confining the upper to the false inner sole, viz, by hitching the upper on the spurs *c*, of the false inner sole, and afterward driving the outer sole upon such spurs and the overlapping parts of the upper, as set forth.

95,212.—Robert Elarton and William J. Elarton, Hillsborough, Iowa.—*Churn.*—September 28, 1869; antedated September 16, 1869.

Claim.—1. The arrangement of the vessels C C for containing water, with reference to the dasher B, substantially as shown and described.

2. The arrangement of cam-wheel E, shaft C, and dasher B, substantially as and for the purpose set forth.

95,213.—R. S. Elliott, Saint Louis, Mo.—*Hydraulic Dredging-Machine.*—September 28, 1869.

Claim.—The arrangement of the pipes B D E and nozzle H, all substantially as specified.

95,214.—Edward I. Eno, Springfield, Ill.—*Corn-Harvester.*—September 28, 1869.

Claim.—1. The fingers or pickers F, resting upon the fulcrum-pivot *x′*, and operated by means of the eccentrics *h*, connected to said fingers by the strap *h′*, substantially as herein shown and for the purpose specified.

2. The finger-guards or gatherers E and E′, in combination with the fingers or pickers F, said pickers being constructed and operated substantially as and for the purpose specified.

3. The shaft P, provided with the radial saw-plates K, and operated by means of the shaft H, in combination with the above-described gathering and picking devices, substantially as and for the purpose shown.

4. In combination with said gathering and picking devices, the endless belt M, operated by means of the rollers L and N, shaft H, and pulleys *n* and O, substantially as shown and for the purpose specified.

95,215.—William A. Farley, Saint Andrew's Bay, Fla.—*Construction of Vessels.*—September 28, 1869.

Claim.—1. The herein-described mode of producing patterns for shaping the timbers of vessels, substantially as specified.

2. The improved mode of producing the form required for the vessel, at any part, by means of the improved pattern herein shown and described.

95,216.—J. Ward Fifield, Franklin, N. H.—*Rat-Trap.*—September 28, 1869.

Claim.—The combination of the double walls, swinging doors, covered pins, and suitable conducting-ways, as and for the purpose specified.

95,217.—Ira Flanders, Paw Paw, Mich.—*Stump-Extractor.*—September 28, 1869.

Claim.—1. The sliding fulcrum *o*, with cogged rails *g g*, crank *k*, plates *f f*, roller *x*, and cogged wheels, on shaft *s*, as combined and operated, for the use and purpose as specified.

2. The crank-shafts L L, ratchet-wheels and pawls *k k*, pulleys *h h*, and ropes *j j*, as combined and operated, for the use and purpose herein specified and set forth.

3. A stump-extractor, as constructed, combined, and operated, for the use and purpose as specified and herein set forth.

95,218.—George P. Fuller, Philadelphia, Pa.—*Curtain-Fixture.*—September 28, 1869.

Claim.—1. The combination and arrangement of the spur-wheel G, roller E, and rack H, with the sash C, for maintaining the proper height of the lower end of the shade, substantially as described.

2. The arrangement of the pinion I, sheave K, shaft J, and cord L, in relation to the spur-wheel G, substantially as shown and specified.

3. The arrangement of the gum rollers M, on the brackets F, substantially as described.

95,219.—George P. Fuller, Philadelphia, Pa.—*Mode of Hanging Window-Shades.*—September 28, 1869.

Claim.—The combination and arrangement of the bands F F, staples *c*, brackets *b*, and slat *a*, with the shade D, sash C, and frame A, substantially in the manner above described.

95,220.—David W. George, Minnesota City, (town of Rollingstone,) Minn.—*Auger-Handle.*—September 28, 1869; antedated September 18, 1869.

Claim.—An improved auger-handle, formed by the combination of the handle A, made in two parts, tube or band B, cylindrical block C, and band or tube E, with each other, said parts being constructed and operating substantially as herein shown and described, and for the purpose set forth.

95,221.—A. F. GIBBONEY, Belleville, Pa.—*Harness-Mechanism for Looms.*—September 28, 1869.

Claim.—The levers J J′, double latches K K, pattern-cylinder F, horizontal levers I I′, cams D D, and shaft B, all constructed and arranged as and for the purpose specified.

95,222.—CHALKLEY GRISCOM, LEWIS GRISCOM, and JOHN P. GRISCOM, Mahanoy Plane, Pa.—*Pump.*—September 28, 1869.

Claim.—1. The yoke K, to which the steam-piston rod and the pump-plunger rod I are secured, when provided with the lips *a*, fitting around the upper and lower edges of the stationary guide L, and adapted to receive the crank-pins of the fly-wheel shaft M, all arranged as described, for the purpose specified.

2. The arrangement and combination, with each other, of the fly-wheel shaft M, crank-pins *b*, grooved sliding yokes K, stationary guides L, piston-rods H H, and plunger-rods I I, all arranged and operating substantially as herein shown and described, for the purpose specified.

3. A mining-pump, consisting of two steam-cylinders A B, of two pump-cylinders C D, which have clack-chambers E, with X-shaped partitions, both clack-chambers communicating with the suction and discharge pipes, as set forth, the piston and plunger-rods being connected by means of sliding-grooved yokes K, which drive the fly-wheel shaft M, the cranks *c* of which stand at right angles to each other, substantially as described, for the purpose specified.

95,223.—JONES HARDING, Detroit, Mich.—*Bedstead.*—September 28, 1869.

Claim.—1. The frame A, when provided with the longitudinal rods B and C, and diagonal rods E, the supports D, and hook-braces G, arranged and operating substantially as described, and for the purposes specified.

2. The combination and arrangement of the frame A, longitudinal rods B and C, supports D, diagonal rods E, hooks F, diagonal hook-braces G, spring-supports H and I, head and foot boards J J′, side-rails L L′, and arch-rods M M′, when constructed and operating substantially as herein described, and for the purposes specified.

95,224.—JOACHIM FRIEDRICH HARTMANN, Richmond, Ind., assignor to himself, HEINRICH W. MORNINGSTAR, and EUGENE MOVEL.—*Head-Block for Saw-Mills.*—September 28, 1869.

Claim.—1. The conical couplings, formed of the pinions H and cones U, in combination with the wheel F, pinion G, rack T, and lever R, with its support S.

2. The cones U U, when arranged to slide on the shaft Z, in combination with the screws I I and wheels 2 2.

3. The arrangement of the wheel F, vibrating piece I, pinion G, shaft P, pinions H H, and rack T.

95,225.—WILLIAM B. HAYDEN, Columbus, Ohio.—*Direct-Acting Steam-Engine.*—September 28, 1869.

Claim.—1. A balanced slide-valve, E, constructed with stems F F upon it, and arranged to operate in combination with independent plugs or pistons D D, substantially as described.

2. The ports O O, for admitting steam on the outer ends of the plugs D, in combination with ports P P, for admitting steam on the opposite sides of these plugs, arranged substantially as described.

3. The hollow piston R, provided with inwardly-opening valves L L, and with slots T, and adapted to operate a balanced side-valve, substantially as described.

4. Steam-spaces C C, as enlargements of the steam-chamber K, communicating with the ports X and I, substantially as described.

5. The ports O P, leading into the chambers H, containing the plugs D, substantially as described.

6. Chamber K, containing valve E, chambers H H, containing plugs D D, in combination with ports leading from said chambers into the steam-cylinder Y, and with a chambered piston, R, substantially as described.

95,226.—GEORGE HEIM, Naperville, Ill.—*Compound for Building-Purposes.*—September 28, 1869.

Claim.—1. The above-described compound, composed of the ingredients substantially as and in the proportions specified.

2. In combination with the above compound, the preparation composed of the ingredients substantially as specified, to form a coating, as described.

95,227.—GOTTFRIED AUGUST H. HERTZER, Waterford, Mich.—*Railway-Rail Chair.*—September 28, 1879.

Claim.—The chair B B′, provided with the stud E, in combination with the clamp I, provided with the stud H, and with the bolts D and G, provided with nuts *d* and *g*, and with the lock-plates F and J, and keys *e* and *j*, when the several parts are constructed and arranged to operate as and for the purposes above set forth.

95,228.—W. S. HILL, Manchester, N. H.—*Whip-Socket.*—September 28, 1869.

Claim.—1. The combination, in a whip-socket, of a clasp-lock B C E, when arranged for application to the dasher or other part of the carriage, in connection with the socket, substantially as specified.

2. The combination, with the parts B C, grooved as described, of leather or other similar guards F, for the protection of the whip, substantially as specified.

95,229.—HORACE R. HUIE, Haywards, assignor to LEONARD L. TREADWELL and GEORGE R. CARTER, San Francisco, Cal.—*Gang-Plow.*—September 24, 1869.

Claim.—1. Attaching the rear end of the plow-beam D to the rear end of the plow-frame, by means of a link, H, substantially as herein described.

2. The metal plate C, or equivalent device, secured to the axle B and pole D, in the manner above described, for the purpose set forth.

95,230.—Suspended.

95,231.—HENRY M. JONES, West Meriden, Conn.—*Door-Fastener.*—September 28, 1869.

Claim.—As an article of manufacture, the herein-described door-fastener, consisting of the two legs A and B, their inner edges inclined to each other, and formed upon a single base, substantially as and for the purpose herein set forth.

95,232.—EDWARD M. JUDD, Wolcottville, Conn.—*Spring Curtain-Roller.*—September 28, 1869; antedated September 11, 1869.

Claim.—1. The disk *h* and cap *k*, receiving between them the cam or ratchet *i* of the axle 3, as and for the purposes specified.

2. The metal block *e*, with its projecting points 2, for connecting the inner end of the spring to the roller, as set forth.

95,233.—AUSTIN KELLEY, Brooklyn, N. Y.—*Ruffle.*—September 28, 1869; antedated September 16, 1869.

Claim.—As a new article of manufacture, a machine-shirred, crimped, or gathered ruffle, whether provided with a band or not, having a selvage-edge formed from a fabric, substantially as herein described.

95,234.—J. B. KELLEY, Brandon, Vt.—*Hay-Tedder.*—September 28, 1869.

Claim.—The revolving frames or heads A *a* and B *b*, geared to the carriage-wheels W W, and carrying the teeth *t t t*, in combination with the adjustable eccentric shaft *s s*, carrying the curved arms *c c c*, and held in position by the clamp-box D, the whole constructed and operating substantially as herein set forth.

95,235.—J. EMERSON KENT, Philadelphia, Pa., assignor to WEBSTER J. EVERETT, same place.—*Shoulder-Brace.*—September 28, 1869.

Claim.—The arrangement of the parts A and B, provided with plates or pads P and P′, shoulder-pads R and R′, straps S and S¹, breast-plate B P, and straps

S^2, S^3, S^4, and S^5, for the purpose of supporting the intercostal muscles of the chest, and causing a pressure inward of the lower or protruding portion of the scapulæ, substantially as specified.

95,236.—Salem T. Lamb and George A. Rankin, New Albany, Ind.—*Peddlers' Wagon.*—September 28, 1869.

Claim.—1. The construction and arrangement of the wagon-body, viz, of the three sections or members, with their shelves and apartments protected, and accessible by means of hinged doors at the sides and ends, substantially as and for the purpose described.

2. In combination with the driver's seat, a rising and falling top that is connected through toggle-levers and bars to lifting-levers in convenient position to the occupant of said seat, so that said occupant may raise and hold up or let down said top at pleasure, substantially as described.

3. Hanging the doors E to the body of the wagon by hinges having curved leaves, so that said doors may swing close into the frame when shut, and entirely out of the way of the sliding drawers when opened, as set forth and explained.

4. In combination with the body of the wagon, the swinging counter, connected and suspended thereto, as and for the purpose described.

5. In combination with the body of the wagon and with a fold-up bench, the case or cage, or its equivalent for containing and carrying said hinged or fold-up bench, as and for the purpose described.

6. In connection with the seat and top, the apartment under or at *l*, for clothes, as described.

95,237.—James Lawton, Glenham, N. Y.—*Feeding-Attachment for Carding-Engine.*—September 28, 1869.

Claim.—As an improvement upon the Apperly and Clissola feed for carding-machines, the combination of the pronged rollers D, arranged on the same level, the toothed wheels *b b*, pinions *c c*, and shield E, all operating to move the roving to the card-cylinder, as and for the purpose specified.

95,238.—T. H. Leavitt, Boston, Mass.—*Machine for Dressing Stone.*—September 28, 1869.

Claim.—1. In a machine for dressing stone, having a reciprocating work-supporting table or carriage, a horizontally-axled grinding-cylinder, the grinding-surface of which is composed of a series of peripheral segments bolted together and confined between the cylinder-heads, substantially as described.

2. A horizontal disk-grinder, composed of sectoral blocks fastened to the lower face of a rotary head fixed to the foot of a vertical shaft, the sectors being so confined in position that any one or more may be removed for repairs or replacement.

3. In a grinding-machine, having a reciprocating work-supporting table or carriage, the combination of a cylinder-grinder, rotating on a horizontal axis, with a disk-grinder at the foot of a rotary vertical shaft, substantially as shown and described.

4. In a stone-dressing machine, a reciprocating carriage, having long side troughs for receiving the liquid and semi-liquid matter escaping from the stone, the troughs being fixed to or forming part of the table.

5. In combination with the sand-receiving hopper, a chute or conductor, so constructed and arranged as to convey the sand to the whole length of the grinding-cylinder, and having provision for controlling and regulating the feed of the sand.

6. In combination with a reciprocating work-supporting table or bed, mounting the bed upon curved rails or ways for lateral curvilinear movement, substantially as and for the purpose described.

95,239.—George A. Leigh, Springfield, assignor to himself and Samuel E. Leigh, Bloomington, Ill.—*Washing-Machine.*—September 28, 1869.

Claim.—1. The within-described washing-machine, consisting of the box A, the cover B, the screen C, the rubbers D and K, operated by means of the lever E, pitman F, crank G, shaft H, and rod N, the chain L, the springs M and M, and the levers O and P, all constructed and arranged substantially as and for the purpose specified.

2. In combination with the cover B, the devices used for raising and securing the lid in place, consisting of the lever O, the rod P, and the toothed rack R, substantially as herein specified.

95,240.—Bernard Levy, Boston, Mass., assignor to himself and William H. Slocum, same place.—*Muff.*—September 28, 1869.

Claim.—A lady's muff, when the interior is divided into two compartments, substantially as shown and for the purpose set forth.

95,241.—John S. Lewis, Elkader, Iowa.—*Seed-Planter.*—September 28, 1869.

Claim.—1. A seeding-machine, consisting of a long tubular box A, provided with apertures B B′, (either or both,) covered by slides C C′, and with discharge-perforations *b*, adapted for suspension from the person of the operator by straps E, and provided with handles F, by which to vibrate it, substantially as herein set forth.

2. In combination with seed-box A, constructed otherwise, and adapted to operate substantially as herein set forth, the partitions D, as and for the purpose explained.

3. The partitioned seed-box A D, composed of tapering sections *x*, as represented and described, for the purpose set forth.

95,242.—Daniel Locke, Geneva, Wis.—*Potato-Digger.*—September 28, 1869.

Claim.—1. The triangular shaft *g*, provided with notches upon its corners, spirally arranged, and with curved teeth *h*, spirally arranged thereon, in connection with the rods D, sleeved or pivoted to the stationary shaft *d*, when constructed, arranged, and operating as above shown and described.

2. In combination with the above, the slotted scoop, composed of the pointed slats C, secured to the axle B, and the transverse bar *c*, as herein specified.

3. The combination of the rotating shaft E, provided with curved teeth F, spirally arranged thereon, in connection with the scoop C, with the triangular shaft *g*, provided with notches and teeth, as above described, and with the grate B, and the cog-wheels *e*, *f*, and G, when constructed, arranged, and operating as above set forth.

4. In combination with the scoop C, the arrangement of the sliding standard H, provided with caster-wheels I, tooth-rack *i*, cogged pinion J, shaft *j*, hand-lever K, and spring-dog *k*, when constructed and operating as above mentioned.

5. The arrangement of the wheels A, the axle B, the scoop C, the rods D, the shafts E and *g*, the cogged wheels *e*, *f*, and G, the standards H, the caster-wheels I, rack *i*, cogged pinions J, shaft *j*, hand-lever K, and dog *k*, when constructed and operating as and for the purposes herein set forth, shown, and described.

95,243.—John Mair, Philadelphia, Pa., assignor to himself and Hazleton W. Cranmer, same place.—*Sail-Latchet.*—September 28, 1869.

Claim.—The application to sails of the curved hooks C H, provided with eyes *e* and *e′*, in combination with rope R, openings O, and rope F, for the purpose of readily fastening and releasing the bonnets of jibs and other sails, substantially as specified.

95,244.—Joseph Marshall, New York, N. Y.—*Cloth and Hat Brush.*—September 28, 1869.

Claim.—A cloth or hat brush, containing a cushion, B, which is entirely or partly surrounded by bristles, substantially as and for the purpose herein shown and described.

95,245.—G. B. Massey, New York, N. Y.—*Low-Water Detector for Boilers.*—September 28, 1869.

Claim.—The float F and valve E, constructed and arranged, with reference to the whistle D, cylinder C, and pipe B, substantially as herein shown and described.

95,246.—G. B. Massey, New York, N. Y.—*High and Low-Water Indicator.*—September 28, 1869.

Claim.—1. The combination, in a water-indicator,

A, of the float E, valve H, and pipes B, F, and G, all arranged and operating substantially as herein shown and described.

2. The turned-up pipe G, arranged within the floating valve-carrier of a water-indicator, substantially as herein shown and described.

95,247.—GERMAN J. MATSON, Alma, Mich., assignor to himself and SAMUEL F. JUDD, same place. —*Washing-Machine.*—September 28, 1869.

Claim.—The combination and arrangement of the gate G, the slides F, the spring I, the thumb-screw J, the treadle L, the ribs C, the rub-boards D and E, the connecting-rods R, the levers Q, the shaft O, the lever P, and the brackets N, in connection with the box A, provided with a sloping bottom and an outlet, S, when constructed and operating as aforesaid.

95,248.—HIRAM S. MAXIM and JAMES RADLEY, New York, N. Y.—*Head-Light.*—September 28, 1869.

Claim.—1. The combination of the vaporizer with a steam or hot-water chamber or passage, in such wise as to vaporize a small continuous stream of the carbon-oil, in the manner and for the purpose substantially as herein described.

2. The combination of the vaporizer with the steam-boiler of a locomotive for the purpose of making and supplying an illuminating-gas from gasoline or other hydrocarbon oils or fluids, for the head-light of such locomotive, constructed and operating substantially as herein described.

3. The combination of the induction and eduction pipes with the heating-chamber, around or at the vaporizer, by passing the induction through the return-pipe, substantially as herein described.

4. The combination of the heater and vaporizer with the air-trunk, which carries the chimney of a locomotive head-light, so as to secure sufficient heat to the vapor to maintain its gaseous form in its passage from the vaporizer to the burner, in the manner and for the purpose substantially as herein described.

5. The combination of the mixer with the gas-pipe and its contracted vent and air-holes, constructed and operating substantially as herein described.

95,249.—W. J. MCDERMOTT, Covington, Tenn. —*Press.*—September 28, 1869.

Claim.—The combination, with the screw and follower, of the wheel E, having a screwed hub and two sets of teeth, F G, the wheels H K, and their shafts, all arranged substantially as specified.

95,250.—J. B. MCINTOSH, Erie, Pa.—*Grate for Stoves and Furnaces.*—September 28, 1869.

Claim.—1. The star-center E, fixed in mortise C.

2. The construction of a grate, in a manner that the openings J may be enlarged, substantially as described, and for the purpose set forth.

95,251.—J. C. MCVUTT and A. B. FURMAN, Strattonville, Pa.—*Plow.*—September 28, 1869.

Claim.—Forming a groove, *c'*, in the part of the mold-board that is covered with the plow-point, substantially as herein shown and described, and for the purpose set forth.

95,252.—CHARLES METZER and G. R. RORABACK, De Soto, Mo.—*Mill-Pick.*—September 28, 1869; antedated September 17, 1869.

Claim.—1. The combination, with the holder-plates A B of a millstone-pick, of a band, E, having a threaded boss, *a*, and the coupling-nut F, working thereon, to actuate the part *b* of the shank G against the plate B, substantially as herein shown and described.

2. The spring-connection D, when employed in combination with holder-plates A B of a millstone-pick, substantially as and for the purpose herein shown and described.

3. The employment of a wedge-block *e*, located within a recess in the inner face of one of the holder-plates of a millstone-pick, to prevent the bit from slipping in the holder-plates, substantially as herein shown and described.

4. The recess in the holder-plate B of a millstone-pick, for the reception of the end of the part *b*, in combination with the said part, for the purpose of preventing the said plate from slipping in the band E, substantially as herein shown and described.

95,253.—CHARLES C. MORGAN, New York, N. Y.—*Mode of Fastening Buttons on Shoes, &c.*—September 28, 1869.

Claim.—The combined use of a strap and washer for uniting buttons to cloth, leather, or other material, when the ends of said strap are brought out, over, or on top of said washer, and between it and the cloth, leather, or other material, substantially in the manner and for the purpose described and represented.

95,254.—AMOS MORELY, Addison, Mich.—*Horseshoe-Nail Clincher.*—September 28, 1869.

Claim.—As a new article of manufacture, the horseshoe-nail clincher, above described, constructed, arranged, and operating as set forth.

95,255.—CHARLES L. OSBORN, New York, N. Y. —*Fernery.*—September 28, 1869.

Claim.—1. An air-tight fernery, comprised of two main parts or divisions, with a water-joint at the line of separation, and a close-shutting lid.

2. In combination with an air-tight fernery, the ventilating-apertures, having valves to shut off or admit the air to the interior as required.

3. In combination with an air-tight fernery, an earth-box, having a perforated bottom.

4. In combination with such earth-box, the space beneath it for fertilizers, or other purposes.

5. The perforations 7, in the sides of the earth-box, to allow the percolation of the water from the water-space, and the watering of the earth by overflow.

6. In combination with the water-spaces within the base, the application of the water-ways to the outside of the base communicating with the water-space at the bottom.

95,256.—A. L. OTIS, Normal Ill.—*Hot-Air Furnace.*—September 28, 1869.

Claim.—1. The arrangement of the hot-air passage D, substantially as specified.

2. The arrangement, with the side walls, of the plates F, substantially as specified.

3. The arrangement of the V-shaped flue and air-supplying pipe K, substantially as specified.

4. The arrangement of the grate I, as specified.

95,257.—JOHN S. PALMER, Providence, R. I.—*Instrument for Setting Button-Hooks.*—September 28, 1869.

Claim.—In combination with the jaws and handles of a pair of forceps, as described, a pair or set of jaws or gripers for holding the said button-hook, and a punch E, and sliding shell G, as described, the said devices co-operating as and for the purpose specified.

95,258.—CHARLES PARKER, Meriden, Conn.—*Vise.*—September 28, 1869.

Claim.—The auxiliary jaws A and B, provided respectively with the cheeks C and D, all constructed and applied to the jaws of a vise, substantially as described and in the manner set forth.

95,259.—H. C. PARSONS, Dexter, Me.—*Mop-Head.*—September 28, 1869.

Claim.—The combination of the toothed jaws B F, tubular parts *h i*, and double cam G, all constructed and arranged to operate as herein described, for the purpose specified.

95,260.—JOHN PATERSON, Troy, N. Y.—*Stop-Valve.*—September 28, 1869.

Claim.—1. A cam-block, adapted to be oscillated by an arm or lever, and arranged in combination with valves having cam-projections on their backs, substantially as specified.

2. The combination of the valves C and sockets *b* with pins *a* and sleeve K, substantially as set forth and shown.

3. The combination of the valves C, cam-stems D, block F, arm H, pins *a*, sockets *b*, sleeve K, and stem L, when constructed and arranged substantially as set forth and shown.

95,261.—Horatio L. Peirce, Taunton, Mass.—*Traveler for Spinning-Ring.*—September 28, 1869.

Claim.—The rounded formation, in a ring-traveler made of a flat metal strip, as described, of the bent ends, which hold the traveler upon the ring, substantially as and for the purposes shown and set forth.

95,262.—Thomas M. Pelham, New York, N. Y.—*Hod-Elevator.*—September 28, 1869.

Claim.—1. A hod-elevating platform, arranged to support the hods by the shanks at the edges on the bottom or floor, and by leaning the under side of the top and the upper part of the shanks against notched bars D or D′, substantially as specified.

2. The arrangement of the bars D D′, and the holding-devices for the lower ends of the shanks of the opposite sides in the order described; that is to say, the bowls of the row on one side above those of the other, with the shanks passing between the lower ones, substantially as specified.

95,263.—Joseph Phillips and Davis Keeley, Phœnixville, Pa.—*Furnace-Door.*—September 28, 1869.

Claim.—Producing a circulation of water through a furnace-door, by means of the partition A, substantially as described.

95,264.—George W. Plumb, Milford, Conn.—*Implement for Sighting Railroad-Tracks.*—September 28, 1869.

Claim.—The construction and arrangement of a hinged mirror, adapted, substantially as herein described, for application to the rails of railroads, for sighting the same for truing and adjusting, substantially in the manner set forth.

95,265.—P. F. Randolph, Jerseyville, Ill.—*Polishing-Machine.*—September 28, 1869.

Claim.—The wheel A, consisting of the inflated tube *a*, rim a^1, projection a^2, and clamps A^1, in combination with the belt E, driving-wheel B, and pulleys C, arranged and operating substantially as described.

95,266.—Thomas W. R. Rayner, New York, N. Y.—*Wash-Boiler Tube.*—September 28, 1869.

Claim.—1. A detached wash-boiler tube, having an internal tube, B, combined with an external tube, A, and a base, C, arranged and operating substantially as and for the purpose herein described.

2. The sliding cap D, in combination with the tubes A and B, arranged and operating as herein described.

95,267.—Henry Redlich, Chicago, Ill.—*Window.*—September 28, 1869; antedated September 22, 1869.

Claim.—1. The combination of the wedge-shaped strips E G, faced with elastic material, stops B C D, and sash H, the latter having grooves I I, corresponding to the form of said strips, as and for the purpose set forth.

2. The combination of the wedge-shaped strip K, strips J L, lever *m*, connecting-rod P, and sash H, as described and shown.

95,268.—Martin C. Remington, Weedsport, N. Y.—*Horse Hay-Rake.*—September 28, 1869.

Claim.—1. The adjustable guards, consisting of one or more fingers, *d d*, as arranged and combined with the cap-flanges C C, substantially as and for the purposes herein specified.

2. The combination and arrangement of the cap-flanges C C, constructed as described, notched standards E E, and the end cross-pieces G G, for adjusting the height of the rake-head F, as herein described.

3. The combination of the oblique braces I I, gathering-fingers or rake-teeth *j*, slotted standard *k*, spring *m*, and top button *n*, as and for the purposes herein set forth.

95,269.—James Rood, Beaver Dam, Wis.—*Grain-Cleaning Machine.*—September 28, 1869.

Claim.—1. The operative combination of the fans *c c e e*, with the screens D and F, the sieve E, the side spout C, and the gauged wind-board K, substantially in the manner and for the purpose described.

2. The manner of constructing and arranging the sieve E and the screen F with part-way bottoms, and in combination with the detached adjustable screen D, substantially in the manner and for the purposes described.

3. The operative combination of the spout C with the screens D and F and the sieve E, substantially in the manner and for the purposes described.

4. The operative combination of the index-gauged wind-board K with the fans *c c c c*, for the purpose of gauging with uniform certainty the exact depth and elevation of wind-current for the best results in each different kind of work to be done, and substantially in the manner described.

95,270.—John Rosencranz, Boston, Mass.—*Hat-Pouncing Machine.*—September 28, 1869.

Claim.—1. The combination of one or more sets of conical rollers, a reciprocating brush-carrier, F, and a grooved table, when arranged for pouncing the brims of hats, substantially in the manner herein described.

2. A hat-finishing block, M, arranged for rotation alternately in opposite directions, and adapted for pouncing hats, substantially in the manner herein described.

95,271.—Theodore O. L. Schrader, New York, N. Y.—*Thread-Guide for Spools.*—September 28, 1869; antedated September 15, 1869.

Claim.—The spool-thread guide, when constructed substantially as described, and shown in Figs. 1*a* and 1*b*.

95,272.—Albert Schuneman and Theodore Schuneman, Detroit, Mich.—"*Plug-Tobacco*" *Cutter.*—September 28, 1869.

Claim.—1. The metallic hollow tube B and the metal cylinders C C, connected by the knife E and adjustable bar D, the same being constructed and arranged together in the manner and for the purposes set forth and described.

2. The application of the lever-power to the semi-rotary movement of the knife within the inner chamber, in the manner and for the purposes set forth.

95,273.—Edmund Schwiedter, Hoboken, N. J.—*Coal-Stove.*—September 28, 1869.

Claim.—1. The vertical grate E, arranged in a heater above the main grate C, substantially as herein shown and described, and for the purpose set forth.

2. The heater, provided with the apertures *a*, *b*, and *e*, and containing the grates C and E, and the doors *a*, *c*, and *f*, all arranged substantially as herein shown and described.

95,274.—S. B. Sexton, Baltimore, Md.—*Base-Burning Fire-Place Stove.*—September 28, 1869.

Claim.—1. One or more segmental circularly-sliding covers, *c*, applied permanently to the top P, substantially as described.

2. Lips g^1 g^3 on the top P, in combination with one or more covers *c*, a feed-passage, and a door, *s*, substantially as described.

95,275.—Thomas Shaw, Philadelphia, Pa.—*Condenser.*—September 28, 1869.

Claim.—The construction of the described condenser on high-pressure engines, in the manner substantially as set forth.

95,276.—Charles J. Shepard, Brooklyn, N. Y.—*Laundry-Stove and Heating-Furnace.*—September 28, 1869.

Claim.—1. The grate and bed-plate, centrally situated, placed so as to allow the flame and gases to pass over and under the bed-plate and fuel, for the purposes specified.

2. The flue under the bed-plate, so arranged as to effectually heat the outer surface of the heater.

3. Taking the products of combustion from the flue, at one or more points, for the purpose of distributing the heat more beneficially.

95,277.—Edward G. Shortt, Carthage, N. Y.—*Shaft-Coupling.*—September 28, 1869.

Claim.—The combination, with the shafts provided with the pins E, of the eccentrically-bored wedges A and set-screws D, substantially as specified.

95,278.—Henry Edward Skinner, London, England, assignor to William Hopcraft, same place.—*Steering-Apparatus.*—September 28, 1869.

Claim.—1. The combination of a cylinder with internal flanges *d*, perforated rest to support the swiveled screw E, and removable cap B, all constructed to receive the operative-mechanism in the manner shown and described,

2. The combination, with swiveled vertical screw-lugged nut, and corresponding spirally-grooved cylinder, of the gears *e e*, horizontal shaft F, and steering-wheel G, all arranged to facilitate the management and control of the rudder, as set forth.

3. The combination of the rotating cylinder C, having couplings *b b* appended to its base, with the couplings *c c*, as and for the purpose specified.

95,279.—Thomas S. Sleeper, Binghamton, N. Y.—*Axle-Skein.*—September 28, 1869.

Claim.—An axle-skein, the socket of which is increased in diameter at a uniform angle from the outer end B to the collar C, and is expanded on two or more sides of its axial center, at an increased angle from the collar C to the mouth D, substantially as and for the purpose set forth.

95,280.—Charles E. Spaulding, Theresa, N. Y.—*Feed-Measure for Stock.*—September 28, 1869.

Claim.—The flanged feed-measure A *a* B, in connection with cleats D *d*, D *d*, substantially as and for the purpose described.

95,281.—B. F. Sturtevant, Jamaica Plains, Mass.—*Hot-Air Furnace.*—September 28, 1869.

Claim.—The process of utilizing heat by a forced and repeated circuit of the heated air of an apartment through a heater, substantially as described.

95,282.—Henry Sutcliffe, Brooklyn, N. Y.—*Numbering-Machine.* — September 28, 1869; antedated September 16, 1869.

Claim.—1. A numbering-machine, in which the table, frame, and numbering-wheels are arranged and applied in the manner specified, so that the sheets of paper on which the impression is being made can hang down between the table and the frame supporting the numbering-mechanism.

2. The revolving ink-distributing table *v*, set upon the axis 19, so that the same may be rocked by the contact of the inking-rollers *p* and *q*, as they swing, said table being fitted with ratchet-teeth, and acted upon by a pawl and spring, substantially as set forth.

95,283.—John B. Sutherland, Detroit, Mich.—*Railway-Car Seat.*—September 28, 1869.

Claim.—1. The compound levers, formed by the arms C and D, pivoted together at *a*, and the latter provided with slot *b* and pins *h*, in connection with seat-back B and seat-frame A, and seat E, substantially as herein set forth.

2. In seat-frames, the pins *k*, when engaged with the curved guides F, which are attached to the seat E and the lugs or rests *m*, when arranged and operating substantially as and for the purposes specified.

3. The arrangement of the seat-frame A, seat-back B, arms C and D, seat E, guides F, slot *b*, pins *d*, *h*, and *k*, and lugs or rests *m*, when combined, constructed, and operating substantially as and for the purposes herein set forth and shown.

95,284.—William A. Sweet, Syracuse, N. Y.—*Roll for Splitting Railroad-Rails.*—September 28, 1869.

Claim.—The combination of the rolls B and B′, constructed and arranged as described, brasses *e e*, set-screws *o o*, spur-wheels C C, pinion and hand-wheel D, substantially as described, and for the purposes set forth.

95,285.—William A. Sweet, Syracuse, N. Y.—*Steam-Valve.*—September 28, 1869.

Claim.—The supplemental bearings or saddles C, substantially as described and set forth.

95,286.—G. L. Swett and B. F. Drake, Leominster, Mass.—*Apple-Corer.* — September 28, 1869.

Claim.—The apple-corer B C D E F, made substantially as described, and for the purpose set forth.

95,287.—Alexander B. Thornton, Berlin, Ill.—*Corn-Plow Fender.*—September 28, 1869.

Claim.—The fender E, when constructed as described, in combination with the slotted standard D and D′, or its equivalent, I and K, shown in Fig. 2, substantially as and for the purpose specified.

95,288.—B. W. Tuthill, Oregon City, Oregon.—*Wheelbarrow.*—September 28, 1869.

Claim.—Wheelbarrows having metallic tubular frames, and sheet-metal boxes or trays, when constructed and arranged substantially as specified.

95,289.—Oscar Van Tassell, Naperville, Ill.—*Bolt-Feeder.*—September 28, 1869.

Claim.—1. The wings or semicircular disks G and shaft C, in combination with the cylinder or spout, through which the flour or meal is conducted to the bolt, when said parts are constructed and operated substantially as herein shown and described, and for the purpose set forth.

2. The combination of the lever H, sliding collar I, connecting-rods J, pivoted wings or semicircular disks G, and shaft C, with each other, and with the cylinder or spout, through which the flour or meal is conducted to the bolt, substantially as herein shown and described, and for the purpose set forth.

95,290.—Adolph Velguth, Milwaukee, Wis.—*Hinge.*—September 28, 1869.

Claim.—The swinging stop C, pivoted to the leaf of a hinge, as and for the purpose described.

95,291.—R. B. Wakefield, Springfield, Mass., assignor to himself, James F. Chamberlain, and E. B. Haskell, same place.—*Brazier.*—September 28, 1869.

Claim.—A brazier, consisting of the shell A, having the openings *i*, *d*, and *m*, therein, and partially lined with the fire-brick *b*, or its equivalent, the grate C, back-board *c*, and the movable rim B having the curtain *h* thereon, all constructed and operating substantially as herein described and set forth.

95,292.—C. B. Walsh, Waupacca, Wis.—*Turbine Water-Wheel.*—September 28, 1869.

Claim.—The construction and arrangement of the hoops B C, concave flanges E F, rim A, and buckets H I and H J, as set forth.

95,293.—John E. Weaver, Nether Providence Township, Pa.—*Bran-Duster for Flour-Mills.*—September 28, 1869.

Claim.—The brushes herein described, when arranged upon the cone, at an angle with the line of the shaft, as and for the purposes specified.

95,294.—John A. Wells, Holly Springs, Miss.—*Machine for Cutting Sheet-Metal.*—September 28, 1869.

Claim.—The frame, composed of the stands A B and cross-piece C, the screw G, with its cranks J and K, the cutter L, the bed D, and the lever E, the whole constructed, arranged, combined, and operating substantially as described.

95,295.—James D. Whelpley and Jacob J. Storer, Boston, Mass.—*Process of Obtaining Wrought Iron Directly from the Ore.*—September 28, 1869; antedated September 16, 1869.

Claim.—The process of obtaining wrought iron and its alloys direetly from the ore, in the manner, and with the manipulations, and order of manipulation, substantially as described.

95,296.—Daniel H. Whitney, Black Rock, N. Y., assignor to Ira P. Hathaway, Augustus F.

BARTLETT, and GEORGE MORRIS, East Saginaw, Mich.—*Machine for Making Shingle-Bolts.*—September 28, 1869.

Claim.—1. In combination with the sash H, the racks O and the feed-mechanism, consisting of counter-shaft C, pulleys E and R, belts S and P, shafts Q and U, friction-wheel T, disk V, provided with friction-hub *v* and flange *v'*, the sliding box *q*, lever *a*, rod *b*, and the pinions *w'*, the whole arranged and operating in the manner and for the purposes specified.

2. In combination with the foregoing parts, as herein described, the standards A, shaft F, pulleys G, N, K, and D, saw-table W, spindle X, and treadle Y, when constructed. arranged, and operating substantially as and for the purposes set forth.

95,297.—EPHRAIM S. WILLIAMS, Cambridge, Mass.—*Chuck.*—September 28, 1869.

Claim.—The chuck-screw, when provided with a slot, *e f* or *l m*, substantially as described and for the purpose set forth.

95,298.—ELI WILLS, Winslow, N. J., assignor to himself and CHARLES P. WESTCOTT, same place. —*Medical Compound.*—September 28, 1869; antedated September 13, 1869.

Claim.—The medical compound herein described.

95,299.—CHARLES W. WILSON, Norfolk, Va.—*Miter-Vise.*—September 28, 1869.

Claim.—The right-angled slide D and ribs E, in combination with the screw F, nut C, slot B, and bed A, substantially as described and for the purpose specified.

95,300.—WILLIAM E. WORTHEN, New York, and TOBIAS NEW, Brooklyn, N. Y.—*Mode of Protecting Plastered Walls against Dampness.*—September 28, 1869.

Claim.—The incorporating into these above mixtures, when applied as a coat to the surface of walls, of gravel, sawdust, chips, bagging, or like substances, for the purpose of roughening the surface sufficiently for the retention of plaster or mastic.

95,301.—NICHOLAS ALLSTATTER, Hamilton, Ohio.—*Harvester.*—September 28, 1869.

Claim.—1. A bevel-wheel C', constructed as described, and combined with the pinion A', in the manner and for the purpose set forth.

2. The pinion A', constructed with a long sleeve, as described, to form a bearing within it for the end of the pinion-shaft Q.

3. The arrangement of the pinion-shaft Q, with its bearing in the sleeve of the pinion A', and the stop-screw *h* set into an annular channel in said shaft, as described.

4. In combination with the clutch-lever *k*, the lever *n*, link *o*, and notch *s*, in the rim of the wheel C', operating together to prevent the rake from being thrown out of gear, except at a certain point of its circuit.

5. The combination of the clutch-collar N', clutch-lever *k*, stop-device *n o s*, and pinion A', constructed with a sleeve and clutch-teeth at the end thereof, as described.

6. The yoke G', constructed with the arm I' and guide *r*, in combination with the rake E'.

7. In combination with the yoke G' and rake E', the spring M and pin L', for the purpose set forth.

95,302.—CASIMIR AMSLER, Saint Louis, Mo.—*Sawing-Machine.*—September 28, 1869.

Claim.—The pitman I, arranged with a sliding head, *i*, and combined with a rock-bar, K, substantially as set forth.

95,303.—JOHN E. ANDERSON, Boiling Springs, Pa.—*Grain-Screen.*—September 28, 1869.

Claim.—1. The hood D, constructed substantially as and for the purpose specified.

2. The combination of the conduit C', the hood D, and exhaust-passage *a*, substantially as and for the purpose specified.

3. The arrangement of the rods D' D', with reference to the hood D and aperture *a*, substantially as and for the purpose specified.

4. The arrangement of the apertures *f f* in the screen C, substantially as and for the purpose specified.

5. The arrangement of a crank, connecting-rod, and rock-shaft, for giving the compound motion to the screen, substantially as and for the purpose specified.

95,304.—JOHN BARNES, Rockford, Ill.—*Harvester.*—September 28, 1869.

Claim.—1. The combination of the main frame, driving-wheel, oscillating yoke-frame F, and links *g*, all constructed and operating as set forth.

2. The combination of the grain-wheel and its spindle with gears and a rack, substantially as set forth.

3. The combination of the vertically-moving grain-wheel yoke with the adjusting-bolt on the spindle, as set forth.

95,305.—W. G. BECKWITH, Lowndesborough, Ala.—*Ox-Yoke Bow.*—September 28, 1869.

Claim.—The bows B B, so constructed that their lower portion will swing open, substantially as and for the purpose described.

95,306.—W. G. BECKWITH, Lowndesborough, Ala.—*Hoe.*—September 28, 1869.

Claim.—The hoe A, when constructed with a contracting or expanding eye, substantially as and for the purpose described.

95,307.—ARTEMAS BIGELOW, Newark, N. J., assignor to HENRY MARTIN, Baltimore, Md.—*Process for Utilizing the Sulphur Fumes from Copper-Ores.* —September 28, 1869.

Claim.—The process herein described of utilizing, for the production of sulphur or sulphuric acid, the sulphurous-acid gas evolved from pyritous copper-ores during the process of converting the same into copper or copper matt, or copper regulus, whereby the two several products, sulphur or sulphuric acid and copper, are manufactured in a commercial condition, substantially as described.

95,308.—T. BRIGHAM BISHOP, New York, N. Y. —*Measuring-Faucet.*—September 28, 1869.

Claim.—1. The devices employed for operating the plug H, consisting of the arm I, fitted loosely upon the rod E, the cord or chain K, the pulleys L and N, and the segment O, or their equivalents, shown in Figs. 4, 5, and 6, substantially as shown and described.

2. The within-described measuring-faucet, consisting of the cylinder A, the head B, the three-way cock C, provided with the branches F and G and the plug H, the piston or plunger D, the rod E, provided with the handle *e*, in combination with the above-described devices for operating the plug H, substantially as described and for the purpose specified.

95,309.—JOHN H. BLAKE, Westbrook, assignor to himself and J. M. TODD, Portland, Me.—*Meat-Chopper.*—September 28, 1869.

Claim.—The described arrangement of gears *a* and *b*, shaft *c*, wheel *d*, projection *o*, rod *e*, joint *y*, toothed wheel *l*, parts *t* and *v*, arm *i*, spring *j*, projection *h*, on the shaft *c*, upon the frame A, as herein described.

95,310.—LEVERETT BRADLEY, Jersey City, N. J.—*Electric Clock.*—September 28, 1869.

Claim.—1. The combination of one or more rotating circuit-closers D with the conical pendulum B of the primary or governing-clock A, substantially as specified.

2. The combination, with the wheel J and armature H, carrying the operating-pawl I, of the pawls L K and spring *m*, essentially as and for the purpose or purposes herein set forth.

95,311.—WILLIAM M. BRAYTON, Rochester, N. Y., assignor to himself, WILLIAM S. THOMPSON, and H. S. MACKIE, same place.—*Thill-Coupling.*—September 28, 1869; antedated September 17, 1869.

Claim.—The combination of the spring B and wedge E with the jack or thill-strap D, operating conjointly for the purposes set forth.

95,312.—Everette R. Breed, Farmington, Ill. — *Soap or Detergent-Compound.* — September 28, 1869.

Claim.—The chemical composition, or detergent-soap, prepared and compounded, and to be used, substantially as described, or of ingredients substantially the same, and which will produce the required result.

95,313.—Adolphus Brown and Felix Brown, New York, N. Y.—*Lubricator for Journal-Boxes.*—September 28, 1869.

Claim.—1. The inclined channel E, contained from the journal-box A, extending inwardly and upwardly, and beyond the journal-box and the groove *a* of the collar F, in order to convey the spread oil back to the reservoir C, in the manner substantially as described.

2. The mud-receptacle G, in combination with the oil-reservoir, lifting-chain, and journal-box, substantially as set forth.

3. The waste-channel E, in combination with the oil-reservoir C, lifting-chain D, journal-box A, and shaft B, substantially as described.

4. The depression or cavity *a*, in the collar F, in combination with the waste-channel E, oil-reservoir C, lifting-chain D, journal-box A, and shaft B, substantially as described.

95,314.—William Henry Burns, Grafton, assignor to Jonathan Luther, Worcester, Mass.—*Roller-Jaw Temple for Looms.*—September 28, 1869.

Claim.—The combination, with the jaws A B, of the grooved rollers C D, the latter arranged to reciprocate laterally on its journal, and toothed lip G of the jaw B, when constructed as and for the purpose described.

95,315.—F. M. Buckmaster, Galesburgh, Ill.—*Horse-Rake.*—September 28, 1869.

Claim.—1. The lever V, with pawl W and catch X, in combination with pawl Y and catch O, constructed and operating substantially as described.

2. The combination of lever V, pawl W, and catch X, pawl Y and catch O, pawl P and catch R, constructed and operating substantially as described.

3. The combination and arrangement of lever H, rods S and L, pawls P and Y, lever V, with pawl W, arms A A″, and revolving rake-head B, with catches R, X, and O, substantially as described.

95,316.—Daniel Bull, Amboy, Ill.—*Clothes-Line Holder.*—September 28, 1869.

Claim.—The pulley-wheel A, notched as at *a*, combined with the hanger B, as and for the purpose above specified.

95,317.—Hugh Burgess, Royer's Ford, Pa.—*Extract of Hops.*—September 28, 1869.

Claim.—1. The new product or extract from hops, herein described.

2. Treating hops in the mode and with the material substantially as specified.

95,318.—Sanford S. Burr, Dedham, Mass.—*Extension-Crib.*—September 28, 1869.

Claim.—1. A child's crib, in which the divided crib-frame proper is combined with the tongued and grooved side rails *c c′*, substantially as and for the purposes herein described.

2. In a crib or bedstead, made as herein explained, combining therewith the bed-bottom, substantially in the manner described, so that the bed-bottom shall automatically accommodate itself to the variations in length of such crib or bed, for the purposes essentially herein set forth.

95,319.—Cornelius L. Campbell, Binghamton, N. Y., assignor to Washington W. Wheaton, same place.—*Device for Fitting Axle-Spindles to Skeins.*—September 28, 1869.

Claim.—The guide-plate L, constructed and operating as herein shown and described, for the purpose set forth.

95,320.—William Carpenter, Fairbury, Ill.—*Button-Holing Attachment for Sewing-Machines.*—September 28, 1869.

Claim.—1. The grooved sliding bar D, moving from side to side on the bar C, and provided with projections *c*, cam *d*, and spring F, all substantially as and for the purposes herein set forth.

2. The plate J, constructed as described, with a vertical groove or recess on the rear side, and sliding on the presser-foot connecting-plate H, substantially as and for the purposes herein set forth.

3. The movable cam *f*, forked rod *e*, and reversible finger K, all constructed and combined with the plate J, to operate in the manner and for the purposes herein set forth.

4. The adjustable bar L, constructed as described, on the sliding plate J, to regulate the backward and forward motion of the needle, substantially as herein set forth.

5. The sliding plate J, connecting with the presser-foot connecting-plate H by means of a spring, *h*, so as to hold the said plate J up to the head of the machine, substantially as and for the purposes herein set forth.

95,321.—Hugh C. Carrigan, New York, N. Y.—*Portable Fire-Escape.*—September 28, 1869.

Claim.—1. The combination of the reels C D, either or both, shaft B, sliding bolts E, ratchet-wheels F, and pawls G, with each other and with the frame A, said parts being constructed and operating substantially as herein shown and described.

2. The ladder M N O, provided with the weight P, iron basket Q, and the straps R S, either or both, in combination with the reel C, shaft B, and frame A, substantially as herein shown and described, and for the purpose set forth.

3. The combination of the chain I, provided with the ring J and hook K, with the reel D, shaft B, and frame A, substantially as herein shown and described, and for the purpose set forth.

4. The ring or eye-bolt Y and chain Z, when used in connection with the frame A, to which the operating-mechanism of the fire-escape is attached, substantially as herein shown and described, and for the purpose set forth.

5. The extension-frame T U V W, constructed as described, in combination with the frame A, ladder M N O, and chain I J K, either or both, substantially as herein shown and described, and for the purpose set forth.

6. An improved portable fire-escape, constructed, arranged, and operating substantially as herein shown and described, and for the purpose set forth.

95,322.—Edwin Carter, Norwalk, Conn.—*Fastening for Attaching the Ends of Bands, Clamps, &c.*—September 28, 1869.

Claim.—The combined arrangement of the slotted coupling-plates A A, studs D D, handle F, and connecting-screw E, in the manner substantially as herein described, and for the purpose set forth.

95,323.—William Chesley, Cincinnati, Ohio.—*Steam-Gauge.*—September 28, 1869.

Claim.—1. The construction of the spring-disk of a steam-pressure gauge with the circumferential rim or flange F, for the purpose set forth.

2. The oscillating segment-rack whose jointed connection with the spring-disk or diaphragm is made adjustable by means of the vibratable plate R, and conical-necked setting-screws, substantially as and for the purpose set forth.

95,324.—John Cochran, Purdy's Station, N. Y.—*Milk-Can.*—September 28, 1869.

Claim.—The bottom of the can, having its edge extended between the lower edge of the body A and the top of the external ring C, in connection with the internal ring D, secured to said external ring, and supporting the bottom, substantially as described.

95,325.—William H. Coleman, New Orleans, La.—*Velocipede.*—September 28, 1869.

Claim.—The wheels K, or their equivalents, the segments L, the levers N, pawls *d*, and springs O, in combination with the loose driving-pinions D, when the latter are provided with projections E, fitting into recesses in the hub of the driving-wheel A of a velocipede, pawls *b* to take into clutches *a*,

and all the parts are constructed, arranged, and operate substantially as described, for the purpose set forth.

95,326.—DANIEL COMPTON, Newport, N. J.—*Ice-Breaking Boat.*—September 28, 1869.

Claim.—The combination of the saws I I, upon the paddles J, with the ice-breakers E F G, arranged upon the under part of the hull H, and all constructed to operate substantially as set forth.

95,327.—S. A. CUMMINS and A. J. CUMMINS, Vienna, N. J.—*Sled-Brake.*—September 28, 1869; antedated September 18, 1869.

Claim.—1. The combination of the angular levers D, pivoted to the runners, and provided with dogs *i* and projections *h*, the cross-bar C, the slotted tongue B, and the rock-bar, with hounds *a*, all constructed, arranged, and operating substantially as herein described.

2. The combination of the swinging dogs F, clevis G, pivoted plates E, cross-bar C, the slotted tongue B, and the rock-bar, with hounds *a*, all constructed, arranged, and operating substantially as herein described.

95,328.—JOSEPH K. DAVIS, Monticello, S. C.—*Cotton and Hay Press.*—September 28, 1869.

Claim.—1. The bars m^2 n^2, combined with the hooked rods J J, metallic plates I I, and end flanges *i i*, in the manner and for the purpose set forth.

2. The hinged cover O, in combination with the removable bars W W, confined at one end, when in use, by the pins and staples *w w*, and at the other end by the cross-bar A^1, substantially as and for the object set forth.

95,329.—JOHN DECAMP, Cincinnati, Ohio.—*Bed-Bottom.*—September 28, 1869.

Claim.—The combination of the slats A D, the spring B, screw C, and dish-formed or concave nut E *e*, provided with wings *e'*, all constructed and arranged as and for the purpose set forth.

95,330.—N. T. DRAKE, High Point, N. C.—*Medical Compound.*—September 28, 1869.

Claim.—1. The mode of compounding the several ingredients into a liniment, and applying and administering the same as described above.

2. The medical compound produced by combining carbolic acid with an essential oil and one or more tinctures, such as above named, or their medicinal equivalents.

95,331.—WILLIAM DUESLER, Saint Joseph, Mo.—*Trip-Hammer Saw-Set.*—September 28, 1869.

Claim.—The machine for setting saws herein described, having frame A, blocks B and K', hammer D, trip G, and spring F, when constructed and arranged substantially as specified.

95,332.—EDGAR F. EATON, Northford, Conn.—*Buckle.*—September 28, 1869; antedated September 17, 1869.

Claim.—The frame A, loop B, and tongues *a a*, all constructed and united, as herein set forth.

95,333.—PRIMUS EMERSON, Carondelet, Mo.—*Feathering Paddle-Wheels.*—September 28, 1869.

Claim.—1. The circular segments E, arranged to support the paddles D, and to allow the feathering thereof in the wheel-rims C, substantially as set forth.

2. The segments E, their journals *e*, and the eccentric F *f* F', when combined with the bearing G and rollers *h*, substantially as set forth.

95,334.—JEROME FASSLER, Springfield, Ohio.—*Blank for Harvester-Guard Fingers.*—September 28, 1869.

Claim.—Shearing or punching blanks from solid plates or bars of iron or steel, substantially as shown in Fig. 1, whereby the forging or forming of harvester-guard fingers is greatly facilitated in their manufacture, as herein set forth.

95,335.—COLIN T. FINLAYSON, Albany, Oregon, assignor to himself and ALFRED C. LOND, San Francisco, Cal.—*Propeller-Wheel.*—September 28, 1869.

Claim.—1. The method, herein described, of propelling ships and raising water by means of the direct action of side currents, drawn by a vacuum, upon the buckets of a wheel working within an inclosing case, and the reaction of the dense outside water upon the volumes thrown out of such case by the wheel, substantially as described.

2. The radial buckets *c*, inclined across the periphery of the wheel, and provided with concave front and rear faces, and side cutting-edge, as and for the purpose set forth.

95,336.—C. C. FOSTER, Odessa, Del.—*Fertilizer-Attachment.*—September 28, 1869.

Claim.—The arrangement, upon an adjustable shaft under the bottom of the hopper of a fertilizer-attachment, of one or a series of rollers of any suitable shape and material, substantially as and for the purposes herein set forth.

95,337.—GEORGE W. GOULDEN, Waverly, N. Y.—*Clamp.*—September 28, 1869.

Claim.—The clamping-device herein described and shown, having platform A, with cylindrical mortises B and screw-posts D, with clamp-screws E and cylindrical tenons C, all constructed substantially as specified.
